A

New General COLLECTION of

VOYAGES and TRAVELS:

CONSISTING

Of the moſt Eſteemed RELATIONS, which have been hitherto publiſhed in any LANGUAGE:

Comprehending every Thing remarkable in its Kind, in

EUROPE, ASIA, AFRICA, and AMERICA,

With reſpect to the

Several EMPIRES, KINGDOMS, and PROVINCES; their SITUATION, EXTENT, BOUNDS and DIVISION, CLIMATE, SOIL and PRODUCE; their LAKES, RIVERS, MOUNTAINS, CITIES, principal TOWNS, HARBOURS, BUILDINGS, *&c.* and the gradual Alterations that from Time to Time have happened in each:

ALSO THE

MANNERS and CUSTOMS

OF THE

Several INHABITANTS; their RELIGION and GOVERNMENT, ARTS and SCIENCES, TRADES and MANUFACTURES:

So as to form

A Compleat SYSTEM of MODERN GEOGRAPHY and HISTORY, exhibiting the Preſent STATE of all NATIONS;

Illuſtrated not only with

CHARTS of the ſeveral Diviſions of the Ocean, and MAPS of each Country, entirely new Compoſed, as well as new Engraved, by the beſt Hands, from the lateſt Surveys, Diſcoveries, and Aſtronomical Obſervations: But likewiſe with Variety of Plans, and Proſpects of Coaſts, Harbours, and Cities; beſides CUTS repreſenting Antiquities, Animals, Vegetables, the Perſons and Habits of the People, and other Curioſities: Selected from the moſt Authentic Travellers, Foreign as well as Engliſh.

Publiſhed by His MAJESTY's Authority.

VOL. IV.

LONDON:
Printed for THOMAS ASTLEY, in *Pater-Noſter-Row.* M.DCC.XLVII.

BRITANNICUM

By the LORDS JUSTICES.

HARDWICKE, *C.* | ARGYLE,
GRAFTON, | TWEEDDALE.

To all to whom these Presents shall come, Greeting,

WHEREAS THOMAS ASTLEY, of the City of *London*, Bookseller, hath humbly represented unto Us, That he hath been at a very great Expence and Charge in purchasing several new *English* Manuscripts of Voyages and Travels, and in Translating divers other Books of Voyages and Travels, out of several Languages, into *English*, and in Engraving Maps and other Plates for the same, intending to Print a New General Collection of the said

VOYAGES and TRAVELS,

In several Volumes in Quarto, *Improved with* CHARTS *of the several Divisions of the Ocean, and entire new* MAPS *of each Country; also select* CUTS, *representing Cities, Antiquities, Animals, Vegetables, the Habits of the People, and other Things remarkable in their Kind; with new Discourses and Observations thereupon*; which Work may be of great Advantage, as well to Trade as Navigation; and he having humbly besought Us to grant to him, the said *Thomas Astley*,

His MAJESTY's Royal Privilege *and* Licence,

For the sole Printing and Publishing the same for the Term of fourteen Years; we being inclined to encourage

An UNDERTAKING *of such* Publick Use *and* Benefit,

Are pleased to condescend to his Request, and do by these Presents, in his MAJESTY's Name, (as far as may be agreeable to the Statute in that Case made and provided) grant unto the said *Thomas Astley*, his Heirs, Executors, Administrators, and Assigns,

HIS MAJESTY's ROYAL PRIVILEGE *and* LICENCE,

For the sole Printing, Publishing, and Vending the said Work, during the Term of Fourteen Years, to be computed from the Day of the Date hereof, strictly forbidding and prohibiting all his Majesty's Subjects, within his Kingdoms and Dominions, to Re-print or Abridge the same, or any Part of them, either in the like, or any other Volume or Volumes whatsoever; or to Copy or Counterfeit the Sculptures or Maps thereof, either in Great or in Small, during the said Term; or to Import, Buy, Vend, Utter, or Distribute, any Copies of the same, or any Part thereof, Re-printed beyond the Seas, within the said Term, without the Consent of the said *Thomas Astley*, his Heirs, Executors, Administrators, or Assigns, by Writing under his or their Hands and Seals, first had and obtained, as they will answer the Contrary at their Peril; whereof the Commissioners and other Officers of His Majesty's Customs, the Master, Wardens, and Company of Stationers are to take Notice, that due Obedience be rendered to this His Majesty's Pleasure herein declared.

Given at *Whitehall*, the 18th Day of *October*, 1743, in the Seventeenth Year of his Majesty's Reign,

By their Excellencies Command,

E. WESTON.

MVSEVM
BRITANNICVM

TO THE

RIGHT HONOURABLE

PHILIP-DORMER,

EARL of CHESTERFIELD,

One of his MAJESTY's Principal Secretaries of State, &c. &c.

MY LORD,

ALTHOUGH the Honour which the Chancellor of *France* has done this Work, by ordering it to be tranſlated into *French*, and promoting it with uncommon Exertions of his Power, ſhould be no Evidence of its Merit: Yet it is hoped, the Notice taken of it by that great Perſonage, will apologize for the Author, if, to put himſelf on an Equality with his Tranſlator, and make the Original appear in *Great Britain* with no leſs Luſtre than the Verſion does in *France* and *Holland*, he preſumes to dedicate this Volume to a great Miniſter, and Patron of the Sciences, in his own Country, who is himſelf learned, as well as a Judge of Literature. I am,

My LORD,

Your LORDSHIP'S

Moſt humble Servant,

The COLLECTOR.

ADDITIONAL LIST of SUBSCRIBERS.

SIR John Colleton, of Exmouth, Bart.
Sir Henry Grey, Bart.
William Watts, of Leiceſter, Eſq;
Robert-Henley Ongley, of Old-Warden, Bedfordſhire, Eſq;
Mr. John Gaſper Vancover.
Mr. John Chandler, F. R. S.
Mr. Jonathan Ewer, of Hatton-Garden.
Mr. John Harper, Junior.
Mr. William Barnet, of St. George Hanover-Square.
Mr. Arthur Venables.
Mr. William Hempſon, of Leghorn.
Mr. Joſeph Pinfold, of Leghorn.
Mr. Whiſtler, of Coventry.
Mr. Watts, of Coventry.
Mr. Hollyer, of Coventry.
Mr. Paton, Bookſeller, in Edinburgh.
Meſſieurs Hamilton and Balfour, Bookſellers, in Edinburgh.
Mr. Jonathan Moore, Bookſeller, at Newport in the Iſle of Wight, 12 Sets.
Reverend Mr. William Langbaine.
Mr. Moſes Longman.
Mr. Rigg, Timber-Merchant, Vaux-Hall.
—— Stark, of Ewell in Surrey, Eſq;
Mr. William Comyns.
Mr. Joſeph Jones.
Peregrine Bertie, Eſq;
Dr. Wright, of Baldock, Hertfordſhire.
Edward Withers, Bookſeller, Fleet-ſtreet.
Richard Baldwin, jun. Bookſeller, in Pater-Noſter-Row.
Mr. Richard Windſor.
Capt. Charles Fowles.
Capt. John Somner.
Mr. Willoughby Clay.
Mr. George Pitzold.
William Meadows, Bookſeller, in Cornhill.
Mr. Nicholas Scott.

THE PREFACE.

Geographical Descriptions

THE *present Volume consists of three Books. The first exhibits a Geographical Description of* China; *which, with the last Book of the former Volume, containing the Voyages and Travels to that great Country, comprizes all that is to be met-with of any Worth in the several Authors who have hitherto treated of it; particularly*

Of *China*, *the late Observations of the Jesuit-Missioners, who surveyed the whole Empire and made the Maps, of which we have inserted general ones to illustrate the Subject.*

IT is wished for Connexion Sake, that both the Books relating to this famous Part of Asia *could have found a Place in the same Volume; but that was impracticable, without swelling one of them abundantly out of Size. However, this is an Inconvenience which affects only the Form or Division of the Volumes, without in the least disturbing the Arrangement of the Parts, or breaking into the Order of our Plan.*

Of *Korea*, *THE second Book comprizes the Description and History of* Korea, Great Tartary, Tibet, Karazm, *and the two* Bukhârias; *Countries but little known in* Europe, *till the Authors, whose voluminous Works we have reduced to moderate Bounds, lately appeared. With regard to* Korea, *the Public are obliged to the same Jesuits who surveyed* China, *for the curious Map and Relation of that Country; before which we had no tolerable Account of it, excepting those few and imperfect Remarks to be found in the Narrative of the* Dutch *Shipwreck on the Island of* Quelpaert.

Of *Great Tartary*, *FROM this Country so much resembling* China, *as well in its Improvements as the Manners and Customs of the Natives, we pass into its Reverse in those Respects,* Great Tartary; *proceeding gradually from the most Eastern Shores of it, Westward to the* Caspian Sea. *In this Part an Account is given not only of the Inhabitants, as they are at present, but also of their ancient State and Conquests under the famous* Jenghîz Khân: *Whose Life we have annexed, as given both by the* Tartar *and* Chinese *Authors, who supply the Defects of each other. This we have done chiefly for Sake of the great Light which is thrown by those curious Memoirs on the History and Geography of all the middle Part of* Asia, *delivered as well in the Writings of the Oriental Historians, as in those of our Western Missioners and other Travellers sent into those Parts in the thirteenth and fourteenth Centuries.*

Of *Tibet*, *IN the Chapter relating to* Tibet, *particular Care has been taken to bring together all that could be found in Authors concerning that surprizing Imposture of the* Great Lama *(who passes for a real God on Earth) and his idolatrous Religion; which within these few Centuries, and apparently without the Assistance of Force, has overspread near one Half of* Asia.

Of *Karazm*. *FROM* Tibet *we pass-over to* Karazm, *an ancient Kingdom on the Eastern Shore of the* Caspian Sea; *and thence proceeding Eastward, describe the* Great *and* Little Bukhâria; *which last terminates at the narrow Desart, bounding* China *on the North-West: The two first are possessed by the* Uzbek-Tartars, Mohammedans *(whose History written by their late* Khân *is there abridged) and the last by the* Eluths, *nicknamed* Kalmûks. *These are Worshippers of the* Great Lama, *or Deity of* Tibet, *and hold in Subjection the* Mohammedan *Inhabitants, who are of the same Nation with themselves, that is,* Mongols, *though of a very different Religion.*

Travels in those Countries

THE third Book contains all the Travels to be met-with through Great Tartary, Karazm, *the* Bukhâri-s, *and* Tibet, *from the Time of* Jenghîz Khân; *which may be reckoned the Æra of modern Discoveries, two Centuries before the* West *and* East-Indies *were explored by Sea. The Conquests of that great Ravager of Countries, and his immediate Successors, which alarmed all the World, and opened the Way into* Tartary, *excited the* European, *as well as* Asiatic *Princes, to dispatch their Ambassadors into those wild, and till then impenetrable, Deserts, to treat of Peace, and form Alliances. In these Expeditions, none were more forward than the Popes in sending their Missioners, with a View both to stir-up the* Tartars *against the* Mohammedan *Princes, and to propagate the* Romish *Religion among them. Although their Zeal was not attended with the desired Effect, yet to it we owe some curious Journals; which, though full of Fables and Superstitions, will always be valuable for giving* Europeans *the first tolerable Idea they had of* Tartary, *and its various Inhabitants.*

By Friar *Rubruquis,*

AMONG the Travels which compose this Book, the most remarkable are those of Rubruquis, Polo *the* Venetian, *the Ambassadors of* Shâh Rukh, *and* Gerbillon. *The first, besides giving a pretty exact Account of the Manners and Customs of the* Mongols, *or* Tartars, *with several curious Particulars relating to the* Khâns, *and their Court, not to be met-with anywhere else, let us into the Proceedings of the* Nestorian, *and other Missioners; who had for many Ages abused Christendom with their pretended Conversions in these Parts of* Asia, *their Miracles,* Prester John's, *and other Impostures.*

Marco Polo,

THE Travels of Polo *is one of the most valuable Works of the Kind now in being: For although the Remarks which they contain of Countries are generally very superficial, and they abound with Fables, as well as those of* Rubruquis *and the other Friars; yet you find there some Account of all the Coasts and Islands from* Madaigaskar *to* Japan, *discovered by Sea by the* Portugu[illegible]ze, *besides the inland Parts of* China *and* Tartary, *with many others where they never penetrated, till the Jesuits entered* China *in* 1552. *The worst of it is, that great Part of the Geography of this Author was become so obscure, owing chiefly to his employing the Names used by Foreigners, instead of those current in the respective Countries, that it was of little Service to us Moderns: However, by Help of the Relations of* Magalhaens, Gaubil, *and other Authors quoted in the Life of* Jenghîz Khân, *we have in good Measure supplied the Defect, and rendered him intelligible.*

Shâh Rukh's Ambassadors,

THE Embassy of Shâh Rukh, *Successor of* Timûr beg, *or* Tamerlan, *to the Emperor of* China, *has contributed somewhat to the same End. This Narrative, written originally in* Persian, *and now first translated into* English, *besides the Improvements it affords to Geography and History, furnishes us with a Sample of the* Asiatic *Taste and Manner of writing Travels.*

Gerbillon the Jesuit.

AS for those of Gerbillon *through the Territories of the* Mongols *and* Kalkas, *which include the great Desart of* Tartary, *they are so full and particular, as to leave scarce any Thing for future Travellers to add, touching either the Country itself, or the Manners and Customs of its Inhabitants.*

Maps and Cuts.

FOR the farther Illustration of the Whole, Variety of Maps, as well as Cuts, are added; the latter selected from the Authors here collected. The Maps are accommodated both to the Descriptions and Travels. We have attempted even to adapt some to the History of Jenghîz Khân, *and Relation of* Polo, *as far as concerns* Tartary *and* China, *in order to exhibit in some Measure the State of Countries in those Times. M.* D'Anville's *general Map of* Tartary, *as given by the Translator of* Du Halde, *being exhibited by a proper Scale, and more agreeable to the larger Draughts of the Jesuits, than his other Maps, has served for the Groundwork of most of ours. However, we have made several considerable Alterations where we found necessary, particularly in the Maps of* Western Tartary *and* Karazm. *We have likewise drawn the Meridians through different Places, in order to extend the Country from West to East, which he had too much contracted in his Maps, in Consequence of adopting the Notion of the prolate Figure of the Earth.*

Condition of the Work. *THIS may ſuffice to give the Reader a general View of what is offered him in this fourth Volume; and it is preſumed the Peruſal will convince him that the Collector has performed his Promiſe to improve the Work as it advanced. However, he is ſorry to find that this Conduct of his did not better the Sale, or remove the Prejudices conceived very early againſt it, from* the virulent Aſperſions thrown-on it by one Rival in Trade *(it is the Proprietor who now ſpeaks)* and the almoſt-united Intereſt of the reſt. *He hopes, nevertheleſs, that thoſe Prejudices will now ſubſide; and that the Bookſeller will find his Account in the Sale of the Whole, which he could not do in the Parts. In ſhort, although the Author has but little Intereſt farther in the Volumes which are already publiſhed, he cannot forbear obſerving, that it would be Matter of real Mortification to him, if, after all the Pains he has taken, he ſhould find his Performance to prove leſs acceptable to his Countrymen, than it appears to be to Foreigners.*

French Editions *THE firſt Volume was ſcarcely finiſhed, when an Advertiſement came-out in the* Amſterdam Gazette, *intimating, that M.* Didot, *Bookſeller at* Paris, *intended to give a Tranſlation of the Whole in* French, *purſuant to the Order of Monſeigneur* the Chancellor, *by publiſhing one Volume in Quarto*[a] *every ſix Months. Accordingly at the Time prefixed a Volume was publiſhed, by which it appeared that the Editor was M.* Antoine Françoiſe Prevoſt, *(Chaplain to the Prince of* Conti) *whoſe Print is at the Head of the Book.*

IT muſt be owned, that no Coſt has been ſpared to make this Edition beautiful: Some Cuts and new Charts alſo have been added: But the Abbé *has taken ſeveral Liberties with the Original, which it is preſumed will hardly be allowed a Perſon who undertakes to give a*

At *Paris*, *Tranſlation of another Body's Work: For he has not only omitted a great Number of Paſſages and Paragraphs of Moment in the Text, beſides Abundance of Notes which have no Relation to Religion; but hath added both Text and Notes in very many Places, without diſtinguiſhing ſuch Alterations by any Kind of Mark, or Reference, and often blending them ſo with the Original, as not to be eaſily ſeparated; by which Means the Collector is made to father a great deal of ſpurious Iſſue, and liable to be blamed for the Faults of another, as well as his own. There are likewiſe many Places to be found, wherein the* Abbé *has ſo far miſtaken the Senſe of the Original, as to make it ſpeak directly contrary to the Meaning of the Author.*

And the *Hague*. *THE Reputation of the Work muſt have ſuffered in ſome Meaſure by the* Paris *Impreſſion, if M.* Pierre du Hondt *at the* Hague *had not determined to publiſh a compleat Tranſlation of it; wherein are marked, with great Exactneſs, all the Omiſſions, Additions, and Miſtranſlations to be found in* Abbé Prevoſt's *Edition. M.* Du Hondt *had likewiſe the Courteſy, as ſoon as his two firſt Volumes (which make but one in the* Engliſh) *were printed, to ſend a Copy of them to the Collector as a Preſent, accompanied with a very polite Letter, ſetting forth the Care he had taken to reſtore the Work to its original State: A Conduct which requires proper Acknowledgments from an Author to a Bookſeller; who might, according to Cuſtom, have found his Account in publiſhing the* French *Tranſlation as it was, without putting himſelf to the Expence either of having its Deficiencies ſupplied, or its Errors corrected.*

State of the Sciences *WHETHER* Abbé Prevoſt *hath ſo profited by the* Hague *Edition, as either to give a full Tranſlation in his ſucceeding Volumes, or mark his Additions and Omiſſions therein, I know not, as having ſeen none of them. But whatever Errors may be committed by the Tranſlator, his Miſtakes ought never to derogate from the Honour due to* the Chancellor, *for ſetting on-foot the Tranſlation of a Book which he judged might be of ſome Uſe to Trade and Navigation. In this he ſeems to have been ſo intent that, as the* Abbé *obſerves at the End of his Preface, having pitched on him to tranſlate the Work, he took-Care* that the War ſhould not interrupt his Correſpondence with *England, for procuring the Numbers as faſt as they came from the Preſs.*

Abroad and at home. *ON this Occaſion, I cannot but take Notice of the different Regard paid of late Years to the Sciences in* France, *and in* South Britain: *For it often happens, that while the great Men there are ſhewing the higheſt Reſpect to our* Engliſh *Books of any Uſe, the great Men here treat them*

[a] *Two of his Volumes make but one of ours, ſo that the Whole in* French *will conſiſt of* 8 *Volumes.*

them with the utmoſt Neglect, and their Authors with the higheſt Contempt. In like Manner we have ſeen Inſtances, that while the Public in France *and* Holland *receive with Eagerneſs our* Engliſh *Productions, they are under a Neceſſity of being dropped at home for Want of Encouragement to carry them on. This, however, we ſay with all Deference imaginable to thoſe of our Subſcribers who have aſſiſted us ſo far; and have ſhewn as much Perſeverance, Benevolence, and Indulgence for the Performance, as any Foreigners could poſſibly have done.*

BUT, however well ſatisfied the Collector may be with the Reception given his Work by the French *in general, he has Reaſon to complain of thoſe concerned in preparing the Edition of it. He has already mentioned the Injury done him by the Tranſlator, perhaps from a Licence cuſtomary in* France; *and is next to take-Notice of the Treatment he has received from one of his Aſſiſtants.*

M. *Bellin's* Objections. ABBE PREVOST *having committed the Care of preparing the Charts and Plans to M.* Bellin, *Engineer of the Marine, and Keeper of the Royal Office for depoſiting the Charts, Plans, and Journals within that Department; there is prefixed to the ſecond Volume a Letter, from that Gentleman to the* Abbé, *giving an Account of the Progreſs he has made in the Execution. In this Letter, M.* Bellin *is pleaſed to throw-out ſome haſty Reflexions on the Charts and Plans inſerted in our Collection, without ſeeming to have duly conſidered the Caſe. His Animadverſions relate to three Articles: Want of proper Diſpoſition, Want of ſufficient Number, and Want of Accuracy.*

Anſwer to the firſt, *WITH regard to the Diſtribution of the Charts, I muſt firſt obſerve, that at the ſame Time he finds Fault with the Order they are placed in, he ſeems to own that he could not put them in much better himſelf* [a]. *But the Fault lay properly in his own Inattention to Things. He was not to have conſidered them as belonging to the Numbers in which they were publiſhed; but ſhould have looked into the Table of Directions to the Book-binder, at the End of my firſt Volume, where he might have found the proper Places marked: He might there alſo have found, that I had anticipated him in his Advice to throw the Charts together at the End of the Volume, as moſt convenient for peruſing them.*

To the ſecond, *I intended to have added ſeveral Charts more of the Coaſts to thoſe inſerted in the firſt Volume; but being prevented by the ſudden Change I was obliged to make in my Plan, deferred giving them till I came to treat of the* Eaſt-Indies; *which, if the Work goes-on, follow next in Order. This is the Defect under the ſecond Article which M.* Bellin *finds Fault with, and which he has ſupplied by five Charts; comprizing in that Number all the Coaſts of* India *and* China, *with the adjacent Iſlands, from* Cape Komorin, *where our Charts end, to* Japan *incluſively.*

To the third. *AN Author may digeſt the Charges which at moſt tax him with Neglect: But thoſe which accuſe him of great Inaccuracy, or Error in his Work, ſtrike at his Reputation, and call for his beſt Defence. With regard to this laſt Article, M.* Bellin *ſays, that my Charts and Plans are taken from* this Place and the other, without much Choice. *I acknowledge the firſt Part of this Charge, but deny the latter: For I made Choice of the beſt I could procure. Himſelf, I hope, will vouch for me, ſo far as relates to the ſeven Charts above-mentioned* [b]; *which, he ſays,* are taken from his Charts publiſhed ſome Years ago, for the Uſe of the King's Ships. *If ſo, how came he to* alter thoſe of the Weſtern Coaſt of *Africa* throughout [c]? *Did his own ſtand in ſo-much Need of correcting? Or did he find mine in ſo-many Particulars different from his own? If the former, why ſo ready to carp at mine? If the latter, why does he inſinuate that they were wholly taken from his? The Truth is, that M.* Bellin's *Charts being ready to my Hand, and the Scale of a proper Size, I made Uſe of them for the Ground-work, in the ſame Manner as I have done M.* D'Anville's *general Map: But far from taking the Whole from him, or copying them implicitly, I examined his Charts by the Aſtronomical Obſervations, and altered them in many Places by other Charts and Plans, as mentioned in the particular Charts themſelves. And this I was the leſs ſcrupulous to do, as*

Cavils at the Charts

I

[a] *M.* Bellin's *Letter*, p. 5. [b] Ibid. p. 6. [c] Lett. p. 7.

I found the Coaſts of Guinea, *from* Sierra Leona *to* Benin, *repreſented in his Chart of the Southern-Ocean very differently from what it is in that of the Weſtern-Ocean, publiſhed but the Year before* [a]. *What his Alterations are, I know not, having not ſeen the* Paris *Edition: But if he altered mine, the* Dutch *Editors altered his; and in caſe they have followed good Authorities, he muſt have altered my Charts for the worſe, ſince I find ſcarce any Difference betwixt theirs and mine.*

HOWEVER that be, I am ſurprized M. Bellin *has found no Fault with the other Charts of the Coaſts, from the* Cape of Good Hope *to that of* Komorin, *although there are rather more Alterations from his* [b] *in them than the former. Are my Charts more correct than his for that Extent? Or are there in the Marine-Office no Charts within that Compaſs fit to be relied on? This laſt, in Effect, happens to be the Caſe, with regard to the whole Eaſtern-Coaſt of* Africa, *from the* Cape of Good Hope *to* Cape Guardafui, *which he owns to be taken from the* Engliſh *Pilots* [c]: *Yet, in my Charts of that Coaſt, I make M.* Bellin *the chief Compliment, referring expreſly to none but his Chart. If he ſhould ſay, I had Reaſon, becauſe, although* by his Marine-Journals he found them exact in many Parts, yet in others they ſtood in Need of Correction, *why then does he claim my Charts as his own? eſpecially too as he makes no Scruple to aſcribe my Collection of Voyages and Travels to M.* Prevoſt [d]; *poſſibly on Account of the Alterations he has made above-mentioned, or merely, perhaps, for tranſlating them.* Without ſufficient Reaſon.

WITH regard to the leſſer Charts, he finds great Fault with thoſe I have given of Teneriffe *and* Madera. *I gave them as I found them in our* Engliſh *Pilots, without warranting them. If he has produced better, he may thank his Situation at the Marine-Office, that hath afforded him* Helps which, he ſays, no Perſon before him ever had, *and with which, he owns, any-body elſe might have ſucceeded as well as himſelf* [e]. *Will he then blame an Author for not giving what he could not come-at, or none had Recourſe to but M.* Bellin? *Neither need he vaunt, if his Plan of the City and Road of St.* Jago *is better than that I have taken from* Dampier: *Could he himſelf have produced a better, before he got his from the* French *Engineer* [f]? *The like Queſtion may be aſked with regard to his Plan of the* Iſle of Goree, *and its Fortifications, which was communicated to him by the Directors of the* India *Company. After all, what are his two or three Plans in Compariſon of the many produced by me, far ſuperior to any Thing it was in his Power to produce? However, I do not blame M.* Bellin *for letting our Draughts ſtand, to ſhew the Difference between his and them, or the Neceſſity there was,* that he ſhould not copy us blindly. Finds Faults without Cauſe.

M. BELLIN *has added two other Charts, one of the* Iſle of Arguin, *and the adjacent Coaſt* [g]: *The other of the* Canary Iſles; *which laſt, he ſays, is drawn from a prodigious Number of Remarks, and different from all former Charts* [h]. *With regard to theſe, he tells M.* Prevoſt, *that he* would be aſtoniſhed at the Errors into which the Authors of them have fallen. *Among the reſt he alledges, that they place* Palma *and* Gomera *fourteen Leagues aſunder, inſtead of eight or nine at moſt* [i]. *This, no Doubt, is a very great Error: But if in the Number of former Charts, he includes ours of the Weſtern-Coaſt of* Africa, *which in that Part (depending on the Accuracy of him and his Materials) is copied from his of the Weſtern-Ocean, it is a Critique on himſelf: For he there makes the Diſtance above twenty Leagues. It is not ſo aſtoniſhing, that M.* Bellin *ſhould fall into ſo groſs a Miſtake, as that after ſuch a Miſtake he ſhould be aſtoniſhed at the Miſtakes of others; who, in this Particular, had not erred near ſo much as himſelf.* Blind to his own

[a] *In* 1739. [b] *The Chart here meant is that of the Eaſtern-Ocean, including the Coaſts from the* Cape of Good Hope *to* Kanton *in* China, *with the adjacent Iſlands.* [c] *See his* Obſervations ſur la Conſtruction de la carte de l'ocean oriental. 1740. [d] Lett. p. 3. *His Words are,* Dans le ſecond volume de votre Recueil des voyages. [e] Ibid. p. 3. [f] Ibid. p. 8. [g] Ibid. p. 7. [h] Ibid. p. 6. [i] Ibid. p. 7.

Uncandid Reflexion.

M. BELLIN *says, he has made many Alterations in our Chart of the* Cape-Verde *Islands, and drawn that of the Course of the* Sanaga, *or* Senegal, de novo. *I should be glad to see them corrected, if requisite, were they my own Surveys: But think he does not act candidly in saying, that the last, which he acknowledges to be taken from one published by* Labat, is not well executed by the *English, without assigning his Reasons. As this is an exact Copy elegantly engraved from the Draught of that River, surveyed by a* French *Engineer, and given by M.* D'Anville *above-mentioned (eminent for his Skill in the Science) with only the Addition of a Scale, and the Bounds of the neighbouring Countries, the Charge is the more surprizing. Would M.* Bellin *out of Prejudice, or a Disposition to find Fault, represent us as not having the Skill even to copy a Chart? If that be the Case, we must be wretched Bunglers indeed! Or did M.* Bellin *condemn our Performance to excuse that of his Countryman; whose Name being in the Title of the Chart, he ought to have mentioned instead of* Labat's? *Even in this Case it is a flagrant Instance of Partiality to the supposed Society of* English *Authors, without any Token of Friendship in Reality to M.* D'Anville, *whom in Effect he wounds through their Sides.*

His Charts examined,

HAVING gone through M. Bellin's *Censures, it might, in my Turn, be allowed me to criticise his Performances; but as I have yet seen no more than Copies of his five additional Charts, which are inserted in the second Volume of the* Hague *Edition, I can speak at present only to them. With Regard to these Charts, which he says were* drawn with all possible Care, *and* the Situation of many Places settled by actual Observations [a], *I must observe, first, that they differ in an infinite Number of Places from his Chart of the Oriental Ocean, both as to the Figure and Extent of the Parts. I am far from thinking this great Variation from himself any Discredit to M.* Bellin, *since new Discoveries make Alterations necessary: On the contrary, I always condemned the Practice of* Nicholas Sanson, *who, we are told, would not correct his Maps, though labouring under the grossest Errors,* for sake of preserving Uniformity [b]. *But as it may be presumed he will grant, that his Chart of the Eastern-Ocean must be very faulty in case his new Charts be correct, I hope it will induce him to think, that a Chart may be very faulty, and yet the Hydrographer not at all liable to Blame. For, indeed, all that can be expected from an Author, is to make Use of the best Materials to be had; and while he does that, he effectually secures himself from Censure, however faulty his Productions may prove to be.*

Differ from each other.

That of the *China* Coasts

ON this Principle, methinks, M. Bellin *should have been more favourable to me, whatever he was to my Charts or Plans: And even with Regard to them, before he was determined to censure any of my Performances, he ought to have been sure that his own were unexceptionable: But notwithstanding his Readiness to find Fault with mine, and the extraordinary Opinion he seems to have of his own, I will venture to say, that the worst of my Charts is better than the last of his supplemental Charts, wherein the Coasts of* China, *and* Korea, *are exhibited in a most deformed Manner. So far from being executed* with all possible Care, *or the* Situations settled by actual Observations, *that not the least Propriety is observed as to the Figure of the Parts, or Longitude of Places, except those of* Kanton *and* Pe-king. *The Space between* Pe-king, *and the most Eastern Shores of* Korea *(which seems to be turned the wrong Way in his Chart) is contracted above three Degrees in fourteen more than it should be, and the intermediate Seas in Proportion. In short, with Regard to this Chart at least, it might justly be said, that M.* Bellin *took his Materials* from this Place and the other, without much Choice: *For although he does not name his Authorities, yet by comparing it with the Map of* China *and* Korea, *at the Head of this Volume, it will appear to be a very inaccurate or random Eye-Draught of the Jesuits Maps, with respect to the Coasts of those two Countries, altered for the worse throughout, from other Quarters.*

Very erroneous.

FOR

[a] Lett. p. 6.

[b] *See* Mem. pour servir Hist. des Hom. illust. vol. 10. p. 13, *& seqq.*

Instance. *FOR Inſtance, the Iſland of* Chu-ſhan [a], *which, in their Map of* Che-kyang, *lies without the Bay of* Hang-chew, *near the Coaſt on the South-Side, in thirty Degrees of Latitude, is placed in his a Degree higher on the North-Side of the Bay. Could M.* Bellin *think the coarſe Meaſures, or Eſtimations of Mariners were more to be depended on than actual Surveys, and Situations determined by Aſtronomers? Could he think the late Obſervations of the Jeſuits on the Coaſt of* China *leſs accurate than the unverified Obſervation of the Jeſuit* Spinola *above an hundred and thirty Years ago, for the Longitude of* Nanga-ſaki [b], *by which he ſeems to have regulated his Chart? In caſe he did, ought he not to have marked that Place at leaſt, to apologize for his diſſenting ſo-widely from thoſe Miſſioners? Whatever his Opinion may be in theſe Reſpects, the Chart in Queſtion is a Proof, that the Draughts found in the Royal Office are not ſufficient to produce accurate Charts: For ſurely ſo-bad a Chart could never have come from the Hands of M.* Bellin, *if he was really in Poſſeſſion of* ſuch Helps as none before him ever had. *I, who do not pretend to ſuch extraordinary Advantages, would yet engage to draw a far more correct one.*

Deſign of that Chart. *IN ſhort, the chief Thing M.* Bellin *ſeems to have had in View by this Chart, was to introduce the Iſland of* Japan; *which is copied from a larger of his own Drawing* [c], *publiſhed in* Charlevoix's *Hiſtory of that Country. In this Part M.* Bellin *has taken more Pains than uſual, or even neceſſary, exhibiting the inland Mountains, as well as the Places along the Coaſt, in ſome Detail; while the reſt of the Chart is but barren of Names, as if ſome deſart Coaſt was repreſented. It is Pity the* Dutch *Editor or Editors were not as kind to this Chart of his, by ſupplying that Defect, as they ſay they have been to the reſt* [d].

Want Uniformity. *IT has ever been a Cuſtom with me in drawing Maps or Charts, to mark with Lines under the Names, ſuch Places whoſe Situations had been determined by Aſtronomers. M.* Bellin *has done the ſame by Stars and Croſſes, in his large Charts of the ſeveral Oceans: But in his five additional Charts, as if determined to be defective rather than agree with me, he has not marked one out of the* many *he talks of, except that of* Pondicherry, *the chief* French *Settlement in the* East-Indies. *In Conſequence of this Omiſſion, they are deſtitute of that Authority which ought always to accompany ſuch Productions; and want the Uniformity which, in my Opinion, ought to be kept-up in reſpect of mine. May it not be ſaid, on this Occaſion,* that his Charts are not well executed? *However, it muſt be confeſſed, it would have been worſe to have marked Places as laid down from Obſervations, which were in reality inſerted at random.*

Apology for this Critique. *I cannot be blamed, I preſume, for this ſmall Critique, even by Mr.* Bellin *himſelf, after having treated me ſo ſeverely, when, perhaps, my greateſt Fault was only in copying too-much after him. However this be, I muſt do my Antagoniſt the Juſtice to own, that I think the Public is in the main much indebted to him for his hydrographical Performances; and ſhall for the future acknowledge the Obligation, whenever I take from him, as readily as I have hitherto done. I have only farther to acquaint him, that he has but a ſingle Perſon to deal with, and not ſeveral; as by always uſing the Words* the Engliſh, *and the* Engliſh Authors, *both he and* Abbé Prevoſt *would perſuade themſelves, or rather their Readers: For although in my Prefaces, according to a common Cuſtom, I generally ſpeak in the firſt Perſon plural, yet I ſometimes uſe the firſt or third Perſon ſingular; as in that to the firſt Volume, and frequently in the Work itſelf, particularly in the laſt two or three Paragraphs of my Introduction.*

The Author miſrepreſented. *FOR all this, M.* Prevoſt, *with what View, or upon what Authority I cannot imagine, not only repreſents me as a Kind of Secretary to a Society of Collectors, whoſe Copy I reviſe and fit for the Preſs; but what is ſtill more ſurprizing, makes me declare the ſame myſelf, in a Paragraph,*

[a] On the Eaſtern Coaſt of *China*, where the *Engliſh* had for ſome Time a Factory. [b] He found it one Hour, or fifteen Degrees, more East than *Ma-kau*, near *Kantoon*, in *China*. [c] The Foundation of it ſeems to be *Kempfer*'s. [d] We muſt take Notice here, that, according to them, the Animal of which we have given the Print, vol. 2. p. 348, is not the *Buffalo*, but the *Urok*. See their Preface.

which he has added as mine to the End of the Introduction, in the following Words, "*I give no* "*farther Account of my Plan, becauſe at the Head of each Part of the Work I ſhall take-care to* "*explain my Deſign by other Introductions. The Undertaking is of great Importance, ſur-* "*paſſing, without doubt, the Abilities of a ſingle Author; and the many Attempts of the* "*ſame Kind, which to this preſent remain unfiniſhed, ſufficiently evince the Difficulties to be* By *Abbé Prevoſt.* "*encountered with: But I hope for more Succeſs, with the Helps which I employ to ſurmount* "*them. A Society of laborious Gentlemen,* to whom I only lend my Pen, *and who have* "*the Eyes of a very judicious Nation upon them, will be reſponſible to me for the Order and* "*Fidelity of the Materials; and I dare engage they ſhall not ſuffer from any Alterations I* "*ſhall make in their Stile: Depending moreover on the Indulgence of the Public towards a* "*Scheme, the Execution of which has been long wiſhed for, I enter upon the Work with that* "*Confidence, which a Perſon ought to have in his Subject, when Utility is united with Enter-* "*tainment; and from the good Inclination of his Readers, when convinced that nothing has* "*been ſpared both to inſtruct and pleaſe them*[a]."

The Matter of Fact. *WITHOUT making any farther Reflexions on a Kind of Conduct that would be deemed very unwarrantable on this Side of the Water, I ſhall only beg Leave to ſet* Abbé Prevoſt *right in his Miſtake, by informing him, that a ſingle Perſon projected and executed the Plan ſo far as hath been publiſhed of it: That he had no Partner in it, nor was any Way aſſiſted farther than by the Perſons whom he employed to extract Materials as he directed: That this Courſe held only with regard to the two firſt Volumes; and that the two laſt, which he reckons the moſt compleat and difficult Part of the Work now finiſhed, were performed with the Help only of an Amanuenſis.*

ALL the Amends I ſhall deſire of M. Prevoſt *is, that as he has given my ſpurious Confeſſion, he will alſo give my genuine Retractation; and that as he has publiſhed M.* Bellin's *Reflexions, he will alſo publiſh my Defence: That in theſe two Reſpects at leaſt I ſhall find the* Paris *Edition as juſt to me, as I make no doubt I ſhall find the Edition of the* Hague; *and that for the future he will not give his own Senſe of Things for mine.*

Apology for changing *IT may be preſumed, that enough has been already ſaid in the Preface to the ſecond Volume, to ſatisfy ſuch of our Subſcribers as might have expected, in theſe four Volumes, a Collection of Voyages and Travels to all Countries throughout the Globe. This was, indeed, the firſt Propoſal: But many Gentlemen fearing, from the narrow Bounds allowed to our Materials, that ſeveral Authors of Value would be left-out, and others too-much contracted; apprehending likewiſe, from the many Numbers of the firſt Volume publiſhed without any Maps or Prints, that the Work would be defective in thoſe Reſpects; for theſe Reaſons they applied to us in-time, to give them, in the propoſed Number of Volumes, the compleat Subſtance of all the beſt Authors, with the proper Accompaniments, to a few Parts of the World, rather than imperfect Abſtracts of a few to all Parts, as had been done in ſome former Collections, which for that Reaſon were in no Eſteem with Perſons of Diſcernment and Taſte.*

Our firſt Plan. *THIS Courſe, they judged, would be moſt agreeable to the Generality of Subſcribers, as well as themſelves; and, in Effect, it ſeems to have been the Caſe: For, upon altering our Scheme, we not only met-with very few Complaints, but, on the contrary, received many Letters approving of our Performance, and exhorting us to perſevere in the new Method. Should there ſtill be any who are offended at the Change of Meaſures, it is hoped they will conſider, that if we have not punctually anſwered their Expectation one Way, we have made them ample Amends the other, by giving more complete Deſcriptions of Countries, and a much-greater Number of Maps, Plans, and Cuts, than could have been the Caſe had we purſued our firſt Deſign.*

BOOK I.

A Description *of* CHINA:

CONTAINING

The Geography, with the civil and natural Hiſtory.

INTRODUCTION.

Introduction. THE Authors, who have treated of *China*, are very many. Thoſe who would ſee pretty compleat Catalogues of them, may conſult two late Writers [a]; but the principal among them, and ſuch whoſe Relations extend to the whole Country in general, are thoſe we have already made Extracts from: Namely, *Nieuhof*, *Montanus*, *Navarette*, *le Comte*, *Gemelli*, and *du Halde*. To theſe, of whom ſome Account has been given, muſt, however, be added the Relations of *Nicholas Trigautius*, *Alvarez Samedo*, b *Martin Martini*, and *Gabriel Magalhaens*, all four Jeſuits. The firſt is an Account of *China*, and the Travels of ſeveral Jeſuits through it, intermixed with the Hiſtory of the Miſſion. It makes a very thick Octavo, and is intitled, *A Hiſtory of the Chriſtian Expedition to the Kingdom of* China, *extracted from the Memoirs of* P. Math. Ricci. It was written originally in *Latin*, and publiſhed at *Rome* in 1615. The next Year an Edition of it in *French* came-out at *Lyons*, c and another at *Paris*, in 1618. *Trigautius*, or *Trigault*, hath added many Remarks of his own to ſupply Omiſſions. He had been long in *China*, had ſeen ſix Provinces, and underſtood the Language, therefore more capable of giving a full and exact Relation of Matters than moſt of thoſe who had publiſhed Remarks before him. Theſe, in his Preface, he accuſes with committing groſs Errors, not excepting ſome of his own Society, but ſuppoſes they related Things on the Credit d of Perſons who impoſed on them through Ignorance or Deſign.

Introduction.

Authors treating of China.

Trigautius.

SAMEDO's Hiſtory of the Empire of *China* was collected from the Memoirs and Obſervations of that Jeſuit, (who had reſided twenty-two Years in that Country) and publiſhed in *Portugueze* by *Manoel de Faria y Souſa*, the famous Commentator on the Poet *Camoens*, and Author of the *Portugueze Aſia*, from whence we have given conſiderable Extracts in our firſt Volume. It was tranſlated into *Engliſh*, and publiſhed at *London*, 1655, in Folio, illuſtrated with Maps and Cuts. *Montanus* hath compiled his Deſcription of *China* chiefly from *Samedo* and *Martini*.

Samedo.

THIS laſt Author publiſhed two remarkable Works relating to *China*; one a geographical Deſcription in *Latin*, under the Title of *Atlas Sinenſis*, in Folio, taken from the *Chineſe* Books, with large particular Maps of the Provinces. There is added, by Way of Introduction, a general Account of the Country and its Inhabitants; their Manners, Cuſtoms, Arts, and Manufactures. *Thevenot* has inſerted a Tranſlation of this Work in the third Part of his Collection of Voyages, but has given only the general Map of *China*. *Nieuhof* gave a Sort of Abridgment of the Deſcription of the Provinces, which *Montanus* has publiſhed more at large. This Deſcription of *Martini*, who was long in *China*, and travelled over ſeven Provinces, is certainly a very

Martinius.

[a] *Jo. Alb. Fabricius's Salutaris lux Evangelii*, &c. *Hamburg*, 1731, in Quarto, where there is a compleat Catalogue of the Jeſuit Miſſioners Letters; and the Preface to the *Hague* Edition of *du Halde's China*, in four Volumes Quarto, 1736.

Introduction. noble Performance; but his Maps must give Place to the late more accurate Surveys of the Jesuits, published by *du Halde*. This Author likewise charges his Chorography with many Mistakes and Exaggerations, as being taken chiefly from the *Chinese* Writers, who often magnify Things beyond the Truth. For this Reason, in the following Account of the Provinces, we have chosen to have Recourse almost wholly to that found in *du Halde*; which was compiled by those who made the above-mentioned Surveys, and consequently had seen every thing they describe with their own Eyes: However, their Description is not so compleat as *Martini*'s, having described only the Cities of the first Rank in each Province; whereas the other hath descended to those of the second and third: Yet, when any of those of the two last Ranks appear to be more than ordinary remarkable, they take Care to mention them. *Martini*'s second Book above-mentioned is his *Sinicæ Historiæ decas prima*, containing the Affairs of the Empire under its Monarchs from their Original to the Time of Christ. It was first published at *Amsterdam* in 1659, in Octavo. To this may be added, his Relation of the Conquest of *China* by the *Tartars*. He published some other Pieces, and afterwards returned to *China*, where he died in 1662 [a].

Magalhaens. THE Work of *Magalhaens*, the last of the four Authors, was published at *Paris* in 1688, in Quarto, under the Title of *Nouvelle Relation de la Chine*, and the same Year a Translation printed at *London* [b] in Octavo. This Jesuit was of the same Family with the famous Circumnavigator of that Name. He understood the *Chinese* Language very well, and had travelled over the principal Parts of *China* from 1640 to 1648, when he was carried to *Pe-king*. There he staid twenty-nine Years at the Court till his Death, in 1677; without stirring thence, unless once that he was sent to *Makau* by the Emperor's Order. "So that, says the "Editor, although the Description which he gives "of the Palace does not agree with that we "find in the *Dutch* Embassy to *China*, yet there "is all the Reason in the World to prefer his "Testimony." He makes no Scruple to correct *Martini*, where he knows him to be in an Error; and speaks with Moderation of many other Things, where the Authors had stretched too far in their Remarks. It seems to have been his Design to supply all the Defects which he found in those other Tracts, and whatever else was wanting; in order to give the Public some compleat Knowledge of *China*: For the Matters contained in his Relation have either been wholly omitted by all former Authors, or else but very slightly touched. Thus far the *French* Editor. Introduction.

Account of the Author. WE learn from his Life [c], written by *Lewis Buglio* [d] the Jesuit, his inseparable Companion for thirty-six Years, that he was born in 1609. He escaped several Dangers in the first Years of his Mission in *China*. The first Time was within two Years after his Entrance into the Empire, when being in the Province of *Se-chwen* with *Buglio*, the *Bonzas* accused them of Rebellion; and the chief *Mandarin*, fearing a Revolt, ordered them to be bastonaded: But they escaped by the Protection of other *Mandarins*. Shortly after, he with other Missioners fell into the Hands of that bloody Rebel *Chang hyen chung*, who at first paid them much Respect: But on their Petition to retire, he ordered them to be cut in Pieces; which Sentence had been executed but for the Intercession of his chief General, who was his adopted Son. At the Beginning of the Regency of *Kang hi*'s four Guardians, having been accused by some Footmen belonging to a Christian *Mandarin*, who was put-out of his Employment, that he had given Presents in Favour of their Master, he was twice put to the Rack, by squeezing both his Feet in a Press, a dreadful Torture, and then condemned to be strangled: But the Regents, as well for that he was a Stranger, as because they were satisfied of his Innocence, acquitted him. Three Years after, in the great Persecution which all the Missioners suffered, he was apprehended with others at *Pe-king*, and loaded for four Months with nine Chains [e], three about his Neck, three about his Arms, and three about his Legs. He was also condemned to have forty Lashes, and to be banished for Life into *Tartary*: But a great Earthquake, says our Author, which happened at that Time [f], freed them. After this he made several Nicknacks to please *Kang hi*, as before he had done for his Father. Within three Years of his Death, the Wounds made in his Feet by the Rack broke-out afresh; and for two Months before he died, those Pains were accompanied with Defluxions, that hindered Respiration: So that he was constrained to sleep sitting in a Chair, for fear of being choaked. He was buried with great Honour by the Emperor, who himself wrote his Elogy [g]. *His Sufferings and Escapes.*

Form of the Book. WITH regard to his Account of *China*, we are informed by the *French* Editor, that at his Death he left a *Portugueze* Manuscript behind

[a] See Vol. III. *p.* 437. e. [b] Intitled, *A new History of* China, *containing a Description of the most considerable Particulars of that vast Empire.* It takes-up three hundred and fifty-two Pages. [c] Inserted at the End of his Relation of *China*. [d] This *Buglio* is, probably, the Author of the Narrative of the *Dutch* Embassy inserted in Vol. III. *p.* 483. [e] The Author, in his Relation, *p.* 207, says, that *John* nine *Adam*, *Lewis Buglio*, *Ferdinand Verbiest*, and himself were imprisoned for two Months, and bound each with Chains. [f] This Forgery has been detected by *Navaretts*. See Vol. III. *p.* 506. [g] See *Maguillans*'s History of *China*, p. 340, & *seqq*.

him,

Introduction. him, intitled, *The twelve Excellencies of* China. This, *Couplet* the Jesuit brought to *Rome*, and presented to the Cardinal *d' Estrees*; who put it into the Hands of the Editor upon his Offer to translate it into *French*. He did so, and published it under the Title of *Nouvelle Relation de la Chine*, which he judged more suitable than the other; because the Narrative was not confined to twelve Excellencies, and the Articles under that Division were not proportionable: For whereas some of those Excellencies took-up more than thirty or forty Pages, others did not fill above one or two. He therefore thought it better to divide it into twenty-one Chapters, and give them Titles answering to their respective Subjects. He likewise added Notes, either to supply Defects, or illustrate Obscurities, without making any Alteration in the Text.

The Contents. THE Contents of the Chapters, as the Editor has divided the Book, are as follows: 1. The Names given to *China* by the Natives and Foreigners. Also of the Countries of *Katay* and *Mangi*. 2. Extent and Division of *China*, Number of walled Towns, and other Particulars from *Chinese* Authors. 3. Antiquity of the Empire, and high Opinion the *Chinese* have of it. 4. Characters and Language of *China*. 5. Genius, and principal Books. 6. Civility and Politeness, with some of their Feasts. 7. Public Works; particularly, the great Canal. 8. Their great Industry. 9. Their Navigation. 10. Great Plenty of all Things. 11. Nobility of *China*. 12. The wonderful Government, Orders of *Mandarins*, and Council of State. 13. Supreme Tribunals, civil and military. 14. Other Tribunals of *Pe-king*. 15. Tribunals and *Mandarins* of Provinces. 16. Grandeur of the Emperor, and his Revenues. 17. Description of *Peking*, and Walls of the Palace. 18. The twenty Apartments of the Palace. 19. The twenty particular Palaces therein. 20. Other Palaces and Temples within the same. 21. The seven imperial Temples in *Pe-king*; and how the Emperor appears in public. To these are added, the Life of the Author, written by *Buglio*.

THIS Relation is embellished with a large Plan of *Pe-king*, and the Palace. But, by the Notes to the seventeenth, twentieth, and twenty-first Chapters, it appears to be the Work of the *French* Editor, not of *Magalhaens* himself. Besides, it differs much from the Draughts given by *Gaubil* and *Du Halde*.

Kau's Description of China. WE must not forget to mention *a short Description of the vast Empire of* China, *by* Dionysius Kau, added at the End of *Isbrand Ides*'s Travels through *Tartary* to that Country [b]. This Ambassador, in a Letter to Burgo-master *Nicholas Witsen*, (to whom he communicated the Relation) observes, that *Kau*, from whom he had the short Description, was a *Chinese* of Integrity and Credit, born at *Kanton*; and that having embraced the *Romish* Religion, he travelled through *Siam* and *India*, where he professed Surgery [c]. The *Dutch* Translator, in a Postscript, informs us, that he made use of two Manuscripts, one written in barbarous and unintelligible *Latin*, the other in somewhat better *German*; but knows not how the Work came into those Languages. He adds, that the two Copies agreed, except in the Expression of Numbers, or some other inconsiderable Matters; and that both were frequently obscure: That where they were wholly unintelligible, or too widely differed from each other, he had left Blanks, or supplied the Defect by Extracts from the best Authors on the Subject; and, that he had illustrated the dark Places with Notes.

THIS short Work is divided into twenty-five Chapters: The first eighteen contain the Description of the Provinces. The nineteenth treats of the Natives and Christians there. The twentieth, of the great Wall, Rivers, Shipping, Bridges, Sluices, Ports. The twenty-first, Religions of *China*. The twenty-second, *Chinese* Manners and Ceremonies. The twenty-third, Trees and Fruits. The twenty-fourth, Countries and Islands round *China*. The twenty-fifth, last Race of *Chinese* Emperors: *Dutch* Translator's Postscript.

Use of Du Halde. ALTHOUGH we have made use of all the above-mentioned Authors, yet, it must be confessed, it hath been done, in a good Measure, under the Guidance of *Du Halde*, who had before extracted from them what appeared most worthy of Credit. We have already given an Account of that Jesuit's Performance so far as relates to *China* [d]. It remains therefore, only to add here the Names of the Missioners, from whose Memoirs, either printed or Manuscript, his Work was compiled; *viz. Martin Martini*; *Ferdinand Verbiest*; *Philippe Couplet*; *Gabriel Magalhaens*; *Jean de Fontaney*; *Joachim Bouvet*; *Jean François Gerbillon*; *François Noel*; *Louis le Comte*; *Claude Visdelou*, present Bishop of *Claudiopolis*; *Jean-Baptiste Regis*; *Joseph-Henry de Premare*; *François-Xavier Dentrecolles*; *Julien-Placide Herviеu*; *Cyr Contancin*; *Pierre de Goville*; *Jean-Armand Nyel*; *Dominique Parrenin*; *Pierre Jartoux*; *Vincent de Tartre*; *Joseph-Anne Marie de Mailla*; *Jean-Alexis Gollet*; *Claude Jacquemin*; *Louis Porquet*; *Emeric de Chavagnac*; *Antoine Gaubil*; *Jean Baptiste Jacques*. But it is to be observed, that *Du Halde* does not quote his Authors regularly, but only at the Head of large Articles, or when he introduces some long Description.

[a] It begins at Page 115, and ends with the Book, containing ninety-five Quarto Pages. [b] *Isbrand Ides*'s Travels, in the Note, *p.* 115, compared with *p.* 210. [c] See Vol. III. *p.* 513. [d] In the *Lettres Edifiantes*, and elsewhere.

Introduction. Introduction.

CHAP. I.

A GEOGRAPHICAL DESCRIPTION *of* CHINA.

INTRODUCTION.

A general View of China: *Its Name, Situation, and Extent. Soil and Produce. Trade and Curioſities. Public Works. Cities numerous. In Form, and Buildings, all much alike. Diviſion into Provinces. Their mutual Situation.*

Names given China

IT is doubtful whence the Name of *China* came to *Europeans*, as not being uſed by the Natives. *Magalhaens* obſerves, that, in *Bengal*, it is called *Chin*; and *Navarette* thinks, that b Name obtained there on Account of the Silk which is called *Chin*. The firſt of thoſe Authors judges it might be derived from the Family of *Chin*, which reigned one hundred and ſixty-nine Years after Chriſt; or, rather, from that of *Sin*, or *Tſin*, which governed two hundred and forty-ſix before the Chriſtian Æra. This ſeems the more probable of the two, becauſe *Tſin-ſhi whang-ti*, its Founder, having, by his Fleets, conquered *Bengal*, the *Greeks*, among whom we c find it ſoon after, might have brought it from *India*.

By Strangers,

MAGALHAENS ſays, the Weſtern *Tartars* call *China*, and the *Chineſe* themſelves, *Hara Kitay* [a], or *Black Barbarians*; from them the *Ruſſians* name it *Kitay*: But, that the Inhabitants of the Kingdom of *Sabamalaha* [b], who are *Mohammedans*, bordering on *Shen-ſi*; thoſe of *Tumet* or *Tibet*, and the People of the Kingdom of *U-ſan-quey*, bordering on *Se-chwen*, corrupting d the Word, call it *Katay*: So the Merchants of *Indoſtan* name it *Katayo* [c]. But it muſt be obſerved, that *Kitay*, or *Katay*, was a Name given by the *Mongols*, or *Moguls*, only to the North of the *Yellow River* Provinces, and adjoining Parts of *Tartary*, formerly poſſeſſed by the *Kin Tartars*, (of whom the *Manchews*, now governing, are the Deſcendants;) and, that towards the Declenſion of their Empire, ſome of their fugitive Subjects erected a new Monarchy to e the Weſt of their Dominions, from thence called *Si-hya*, or Weſtern *Hya* [d], by the *Chineſe*, but *Hara Kitay* by the *Mongols*. The *Manchews*, a or Eaſtern *Tartars*, before their late Conqueſt, ſtiled it *Nikan Koron* [e], or *the Kingdom of the* Barbarians.

By the Chineſe.

THE *Chineſe* themſelves ſeem to have no fixed Name for their Country; which changes with every new Family that aſcends the Throne. Thus, under the preceding Race of *Chineſe* Emperors, it was called *Tay-ming-que*, or *the Kingdom of great Brightneſs*: But the *Tartars* now reigning term it, *Tay-tſing-que*, or *the Kingb dom of great Purity*; which are the Names or Titles of their reſpective Families, or Races, aſſumed by the Founders. In their Books and Petitions to the Emperor, they generally make uſe of the Word *Shang-que*, *High and Sovereign Kingdom*: The *Literati*, in their Writings, that of *Chung-que* [f]; the *Kingdom of the Center or Middle* [g]: Either becauſe their firſt Monarch fixed his Seat in *Ho-nan*, the middle Province; or, to expreſs its lying in the Middle of barbac rous Nations. They likewiſe, for Grandeur, uſe the Word *Tyen-hya*; which ſignifies, *the Kingdom containing all that is under Heaven*.

Its Bounds,

CHINA is bounded on the North by the great Wall, which divides it from Weſtern *Tartary*; on the Weſt, with *Tibet*, and *Ava*; on the South, by the *Laos*, *Tong-king*, and the *Chineſe* Sea, or Oriental Ocean; and on the Eaſt, by the ſame Ocean. It is, properly, ſeparated from *Tibet* by the Countries of *Koko-nor*, and the *Si-fan*; and d has to the North-Weſt, the Country of *Hami*, *Khamil*, or *Khamul*, a Part of *Little Bukharia*; from whence it is divided by Part of the great Deſart, which, there, is eight or nine Days Journey over.

Site, and Extent.

THERE is ſcarce any Country whoſe Situation and Dimenſions have been better aſcertained than thoſe of *China*; by Means of the Surveys and accurate aſtronomical Obſervations made by the Miſſioners. From whence it appears to lie between an hundred and fifteen and an hundred and e eighty-one Degrees of Eaſtern Longitude [h]; and between twenty Degrees fourteen Minutes and forty-one Degrees twenty-five Minutes of Nor-

[a] Or, *Kara Katay*. [b] Or, rather, *Samalhan* for *Samarkand*, meaning *Bukharia* in general. [c] *Magalhaens*'s Relation of *China*, p. 1, & *ſeqq*. [d] *Hya*, ſignifies Guards: The Guard of the Weſtern Part of the Wall having been truſted to theſe *Tartars*, as that of the Eaſtern was to the *Kin*. [e] *Magalhaens* writes *Nika Korum*. [f] And the *Manchews*, at preſent, *Tulimpa Koron*, which ſignifies the ſame Thing. [g] It alſo ſignifies *the Flower of the Center*. [h] From *Ferro*, juſt twenty Degrees Weſt of *Paris*, and ſeventeen Degrees thirty-five Minutes, of *London*.

thern

Introduction. thern Latitude. Its Shape is almoſt ſquare; being in Length, from South to North, about one thouſand two hundred and ſeventy-one Miles, and one thouſand one hundred and forty in Breadth, from Weſt to Eaſt.

Soil and Produce. To give the Reader a general Idea of this charming Country, we cannot do better than quote the Words of a late Author, who, in his Account of *China* [a], writes as followeth: "*China* is juſtly reckoned the fineſt Country in "the World. It is exceeding fruitful; the b "Mountains themſelves being cultivated to the "Top. It produces, in many Parts, two Crops "of Rice, and other Grain, with Variety of "uncommon Trees, Fruit, Plants, and Birds. "It abounds with Cattle, Sheep, Horſes, and "Game. It is full of large navigable Rivers, "and Lakes, ſtored with Fiſh. Its Mountains "yield Mines of Gold, Silver, Copper, brown "and white, *&c.* with Plenty of Coals every-"where. *Pe-che-li*, *Kyang-nan*, and *Shang-* c "*tong*, are moſtly plain, and cut into infinite "Canals, like *Holland*. Being of great Extent "in Latitude, the Northern Provinces are cold, "the Southern hot; but the Air generally good. "In ſhort, *China* far exceeds all other Coun-"tries for Number of People, Cities, and "Towns; the Morality, Civility, and Induſtry "of its Inhabitants; the Excellency of its "Laws and Government.

Trade and Curioſities. "THE Commerce of *China* conſiſts in Gold, d "Silver, precious Stones, Porcelain, or *China* "Ware; Silks, Cottons, Spice, Rhubarb, and "other Drugs; Teas, japanned or varniſhed "Works, *&c.* The Trade of the Provinces with "one another is ſo very great, it needs no fo-"reign Vent for its Commodities. They reckon "in *China* no fewer than one thouſand four "hundred and ſeventy-two Rivers and Lakes, "and two thouſand ninety-nine remarkable "Mountains. Beſides Oranges, Lemons, and e "Citrons, which came firſt from hence, there "are the Varniſh Trees; the Tallow Tree, and "white Wax Tree, for Candles; the Iron "Wood, of which Anchors are made; not to "mention the Tea Shrub. Here is the Muſk-"Deer, and Man-Ape: The Golden Fiſh, very "beautiful; and the *Hay-ſeng*, very hideous.

Public Works. "IT is the moſt famous for public Works, and "conſequently for publick Spirit, in the World. "The moſt eminent are the great Wall before-f "mentioned, built one thouſand nine hundred "and ſixty Years ago, againſt the *Tartars*: Be-"ing one thouſand ſeven hundred and ſeventy "Miles long, from twenty to twenty-five Feet "high, and broad enough for five or ſix Horſe-"men to travel a-breaſt. The great Canal, *Introduction.* "which extends three hundred Leagues, quite "through the Empire, from *Kanton* to *Pe-king*, "(crouded with infinite Numbers of Barks and "Boats) made four hundred and ſixty-four Years "ſince. They reckon three hundred and thirty-"one remarkable Bridges, one thouſand one "hundred and fifty-nine Towers and triumphal "Arches, erected to Kings, and eminent Perſons; "famous Libraries, two hundred and ſeventy-"two; ſeven hundred and nine Halls, built in "Memory of Anceſtors, or worthy Men; Sepul-"chres, remarkable for their Architecture, ſix "hundred and eighty-eight; thirty-two Palaces "of the Regulos; thirteen thouſand ſix hundred "and forty-ſeven Palaces of the Magiſtrates.

"IT contains one thouſand five hundred and *Cities numerous.* "eighty-one Cities; one hundred and ſeventy-"three of the firſt Rank, two hundred and thirty-"five of the ſecond, and one thouſand one hun-"dred and ſeventy-three of the third Rank, be-"ſides innumerable Boroughs and Villages, many "as large as Cities; two thouſand eight hundred "and twenty-one fortified Places and Citadels, "beſides three thouſand Forts on both Sides of "the great Wall, and three thouſand Towers "for Watch and Centries."

IT hath been already obſerved, that moſt of the Cities of *China* reſemble one another ſo nearly, that to ſee one, is almoſt ſufficient to give an Idea of them all [b]. They are generally ſquare, when the Ground will permit, and incompaſſed with high Walls, defended by Towers, built as Buttreſſes, at convenient Diſtances. They have ſometimes Ditches, either dry or wet. There are, within the Cities, alſo other Towers, either round, hexagonal, or octogonal, and eight or nine Stories high; triumphal Arches in the Streets; tolerably handſome Temples conſecrated to their Saints [c], or erected in Honour of their Heros, and thoſe who have done ſome important Service to the State: In ſhort, there are certain public Buildings more remarkable for their vaſt Extent than their Magnificence.

To this we may add a pretty many large *All much alike.* Squares, and long Streets; ſome very wide, others narrow, with Houſes on each Side, having only a Ground-Floor, or one Story at moſt. There one ſees Shops adorned with *China* Ware, Silks, and varniſhed or japanned Goods: Before the Door of each, there is placed, on a Pedeſtal, a Board, ſeven or eight Feet high, either painted or gilded, with three large Characters thereon, by Way of a Sign. You ſometimes find on it, the Names of two or three Sorts of Goods; and underneath, that of the Shop-keeper himſelf,

[a] See *A ſhort Way to know the World*, or, *A Compendium of modern Geography*, printed in 1745, *p.* 241, & *ſeqq.* [b] In the *Lettres Edifiantes*, p. 400. e. [c] *Du Halde* ſays, to their Idols.

with

The Geography. with these Words, *Pû hû*, that is, *He will not cheat you.* This Kind of double Row of Pilasters, placed at equal Distances, form a Colonade, which makes an agreeable Prospect enough.

THE Beauty of the *Chinese* Cities consisting wholly in these Particulars, it was thought proper to premise this general Account, to avoid making useless and tedious Repetitions in speaking of the principal Cities of every Province. For this Reason we shall confine ourselves to what is most remarkable in them, with respect to their Situation, public Structures, Trade, or Commodities; dwelling more or less upon each Subject, as it may happen to deserve it.

Division into Provinces. *CHINA* is divided into fifteen Provinces; the least of them large enough to make a Kingdom, as each originally was; and some of them contained several little Monarchies. The following Table shews their Extent and capital Cities.

	Length.	Breadth.	Chief Cities.
Pe-cheli	385	239	*Pe-king*
Ho nan	340	330	*Kay-fong fû*
Kyang nan	360	330	*Nan-king*
Kyang-si	350	290	*Nan-chang fû*
Che-kyang	250	190	*Hang chew fû*
Shan-tong	380	225	*Tsi-nan fû*
Shan-si	410	195	*Tay-ywen fû*
Shen-si	540	450	*Si-ngan fû*
Se-chwen	600	400	*Ching-tû fû*
Hu-quang	520	405	*Vu-chang fû*
Quang-tong	560	345	*Quang-chew fû*
Quang-si	375	250	*Quey-ling fû*
Fo-kyen	285	200	*Fû chew fû*
Quey-chew	325	185	*Quey-yang fû*
Yun-nan	455	380	*Yun-nan.*

Their mutual Situation. *SHEN-SI*, *Shan-si*, and *Pe-cheli*, lie to the North, along the great Wall; *Shan-tong*, *Kyang-nan*, *Che-kyang*, *Fo-kyen*, and *Quang-tong*, are maritime Provinces; *Quang-si*, *Yun-nan*, and *Se-chwen*, (which joins *Shen-si*) lie to the South-West and West; *Ho-nan*, *Hu-quang*, *Quey-chew*, and *Kyang-si*, possess the Middle [a].

SECT. I.

Pe-che-li, Cheli, *or* Li-pa fû, *the first Province.*

1. *A Description of the City of* Shun-tyen fû, *or* Pe-king.

Bounds and Figure. Air. Weather. Soil and Produce. Districts and Cities. Shun-tyen fû, *or* Pe-king. *Figure and Extent. Inhabitants, Number. Suburbs. Its Walls. The Gates. Streets and Shops. Buildings mean. Temples stately. The City well governed. Guards of the Streets. Fine Order: Neatness of the Streets. The Observatory. The old Instruments. Gnomon, and Meridian Line. New Instruments: Large, but ill made: Huge Drums and Bells. City-Bell. Other Bells.*

1. *Province,* Pe-che-li.

Bounds and Figure. THIS Province, which is the first, and chief, hath, on the East, the Sea; on the North, the great Wall, and Part of *Tartary*; on the West, the Province of *Shan-si*, from which it is separated by Mountains; and on the South, the Provinces of *Shan-tong* and *Ho-nan*. Its Figure is triangular.

Air. ALTHOUGH this Province does not extend beyond the forty-second Parallel, and its Air is temperate, yet the Rivers are frozen during four Months; that is, from the End of *November* to the Middle of *March*. But, unless a certain North Wind blows, they never feel those piercing Colds the Frost produces in *Europe*; which may be attributed to the nitrous Exhalations, and especially to the Clearness of the Sky, which is scarce ever clouded. Except towards the End of *July*, and Beginning of *August*, which is the wet Season, it seldom rains: But the Dew falls every Night, which, being dried-up at Sun-rise, is succeeded by a very fine Dust, that penetrates every Thing, even Rooms most closely shut; and obliges tender-eyed Travellers to wear a thin Veil over their Faces.

Weather.

Soil and Produce. THE Soil of *Pe-che-li* is even, but sandy, and not very fruitful. As it has but few Canals, Rice is sown dry in many Places, and grows very well; but is somewhat hard to boil. It abounds with all Sorts of Grain, chiefly Wheat and Millet; besides Cattle, Pulse, and Fruit. Its Rivers are full of Fish, especially excellent Cray-Fish; and the Mountains afford a great deal of Pit-Coal; Wood being scarce. Among the Animals, there is a particular Sort of Cats, with long Hair, and hanging Ears, which the *Chinese* Ladies are very fond of. This Province is rendered considerable, by being, as it were, the Rendezvous of all the Riches of the Empire. The Inhabitants are neither so polite, nor addicted to the Sciences, as those of the Southern Parts; but much more robust and warlike. The same may be said of all the *Chinese* inhabiting the Northern Provinces.

Districts and Cities. IT is divided into nine Countries, or Districts, each of which has a *Fû*, or City of the first Rank, whereon several others depend. These Cities are one hundred and forty in Number; of which twenty are *Chew*, or Cities of the second Rank; and one hundred and twenty *Hyen*, or

Vol. IV. Pl. 33 P. 23.

The Geography. Cities of the third Rank: Not to ſpeak of Boroughs and Villages without Number, ſome as large as Cities; but not intitled to that Name, becauſe neither incompaſſed with Walls nor Ditches.

THE nine *Fû*, or Capitals, are, 1. *Shun-tyen fû*, or *Pe-king*. 2. *Pau-ting fû*. 3. *Ho-kyen fû*. 4. *Ching-ting fû*. 5. *Shun-te fû*. 6. *Quang-ping fû*. 7. *Tay-ming fû*. 8. *Yong-ping fû*. 9. *Swen-wha fû*.

Shun-tyen fû, or Pe-king. 1. *SHUN-TYEN FU*, called *Pe-king*, or the Court of the North, from its being the ordinary Reſidence of the Emperors, (removed hither from *Nan-king*, or *the Court of the South*, about the Year one thouſand four hundred and five, to watch the *Tartars*) is the Capital of the whole Empire, ſituated in a very fruitful Plain, twenty Leagues from the great Wall. This City, which is almoſt ſquare, is divided into two. That where the Emperor's Palace ſtands, is named *Lau-ching*, or, *the old City*: It is alſo called the *Tartar* City, becauſe the Houſes are diſtributed among the *Tartars*; as were likewiſe the Lands about it, and the Cities, within a certain Diſtance, exempt from Taxes and Tribute, when the preſent Family was eſtabliſhed on the Throne. The ſecond is called *Sin-ching*, or, *the new City*; it may be termed, the new *Chineſe* City, becauſe, on the above Occaſion, Part of the *Chineſe* retired to it out of the other, which is by much the better peopled of the two [a].

Figure and Extent. *LE COMTE* ſays, this *Chineſe* City is beſt inhabited: That they built it on being driven by the *Tartars* out of the other, which was four Leagues in Compaſs: But that, both together, (without their Suburbs) are ſix great Leagues in Circuit, allowing three thouſand ſix hundred Paces to each League, according to the Meaſurement made of it by the Emperor *Kang hi*'s Command.

PARIS is much finer, but much leſs: For being in Length no more than two thouſand five hundred Paces, if ſquare, it would not exceed ten thouſand Paces in Compaſs; conſequently it is only half as big as the *Tartar* City alone, and but a Quarter as large as all *Pe-king*.

Inhabitants, Number. BUT conſidering that the Houſes there are generally but one Story high, and thoſe of *Paris*, one with another, four, it may have more Lodgings than *Pe-king*, whoſe Streets are much wider, and Palace not half inhabited. Yet he allows *Pe-king* to have more People, becauſe twenty or more *Chineſe* will lie in as little Room as ten *Pariſians*, and from the incredible Number of Men ſeen in the Streets, to which thoſe of *Paris* look like Wilderneſſes. Some have thought both Cities could not contain fewer than ſix or ſeven Millions of Souls: But he accounts for theſe Throngs from the Curioſity of the Inhabitants to ſee Jugglers, Ballad Singers, and other Diverſions; Trains of *Mandarins* and others; Guards of the Streets; the flocking of the Country Folks with their Proviſions; the Mechanics ſeeking Buſineſs out of Doors. He therefore allows but two Millions of Inhabitants, or twice as many as in *Paris* [b].

1. Province Pe-che-li.

Suburbs. BUT the Number of Inhabitants muſt be conſiderably more, if it be conſidered, that every Gate in the Walls, incompaſſing both Cities, has a populous Suburb, equal at leaſt to a large Town; eſpecially one of thoſe on the Weſt, becauſe moſt People, coming from all Parts of the Empire, enter the City on that Side. The *Tartars* and their Troops here are divided into eight Banners, and each City into five Quarters, Wards, or Juriſdictions [c].

Its Walls. THESE Cities are encompaſſed with Walls. Thoſe of the ancient City are ſtately, and worthy the greateſt Capital in the World: But thoſe of the new City, narrow, and no better than the Walls of *Nan-king*, and the Generality of the Cities of *China*. A Horſeman may aſcend the Walls of the old City by Means of a Ramp, or Slope, which begins at a great Diſtance. In ſeveral Places there are Houſes built for a Corps-de-Guard. The Towers are within Bow-ſhot of each other; ſome of them much larger than the reſt, and capable of containing ſmall Bodies of Reſerve [d].

The Ditch. THE Ditch is dry, but very broad and deep. All is regular and as well kept as if they were in continual Apprehenſion of a Siege [e].

The Gates. THE Gates of the City, nine in Number [f], which are high and well arched, ſupport exceeding large Pavilions, nine Stories high [g]. Each Story is furniſhed with Windows and Loopholes; and the loweſt forms a great Hall for the Soldiers and Officers on Guard. Before each Gate there is an open Area, or Parade [h], of above three hundred and ſixty Feet, (which ſerves for a Place of Arms) incompaſſed by a ſemicircular Wall, like that of the City. The Entrance of this Pa-

[a] *Du Halde*'s *China*, vol 1. *p.* 65, *& ſeqq.* This Author makes the new City the *Tartar* City. [b] *Le Comte*'s Memoirs of *China*, p. 54, *& ſeqq.* [c] *Magalhaens*'s Relation of *China*, p. 265, *& ſeq.* [d] *Du Halde*, as before, *p.* 66; and *le Comte*, as before, *p.* 72. [e] The ſame. [f] This muſt be underſtood of the *Tartar* City only, for the other has ſeven, as appears from the Plan: So that, in the Circumference of both Cities, there are thirteen Gates. [g] *Le Comte* ſays, all the Beauty of the Gates conſiſts in a prodigious Height; which, at a Diſtance, makes the fineſt Shew in the World, and is preferable to all the Ornament of *European* Gates. Memoirs of *China*, p. 72. [h] There are no Parades in the Plan of *Pe-king* given by *du Halde*, but they are found in that of *Ching-ting fû*.

The Geography.

rade is never on that Side which faces the great Road into the City: This Road is alſo commanded by a Pavilion like the former; ſo that, as the Cannon of the one can play on the City, the Cannon of the other ſcours the neighbouring Country. Each Gate has a double Pavilion, built in like Manner on the Platforms of the Walls, and furniſhed with Artillery; ſo that there needs no other Sort of Citadel to keep the People in Awe [a].

Streets and Shops.

ALMOST all the Streets are built in a direct Line, the greateſt being about an hundred and twenty Foot broad, and a good League long; and the Shops, where they ſell Silks and China-Ware, adorned with their Signs, which generally take-up the whole Street, make a very agreeable Perſpective [b]. The little Streets run all from Eaſt to Weſt, and divide the Space between the great Streets into equal and proportionable Iſlands [c].

THE infinite Multitudes of People who throng theſe Streets, without one Woman, and the Confuſion cauſed by the ſurprizing Number of Horſes, Cattle, and Carriages, is aſtoniſhing: Perſons of Diſtinction would be ſtopped every Moment, if they had not a Horſeman to go-before and call to the Paſſengers to make Way. People are carried through the Streets in Chairs by Men, or more uſually on Horſeback. One may ſometimes hire a Horſe or Mule the whole Day for ſix or ſeven Pence. There are Books ſold, which give an Account of the Wards, Streets or Places where every Perſon lives, who has any public Employment [d].

Buildings mean.

THE Streets have their reſpective Names, and the faireſt of all, is that called *Chang ngan kyay*, or *The Street of perpetual Repoſe*, already deſcribed [e]. But the Houſes bear no Proportion to the Beauty of the Streets, being neither well-built, nor high enough. All the public Structures, except the Emperor's Palace, are ſo mean, that it would be abſurd to give that Name to the Noblemens Houſes, being but one Story high, like all the reſt: Yet the great Number of Apartments for themſelves and Domeſtics makes ſome Amends for their Want of Beauty and Magnificence; which is owing to a political Cuſtom rather than the Inclination of the *Chineſe*, who love Expence and Grandeur.

THEIR Tribunals of Juſtice are built no better than common Houſes. The Courts indeed are large, the Gates lofty, and ſometimes imbelliſhed with tolerable Ornaments of Architecture; but the inward Rooms and Offices can boaſt neither State nor Cleanlineſs.

1. *Provin* Pe-che-li.

HOWEVER, one frequently meets with ſplendid Temples, raiſed by the Princes and People at a vaſt Expence, and beautified with great Numbers of Images. The Roofs eſpecially are obſervable for the Luſtre of their Tiles, varniſhed with Yellow and Green; for the many curious Figures which are placed on every Side, and the Dragons ſhooting-out at the Corners, painted in the ſame Colours. The Emperors have founded ſeveral within the outward Bounds of the Palace; among which, two more eminent than the reſt were built by the Father of *Kang-hi*, at the Requeſt of his Mother, who was much infatuated with the Religion of the *Lama's* [f].

Temples ſtately.

THE Governor of *Pe-king*, who is a *Manchew Tartar* of Figure, and called *Kyû-men ti-tû*, or *The General of the nine Gates*, in all civil Matters has under his Juriſdiction both the Soldiers and People. Nothing can exceed the Policy obſerved here: It is amazing to ſee the perfect Tranquillity that is maintained among ſuch infinite Numbers; and for ſeveral Years together one ſhall not hear of a Houſe being broke open, or a Man murdered: For it is almoſt impoſſible the Authors ſhould eſcape unpuniſhed.

The City well governed.

ALL the great Streets, which run in a Line from one Gate to another, have Corps-de-Guard. Day and Night there are Soldiers with Swords by their Sides and Whips in their Hands to chaſtiſe all, without Diſtinction, who make any Diſturbance; and to confine whoever reſiſts. The leſſer Streets, which terminate in the greater, have, at the Ends, wooden croſs-barred Gates; through which thoſe, who walk within, may be ſeen by the Corps-de-Guard, placed over-againſt them in the great Streets. There are alſo Soldiers on Duty towards the Middle. The croſs-barred Gates are ſhut every Night by the Guard, and ſeldom opened; except to Perſons with a Lanthorn, who are known, and have good Reaſon for going-out, as to fetch a Phyſician. As ſoon as the firſt Stroke of the Watch is given on a great Bell, one or two Soldiers walk from one Corps-de-Guard to the other; playing all the while with a Kind of Clapper by Way of Notice. They ſuffer none to walk in the Night, and even queſtion thoſe whom the Emperor ſends about Buſineſs: If their Anſwer give the leaſt Suſpicion, they take them into Cuſtody: Beſides, this Guard muſt anſwer every Call of the Centinel who is on Duty. It muſt be added, that

Guards of the Streets.

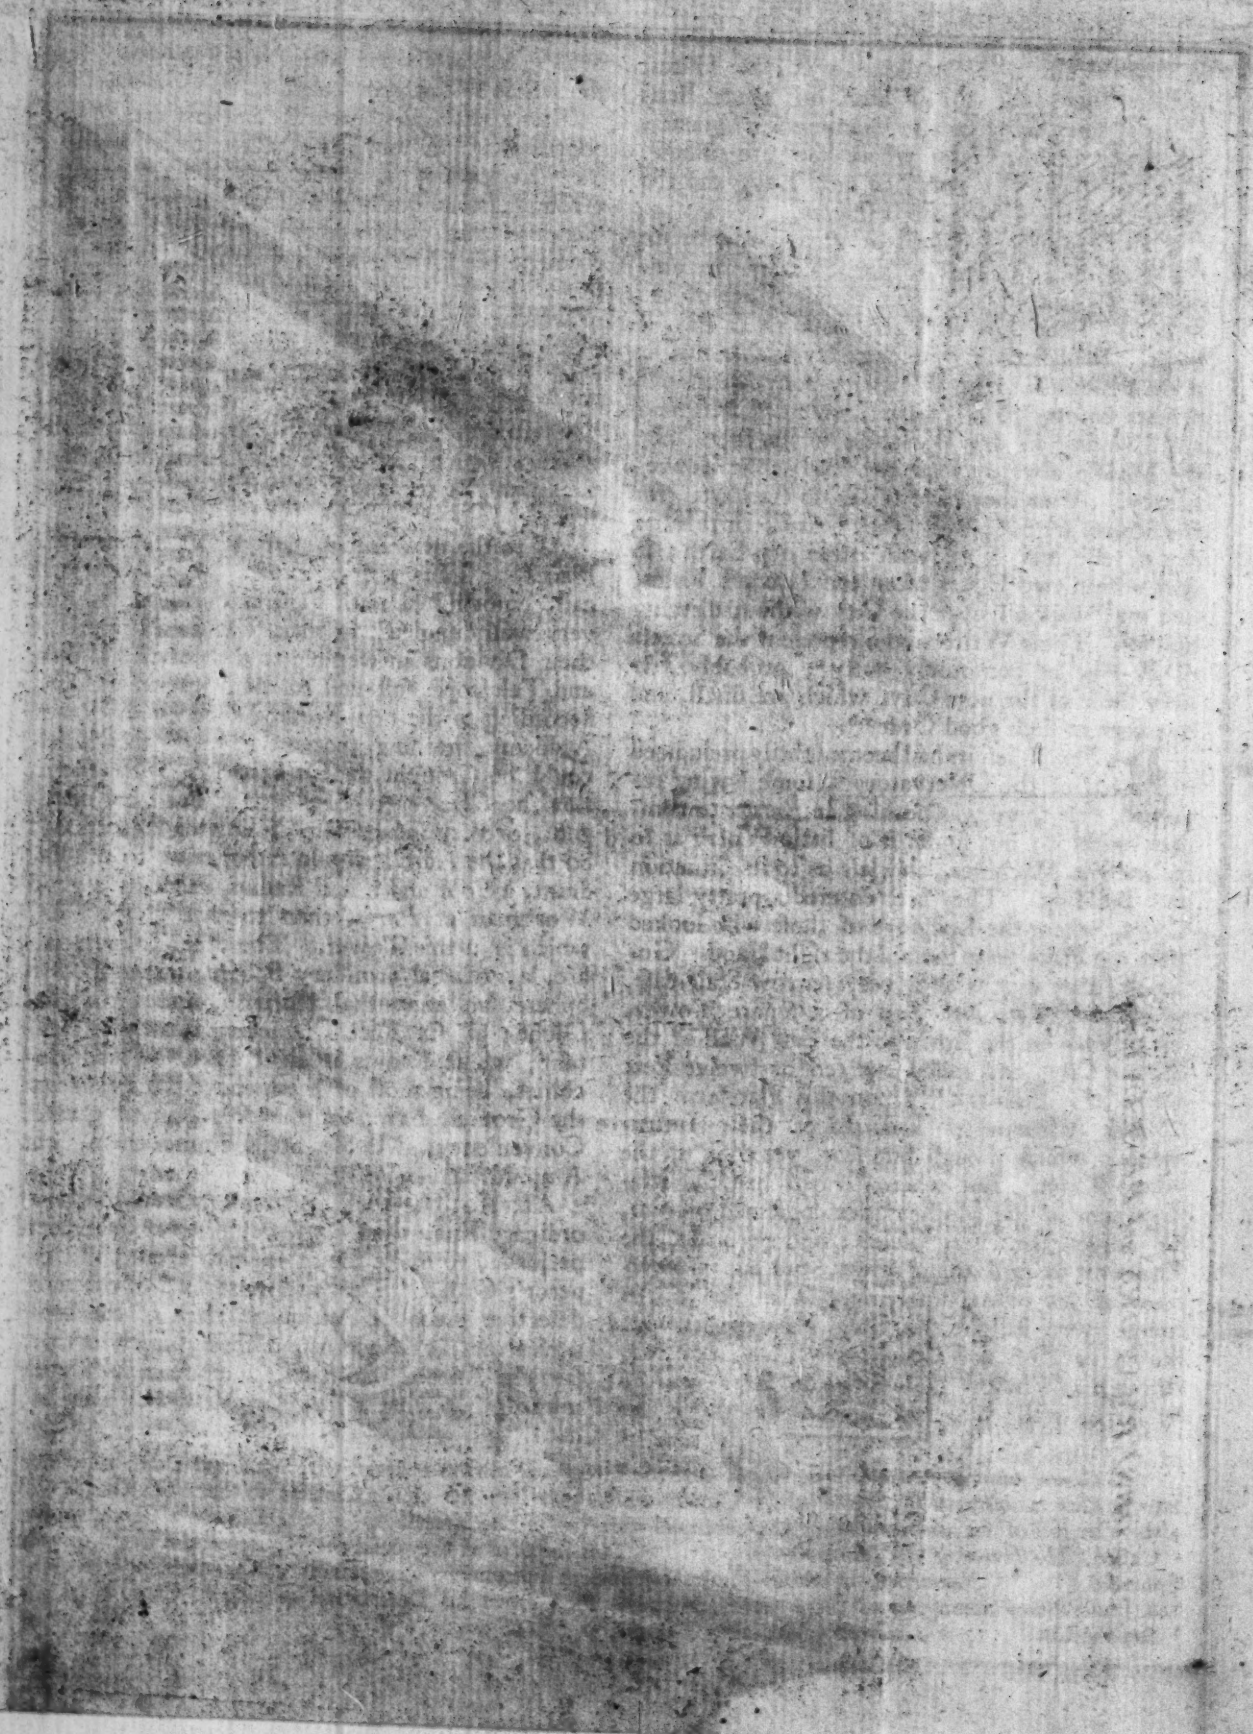
Plate XIX. Vol. IV. p. 8



The Geography. *Fine Order.*

not only the Governor of the City, who is obliged to go the Rounds, arrives when leaſt expected; but alſo the Officers, who keep Guard on the Walls and Pavilions over the Gates, (where they beat the Watch on great Braſs Drums) ſend Subalterns to examine the Quarters belonging to the Gates where they are poſted: The leaſt Neglect is puniſhed next Day, and the Officers of the Guard are caſhiered.

Neatneſs of the Streets.

THE Empire is indeed at great Expence on this Account, for Part of the Soldiers are employed for nothing elſe but to take Care of the Streets: They are all Foot, and their Pay is large. Beſides their watching Day and Night, it is their Buſineſs to ſee that every-body ſweeps the Streets before his Door, and waters it Morning and Evening in dry Weather, while they keep the Middle always clean for the public Conveniency. After they have taken-up the Dirt, (for the Streets are not paved) they beat it, or turning dry it, elſe mix it up with other dry Earth; ſo that within two Hours after the heavieſt Rains, one may walk all over the City without dirtying himſelf. Thoſe Writers who repreſent the Streets of *Pe-king* as commonly naſty [a], probably ſaw only thoſe of the new City, which are ſmall, and not kept in ſuch good Order [b].

The Obſervatory.

THE *French* Jeſuits had been mightily prejudiced in Favour of the Obſervatory [c], ſome having reported, that there was nothing in *Europe* to compare with it; but found it of little Worth as to its ancient Machines, and leſs as to its Situation and Building. They firſt entered a pretty large Court, where the Lodgings of thoſe who looked after the Place were toward the right Hand. Going-in, they met with a very narrow Stair-caſe, which carries to the Top of a ſquare Tower, contiguous on the Inſide to the Eaſt Wall of the *Tartar* City, and raiſed but ten or twelve Feet above the Bulwark. Upon this Plat-form the *Chineſe* Aſtronomers had placed their Inſtruments; which though but few, yet took up the whole Room. But when *Verbieſt* had the Management of the Mathematics conferred on him, he judged them very uſeleſs; and perſuaded the Emperor to pull them down, and put up new-ones of his own contriving. The old Inſtruments were ſtill in the Hall, near the Tower, buried in Duſt and Oblivion. They appeared, through a Window cloſe-ſet with Iron Bars, to be large, well caſt, and ſhaped ſomething like aſtronomical Rings. But they had a full View of a cœleſtial Globe, about three Feet Diameter, that lay in a By-Court: Its Figure was almoſt oval [d]; it was divided with little Exactneſs; and the whole Work very coarſe [e].

1. Province, Pe-che-li.

The old Inſtruments.

THEY have, in a lower Room near that Place, contrived a Gnomon. The Paſſage, through which the Ray enters, is about eight Feet from the Ground, horizontally placed, and formed by two Copper-Plates, which may be moved to and fro, to make the Orifice larger or ſmaller. Under it lies a Table, covered with Braſs; in the Midſt of which, Length-ways, they have ſtruck a Meridian Line, fifteen Feet long, divided by other croſs Lines, which are neither exact nor fine. They have cut little Holes out into the Sides, wherein they put Water, to keep it exactly horizontal; which, for a *Chineſe* Contrivance, ſays *Le Comte*, is the moſt tolerable of any I have ſeen.

A Gnomon, and Meridian Line.

As to the new Inſtruments which poſſeſs their Places [f]: They are of Braſs, large, and well caſt, embelliſhed with Figures of Dragons, and very well diſpoſed; ſo that, was the Niceneſs of their Diviſions anſwerable to that of the Work, and Teleſcopes faſtened to them inſtead of Pins, according to the new Method uſed by the Royal Academy, nothing that we have of this Kind, could be brought in Competition with them. But the *Chineſe* Artificer was either very negligent, or very incapable of following Directions: So that the Author would rather truſt to a Quadrant, a Foot and a half Radius, made by a good Workman at *Paris*, than to that of ſix Feet, which is in this Tower. The other Inſtruments are, a zodiacal armillary Sphere, an equinoctial Sphere, an azimuthal Horizon, and a cœleſtial Globe; all ſix Feet Diameter. Laſtly, a Sextant; whoſe Radius is eight Feet. Theſe Machines, being moſt of them above ten Feet from the Ground, have, for the Aſtronomers greater Conveniency, Marble Steps round them, cut Amphitheatre-wiſe.

New Inſtruments. *Large, but ill made.*

ALTHOUGH theſe Inſtruments ſeem ſo extraordinary fine, the *Chineſe* could never have been perſuaded to make uſe of them without the Emperor's Order. They are more fond of the moſt defective Piece of Antiquity, than of the moſt perfect of the Moderns; differing much in that, ſays the Author, from us, who are in love with nothing but what is new [g]. *Navarette* tells us,

[a] *Le Comte*, among the reſt, ſays, *p.* 58, that the Streets are always peſtered with Mud and Duſt; of which laſt the City is continually covered with a Cloud, which gets into the cloſeſt Cloſets; ſo that one's Goods will always be full of it, notwithſtanding the continual watering of the Streets. [b] *Du Halde*'s *China*, p. 67. [c] Called, *The Tower of the Mathematics.* [d] This looks as if they held the Figure of the Earth to be a Spheroid. [e] *Navarette*, in whoſe Time theſe ancient Inſtruments were ſtanding, ſays, the Engravings on the Braſs Plates belonging to them were admirably good. See his Deſcription of *China*, Chap. 6. *p.* 13. [f] See the Cut. [g] *Le Comte*'s Memoirs of *China*, p. 63, *& ſeqq.*

The Geography. that ſome Mathematicians always watch at Top of this Tower, who obſerve the Motions of the Stars, and remark any Thing particular that appears in the Sky; whereof, the next Day, they give the Emperor an Account. When any Thing unuſual occurs, the Aſtrologers meet, and make their Judgments, whether it portends Evil or Good to the imperial Family [a].

Huge Drums and Bells. IN the imperial Palace, you may ſee Drums and Bells upon the high Towers; and in the City, two other Towers with Drums and Bells. *Magalhaens* ſays, the City-Drum is fifteen public Cubits [b] Diameter; and, that the Palace-Bell is as big as ever any he ſaw in *Portugal:* Yet, that the Sound is ſo loud, clear, and harmonious, that it rather ſeems to be a muſical Inſtrument than a Bell [c]. *Le Comte* cenſures *Magalhaens* for this; ſaying, that what he ſays, muſt be underſtood comparatively; that as much as their Bells exceed ours in Bigneſs, ſo much do ours excel theirs in Sound; that all the Bells he heard at *Pe-king*, ſeemed to make but a dull obſcure Noiſe; and that it could not well be otherwiſe, their [d] Clappers being of Wood [e].

City-Bell. THE City-Bell, for ſtriking the Watch, or Hour of the Night, is, perhaps, the biggeſt in the World. Its Diameter, at Bottom, as meaſured by *Schaal* and *Verbieſt*, the Jeſuits, is twelve *Chineſe* Cubits and Eight-tenths; Thickneſs towards the Cloſure, Nine-tenths of a Cubit; Depth within, twelve Cubits; and Weight, one hundred and twenty thouſand Pound of Braſs. The Editor, in his Notes, obſerves, that before an Account of this Bell came to *Europe*, *Kircher* thought the Bell of *Erfort* to be the greateſt in the World [f], though it is not above one fourth Part as large; weighing only twenty-four thouſand Pounds. But he retracted his Miſtake in his *China illuſtrata*, which our Author had not ſeen. The Sound, or, rather, terrible Roaring of this *Pe-king* Bell, is ſo loud, full, and ſonorous, that it is heard a great Way round the Country. It was carried up to the Tower with Engines by the above-mentioned Jeſuits [g], to the Aſtoniſhment of the whole Court [h]. *Navarette* ſays, this Bell hangs in a lofty and beautiful Tower; and has an excellent Sound. He adds, that in 1668, News came to *Kanton*, that it had rang of itſelf [i]; ſome believed, others gave no Credit to it: If true, ſays he, *China* has a Bell like that of *Belilla* in *Spain* [k].

1. Province, Pe-che-li.

Other Bells. THE Emperors of *China*, together with this extraordinary Bell, cauſed ſeven others to be caſt; of which there are five that ſtill lie upon the Ground. One of theſe juſtly deſerves to be admired, as being all over covered with *Chineſe* Characters; ſo fair, ſo neat, and ſo exact, that they do not look as if they had been caſt, but rather to be written upon Paper, by ſome excellent Writing-Maſter [l]. *Navarette* mentions one, which is within, full of Characters [m]. He ſays, *Adam Schaal* counted ten thouſand, and found the Weight one thouſand two hundred Quintals, (or ſixty Tuns) [n].

THE Editor of *Magalhaens* obſerves, that *Verbieſt*, in his Letters, and *Couplet*, in his Chronology, relate, that theſe Bells were caſt about the Year 1404, by Order of the Emperor *Ching-ſu*, or *Yong-lo*; five of them weighing one hundred and twenty thouſand Weight each; and then, doubtleſs, the biggeſt in the World. But *James Rutenfels* [o] affirms, that there is one in the Palace of the grand Duke at *Moſkow*, which weighs three hundred and twenty thouſand Pound; being ſo prodigious heavy, that no Art of Man can raiſe it, nor hang it in the Tower, called *Ivan-velichi*; at the Bottom of which it lies upon Pieces of Timber [p].

Splendour of the Palace. Other Palaces. The double Roofs. The Terraſſes. Imperial Hall of Audience. The Throne. Two leſſer Halls. Magazines of Rarities. The Gallery.

Site and Diviſion.

THE imperial Palace ſtands about the Middle of the old or *Tartar* City. Its Figure is a long Square. The Eaſt, North and Weſt Sides near equally diſtant from the City-Walls [a]; but its South or Front-ſide, is Two-thirds nearer the South Wall of the ſame City; as appears from the Plan.

THIS Palace is divided into two, the outer and the inner; each encloſed with a ſeparate Wall, called likewiſe, by Authors, the outer, and the inner.

Outer Palace and Wall.

The outward Palace is an oblong Square, about fifteen *Li* (or four Miles three Quarters) in Compaſs. The Wall incloſing it, is called *Whang-ching*, or the *Imperial Wall*. *Du Halde* ſays, it is low and narrow [b]. But *Magalhaens* affirms, it is of an extraordinary Height and Thickneſs [c]. He adds, that it is plaiſtered, both within and without, with red Mortar; and covered with a ſmall coping of varniſhed Bricks of a yellow Gold-Colour, laid with great Art and Exactneſs. The Length of it, from the South to the North Gate, is eight *Chineſe* Furlongs, or two *Italian* Miles [d].

The Gates.

THIS Wall is adorned with large Gates, where there are Guards. Its South-Gate is that of the Palace [e] itſelf, being about an hundred Fathoms from the principal Gate of the City, which looks Southward alſo; and is called by the People *Syen-men*: Although its true Name, which is cut both in *Tartarian* and *Chineſe* Characters, is *Ching-yang-men*, that is, *the Gate facing the Noon-Day Sun* [f]. According to *Magalhaens*, the Gates are four, one in the Middle [g] of each Side; and every Gate compoſed of three Portals, of which, the middlemoſt is always kept ſhut; and never opened but only for the Emperor. The reſt are always open from Break of Day till the Bell rings for clearing the Palace; except the South-Gates, which are never more than half open, but when his Majeſty goes out or in. All Manner of Entrance within theſe Gates is forbidden to the *Bonzas*, the Blind, the Lame, the Maimed, the Beggars; ſuch as have Scars and Wens upon their Faces, or have their Ears or Noſes cut; and, in a Word, to all thoſe who have any conſiderable Deformity.

1. *Province* Pe-che-li.

And Guards.

IN the Time of the *Chineſe* Kings, there was a Guard of thirty Soldiers with their Captain, and ten Eunuchs at each Portal; but at preſent not above twenty *Tartars* with their Officer: So that *Samedo* and *Martini* greatly miſtake, who affirm the Guard of every Gate to conſiſt of three thouſand Men, and five Elephants; whereas there is only a Guard of three thouſand Men in all, who being diſtributed into Companies and Squadrons, in their Turns, on ſo many Days in a Month, guard the Gates of the City, and of the Palace, beſides the Towers that environ the inner Wall. As for Elephants, they never ſtand at the Gates, but in their Stables, or rather Palace.

Fine Palaces and Lake.

THE ſame Author ſays, that this outward Incloſure contains ſeveral ſeparate Palaces; ſome round, others ſquare, but all ſpacious, rich, and magnificently adorned, fit for ſome Kings of *Europe*. In the Part lying Weſt of the inner Palace, which is much larger than that on the Eaſt Side, there is a Lake full of Fiſh, five Furlongs, or an *Italian* Mile and a Quarter in Length, and made in the Form of a baſe Viol. Where it is narroweſt, it is to be croſſed over a very beautiful Bridge, which anſwers to the Gates of the Walls, at the Ends of which ſtand two triumphal Arches, of three Arches a-piece; high-raiſed, majeſtic, and moſt excellent Workmanſhip. This Lake, mentioned by *Marco Polo* [h], is environed with little Palaces, or Houſes of Pleaſure, built partly in the Water, and partly on the Land, the Middle of the Lake being full of very beautiful Barges for the King's Uſe when he has a Mind to fiſh, or to be rowed about the Lake.

Streets and Houſes.

THE Remainder of the two Eaſt and Weſt Spaces, which is not taken-up by the Lake, or the ſeparate Palaces, is divided into large and well-proportioned Streets, inhabited by the Officers and Artificers in the Emperor's Service [i]. *Le Comte* ſays the ſame, and that none but the Eunuchs live in the inner Palace; but adds, that all the Houſes are low and ill contrived, far worſe than thoſe in the *Tartar* City [k]. *Du Halde* obſerves, that the Eunuchs dwell within the outward Incloſure, and that the Courts, called *The inner Tribunals*, ſtand there, for regulating the Affairs of the Palace only [l].

[a] About a Mile from the North and Weſt Walls, and one Third more from the Eaſt Wall. [b] *Du Halde's China*, p. 67. [c] *Le Comte* ſays, it is a very good Wall. [d] *Magalhaens's* Relation of *China*, p. 268. [e] Great Men always chuſe to have the Gates or Doors of their Houſes facing the South. [f] *Du Halde*, as before. [g] Not exactly in the Middle according to the Plan. [h] Lib. 2. cap. 6. [i] *Magalhaens*, as before, *p.* 268, *& ſeqq.* [k] *Le Comte's* Memoirs of *China*, p. 59. [l] *Du Halde*, as before.

The Geography. ACCORDING to *Magalhaens*, there dwelt formerly, in this outer Inclosure, ten thousand Eunuchs [a], besides the other Inhabitants: But that they, who reign at present, have put in their Rooms *Tartars*, and *Chinese* of the Province of *Lyau-tong*, who are looked upon as *Tartars* by a peculiar Favour [b]. *Navarette* observes, that when *Shun-chi*, Father to the present Emperor, died, they turned-out of the Palace six thousand Eunuchs; and conceives they expelled as many Women, for every Eunuch has a Woman to wait on him [c]. The Reason was, their Power and Insolence became insupportable to the Princes of the Empire, but they are now very inconsiderable: The youngest serve as Pages; the others are put to the vilest Employments, their Task being to sweep the Rooms, and keep them clean. They are severely punished by their Overseers, who never pass-by the least Fault [d].

The Eunuchs.

Inner Wall. THE inner Wall, which immediately encompasses the Palace where the Emperor resides, is extremely high and thick, built with large Brick, and embellished with Battlements well contrived. It extends from South [e] to North six Furlongs, or an *Italian* Mile and an half; it is a Furlong and an half in Breadth, and fifteen Furlongs, or five Miles wanting a Quarter, in Circumference [f]. It has four Gates with large Arches, those to the South and North being threefold, like the Gates of the first Inclosure; those upon the Sides, single. Upon these Gates, and upon the four Angles of the Wall, eight Towers, or rather Halls [g], of an extraordinary Bigness, and very good Workmanship, advance themselves; varnished within with a very beautiful Red, adorned with Flowers of Gold, and covered with Tiles varnished with Yellow. During the Reign of the *Chinese* Kings, twenty Eunuchs kept Guard at each of these Gates, but at present forty Soldiers, with two Officers [h]. The Officers of the Houshold and *Mandarins* of the Tribunals within the Palace are allowed Entrance within this Wall: But all others are severely prohibited [i], unless they shew a little Tablet of Wood or Ivory, whereon their Names and Place of Abode are set-down, with the Seal of the *Mandarin* to whom they belong. This second Wall is environed with a deep and wide Mote, lined with Freestone, and full of large and excellent Fish. Every Gate has a Draw-bridge to lay over the Mote, the South Gate excepted, where the Draw-bridge lies only over one Arch.

Guards.

1. Province, Pe-che-li.

CLOSE by the Eastern Wall, on the outside, runs a River, over which are built several very fair Bridges, all of Marble, except the Arch in the Middle, where there is a Draw-bridge. There is a great Number of such Bridges in the Palace [k].

Mote and River.

WE cannot propose to give our Readers so satisfactory an Account of this grand Palace, as willingly we would do: For *Magalhaens*'s Description, though the only one which extends to the Whole, is somewhat confused for want of a Plan; that which his ingenious Editor has contrived not being exact enough. The other Missioners are not only defective, but differ somewhat from one another as to the Dimension, Situation, Order and Form of the Courts and Apartments [l]. Perhaps they mistook some Things in trusting to their Memories. Besides *Magalhaens*, there is another quoted by *du Halde*, who describes the Courts as far as the Emperor's Apartment, where they had the Honour, with other Jesuits, to salute his Majesty; and these two are all who furnished Particulars of them: But to prevent Confusion, we must give each separately; for the first divides the Palace into Apartments, the second (as all the other Missioners do) by Courts: Besides, there seems to be some Mistake in ranging them in one of their Accounts.

Authors differ.

FOR the better apprehending the Situation of the several Parts of this Palace, it must be observed, says *Magalhaens*, that between the outward Inclosure of the Palace and South Wall of the City, where stands the principal Gate, there is a large Space belonging to the Palace, and

Squares before the Palace.

[a] *Le Comte* says, the whole Palace was inhabited by them. [b] *Magalhaens*'s Relation of *China*, p. 271. [c] *Navarette*'s Description of *China*, chap. 6. *p.* 12. [d] *Le Comte*'s Memoirs of *China*, p. 60. [e] By the Plan it consists of two long Squares, one as broad again as the other, and an equilateral Square. *Navarette* says, the Wall that incloses the Palace is in the Shape of an half Moon. [f] *Du Halde* says, it is twelve *Chinese Li*, or Furlongs, in Circumference, ten making a great *French* League, of twenty to a Degree. [g] *Du Halde* calls them Pavilions, and says, those over the Gates are more strong and lofty, and surrounded with a Gallery supported by Pillars, resembling our Peristyle. [h] *Le Comte* says, that the Guards placed in the Gates and Avenues of the Palace have no other Arms but their Simitars, and are not so numerous as he at first imagined. See his Memoirs of *China*, p. 60. [i] *Navarette* observes, that of twenty-four Missionaries, who met at *Pe-king* in the Year 1665, only *John Adamus*, (or *Schaal*) then Professor of Mathematics, had ever been within the Palace. Afterwards, about 1668 and 69, the three who remained there were admitted, being sent for by the Emperor. See his Description of *China*, chap. 6. *p.* 12. [k] *Magalhaens*, as before, *p.* 269, *& seqq.* [l] For Instance, *le Comte* says, the inner Palace is made-up of nine Courts, whereas *Magalhaens* describes twenty: Nor can we find any Court and Hall of the Throne, such as *le Comte* describes; and the rather, because he does not tell us which of the nine they were.

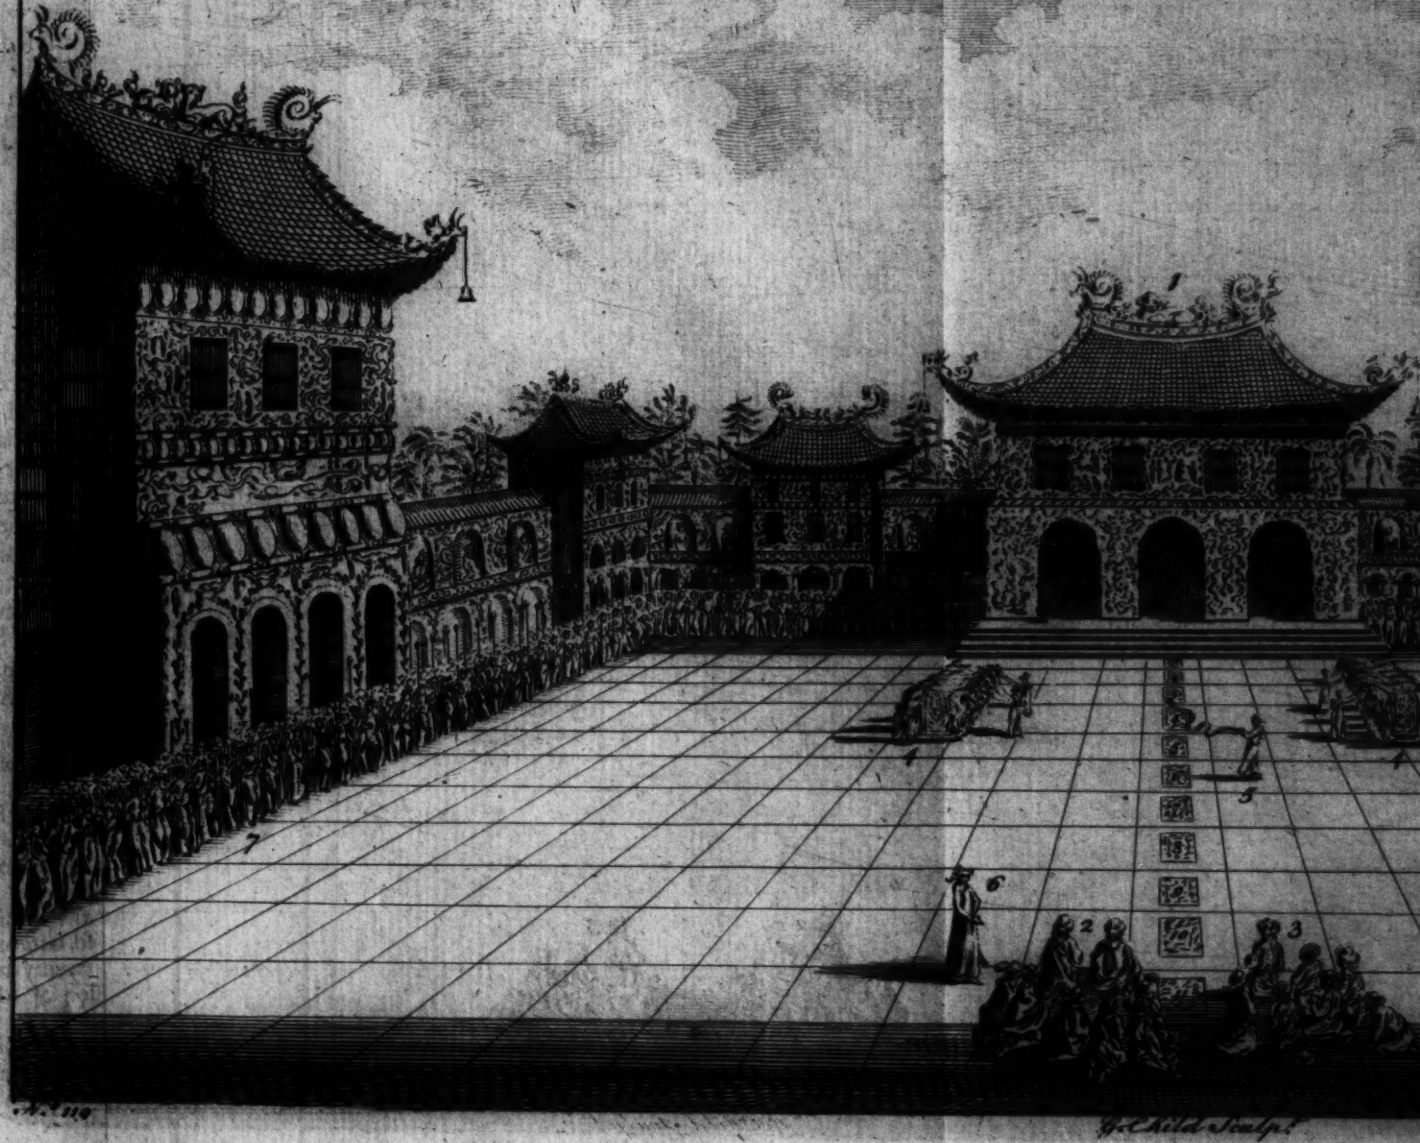
SUPREME IMPERIAL HALL of A
from Nieuhof:



N. 119

B. Child Sculp.

Plate III. Vol. IV. A. 19

Geography. contrived after the following Manner: You enter a the City into a large Street, which extends the full Length of the Wall; and having croſſed it, come into a ſquare Piazza, environed with a Baluſtrade of Marble. Beyond this there is a ſecond Street, where appear two triumphal Arches, one on each Hand. Paſſengers are not permitted to go either in a Sedan, or on Horſeback, within the Space between theſe Arches, but muſt alight and walk a-foot till they have paſſed them; in Reſpect to the Emperor's firſt Apartment, b which ſtands on the other Side of the Street at an equal Diſtance between the two Arches.

Firſt Apartment. THIS firſt Apartment is called *Tay-tſing-mwen*; or, *The Portal of great Purity*. It conſiſts of three great Gates with three Arches, very long and large, above which is a very fair Hall. Theſe Gates are never opened but when his Majeſty goes out of Town. Beyond this Apartment there is a vaſt Court adorned on both Sides with Porticos, ſupported by two hundred Pillars; which, c being ſeen from the Gate, afford a grand and pleaſing Perſpective. This Court, which is two Bow-Shots broad, and above twice a Muſket-Shot in Length, is bounded on the North Side by the famous Street of *Perpetual Repoſe*, which paſſes through two Gates: That on the right Hand is called *The Oriental Gate of the Street of perpetual Repoſe*; that on the left, *The Weſtern Gate*. What has been hitherto deſcribed, is without the exterior Wall of the Palace, and d only ſerves for a Portico, or Avenue, but ſo majeſtical, that it challenges an awful Reſpect.

Second Apartment. THENCE going-on, you ſee, in the Middle of the exterior Wall, the ſecond Portal and Apartment; which ought rather to be called the firſt, becauſe all who enter the Palace, are obliged to go through it. It is compoſed of five Gates, three great ones which never open but for the Emperor, and two ſmall ones on each Side, one raiſed at the Bottom about the Height of a Step e above the Ground, through which all who go-in and out muſt paſs, even the great Lords themſelves. Above theſe Gates, as above all the reſt, ſtands a large Hall, adorned with a great Number of Columns, with Baſes and Chapiters gilded, and painted; on the Outſide with Vermilion Varniſh, within-ſide with a Varniſh of Gold and Azure. Beyond this Apartment lies a Court [a], incomparably more ſpacious than the former, on the Eaſt and Weſt Sides filled-up with Halls and f Chambers that have their Porticos and Galleries, as have all the reſt already mentioned.

AT the End of this Court is the Apartment called *The Portal of the Beginning*, and behind it another Court; at the End of which is the Apartment, called *The Tower* or *Portal of the South*, which is the firſt within the inner Wall. This Apartment conſiſts of three vaſt Arches, and a Hall above them; the Architecture of which is like to that of the third, but the Structure is larger, more lofty, and more majeſtic. On the two Sides it has two Walls built in the Form of Galleries, that extend themſelves toward the South a full Muſket-Shot in Length; and at both Ends, North and South, are bounded by four Pavilions, or Halls, like thoſe in the Middle, but much leſs. The Roofs are hexagonal, or ſloping ſix Ways, and are beautified at the Top with Dogs of Braſs gilded. All which five Buildings together beget a ſtrange Surprize, cauſing both Aſtoniſhment and Reverence by Means of their Grandeur and their Riches. In the Middle of this great middlemoſt Hall it is where the Drum and the Bell hang-up, which have been deſcribed before.

1. Province, Pe-che-li.

Third and fourth.

Fifth Apartment. BEYOND this lies another Court like the former, at the End of which ſtands the fifth Apartment, called *The ſupreme Portal*. To this Apartment belong five large and majeſtic Gates, to which you aſcend by five Pair of Stairs of thirty Steps a-piece: But before you come at it, you muſt croſs a deep Mote full of Water over d five Bridges, that anſwer to the five Pair of Stairs; both the one and the other beautified with Parapets, Baluſters, Columns, Pilaſters, and ſquare Baſes, with Lions and other Ornaments, all of very fine and very white Marble: So that it is not without good Reaſon that this Apartment carries the Name of *The ſupreme Portal*, as being more magnificent and majeſtic than all the reſt. Beyond it lies another very ſpacious Court [b], garniſhed on both Sides with Porticos and Galleries, e Halls and other Rooms, very noble, ſtately, and rich.

Sixth Apartment. AT the End of this Court is *The ſupreme imperial Hall* [c], to which you aſcend by five Pair of Stairs; each Pair of forty Steps, all of very fine Marble and coſtly Workmanſhip. The Pair in the Middle, which the Emperor only aſcends, is of an extraordinary Breadth: The two Pair on each Side, appointed for the great Lords and *Mandarins*, are not ſo broad; and the other two, f which are the narroweſt, ſerve for the Eunuchs and Officers of the Houſhold. They tell us, that under the Reign of the *Chineſe* Emperors,

[a] This ſhould be the firſt Court of *du Halde*'s Author.

[b] This ſhould be the third Court of *du Halde*'s Author, but then the Mote and Bridges will be miſplaced.

[c] By this it ſhould be the fifth Court, according to *du Halde*'s Author, *Iſbrand Ides*, and others, who place the Hall of the Throne in the fifth Court, as this properly is from the Entrance of the Palace.

this

The Geography. this Hall was one of the Wonders of the World for its Beauty, Riches, and Spaciouſneſs; but that the Robbers, who rebelled during the laſt Revolution, burnt it, together with a great Part of the Palace, when they abandoned *Pe-king* for fear of the *Tartars*, and theſe latter were contented that it ſhould only, in ſome Meaſure, reſemble what it was before; yet there is that in it ſtill which ſerves to fill the Imagination, and diſplay the Grandeur of the Emperor. In this Hall it is that the Prince, being ſeated in his Throne, receives the Homages of all his great Lords, and all his *Mandarins*, both learned and military; who, as faſt as they come to the Place, take their Stands, according to their Rank and Quality, in Places appointed for every one of the nine Orders, which are marked and written-down at the Bottom of little Pillars [a]. *Adams* ſays, theſe Pillars are of Braſs, and ſquare [b].

Imperial Throne.

Seventh, eighth, and ninth Apartments. BEYOND the imperial Hall is another Court, which leads to the ſeventh Apartment, called *The high-raiſed Hall.* From hence you enter another Court, which brings to the eighth Apartment, called *The ſupreme Hall in the Middle.* Thence, paſſing croſs another Court, you come to *The Hall of ſovereign Concord.* To this Hall, and two more on each Side, the Emperor comes twice a Year, Morning and Afternoon, to treat of the Affairs of the whole Empire with his *Ko lau*, or *Counſellors of State*, and *Mandarins* of the ſix ſupreme Tribunals. For this Reaſon, at the Eaſt End of this Hall, there is a very fair Palace for the Tribunal, called *Kyu-ywen*, or *The Tribunal within*, compoſed of Counſellors of State, and above three hundred *Mandarins* of all Degrees; which makes it ſuperior to all the other Tribunals of the Empire.

Tenth Apartment. FROM hence, paſſing into another Court, you come to the tenth Apartment, with a fair and very high-raiſed Portal, called *The Portal of Heaven, clear and without Blemiſh.* There are three great Gates in the Middle, to which you aſcend by three Pair of Stairs, each Pair containing above forty Steps, having two little Doors on both Sides, as all the Gates of theſe Apartments have.

Eleventh or Emperor's Apartment. THIS Portal carries you into a ſpacious Court, bounded by the eleventh Apartment, called *The Manſion of Heaven, clear and without Blemiſh*, which is the richeſt, higheſt-raiſed, and the moſt ſumptuous of all. There are five Aſcents to it of very fine Marble, each containing five and forty Steps, adorned with Pillars, Parapets, Baluſters, and ſeveral little Lions. At the Top on both Sides are ten large Lions of gilded Braſs, excellent Pieces of Workmanſhip. In the Middle of the Court, at a proportionable Diſtance from the Stairs, ſtands a Tower of Braſs, gilt, which has Doors and Windows, is round and ends in a Point, being about fifteen Foot high. It is adorned with Abundance of ſmall Figures curiouſly engraven; and on each Side ſtand two large Chafers of gilded Braſs, and curiouſly wrought, where they burn Incenſe Day and Night. In this ſumptuous Apartment the Emperor reſides with his three Queens: The firſt, called *Whang hew*, that is, the *Queen*, or *Empreſs*, lives with him in the middle Quarter: The ſecond, called *Tong kong*, has her Lodgings in the Eaſtern Quarter; and the third, called *Si kong*, in the Weſtern Quarter, which, as well as the Eaſtern, joins to that of the Middle. In this Apartment alſo, and in the reſt mentioned hereafter, there are generally reſiding a thouſand, ſometimes two, and ſometimes three thouſand Concubines, according to the Emperor's Pleaſure.

1. *Proolrei Pe-che-li.*

His Queens and Women.

IN Reference to this Apartment, it is farther to be obſerved, that as the Houſes, ſo are the porcelain Ware, Moveables, Habits, and all other Things for the Service of the Emperor, adorned with Dragons. In like Manner all the Structures where he reſides have Relation to the Heavens, either in Name, Number, or ſome other Way. Thus this laſt Apartment is called *The ninth Heaven*, and not the eleventh, by the *Chineſe*, in regard, they never reckon that which is without the outermoſt Incloſure of the Palace; and for that they make but one of *The Portal of Heaven, ſerene and without Blemiſh*, and this laſt Apartment [c]. In order, likewiſe, to anſwer to the twelve Signs, the particular Places where the Emperor reſides are twelve in Number; three of which ſtand in a ſtreight Line from North to South [d]; the reſt ſtand upon the Eaſt and Weſt Side, and are ſo ſpacious, as well as ſo ſtately, that one ſingle Apartment might ſuffice a King.

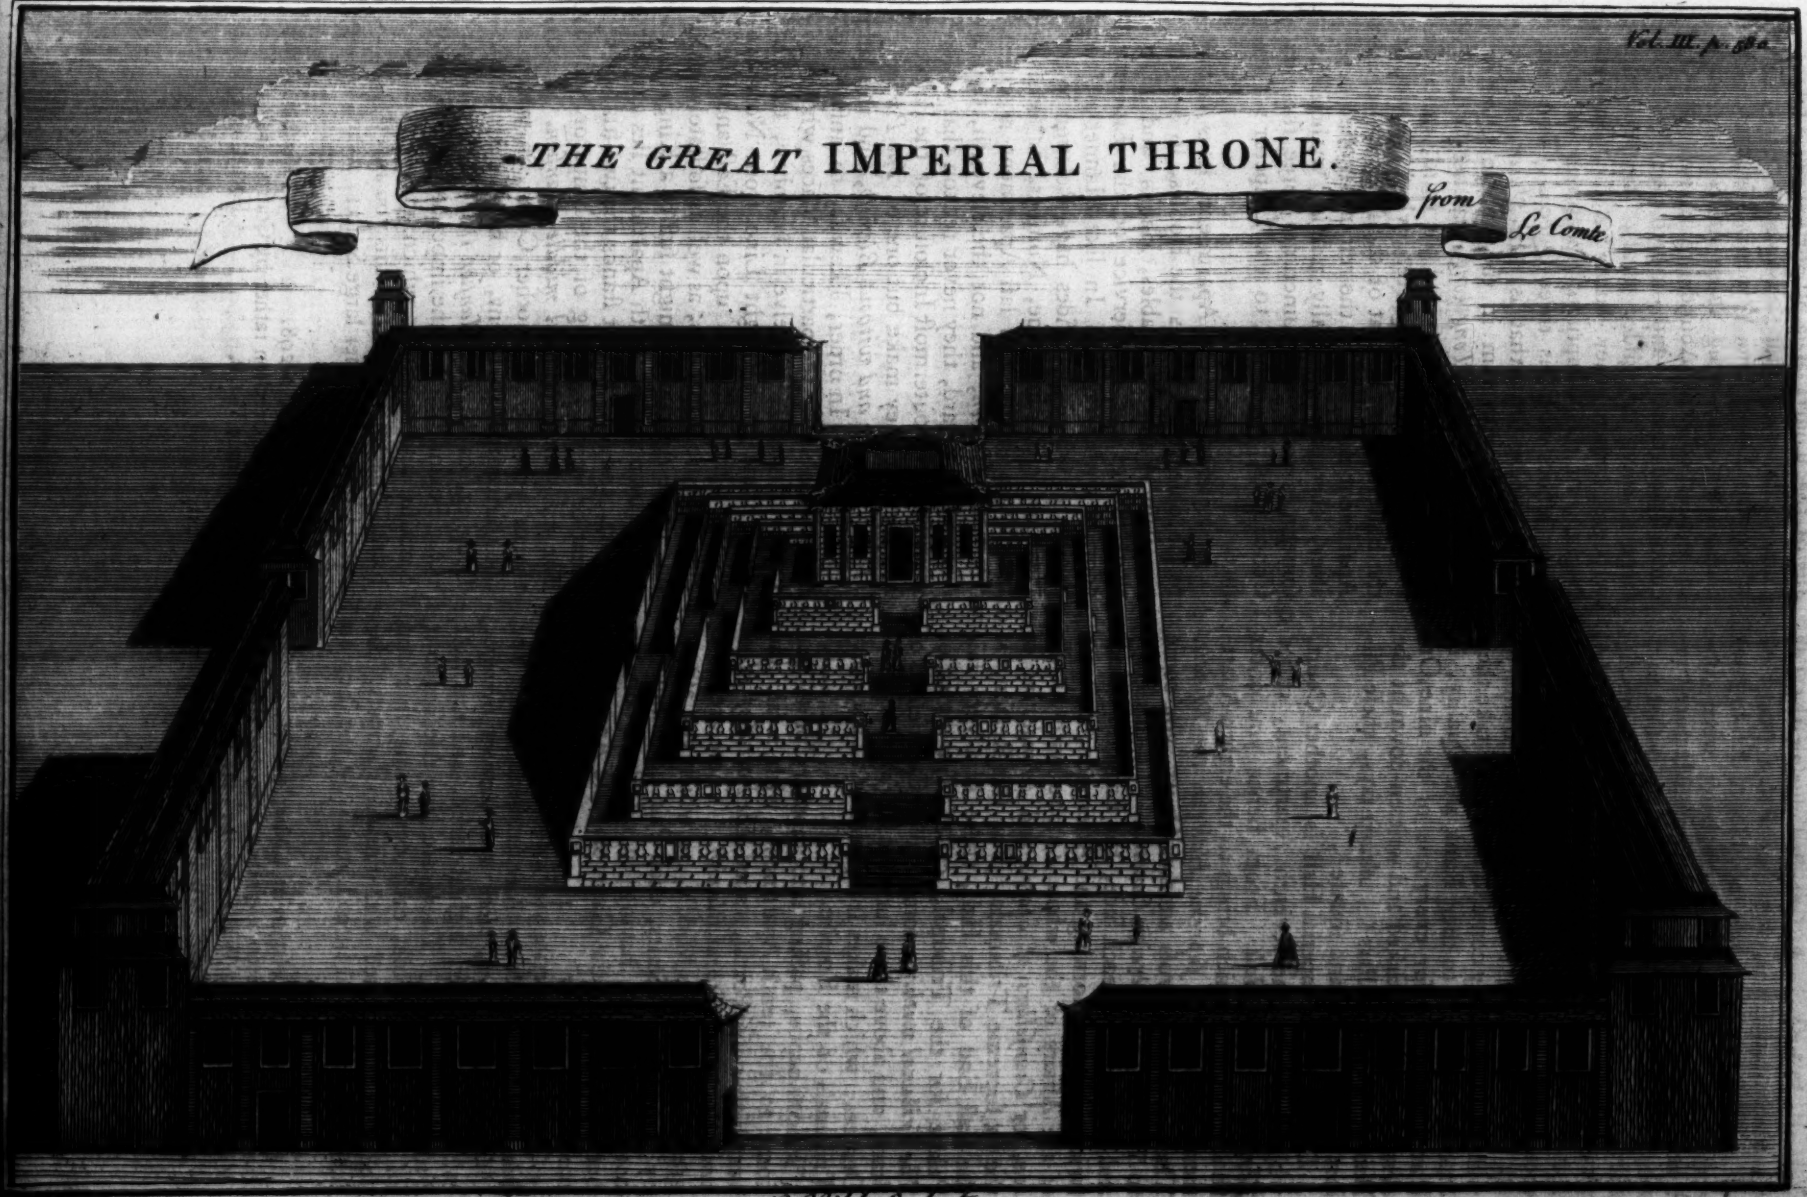
Twelfth, thirteenth, and fourteenth Apartments. BEYOND this eleventh Apartment lies another Court, and next to that ſtands the twelfth Apartment or ſecond Lodging of the Emperor, called *The noble and beautiful middle Manſion.* From thence you paſs to another Court, in which is the thirteenth Apartment, or his Majeſty's third Lodging, called *The Manſion that entertains Heaven.* Behind that lies the imperial Garden, moſt beautiful and ſpacious, which makes the fourteenth Apartment. After this you meet-with ſeveral Courts and other large Spaces, which having

[a] *Magalhaens*'s Relation of *China*, p. 281, *& ſeqq.* [b] The ſame, *p.* 298. [c] This ſhews, that the two firſt Apartments are made ſo by the Author, and that the *Chineſe* reckon rather by Courts, (as the other Miſſioners do) or by Walls, for they ſay their Emperor lies behind nine Walls. [d] Rather from South to North, as the Author now proceeds.

Vol. III. p. 68 a.

THE GREAT IMPERIAL THRONE.

from Le Comte



N. 190

G. Child Sculp.t

Plate XX. Vol. IV. p. 14

Geography.

enth Apartment.

crossed, you come to the last Portal of the innermost Inclosure, which makes the fifteenth Apartment, and is called *The Portal of the mysterious Valour*. It consists of three Gates and three great Arches, which support a very high-raised Hall. This Hall is painted and gilded, the Top of whose Roof is crowned with several little Towers and other Ornaments, so well proportioned and disposed, that the Whole appears no less majestic than beautiful.

enth Apartment.

PASSING through this, you cross the Mote over a large and fair Bridge, built all of large Marble Stones, into a Street that runs from East to West; bounded on the North by several Palaces and Tribunals. In the Middle, facing the Bridge, there is a Portal with three Gates, something less than the preceding Portals; and this is the sixteenth Apartment, called *The high-raised Portal of the South* [a]. Beyond it lies a Court thirty Fathoms broad from South to North, and a *Chinese* Furlong in Length from East to West. Here the Emperor exercises his Horses; and therefore it is not paved as the other Courts, Streets, and Spaces are, of which we have spoken; but only covered with Earth and Gravel, which is watered when his Majesty has a Mind to ride.

nteenth Apartment.

IN the Midst of the North Wall of this Court stands a large Portal with five Gates, like the former, which makes the seventeenth Apartment, and is called *The Portal of ten thousand Years*, that is to say, *The Emperor's Portal*. A little farther you meet with a spacious Park, where this Monarch keeps his wild Beasts, Bears, wild Boars, Tygers, and the like; every one in their particular Stands, large and beautiful. In the Midst of this Park are five Hillocks [b], two to the East, two to the West, (all four sloping equally quite round) and one in the Middle higher than the rest. They were made by Hand, of the Earth digged out of the Mote and Lake before-mentioned, and are covered over with Trees planted in Order. Every one of these has a round or square Pedestal, wherein several Holes are cut for the Rabbits to burrow, and Hares to sit; of which those little Hills are full. The Emperor often visits this Place to see the Deer and the Goats run-about, and hear the Birds sing. Within Musket-Shot of this Place stands a very thick Wood; at the End of which, adjoining to the North-Wall of the Park, are to be seen three Houses of Pleasure, with lovely Stairs and Terrasses to go from one to the other. This is a Structure truly royal, the Architecture being exquisite, and makes the eighteenth Apartment; being called *The royal Palace of long Life*.

nteenth, ntieth, ventieth Apartment.

a A little farther stands a Portal like the former, which makes the nineteenth Apartment, and is called *The high-raised Portal of the North*. Out of this you come into a long and broad Street, adorned on both Sides with Palaces and Tribunals; beyond which stands another Portal with three Gates, built within the outermost Inclosure, and is called *The Portal of the Repose of the North*. This is the last and twentieth of these Apartments that make up the imperial Palace, in b a strait Line, from South to North [c].

1. *Province*, Pe-che-li.

First Court.

THE Account given by the Missioner, quoted by *Du Halde*, of the nine Courts, lying before the Emperor's Apartment, is as follows: He entered the Palace with the other Missioners, by the East Gate of the Portal; the Southern Gate being never opened but for the Emperor. This led into a vast square Court to the South of the Palace, two hundred geometrical Paces over. It is paved with large Bricks, and the Walks laid c with broad flat Stones. At each Angle is a large oblong Building, with a double Roof, whose Ground-Story has three Entrances, like the Gates of Cities.

Second Court.

BEFORE they entered the second Court, they came to a Canal, almost dry, running parallel to the Walls of it from East to West. They crossed over one of the six [d] white Marble Bridges, built towards the Middle, facing so many Arches or open Gates; each supporting a large Building d that has a Platform or Tower, with a double Roof, whose Thickness is upwards of twenty geometrical Paces. At each End of the Bridge, leading to the Middle Gate, are two round Pillars of white Marble, upon a large Pedestal, incompassed with a Balustrade of the same. The Base is adorned with two great Lions, each between seven or eight Feet high, and seeming as if they had been cut out of one Block. Passing Northward, through the Gate, into this second e Court, (which is in Length about an hundred geometrical Paces, and fifty in Breadth) they found, at the Entrance, two other white Marble Columns, adorned with Dragons in Relievo, with two small Wings below a Chapiter, which is flat and very broad.

Third Court.

FROM thence they entered a third Court, twice the Length of the second, and a little wider, with five Gates, and Buildings over them, like the former. These Gates are very thick, and covered with Plates of Iron, fastened-on with Rows of Brass Nails, whose Heads are bigger than a Man's Fist. All the Buildings of the Palace are placed on Bases, as high as a Man, of f a reddish grey Marble, very ill polished, and adorned with Mouldings.

[a] That of the *North*, comes after. [b] These Hills are mentioned by *Marco Polo*, lib. 2. cap. 16. [c] *Magalhaens*'s Relation of *China*, p. 289, *& seqq.* [d] Rather, five; that being generally the Number of Gates.

ALL

The Geography. *Their Buildings.* ALL theſe Courts are ſurrounded with very low Buildings, covered with yellow Tiles. At the Bottom of this third, there is a long Building flanked with two Pavilions [a], whoſe Wings are terminated by two ſuch others. They are double-roofed, and ſurrounded with Galleries, as well as the Wings and the lower Part of the Building; which ſtands on a Platform of Brick, with its Parapet and little Embraſures; being near thirty-five Feet high. The Baſe of the Platform, for ſix Feet above the Ground, is of b Marble. The Paſſage is by three Gates, like the former; with this Difference, that the Nails and Iron-Work are gilded. There were ſeveral Guards at this Gate; and among them, a *Kolau*, or one of the prime Miniſters of State; who, for taking a Bribe, was condemned as one of a Company of Soldiers to guard this Poſt: But, notwithſtanding his Diſgrace, all who paſſed ſaluted him, by bending the Knee; ſtill regarding him on Account of the high Station he once poſ- c ſeſſed.

Fourth Court. AFTER theſe three Courts, which had nothing remarkable [b], excepting their Extent, they entered a fourth, near fourſcore geometrical Paces ſquare, and exceedingly agreeable. It is ſurrounded with Galleries, interrupted at proper Diſtances with little open Halls, ſomewhat high, having Steps before them, with their Flights of white Marble, which go quite round. Through this Court runs a little Canal, lined with white d Marble, and its Sides adorned with Baluſters of the ſame. It has over it four or five ſingle-arched Bridges of white Marble, embelliſhed with Mouldings and Baſſo Relievo's. At the Bottom of this Court there is a large and magnificent Hall, with three fine Stair-caſes, whoſe Flights are decorated with Baluſters of the ſame Kind.

Fifth Court. THE fifth Court, which follows, is nearly of the ſame Form and Size; but makes a finer Ap- e pearance, as having a large ſquare Perron three Stories high; each adorned with Baluſters of white Marble. This Perron takes up near half the Length of the Court [c], and two Thirds of its Breadth: It is about eighteen Feet high, built upon a Baſe of *Siam* Marble; which is coarſer, and upwards of ſix Feet high. It has three Stair-caſes, whereof the middle one is moſt conſiderable, having, near the Foot of it, two Braſs Lions; and on the Top of the Perron are eight f Vaſes of the ſame Metal, about ſeven Feet high. This Perron is before a large and magnificent Hall, where the Emperor receives the Memorials and Petitions daily preſented him by the *Mandarins* of the ſovereign Tribunals, who firſt perform the accuſtomed Proſtrations at the great Stairs. *1. Perron, Pe-che.*

AFTERWARD, they paſſed through two other ſuch Courts, with Perrons of the ſame Form as well as Size; and incompaſſed with the like Buildings, furniſhed with Stair-caſes, and Baluſters round them. They were conducted through a Door, on the right Hand of the laſt Court, into another, about two hundred Paces long; being a Kind of *Hippodrome*, (or Place for Horſe-Racing;) at the End of which, on the left Hand, they entered a great open Hall, where they found Guards; and waited ſome Time for the *Mandarin* appointed to conduct them into the Apartment of the Emperor. Him they followed through a ninth Court, ſomething leſs than the former [d], but equally ſumptuous. At the End of it appeared a *Sixth, ſeventh, eighth Courts.* *Ninth Court.* large Building, of an oblong Figure, with a double Roof, covered with yellow varniſhed Tiles, like the preceding. This is the Palace where the Emperor's Apartment is; to which there led a Cauſeway, raiſed about five or ſix Feet high, incloſed with Baluſters of white Marble, and paved with the ſame. None but the Emperor may paſs this Way, or through the Middle of the other Courts.

THIS Palace, which ſhines with Carvings, Varniſh, Gilding, and Painting, ſtands upon a Kind of Platform, paved with large ſquare Pieces of a beautiful green Marble, poliſhed like Glaſs, and laid ſo cloſe together, that one can ſcarcely diſcern the Joinings. At the Entrance of the great Hall, there is a Door which opens into a large ſquare Room paved with Marble; where the Emperor was ſitting on an Eſtrade, after the *Tartar* Faſhion. The Beams of this Room were ſupported by wooden Columns, varniſhed with red; and fixed in ſuch a Manner in the Wall, that they were even with its Surface. It muſt be confeſſed, that this Series of Courts, all on a Level, and ranged in a Line; this Collection of Buildings, though confuſed and ununiform; interſperſed with Pavilions, Galleries, Colonades, Baluſters, Stair-caſes of Marble, and a Multitude of varniſhed Roofs, covered with yellow Tiles, ſo bright and beautiful, that, when the Sun ſhines on them, they look as if they were gilt with Gold; preſents ſomething ſo inexpreſſibly magnificent to the Eye, as to diſcover it to be the Palace of a great Emperor [e]. *Splendour of the Palace.*

[a] Or, Halls. [b] Yet, *Magalhaens* extols them highly. [c] This muſt be *The Hall of the great Union*, where the Throne ſtands, mentioned hereafter: But the Deſcription of the Place differs much from that given by *Le Comte*, who makes the Perron to ſtand in the Middle of the Court, with Stairs on the four Sides. [d] Allowing an hundred and eighty Paces for the Length of this Court, that of all of them, will amount to one thouſand one hundred and twenty Paces. [e] *Le Comte*'s Memoirs of *China*, p. 60.

The Geography.

1. Province, Pe-che li.

Other Palaces.

IF to these we add, the Courts that have been made on the Wings, for Offices and Stables; the Palaces of the Princes of the Blood, with those of the Empress, and of the Women; the Gardens, Ponds, Lakes, and Woods, in which are kept all Sorts of Animals, the Whole will appear surprizing [a].

The double Roofs.

BEFORE we proceed to give an Account of the remaining Structures and Apartments of the Palace, we have a few Words to add concerning the Roofs of these Buildings, the Terrasses or Platforms whereon they stand, and the great imperial Hall of the Throne.

THE Roofs have four Sides, rising very high, adorned on the Rest with a Plat-band of Flower-work, and turned-up at the Ends. A second Roof, as glittering as the former, rising from the Walls, goes quite around, supported by a Forest of Beams, Joists, and Spars, all japanned with green Varnish, strewed with Gold Figures. This second Roof, with the Projection of the first, makes a Kind of Crown to those Buildings, which has a very fine Effect.

The Terrasses.

THE Terrasses or Platforms, whereon these Apartments are built, contribute also much to give them that Air of Grandeur which strikes the Eye. They are about fifteen Feet high from the Ground, cased with white Marble, adorned with Balustrades of pretty good Workmanship, and open only at the Entrance of the Stair-cases, which are placed on the Sides, in the Middle, and in the Corners of the Front. The Ascent in the Middle is, properly, no more than a Ramp or Slope, consisting of one or two Pieces of Marble, without either Steps or Restings. Nobody is permitted to enter this Way into the Apartments but the Emperor alone; who, upon Days of Ceremony, is carried through in his covered Chair. These Terrasses, which extend from East to West, make, before the Doors and Windows of the Apartments, a very broad Platform, paved with Marble, projecting seven or eight Feet all the Way beyond the Building. This is the Form of the Apartments or Lodgings of the Emperor, and of the imperial Hall, named *Tay-ho-tyen*, or *The Hall of the great Union* [b].

Imperial Hall of Audience.

THIS Hall is about one hundred and thirty Feet long, and almost square. The Cieling is all of carved Work, varnished with green, and charged with gilded Dragons. The Pillars, that support the Roof within, are six or seven Feet in Compass at the Bottom, and incrustated with a Kind of Paste, japanned with red Varnish. The Pavement is covered partly with very ordinary Carpets, made like those of *Turkey*. The Walls are very well white-washed; but without Hangings, Looking-Glasses, Branches, Paintings, or any other Sort of Ornament.

The Throne.

THE Throne, which is in the Middle of the Hall, consists of a lofty Alcove, very neat, but neither rich nor magnificent; and without any Inscription, but the Word *Shing*, that is, *excellent*, *perfect*, or *most wise* [c]. On the Platform or Floor before it, stand very great and thick Vessels of Brass (wherein Perfumes are burnt during the Ceremony) and Candlesticks, made in the Form of Birds, large enough to hold Flambeaux. This Platform is continued Northward beyond the Hall *Tay-ho-tyen*, and serves as a Foundation to two lesser Halls, which are hidden by the former. One of them is a very pretty Rotundo, or circular Room, with Windows on every Side, and shining with Varnish of divers Colours. There, they say, the Emperor reposes sometimes, before or after the Ceremony, and changes his Habit.

Two lesser Halls.

THE round Hall is but a few Paces distant from a second, that is longer than broad; the Door of which faces the North: Through this Door the Emperor is obliged to pass when he comes from his Apartment to his Throne; there to receive the Homages of the whole Empire. He is then carried in a Chair, by Chairmen dressed in long red Vests, embroidered with Silk, and wearing Caps adorned with Plumes.

IN the Bass-Court, before the *Tay-ho-tyen*, the *Mandarins* range themselves, on Days appointed for the Ceremonies prescribed by the Laws of the Empire, to renew their Homage; which Ceremonies are performed whether the Emperor be present or not. Nothing is more usual than for them to strike the Ground with their Foreheads, before the Gate of the Palace, or one of the royal Halls, with the same Formality and Respect as if he was seated on his Throne.

Magazines of Rarities.

THIS Court is the largest belonging to the Palace; it is, at least, three hundred Feet long, and two hundred and fifty wide [d]. Over the Gallery that surrounds it, are the imperial Magazines of Rarities: For the Treasure or Revenues of the Empire are kept in the supreme Tribunal, named *Hû-pû*. These Magazines are opened upon certain Occasions; as at the Creation of a Prince, who is to inherit the Crown, an Empress, Queen, *&c.* In one, are kept the Vases, and other Works, of different Metal; in another,

[a] *Du Halde*'s *China*, vol. 1. *p.* 245, *& seq.*

[b] This is what *Magalhaens* calls *The supreme imperial Hall.*

[c] Rather than *holy*, as Authors render it.

[d] The Missioners Description, given before, makes some of the Courts, as the first and third, two hundred Paces long, and the three following only eighty: But that Number making four hundred Feet, the least of the other Courts, if there be no Mistake in the Figuring, must be bigger than this; and some near three Times as large.

The Geography.

ther, vaſt Quantities of the moſt beautiful Skins: A third contains Habits, furred with the Skins of grey Squirrels, Foxes, Ermins, and Sables; wherewith the Emperor ſometimes rewards his Servants. There is one for precious Stones, curious Marbles, and Pearls, which are found in *Tartary*. The greateſt of all, conſiſting of two low Stories, is full of Preſſes, where the Silks are kept; made on Purpoſe, for the Uſe of the Emperor and his Family, at *Nan-king*, *Hang-chew fû*, and *Sû-chew fû*, under the Direction of a *Mandarin*. In the other Storehouſes are repoſited Arrows, Bows, and Saddles, which have either been made at *Pe-king*, brought from foreign Countries, or preſented by great Princes; and ſet apart for the Uſe of ſome Emperor and his Children. There is one alſo where they collect the beſt Tea of every Kind that *China* produces, with various Simples, and other the moſt eſteemed Drugs.

The Gallery.

THIS Gallery has five Doors; one to the Eaſt, another to the Weſt, and three in the South Front. Thoſe in the Middle are never opened but for the Emperor; the *Mandarins*, who come to perform the Ceremony before the imperial Hall, entering by the Side-Doors. There is nothing extraordinary in this Front. It has a large Court, into which one deſcends by a Marble Stair-caſe, adorned with two great Lions of Copper, and a Baluſtrade of white Marble. It is made in the Form of a Horſeſhoe, on the Side of a little ſerpentine River, which runs through the Palace; and has Bridges over it of the ſame Materials [a].

3. *Other* Palaces, *and* Temples, *both within and without the* Wall *of the* inner Palace.

Other Palaces within the inner Wall. Statues of ancient Kings. Palace of the Princes: Of Love and Union. *Their Form and Order. Outward Palaces. Uncommon Virtue. Admirable Bridge. Folly of an Emperor. The Hare in the Moon. Palaces of Pleaſure, and Diverſion. Temples: The firſt. Obſcene Idol. Temple of Heaven. Temples of the Earth, Sun, and Moon. Of the Guardian Angel.*

Other Palaces.

ON each Side of the Palace, deſigned for the Emperor's Perſon, there are erected ſeveral others; many of which, for their Beauty, Splendour, and Largeneſs, might well ſerve for the Manſions of great Princes. For the better apprehending of their Situation [b], it is to be obſerved, that the Space which the inner Wall incloſes, is divided into three diſtinct Parts, by two great and high Walls that run from South to North. The imperial Palace poſſeſſes the middle Space; and the collateral Palaces, the other two. Theſe Partition-Walls have no Battlements, but are coped with yellow varniſhed Tiles; and the Top is raiſed and trimmed with a thouſand Deſigns and Figures of the ſame Materials and Colour. From the Eves of this little Roof, on both Sides, hang Dragons in Demi-Relief. The reſt of the Wall is covered with ſquare Tiles, green, yellow, and blue; ſo ranged, as to repreſent Beaſts, Flowers, and Horns. As to the Palaces which are ſeparated one from the other, by Walls of the ſame Kind; each of them has four Apartments [c], with their Courts, and a royal Hall in the Middle, with Stairs and an open Gallery round about, of white Marble; like thoſe of the Emperor's Palace, but much leſs. The Courts are adorned on each Side with Halls and Chambers of exquiſite Architecture; and painted within-ſide with Vermilion Varniſh, intermixed with Gold and Azure.

1. Province, Pe-che-li.

Within the inner Wall.

THE firſt Palace, is called *Ven-wha-tyen*, or *The Palace of flouriſhing Learning*. Hither the Emperor retires when he has a Mind to diſcourſe with his Men of Learning, to conſult about his moſt important Affairs, or to keep the Faſts moſt uſually obſerved in *China*. It is placed on the Eaſt Side of the ſixth Apartment of the Emperor's Palace, called *The ſupreme imperial Hall*.

THE ſecond Palace is juſt over-againſt the former, on the Weſt Side of the ſame imperial Hall, and is called *Vu-ing-tyen*, or *The Palace of the Council of War*. Here the Emperor holds Conſultations when the Kingdom is alarmed by any Revolt, by Pirates, or the Inrodes of the *Tartars* upon the Frontiers.

Statues of ancient Kings.

THE third (or ſecond, on the Eaſt Side [d]) is called *Tong-ſyen-tyen*, or *The Palace where Honour is paid to the deceaſed Emperors of the reigning Family*. Thoſe Monarchs are ſeated upon their Thrones in a magnificent Hall, adorned with Stairs, Galleries, and all other Conveniences, like the reſt. Their Statues are made of Eagle-Wood, Saunders, or ſome other odoriferous Wood, and cloathed in rich Habits. Before the Images are placed ſumptuous Tables, with Candleſticks, Chafers, and other coſtly Ornaments. Upon the Day of Ceremony, there is an Offering made them, of ſeveral Tables covered with exquiſite Viands.

THE fourth Palace, (or ſecond on the Weſt

[a] *Du Halde's China*, vol. 1. *p.* 68, &c.

[b] But the particular Situation of none of them is diſtinctly marked, except that of the two firſt.

[c] At the End of the Notes, they are ſaid to be twenty-four.

[d] Proceeding Northward, as the Editor judges.

Side)

The Geography.

Side) is called *Jin-chi-tyen*, or *The Palace of Mercy and Prudence*, where the Funeral Honours are paid to the Emperor after his Deceaſe.

Palaces of the Princes,

THE fifth Palace, or third on the Eaſt Side, is called *Tzu-king-kong* [a], or *The Palace of Compaſſion and Joy*, where the Heir to the Crown reſides till the Death of his Father.

THE ſixth, or third on the Weſt Side, called *King-ho-kong*, or *The Palace of Union and Flouriſhing*. Here the ſecond and third Sons of the Emperor reſide till they marry.

THE ſeventh, or fourth oriental Palace, called *Ywen-when-tyen*, or *The Palace of the royal Nuptials*; becauſe the Nuptials of the King and the Heir to the Crown are there ſolemnized.

THE eighth Palace, or fourth on the Weſt Side, called *Tſu-nen-kong* [b], or *The Palace of Piety*, being the Reſidence of the Queen-Mother, and her Maids of Honour.

Queens and Princeſſes,

THE ninth Palace, or fifth to the Eaſt, called *Chong-qui-kong*, or *The Palace of Beauty*. The c tenth Palace, or fifth to the Weſt, called *Kya-ſyang-kong* [c], or *The happy Palace*. Theſe two Palaces are appointed for the Emperor's Siſters and Daughters before they are married.

THE eleventh, or ſixth to the Eaſt, called *I-wha-tyen*, or *The Palace of due Title*. The twelfth, or ſixth Palace to the Weſt, called *Syang-ning-kong*, or *The Palace of Felicity*. The thirteenth, or ſeventh Palace to the Eaſt, called *Jin-ſhew-kong* [d], or *The Palace of long Life*. The d fourteenth, or ſeventh Palace to the Weſt, called *Kyen-ning-kong*, or *The Palace of cæleſtial Repoſe*. In theſe four Palaces the ſecond and third Queen keep their Court, together with the Concubines and other Ladies of the deceaſed Emperor.

Of Love and Unity.

THE fifteenth, or eighth to the Eaſt, called *Kya-ta-tyen*, or *The Palace of great Friendſhip*. The ſixteenth, or eighth to the Weſt, called *Quen-ning-kong*, or *The Palace of the Place of Repoſe*. To one of theſe Palaces the Emperor e retires when he has a Mind to be private with his firſt Queen.

THE ſeventeenth Palace, or ninth to the Eaſt, called *Ching-chyen-kong* [e], or *The Palace that receives Heaven*. The eighteenth Palace, or ninth to the Weſt, called *I-quen-kong* [f], or *The Palace of the elevated Earth*. To the firſt of theſe two Palaces the Emperor retires with his ſecond Queen, and to the ſecond with his third.

THE nineteenth Palace, or tenth to the Eaſt, f called *Hong-te-tyen* [g], or *The Palace of abounding Virtue*.

Province Pe-che-li.

THE twentieth, or tenth Palace to the Weſt, called *Kyu-en-ſin-tyen* [h], or *The Palace that envelops the Heart*. In theſe two Palaces are kept the Emperor's Jewels and Rarities of an ineſtimable Price [i].

BESIDES theſe Palaces, there is an eminent Temple within this Incloſure, which will be deſcribed in the next Article. According to the *Their Form and Order.* b later Miſſioners Accounts, the Palaces of the Emperor's Children and the other Princes of the Blood are very neat within, vaſtly large, and built at a great Expence. The ſame Manner runs through the Whole, both as to the Body of the Work and Embelliſhments. It is a Series of Courts, adorned on the Sides with Buildings, and in Front with a varniſhed Hall; raiſed on a Platform three or four Inches high, which is bordered with great ſquare Blocks of hewn Stone, and paved with large ſquare Tiles. The Gates generally open into little Streets [k] not much frequented; and have no other Ornaments than two Lions of Braſs, or white Stone, of very indifferent Workmanſhip; without any Order of Architecture, or Sculpture in Stone, ſuch as is found in the triumphal Arches [l].

ALL the Palaces hitherto mentioned ſtand within the Wall of the inner Palace. Thoſe that follow are ſeated between the two Incloſures.

THE firſt is called *Chung-wha-tyen*, or *The Palace of the double Flower*. It is in Length *Outward Palaces.* two *Chineſe* Furlongs, or half an *Italian* Mile, and had its Name on the following Occaſion: About two hundred Years ago, an Emperor going, contrary to the Advice of his People, to fight the Weſtern *Tartars*, who then ravaged the Province of *Pe-king*, was overthrown, taken, and carried into *Tartary* [m]. The *Chineſe* believing him to be dead, ſet-up his Brother. Some Months after, Ambaſſadors coming to demand a Ranſom for the captive Monarch and other Priſoners, the new Emperor gave Order to Com- *Uncommon Virtue.* miſſioners to treat about their Enlargement; and at the ſame Time appointed a magnificent Palace to be built, whither he intended to retire upon his Brother's Return. However, this the releaſed Emperor would not ſuffer, but retired thither himſelf. Three Years after, the new Emperor dying, the former re-aſcended the Throne, and was crowned a ſecond Time: Hereupon the

[g] In the Notes, *Long-te-tyen.* [h] In the Notes, *Kiun-ſin-tien.* [i] *Magalhaens*'s Relation of *China*, *p.* 303, *&* *ſeqq.* [k] Theſe Streets muſt be thoſe of the outer Palace, and the Gates in the inner Palace Wall. [l] *Du Halde*'s *China*, p. 69. [m] See what Evils attend Princes, who act contrary to the Advice of their People! It would be for the Good of both that they had no ſuch Power.

The Geography. *Literati*, according to Cuſtom, changed his Name to *Tyen-ſhong*, or *The Prince who followed the Will of Heaven*; and that of the Palace to *Chong-wha-tyen*, alluding to the double Coronation of the Emperor.

Admirable Bridge. THE Bridge over the Mote, that ſurrounds this Palace, is a wonderful Piece of Workmanſhip. It is a Dragon of an extraordinary Bulk and lively Figure, whoſe fore and hind Feet ſtanding in the Water, ſupply the Place of Pillars. His Body, Dolphin-like, forms the middle b Arch, while his Tail makes another, and his Head and Neck a third. The Whole is of black Jaſper, ſo well cloſed and wrought, that it ſeems to be of one Piece. It is called *Ti-kyang*, or *The flying Bridge*: For the *Chineſe* report, that this Dragon flew through the Air from a Kingdom in the *Eaſt Indies*, which they call *Tyen-cho*, or *The Kingdom of Bambûs*, whence they alſo ſay their Law was brought in former Times [a]. They tell an hundred idle Stories of this Dragon and c this Bridge [b].

Its Situation. THE Editor obſerves, that *Couplet*, ſpeaking of the Emperor who cauſed this Palace to be built, places it to the Eaſt between the two Incloſures, and upon the South Side. This Prince was called *Ing-ſong*, or *King-tong*, and his Brother, *King-ti*: He began his Reign in 1436. He was taken by the *Tartars* in 1450, and ſet at Liberty ſome Time after. His Brother dying in 1457, he reaſſumed the Government the ſame Year, d and died in 1464.

THE ſecond is called *Hyen-yang-tyen*, or *The Palace of the riſing Sun*, a Structure beautiful and magnificent, environed with nine very high Towers of different Workmanſhip, which ſignify the firſt nine Days of the Moon: Theſe are very great Holidays, eſpecially the ninth, and there celebrated [c].

THE third Palace is called *Van-ſhew tyen*, or *The Palace of ten thouſand Lives*. It was built e near the Lake by the Emperor *Kya-ſing* [d], at the Inſtance of one of the married *Bonzas*, who promiſed to preſerve him from dying by his Art in *Folly of an Emperor.* Chemiſtry. Hither this ſilly Monarch (though otherwiſe good and juſt) retired to diſtil the Water of Immortality; but being greedy after Life, he haſtened his Death: For being overcome by the Fire of the Furnace, he fell ſick in a Month or ſix Weeks after; and died within a few Days, after he had reigned five and forty f Years. This Palace is leſs than the reſt; but what it wants in Bigneſs, it has in Beauty. It is environed by an high Wall with Battlements, and perfectly round. All the Halls and Chambers alſo are round, Hexagons or Octagons; and the Architecture is moſt beautiful and magnificent. *1. Province,* Pe-che-li.

THE fourth is called *Sing-hyu-tyen*, or *The Palace of perfect Purity*; and was built by the ancient Emperors for ſolemnizing the Feaſt of the fifteenth of the eighth Moon. This Palace is not very big, but wonderfully delightful; being ſeated on an artificial Mountain, called *Tulb-ſhan*, or *The Mountain of the Hare*. But if *Europeans* laugh *The Hare in the Moon.* at the *Chineſes*, for imagining the Spots in the Body of the Moon to be a Hare; the *Chineſes* laugh as much at them for painting the Sun and Moon with human Faces.

THE fifth Palace is called *Ing-tay-tyen*, or *The Palace of the flouriſhing Tower*. It ſtands on the Lake Side among the ſhady Trees: So that the Emperor makes it his chiefeſt Reſidence during the exceſſive Heat.

THE ſixth is called *Van-yew-tyen*, or *The Pa- Palaces of* c *lace of ten thouſand Sports and Delights*. It is *Pleaſure,* ſeated on the North Bank of the Lake. There the Emperor repoſes when he goes a-fiſhing, or to take his Pleaſure by Water. Among his Boats, made either to ſail or row, there is one built by the Direction of *John Adam* [e], in Form of a Brigantine. In this the Emperor (who is much delighted with it) always goes a-fiſhing, or to behold the Sea-Fights, which are many Times repreſented upon the Lake.

d THE ſeventh is a great Platform, encompaſſed with a Square of high Walls, in the Middle of which is a beautiful Palace, called *Hu-ching-tyen*, or *The Palace of the Walls of the Tyger*. The royal Hall belonging to it is round, very high and majeſtic. It has on the Top two Cupolas of Braſs gilded, one very large, about eight Foot above the other, which is leſs, and in the Form of a great Gourd. Theſe joined to the Roof, *And Diver-* covered with Azure varniſhed Tiles, and embel- *ſion.* e liſhed with Flowers, groteſque Borderings, and other Ornaments, make a curious Shew. From this Hall, and the Balconies belonging to it, the Emperor diverts himſelf with the Sight of Tygers, Bears, Leopards, Wolves, Monkeys, Muſk-Cats, and ſeveral other Kinds of Beaſts that are bred in the Incloſure; as well as Birds, Peacocks, Eagles, Swans, Cranes; green, red, and white Parrots: Beſides other foreign Kinds remarkable both for their Size and the Variety of their Co- f lours. Among the reſt there was one called *Laqui*, or *The Bird with a Bill of Wax*, by reaſon the Bill is of the Colour of Wax. It is as big as a Blackbird, and learns whatever is taught her.

[a] This is to be underſtood of the Sect of *Fo*.

[b] *Magalhaens*'s Relation of *China*, p. 314, *&* *ſeqq.*

[c] The ſame, *p.* 327.

[d] Called alſo *Shi-ſong*, who began his Reign in 1522, and died in 1567.

[e] Or, *John Adam Schaal.*

Geography.

THE eighth is ſeated at the End of a vaſt Platform [a], and called *The Manſion of the Fortreſs of the Middle*. The Emperors uſed to go to the royal Hall of this Palace to ſee three thouſand Eunuchs exerciſe: But the *Tartars* have laid this Cuſtom aſide [b].

Tribunals.

To theſe Palaces may be added four and twenty other beautiful ones, built between the two Incloſures. Theſe are the Tribunals of the *Mandarins*, who are the high Stewards of the Emperor's Houſhold, and not ſubject to the other Tribunals of the Empire. They are the Overſeers of the Palace, the Servants, the Cellars, Offices, Treaſuries, and the like; puniſhing and rewarding the Domeſtics according to his Majeſty's Order. In the Time of the *Chineſe* Monarchs, theſe Tribunals were governed by Eunuchs, but at preſent by ſeventy-two *Tartar* Lords, bred-up in the Palace. Three of theſe belong to every Tribunal, who have under them a great Number of inferior Officers [c].

Temples.

BESIDES the Palaces, there are, within the two Incloſures, a great Number of Temples. Of theſe, four are more famous than the reſt, and called Palaces, by reaſon of their Largeneſs, the Multitude of their Apartments, and Beauty of their Structure. The firſt is called *Tay-quang-ming*, or *The Palace of great Light*. It is dedicated to the *Pe-tew*, or thoſe which *Europeans* call the *North Stars*. As they believe this Conſtellation is a God, and has Power to grant long Life, the Emperors, Queens and Princes offer their Oblations in this Temple; where there is no Image, but only a Cartridge, or Linen Roll, ſurrounded with a ſumptuous ſquare Border, with this Inſcription, *To the Spirit and the God* Petew. This Temple ſtands within the inner Wall, the other three between the two Incloſures.

THE ſecond is called *Tay-kau-tyen*, or *The Palace of the moſt illuſtrious and ſovereign Emperor*, dedicated to *Quan-ti-king*, a famous Captain, of whom they implore long Life, Children, Honour, Riches, and all other temporal Bleſſings [d].

THE third Palace or Temple is called *Makalatyen* [e], or *The Palace of the horned Ox-head*; that being the Idol worſhipped there.

THE fourth Palace is called *Lama-tyen*, or *The Palace* or *Temple of the Lama*. It is ſeated on the Eaſt Side of the Lake upon a Mountain, made with Hands like a Sugar-Loaf; and environed with Rocks, full of Holes and Cavities, occaſioned by the continual Daſhing of the Waves of the Sea; from whence, with great Pains, they were long ſince brought, the *Chineſe* taking great Delight to behold ſuch rude Works of Nature. They are ſo diſpoſed as to repreſent the high Out-juttings and rugged Precipices of Rocks. At the Top appears a very high, round Tower, of twelve Stories, the uppermoſt hung-round with fifty jingling Bells. The Temple, which is large and magnificent, is ſeated in the Middle of the Deſcent on the South Side; the Cloiſters and Cells of the *Lamas* extending themſelves to the Eaſt and Weſt. The Idol ſtands upon an Altar within, all naked, and in a filthy Poſture, like the *Roman Priapus*. Neither is it adored but by the *Lamas* and the Weſtern *Tartars*: For the Eaſtern *Tartars* and the *Chineſes* abhor it as an obſcene Monſter. *Shun-chi*, the Emperor's Father, erected theſe two Temples for Reaſons of State, and to pleaſe his Mother, Daughter of a petty King of the Weſtern *Tartars*: But there is great Probability, that at her Death theſe Temples will be ſhut-up.

1. Province, Pe-che-li.

Obſcene Idol.

ALL the Structures already deſcribed are covered with large thick Tiles, varniſhed with Yellow, Green, and Blue; and faſtened with Nails to withſtand the Winds, which are very high at *Pe-king*. In regard that all which one ſees of theſe Palaces, is varniſhed over with the Colours before-mentioned, they appear at a Diſtance, when the Sun riſes, as if covered with pure Gold, enamelled with Azure and Green; which yields a moſt delightful and majeſtic Proſpect. The Ridges, which always run from Eaſt to Weſt, riſe about eight Foot [f] above the Roof. The Extremities are terminated with the Bodies and Heads of Dragons, Tygers, Lions, and other Beaſts, that wind about and extend themſelves the whole Length of the Ridges: A vaſt Variety of Flowers, groteſque Works, and other Ornaments, iſſuing from their Mouths, Ears, or being faſtened to their Horns.

Beautiful Proſpect.

THUS we have given an Account, ſays *Magalhaens*, of the principal Structures of the Palace, for it would be endleſs to deſcribe all the other Palaces and Buildings; as, the Houſes of Pleaſure, Libraries, Magazines, Treaſuries, Stables, and ſuch like meaner Edifices [g].

BESIDES the Temples, which ſtand in the Palace, the Emperor has ſeven more, five in the new City, and two in the old, in each of which he ſacrifices once a Year.

THE firſt of theſe is called *Tyen-tang*, or *The*

[a] Or, Court. [b] *Magalhaens*'s Relation of *China*, p. 217, *& ſeqq.* [c] The ſame, *p.* 325, *& ſeq.* [d] *Magalhaens*, as before, *p.* 320, *& ſeq.* [e] *Makala*, in the *Lama* Language, (but whether that, or the *Mogol*, be meant, we know not) ſignifies, *An Oxhead, with the Horns on*; and *Tyen*, in *Chineſe*, *A royal Palace.* [f] The Author ſays the Height of a Lance: So he expreſſes Diſtances often by Bow-Shot, Muſket-Shot, and ſuch indeterminate Things. [g] *Magalhaens*, as before, *p.* 324, *& ſeqq.*

Temple

The Geography.

Temple of Heaven.

Temple of Heaven, ſeated two *Chineſe* Furlongs a from the principal Gate of the *Chineſe* City [a], a little to the Eaſt; and incloſed with a round Wall, three Furlongs in Compaſs. One Part of this Area is taken up with very beautiful Buildings; the reſt with a green and very thick Grove of extraordinary high Trees. It has a Portal of five Doors on the South Side: Three in the Middle always ſhut, but when the Emperor comes to ſacrifice; and one on each Side always open. On the South and North Side, there are b ſeven ſeparate Apartments; ſix of which are Halls and Portals, as large and magnificent as thoſe of the Palace. The ſeventh is a vaſt and high round Hall, which repreſents Heaven, ſupported by fourſcore and two Columns; the whole painted within-ſide with Azure and Gold, and covered with Tiles varniſhed with blue. In this Temple the Emperor ſacrifices to Heaven, upon the Day and Moment that the Sun comes to the Winter Solſtice, attended by all the great Lords c and *Mandarins* of his Court. The Victims, he offers, are, Oxen, Hogs, Goats, and Sheep. Great Preparations are made for this Ceremony; which is performed with great Solemnity, and Signs of Humility: For then the Emperor lays aſide his Gold, his precious Stones, and yellow Robes; appearing only habited in a plain Veſtment of black or ſky-Colour Damaſk.

Temple of the Earth,

THE ſecond Temple is called *Ti-tang*, or *The Temple of the Earth*. It ſtands towards the Weſt d of the Gate, at the ſame Diſtance as the firſt; from which it differs in nothing, but only that it is covered with green varniſhed Tiles. The Emperor, being crowned, before he takes Poſſeſſion of the Empire, ſacrifices in this Temple to *the God of the Earth*. Afterwards, putting on the Habit of a Ploughman, with two Oxen, whoſe Horns are gilded, and a Plough, varniſhed with Vermilion and Streaks of Gold, he ſets himſelf to plough a little Piece of Ground that e lies within the Incloſure of the Temple. Meanwhile, the Queen, with her Ladies, in another Apartment, dreſs him a homely Dinner, which ſhe brings him, and they eat together. The ancient *Chineſes* inſtituted this Ceremony, to the End their Monarchs might remember, that their Revenues came from the Labour and Sweat of the Peoples Brows; and therefore ought to be employed in neceſſary Expences, for the Good of the Public; not in Luxury and Parade.

THERE are three other Temples, like the former, anſwerable to three other Gates of the ſame City; from whence they are two *Chineſe* Furlongs diſtant. That on the North Side is called *Pe-tyen-tang*, or *The North Temple of Heaven*. Here the Emperor ſacrifices at the Time of the Summer Solſtice. And, at the Time of the Vernal Equinox, he ſacrifices in the Eaſtern Temple, called *Je-tang*, or *The Temple of the Sun*: And at the autumnal Equinox, in the Weſtern Temple, which is called *Yue-tang*, or *The Temple of the Moon*. Before the Performance of theſe Sacrifices, his Majeſty commands a Faſt for three Days to be obſerved in *Pe-king*; during which Time, they are forbidden to eat either Fleſh or Fiſh: Nor are the Tribunals, eſpecially the criminal, to do any Buſineſs; which ſomewhat reſembles the *Romiſh* Faſt of Ember Weeks.

THE ſixth Temple, ſtanding in the old City, is called *Ti-vang-myau*, or *The Temple of all the paſt Kings* [b]. This is a large and magnificent Palace, with many Apartments, Portals, Courts, and Halls; of which, the laſt is as fair, large, and well adorned, as thoſe of the King's Palace. There you behold, on rich Thrones, the Statues of all the Emperors of *China*, from *Fo-hi*. This Temple ſtands in the Middle of one of the faireſt Streets which is there, croſſed by two triumphal Arches, with three high majeſtic Gates. All People, of what Quality ſoever, alight and walk a-Foot when they come to theſe Arches, till they are paſt the Front of the Temple. Here the Emperor performs the Ceremonies to his Predeceſſors once a Year.

THE ſeventh is called *Ching-whang-myau*, or *The Temple of the Spirit that guards the Walls*; near which it ſtands, on the Weſt Side. The *Mandarins* only ſacrifice in this Temple: However, this Ceremony is reckoned among the royal Sacrifices, becauſe they are performed at the Charge and Appointment of the Emperor. Every City in the Empire has ſuch a Temple ſeated as this is, and conſecrated, as we may ſay, to its guardian Angel [c].

THUS much for *Pe-king*, and the Emperor's Palaces there. He has others in the Neighbourhood [d]. Not far from it ſtands the Pleaſure-Houſe of the ancient Monarchs, no leſs than ten common *French* Leagues in Circumference; But it differs vaſtly from the royal Palaces in *Europe*; having neither Marble nor Water-Works, nor Stone-Walls about it. It is furniſhed with four Rivulets of excellent Water, whoſe Banks are planted with Trees; and is compoſed with three f Buildings, very large and neat: Beſides ſeveral Fiſh-Ponds, Paſtures for Roebucks, wild Mules, and other fallow Beaſts; Sheep-Folds, Kitchen-Gardens, Green-Walks, Orchards, and ſome Pieces of Ground under Corn. Hither the Emperors formerly retired from Buſineſs, to relieve

[a] It is marked in the Plan of *Pe-king*, and *Du Halde* has given the Plan of it. Vol. III. *p.* 560.

Geography. the Cares of Government, and taste the Sweets of a private Life [a].

4. *The other Cities of* Pe-che-li.

Pau-ting fû. Ho-kyen fû. Ching-ting fû. Shun-te fû. Quang-ping fû. Tay-ming fû. Yang-ping fû. Shan-hay *Fort*. Swen-wha fû. *Yellow Rats. Gates in the great Wall.* Tyen-tsing-chew *and* Tong-chew. *Table of Situations. Its Authority.*

ting fû. 2. *PAU-TING FU*, the second City of *Pe-che-li*, is the Residence of the Vice-Roy of this Province; and lies in the Road to *Shan-si*, which is exceeding agreeable [b]. It has three Cities of the second Rank, and seventeen of the third, within its District; which is very pleasant and fruitful. In the midst of the City there is a little Lake, abounding with a Kind of Water-Lily, called, by the *Chinese*, *Lyen-wha*.

kyen fû. 3. *HO-KYEN FU* has its Name from its being situated between two Rivers. Its Walls are built in a Line, high and handsome, almost four Miles in Compass. On it depends two Cities of the second Order, and fifteen of the third. The Rivers of its District are stored with delicious Cray-Fish, besides other Kinds.

g-ting 4. *CHING-TING FU* is an oblong Square, almost four Miles in Compass. The Walls are handsome, and flanked with square Towers. It stands pretty near a fine River; which, a few Leagues from thence, falls into the Lake *Pay-hû*.

Its Jurisdiction is very large; comprehending five Cities of the second, and twenty-seven of the third Rank. To the North of it are Mountains, where abundance of uncommon medicinal Herbs are found. Among other Temples, built in Honour of their Heroes, is one consecrated to the Memory of the first Emperor of the *Han* Race.

te fû. 5. THE District of *Shun-te fû* contains only nine of the third Rank; but they are very famous and populous. The Country is well watered with Rivers, full of Fish. The best Touch-Stones are found here. Likewise a very fine Sand, used in polishing of precious Stones: They also make *China* Ware of it; but not very beautiful.

ping 6. *QUANG-PING FU* is situated in the Southern Part of *Pe-che-li*; and has only nine Cities of the third Rank in its Dependance: But its Territory being watered by several Fish-Rivers, is agreeable and fertile.

ing. 7. *TAY-MING FU*, like the former, which lies near it, has nothing extraordinary to boast of; but the Country is more fruitful and agreeable. It has under it one City of the second Rank, and eighteen of the third. 1. *Provinces* Pe-che-li.

8. *YONG-PING FU* has in its Jurisdiction only one City of the second, and five of the third Order. It is incompassed by the Sea, by Rivers, and by Mountains, covered with very fair Trees. Its Soil is not very fertile; but it is supplied, by the neighbouring Bay, with all Sorts of Necessaries. Yong-ping fû.

NOT far from this City is the Fort *Shan-hay*, the Key of the Province of *Lyau-tong*. It stands near the great Wall; which, beginning at the Bulwark built in the Sea, extends, for a League, in a plain Country; and then ascends the Hills. Shan-hay Fort.

9. THE Largeness of *Swen-wha fû*, Number of its Inhabitants, Beauty of its Streets, and triumphal Arches, render it considerable. It is seated amidst Mountains, and not far from the great Wall; having under it two Cities of the second, and eight of the third Rank; besides some Forts along the Wall, provided with numerous Garisons. Its Mountains afford fine Crystal, Marble, and Porphyry. Here is found abundance of yellow Rats, larger than those of *Europe*; whose Skins are in great Request with the *Chinese*. The Gates of the great Wall are defended, on the Inside, by several pretty large Forts, *viz. Hi-fong-kew*, *Ku-pe-kew*, *Tu-she-kew*, and *Chang-kya-kew*. Through the first, the Emperor usually goes to hunt in *Tartary*; and through the two latter, the *Tartars*, in Subjection to the Empire, come to *Pe-king*. Swen-wha fû. *Yellow Rats.*

AMONG the lesser Cities, there is one, which, though without any Jurisdiction over others, has, beyond Comparison, a greater Trade, is more populous and rich, than most of the Cities before described; this is *Tyen-tsing-wey* [c], raised since the Year 1710, to the Rank of *Chew*, or Cities of the second Order. It is seated where the royal Canal joins the River of *Pe-king*. Here resides the Superintendant of the Salt made along the Coasts of *Pe-che-li* and *Shang-tong*. All Ships, that fetch Timber from Eastern *Tartary*, after crossing the Gulf of *Lyau-tong*, unload in this Port [d], which is but twenty Leagues from *Pe-king* [e]; taking Water at *Tong-chew*, twelve Miles distant; a City often mentioned before [f]. Tyen-tsing chew.

Its Authority. THE Latitudes were determined by aſtronomical Obſervations; and the Longitudes geometrically, or by a Chain of Triangles, by the Jeſuits, who made the Map of the Province for the Emperor. The like is to be underſtood of all the other Situations [a] inſerted at the End of their reſpective Provinces. The Longitude is reckoned from *Pe-king*, which lies Eaſt of *Paris* one hundred and thirteen Degrees fifty-one Minutes and thirty Seconds by the the Obſervation of *Gaubil*; one hundred and fourteen Degrees twenty Minutes, by that of *Koegler*; and one hundred and fourteen Degrees, according to others; which being the middle, as well as the round Number, is by us preferred.

SECT. II.

Kyang-nan, *the ſecond Province.*

Bounds and Extent. Commodities and Trade. Character of the People. Nan-king, *Size and Figure. Preſent State. Government. Manufactures. The* Yang-tſe-kyang. *Vaſt Compaſs. Huge Bells: Their Number.* Su chew fû: *Its Diſtrict.* Song-kyang fû. Chang chew fû: Ching-kyang fû. Kin-ſhan *and* Qua chew. Whay-ngan fû. Yang chew fû. *Number of Inhabitants.* Ngan-king fû. Whey chew fû. Ning-que fû. Chi chew fû. Fong-yang fû: *Its former Grandeur. Riſe of* Hong-vû. *Stately Temple. The* Whay-ho. Lyu chew fû. *Iſland of* Tſong-ming: *Its Towns, Roads, and Soil.*

THIS Province, one of the moſt fertile, trading, and, conſequently, wealthy in *China*, is bounded on the Weſt, by that of *Hô-nan* and *Hû-quang*; on the South, by *Che-kyang* and *Kyang-ſi*; on the Eaſt, by the Gulf of *Nan-king*; and on the North, by *Shan-tong*.

IT is of vaſt Extent, containing fourteen Cities of the firſt, and ninety-three of the ſecond and third Rank; all the moſt populous and famous in the Empire, eſpecially for Trade. It is the Reſort of all the great Barks; for the Country is full of Lakes, Rivers, and Canals, which have a Communication with the great River *Yang-tſe-kyang*, that runs through the Province; where there are but few Mountains, except towards the South.

THE Silks, varniſhed Works, Ink, Paper, and, in general, every Thing that comes from this Province, is much more eſteemed and dear than what is brought from the reſt. In the City of *Shang-hay* only, and the Villages belonging to it, they reckon above two hundred thouſand Calico Weavers.

THE Sea-Coaſt abounds with Salt-Pits, and Marble is found in abundance. In ſhort, this Province is ſo rich, that it yields, annually, about thirty-two Millions of *Taëls* [b], excluſive of the Duties on Goods exported or imported.

[a] Theſe Tables of Latitude and Longitude are given at the End of *du Halde*'s fourth Volume, in *French*. As ſuch Materials are the Foundation of all Maps, the *Engliſh* Editor hath thought fit to inſert them in his Copies of the Jeſuits Maps, as Vouchers. By theſe Tables one may trace the Progreſs of the Miſſioners through each Province, in making the Map of it. [b] A *Taël*, or *Lyang*, is the Value of an Ounce of Silver, equivalent to ſeven Livres, ten Sols, or ſix Shillings and eight Pence *Engliſh*.

THE

The Geography. THE Inhabitants of *Kyang-nan* are civil, polite, and exceeding ingenious, as they are much addicted to the Sciences. This Province is remarkable for producing a great Number of Doctors; who, by their Merit, attain to the Offices and Dignities of the Empire.

Character of the People.

THIS Province is divided into two Governments; *I-tong*, or *The Eaſtern*; and *I-ſi*, or *The Weſtern*; each of which is ſubdivided into ſeven *Fû*.

1. *The Eaſtern Part.*

	Chew.	*Hyen.*
1. *Nan-king*, Capital of the Province, governs - - - - -	0	8
2. *Sû chew fû*, Capital of the Eaſtern Part - - - - -	1	7
3. *Song-kyang fû* - - - - -	0	4
4. *Chang-chew fû* - - - - -	0	5
5. *Chin-kyang fû* - - - - -	0	3
6. *Whay-ngan fû* - - - - -	2	9
7. *Yang-chew fû* - - - - - -	0	6

Nan-king, Size and Figure.

1. *NAN-KING*, if we may believe the ancient *Chineſe*, was once the fineſt City in the World: They ſay, that if two Horſemen ſet-out in the Morning from the ſame Gate, to gallop round it different Ways, they would not meet till Evening. It is certainly the greateſt City in *China*; its Walls being ſixty-ſeven *Li* in Compaſs, (according to the Meaſure we took of it, ſays the Author of this Geography, when we made the Plan) which amount to near five great Leagues and a half, and four hundred and ſixty-ſix Fathom [a].

IT ſtands but one League from the *Kyang*; from which River Barks come-up to it by Means of Canals, that end at the City.

THE Figure of *Nan-king* is irregular, occaſioned by the Hills that are within its Walls, and the Nature of its Soil. It was formerly the imperial City; whence ſtiled *Nan-king*, or *The Southern Court*; as *Pe-king* ſignifies the *Northern*: But ſince the ſix great Tribunals, which then were in both thoſe Cities, are all tranſlated to *Pe-king*, the Emperor gave it the Name of *Kyang-ning*. Its old Name, though ſtill uſed in Diſcourſe, is never ſuffered to be mentioned in the public Inſtruments.

Preſent State. THIS City is much fallen from its ancient Splendour. No Footſteps appear of its magnificent Palace. Its Obſervatory is neglected, and almoſt deſtroyed. All its Temples, Sepulchres of Emperors, and other ſuperb Monuments, were demoliſhed by the *Tartars*, who firſt invaded the Empire [b]. About one Third of it is quite waſte; but the reſt very well inhabited. There is ſcarce a greater Trade, and Number of People, anywhere, than what are ſeen in ſome Parts: But then the Streets are not ſo broad as thoſe of *Pe-king* by one-half: However, they are handſome enough, well paved, and adorned with neat Shops handſomely furniſhed.

2. Province, Kyang-nan.

Government. HERE reſides a *Tſong-tu*; before whom are brought important Matters from the Tribunals, both of *Kyang-nan* and *Kyang-ſi*. The *Tartars* have alſo a numerous Gariſon, and poſſeſs one Part of the City, ſeparated from the reſt by a ſingle Wall. One ſees no public Buildings of Note, except its Gates, which are exceeding beautiful, and ſome Temples; ſuch is that where ſtands the famous Porcelain Tower. This City is eminent for cultivating the Sciences: It ſingly furniſhes more Doctors and great *Mandarins* than ſeveral Cities together: The Libraries here are more numerous, the Bookſellers Shops better furniſhed, the Printing more beautiful, and the Paper better than any-where in the Empire beſides [c].

Manufactures. THE principal Manufactures of *Nan-king* are the Satins, called *Twan-tſe*, both flowered and plain; which are the beſt and moſt eſteemed at *Pe-king*. The Woollen Cloth, called *Nan-king-ſhen*, which is pretty good, is to be found in ſome other Cities; being ſcarce any Thing elſe than Felt made without weaving; and artificial Flowers made of the Pith of a Tree called *Tong-tſau*; for which there is a great Trade. The Ink of *Nan-king* comes all from *Whey-chew*, in the ſame Province. Its Diſtrict is full of great Villages, almoſt wholly peopled with thoſe who make or ſell theſe Sticks of Ink, which are of all Sorts of Figures, and often adorned with green, blue, or gilded Flowers.

The Yang-tſe-kyang. THE Breadth [d] and Depth of the *Yang-tſe-kyang* rendered *Nan-king* formerly an excellent Port: The famous *Corſair* [e], who beſieged it in the late Troubles, paſſed eaſily up to it: But, at preſent, the *Chineſe* Veſſels of Carriage do not enter the River; either becauſe the Mouth is choaked-up, or diſuſed, that the Knowledge of it, by Degrees, may be loſt [f]. In *April* and *May*, abundance of excellent Fiſh is caught; ſome of which are conveyed to the Court, covered with Ice [g], which keeps them freſh, in Barks appointed ſolely for that Uſe [h].

LE COMTE obſerves, that *Nan-king* was

[a] It ſhould be ſix Leagues and more than half, reckoning ten *Li* to a great League, as the Miſſioners commonly do. [b] Under *Jenghiz Khân*, in 1211. [c] Theſe Remarks are from *Le Comte*. [d] *Le Comte* ſays, its Breadth here is half a League. [e] This was *Ching-ching-kong*, *Que-ſing*, or *Kox-inga*, often before-mentioned. [f] This is taken from *Le Comte*, as is a good deal of the reſt. [g] See Vol. III. p. 413. c. [h] *Du Halde's China*, p. 73, *& ſeq.*

The Geography. formerly incloſed with three Walls; that the outermoſt was ſixteen long Leagues in Compaſs; and that ſome Works of it are ſtill to be ſeen, looking more like the Bounds of a Province than a City. The Things remarkable there, according to him, are the *Kyang*, the Porcelain Tower, the Obſervatory, and the Bells. Of the two firſt ſomething has been already ſpoken [a], and more will be ſaid hereafter. Of the two latter, he ſays little more than what *Gemelli* has done [b]; only with regard to the Obſervatory, he adds, that it was a Platform, with proper Inſtruments, which were afterwards removed to *Pe-king*: But that now, only ſome old Buildings remain, and the large ſquare Hall, built in Honour of *Kang-hi*.

Vaſt Compaſs.

Huge Bells. As to the Bells, he gives the ſame Dimenſions to one lying between the Obſervatory and the Jeſuits College, that the ſame Author gives it; but makes it ſwell, towards the Middle, equal to the Circumference of the Bottom, inſtead of growing ſmaller. He adds, that the Handle, or Ear, by which it hangs, is two Feet thick, and the lower Brim ſix Inches and an half, but that it grows thinner and thinner to the Bowing, where the Cone begins; ſo that under the Ear it is not above two Inches thick: This, he ſays, may be meaſured exactly enough, becauſe they pierce their Bells at the Top to increaſe their Sound, as they fancy. The Metal is brittle, and very ill caſt, being full of little Knobs. He computes it to weigh about fifty thouſand Pounds.

Their Number. THESE Bells were caſt during the ninth Reign before this; and have their particular Name; the one being called *Chwi*, the *Hanger*; another, *She*, the *Eater*; a third, *Shwi*, or *So*, the *Sleeper*; and a fourth, *Si*, the *Flyer*. This laſt is on the other Side of the *Kyang* [c].

Sû chew fû. 2. *SU CHEW FU* is one of the moſt beautiful and pleaſant Cities in all *China*; the *Europeans* compare it to *Venice*. One may paſs through the Streets, and to the Sea, by Water, in two Days; the Branches of the River and Canals bearing the largeſt Barks: From thence, in two or three more, the little Merchant Ships croſs over to *Japan*; with which it carries on a Trade, as well as with all the Provinces of the Empire. The Embroideries and Brocades made here, are in great Requeſt, being good and cheap. It is the Seat of the Vice-Roy of the Eaſtern Part of the Province. Its Diſtrict is charming, very rich, cultivated, full of People, Towns, and Boroughs, which are ever in Sight. It abounds in Rivers, Canals, and Lakes, covered with ſplendid Barks; ſome full of Quality, who are lodged more decently than in their own Houſes. There is, in the *Chineſe* Books, an ancient Proverb, *Shang yew tyen tang, Hya yew Sû Hang*, that is, *Above is Paradiſe, below* Sû chew *and* Hang-chew; in Effect, theſe two Cities are the terreſtrial Paradiſe of *China*. The Walls are reputed more than four Leagues in Compaſs; having ſix Gates toward the Land, and as many to the Water. The Suburbs extend a great Way on both Sides of the Canals; and the Barks are ſo many floating Houſes, ranged in ſeveral Rows on the Water, for more than a League together; many of them equal to third Rate Ships in Bulk. The Throngs of Traders are incredible; yet no Quarrelling. The whole together yields a Proſpect which cannot well be deſcribed. The eight Cities under its Juriſdiction are all very handſome, and a League and an half or two Leagues in Compaſs [d].

Its Diſtrict.

2. *Province*, Kyang-nan.

3. *SONG-KYANG FU* is built in the Water, very conveniently for Trade, foreign as well as domeſtic, being not far from the Sea. Here is a great Reſort for Cotton, and lovely Calicos of all Sorts; which, when dyed, one would take for the fineſt Serge. Song-kyang fû.

ITS four Cities of the third Rank may compare with the beſt for Magnitude, the extraordinary Reſort of Merchants from all Parts, and the different Sorts of Commerce carried on there. Such is, for Inſtance, *Shan-hay hyen*; where Ships from *Fo-kyen* are continually entering, and others ſailing out, to trade with *Japan*.

4. *CHANG CHEW FU* is a famous City, and of great Trade, ſituate near the Canal paſſing from *Sû-chew* to the *Kyang*, and adorned with ſeveral triumphal Arches. Moſt of its five dependant Cities are very fair and well peopled. *Vu-ſi hyen*, for Example, is a good League and an half in Compaſs, excluſive of the Suburbs, which are a Mile and an half in Length. It is ſurrounded with a great Ditch, in Form of a Canal. The Walls are fair, and twenty-five Feet high. Chang chew fû.

IN another of its Cities, *China* Ware is made, which, according to the Inhabitants, adds an admirable Smell to the Water uſed for Tea [e]; whence it is preferred to the beſt Porcelain of *King-te-ching* [f].

5. *CHING-KYANG FU*, though ſcarce three Miles in Compaſs, is very conſiderable, on Account of its Situation and Trade; being one of the Keys of the Empire towards the Sea, and furniſhed with a ſtrong Gariſon. Its Walls, in ſeveral Places, are above thirty Feet in Height, made of Bricks, four or five Inches thick. Ching-kyang fû.

[a] See Vol. III. p. 539, and 413, 554. [b] See Vol. III. *p.* 554. [c] *Le Comte*'s Memoirs of *China*, p. 76, *&c. ſeqq.* [d] *Du Halde*, as before, *p.* 74; and *Le Comte*, p. 83. See alſo Vol. III. *p.* 466, 506, and 521. [e] As the Water of *Vû-ſi hyen* does an agreeable Flavour to it, not to be found elſewhere. [f] *Du Halde*, as before, *p.* 75. Vol. 4, Plate VII, p. 26.

N°118. N.Parr Sculp Vol.4. Pl.1. P.27.

The Geography. THE Suburbs are a geometrical Mile in a Length, and as populous as the City itſelf; from which they paſs to them over Stone Bridges. The Streets of both are paved with Marble, and crouded with People, eſpecially at its Port. There are ſome very agreeable Hills near the Town. It ſtands on the Sides of the *Ta-kyang* [a], which is here a Mile and an half broad; and to the Eaſt of a Canal cut as far as the River.

Kin-ſhan, and Qua chew. SIX Paces from the Bank, in the River, ſtands a Hill, called *Kin-ſhan*, or *Golden Hill*, becauſe b of its agreeable Situation. On the Top of it is a Tower ſeveral Stories high. This Iſland is, at leaſt, five hundred Paces round; and has its Shores beſet with Idol-Temples, and Houſes of *Bonzas*.

OPPOSITE, on the other Side of the River, ſtands *Qua chew*; which, though it paſſes for no more than a *Ma-tew*, or *Place of Trade*, yet is as conſiderable as the greateſt Cities [b]. Near it is the Temple of *Quang-qua-myau*.

Whay-ngan fû. 6. *WHAY-NGAN FU* is ſituate in a marſhy c. Place, and incloſed with a triple Wall, is rich, though not very populous. It is in Danger of being drowned, the Ground it ſtands on being lower than the Canal, which in ſeveral Places is ſupported only by Banks of Earth: But two Leagues off it has a very large and populous Borough, named *Tſing-kyang-pû*, which is, as it were, the Port of the *Whang-ho*. There a *Tſong-ho*, that is, *The Surveyor-General of the Rivers*, or *Grand Maſter of the Waters*, reſides, who has d a great Number of Officers under him.

BEYOND the *Whang-ho* there are certain Towns along the Canal, where the *Mohammedans*, ſettled there for many Generations, have unſucceſsfully endeavoured to draw a Trade. Their Temples are very high, and not built in the *Chineſe* Taſte.

MARBLE is very common in the Diſtrict of this City. The Plains produce Plenty of Rice and Wheat: Its Rivers and Lakes, all Sorts of very e good Fiſh [c].

Yang-chew fû. 7. *YANG-CHEW FU* is built on the royal Canal: Its Air is mild and temperate, the Soil agreeable and fertile. It is a Place of great Trade in all Sorts of *Chineſe* Manufactures and Salt, which is made on the Sea-Coaſt, and conveyed hither by Canals, from whence it is carried into the Heart of the Empire. There is a *Tartar* Gariſon in this Place.

TO the Eaſt is a large Suburb, joined by a f Bridge, which with a Ferry-Boat ſcarce ſuffices for the People to croſs over, although the Paſſage is not above twenty Paces wide.

YANG CHEW is two Leagues in Circum- *2. Province, Kyang-nan.* ference, and, including the Suburbs, contains two hundred thouſand Souls. The Inhabitants *Number of Inhabitants.* are great Lovers of Pleaſure: They educate ſeveral young Girls, whom they teach to ſing, to play on Inſtruments, to paint, and all other Accompliſhments, and afterwards ſell them at a great Price to the rich Lords [d].

2. *The Weſtern Part.*

	Chew.	*Hyen.*
1. *Ngan-king fû*, the Capital, governs -	0	6
2. *Whe-chew fû* - - -	0	6
3. *Ning-que fû* - - -	0	6
4. *Chi-chew fû* - - -	0	6
5. *Tay-ping fû* - - -	0	3
6. *Fong-yang fû* - - -	3	13

1. *NGAN-KING FU*, the chief City of *Ngan-king fû.* the Weſtern Part of the Province, is charmingly ſituated near the Borders of three Provinces. Though but five Days Journey from *Nan-king*, yet it has a particular Vice-Roy, who keeps a great Gariſon in a Fort that commands the Lake *Poyang*, at the Entrance of the Province of *Kyang-ſi*, and of the River *Kyang*.

THIS City is very conſiderable, on account of its Riches and Trade; whatever is carried to *Nan-king*, paſſing through it. Its Diſtrict is a very open, agreeable, and fertile Country.

2. *WHEY-CHEW FU*, the moſt Southern *Whey-chew fû.* City in the Province, is one of the wealthieſt in the Empire. The Air is wholeſome and temperate, though encompaſſed with Mountains. There is no City without ſome Dealers from *Whey-chew*; nor any Bank, or Exchange, in which they are not principally concerned; yet the People live ſparingly. Here the beſt Sticks of Ink and varniſhed Works are made.

ITS Diſtrict is famous for Mines of Gold, Silver, and Copper; produces the beſt Tea; and the Earth, whereof they make the *China*-Ware, particularly at *King-te-ching*, is found there, near the Borders of *Kyang-ſi*.

3. *NING-QUE FU* is ſituate on a fine *Ning-que fû.* River, which falls into the *Kyang*. The Ground where it ſtands is rugged, becauſe ſurrounded with Hills; but being covered with Woods, they afford an agreeable Proſpect, as well as excellent medicinal Herbs. There are in this Place a great many Manufactories for Paper, made of a Kind of Reeds.

4. *CHI-CHEW FU* ſtands on the Side of *Chi-chew fû.* the *Kyang* [e], and though encompaſſed with Hills,

[a] The ſame as the *Kyang*, or *Yang-tſe-kyang*. [b] *Du Halde*'s *China*, p. 75; and *le Comte*'s Memoirs of *China*, p. 84. See alſo Vol. III. *p.* 460, and 522. [c] *Du Halde*, as before. See alſo Vol. III. *p.* 416, 505, and 519. [d] *Du Halde*, as before, *p.* 76. See alſo Vol. III. *p.* 467, and 523. [e] A Mile or more from it on the Eaſt Side, according to the Jeſuits Map.

The Geography. yet its Diſtrict abounds with all the Neceſſaries of Life.

Tay-ping fû. 5. *TAY-PING FU* is incloſed by three Branches of Rivers that fall into the *Kyang*, on which it ſtands. This Situation makes it a Place of good Trade. The moſt conſiderable for Riches of the three Cities in its Diſtrict, is *Vû-hû hyen*.

Fong-yang fû. 6. *FONG-YANG FU* ſtands on a Mountain, pretty near the *Yellow River*, and incloſes ſeveral little Hills within its Walls. The Diſtrict of this City exceeds in Extent the greateſt Provinces of *Europe*, being eighty Leagues from Eaſt to Weſt, and ſixty from North to South: Comprehending eighteen Cities, five of the ſecond Rank, and thirteen of the third; beſides a great Number of *Ma-tew*, or *Places of Trade*, ſettled on the River for the Conveniency of Merchants, and levying the Duties of the Empire.

HONG-VU[a], Founder of the preceding Dynaſty, having driven the Weſtern *Tartars* out of *China*, which they had poſſeſſed for eighty-ſeven Years, fixed his Court here in 1367, and named it *Fong-yang*, that is, *The Place of the Splendor of the Eagle.* He deſigned to have made it the moſt large and famous City in the Empire; but the Unevenneſs of the Ground, the Want of freſh Water, and moſt of all the Neighbourhood of his Father's Tomb, cauſed him to change his Reſolution; and by Advice of his principal Officers, he transferred his Seat to *Nan-king*, thirty-two Leagues diſtant. Upon this a Stop was put at once to all the Works that were then going forward. The imperial Palace which was to have had a triple Incloſure, the Walls that were to have been nine Leagues in Compaſs, and the Canals which were marked-out, were all abandoned. There were only three Monuments finiſhed, which are ſtill remaining, and ſhew the Plan was very magnificent.

Former Grandeur.

THE firſt is the Tomb of *Hong-vû*'s Father, adorned with every thing the moſt beautiful in its Kind. It is called *Whang-lin*, or *The royal Tomb.*

THE ſecond is an oblong, ſquare Tower, in the Midſt of the City, an hundred Feet in Height, divided into four large Stories, raiſed on a maſſive Pile of Brick-work, forty Foot high, an hundred long, and ſixty broad. It is ſaid to be the higheſt Structure in *China*, and is ſeen at a great Diſtance [b].

Riſe of Hong-vû. THE third is a ſumptuous Temple, erected to the incarnate God *Fo*. It was at firſt a little Temple, where *Hong-vû*, after having loſt his Parents, retired at the Age of ſeventeen, and ſerved for ſome Years as Scullion in the Kitchen; till being weary of ſuch a ſlothful Life, he liſted himſelf a Soldier under one of the Chiefs of the Robbers, who had revolted againſt the *Tartars*. His Valour firſt gained him the Chief's Daughter in Marriage, and at his Death the Command of the Troops. With this Succeſs, aſpiring to the Throne, he attacked the *Tartars* briſkly, defeated them, and took *Nan-king*, with ſeveral other Cities; never ceaſing to purſue them till he had driven them intirely out of *China*.

2. *Province*, Kyang-nan.

Stately Temple. As ſoon as he came to the Throne, more out of Acknowledgment to thoſe who had entertained him in his Miſery, than any Regard for their Religion, he cauſed this ſumptuous Temple to be reared; aſſigning Revenues for maintaining three hundred *Bonzas* under a Chief of their Sect, whom he conſtituted a *Mandarin*, to govern them independent of the Officers of the City.

THIS Temple was called *Long-hing-ſe*, or *The Temple which the Dragon came-out of*, becauſe the Emperor bears a Dragon and ſix Griffins for his Arms. It began by a Row of five great Piles of Buildings, after the imperial Manner, flanked with Halls and Lodgings for the *Bonzas*, which is all that remains of it at preſent; the reſt having been deſtroyed during the laſt civil Wars, and the Prieſts (of whom not above one in twenty exiſt) almoſt reduced to Beggary. *Fong-yang* itſelf has been ſo intirely ruined by theſe Wars, that from an imperial City it is dwindled to a large Village. It is pretty populous, and well-built towards the Middle; but in all other Parts nothing is to be met-with but low thatched Houſes, or open Fields, where they plant Tobacco, in which almoſt the whole Trade of the Country conſiſts.

The Whay-ho. IN the neighbouring Mountains there is found Abundance of Talk and red Wormwood. Its Plains are watered by fine Rivers, and among others, the great *Whay-ho*; which riſing in *Honan*, runs through the whole Province, and after a long Courſe, paſſing through the Lake *Hong-tſe*, falls into the *Whang-ho*, about thirty-nine Leagues from its Mouth.

Lyu-chew fû. 7. *LYU-CHEW FU* ſtands in a pleaſant Country, producing all Sorts of Grain and Fruit, the Lake *Tſau* watering the Plains, as well as furniſhing all Sorts of Fiſh. The Diſtrict is alſo famous for good Paper, and the beſt Sort of Tea. Its Mountains, eſpecially near *Lû-kyang hyen*, are covered with very fine Trees, and there is a very remarkable Bridge near *Lû-ngan chew*.

Iſland of Tſong-ming. TO this Province belongs the Iſland of *Tſong-ming*; or, as it is commonly called, *Kyang-ſhe*, that is, *The Tongue of the River*: Either becauſe

[a] That is, *A Prince of Valour that triumphs over every Thing.*

[b] *Du Halde's China*, p. 76, & ſeq.

it

The Geography. it is ſhaped like a Tongue, or that it lies at the Mouth of the *Kyang* [a], about five or ſix Leagues from the Coaſt. Anciently it was a ſandy Deſart, where Robbers and Villains were baniſhed. Theſe having tilled the Ground for a Subſiſtence, People from the Continent went and ſettled there, dividing among them the arable Land, which is on the South Side, and yields two Harveſts; one of Grain in general, the other of Rice and Cotton. The Land to the North is over-run with Reeds, which ſerve for Building as well as Fewel, there being no Trees here, except thoſe planted about the Houſes. This North Part is interſperſed alſo with large Spots of Land, yielding great Quantities of Salt for Exportation. It is hard to account for theſe Spots, and more for the ſtrange Alteration that often happens; the ſaline Lands becoming fertile, and the fertile Lands in their Turn full of Salt.

Its Towns. THIS Iſle is about twenty Leagues long, and five or ſix broad. There is only one City on it, which is of the third Rank, incloſed with very high Walls, ſupported by good Terraſſes, and ſurrounded with Ditches full of Water. The Champain is cut into an infinite Number of Canals, edged with very high Cauſeways to prevent Inundations, for the Land is even, and void of Hills. The Air is wholeſome and temperate.

THE Country alſo is pleaſant. Every now and then one meets with large Boroughs, well furniſhed with Shops. Between them, ſcattered up and down, are the Houſes of the Families employed in Huſbandry. Thoſe of the richer Sort are built with Brick, and covered with Tiles: The Walls of all the reſt are made of Reeds platted, and the Roofs of Stubble. Theſe Houſes are ſurrounded with Ditches, full of running Water, and planted on both Sides with Trees. *Roads and Trade.* The Inhabitants being very ſparing of their Land, the great Roads are narrow, but lined on both Sides with little Houſes of Shop-keepers, who ſell Refreſhments to Travellers: So that the whole Iſland, in the beſt cultivated Places, ſeems to be one immenſe Village.

THE Country affords no Game, but there is Plenty of large Geeſe, wild and tame Ducks, Hens, Hogs, and Buffalos, which they reſerve for the Plough. Fruit is ſcarce, the Ground producing nothing but large Lemons, ſmall ſour Oranges, Apricots, huge Peaches, the Fruit called *Se-tſe*, and large Water-Melons; with all Sorts of Herbs and Pulſe the whole Year round [b]. *2. Province, Kyang-nan.*

SECT. III.

Kyang-si, *the third* Province.

Bounds. Inhabitants. Produce. Division. Nan-chang fû. Zhau-chew fû. King-te-ching, *vastly populous: Its Situation: The best* China-*Ware.* Quang-sin fû. Nan-kang fû. Kyew-kyang fû. Kyen-chang fû. Vû-chew fû. Lin-kyang fû. Ki-ngan fû. Shwi-chew fû. Ywen-chew fû. Kan-chew fû. *Dangerous Passage.* Nan-ngan fû. *Mountain* Mey-lin. *Table of Situations.*

Bounds and Soil.

THIS Province (divided in two Parts by the *Kan-kyang*) is bounded on the North by that of *Kyang-nan*, on the West by *Hû-quang*, on the South by *Quang-tong*, and on the East by those of *Fo-kyen* and *Che-kyang*. Having passed the almost inaccessible Mountains, which are in the Southern Part of it, and unite with these of the two last Provinces, one discovers exceeding fertile Valleys and Plains; yet it is so populous, that it does not yield much more Rice than is sufficient for the Inhabitants, who are reckoned sordid by their Neighbours, but are of an excellent Genius, and often rise to Honours.

Produce.

THE Brooks, Lakes and Rivers of *Kyang-si* abound with Fish, particularly Salmon, Trouts, and Sturgeon. The *Lyen-wha* Flower, so much valued in *China*, is found almost every-where. The Mountains which encompass it are covered with Woods, Simples and medicinal Herbs, as well as very rich in Minerals and Mines of Gold, Silver, Lead, Iron, and Tin. It furnishes very beautiful Silks, excellent Rice[b] and Rice-Wine: But what renders it most famous, is, that lovely *China*-Ware made at *King-te-ching*.

Kyang-si *is subdivided into thirteen* Fû.

Division.

13.	*Nan-ngan fû* - -	0	4

3. *Province*, Kyang-si.

1. *NAN-CHANG FU*, though reduced to Ashes by the *Tartars*, is now one of the finest Cities in *China*. The Canals and Rivers, by which it may be entered on every Side, render it a Place of great Trade in *China*-Ware. It stands on the *Kan-kyang*, which is pretty deep along its Port; and is not far-off the Lake *Po-yang*, into which that River discharges itself. Its District is so well cultivated, that it is hard to find Grazing for Cattle. It has always produced a great Number of *Literati*, and is full of Persons of Distinction. The Vice-Roy keeps his Court in this City, and under the preceding Dynasty several Families of Princes of the imperial House dwelt there, but at present they all remain at Court. Nan-chang fû.

2. *ZHAU-CHEW FU* is beautifully situated, being built on the North Side of the Lake *Po-yang*, and encompassed with Rivers that fall into the same, and render its District (which is flat) extraordinary fruitful. It is chiefly famous for the beautiful *China*-Ware made at *King-te-ching*. This Borough wants nothing but Walls to merit the Name of a City; those Places called *Ching*, which are of great Resort and Trade, not being inclosed. It extends a League and an half along a fine River: The Streets are very long, and intersect each other at certain Distances; but are rather too narrow, and the Houses too close: However, those of the Merchants take-up a great deal of Room, and contain a prodigious Multitude of Workmen. It is crouded like a Fair, having more than a Million of Inhabitants. Zhau-chew fû. King-te-ching. *Vastly populous.*

WHATEVER is consumed here, is brought from other Places; even the Wood for supplying the Furnaces with Fewel comes near three hundred Miles. This makes Provisions dear, yet an infinite Number of poor Families flock hither from the neighbouring Towns. There are none, even to the Lame and Blind, but what get their Living here by grinding Colours. Anciently they reckoned no more than three hundred Porcelain Furnaces at this Place, but at present about five hundred.

KING-TE-CHING stands in a Plain surrounded with high Mountains. That on the East *Its Situation.*

[a] Latitude, by *Noel*, thirty-one Degrees fourteen Minutes twenty-four Seconds: Longitude, five Degrees eleven Minutes forty-four Seconds. See as before. Latitude, by another Jesuit, thirty-one Degrees sixteen Minutes: Longitude, five Degrees eleven Minutes forty-five Seconds. [b] It is much esteemed, and great Quantities sent to Court.

Side,

Geography. Side, against which it is built, forms, without, a a Kind of Semicircle: Those on the Sides give Passage to two Rivers; one of them is small, the other very large. These unite and make an handsome Port, within a League of the Place, in a vast Bason; where, on entering, one sees sometimes two or three Rows of Barks following each other the whole Length of this Space. The Clouds of Flame and Smoke, which ascend from different Parts of it, shew at once the Length, Breadth and Circumference of *King-te-* b *ching*. At Night one would think he saw a large City all on Fire, or a vast Furnace with a great many Vent-holes.

best China Ware. STRANGERS are not suffered to be at *King-te-ching*: Whoever has not Acquaintance in the Place to answer for his Behaviour, must lodge at Night in his Bark. The *China*-Ware made in this Place is the Commodity wherein all the Trade of *Zhau-chew fû* consists; which draws a great Number of Dealers from the other Pro- c vinces: For the Sort that is made at *Kanton*, in the Province of *Fo-kyen*, and some other Places, is not so much esteemed in *China*, as Earthen-Ware is in *Europe*. Strangers cannot mistake it, for it is as white as Snow, does not shine, and is without any Mixture of Colours.

THE Water at *King-te-ching* seems to contribute to the Beauty and Value of its Porcelain: For they cannot make so good elsewhere, although they employ the same Materials; which are found d on the Borders of this Province, and, in one Place, on those of *Kyang-nan*. What this Earth is, and how it must be ordered, will be shewn hereafter [a].

Quang-sin fû. 3. *QUANG-SIN FU* is situated in the midst of Mountains; many of which, though very high, and of great Extent, are divided into fertile ploughed Lands, and abound with Boroughs and Villages: Some of these Hills are covered with Forests, others produce fair Crystal. They e were formerly infested with Robbers; and the Roads through them, from *Fo-kyen* and *Che-kyang*, are so narrow, like Straits, that it is very easy to defend the Passages, and prevent Invasions. Very good Paper is made at *Quang-sin fû*, and the best Candles in all the Empire.

Kang 4. *NAN-KANG FU* stands on the Side of the Lake *Po-yang*, which is about four Leagues long, and thirty broad. It affords excellent Fish; and divides this Part of the Province in two. f The Plains produce Plenty of Rice, Wheat, Fruits, and Pulse. The Mountains are partly cultivated, and partly covered with thick Woods; some five Leagues in Length. A Kind of Hemp grows about the Town, whereof they make good Summer Cloaths.

Situation.

5. *KYEW-KYANG FU* is a large City of Trade, situate on the South Side of the great *Kyang*, (which washes its Walls) near the Entrance of the Lake *Po-yang* [b]: Hence it becomes the Rendezvous of all the Barks; not only of this Province, in their Passage to and fro, but also of *Kyang-nan* and *Hû-quang*. Although it lies near an hundred Leagues from the Sea, yet they catch Salmon, Dolphins, and Sturgeon, in the River here, which ebbs and flows at the New and Full Moon; and runs so slowly, that its Course is scarce perceptible. 3. *Province*, Kyang-si. Kyew-kyang fû.

6. *KYEN-CHANG FU* stands on the Borders of the Province of *Fo-kyen*, in a pleasant and fruitful Country. The Rice-Wine made here is pretty good; but the Rice itself is not. However, the Land produces a Sort of red Rice, that is well tasted, and wholesome. A Kind of Linen is made here of Hemp, which is worn during the Summer Heats. Kyen-chang fû.

7. *VU CHEW FU*, or *Fû chew fû*, stands on the Side of a River, in a great fertile Plain. The Compass of its Walls is greater than that of any City in *France*, excepting *Paris*; and its Government may extend twenty or twenty-five Leagues. This must have been one of the most flourishing Cities of the Empire before the last Wars. The East Side is well built again. In the other Part, one sees Clusters of repaired Houses rising out of the Ruins, and forming, as it were, Hamlets, Villages, and Boroughs, in the City itself. They reckon but forty or fifty thousand Inhabitants in the City and Suburbs; but the Country is very populous, and well improved. In several Places they have, annually, two Harvests of Rice; which is so white, that it dazzles the Eyes. Most of that furnished as Tribute, by the Province, is sent from this District. Figs thrive very well; and Vines, planted by a Missioner, produced good Grapes: But other Sorts of Fruit do not ripen kindly; probably, because the Soil is too moist. Vu-chew fû.

8. *LIN-KYANG FU*, situate two Leagues and an half from the *Kan-kyang*, on the *Yû-ho*, is not populous, and has but little Trade. As the Inhabitants live very saving, they say, by Way of Sneer, *that one Hog serves the City two Days*. Lin-kyang-fû.

THREE Leagues distant, on the *Kan-kyang*, stands a *Ching*, or Borough, where there is a great Trade for Drugs and Simples; which are brought in Barks from all the Southern Parts. The Soil of this District is good: It produces excellent Oranges; in which almost all its Trade consists: The Mountains, surrounding it, are covered with great Trees, or cultivated by Way of Terrasses.

[a] *Du Halde's China*, p. 79, *& seq.*

[b] About three or four Miles distant.

9. *KI-*

The Geography.

Ki-ngan fû.

9. *KI-NGAN FU* is ſituate on the *Kan-kyang*; which, near this City, runs, with extreme Impetuoſity, among Rocks, even with the Surface of the Water. There are eighteen Currents, which require both Strength and Skill, either to aſcend or deſcend them. This dangerous Paſſage is called *She-patan* [a], and continues for twenty Leagues: But, afterwards, one finds a fine River, ſix Times broader than the *Sein* at *Rouen*; and always covered with at leaſt fifty loaded Barks. Though the Country is uneven, the Plains are fertile; and the Mountains are ſaid to have Mines of Gold and Silver.

Shwi-chew fû.

10. *SHWI CHEW FU* ſtands on a Branch of the *Kan-kyang*; being divided by a River in two Parts, each incompaſſed by a Wall: One is called the *North*, the other the *South City*. Theſe are joined by two Bridges: One of Stone, with above ten Arches, well built; the other of Boats. The firſt is alſo called the *Mandarin City*, becauſe all the *Mandarins* dwell there. The other contains almoſt all the conſiderable Families, Citizens, and common People [b]. This Place is named *The Happy*, from the Goodneſs of the Air. In the Brooks, that water its Diſtrict, Gold and Silver Sands are found, as is the *Lapis Armenus* in the Mountains; with which, and Foreſts, it is ſurrounded.

Ywen-chew fû.

11. *YWEN CHEW FU* has, in its Neighbourhood, a little Lake, beſet with Houſes of Pleaſure, where the Inhabitants divert themſelves. It furniſhes the reſt of the Empire with a good deal of Vitriol and Alum. Though its Diſtrict is but ſmall, it yields to none of the reſt in Fertility.

Kan-chew fû.

12. *KAN CHEW FU*, which may be as large as *Rouen*, takes its Name from the River *Kan-kyang*, whereon it ſtands. It receives another near its Walls, called *Chang-ho* [c]. There is a Bridge of Boats faſtened together by Iron Chains. One of theſe Boats is ſo contrived as to open to let the Barks paſs, after they have been examined and ſearched by the Receivers of the Cuſtom-houſe, who daily come here for that Purpoſe.

ITS Mountains are ſaid to abound with medicinal Herbs, as well as thoſe of *Quang-ſin fû*; at the Foot of which the chief Prieſt, or *Bonza* of the Sect of *Tau-tſe*, (who aſſumes the Title of *Tyen-ſe*, or *Heavenly Maſter*) has his Reſidence.

FROM this City to *Nan-ngan* there are nothing but Deſarts: But the Country to *Nan-chang*, the Space of ſixty Leagues along the River, is charming, populous, and fertile. It is a Day's Journey from the rapid Current ſpoken of before [d]. Here is a *Tau-ye*, or Governor of two firſt-rate Cities, eſtabliſhed to ſuppreſs the Robbers who formerly infeſted this Diſtrict; which borders on *Hu-quang*, *Fo-kyen*, and *Quang-tong*, and afforded them a Retreat.

THE Diſtrict of this City is very extenſive, and abounds with thoſe Trees from whence the Varniſh diſtils; which is ſome of the beſt that *China* affords.

Nan-ngan fû.

13. *NAN-NGAN FU* is as big as *Orleans*; but the Suburbs are larger than the City. It is very handſome, and populous; of great Trade, and much frequented; being the common Thoroughfare for Mercandizes [e] to or from *Quang-tong*, near whoſe Borders it ſtands. The Paſſage is by Water, except ten Leagues by Land, from this Place to *Nan-hyong*. At the End of the firſt two Leagues, you come to a Mountain [f] ſo ſteep, that in ſome Places they have cut it in Form of Stairs. The Top of it is Rock, to the Depth of forty Feet; through which they have been obliged to open a Paſſage [g].

SECT. IV.

Fo-kyen, *the fourth* Province.

Bounds and Situation. Soil and Commodities. Oranges, and Li-chi. *Language. Division.* Fu-chew fû. Tſwen-chew fû. *Remarkable Bridge.* Kyen-ning fû. Fû-ning chew. Yen-ping fû. Ting-chew fû. Hing-wha fû. Shau-u fû. Chang-chew fû. Hyamen, *or* A-mwi *Port.*

Bounds and Situation.

FO-KYEN is bounded by *Che-kyang*, on the North; *Kyang-ſi*, on the Weſt; *Quang-tong*, on the South; and on the Eaſt, by the Sea of *China*. This is one of the leaſt, yet richeſt Provinces of the Empire. The Climate is hot, but pure. The inland Provinces are furniſhed from hence with dried and ſalted Fiſh, caught on the Coaſt; whoſe Shores, which are very irregular, occaſioned by the many Bays of different Sorts, are defended by a great Number of Forts.

Soil and Commodities.

ITS Mountains are almoſt all formed into a Sort of Amphitheatres and Terraſſes, placed one over another, and ſowed with Rice; which, in the Plains, is watered by little Canals cut from the great Rivers, Torrents, and Springs. They have the Art of raiſing the Water to the Top of the higheſt Hills, and convey it from one to the other by Pipes of Bambû, with which this Province abounds.

BESIDES *Fo-kyen*'s producing whatever is found in moſt of the other Provinces, as, Muſk, precious Stones, Quickſilver, Hempen Cloth, and Calico, Steel, and all Sorts of Utenſils, made to Perfection; it is rendered exceeding rich by Trade with *Japan*, the *Philippine* Iſlands, *Formoſa*, *Java*, *Kamboja*, *Siam*, &c. from whence are brought Cloves, Cinnamon, Pepper, Sandal Wood or Sanders, Amber, Coral, and the like. Its Mountains are covered with Trees fit for building Ships, and contain Mines of Tin and Iron: They ſay alſo, ſome of Gold and Silver.

AMONG its Fruits, there are excellent Oranges, a bigger than the *European*; having both the Taſte and Smell of the Muſcadine Grapes: The Peel, which comes-off very eaſily, is thick, and of a bright yellow, they candy, and tranſport into other Provinces. Here alſo are found beautiful red Oranges, and two Sorts of Fruit peculiar to *China*, *viz.* the *Li-chi*, the moſt delicious, perhaps, in the World; and the *Long-ywen*, which is very good, but not ſo much eſteemed. Theſe will be deſcribed elſewhere. The Plant *Tyen-wha*, for dying blue, which thrives here, is in far b greater Eſteem than that which grows in the other Provinces.

4. *Province*, Fo-kyen. *Oranges, and* Li-chi.

Language.

THE *Mandarin* Language generally ſpoken throughout *China*, is underſtood by few in *Fo-kyen*: For they ſpeak a different Language in moſt of the Cities; each of which has a Dialect of its own: Paſſengers find this very inconvenient. The Inhabitants, who are ingenious, and fond of *Chineſe* Sciences, produce a great Number of *Li-*c *terati* [c].

Division.

THIS Province is divided into nine *Fû*, and ſubdivided into ſixty *Hyen*, or Cities of the third Rate, having none of the ſecond.

	Chew.	*Hyen.*

Empire: But they are not half ſo pleaſant as a one of the fineſt Cities in the Empire; and is when newly gathered.

Tſwen-chew fû.

2. *TSWEN-CHEW FU* [a] is agreeably ſituated on a Cape, and almoſt incompaſſed with Water; the greateſt Barks entering within its Walls. All the Cities of its Diſtrict are very populous, and carry on a great Trade: Their Houſes are neat, their Streets adorned with triumphal Arches, and paved with Bricks, which incloſe two Rows of ſquare Stones. Among the Temples here, one deſerves Notice, for its two b Towers, built with Stone and Marble, ſeven Stories high, with Galleries round each [b].

Remarkable Bridge.

NOT far from the City is a Bridge of blackiſh Stone, remarkable for its Largeneſs as well as Beauty [c]. It has no Arches, but is ſuſtained by above three hundred Pillars, with acute Angles, to break the Force of the Stream, which before cauſed the Loſs of an infinite Number of Barks. They affirm, that it coſt a Governor, who built it, one million four hundred thouſand c Ducats. A prodigious Number of Ships, bound for foreign Parts, are every Hour ſetting out from this City and others in its Diſtrict.

Kyen-ning fû.

3. *KYEN-NING FU* ſtands on the *Min-ho*, and has a pretty good Trade. As that River ceaſes to be navigable about the City *Pu-ching hyen*, thirty Leagues diſtant, the Goods are landed here, and carried by Porters (eight or ten thouſand attending the Barks) beyond the Mountains, which are very ſteep, as far as a Borough near d *Kyang-chan*, in the Province of *Che-kyang*, where they are embarked on another River. This Road, which is made level, and paved with ſquare Stones, is furniſhed with Boroughs full of Inns, for lodging Travellers. This City, after two long Sieges, was taken by the *Tartars*, who burnt it intirely, and put all the Inhabitants to the Sword. It has been rebuilt ſince; but not ſo ſumptuouſly as before.

Fû-ning chew.

NOT far from *Kyen-ning* is *Fu-ning chew* [d], a e City of the ſecond Rank, remarkable for having Juriſdiction over two Cities of the third Order, viz. *Fu-ngan hyen* and *Ning-te hyen*. The Country where they are ſituated is of vaſt Extent, but over-run with Mountains; thoſe to the North of difficult Aſcent.

Yen-ping fû.

4. *YEN-PING FU* ſtands on the Deſcent of a Hill; at whoſe Foot runs the *Min-ho*: The Whole appearing from the River like an Amphitheatre. All the Barks of the Province paſs by f its Walls. Though not very large, it is reckoned

4. *Provinces.* Fo-kyen.

fortified naturally by inacceſſible Mountains; from whence the deſcending Waters are conveyed by Canals into every Houſe: Scarce any City beſides can boaſt the like. As the *Mandarin* Language is commonly ſpoken by the Inhabitants, they are, probably, a Colony from the Province of *Kyang-nan*.

SHA-HYEN is called the *Silver City*, from the Fertility of its Lands: Nor are thoſe belonging to its ſix other dependent Cities, leſs fruitful.

5. *TING-CHEW FU* lies among the Ting-chew fû. Mountains which ſeparate *Fo-kyen* from *Kyang-ſi*: Of theſe, ſome are covered with Flowers, which make a delightful Proſpect: Others, if allowed to be dug, would afford Mines of Gold: Some again are ſo prodigious high, as to be almoſt inacceſſible: However, the Diſtrict abounds with Neceſſaries. But neither is the Air healthful, nor the Trade conſiderable.

6. *HING-WHA FU*, ſignifies *a growing Flower*, being ſituated on the Coaſt in the moſt Hing-wha fû. delightful as well as fertile Country of the whole Province, paying the largeſt Tribute in Rice of all the Cities. It is adorned with ſeveral triumphal Arches. Though it has no more than two *Hyen* under it, yet its Diſtrict contains ſo great a Quantity of Boroughs and Villages, that it ſeems but one continued City. Some of theſe Boroughs alſo might, for Largeneſs and Beauty, paſs for Cities. The Country furniſhes Silk; and is full of rich Merchants. The Roads are very handſome, broad, and almoſt all paved with ſquare Stones. The Fruit, *Li-chi*, is better here than in any other Part of the Province [e].

7. *SHAU-U FU*, which is one of the Keys Shau-u of the Province, is become very conſiderable of late, being incompaſſed with Forts, or military Places, as large as Cities.

IN its Diſtrict, there are Manufactories of very fine Linen, made of a Kind of Hemp, much eſteemed in *China*, becauſe it is cool in Summer; and when one ſweats, never ſticks to the Back.

8. *CHANG-CHEW FU* [f] is the moſt Sou- Chang-chew fû. thern City in the Province. It ſtands on a River that ebbs and flows [g]; and, to the South of its Walls, is croſſed over a very fair Bridge of thirty-ſix very high Arches, with rich Shops on both Sides [h].

THE Inhabitants are very ingenious, and have f a great Talent for Buſineſs. Its Territory abounds with the large Muſcadine Oranges before-men-

[a] Or, *Swen-chew fû*. See Vol. III. *p.* 501. [b] See before, Vol. III. *p.* 435. [c] This is the Bridge of *Lo-jang*, Vol. III. *p.* 501. [d] It ſtands on the Coaſt, above an hundred and ten Miles from *Kyen-ning fû*, and is the only *Chew* in *Fo-kyen*, though not mentioned in the Table of Diviſion; being, poſſibly, independent of any *Fû*. [e] *Du Halde's China*, p. 83, & *ſeqq*. [f] See Vol. III. *p.* 521. [g] Called the *Chang*, by the *Chineſe*; by *Europeans*, the River of *Chin-cheo*, or *Chin-chew*. [h] Like *London* Bridge.

Geography.

tioned [a], which are candied and exported; and the finest Cryſtal imaginable is found in the Mountains, whereof they make Buttons, Seals, and the like. This City is very populous, and of great Reſort [b], being in the Neighbourhood of *A-mwi*, in the Bay of *Chang-chew*.

Hya-men or A-mwi Port.

HYA-MEN, or *The Port of* A-mwi [c], is ſo named from the Iſland to which it belongs: It is, properly, no more than a Road, that makes one of the beſt Harbours in the World. It is incloſed on one Side by the firm Land, and ſeveral very high Iſlands, which defend it againſt all Winds. It is capacious enough to receive many thouſand Ships; which may ride as near the Shore as they pleaſe without Danger. And there are continually in the Port, a great Number of *Chineſe* Junks, that trade to foreign Countries. Twenty Years ago, it was much frequented by *European* Ships; but, at preſent, the Trade is carried to *Kanton*. The Emperor keeps a Gariſon of ſix or ſeven thouſand Men here, under the Command of a *Chineſe* General.

AT entering the Road, there is a Rock, which ſeems to divide it into two Parts, juſt as the *Mingant* divides that of *Breſt*; and three Leagues from thence, there is a little Iſle, having a Hole from one Side to the other, through which one may ſee the Light; whence it is called the *Pierced Iſland* [d].

BESIDE *A-mwi*, there is *Que-mwi*, and ſeveral other Iſlands in the Bay of *Chang-chew*, of which ſome Account has been already given [e], with many others, great and ſmall, along the Coaſt.

2. ACCOUNT *of the* Iſlands *of* Pong-hû *and* Tay-wan, *or* Formoſa.

Introduction. Iſlands of Pong-hû, Tay-wan, *or* Formoſa. *Gold Mines.* Chineſe *Cruelty. Air and Soil. Cattle and Birds.* Tay-wan fû: *The Streets. The Port.* Dutch *Fort. Other* Chineſe *Cities. Native Inhabitants. Houſes and Furniture. Perſons and Diet. Dreſs and Ornaments. Marriages. Government. Morals and Religion. Diſcovery of* Tay-wan *by the* Chineſe: *By the* Japaneſe *and* Dutch. *Fort* Zeland *built.* Chineſe *ſettle there.* Koxinga's *Deſign againſt* Formoſa. *Takes* Tay-wan. *Table of Situations.*

4. *Province*, Fo-kyen.

Introduction.

WE have ſeveral Accounts of the Iſland of *Formoſa* [f], particularly thoſe by *George Candidius*, a *Dutch* Miniſter; *David Wright*, a *Scot*; and Mr. *George Pſalmanaazaar*, a Native, now in *England*. Theſe Authors differ vaſtly. The two firſt wrote about the Middle of the laſt Century, and from them *Montanus* hath compoſed his Deſcription of the Iſland [g]: The laſt, in 1704, publiſhed his Relation in *Engliſh*, with Cuts, containing three hundred and thirty-one Pages in Octavo. That of *Candidius* is tranſlated [h] and publiſhed in one of our voluminous Collections. It conſiſts of no more than ſix or ſeven Pages, and relates chiefly to ſome Nations of the original Inhabitants, at the Time the *Dutch* were in Poſſeſſion of the City of *Tay-wan*. The following Account comes from the Miſſioners who made the Map of *Fo-kyen*, and treats of the ſame Inhabitants, but reduced to a State of Dependence on the *Chineſe*, who at preſent are Maſters of the Weſtern Part of the Iſland: Though *Pſalmanaazaar* affirms, the *Japaneſe* are Maſters of the Whole.

Iſlands of Pong-hû.

To the Province of *Fo-kyen* belongs the Iſland of *Formoſa*, to and from which Ships are continually paſſing. In the Way lie the Iſlands of *Pong-hû* [i], which form a little *Archipelago*. The chief of them is inhabited only by the *Chineſe* Gariſon: However, a literary *Mandarin* reſides there to watch the trading Veſſels that paſs, which brings-in a conſiderable Revenue.

As theſe Iſles are nothing but Sands or Rocks, all Sorts of Neceſſaries muſt be brought thither from *Hya-men*, or *Formoſa*, to the very Wood for Firing: For they afford neither Buſhes nor Briars, nor any Trees except one, which is their ſole Ornament. The Port is good and ſecure againſt all Sorts of Winds: Its Ground is ſandy, and the Water from twenty to twenty-five Fathom deep.

Dutch Fort deſtroyed.

NOTHING remains of the Fort, built by the *Dutch* [k] at the End of the great Iſle, to defend the Entrance, except the Name of *Hong-mau-chay*, that is, *The Fort of the red Hairs*, for ſo the *Chineſe* called them. This Harbour, though in ſuch a de-

[a] See before, *p.* 33. a. [b] *Martini* found, in the Hands of one of the *Literati*, an old Parchment-Book in *Gothic* Characters, which contained moſt of the Scripture in *Latin*; but the Owner would not part with it, becauſe it had been long in the Family. [c] In the *French* it is written, *Emoy*, and *Emouy*. The *Engliſh* call it *Amoy*, and have a Factory there. Some write, *Eymy*. It is often mentioned in the *Dutch* Embaſſies, Vol. III. *p.* 444, *& ſeqq.* [d] *Du Halde*'s *China*, p. 86; and *le Comte*'s Memoirs of *China*, p. 85. [e] See Vol. III. *p.* 444, 493, *&c.* [f] Called alſo *Tay-wan*: Although this is more properly the *Chineſe* Name of a little Iſland, where the chief City is ſituate: They call the great Iſland, *Pe-kan*, or *Pakkando*, which ſome ſay is the indigenous Name. See Vol. III. *p.* 497. But *Pſalmanaazaar* ſays, the Natives call it *Gad Avia*, or *The beautiful Iſle*: Alſo, *Kaboſki*, or *The principal Iſland*. [g] See *Ogilby*'s *China*, vol. 2. *p.* 9, *& ſeqq.* [h] It was firſt tranſlated into *French*, and publiſhed in the fifth Volume of the *Dutch* Collection of Voyages to the *Eaſt Indies*, along with thoſe of *Van Rechteren*. [i] Called, by *Europeans*, *The Piſcadores*. [k] See Vol. III. *p.* 492. e.

The Geography. solate Place, is absolutely necessary for the Preservation of *Tay-wan*, which at present has no Port for Ships, that draw above eight Feet of Water.

Formosa. *FORMOSA* is divided into two Parts, by a Chain of Mountains, which begins in the South of *Sha-ma-ki-tew*, and ends at the North Coast: Only that Part lying to the West of the Mountains belongs to the *Chinese*, contained between twenty-two Degrees eight Minutes and twenty-five Degrees twenty Minutes of North Latitude.

THE Eastern Part, if you will believe the *Chinese*, is mountainous and wild, inhabited by People who differ little from the Savages of *America*; only they are more chaste, and of a mild and peaceable Disposition, yet always in War with the *Chinese*. They love and assist one another, are not covetous or selfish; making no Account of Gold or Silver, whereof they say they have several Mines: But they are exceeding revengeful, without Law or Government, living only on Fish and the Flesh of Animals; and, in short, without any Worship or Religion.

Gold Mines. THE *Chinese* finding no Gold Mines in the Part whereof they were Masters, and not venturing to cross the Mountains, sent a small Ship to the Eastern Part, where they were assured they lay. The Inhabitants received them very hospitably, but gave them no Information concerning the Mines: Possibly, through Jealousy of their Power. After eight Days Search, all the Gold the *Chinese* found were a few Ingots, lying carelessly in the Cottages. After these good People had assisted them to equip their Vessel, they invited their Benefactors to a great Entertainment; and having made them all drunk, cut their Throats when they were asleep, and sailed-off with the Ingots. The News was no sooner spread through the Eastern Parts of the Isles, than the Inhabitants entered the Western Part, where they put Man, Woman and Child to the Sword without Mercy, and fired some *Chinese* Habitations: Ever since which Time one Part of the Isle has been continually at War with the other.

Chinese Cruelty.

Air and Soil. THAT Part of *Formosa*, possessed by the *Chinese*, deserves the Name it bears [a], being a very fine Country: The Air is pure, and always serene; it produces Plenty of Corn, Rice, and other Grain, and is watered by many Rivers, which descend from the afore-mentioned Mountains, but the Water is not very good. Most of the Fruits growing in the *Indies* are found here; as, Oranges, Bananas, Ananas, Goyavas, Papayas, Cocos, *&c.* as well as Peaches, Apricots, Figs, Grapes, Chesnuts, Pomegranates, and other *European* Fruits. They cultivate a Sort of Water-Melons, much larger than those of *Europe*, and of an oblong Figure, though sometimes they are round: They consist of either a white or red Pulp, and are full of a cool, luscious Juice, very grateful to the *Chinese*. Tobacco and Sugar grow here exceeding well. All the Trees are so agreeably ranged, that when the Rice is transplanted in Lines and Squares as usual, the whole Southern Part looks like a vast Garden.

4. Provinces of Fo-kyen.

Cattle and Birds. THERE are no Boars, Wolves, Bears, Tygers or Leopards to be met-with here as in *China*. Fallow Deer, Horses, Sheep, Goats, and even Hogs, are very scarce; but Stags and Apes are seen in Herds. Pullets, Ducks and tame Geese are very plenty; as also Oxen, which serve to ride on, being furnished with a Bridle, Saddle, and Crupper.

VERY few Birds also are to be seen in this Part of the Island: The most common Sort are Pheasants, which the Fowlers will not suffer to increase.

THE *Chinese* divide the Lands they possess in *Formosa* into three *Hyen*, or subordinate Governments, with their Officers, who are subject to the Governor of the Capital, and he to the Vice-Roy of the Province of *Fo-kyen*.

Tay-wan fû. THIS Capital, named *Tay-wan fû* [b], is very populous, much frequented, and of great Trade, being equal to most Cities of *China* for Goodness, and the Number of Inhabitants. There one finds Rice, Sugar, Sugar-Candy, Tobacco, Salt; dried Venison, much esteemed by the *Chinese*; all Kinds of Fruit; Linen of divers Sorts; Wool, Cotton, and Hemp; the Bark of certain Trees, and Plants resembling Nettles; Abundance of medicinal Herbs, mostly known in *Europe*, *&c.* There are very few Mulberry-Trees in the Island, and consequently few Silks or Manufactories of the Country.

The Streets. THE Streets of *Tay-wan fû* are all strait as a Line, and though not above thirty or forty Feet wide, some are near a League in Length. They look like charming Galleries; and it would be a Pleasure to walk in them, if they were less crouded, and better paved. The Houses are covered with Straw, and built, for the most Part, only with Clay and Bambû: The Tents, wherewith the Streets are covered for seven or eight Months to keep-off the Sun, hide all that is disagreeable, letting nothing be seen but the Shops, adorned with Silks, *China*-Ware, Varnish, and other Goods.

The Port. THE Port is very good, and sheltered from all Winds, but the Entrance becomes more difficult every Day. Heretofore it had two Entrances; the one called *Ta-kyang*, where the greatest Ships rode with Ease, the other, *Lo-ulbmen*, where the Bottom is Rock, and the Depth

[a] The *Portugueze* call it *Hormosa*, or *The Beautiful*, as *Formosa* signifies. [b] *Psalmanaazaar* is quite a Stranger to this remarkable City, which stands in a little Island close to the greater, called *Formosa*, and places two on the latter, *Xternetsa* (the Capital) and *Bigno*, which no-body else ever heard of.

not

N.° 123

Geogra-by.

not above nine or ten Feet at the higheſt Tides. The firſt Paſſage is impracticable at preſent, for in ſome Places they find but five Feet Water, and the moſt it riſes to, is ſeven or eight; beſides, it is every Day choaked-up more and more by the Sea rolling in the Sands. The *Dutch*, to keep foreign Ships out, at the Point of the Iſle, to the South of the *Ta-kyang*, built a Citadel, which they called *The Caſtle of Zeland*, and would be an excellent one, was it not founded on the Sand.

h Fort.

THE *Mandarins* are very careful to examine all that paſs into or out of the Iſland, no *Chineſe* being ſuffered to ſettle there without their Paſſports, and giving Security: For the *Tartars* know, that ſhould one of them ſeize it, he might raiſe great Troubles in the Empire [a]; ſo that the Emperor keeps a Gariſon there of ten thouſand Men, commanded by a *Tſong-ping*, or Lieutenant-General, two *Fû-tſyang*, or Major-Generals, and ſeveral inferior Officers; who are changed every three Years, or oftener, if there be Occaſion.

Chi-Cities.

THE Inhabitants of this Part of the Iſland may be diſtinguiſhed into the Natives and *Chineſe*. *Tay-wan fû*, *Fong-ſhan hyen* and *Chu-lo hyen* are peopled only by the latter; for the third of the three above-mentioned *Hyen* is included in the Capital. Such Natives as are found there, are the Servants or rather the Slaves of the *Chineſe*.

BESIDES theſe three Cities, they have ſeveral Villages, but no conſiderable Fort; excepting *Ngan-ping-ching*, lying under the Caſtle of *Zeland*, and inhabited by four or five hundred Families: Beſides a Gariſon of two thouſand Men, commanded by a *Fû-tſyang*, or Major-General [b].

r In-ants.

THE *Chineſe* in *Formoſa* are the ſame, as to Government and Manners, as in *China*. The Natives, who are ſubject to them, are divided into forty-five Boroughs, or Habitations, called *She*. The thirty-ſix in the Northern Part are populous enough, and the Houſes very like the *Chineſe* [c]: But the Southern nine are no more than Parcels of Cottages made of Earth and Bambû, covered with Straw, and raiſed on a Kind of Terraſs three or four Foot high. They are built in Form of a Tunnel inverted, and fifteen, twenty, thirty or forty Feet in Diameter: Some of them are divided by Partition-Walls. There are in theſe Huts neither Chairs, Benches, Tables, Beds, nor any Moveables. In the Middle is a Kind of Chimney, or Stove, raiſed above two Feet from the Ground, where they dreſs their Victuals. Their ordinary Diet is Rice, a ſmall Grain, and Game, which theſe Southern Inhabitants take either with Arms, or by running; having been ſeen to out-ſtrip Horſes in their full Speed. The *Chineſe* attribute their Swiftneſs to their Knees and Loins being bound exceeding tight, till the Age of fourteen or fifteen.

4. *Province*, Fo-kyen.

THE Men [d] are of an eaſy, ſlender Shape, Olive Complexion, with ſleek Hair hanging over their Shoulders. They have a Sort of Dart, which they throw the Space of ſeventy or eighty Paces with the greateſt Dexterity; and though nothing is more ſimple than their Bows and Arrows, yet they kill Pheaſants flying.

Perſons and Diet.

THEY are very ſlovenly in their Diet, having neither Diſhes, Plates, Spoons, nor Chop-ſticks. Their Victuals are ſerved on a Piece of Wood, or Mat, and they feed themſelves with their Fingers. They eat their Fleſh half raw, it being enough if but ſhewn to the Fire. They lie on the Floor ſpread with the Leaves of a certain Tree.

THEIR whole Apparel is a ſingle Cloth, two or three Feet long, wherewith they are covered round from the Waiſt down to the Knees. Some imprint ſeveral groteſque Figures of Trees, Animals, Flowers, *&c.* on their Skin. This Privilege, which is allowed only to ſuch as excel in running and hunting, coſts them dear: For it puts them to ſuch violent Pain, that the Operation would kill them, was the Whole to be performed at once; they therefore employ ſeveral Months, and ſometimes a whole Year, about it: Nevertheleſs, all Perſons are at Liberty to blacken their Teeth, wear Bobs in their Ears, Bracelets above their Elbows and Wriſts, Necklaces and Coronets, conſiſting of ſeveral Rows of ſmall Grains of different Colours. Theſe Coronets end with a Kind of Plume of Cocks or Pheaſants Feathers.

Dreſs and Ornaments.

IN the North Part of the Iſland they cover themſelves with the Skins of Stags, made into a Sort of Coat, without Sleeves, much like a Dalmatic [e]. They wear a Bonnet of Banana Leaves, in Form of a Cylinder, which they adorn with Coronets, placed one over another, and faſtened with very narrow Bands, or little Locks of Hair of different Colours; having on the Top a Tuft or Plume, as above-mentioned.

WHEN a young Man has a Mind to marry, and meets with a Laſs to his Mind, he goes ſeveral Days ſucceſſively with Muſic to her Door: If the young Woman likes her Spark, ſhe goes out to him, where they ſettle Terms between themſelves; after which, acquainting their Pa-

Marriages.

[a] As *Que-ſing* or *Koxinga* did. [b] *Du Halde*'s *China*, p. 86, *& ſeqq.* [c] *Candidius* ſays, they are very ſtately and lofty, beyond what is found in other Parts of *India*. [d] *Candidius* ſays, the Men are more than ordinary tall; the Women ſhort and fat: *Pſalmanaazaar*, that they are ſhort, thick, and robuſt. [e] A Dalmatic is a Kind of Cope, or Veſtment, which Deacons, Sub-deacons, and even Biſhops, put on when they officiate.

rents

The Geography.

rents with the Matter, they prepare the Wedding-Feaſt. This is made at the Houſe of the Bride's Father, where the Bridegroom continues [a], as the Brides in *Europe* do at the Houſes of their Huſbands Father. Hence they place their good Fortune not in having Boys, but Girls, who procure them Sons-in-Law, to be the Props of their old Age.

Government.

ALTHOUGH the Iſlanders in this Diviſion are intirely ſubject to the *Chineſe*, yet they ſtill preſerve ſome Remains of their ancient Government. Each Borough chuſes three or four of the moſt ancient, who are in greateſt Repute for Integrity, to be Judges over them: Theſe determine all Differences abſolutely; and if any one refuſes to ſubmit to their Deciſion, he is driven that Inſtant out of the Borough, without Hopes of ever being admitted there again; nor dares any other receive him.

To regulate what concerns the Tribute, which they pay in Grain, the Tails or Skins of Stags, and the like, there is in every Borough a *Chineſe*, who learns the Language, to ſerve as an Interpreter to the *Mandarins*. But inſtead of procuring Eaſe to theſe poor People, they act as ſo many petty Tyrants, and tire-out the Patience not only of them, but the *Mandarins* themſelves, who are forced to let them continue in their Employments, to avoid greater Inconveniences. There were formerly twelve Boroughs in the South ſubject to the *Chineſe*; but three of them revolting, drove-out their Interpreters, and united themſelves with thoſe of the Eaſtern Part of the Iſland: However, under the preſent Emperor, a great Number of Towns have ſubmitted, and they hope, by little and little, that the reſt will follow their Example.

Morals and Religion.

ONE finds among them, by the Confeſſion of the *Chineſe* themſelves, no cheating, thieving, quarrelling, nor any Law-Suits, except againſt their Interpreters; and they practiſe all the Duties of Equity and Benevolence. Whatever is given to any of them, muſt not be touched by him, till thoſe who ſhared the Labour, partake of the Wages. The Miſſioners found ſeveral of them who underſtood *Dutch*, read their Books, and made uſe of their Characters in writing. They alſo ſaw in their Hands ſome Fragments of Scripture in the ſame Tongue. Theſe People adore no Images, and even abhor whatever tends that Way. They perform no religious Worſhip, nor ſay any Prayers [b]: Yet the Jeſuits met with ſome who believed in one God, in three Perſons, in the Creation and Fall of Man, and the Virtue of Baptiſm; for in the Time of the *Dutch* there were ſome Chriſtians among them.

4. Provin. Fo-kyen.

THE *Chineſe*, according to their Hiſtory, had no Knowledge of *Formoſa*, though not far diſtant, till about the Year 1430, when the Eunuch *Wan-ſan-pau*, returning from the Weſt, was driven thither by a Tempeſt; and made ſome Stay there, in order to get the beſt Intelligence he could of it. In 1564, *Yu-ta-yew*, Chief of a Squadron, cruizing in the Eaſtern Sea of *China*, a bold *Corſair*, named *Lin-tau-kyen*, met-with and attacked him briſkly: But after a Fight of five Hours, Night coming-on, he fled towards the Iſles of *Pong-hû*, which he had ſeized with an Intention to take all the reſt of his Soldiers on-board, and return to the Charge. However, *Yu-ta-yew* purſued him ſo cloſely, that at Break of Day *Lin-tau-kyen* found the Entrance of the Port blocked-up by Part of the Enemy's Ships. His Troops being much diminiſhed in the Fight, he judged it dangerous to attempt entering the Port, and continued his Courſe to *Formoſa*.

Diſcovery Tay-wan.

YU-TA-YEW purſued him thither, but finding the Sea ſhallow, and having no Knowledge of the Coaſt, he returned to *Pong hû*; where having left a good Gariſon, he ſailed to *China*. The Court was pleaſed with his Diſcoveries, and ſent a literary *Mandarin* to govern thoſe Iſles. Mean-while *Lin-tau-kyen*, who had great Things in View, not thinking *Formoſa* fit for his Purpoſe, cut the Throats of all the Inhabitants who fell into his Hands; and making uſe of their Blood to caulk his Ships, put to Sea as ſoon as he could for the Province of *Quang-tong*, where he died miſerably [c].

By the Chineſe.

TOWARDS the End of the Year 1620, a *Japaneſe* Squadron landed on *Formoſa*, whoſe commanding Officer intending to ſubdue it, left Part of his People there to inform themſelves concerning it. About the ſame Time a *Dutch* Ship, in its Courſe to or from *Japan*, being driven thither by Storm, and finding the Country commodious for their Trade, intreated the *Japaneſe* to let them build a Houſe at the Entrance of the Port, under Pretence, that it would be ſerviceable in their Commerce with *Japan*; and as they promiſed

By the Japaneſe & Dutch.

[a] *Candidius* ſays, the Man and Wife dwell in ſeparate Houſes: That he never goes to her but by Night, without her Leave: That the Marriage does not take Place without the Conſent of Parents: That the Women keep the Children till three Years old, and then ſend them home to their Father: That they are made to miſcarry of all the Children they have before they are thirty-five Years old, by their Prieſteſſes lying on and preſſing their Bellies. [b] *Candidius* ſays, they believe in many Gods, and offer Prayers and Sacrifices to them by their Prieſteſſes, for they have no Prieſts. His Account of theſe People differs almoſt in every Thing from that of the Miſſioners; and *Pſalmanaazaar*, who ſpeaks of Prieſts, but not Prieſteſſes. This laſt Author pretends, that they have a revealed Religion, which teaches the Belief of one God, who appears to them in the Shape of various Animals; and has commanded the Hearts of eighteen or twenty thouſand Children to be torn-out by the Prieſts, and burnt on his Altar at the Beginning of every Year. See the Deſcription of *Formoſa*, p. 171, and 178. [c] *Du Halde's China*, p. 88, *& ſeqq.*

Geography. promised to take no more Ground than what an Ox-Hide would incloſe [a], the *Japaneſe* at laſt conſented. The *Dutch* immediately went to work, and cutting the Hide into very narrow Thongs, joined the Ends together, and therewith meaſured-out the Ground. Here they built the Fort already ſpoken of, on the Gate whereof are ſtill to be ſeen theſe Words, *Caſtel Zelanda*, 1634.

Zelinda.

THE *Japaneſe*, who were at firſt angry at this Piece of Fraud, were ſoon pacified: But whether they took Umbrage at the new Fort, or did not find their Account in the Iſland, which continued ſtill unimproved, they preſently after abandoned it: And then the *Dutch*, the better to ſecure the Port, built, on the other Side of it, a Houſe, fortified with four Semi-Baſtions: The Iſlanders being in no Condition to oppoſe them [b].

neſe ſet-ers.

WE have elſewhere related [c], that the *Dutch* quitted the Iſlands of *Pe-hû* [d], or the *Piſcadores*, to ſettle on *Formoſa*; upon a Promiſe of the *Mandarins*, that they ſhould trade in *China*, and the *Chineſe* ſhould come and trade thither with them. This is the more probable Account of their firſt Eſtabliſhment at *Tay-wan*. The Wars of *China* being over, more than twenty-five thouſand *Chineſe*, fit for bearing Arms, retired from their Country, and came to dwell on that Iſland with their Families; ſome of whom applied themſelves to cultivate the Lands, and others to Commerce.

inga's n

KOXINGA being obliged to abandon *China*, reſolved to ſeize *Formoſa*. This was not kept ſo ſecret, but it came to the Ears of the *Dutch*. The Company had Advice of it, from *Japan*, ſo early as 1646: Hereupon, in 1650, it was reſolved to keep a Gariſon there of one thouſand two hundred Men. In 1652, a Jeſuit, who returned to *Europe* in the *Dutch* Fleet, aſſured them of that Rover's Deſign: In effect, that ſame Year the *Chineſe* Peaſants revolted, though few of them had Arms: But the *Dutch* being joined by the Natives, ſoon ſuppreſſed them [e]. They had been too haſty in their Meaſures, *Koxinga* then being engaged in ſome Project againſt the Court of *China*; ſo that he could not ſuccour them at that Time. To awe them next Year, Fort *Province* was built in the Iſland, on the Side of the Channel, which divides it from *Tay-wan*, and was then called *Sakkam*.

ſt For-

THE Suſpicions of an Attack being increaſed by ſcarce any Junks coming to trade, in 1654 and 1655, they ſent ſome Veſſels to the *Piſcadores* to get Intelligence; which brought a Confirmation of the Danger. However, next Year, *Coyet*, the Governor, ſent one *Pin-qua*, a *Chineſe*, to renew Friendſhip with *Koxinga*; who proteſted, his Deſign was to live in Peace with the *Hollanders*; and that his having Occaſion for the Junks, was the Reaſon why they had ceaſed going as uſual to *Formoſa*. After this, Commerce flouriſhed more than ever. But, in 1659, it being diſcovered, that *Pin-qua* had ſecretly received of the Junks, that traded thither, Cuſtoms for *Koxinga*, and the Governor having thereupon ſeized his Effects, that Officer eſcaped to the Coaſt of *China*; and, as it is ſaid, ſpurred on *Koxinga* to execute his long meditated Deſign. This General having been defeated by the *Tartars* in his Attempt againſt *Nan-king*, and forced to retire to the Coaſts, and the Iſle of *A-mwi*, great Numbers of his Party fled to *Formoſa* in 1658 and 1659; ſpreading the Report, that they would ſoon be followed by the reſt of the Forces.

Takes Tay-wan.

HOWEVER, this Expedition did not take Place till *April* 1661, when *Koxinga* appeared with a numerous Fleet, carrying twenty-five thouſand Troops, before the Caſtle of *Zeland*, the thirty-firſt of that Month: During all this Time, the Council of *Batavia*, conſiſting of Merchants, lulled a-ſleep, by the Advice of *Verburgh*, (who, in Pique to his Succeſſor *Coyet*, treated all the Intelligence he ſent from Time to Time, as Chimeras) and their own Covetouſneſs, neglected either to fortify the Place, or re-inforce the Gariſon; which conſiſted of about one thouſand four hundred Men. However, they held-out, with very little Aſſiſtance from *Batavia*, till the Beginning of the Year 1662; and then ſurrendered upon better Terms than they expected [f]. *Koxinga* and his Succeſſors reigned as Kings in *Formoſa* till 1682, when the laſt of them ſubmitted to the Emperor *Kang-hi*; as hath been already related [g].

SECT. V.

Che-kyang, *the fifth Province.*

Bounds and Soil. Silk. Golden Fiſh. Tallow Tree. Pe-tſi *Fruit. Diviſion.* Hang-chew fû, *very populous. The Silk Country. Charming Lake.* Kya-hing fû. Hu-chew fû. Ning-po fû. *Canal of* Ning-po. *Walls and Gates.* Tin-hay hyen. *Iſland* Chew-ſhan: *Harbour and Factory. Iſlands* Pou-to *and* Kimpeton. Shau-hing fû. *Tomb of* Yu. Tay-chew fû. Kin-wha fû. Kyu-chew fû. Yen-chew fû. Wen-chew fû. Chau-chew fû.

Bounds and Soil.

THIS Province is one of the moſt fertile and flouriſhing, as to Trade, in the whole Empire. It is bounded on the Eaſt by the Sea; on the South by *Fo-kyen*; on the North and Weſt by *Kyang-nan* and *Kyang-ſi*, with which it is ſurrounded. The whole Country is cut with Rivers and Canals: Theſe laſt are broad and deep, lined on both Sides with Stone, covered with Bridges at certain Diſtances; ſo that one may travel all over the Province either by Water or Land. It abounds alſo with Lakes and running Springs. The Mountains are cultivated, or produce Timber for building Ships and Houſes.

Silk.

ITS Inhabitants are very mild, ingenious, and polite. The Silks, produced and manufactured here, are almoſt ſufficient to ſupply foreign Countries. Thoſe embroidered with Gold and Silver, are the beſt in all *China*; and ſo cheap, that a Suit of it coſts leſs than one of the moſt ordinary Cloth in *Europe*. Hence one ſees a great Number of Fields full of dwarf Mulberry-Trees, which they hinder to grow, by planting and cutting them almoſt like Vines; being convinced, by long Experience, that the Leaves of the ſmalleſt Trees produce the beſt Silk.

Golden F

PROVISIONS are very plentiful. Here are excellent Cray-Fiſh; and, in the Lakes, the Golden Fiſh are found. Muſhrooms are carried hence all over the Empire: They keep, ſalted and dried, all the Year round: By only letting them lie in Water, they become as good and freſh as if they had been juſt gathered.

Tallow T

THE beſt Hams come from this Province. Here alſo grows the Tallow-Tree, and thoſe eſteemed Shrubs that bear a very white Flower, reſembling the Jaſmin, but more leafy. A ſingle Flower is ſufficient to perfume a whole Houſe.

Pe-tſi F

THE Fruit, called *Pe-tſi*, is much more common in this Province than elſewhere; it grows in marſhy Water, and is as big as a Cheſnut. Its Kernel is covered with a very thin Skin; the Pulp is white, and full of an agreeable Juice; it is firm, and ſomewhat ſour. *Martini* affirms, that if one puts a Piece of Copper-Coin with this Fruit in his Mouth, he may break it eaſily with his Teeth: But other Miſſionaries found it not ſo.

CHE-KYANG yields whole Foreſts of Bambû Canes, which are large and ſtrong for bearing Burdens. Notwithſtanding their Hardneſs, they are eaſily ſlit into very thin Slips, wherewith they make their Mats, Boxes, Combs, *&c.* As they are by Nature bored through, they are very proper for Pipes, to convey Water from one Place to another; or for Teleſcopes, to ſerve either as a Tube, a Caſe, or a Reſt.

Diviſion.

THIS Province is ſubdivided into eleven *Fû*, which have under them ſeventy-ſeven Cities of the third Rank, beſides an infinite Number of very populous Boroughs and Villages [a].

1. *HANG-CHEW FU*, the Capital of the Province, is one of the richeſt and largeſt Cities of the Empire. It is conſiderable, eſpecially on Account of its moſt advantageous Situation, prodigious Number of Inhabitants, the Conveniency of its Canals, and its Trade for the beſt Silk in the World.

THE *Chineſe* reckon it, *The terreſtrial Paradiſe*. It is almoſt round, and forty *Li* [b], or four Leagues in Compaſs, excluſive of the Suburbs, which are immenſe; from the Eaſtern Gate to the Northern, they reckon ten *Li* [b]. Its Walls are fair, very high, and thick. Though there are large Gardens in the City, and the Houſes are but of one Story, yet it is aſtoniſhingly crouded; the Number of Inhabitants amounting to a Million. A Chriſtian Bachelor aſſured a Miſſionary, that, within the Walls only, the Officers who gather the Tax, had on their Rolls about three hundred thouſand *Hû*, or Families.

THE Water of the Canals within the City is not good. Thoſe of the Suburbs bear a prodigious Number of Barks, inhabited by intire Families. The Streets are not wide; but adorned with triumphal Arches. The Shops very neat, and the Dealers very rich: There are in *Hang chew* four great Towers, ſeveral Stories high. The Gariſon conſiſts of ſeven thouſand *Tartars*, (who have a Fortreſs here) under the *Tſyang-kyun*, or *Tartar* General; and three thouſand *Chineſe*, under the *Fû-ywen*, or Vice-Roy. The River called *Tſyen-tang-kyang*, runs near its Walls; where it is a great League in Breadth [c].

HANG-CHEW is, properly, the Country of Silk, becauſe the chief Manufactories are there. They ſay, there are ſix thouſand Workmen within its Walls; and the Villages every-where are full of them. The flowered Taffeties and Satins, named *Lin-tſe*, and others all plain, called *Lau-fang-ſe*, made in this City, are reckoned the beſt in the whole Empire.

WHAT renders this Place delightful, is the Lake *Si-hû* [d], which is cloſe to it, and two Leagues in Compaſs. The Water is good, and clear as Cryſtal; ſo that the ſmalleſt Stones may be ſeen at the Bottom [e]. On the Side where the Water is low, it is covered with the *Lyen-wha* Flowers. They have raiſed there, upon Stakes, open Halls, ſuſtained by Pillars, and paved with great ſquare Stones, for the Conveniency of thoſe who would walk on foot. They have alſo made Cauſeways, lined with Freeſtone; and over the Openings, left for Boats to paſs, built pretty handſome Bridges.

IN the midſt of the Lake, there are two little Iſlands, where they have built a Temple and Houſes fit for diverting themſelves. The Sides of the Lake are likewiſe adorned with Temples, huge Monaſteries of the *Bonzas*, and pretty handſome Houſes: Among which is a little Palace for the Uſe of the Emperor, who lodged there when he travelled into the Southern Provinces [f].

2. THE City of *Kya-hing fû* is great, very populous, and of conſiderable Trade. Its Suburbs are of very great Extent. Into every Street of the City they have brought Canals, lined with fine Freeſtone; which, as well as the Ditches, are covered with handſome Bridges. In all the Streets there are handſome Piazzas; and triumphal Arches are frequent enough. There are fifteen Marble Towers, on the Sides of the Canal, to the Weſt of the City, through which all the Barks paſs. Every Houſe in it rears Silk-Worms. The Fruit, called *Pe-tſi*, ſpoken of before, is common. In Autumn they catch certain little Birds; which are preſerved in Wine made of Rice, and ſold all the Year round. Very good Cray-Fiſh are taken here. There are plentiful Salt-Pits near *Hay-yen hyen*, which ſtands on the Sea-Coaſt. One ſees on all Sides Silk Manufactures. The whole Diſtrict is flat, without ſo much as one Hill.

3. *HU CHEW FU* takes its Name from the great Lake [g] on the Side whereof it ſtands. It is one of the greateſt and moſt conſiderable Cities in *China*, on Account of its Riches, Trade, Fertility of its Lands, and Beauty of its Waters and Hills. It is inconceivable what a Quantity of Silk is made there. The Tribute paid therein, by *Te-tſin hyen*, one of its dependent Cities, amounts to five hundred thouſand *Taëls*, or Ounces of Silver. The beſt Pencils for Writing with are made here: And its Diſtrict yields abundance of Tea.

4. *NING-PO FU*, which the *Portugueze* have called *Liampo*, is a very good Port, on the Eaſtern Coaſt, over-againſt *Japan*. It ſtands on the Confluence of two ſmall Rivers; the *Kin* coming from the South, and the *Yau* from Weſt

5. *Province*, Che-kyang.

Kya-hing fû.

Hu-chew fû.

Ning-po fû.

[a] *Du Halde's China*, p. 5. [b] Theſe *Li* muſt be three hundred and ſixty Paces each. [c] But, *Le Comte* ſays, that a little higher, it is a uſeleſs Torrent, running through Rocks. [d] Or, *The Weſt Lake*. [e] *Le Comte* affirms, it is very ſhallow; but deep enough for flat-bottomed Boats for Pleaſure. [f] The ſame Author, *p.* 82, ſays, there is not the leaſt Sign of the ſtately Houſes and Palaces with which ſome ſurround this Lake; and nothing to be ſeen but ſome wooden thatched Dwellings, common in *China*. [g] *Hû*, ſignifies *a Lake*.

The Geography. North-West; which form the Canal from thence to the Sea, capable of bearing *Chineſe* Veſſels of two hundred Tons. Theſe Rivers water a Plain almoſt incompaſſed with Hills, which form a Kind of oval Baſin; whoſe Diameter, from Eaſt to Weſt, paſſing through the City, may be ten or twelve thouſand *Chineſe* Fathom, of ten Feet each. The Length from South to North is much greater.

Canal of Ning-po. THIS Plain, which is level and well improved, like a Garden, is full of Villages and Hamlets. It is cut by a great Number of Canals, formed by the Waters that fall from the Hills. The Canal, on which Part of the Eaſtern Suburb ſtands, extends to the very Foot of them, and divides into three Branches. It may be about five or ſix thouſand Fathoms long, and ſix or ſeven broad. In this Space, there are ſixty-ſix Canals iſſuing from the Sides of the principal Canal; ſeveral of which are broader than it. Hence the Plain is rendered exceeding fruitful, and yields two Harveſts of Rice. They ſow Cotton and Pulſe. Tallow Trees are very numerous here. The Air is generally pure; the Country pleaſant and open. The Sea furniſhes Plenty of Fiſh, eſpecially good Cray-Fiſh; and a delicious Sort, called *Whang*; that is, *Yellow*; which are caught in the Beginning of Summer, and tranſported in Glaſſes all over the Empire.

Walls and Gates. THE Walls of *Ning-po* are five geometrical Miles and ſeventy-four Paces in Compaſs. They are built of Freeſtone, and able to withſtand any Force but Cannon. The Diſtance from the Weſtern to the Eaſtern Gate, is two Miles one-half and ſeventy-four great Paces. It has five Gates; two towards the Eaſt, becauſe the Port is on that Side: Not to mention two great Arches, called by the *Chineſe*, Water-Gates, made in the Walls, for the Barks to paſs: There being many Canals in the South-Weſt Part of the City. One ſees here a Brick Tower, ſeveral Stories high; and, before the moſt Southern of the two Gates, a Bridge, over the River *Kin*, of ſixteen flat-bottomed Barks, faſtened with Iron, forty Fathoms long. Beſides theſe, there is not one Building worth Notice in the whole Place; excepting the *Pay-lew*, or *Pay-fan*, which *Europeans* call *Triumphal Arches*. The Streets, which are narrow, are ſtill more contracted by the Penthouſes over the Shops; ſo that two of our large Coaches would have much ado to paſs. This City was ſacked in the laſt Wars; but, of late, it has recovered again, and is provided with a large Gariſon.

THE Entrance to *Ning-po* is difficult, eſpecially for great Veſſels; the Bar not having above fifteen Feet Water in the Spring-Tides. You leave on the left Hand *Tin-hay hyen* [a], one of its dependent Cities; which is an oblong Square, a thouſand *French* Fathom in Compaſs. It is commanded by a Citadel on a very high Rock; at the Foot whereof Ships muſt neceſſarily paſs, within the Diſtance of half Piſtol-ſhot. One Tide brings them up along a very fine River, an hundred and fifty Fathoms broad, and everywhere ſeven or eight deep, with Salt-houſes on both Sides; and a Proſpect of Villages and cultivated Plains, as far as the Mountains.

5. *Province* Che-kyang. *Tin-hay hyen.*

THE *Chineſe* Merchants of *Siam* and *Batavia* come to *Ning-po* every Year, to buy Silks; which are the faireſt in the Empire. Thoſe of *Fo-kyen*, and other Provinces, reſort thither continually. This City has alſo a great Trade with *Japan*; *Nangazaki* being only two Days ſailing from hence. They carry thither Silk, raw and manufactured, Sugar, Drugs, and Wine; and bring back Copper, Gold, and Silver.

EIGHTEEN or twenty Leagues from *Ning-po*, in the Sea, is the Iſland *Chew-ſhan*. The Port is very good, but not commodious for Trade. The *Engliſh*, at their firſt Arrival, put in there by Accident; not being able to find out the Way to *Ning-po* through ſo many Iſlands as are upon the Coaſt [b]. Mr. *Cunningham* [c] informs us, that the *Chineſe* granted them a Settlement and Liberty to Trade; but not at *Ning-po*. This being the largeſt of the Iſlands, is eight or nine Leagues from Eaſt to Weſt, four or five in Breadth, and three from *Khi-tu* Point; called by the *Portugueze*, Cape *Liampo*.

Island Chew-ſhan.

THE Harbour lies at the Weſt End of the Iſland. It is very ſafe and convenient; the Ships riding within Call of the Factory, which is built cloſe by the Shore, in a low Valley, with near two hundred Houſes about it, for the Benefit of Trade, inhabited only by Men: Their Wives dwell in a Town three Quarters of a Mile from the Coaſt, incloſed with a handſome Wall three Miles in Compaſs, fenced with twenty-two ſquare Baſtions. It has four Gates, planted with a few old Iron Guns, ſeldom uſed. Here the *Chong-ping* [d], or Governor, reſides; and three or four thouſand beggarly Inhabitants, moſt part Soldiers and Fiſhermen, in very mean Houſes: For the Trade, being but newly granted, had not yet brought any conſiderable Merchants thither. The Iſland, which is pretty populous, abounds with all Sorts of Cattle, Fowl, Roots,

Harbour & Factory.

[a] Here ſeems to be a double Miſtake; for *Tin-hay hyen*, which is on the Iſland *Chew-ſhan*, (above nine Leagues from the Mouth of the River *Ning-po*) is put inſtead of *Chin-hay hyen*; and this laſt ſtands on the right Hand, in reſpect of thoſe who enter the River. [b] *Du Halde*'s *China*, p. 94, & *ſeqq*. Alſo *Le Comte*, p. 86. [c] He made the Voyage to *Chew-ſhan* in 1700, or 1701. He writes *Chu-ſan*. [d] In the Original, *Chumpeen*.

and

The Geography.

and other Proviſions. But the Merchandize comes all from *Ning-po*, *Hang-chew*, *Nan-king*, and other Cities on the Continent. The Tea grows on the Hills here; but not ſo good as elſewhere.

Islands Pou-to,

THREE Miles Eaſt of *Chew-ſhan* lies the Iſland *Pou-to*, about five Leagues round, a Place of great Pilgrimage [a] for one thouſand ſix hundred Years paſt. Hither the Emperor was to have come on his Birth-Day, in the fortieth Year of his Reign [b], but was diverted by his *Mandarins*; who pretended, it was ſubject to terrible Thunder. It is inhabited only by three thouſand of the *Ho-ſhang*, or unmarried *Bonzas*, who have built four hundred Temples. In two of them, conſiderable for their Bigneſs and Form, are two High-Prieſts, over the reſt. Their Houſes are the beſt in theſe Parts. The Iſland is croſſed with Roads; ſome flagged, and ſhaded with Trees. The Junks bound from *Ning-po* to *Japan* touch here, to make their Offerings.

and Kimp-tong.

FIVE Leagues from *Chew-ſhan*, in the Way to *Ning-po*, is the Iſland *Kimp-tong*; where, it is ſaid, there are Silver Mines; and *Mandarins*, out of Employment, retire, to enjoy an eaſy Life. The reſt of the circumjacent Iſlands are either deſert, or inhabited only by Fiſhermen: But all ſtored with Deer.

CHEW-SHAN having been quite deſtroyed in the laſt *Tartar* Wars, continued ſo till about 1684, that the preſent Town was built to expel ſome Pirate. Four Years after, it began to be re-peopled; and a *Chong-ping*, or General, was ſent to govern it [c].

Shau-hing

5. *SHAU-HING FU* is ſituated in one of the fineſt Plains in the World; and much like *Venice*. Every Street has a Canal, covered with high one-arched Bridges; ſo that one may enter the City by Boat on any Side.

THE Streets, which run along the Canals, are very large and handſome, paved with white Stones ſix or ſeven Feet long, and adorned with triumphal Arches. The Walls have a Ditch within as well as without; and the City being reckoned, at leaſt, four Leagues in Compaſs, is divided into two *Hyen*, or ſubordinate Juriſdictions, which have their diſtinct Governors; one called *Shan-in*, the other *Quey-ki*.

SEVERAL of the Houſes are built with exceeding white Freeſtone, (which is ſcarce ever ſeen in the other Cities of *China*) dug out of the Mountain *Nyau-men-ſhan*, two Leagues diſtant. The Inhabitants of *Shau-hing* are the moſt noted in all *China* for Quirks of the Law: Though being otherwiſe good Lawyers, there is no Vice-Roy, or *Mandarin*, but what has one of them for his *Syang-kong*, or Secretary. This City is famous all over the Empire for the Wine made here, as well as for the Tomb [d] of the *Great Yu*, one of the firſt Monarchs; who obtained the Throne by the Service he did his Country, in cauſing the Sea, which had overflowed Part of the Empire, to retire. There is near it alſo a remarkable Hill, called, from its Figure, *Hew-ſhan*, or *The Mountain of the Ape*; where the People go to divert themſelves.

5. *Province*, Che-kyang. *Tomb of* Yu.

6. *TAY-CHEW FU* ſtands on a River, in a Country over-run with Mountains. It is not by far ſo conſiderable as the other Cities. It is remarkable for a Kind of Ray, or Thorn-back, caught there in the Sea; with whoſe Skin, which ſerves for ſeveral Uſes, eſpecially in making Scabbards for Hangers, they drive a great Trade; tranſporting it to *Japan*, as well as through the Empire.

Tay-chew fû.

7. *KIN-WHA FU* ſtands in the Middle of the Province, by a pretty handſome River. It was formerly very great, and famous for the Beauty of its Buildings: But having long withſtood the whole Power of the *Tartars*, they burnt one Part of the City, and a great Bridge on the Weſt Side; which have been ſince rebuilt. Rice grows here plentifully; and the Wine made of it, is much eſteemed in the Country. A great Trade is carried on alſo with large dried Plumbs and Hams; which are ſent into all the Provinces. Thoſe little Shrubs, whoſe white Flower reſembles the Jaſmin, and the Tallow-Tree, are found almoſt every-where in its Diſtrict.

Kin-wha fû.

8. *KYU-CHEW FU* is built on a fine River, and between two other ſmaller ones that fall into it. It is the moſt Southern City in the Province, bordering on *Kyang-ſi* and *Fo-kyen*. The Road leading into this latter Province, is very difficult; it begins about the City *Kyang-ſhan hyen*, and continues over pretty ſteep Mountains for near thirty Leagues together. They have made Stairs, winding round one of them, conſiſting of more than three hundred Steps of flat Stones, to render the Aſcent more eaſy. There are Inns, all the Way, at certain Diſtances.

Kyu-chew fû.

9. ALTHOUGH the Walls of *Yen-chew fû*, or *Nyen-chew fû*, are waſhed by a River, which, not far off, falls into another, that bears pretty large Barks, yet it is not to be compared to the reſt of the Cities of the Province; either for Bigneſs, Wealth, or Number of Inhabitants. Its Territory is incumbered with Hills and Mountains. In it Mines are found; and one meets with the Trees that diſtil the Varniſh. The Paper made here, is no leſs eſteemed.

Yen-chew fû.

10. *WHEN-CHEW FU* is ſituated in a marſhy Soil, very near the Sea; and the Beauty

When-chew fû.

[a] Not *Chew-ſhan*, as *Martini* relates. [b] The Year 1702. [c] See *Philoſophical Tranſactions*, N° 280. *p.* 1201. alſo the *Abridgment*, vol. 5. part 2. *p.* 178, *& ſeqq.* [d] A Mile and an half from the City.

The Geography.

of its Buildings have gotten it the Name of *Little Hang chew*. The Tide comes up to its very Walls; where there is a commodious Harbour. Its Diſtrict is divided into Plains and Mountains: The firſt, very fertile; but ſome of the latter, frightful to look at; eſpecially thoſe towards the Province of *Fo-kyen*.

Chau-chew fû.

11. *CHU-CHEW FU* is ſituate on a fine River, navigable to the Sea. It is invironed by Mountains, covered with fair Trees; among which are Pines, uſed for building Houſes and Ships; the Hollow of whoſe Trunk would hold thirty Men.

THE Sides of the Brooks are covered with whole Foreſts of Bambû Canes [a]; ſome more than twenty Feet high, and the ſmalleſt ten. Theſe Canes burnt, when green and freſh cut, yield a Water, which, being drank, the Phyſicians pretend, rectifies the Blood coagulated by a Bruiſe or Fall [b].

6. Province, Hu-quang.

SECT. VI.

Hu-quang, *the ſixth Province.*

Bounds, Soil, and Produce. Diviſion. Vu-chang fû. *Surpriſing Proſpect.* Han-yang fû. Ngan-lo fû. Syang-yang fû. Ywen-yang fû. Te-ngan fû. *Wax Worms.* Kin-chew fû. Whan-chew fû. Chang-cha fû. *Great Feſtival.* Yo-chew fû. *Lake* Tong-ting. *Large Pines.* Pau-king fû. Heng-chew fû. Chang-te fû. Ching-chew fû. Yong-chew fû.

Bounds, Soil, and Produce.

THIS great Province lies in the Middle of the Empire, between thoſe of *Ho-nan*, on the North; *Kyang-nan*, and *Kyang-ſi*, on the Eaſt; *Quang-tong*, and *Quang-ſi*, on the South; *Quey-chew*, *Se-chwen*, and *Shen-ſi*, on the Weſt. The Country is moſtly plain, conſiſting of open Fields, watered by Lakes [c], Brooks, and Rivers, abounding with all Sorts of Fiſh, as the Lakes are covered with wild Fowl.

ONE meets with, in the Plains, incredible Numbers of Cattle, with all Sorts of Grain and Fruit, eſpecially Oranges; and ſeveral Kinds of Citrons. Some of its Mountains produce Cryſtal, or Talk; others are covered with medicinal Herbs, or old Pines, fit for making thoſe great Pillars uſed in *Chineſe* Buildings. Beſides the Mines abounding with Iron, Tin, Tottenague, and other Metals, Gold is found in the Sands of the Rivers and Torrents which deſcend from the Hills.

A GOOD deal of Paper is made of the Bambûs growing here. One ſees Store of thoſe little Worms, which produce Wax in the ſame Manner as Bees. In ſhort, *Hu-quang* affords ſuch Plenty, that it is commonly called *The Granary of the Empire.*

Diviſion.

THE great River *Yang-tſe-kyang* croſſing it from Weſt to Eaſt, divides it into two Parts [d]; the *Hû-pe*, or Northern; and *Hû-nan*, or Southern. The former containing eight Cities of the firſt Rank, and ſixty of the ſecond and third. The Southern Part has fifty-four *Chew* and *Hyen* ſubordinate to ſeven *Fû*, beſides Boroughs, Villages, and fortified Towns.

[a] Which ſeems to be a Corruption of *Mambu*, the *Indian* Word for this Sort of Cane, or Reed. [b] *Du Halde's China*, p. 96, & *ſeqq.* [c] The Lake, called *Tong-ting-hû*, lying in the midſt of the Province, is above ſixty Miles long, and thirty-five broad. It communicates with the *Yang-tſe-kyang*; and receives, among other Rivers, the *Heng-kyang* from the South, and *Ywen-kyang* from the Weſt. [d] But unequally; the Southern being twice as big as the other.

N.° 128

Plate XVI. Vol. IV. p. 45

6. *Province*, Hu-quang.

1. *The Northern Part.*

	Chew.	*Hyen.*
1. *Vu-chang fû*, Capital of the Whole, preſides over	1	9
2. *Han-yang fû*	0	2 [a]
3. *Ngan lo fû*	2	5
4. *Syang-yang fû*	1	6
5. *Ywen-yang fû*	0	7 [b]
6. *Te ngan fû*	1	5
7. *Hing-chew fû*	2	11
8. *Whang-chew fû*	1	8

1. *VU-CHANG FU* is the Capital both of the whole Province, and of the Northern Diviſion; where the *Tſong-tu* of both Parts reſides. This City, in Conjunction with *Han-yang fû* [c], (which is ſeparated from it only by the River *Yang-tſe-kyang*, and the little River *Han*) forms the moſt populous and frequented Place in all *China*.

VU-CHANG itſelf may be compared for Size to *Paris*. *Han-yang* (one of whoſe Suburbs extends to a Point where the Rivers *Han* and *Yang-tſe kyang* meet) is not inferior to *Lyons*, or *Roan*. Add to this, an incredible Number of great and ſmall Barks, (never fewer than eight or ten thouſand) ſpread all along both Rivers for above two Leagues together; ſome Hundreds of which are as long and high in the Sides, as moſt of thoſe that lie at *Nantz*.

A PERSON, who was to view, from an Eminence, this Foreſt of Maſts, on one Side; and on the other, that vaſt Extent of Ground, covered over with Houſes; would readily own, that he ſaw the fineſt Proſpect of the Kind in the World.

As this City may be ſaid to ſtand in the Center of the Empire, it has an eaſy Correſpondence in Trade with the other Provinces, by Means of the *Kyang*; which here, though, at leaſt, an hundred and fifty Leagues from the Sea, is three Miles broad, and deep enough to carry the biggeſt Ships. It is farther remarkable for Plenty of the beſt Tea, and the prodigious Demand for the Bambû Paper made here; beſides, the Mountains, in its Diſtrict, yield the faireſt Kind of Cryſtal.

2. *HAN-YANG FU*, as hath been juſt now mentioned, is only ſeparated from the Capital by the *Kyang*; and is waſhed alſo by the River *Han*, whence it takes its Name. It has, both within and without its Walls, ſeveral Lakes, abounding with Fiſh and wild Fowl. Its advantageous Situation for Trade renders the Inhabitants exceeding rich. It is remarkable for a very high Tower, built formerly in Honour of a young Maiden; whoſe Innocence and Virtue were juſtified, as they ſay, by a very extraordinary Prodigy. *Han-chwen hyen*, the only City under its Juriſdiction, is intirely ſurrounded with Lakes and Rivers. Several Kinds of Oranges and Citrons grow in its Diſtrict; but never come to Perfection.

3. THE City *Ngan-lo fû* is built on the River *Han*, in a vaſt Plain, equally agreeable and fertile; but has nothing to diſtinguiſh it, except, that it is enriched by its Trade with the two former Cities. Ngan-lo fû.

4. *SYANG-YANG FU*, ſtanding alſo on the *Han*, has the ſame Advantage as the former with reſpect to Trade. They gather abundance of Gold out of the Rivers in its Diſtrict; and, it is likely, the Mountains, wherewith Part of it is incumbered, afford rich Mines of it, was it permitted to open them; as they do of the *Lapis Armenus*, Vitriol, and a green Stone, of great Uſe in Painting. They are alſo ſtored with large old Pines, fit for Pillars; Houſeleek, and phyſical Plants. Syang-yang fû.

5. *YWEN-YANG FU* is the moſt Northern City in the Province, near *Shen-ſi*, ſtanding on the River *Han*, and in a pretty large Plain, incompaſſed with Mountains, which have a gentle Deſcent; and beſides ſeveral Sorts of medicinal Herbs, produce abundance of very good Tin. The Soil is fertile every-where. In the Diſtrict grows a remarkable Shrub; which, like the Ivy, climbs about Trees: It bears a Flower of a very pale Yellow; and the Extremities of its Branches are as fine as Threads of Silk. Ywen-yang fû.

CHU-SHAN HYEN, one of its dependent Cities, lies on a River that falls into the *Han*; the Water of which is proper to take Spots out of Silk, and for ſharpening Iron Tools: A Virtue, doubtleſs, owing to its being impregnated with certain Salts.

6. *TE-NGAN FU* is built on a River that falls into the *Yang-tſe-kyang*, (which is not far off;) and, by ſeveral Branches, has a Communication with Lakes in the Neighbourhood. Te-ngan fû.

ITS whole Diſtrict, which is incloſed on the North by Mountains, and on the South by Rivers that water it, is exceeding fertile. It is moſt remarkable for a Kind of white Wax, made by little white Worms, before-mentioned; of which they make Candles that are whiter than Wax, and give a clearer Light, as well as a more agreeable Smell. *Wax Worms.*

7. *KIN-CHEW FU* is handſome enough, and of great Trade; ſcarce inferior to the Capital for Numbers of People; and divided by a ſingle Wall in two Parts: One poſſeſſed by the *Chineſe*, the other by *Tartars*, who compoſe the Gariſon. It is a common Saying, *That whoever is Maſter of* Kin-chew, *has the Key of* China *in his Hands*; and it is their Cuſtom to build a Citadel Kin-chew fû.

[a] In the Deſcription, 1. [b] In the Deſcription, 6. [c] See Vol. III. *p.* 583.

in

The Geography. in all Places of Importance. It is ſurrounded by a Lakes, which abound with Fiſh; and render the Soil pleaſant as well as fertile.

Whang-chew fû. 8. THE Situation of *Whang-chew fû*, on the great *Kyang*, its ſmall Diſtance from the Capital, and the Number of Lakes wherewith it is ſurrounded, renders it delightful. Hence it is exceeding populous, and yields to few of the other Cities for Trade; a ſurprizing Number of Barks arriving there every Day. They catch in the River a great Number of Tortoiſes, large and b ſmall; which the Grandees keep in their Gardens, and Houſes of Pleaſure. They make excellent Spirits there; which are very ſtrong, take-fire in an Inſtant, and have no bad Smell. There are alſo very good and large Cheſnuts. Its whole Territory is admirably well improved, and agreeably watered. Some of the Mountains, that are to the North, are covered with Trees and Foreſts: They alſo afford Springs; whoſe Waters give the Tea a delicious Taſte.

2. *The Southern Part.*

	Chew.	*Hyen* [a].
1. *Chang-cha fû*, Capital, governs	1	11
2. *Yo-chew fû* - -	1	4
3. *Pau-hing fû* - -	1	9
4. *Hing-chew fû* - -	1	4
5. *Chang-te fû* - -	0	6
6. *Ching-chew fû* - -	1	6
7. *Yung-chew fû* - -	1	7

Chang-cha fû. 1. *CHANG-CHA FU* is the chief City of *Hû-nan*, or the Southern Part of *Hû-quang*. It ſtands on a large River, that has a Communication with the great Lake *Tong-ting-hû*. The Eaſe, with which the Huſbandmen convey the Water, from the Lakes and Rivers, into the Lands of its Diſtrict, by Machines ſpoken of elſewhere, renders its Soil rich and fertile. In theſe Rivers abundance of Fiſh is e caught, eſpecially very good Lampreys [b].

THE Country is partly plain, partly mountainous. The Hills yield very fine Cinnabar, and abundance of Talk; which, reduced to a Lime, and mixed with Wine, the Phyſicians ſay, is a wonderful Preſervative to Health.

A CERTAIN *Mandarin*, Governor of one of its dependent Cities, whoſe Virtue had endeared him to the People, happening to be drowned in the River, they inſtituted a Feſtival in Honour f of him, in the fifth Moon; which, afterwards, came to be obſerved all over the Empire. They celebrate it with Games, Feaſts, and Combats on the Water, in Dragon-Boats. Formerly, Premiums were given the Victors: But as this Sort of Diverſion was often attended with fatal Accidents, it is almoſt every-where ſuppreſſed.

Great Feſtival.

6. *Pre-* *Hu-qu*

2. THE Situation of *Yo-chew fû* is admirable, being built on the Side both of the *Yang-tſe-kyang* and the *Tong-ting-hû*; which render it one of the wealthieſt Cities in the Empire by its Trade. *Yo-chew fû.*

THIS Lake, which reſembles a Sea, is remarkable for the Greatneſs of its Circumference, (being more than fourſcore Leagues;) for the b abundance of its Waters, eſpecially at certain Seaſons; and the aſtoniſhing Quantity of Fiſh caught therein. Two of the greateſt Rivers in the Province [c] diſcharge themſelves into it; and paſs out again, afterwards, without any ſenſible Diminution. *Lake Tong-ting.*

ITS Diſtrict, which is divided by the Lake, is exceeding fertile every-where, and ſtored with different Kinds of Orange and Lemon-Trees. Many of its Mountains are covered with Foreſts, c chiefly of Pine-Trees: In ſome of them they find the *Lapis Armenus*, and green Stone; which, reduced to Powder, makes a very beautiful Colour for painting. In others, Talk, and little black Stones, the impalpable Powder of which is uſed as an effectual Remedy againſt the Quinſy and other Diſeaſes of the Throat. *Large*

3. *PAU-KING FU* is built on the River *Lo-kyang*, which falls into the *Heng-kyang*, and this into the Lake *Tong-ting*. Its Territory conſiſts of fertile Valleys, and very fine Plains, d excepting towards the Province of *Quang-ſi*, where it is mountainous. *Pau-kin* fû.

To the North of *U-kang chew*, one of its dependent Cities, where the River falls-down Rocks with aſtoniſhing Rapidity, they have erected a brazen Pillar, to which the Bark is faſtened, till Meaſures are taken for aſcending the Stream with Safety.

4. *HENG-CHEW FU*, a pretty large City, is ſituate at the Confluence of two Rivers [d], e which incloſe Part of its Territory. Its Mountains are very agreeable, and well cultivated, or covered with Trees always green. The Country furniſhes much Game, and has ſeveral Gold and Silver Mines, but none opened. Very good Paper is made here: In ſhort, every thing is plenty. *Heng-* fû.

5. *CHANG-TE FU* is a large City, built on the River *Ywen-kyang*, not far from the great Lake *Tong-ting*. Its Diſtrict is of no great Extent, but the Country is the moſt fertile in all the Province; and its River, which is navigable almoſt from the Beginning to the Lake, cauſes Trade to flouriſh. It is remarkable for a peculiar Sort of Orange-Trees, which bear no Fruit till the Seaſon for others is paſt; whence they *Chang* fû.

[a] In the Deſcription, the *Hyen* are 11, 7, 4, 9, 4, 9, 7.
[b] *Du Halde's China*, p. 6, and 98, *& ſeqq.*
[c] See the Note [c], at the Beginning of the Section.
[d] One is the *Heng-kyang*, before-mentioned.

call

call them *Winter Orange-Trees*, but its Fruit has a delicious Taſte. Its Mountains are full of fallow Deer, and bear Cedars, whoſe Fruit, though not good to eat, is hung-up in Chambers to perfume them. Store alſo of *Lapis Armenus* and even ſome *Manna* is found there.

6. *CHING-CHEW FU* is ſituate on an Angle made by two Rivers, and the Country watered by a Multitude of Brooks. Its Mountains, which are numerous, yield Abundance of Quickſilver, *Lapis Armenus*, and green Stones, fit for Painters; nor are they deſtitute of Gold and Silver Mines. The People who inhabit theſe Mountains want the Politeneſs of the *Chineſe* Commonalty, being of a rude and ſavage Diſpoſition, ſo that they are looked-on as Barbarians.

7. *YONG-CHEW FU*, the moſt Southerly City in the Province, ſtands amidſt verdant Mountains, on a River, which, a little Way off, falls into the *Syang-kyang*, and whoſe Water is ſo clear, that in the deepeſt Places you may count the Flints and ſmalleſt Pebbles at the Bottom. Its Territory, though hilly, is well cultivated. Store of Bambûs grow in ſome Parts, and in others the *Lyen-wha*, with yellow Flowers, rarely found elſewhere.

BESIDES the eight dependent Cities, there are in this Diſtrict two more of the ſecond Order, which do not depend on any *Fû*, but have a Juriſdiction over other Cities. The firſt, *Tſin chew*, on the Borders of *Quey chew*, has under it three Cities of the third Rank: The ſecond, *Ching chew*, (a great and very populous City, ſtanding between two Rivers) whereon depend five of the ſame Order, all on the Borders of *Quang-tong* [a].

SECT. VII.

Ho-nan, *the ſeventh* Province.

Name and Bounds. Air and Produce. Soil. Remarkable Lake. Diviſion. Kay-fong fû. *Dreadful Inundation.* Que-te fû. Chang-te fû. Wey-kyun fû. Whay-king fû. Ho-nan fû. Nan-yang fû. Yu-ning fû. *Table of Situations.*

[a] *Du Halde's China*, p. 100, *& ſeqq.*

HO-

The Geography.

Name and Bounds.

HO-NAN is bounded on the North by the Provinces of *Pe-che-li* and *Shan-si*; on the West by *Shen-si*; on the South by *Hu-quang*; and on the East by *Shan-tong*. It is likewise watered by the *Whang-ho*, or *Yellow River*. It is named *Chong-wha*, or *The Flower of the Middle*, becauſe ſituate almoſt in the Middle of *China*.

Air and Produce.

THE *Chineſe* ſay, that *Fo-hi*, the Founder of the Monarchy [a], and other ancient Emperors, invited by the Beauty and Fruitfulneſs of the Land, fixed their Seats here. For Delightfulneſs no Country can compare with it: The Air is temperate, and very healthful. It abounds with Cattle, all Sorts of Oranges, Pomegranates, *European* Fruits and Grain; inſomuch, that one ſhall have three Pounds of Meal for a Penny. The Quantity of Corn, Rice, Silk, and Cloth, which it furniſhes by Way of Tribute, is aſtoniſhing.

Soil.

EXCEPTING on the Weſt-Side, where there are Mountains covered with Foreſts, the whole Province is plain; and ſo duly watered, as well as cultivated, that one ſeems to travel through a vaſt Garden. Hence the *Chineſe* commonly call it, *The Garden of China.*

Remarkable Lake.

IT is farther remarkable for a Lake, whoſe Water gives the Silk an inimitable Luſtre, which has drawn a great Number of thoſe concerned in that Manufacture to ſettle about it. In *Nan-yang*, one of its dependent Cities, there is a Kind of Serpent, whoſe Skin, which is ſpeckled with ſmall white Spots, being ſteeped in a Vial full of Wine, is uſed by the Phyſicians as a Remedy againſt the Palſy.

Diviſion.

BESIDES the Forts, Caſtles, and Gariſon-Towns, *Ho-nan* contains eight *Fû*, or Cities, of the firſt Rank, and an hundred and two of the ſecond and third.

	Chew.	*Hyen.*	
1. *Kay-fong fû*, the Capital, governs	4	30	e
2. *Que-te fû*	1	8	b
3. *Chang-te fû*	1	6	
4. *We-kyun fû*	0	6	
5. *Whay-king fû*	0	6	
6. *Ho nan fû*	1	13	
7. *Nan-yang fû*	2	10	c
8. *Zhu-ning fû*	2	12	

Kay-fong fû.

1. *KAY-FONG FU* is a great, rich, and populous City, ſtanding four Miles and an half from the *Whang-ho*, in the Middle of a large and well-cultivated Plain; but its Situation is ſo very low, that the Water of the River is higher than the City. To guard againſt Inundations, they have built great Banks, or Dikes, for the Space of above thirty Leagues. But in 1642, this City having held-out for ſix Months againſt more than an hundred thouſand Rebels, the Commander of the Troops, which came to its Aſſiſtance, judging the only Expedient left for its Relief was, to break-down the Banks of the *Whang-ho*, in order to lay the Plain under Water, the Inundation was ſo ſudden and violent, that the City itſelf was overflowed, and three hundred thouſand of its Inhabitants drowned. 7. Pe-Ho-

Dreadful Inundation.

KAY-FONG appears to have been three Leagues in Compaſs before that Misfortune, and has been ſince rebuilt, but not ſo well as to hold its Place among the handſomeſt Cities of *China*.

2. *QUE-TE FU* ſtands in a vaſt Plain, and in the Middle between two fine Rivers. All the Cities in its Dependence are rich, and very populous. The Country is well improved, and without any Hills; the Air very pure, and Soil fertile in all Sorts of Grain and Fruit. Oranges and Pomegranates are very plenty. Que-te

3. *CHANG-TE FU* lies in the Northern Part of the Province, which is there much ſtreightned by the Provinces of *Pe-che-li* and *Shan-ſi*. Its Diſtrict, though of no great Extent, is very fruitful, being watered by many Rivers, full of Fiſh; among which one reſembles the Crocodile, whoſe Fat, if once ſet on Fire, is ſcarce poſſible to be extinguiſhed till the whole is conſumed. Chang-fû.

ITS Mountains yield Loadſtones, and divers Kinds of Wormwood. One of them is ſo ſteep, and difficult of Aſcent, that in Time of War the Inhabitants retire to the Top, where there is a large Plain, and dwell in perfect Safety.

4. *WE-KYUN FU* ſtands on a River in a ſandy Country, and the worſt Soil in all the Province. Its Diſtrict, like the former, is contracted by *Pe-che-li* and *Shan-ſi*. Excepting ſome Mountains on the Side next this laſt Province, the reſt is a plain Country, and pretty well improved. We-fû.

5. THE Territory of *Whay-king fu* is of very ſmall Extent. On the North it is ſeparated by Mountains from the Province of *Shan-ſi*, and on the South by the great River *Whang-ho*. The Air is very healthful, and the Soil no leſs fertile. It ſupplies the whole Province with Simples and medicinal Herbs. Why-fû.

6. *HO-NAN FU*, which bears the Name of the Province, ſtands in the Midſt of Mountains, between three Rivers. The *Chineſe* formerly believed it was in the Center of the Earth, becauſe it is in the Middle of their Empire. It is very large and populous. Its Diſtrict is of Ho-

[a] Who, by the *Chineſe* Account, began his Reign 2952 Years before the Chriſtian Æra.

[b] In the Deſcription, 6.

[c] In the Deſcription, but 6.

large

The Geography. large Extent, and though ſurrounded with Mountains, is very fruitful. a

TENG-FONG HYEN, one of its ſubordinate Cities, is famous for the Tower built there by the celebrated *Chew-kong*, where he uſed to obſerve the Stars. There is ſtill an Inſtrument to be ſeen which he employed to find the Meridian Shadow, in order to diſcover the Height of the Pole, and make other aſtronomical Obſervations. He lived more than a thouſand Years before Chriſt, and the *Chineſe* pretend he invented b the Mariners Compaſs.

Nan-yang fû. 7. THE Diſtrict of *Nan-yang fu* is very fine, and though of very great Extent, is ſurprizingly fertile; Proviſions being exceeding cheap, and ſo plenty, that numerous Armies have quartered here a conſiderable Time, without incommoding the Inhabitants in that Article.

THE City, ſituate on a ſmall River, is neither large, rich, nor populous. It is encompaſſed with Mountains, ſome of which produce the c *Lapis Armenus*, and breed thoſe Serpents ſpotted with White, already ſpoken of in the general Deſcription of the Province.

Yu-ning fû. 8. *YU-NING FU* [a] is built on the River *Yu-ho*. Its Diſtrict, which is very extenſive, is partly plain, and partly mountainous, eſpecially towards the North and South; but watered by ſeveral Rivers, which produce Plenty of all Sorts of Grain and Fruit [b].

SECT. VIII.

Shan-tong, *the eighth* Province.

Bounds and Produce. *Fruit* Tſe-tſe, *and Silk.* *Diviſion.* Tſi-nan fû. Yen-chew fû. Tſi-ning chew. *Birth-Place of* Confuſius. Tong-chang fû. *Porcelain Tower.* Tſing-chew fû. Ten-chew fû. Lay-chew fû. *Table of Situations.*

Bounds and Produce. *SHAN-TONG* is bounded on the Weſt by *Pe-che-li*, and Part of *Ho-nan*; on the South d by *Kyang-nan*. The Gulf of *Kyang-nan* waſhes it on the Eaſt, and that of *Pe-che-li* on the North.

THE Numbers of Lakes, Brooks and Rivers, beſides the great imperial Canal, which croſſes Part of this Province, contribute towards rendering it one of the moſt plentiful Parts of the Empire; nor is this extraordinary Plenty to be interrupted, except by too great a Drought, for it e ſeldom rains here, or by the Havock that is ſometimes made by Locuſts.

FOWL, Eggs, fat Capons, Pheaſants, Partridges, Quails and Hares are exceeding cheap. The Lakes and Sea afford a prodigious Quantity of Fiſh, of which you may have ſeveral Pounds for a Penny.

Fruit Tſe-tſe, *and Silk.* THE Soil produces all Kinds of Grain and Fruit, eſpecially fine wholeſome Peaches, divers Sorts of Nuts and Cheſnuts, with Abundance of f Plumbs, excellent Pears, and the *Tſe-tſe*. Theſe three laſt they dry for tranſporting into the other Provinces. The *Tſe-tſe*, which is a Sort of Fig [c], is to be found no-where but in *China*; nor in

[a] Or, *Zhu-ning fû*; being written elſewhere, *Ju-ning fû*, in the *French*. [b] *Du Halde's China*, p. 6, and 102, & *ſeqq*. [c] See the Natural Hiſtory.

The Geography. any Province thereof in ſuch Plenty as in this of *Shan-tong*.

THERE is found in the Fields a Sort of white Silk, peculiar to this Province, faſtened in long Threads to the Shrubs and Buſhes by Worms, reſembling Caterpillars. Of this they make Silks, (called *Kyen chew*) which are coarſer, but more compact and ſtrong, than thoſe made of the Silk produced by the Houſe-reared Worms.

Diviſion. *SHAN-TONG* is ſubdivided into ſix Counties, or Diſtricts, containing ſix Cities of b the firſt Rank, and an hundred and fourteen of the ſecond and third; beſides more than fifteen Forts, built at the Entrances of all Ports and Rivers along the Coaſt: Likewiſe ſeveral populous Iſlands ſcattered over the Gulf; ſome of which afford very commodious Harbours for the Junks that trade to *Korea* and *Lyau-tong*.

	Chew.	*Hyen.*
1. *Tſi-nan fû*, the Capital, commands	4	26
2. *Yen-chew fû*	4	23
3. *Tong-chang fû*	3	15
4. *Tſing-chew fû*	1	13
5. *Teng-chew fû*	1	7
6. *Lay-chew fû*	2	5

Tſi-nan fû. 1. *TSI-NAN FU*, the Capital of this Province, is a very great and populous City. The Lake within its Walls, which ſupplies Canals throughout the City, together with the beautiful d Buildings, render it very famous. Its Trade is carried on chiefly by Means of the grand Canal [a], into which Goods are conveyed down the *Tſing-ho* from *Lu-kew*, a Village thereon, four Miles from *Tſi-nan*. The Commodities peculiar to this Country are the Silks before-mentioned, called *Kyen chew*, made of the Produce of the wild Worms; and the Works of *Lew-li*, or *Chineſe* Glaſs, which are made at *Yen-ching*, a great Borough in the Diſtrict of this Capital: But this e Sort of Glaſs is more brittle than that of *Europe*, breaking when expoſed to too ſharp an Air.

ITS Diſtrict, which is very large, and extends to the Sea, abounds with all Sorts of Grain, and Herds of Cattle. Some of its Mountains have Iron Mines. The Lakes ſcattered over it are ſtored with Fiſh, and adorned with thoſe Flowers called *Lyen-wha*.

Yen-chew fû, 2. THE Territory depending on *Yen-chew fû* [b], which is of great Extent, is ſhut-up between f two famous Rivers; *Ta-chin-ho* to the North, and *Whang-ho* to the South. There are, beſides, ſeveral other Rivers and ſome Lakes which abound with Fiſh. Hence the Country is exceeding fertile, for nothing is to be ſeen but cultivated Plains, or Woody Mountains. The Air is alſo mild and temperate. *8. Province, Shan-tong.*

SOME of the Cities dependent on *Yen-chew* are remarkable. *Tſi-ning chew* is not inferior to it, either for Bigneſs, Multitude of Inhabitants, or Richneſs of its Trade; and its Situation, towards the Middle [c] of the great Canal, renders it one of the greateſt Marts in the Empire. *Kyo-few hyen* is famous for being the Birth-Place of *Confuſius*, the chief Doctor of the *Chineſe*; who have erected here ſeveral Monuments, as ſo many public Teſtimonies of their Gratitude towards that great Man. *Tſi-ning chew.* *Birth-Place of Confuſius.*

IT is affirmed, that in the Neighbourhood of another little City, called *Kin-kyang hyen* [d], they formerly gathered much Gold, whence it has its Name, which ſignifies *Earth of Gold*. There are alſo divers Parts, eſpecially towards *Tong-ping chew*, ſo intermixed with Woods and Fields, that they afford the moſt gay and agreeable Proſpect imaginable [e]. Within its Diſtrict is the Village *Kya-kya*; and the Temple of *Ti-wang myau*, near the City of *Shan-tſui* [f], of which we have given the Proſpects. c

3. *TONG-CHANG FU* [g], which is ſituate on the great Canal, is famous for its Riches, procured by the Plenty of Grain, and Fruits of all Kinds, which grow in its extenſive Diſtrict. *Tong-chang fû.*

AMONG its dependent Cities, *Lin-tſin chew*, where the great Canal joins the River *Wey-ho* [g], is very conſiderable; being in ſome Sort the general Reſort of all Kinds of Merchandizes and Barks. Few Cities in the Empire are more populous, and of better Trade [h]. It is no leſs famous for its Buildings, eſpecially a beautiful Tower of eight Stories, raiſed without the Walls. The Outſide, which is of Porcelain, is adorned with divers Figures. Within it is lined with finely poliſhed Marble of ſeveral Colours. By a Stair-Caſe made in the Wall, one goes-up to all the Stories, and from thence to very fine Galleries of Marble; embelliſhed with gilded Iron Rails, which encompaſs the Tower, and at the Corners with little tinkling Bells. Not far from this Tower are certain curious Temples, whoſe Manner would not be diſagreeable to the Taſte of the beſt *European* Architects. *Porcelain Tower.*

4. THE Territory belonging to *Tſing-chew fu* is partly watered by Rivers, and partly covered with Hills. The Soil is very fertile, and the neighbouring Sea yields other Neceſſaries. The Skin alone of the Fiſh caught here brings a conſiderable Profit. *Tſing-chew fû.*

[a] Above ſixty Miles diſtant. [b] See Vol. III. *p.* 541. [c] At the Diſtance of twenty-two Miles to the Eaſt. [d] Rather, *Kin-yang*, as in the Jeſuits Maps, *Kyang* ſignifying a *River*, not *Earth*. [e] See Vol. III. *p.* 417, and 418. [f] The ſame, *p.* 418, and 471. [g] In the *French*, *Oei-ho*. [h] See Vol. III. as before.

THERE

The Geography.

THERE grows in the Bellies of the Cows a yellow Stone, called, by the *Chineſe*, *Nyew-Whang*, as big ſometimes as a Gooſe-Egg, but not more hard than the ſofteſt Crayon [a]. The Phyſicians prefer it to the Bezoar, and ſay, that, when pulverized and taken in hot Water, it is an immediate Cure for Defluxions and Rheums; in the ſame Manner as the Stone that grows in the Gall of an Ox, cures the Jaundice.

Teng-chew fû.

5. *TENG-CHEW FU*, like ſeveral of its dependent Cities, is ſituate on the Sea, where there is a very commodious Harbour. It has alſo a ſtrong Gariſon and ſeveral Ships of War to guard the Coaſt. In the Sea-Ports they catch Abundance of good Oyſters, which are ſerved as Dainties at the Tables of Lords. The Country is mountainous, yet fertile, being watered by Rivers. The *Nyew-whang* Stone is found in this City as well as the former. The Bambûs, every where elſe round, are here ſquare. b

Lay-chew fû.

6. *LAY-CHEW FU*, ſeated on a Promontory, is incompaſſed on one Side by the Sea, and on the other by Mountains. Some of its ſubordinate Cities alſo, as *Kyau chew*, which is very ſtrong by Situation, are waſhed by the Ocean. Its whole Diſtrict is rendered fertile by Rivers; and is intermixed with Plains and Mountains, eſpecially toward the Coaſts [b]. c

9. *Province*, Shan-ſi.

SECT. IX.

Shan-ſi, *the ninth Province.*

Bounds and People. Soil and Produce. Diviſion. Tay-ywen fû. *Carpets. Sepulchres.* Ping-yang fû. Lû-ngan fû. Fwen-chew fû. Tay-tong fû. *Soil and Produce.*

Bounds and People.

THIS Province, which is the leaſt in *China*, is bounded on the Eaſt by *Pe-che-li*; on the South by *Ho-nan*; on the Weſt by *Shen-ſi*; and on the North, it is ſeparated from *Tartary* by the great Wall.

THE firſt Inhabitants of *China*, as the Hiſtory relates, ſettled in this Province; whoſe Climate is healthful and agreeable. Though ſome of its numerous Mountains are frightful and uncultivated, yet moſt of them are well improved; being cut into Terraſſes from Bottom to Top, and quite covered with Corn. For, in ſeveral Parts of them, they find four or five Feet Depth of Earth without the leaſt Stone; and their Tops are crowned with very fair Plains. They are farther remarkable for inexhauſtible Mines of Coal; which is uſed either in Lumps, or ground and made into Cakes, other Fuel being ſcarce. Rice does not thrive ſo well here as elſewhere, becauſe Canals are not ſo numerous: But it abounds in all other Grain, eſpecially Wheat and Millet; which are carried into the other Provinces, as well as dried Grapes: For they make no Wine of thoſe produced here. d

Soil and Produce.

THIS Province furniſhes abundance of Muſk, Porphyry, Marble and Jaſper of divers Colours; the *Lapis Armenus*, and Iron Mines; from whence they ſupply other Parts with all Sorts of Utenſils for the Kitchen. One meets alſo with Lakes of Salt-Water, which yield Salt; with many hot and boiling Springs. e

Diviſion.

SHAN-SI is divided into five Diſtricts, containing five Cities of the firſt Rank, and eighty-five of the ſecond and third; without reckoning a great Number of Forts, built at certain Diſtances, to defend the great Wall, and render the Roads ſecure: Some of which are larger and better peopled than many of the Cities. f

[a] A ſoft Mineral, of which Pencils are made for Drawing. [b] *Du Halde*'s *China*, p. 6, and 104, *& ſeqq.* [c] Latitude, by *Jartoux*, thirty-ſeven Degrees ten Minutes nine Seconds: Longitude, three Degrees forty-five Minutes thirty Seconds. [d] Latitude, by *Regis*, thirty-five Degrees fifty-five Minutes: Longitude, three Degrees thirty Minutes.

The Geography.

		Chew.	*Hyen.*
1. *Tay-ywen fû*, the Capital, governs		5	20
2. *Ping-yang fû*		6	28
3. *Lû-yang fû*		0	8
4. *Fwen-chew fû*		1	7
5. *Tay-tong fû*		4	7

Tay-ywen fû.

1. *TAY-YWEN FU*, an ancient City, is about three Leagues in Compass, and inclosed with strong Walls. It is very populous; and b was formerly a very fine City, full of beautiful Palaces, where dwelt the Princes of the Blood of the *Tay-ming* Family: But, at present, they are gone quite to Ruin: Nor dare any-body rebuild them. It has a small *Tartar* Garison, under an *Ho-tong-ta*; and stands on the *Twen-ho*.

THIS River, whose Name is found in the most ancient *Chinese* Books, is neither broad nor deep; yet falling, after a pretty long Course, into the *Yellow River*, it gives a Communication c with the Provinces of *Ho-nan* and *Kyang-nan*.

Carpets. BESIDES the Manufactories for Silks here, there is a particular one for Carpets, after the *Turkish* Fashion, which they make of any Dimensions required; and as the Mountains, which are covered with Woods, yield abundance of excellent Iron, a great Trade is driven in Iron-Works.

Sepulchres. ON the neighbouring Mountains are to be seen very handsome Sepulchres, either of Marble or d Stone, which take up a great deal of Ground; and, at convenient Distances, are placed triumphal Arches, Statues of Heros, with Figures of Lions, Horses, and other Animals, in different Attitudes, and very natural. The Whole is incompassed with a Kind of Forest of ancient Cypress, planted checker-wise.

Ping-yang fû.

2. *PING-YANG FU* is not inferior to the Capital; either for Antiquity, Fertility of Soil, or Extent of its District. It is situate on the e River *Fwen-ho*, and is more than four Miles in Compass. Several of its dependent Cities are very considerable; without reckoning an infinite Number of very populous Boroughs and Villages.

ITS District is partly plain, partly mountainous. All the Lands are very fertile, except those near some untilled and frightful Mountains. It is divided by two Rivers. On the West and South Sides it is washed by the *Whang-ho*. Near *Ngan-i hyen* there is a Lake, of whose Water, f which is as salt as the Sea, they make abundance of Salt.

Lû-ngan fû.

3. THE Territory of *Lu-ngan fû* is not large; but it is agreeably situated almost at the Head of the River *Tso-tsang-ho*. Its District is pretty full of Hills; yet the Lands produce all Sorts of Necessaries; and the Whole is spread over with Boroughs and Villages.

Provinces. Shan-si.

Fwen-chew fû.

4. *FWEN-CHEW FU*, which lies between the Capital and *Ping-yang*, takes its Name from the River *Fwen-ho*, on the West Side whereof it stands, in a Place very commodious for Trade. Almost all the Cities of its District, which is not large, lie between this River and the *Whang-ho*.

THE Country, though hilly, is well improved; abounding with all Sorts of Grain, thick Forests, and good Pastures. They make a strong Liquor here of Rice, called *Yang-tsyû*, wherein they steep Mutton; which is reckoned very delicious and nourishing. In this Tract one meets with a great Number of Baths and Springs almost boiling hot; whose Waters differ both in Colour and Taste.

Tay-tong fû.

5. *TAY-TONG FU* is neither so ancient nor large as the other Cities of the Province: But is of Importance, as being situated in the midst of Mountains, and in the only Spot which lies exposed to the Incursions of the *Tartars*. Hence it is one of the best fortified Places; and furnished with a numerous Garison.

ITS Territory, which is very large, is surrounded with a great Wall [a]; along which there are Forts built from Space to Space, provided with Forces for its Defence. In the Mountains, *Soil and Product.* with which it is covered, there is found excellent *Lapis Armenus*, with abundance of medicinal Herbs. Some of them produce a red Stone; which being steeped in Water, is used instead of Vermilion, for taking the Impression of Seals: Others furnish the Azure, Marble, and Jasper, of all Colours; particularly, that Kind of Jasper named *Yu-shé*, which is very transparent, and as white as Agat [b]. There is a great Trade driven in all Sorts of Skins dressed here [c].

SECT. X.

Shen-ſi, *the tenth Province.*

Bounds. Air, Soil, and Produce. Drugs. Gold Mines. Minerals. Animals. Flowers. Diviſion. Si-ngan fû. *Walls and Palace. Gariſon.* Yen-ngan fû. Fong-tſyang fû. Han-chong fû. *Surprizing Road. Bird of Prey.* Ping-lyang fû. Kong-chang fû. Ling-tau fû. Kin-yang fû. Lan chew. Kan chew.

THIS Province, which is in the North-Weſt Part of *China*, has on the North, the great Wall, which ſeparates it from *Tartary*; on the Weſt, the Countries of *Koko-nor* and the *Si-fan*; on the South, the Provinces of *Se-chwen* and *Hu-quang*; and on the Eaſt, *Shan-ſi*.

THE Air is temperate; the People mild, civil, obliging, and better affected to Strangers than the *Chineſe* of *Shan-ſi* and *Pe-che-li*. The Overflowing of Torrents and Rivers renders the Soil very fruitful.

THIS Country produces little Rice; but abounds with Wheat and Millet; which grows here ſo faſt, that, during Winter, the Huſbandmen ſuffer their Sheep to browze on it; knowing that it will thrive the better for it in Spring. But the Locuſts, to which this Province is ſubject, often deſtroys the Harveſt.

FROM hence alſo comes abundance of Drugs; eſpecially Rhubarb, Honey, Wax, Muſk, perfumed Wood which reſembles Sanders, Red-Lead, and Pit-Coals, which are inexhauſtible.

HERE are alſo rich Gold-Mines, though unopened: And ſo great a Quantity of that Metal is found in the Rivers and Brooks, that an infinite Number of Perſons ſubſiſt by ſeparating it from the Sand.

A GREAT Number of Quarries yield a ſoft Stone, or Mineral, called *Hyung-whang*, of a red Colour, inclining to yellow, and ſpeckled with little black Spots. Out of it they cut Veſſels of ſeveral Kinds. The Phyſicians look on it as a ſovereign Remedy againſt all Sorts of Poiſon, malignant Fevers, and the Dog-Day Heats; infuſing it in Wine before they make uſe of it. Little blue Stones are alſo found here, inclining to black, and interſperſed with ſmall white Veins: They are given pulverized, to prolong Life. 10. *Province* Shen-ſi.

STAGS and Deer range the Country in Herds. *Animals.* Here is alſo abundance of Bears, wild Bulls, and Creatures reſembling Tygers, whoſe Skins are in much Requeſt; a Kind of Goats, from whence they take the Muſk; and of Sheep, with very long and thick Tails, whoſe Fleſh is very well-taſted: Not to mention a particular Species of Bats as big as Hens, which the *Chineſe* prefer to the niceſt Pullets.

THEY make a very pretty Stuff of Wool and Goat-Hair mixed; uſing the Hair that grows in the Winter, as being more fine. The Birds, called *The Golden Hens*, much eſteemed for their Beauty, are alſo found in this Province.

ALL Sorts of Flowers grow here; particularly *Flowers.* one, much eſteemed, called *The Queen of Flowers*, reſembling the Roſe, but more beautiful; although the Smell is not ſo pleaſant, the Leaves are longer, and the Stalk is without Prickles. Its Colour is a Mixture of white and red; yet ſome of them are red and yellow. The Shrub it grows on is like the Elder-Tree.

SHEN-SI is divided into two Parts; *I-tong*, *Diviſion.* the Eaſtern; and *I-ſi*, the Weſtern; which contain eight Cities of the firſt, and one hundred and ſix of the third Rank; beſides a great Number of Forts, built from Space to Space, along the great Wall.

1. *The Eaſtern Part.*

	Chew.	*Hyen.*
1. *Si-ngan fû*, the Metropolis, governs	6	31
2. *Yen-ngan fû*	3	16
3. *Fong-tſyang fû*	1	7
4. *Han-chang fû*	2	14

1. *SI-NGAN FU*, the Seat, for ſeveral Ages, of the *Chineſe* Emperors, is, next to *Pe-king*, one of the largeſt, faireſt, and moſt populous Cities in *China*. It ſtands in a great Plain; and is the Reſidence of the *Tſong-tû* of *Shen-ſi* and *Se-chwen*, as well as of the Governor of the Eaſtern Part of *Shen-ſi*. It drives a great Trade, eſpecially for Mules; which are ſo well trained, that they ſell at *Pe-king* for five or ſix hundred Livers a-piece. Si-ngan fû.

[a] Latitude, by another Jeſuit, thirty-five Degrees thirty-ſeven Minutes: Longitude, four Degrees forty-one Minutes fifteen Seconds.

The Geography. *Walls and Palace.* THE Walls, which form an equilateral Square, four Leagues in Compaſs [a], are very broad and high, flanked with Towers at the Diſtance of a Bow-ſhot from one another, and incloſed with a good Ditch. Some of its Gates are very magnificent, and remarkable for their Height.

THERE is ſtill to be ſeen a Palace where dwelt the ancient Kings of the Province, who were very powerful. The reſt of the Buildings are no better than thoſe of other Cities. Nor is the Furniture ſo neat as in the Southern Provinces.

Gariſon. THE principal Forces of the *Tartars*, deſigned for the Defence of the North of *China*, are in Gariſon here, under a *Tſyan-kyun*, or General of their Nation; who, with his Soldiers, inhabit one Part of the City, ſeparated from the reſt by a Wall. The People of the Country are more robuſt, brave, hardy, and even taller than elſewhere; which renders its Militia more formidable than thoſe of almoſt all the other Provinces.

THE Mountains of the Territory of *Si-ngan fû* are very agreeable, and abound with Game; as well as that Sort of Bats, as big as Pullets, ſpoken of before. They alſo afford a Kind of white Earth, highly valued by the Ladies; who, infuſing it in Water, uſe it to whiten the Complexion [b].

Yen-ngan fû. 2. *YEN-NGAN FU* is ſituate on the *Yen-ho*, in an agreeable Plain. It has, within its Walls, a pretty high Hill, remarkable for the fine Buildings that are upon it. Its Mountains diſtil a bituminous Liquor, which they call *Oil of Stone*, and uſe for Lamps.

THE Country is very rich in Martins, Sables, and other choice Furs. It abounds likewiſe with all Sorts of fine Marble; and produces, almoſt every-where, thoſe Shrubs, already deſcribed, which produce the Roſe-like Flowers, reared with ſo much Care in the Gardens of the Grandees.

Fong-tſyang fû. 3. *FONG-TSYANG FU* takes its Name from a fabulous Bird, which the *Chineſe* deſcribe with Variety of admirable Colours, and paint ſometimes on their Cloaths and Furniture. It is very large; and the Buildings handſome enough. Its Diſtrict is well cultivated, as well as watered by Brooks and Rivers.

Han chong fû. 4. THE whole Diſtrict of *Han-chong fû*, which is large and populous, ſtands on the River *Han*; by whoſe Branches the Country is watered. The high Mountains and Foreſts, wherewith it is incompaſſed, ſerve for Bulwarks. The Valleys furniſh Plenty of Neceſſaries, as well as Honey, Wax, Muſk, and Red-Lead. Fallow Beaſts are very numerous; eſpecially Deer, Stags, and Bears; the Feet of which laſt, eſpecially the fore Feet, are reckoned delicious Morſels.

THE Road made formerly over the Mountains, leading to the Capital, has ſomething ſurpriſing in it. Upwards of an hundred thouſand Men performed it with incredible Diſpatch. They levelled Hills, and made Arches from one Mountain to another; ſupporting them by Pillars, when the intervening Valley was too wide. Theſe Bridges are in ſome Places ſo high, that one cannot behold the Precipice without Horror: Four Horſemen may ride a-breaſt over them: And, for more Security, they have Rails on each Side. At certain Diſtances, there are Villages and Inns for the Conveniency of Travellers.

THE *Hay-tſing*, a Bird of Prey, is found only in the Diſtrict of this City, and ſome particular Parts of *Tartary*. It may be compared to our beſt Falcons for Sprightlineſs and Courage. All that are caught, are ſent to the Emperor's Falconry.

2. *The Weſtern Part.*

	Chew.	*Hyen.*
1. *Ping-lyan fû*, or *Ping-lyang fû*, governs	3	7
2. *Kong-chang fû* - -	3	10
3. *Ling-tau fû* - -	2	13
4. *King-yang fû* [c] - -	1	4

Lan-chew is the Capital.

1. *PING-LYANG FU* ſtands on a Branch of the *Kin-ho*, and abounds with every Thing. The Climate is very mild, its Diſtrict well watered; and the agreeable Proſpect of Mountains ſurrounding it, renders it a charming Habitation.

2. *KONG-CHANG FU* is a City of Trade, and very populous, ſituate on the *Whey-ho*. The almoſt inacceſſible Mountains which incompaſs it, ſecured it againſt the Invaſions of the *Tartars*. A Sepulchre is ſhewn here, which, they ſay, is that of *Fo-hi*; which, if ſo, muſt be the moſt ancient Monument in the World [d].

THE Diſtrict affords Plenty of Muſk. Almoſt all its Mountains yield the Mineral *Hyung-whang*; and the dark blue Stone, ſtreaked with white; both before-mentioned.

3. *LING-TAU FU* ſtands on a River that falls into the *Whang-ho*. It is famous for the great Quantity of Gold found in the Sand of the neighbouring Rivers and Torrents. The Country is full of Mountains, which abound with wild Bulls, and certain Animals reſembling Tygers; whoſe Skins are uſed for Winter-Cloathing.

[a] *Le Comte* ſays, but three of his Meaſure. [b] *Du Halde*'s *China*, p. 6, and 108, *& ſeq.* Alſo *Le Comte*, *p.* 81. [c] In *Du Halde*'s Table, it has no dependent Cities; but in his Deſcription, we find 5. In the ſame Place, *King-chang* has only 7 *Hyen*, and *Ling-tau* 3. [d] He began his Reign, according to the *Chineſe*, two thouſand nine hundred and fifty-two Years before the Chriſtian Æra.

THE

THE Valleys are covered with Corn, and the Banks of Rivers with Cattle, especially Sheep; whose Tails are very long, and Flesh delicious.

4. *KING-YANG FU* [a] has always been looked on as a Barrier against the Incursion of the *Tartars*. The deep Ditches incompassing it, and its strong Walls; the River, that almost surrounds it; and the Forts, built from Space to Space, joined to the Mountains and Rivers, by which it is, as it were, inclosed, render it a Place of great Strength.

THE District is very fruitful. It produces a certain Herb named *Kin-si*, that is, *Gilded Silk*; which is considered as an excellent Remedy; also a Kind of Beans, affirmed to be an admirable Specific against all Sorts of Poison.

ALTHOUGH *Lan-chew* is only of the second Rank, and depends on the former, yet it is the Capital of this Western Part, and Seat of the Governor; because, being near the great Wall, and principal Gates in the West, Succours are easily sent from hence to the Soldiers, who defend the Entrance. Though not large, it is the best City to be met with on the *Yellow River*. Its Trade consists principally in Skins, which come from *Tartary*, by Way of *Sining* and *To-pa*; also in woollen Stuffs, whereof a Kind of fine Serge, named *Kû-zhong*, is most esteemed; being nigh as dear as the common Satin, but very subject to be Moth-eaten; the coarser Sort is called *Ko-he*. There is another Stuff, called *Pe-zhong*, made of short-teazed Hair; but dear, and subject to the same Inconvenience. The *Myew-zhong*, made of Cow's Hair, is coarse, and almost as thick as Kersy. Lastly, the *Tye-he-myen*, made of Thread and Worsted; but not so substantial and closely woven as our Linsey-woolsey. After all, *Lan-chew* is not reckoned a rich City in *China* [b].

AMONG the fortified Places in this Province, for defending the great Wall, besides *Si-ning* and *To-pa*, before-mentioned, may be reckoned *So-chew* and *Kin-tan*, *Kan-chew*, *Lyang-chew*, *Ning-hya-wey*, and *Yu-ling-wey*. At these Places General-Officers are posted with Troops: He who resides at *Kan-chew* being Generalissimo. This City and *So-chew* are very considerable. In the first [c], a Vice-Roy resides, and several *Mandarins*; the principal among whom receive their Orders from none but the Court. The second is pretty large, of equal Strength, and its Governor very powerful. It is divided into two Parts; one inhabited by the *Chinese*, and the other by Strangers, who come to trade here [d]. It stands at the extreme North-West Corner of all *China*, toward *Hami*, or *Khamil*, a little within the Wall; where is the Fort and Gate of *Hya-yu-quan* [e]. But *Ning-hya* exceeds the rest of these Fortresses; being handsomer, richer, and better built than most Cities of the Empire [f]. It is, at least, fifteen *Li* [g] in Compass, and stands [five Miles] to the West of the *Whang-ho*, whence Canals are cut. Woollen Goods and *Turkish* Carpets are made here. The Mountains in its District are so high and steep, that they serve in Place of the great Wall, for ten Leagues together. *Si-ning chew* is not large, but exceeds *Ning-hya* in Trade; on which Account *To-pa*, though only a Borough, is of more Worth than a large City [h]. These two Places stand in the utmost Borders Westward towards the Country of *Koko-nor*.

SECT. XI.

Se-chwen, *the eleventh Province.*

Bounds and Produce. Beſt Rhubarb, Fû-lin *Root. Diviſion.* Ching-tu fû. Pau-ning fû. Shun-king fû. Su-chew fû. Chong-king fû. Quey-chew fû. Ma-hu fû. Long-ngan fû. Tſun-i fû. Tong-chwen fû. *Other Cities of Note.*

Bounds and Produce.

SE-CHWEN is bounded on the North by *Shen-ſi*; on the Eaſt, by *Hû-quang*; on the South, by *Hû-quang* and *Yun-nan*; and on the Weſt, by the Kingdom of *Tibet*, and certain neighbouring People. The great River *Yang-tſe-kyang* runs through this Province; which is very rich in Silk, Iron, Tin, and Lead; in Amber, Sugar-Canes, excellent Loadſtones, and *Lapis Armenus*, of a very beautiful Blue. Orange and Citron Trees are very numerous. The Horſes are highly eſteemed, becauſe they are little, very pretty, and exceeding ſwift. Here is, likewiſe, Plenty of Stags, Deer, Partridges, Parrots, and a Sort of Hens with Wool like that of Sheep, inſtead of Feathers. They are very ſmall, have ſhort Feet, and are highly valued by the *Chineſe* Ladies.

Beſt Rhubarb.

THIS Province abounds with Muſk. Hence alſo comes the beſt Rhubarb, the true Root of *Fû-lin*; and another Root, named *Fen-ſe*, which bears a great Price. They get Salt, by evaporating the Water of Wells dug in the Mountains: But it is not ſo good for Seaſoning as that of the Sea; with which it is difficult to ſupply them at ſuch a Diſtance.

Fû-lin *Root.*

Diviſion.

SE-SCHWEN is ſcarce inferior to any other Province for Extent. It is divided into ten Diſtricts, comprizing ten Cities of the firſt Rank, and eighty-eight of the ſecond and third, beſides a great Number of fortified Towns and Forts.

	Chew.	*Hyen.*

a

1. *CHING-TU FU* was, heretofore, one of the fineſt Cities in the Empire: But having
b been ruined, as well as the whole Province, in 1646, by the Civil Wars, it retains nothing of its former Splendor: However, it is ſtill very populous, and of great Trade. Its Diſtrict, which is very large, and the only one that is plain in the Province, is interſperſed with navigable Canals, lined with hewn Stone, cut from the great *Kyang*; which, there, is very gentle, and rather ſlow than ſwift, till it paſſes into *Hu-quang*.

c 2. THE Situation of *Pau-ning fû*, between two Rivers, though ſmall, renders it agreeable, and of pretty good Trade. Its Houſes are well built. Its Diſtrict, which abounds with Muſk, is covered with Mountains, ſtored with Stags and Deer; ſome are cultivated, and covered with Foreſts.

3. *SHUN-KING FU* ſtands on a fair River. Its Diſtrict is ſurrounded with Mountains; whereof
d ſome are covered with Orange-Trees of all Sorts, and yields abundance of Silk, the Root *Scorzonera*, and a Kind of well-taſted Cheſnuts.

4. *SU-CHEW FU* is a Place of great Trade as well at Note, ſituate on the *Kyang*. Its Diſtrict, though mountainous, is very fertile, and produces the Bambû Canes every-where.

5. *CHANG-KING FU* is one of the moſt handſome and trading Cities in the Province, by
e Means of two Rivers, at the Confluence of which it ſtands. One of them is called *Kin-ſha-kyang*, or *The River of Golden Sand*; which, in its Way from the Province of *Yun-nan*, collects all the Waters of the Mountains on the Side of *Tartary*. The other, which riſes ſtill farther beyond the Borders of *China*, is, properly, the *Great Kyang*; till paſt *Yo-chew fû*, it goes by divers Names.

CHONG-KING is built on a Mountain, the Houſes riſing one above another, in Form of an Amphitheatre. Its Diſtrict, of vaſt Extent,
f is intermixed with Plains and Mountains. The Air is good and temperate. Pretty Trunks are made here of Canes, twiſted and painted with divers Colours. The Rivers afford exceeding good Fiſh; eſpecially Tortoiſes.

[a] Latitude, by *Le Comte*, thirty-four Degrees ſixteen Minutes forty-five Seconds: Longitude, ſeven Degrees fourteen Minutes forty-five Seconds. [b] In the Deſcription, *p.* 111, it is twenty-five *Hyen*. [c] In the Deſcription, two *Chew*.

6. As *Quey-chew fû* ſtands on the *Kyang*, at the Entrance of the Province, there is a Cuſtom-houſe for receiving the Duties on Goods brought hither. Its Trade renders it very rich. Although the Country is full of Mountains, yet there is not an Inch of Land uncultivated. Muſk is plenty; and thoſe Pits from whence they procure Salt. Orange and Lemon-Trees are common. In the moſt Northerly Parts, the Mountains, which are very rugged, are inhabited by a very clowniſh Sort of People [a], if compared with the *Chineſe* Commonalty.

7. *MA-HU FU*, being ſeated on the *Kin-ſha-kyang*, is a Place of good Trade. Its Territory, though very ſmall, is well watered, and very fruitful. Some of its Mountains are full of Stags.

8. *LONG-NGAN FU* is, as it were, the Key of the Province; having Command over ſeveral Forts, which were of Uſe, formerly, to defend the Country againſt the *Tartars*. Its Diſtrict is intermixed with ſteep Mountains and fertile Valleys.

9. *TSUN-I FU* is conſiderable for nothing, but becauſe it lies on the Borders of the Province of *Quey-chew*, and may defend the Entrance of it on that Side. Its Diſtrict is over-run with Mountains. It is well watered, and fertile enough in ſeveral Parts.

10. *TONG-CHWEN FU* is a military Place, as well as the Cities *U-mong-tû fû* and *Chin-hyung-tû fû*; ſo called, becauſe the Inhabitants are old Soldiers, bred-up to Arms, from Father to Son. Beſides their Pay, they have Lands aſſigned them near the Cities they dwell in: And in Time of Peace, when the Troops are diſbanded, they are diſtributed into all the frontier Gariſons of the Empire.

THERE are, in this Province, certain Cities of the ſecond Rank, which have Juriſdiction over ſome of the third Rank; and many Forts, or Places of War; ſuch as,

TONG-CHWEN CHEW, whoſe Diſtrict is full of populous Boroughs: The Mountains, as well as the Plains, being well cultivated. The Air is very healthful; and the Country produces abundance of Canes, which yield exceeding good Sugar.

HYA-TING-CHEW, whoſe Territory furniſhes Plenty of Rice and Muſk.

YA-CHEW lies neareſt *Tibet*, and commands ſeveral Forts built on the Borders of the Province [b].

SECT. XII.

Quang-tong, *the twelfth Province.*

Bounds and Produce. Fruits. Lemons. Iron-Wood. Strange Oſiers. Fowl. Petrified Crabs. Diviſion. Quang-chew fû. *Order at Night. Manufactures.* Fo-ſhan. *Great Reſort.* Ma-kau. *Iſle of* Sanſian. Shau-chew fû. *Fine Monaſtery.* Nan-hyong fû. Whey-chew fû. Chau-chew fû. Chau-king fû. *Large Village.* Kau-chew fû. Lyen-chew fû. Lwi-chew fû. Kyun-chew fû. Hay-nan. *Its Extent. Air and Soil. Mines. Sweet Woods. Produce. Dragons Blood. Curious Fiſh. Game, and Fowl. Birds. Serpents. Rich Gold Trade. Natives cowardly. Habit and Arms.*

QUANG-TONG, the moſt conſiderable of all the Southern Provinces, is bounded on the North-Eaſt by that of *Fo-kyen*; on the North by *Kyang-ſi*; on the Weſt by *Quang-ſi*, and the Kingdom of *Tong-king*; the reſt is waſhed by the Sea; which makes a great Number of commodious Ports. *Bounds and Produce.*

THE Country is partly plain, partly mountainous; and ſo fertile, as to produce two Crops of Corn yearly. It alſo furniſhes Gold, precious Stones, Silk, Pearls, Pewter, Quickſilver, Sugar,

[a] Theſe are the *Myau-tſe*, hereafter deſcribed. [b] *Du Halde's China*, p. 6, and 111, *& ſeqq.* [c] In the Original, *Swey-chew fû.*

The Geography. Copper, Iron, Steel, Saltpeter, Ebony, Eagle-Wood, and ſeveral others of the odoriferous Sort. There is likewiſe Plenty of Pomegranates, Grapes, Pears, Plums, Cheſnuts, Peaches, and other Fruits, which ripen with Difficulty: But *Bananas*, *Ananas*, *Li-chi*, *Long-ywen*, Oranges and Lemons of all Sorts, are excellent in their Kind. *Fruits.*

Lemons. OF theſe laſt there is a particular Sort, which grows on thorny Trees, bearing white Flowers, of an exquiſite Odour; from which they diſtil a very pleaſant Liquor. The Fruit is almoſt as big as a Man's Head; the Subſtance within is either white or reddiſh, and has a Taſte between ſweet and ſour. There is another Kind of Fruit, the largeſt any-where to be ſeen; which grows not on the Branches, but out of the Body of the Tree. Its Rind is very hard; and, within, it has a great Number of little Cells, containing a yellow Pulp, which is very ſweet and aggreeable, when full ripe.

Iron-Wood. ANOTHER Rarity of this Province is the Tree which the *Portugueze* call *Iron-Wood*: For it reſembles Iron in Colour, Hardneſs, and Weight; ſo that it ſinks in Water. There is alſo a particular Wood, called *Roſe-Wood*, whereof Tables, Chairs, and other Moveables, are made: It is of a reddiſh Black, ſpeckled with Veins, and painted naturally.

Strange Oſiers. THE Mountains produce a prodigious Quantity of a wonderful Kind of Oſier or Willow, no thicker than one's Finger. It creeps along the Ground, and ſhoots forth very long Sprigs, reſembling twiſted Cords; which ſo embarraſs the Way, that the Stags themſelves know not how to extricate themſelves. This Oſier, which is very pliable and tough, ſerves for making Cables and Ropes for Shipping. When ſplit in very thin Slips, they are wrought into Baſkets, Paniers, Hurdles, Chairs, and very commodious Mats; which the *Chineſe* generally lie-on in Summer, becauſe they are cool.

Fowl. THIS Province abounds with wild and tame Peacocks; alſo a prodigious Multitude of tame Ducks. The Inhabitants hatch their Eggs in Ovens, or in Dung; and carry them to the Coaſt, at low Water, to feed on Oyſters, Cockles, and Sea Inſects. The Flocks of many different People are intermixed on the Shore; but as ſoon as the Owners ſtrike on a Baſin, each Flock returns to its own Boat, as Pigeons do to their Houſes.

FISH of all Sorts are caught along the Coaſts, beſides Oyſters, Lobſters, very well-taſted Crabs, and Tortoiſes of an extraordinary Size. On the Shores, and in a Lake of the Iſland *Hay-nan*, Crabs are found; which, as ſoon as taken out of the Water, they ſay, become hard as Flints, and prove good againſt burning Fevers. *12. Petrified Crabs.*

THE People of this Province are very induſtrious; and though not quick at Invention, are very expert at imitating, and make any Sort of *European* Work that is ſhown them, in great Perfection.

As *Quang-Tong* is a Maritime Province, and moſt remote from the Court, its Government is one of the moſt conſiderable in the Empire.

QUANG-TONG is divided into ten Diſtricts, containing ten Cities of the firſt, and eighty-four of the ſecond and third Rank; excluſive of ſeveral Forts, or military Places, the City of *Makau*, and many Iſlands great and ſmall. *Diviſion.*

10.	*Kyun-chew fû*, in the Iſle of *Hay-nan*	3	10

1. *QUANG-CHEW FU*, which the *Europeans* call *Kanton* [a], is one of the moſt populous and opulent Cities in *China*; it ſtands on the *Ta-ho* [b], one of the fineſt Rivers in the Empire: In its Way from the Province of *Quang-ſi*, it receives another River, deep enough to bring-up large Veſſels to the Town, and, by means of Canals, extends its Waters into divers Provinces. Its Mouth is large [c], and called *Hû-men*, that is, the *Tiger's Gate*, guarded with Forts, built only to keep off the *Chineſe* Pirates. The Sides of this River, the neighbouring Plains, and even the little Hills themſelves, are well cultivated, and ſtored with Rice, or a Kind of Trees, which are always green. The Paſſage from the Sea affords a charming Proſpect. *Quang-chew fû.*

THIS City is near as big as *Paris*, and the Seat of the Vice-Roy. At the End of each

[a] See Vol. III. *p.* 545. [b] That is, *Great River*. It is, in the Maps, called the *Si-kyang*, or the *Weſtern River*; and that ſaid to fall into it, *Pe-kyang*, or the *North River*. [c] What is here called its Mouth, is, rather, a great Bay full of Iſlands, chiefly on the Weſt Side, being ſixty Miles wide, at the Sea, from Coaſt to Coaſt; but, betwixt the Eaſt Coaſt and the Iſland, on which *Ma-kau* ſtands, not above eighteen Miles. By the Jeſuits Map, Mid-way from thence to *Kanton*, is the Mouth *Hu-men*, about two Miles and an half broad.

Street

Street there is a Barrier, which is ſhut every Evening ſoon after the Gates of the City; ſo that every-body is obliged to be at home by the Time it grows dark: And thus the greateſt Cities are as quiet in the Night-Time, as if they conſiſted but of ſingle Families.

THE Barks with which both Sides of the River are crowded, contain an infinite Number of People, and make a Kind of floating City. As they lie cloſe together, and in Rows, they form Streets. Each Bark holds a whole Family, and, like Houſes, is divided into different Apartments. The common People, who inhabit them, go out betimes in the Morning, either to fiſh, or work at the Rice. For a farther Deſcription of this great City, we ſhall refer the Reader to the Plan, and what has been already related by the Travellers [a].

ALTHOUGH the Manufactures of *Kanton* look well to the Eye, yet they are neither ſubſtantial, nor well wrought; for generally the Materials they are made of, are too ſcanty, or ill choſen, or elſe the Workmanſhip is too ſlight; for this Reaſon, they are not much eſteemed at *Pe-king*. However, the Silks called *Sha*, are reckoned the beſt of that Kind at the Capital; eſpecially the flowered Sorts, which are wrought open like Lace, and very much worn in Summer, becauſe genteel and cheap.

THOUGH the Number of Artificers in this City is almoſt incredible, yet not being ſufficient, they have eſtabliſhed a great many Manufacturies at *Fo-ſhan* [b], four Leagues diſtant. During the Troubles, wherein *Kanton* was involved, the Trade was carried to this Borough; which is at leaſt three Leagues in Compaſs, is a Place of great Reſort, and, in ſhort, not inferior to *Kanton*, either for Wealth, or Number of Inhabitants.

VAST Quantities of Money are brought hither from other Countries, and whatever is valuable in the Empire is here to be found. Hence it is reſorted to both by the provincial and foreign Merchants [c]. *Le Comte* obſerves, that the *Mandarins* are not fond of letting the latter approach its Walls, not ſo much for fear of a Surprize, as that it obſtructs their own clandeſtine Traffic [d].

DEPENDENT on *Kanton*, is the City and Port of *Ma-kau*, belonging to the *Portugueze*. It is ſituate towards the Mouth of the River, or rather Harbour of *Kanton*, and has loſt, with its Trade, all its former Splendor [e]. It was given to the *Portugueze* to ſettle, by the Emperor *Kya-tſing*, for their Services againſt the Pirate *Chang-ſi-law*: This Rover having beſieged *Kanton*, the *Mandarins* deſired the Aſſiſtance of the *Europeans* on board the Merchant-Ships; who obliged the Pirate to raiſe the Siege, and purſuing him to *Ma-kau*, which he had taken before, ſlew him there. In the Way from *Kanton*, *Nieuhof* paſſed by *Lantam*, a famous Village.

12. *Province* Quang-tong

WITHOUT all the Iſlands, which, as hath been obſerved, croud the Weſt-Side of the River, or Harbour of *Kanton*, lies that of *Shang-chwen-ſhan*, commonly called *Sançian*. There are five Villages on it, inhabited by Fiſhermen, who live on the Fiſh they take, and the Rice they ſow: On an Eminence, at the Foot of a Hill, ſtands the Tomb of *Francis Xavier*, the Popiſh Saint and Apoſtle of the *Indies*: Beſide it is a Plain, adorned with Trees and Gardens. There is alſo a Chapel here, built by the *Portugueze* Jeſuits, about thirty Years ago [f]. *Iſle of* Sanſian.

2. *SHAU-CHEW FU*, is ſituate where two navigable Rivers meet; one comes from *Nan-hyong*, the other from the Province of *Huquang*, whoſe Weſt Bank is well inhabited, and joined to the City by a Bridge of Boats. The whole Diſtrict, which is ſcattered over with Boroughs, produces Abundance of Rice, Herbage, Fruits, Cattle, and Fiſh; but the Air is ſo bad, eſpecially from the Middle of *October* to *December*, that great Numbers are carried-off by Diſtempers. Near one of its dependent Cities, there grow black Reeds, which look like Ebony, whereof they make various muſical Inſtruments. Shau-chew fū.

THREE miles from *Shau-chew*, there is a celebrated Monaſtery, which they ſay was founded eight or nine hundred Years ago, and formerly contained a thouſand *Bonzas*: Nothing can be more charming than its Situation. In the Middle of the great Mountain *Nan-wha* [g], where it ſtands, one diſcovers an agreeable Deſart, which extends along a vaſt Plain, encompaſſed with little Hills, whoſe Tops are planted with Rows of Fruit-Trees, and from Space to Space, Thickets of Evergreen. They pretend, that the Founder of this Monaſtery ſpent his Life in the moſt dreadful Mortification, and that Worms bred in the Sores made in his Fleſh by an Iron Chain [h]. But the Jeſuit owns, that the Devil has his Penitents, as well as his Virgins and Martyrs. He adds, that though the *Bonzas*, his Succeſſors, make Profeſſion of Chaſtity; yet they are ſaid to be given to all Sorts of Debaucheries: That formerly the People, who came hither in Pilgrimage, complained, that they robbed and plun- *Fine Monaſtery.*

[a] Vol. III. *p.* 582. See alſo *p.* 547. [b] The ſame, *p.* 545, 549, 582. [c] *Du Halde*'s *China*, p. 6, and 113, & *ſeqq.* [d] *Le Comte*'s Memoirs of *China*, p. 85. [e] It has been already deſcribed, Vol. III. *p.* 509. [f] *Du Halde*, as before, *p.* 119. [g] Written *Maw-wha* in *Nieuhof*'s Journal. See Vol. III. *p.* 407. [h] As hath been already mentioned: This Impoſtor is called *Luzu*, in the ſame Place.

The Geography.

dered them; but that at present Care is taken to prevent the like [a].

Nan-hyong fû.

3. *NAN-HYONG FU* [b], is a large trading City, and one of the most frequented in the Empire. It stands at the Foot of a Mountain, separating the Provinces of *Quang-tong* and *Kyang-si)* from which two large Rivers descend; one runs Southward, the other Northward, divided into many Branches.

BETWEEN this City and *Nan-ngan*, the first in *Kyang-si*, ten Leagues distant, lies the great Mountain *Mey-lin*, over which there is an admirable Road, above three Miles in Length, with Precipices on each Side; but Travellers are in no Danger from them, the Way being pretty wide. This Road is the most famous throughout *China*, for the continual Passage of Goods, and Crouds of People [c].

Whey-chew fû.

4. *WHEY-CHEW FU*, is almost surrounded with Water; and the Lands about it are the best in the Province.

THE whole District, which lies near the Sea, abounds with Fish, Oysters, Lobsters, very well-tasted Crabs, and extraordinary large Tortoises, of whose Shells Toys are made. There are two remarkable Bridges at *Whey-chew*, one of forty Arches, which covers the two Rivers that meet on the East Side; the other is built over a Lake, three Miles in Compass, that washes the Walls of the City on the West. This Lake is lined with Stone quite round; and the Sides of it are embellished with Gardens, and stately Trees. There are two Islands in it adorned with Pleasure-Houses, and joined by a fine Stone Bridge.

IN a Mountain of this District they catch Butterflies, remarkable for their Beauty and Size; which are sent to Court, and employed in certain Ornaments of the Palace.

Chau-chew fû.

5. *CHAU-CHEW FU*, stands near the Mouth of the River *Han-kyang*, the Sea flowing up to its Walls. It has a magnificent Bridge on the East Side, which is very long, and proportionably wide.

ITS District is separated by Mountains from the Province of *Fo-kyen*, and the Soil every where very fertile; excepting in some Places, where stony.

Chau-king fû.

6. *CHAU-KING FU*, is reckoned the best-built, and handsomest City in the whole Province. Here the *Tsong-tu* of the Provinces of *Quang-tong* and *Quang-si* resides, for the Conveniency of both. It is situate by the River *Tabo*, on whose East Side appears a beautiful Tower, nine Stories high.

THE Port is very spacious, lying at the Confluence of three Rivers, or great Streams; one of these goes to *Kanton*, and is so restrained between two Hills, that often it overflows in the Time of Rain. It is beset all the Way on both Sides with large Villages, so near each other, that they seem to make but one. Among the rest, there is one upon the Left Hand, of an extraordinary Length, containing near two hundred Houses; which appear like square Towers, and serve the Inhabitants to retire to with their Effects, in Time of any Danger. Afterwards you come to the great Village *Fo-shan*, before-mentioned. There are, upon the River only, upwards of five thousand Barks, each as long as our middling Ships, and containing an intire Family.

THIS District abounds with wild and tame Peacocks, which are rarely seen in the other Provinces; also with Eagle-Wood, Rose-Wood, and Iron-Wood, all mentioned before.

7. As the Tide ascends as high as *Kau-chew fû*, the *Chinese* Ships of Burden may sail up to it.

ITS District is very fertile, and inclosed partly by the Sea, and partly by Mountains, which are as Walls to it. Here are Abundance of excellent Birds of Prey; also a Sort of Stone nearly resembling Marble, which naturally represents Water, Mountains and Landskips. The *Chinese* cut it into Leaves, whereof they make Tables, and other Furniture.

THE Sea produces a Kind of Crabs, which when they are out of the Water, petrify, without losing their natural Form.

8. *LYEN-CHEU FU*, stands near the Sea, which there forms a very commodious Port for Barks, and Ships of Burden. Its District, which is but of small Extent, borders on the Kingdom of *Tong-king*, from which it is separated by inaccessible Mountains. It affords Plenty of Peacocks. They fish here for Pearls, and make several pretty Works of Tortoise-Shell.

9. THE Territory belonging to *Lwi-chew fû*, is the most agreeable and plentiful in all the Western Part of the Province. It is almost surrounded by the Sea, being separated from the Island of *Hay-nan* only by a small Streight, where, it is said, there was formerly a Pearl Fishery. It abounds with Boroughs, whose Inhabitants subsist by fishing on the Coasts. The creeping Osier, mentioned before [d], grows every where in the District of this City.

10. *KYUN-CHEW FU* [e], the Capital of *Hay-nan*, is situate on the North Side of the Island on a Promontory. Ships come to Anchor under its very Walls. The Port, where almost all the Barks of *Kanton* arrive, is form'd by a pretty large River, whose Mouth is defended by

[a] If they go thither on Pilgrimage, they must be robbed and plundered still.
[b] Written also *Nan-yong*.
[c] See Vol. III. *p.* 408, and elsewhere.
[d] See *Page* 58.
[e] In the Map, *Kyang-chew fû*.

two ſmall Forts; but has not above ten or twelve Feet Water; ſo that Veſſels made after a different Manner from the *Chineſe* would find it difficult to enter. Trade brings thither all the Merchants in the Iſland, who have their Factors in other Parts. The capital City ſtands about two Leagues from this Port; and between them is a great Plain, full of beautiful *Chineſe* Sepulchres. Almoſt all its dependent Cities are on the Sea Coaſt.

ON the South Side of the Iſle, there is an excellent Port, at the Bottom of a great Bay, where ſix Veſſels may ride ſecurely, in twenty Feet Water, within Piſtol-Shot of the Shore, during both the Monſoons.

Iſland of Hay-nan.

HAY-NAN, which ſignifies *South of the Sea*, is a great Iſland, belonging to the Province of *Quang-tong*, which is due North, and may be ſeen diſtinctly when the Sky is clear[a]. It lies off the Coaſt of *Tong-king* and *Cochinchina* to the Eaſt; having on the South the Channel, formed by the Bank of *Paracel*. Its Length, from Eaſt to Weſt, is between ſixty and ſeventy Leagues; and its Breadth, from North to South, between forty and fifty; ſo that it is near an hundred and ſixty in Circumference.

Soil. THE Air of the Southern Part is very unhealthy, and the Water noxious, unleſs boiled before it be drank. The North Side is plain for fifteen Leagues from the Coaſt: But the South and Eaſt Sides are covered with very high Mountains; ſo is the middle Part. It is only in the ſmall Portion of Land, lying between theſe two Bodies of Mountains, that one meets with cultivated Plains, and thoſe mixed with barren Sands. However, the many Rivers, and frequent Rains, produce Rice (of which they have often two Harveſts a Year) ſufficient for the Inhabitants, though pretty numerous.

BESIDES the Mines of Gold in the Heart of the Iſland, there are others, in the North Part, of the *Lapis Armenus*, which is carried to *Kanton*, and uſed in painting all the blue Porcelain. The beſt Wood, both for Scent and Carving, comes from the Mountains here; ſuch as the Eagle-Wood, the *Wha-li*, called by *Europeans*, *Roſe*, or *Violet-Wood*, and a yellow Wood, which is very beautiful, and incorruptible. Pillars of a certain Thickneſs, are of an immenſe Price, and reſerved, as well as the *Wha-li*, for the Emperor's Service: *Kang-hi* built a Palace of ſuch Timber, deſigned for his Burying-Place.

THIS Iſland, beſides the ſeveral Kinds of Fruits found in *China*, produces much Sugar, Tobacco, and Cotton. Indigo is common here; to which may be added, Areca-Nuts, Rattan-Canes, and Sea-Fiſh, dried and ſalted. For theſe Commodities, twenty or thirty thouſand pretty large Junks arrive here every Year from *Kanton*: So that *Hay-nan* may be ranked among the moſt conſiderable Iſlands of *Aſia*. *12. Province Quang-tong*

ON the Shores of the Port, on the South-Coaſt abovementioned, grow ſeveral maritime Plants and Mandrepores[b] of all Kinds: Alſo ſome Trees which yield Dragons Blood, and ſeveral others of different Sorts; from which, an Inciſion being made, there diſtils a white Juice, that, as it hardens, turns red; but is not of a Conſiſtence like Gum, or Roſin. This Matter burns ſlowly, and diffuſes a Scent leſs ſtrong, and more agreeable, than Incenſe. *Dragons Blood.*

THERE is found among the Rocks, at no great Depth of Water, a certain little blue Fiſh, which reſembles the Dolphin more than the Dorado, and is in greater Eſteem with the *Chineſe* than the Golden Fiſh; but they live only a few Days out of their Element. *Curious Fiſh.*

THE Inhabitants know nothing of a Lake, which ſome Travellers mention, having the Virtue of petrifying whatever is thrown into it. This Report may have taken its Riſe from thoſe counterfeit Petrifications common at *Kanton*; which the *Chineſe* make to Perfection. Nor are there Pearls found in great Abundance, as others report, or indeed at all, on the Northern Coaſts of this Iſland.

HAY-NAN abounds with Game. The Partridges, Quails and Hares, are inferior to thoſe of *Europe*; but Snipes, Teal, and all Sorts of Water-Fowl, are very good. There is a Kind of Wood-Hen of an excellent Reliſh. Turtle-Doves, and Wood-Pigeons, are in great Plenty. Stags, and Maron-Hogs, which are a Kind of Wild-Boars, are very common; ſo are very ugly Apes, of a grey Colour. There are others, whoſe Features very nearly reſemble the human; but this Species is ſcarce. *Game, and Fowl.*

HERE are alſo ſeveral Sorts of curious Birds; as Ravens, with white Rings about their Necks; Starlings, which have a little Moon on their Bills; Black-Birds, of a deep blue Colour, with yellow Ears, half an Inch long, which ſpeak and whiſtle in Perfection; Birds the Bigneſs of a Linnet, whoſe Feathers are of a moſt beautiful Red, and others of a very bright Gold Colour; which two Sorts of Birds are always together. *Birds.*

THIS Iſland breeds Serpents and Snakes of a monſtrous Size; but ſo timorous, that the leaſt Noiſe frights them away: Nor can the Reptiles be dangerous, ſince the Natives travel both by Day and Night through the Plains and thick *Serpents.*

[a] It is, by the Jeſuits Maps, about four Leagues diſtant. [b] A Sea-Plant, reſembling Coral.

Woods,

The Geography.

Woods, without Arms, and almoſt always bare-foot.

THIS Iſland is ſubject to *China*, except the middle Part, named *Li-mû-ſhan*, or *Chi-ſhan* [a], to whoſe Mountains the Natives retired, and live independent of the *Mandarins*.

Gold Trade.

THESE People had formerly an open Correſpondence with the *Chineſe*, with whom they twice a Year trafficked the Gold, which they dug out of their Mines, their Eagle and Calamba Wood; ſome Merchants on each Part having been ſent to examine the Goods, and make the Bargain. The *Chineſe* Linen and Wares were firſt carried into *Li-mû-ſhan*; after which the Inhabitants faithfully delivered them the Things they had agreed for. The Emperor *Kang-hi*, being informed of the prodigious Quantity of Gold which his *Mandarins* acquired by this Commerce, for that and other Reaſons, forbad all Correſpondence with theſe People, under Pain of Death. However, ſome Emiſſaries of the neighbouring Governors ſtill carry it on by Stealth. But the Profits ariſing from this clandeſtine Trade, for theſe thirty Years paſt, are very inconſiderable to what they uſed to be.

Natives cowardly.

THESE Iſlanders therefore ſcarce ever appear; unleſs now and then, to ſurprize ſome of the neighbouring Villages. But they are ſuch Cowards, and ſo badly diſciplined, that fifty *Chineſe* would defeat one thouſand of them. Nevertheleſs, there is a Part of them, who, paying Tribute to the Emperor, are ſuffered to poſſeſs Villages in the Plains. Many others put themſelves into the Service of the *Chineſe*, chiefly in the Eaſt and South Part of the Iſle, to keep their Sheep, and till their Lands: Theſe, generally ſpeaking, are very deformed, ſhort, and of a reddiſh Colour.

Habit and Arms.

BOTH Men and Women wear their Hair in a Ring on the Forehead, and on their Heads a Hat made of Straw or Rattan, tied under the Chin. Their Habit conſiſts of a Piece of Calico, either black, or of a deep Blue, which covers them from the Waiſt to the Knees. The Women wear a Kind of Waiſtcoat of the ſame; and are farther diſtinguiſhed by blue Streaks on their Faces, made with Indigo, from their Eyes downwards. Both Sexes wear Gold and Silver Earrings, ſhaped like a Pear, and very well made.

THEIR Arms are Bows and Arrows, which they are not very expert at; and a Kind of Hanger, which they carry in a little Baſket, faſtened to their Girdle behind. This is all the Tools they have for doing their Carpenters Work, and clearing their Way through the Foreſts [b].

SECT. XIII.

Quang-si, *the thirteenth Province.*

Site, Air, and Produce. Gold and Silver Mines. Meal-Tree, Wax-Insects. Division. Quey-ling-fû. *The Flower* Quey. *Best Ink Stones.* Lyew-chew fû. King-ywen fû. Se-nghen fû. Ping-lo fû. U-chew fû. Sin-chew fû. Nan-ning fû. Tay-ping fû. Se-ming fû. Chin-ngan fû. Se-chin fû.

Air, Produce. THIS Province is situate between those of *Quang-tong*, *Qua-chew* and *Yun-nan*, and the Kingdom of *Tong-king*. It is well watered, and produces such Plenty of Rice, that for six Months of the Year the Inhabitants of *Quang-tong* are supplied from thence, yet it is not to be compared to most of the other Provinces, either for Beauty, or Trade. Only the Parts towards the East and South, are well improved, the Country being flat, and the Air mild; almost every where else, especially towards the North, it is incumbered with Mountains, covered with thick Forests.

and A CERTAIN Chain of Mountains in this Province, having been known, for a long Time past, to contain Mines of Gold, Silver, Tin, Copper, and Lead; some Years ago the Governor, in whose District they are, presented a Memorial to the Emperor, setting forth, that the Inhabitants offered to open them at their own Expence, paying, as usual, forty *per Cent.* to his Majesty, and five to the Officers and Soldiers, who presided over the Work. It was also proposed, that none should be permitted to work at them, without a Licence from his *Mandarin*, besides four Persons Security for his Conduct. The Tribunal of the *Hu-pû* approved of this Memorial; but afterwards the Emperor reserved the Gold Mine wholly to himself.

Tree. THERE is in this Province a pretty extraordinary Tree, named *Quang-lang*; which, instead of Pith, contains a soft Substance, that serves for Meal, and does not taste amiss. Likewise Abundance of those Insects, which produce white Wax. The Cinnamon that grows here, diffuses a more agreeable Odour, than that of *Seylan* [b], and the Silks bear a good Price; in short, this Country breeds Parrots, Porcupines, and Rhinoceroses.

13. Province Quang-si. Wax-Insects.

Division. *QUANG-SI* is subdivided into twelve Districts, containing twelve Cities of the first Rank, and fourscore of the second and third.

		Chew.	*Hyen.*

8.	*Nan-ning fû* - -	4	3
9.	*Tay-ping fû* - -	12	2
10.	*Se-ming fû* - -	4	0
11.	*Chin-ngan fû* - -	1	0
12.	*Se-ching fû* - -	2	0

Quey-ling fû. 1. *QUEY-LING FU* stands on a River [c] that falls into the *Ta-ho*, and runs with such Rapidity through the narrow Valleys, that, though large, it is not navigable. It is remarkable for being built partly after the Manner of our ancient Fortifications; but is much inferior to most of the other Capitals.

The Flower Quey. *QUEY-LING* signifies *the Forest of the Flowers of Quey*; because that Flower is more common in the Territory of this City, than elsewhere. It is little and yellow, with Leaves resembling those of the Laurel, and grows in Bunches on a very large Tree, which in Autumn is covered over with them, diffusing an agreeable Smell; when they fall, others come in their Places.

Best Ink-Stones. IN its District are found the best Stones for making Ink of; and Birds, whose bright variegated Feathers are woven in their Silks.

IT is almost wholly encompassed with savage People, settled in the Mountains [d]; of whom an Account will be given elsewhere.

Lyew-chew fû. 2. THE Territory of *Lyew-chew fû* is of great Extent, and well watered; but full of Mountains, which abound with Simples. Among its dependent Cities, *Vu-swen-hyen* is famous, on Account of the lively and subtil Wit of its Inhabitants; some of whom obtain their Doctors Degree every Examination, at *Pe-king*.

[a] By the Map, Latitude, eighteen Degrees twelve Minutes thirty-six Seconds: Longitude, seven Degrees forty-four Minutes. [b] Or *Selan*, commonly spelled *Ceylon*. [c] According to the Map, it stands in a Sort of Lake. [d] The *Chwang Ko-lau* to the North and South, the *Seng Myau-tse* to the West.

The Geography.

Kin-ywen fû.

3. *KIN-YWEN FU* [a] is built on a large River, but encompaſſed with frightful Mountains, ſome inhabited by a Kind of ſavage People [b]. The Valleys lying between are interſperſed with Villages and Forts [c]. The *Areka* is found every where in its Diſtrict, and Gold gathered out of its Rivers.

Se-nghen fû.

4. THE Diſtrict of *Se-nghen fû*, of no great Extent, is encompaſſed with Mountains, whoſe Inhabitants, formerly half ſavage, are reduced to Civility.

Ping-lo fû.

5. *PING-LO FU* ſtands on a large River, but hardly navigable, being full of Water-Falls. All the Cities of its Diſtrict are invironed with diſagreeable Mountains: Some of them, however, are covered with Orange-Trees; and Abundance of white Wax, made by certain Inſects, is found here.

U-chew fû.

6. *U-CHEW FU* is the Key of the Province of *Quang-tong*; and as all the Rivers of *Quang-ſi* meet near its Walls, it is the moſt conſiderable for Trade.

THE Country, which is partly plain, and partly mountainous, produces Red Lead, and the *Quang-lang* Tree, producing Meal, before ſpoken of. The Rhinoceros is found here, and a Kind of Apes, with yellow Hair, which reſemble Dogs in their Shape and ſhrill Yell.

Sin-chew fû.

7. *SIN-CHEW FU* [d] ſtands at the Confluence of two Rivers, encompaſſed with delightful Foreſts and Mountains. Its Diſtrict produces a Sort of Cinnamon, and the Iron-Wood. Of a certain Graſs they make Cloth, which is ſometimes dearer than the common Silks. A Kind of yellow Earth is found here, ſaid to be ſovereign againſt all Sorts of Poiſon.

Nan-ning fû.

8. *NAN-NING FU* is almoſt ſurrounded with Rivers and little Lakes. Its Diſtrict is intermixed with Plains and Mountains; ſome of which produce Iron Mines. Great Parrots, eaſily taught to ſpeak, are found here: Alſo a Kind of Fowl, which diſcharges out of its Mouth Threads of Cotton; and very large Porcupines, darting long and ſharp Quills.

Tay-ping fû.

9. *TAY-PING FU* is ſituate in an Elbow made by a large River, incloſing it on three Sides, and fortified on the fourth by a Wall. Its Diſtrict is the beſt in the whole Province, being very fertile, populous, and well cultivated. It contains a great Number of Forts, as bordering on *Tong-king*: But the Inhabitants of this, and the next *Fû*, are looked on as Barbarians by the *Chineſe*, becauſe they want their Politeneſs and Affability.

10. *SE-MING FU* ſtands alſo near the Borders of *Tong-king*, in a mountainous Country, and not far from the Pillar, which the Inhabitants of that Kingdom have erected to mark their Limits. Every Thing is plenty in this Diſtrict; and its Mountains furniſh Abundance of Wood.

11. *CHIN-NGAN FU* was formerly no more than a pitiful Borough, which was afterwards enlarged and incloſed with Walls, in order to make it a City of the firſt Rank: But moſt of its Diſtrict belongs to *Tong-king*, whence it comes to have but one ſubordinate City.

THE Manners of its Inhabitants differ but little from thoſe of the *Chineſe*. The Country produces much Honey and Wax, with all the Neceſſaries of Life.

12. *SE-CHIN FU* [e] is ſituate almoſt at the Spring of two little Rivers, which meet near its Walls. Its Diſtrict, though not large, is partly plain, partly mountainous. It borders on *Yunnan*, and is full of populous Boroughs [f].

SITUATIONS *in* Quang-ſi, *determined in* 1714.

SECT.

Geography.

SECT. XIV.

Yun-nan, *the fourteenth* Province.

Bounds. Gold-Sand. White Copper. Precious Stones. Animals. Inhabitants: Language: Religion: Government: Dreſs. Diviſion. Yun-nan fû. *Trade. Soil.* Ta-li fû. Ling-ngan fû. Chu-hyung fû. Ching-kyang fû. King-tong fû. Quan-nan fû. Quang-li fû. Shun-ning fû. Ku-tſing fû. Yau-ngan fû. Ko-king fû. Vu-ling fû. Li-kyang tu fû. Ywen-kyang fû. Mong-wha fû. Yung-chang fû. Yung-ning-tu fû. Yung-pe fû. Kay-wha fû. San-ta fû. *Table of Situations.*

14. Province Yun-nan.

YUN-NAN [a], being one of the richeſt Provinces of the Empire, is bounded on the North by *Se-chwen*, on the Eaſt by *Quey-chew*, and *Quang-ſi*, on the South by the Kingdoms of *Tong-king*, *Lao* or *Lau*, and on the Weſt by that of *Ava*, and the Lands of ſome ſavage Nations, little known. It is watered every where by Rivers and Lakes [b]; ſo that all Sorts of Neceſſaries are very cheap.

Sand. BUNDANCE of Gold is gathered out of the Sand of the Rivers and Torrents which deſcend from the Mountains in the Weſtern Part, which thence may be judged to contain Gold Mines.

Cop- BESIDES thoſe of common Copper, there are ſome of a ſingular Kind, named *Pe-tong*, which is white both within and without. This Province produces red, but not yellow Amber: In a Word, Rubies, Saphires, Agats, and other precious Stones [c]; Pears, Muſk, Silk, Benjamin, *Lapis Armenus*, and very beautiful Marble, of divers Colours; ſome naturally repreſenting Mountains, Flowers, Trees, and Rivers, whereof Tables, and other Ornaments are made.

AMONG the Animals one meets with excellent Horſes, moſt of them low, but ſtrong and vigorous; Stags of a peculiar Kind, no larger than our ordinary Dogs, and the Birds called *Kin-ki*, or *Golden-Hens*. The People, though very ſtrong and couragious, are of a mild, affable Temper, and fit for ſtudying the Sciences.

THE Nation of the *Lo-lo*, formerly ruled in *Yun-nan*, and was governed by different Sovereigns. The *Chineſe*, after fighting ſeveral Battles, and building ſome Forts and Cities in the little uncultivated Plains there, to gain theſe People, conferred on their Lords all the Honours of *Chineſe Mandarins*; which deſcend to the next Heirs, on Condition, that they ſhould be ſubject to the Governor of the Province in common Affairs; that they ſhould receive the Inveſtiture of their Lands from the Emperor; and ſhould not execute any Authority therein without his Conſent.

Language, Religion.

THE *Lo-lo* are as well ſhaped as the *Chineſe*, and more inured to Fatigue. They have a different Language, and a Sort of Writing, which ſeems to be the ſame, as their Religion is, with that of the *Bonzas* of *Pegu* and *Ava*; who, having inſinuated themſelves with the moſt rich and powerful among the *Lo-lo*, in the Northern Part of *Yun-nan*, have there built huge Temples, which are of different Structures from the *Chineſe*.

Government.

THE *Lo-lo* Lords are abſolute Maſters over their Subjects, and have a Right to puniſh even with Death, without waiting for the Anſwer of the Vice-Roy, much leſs that of the Court; ſo that they are obeyed with an incredible Readineſs. Any one thinks his Fortune made, if he is admitted to ſerve in the Palace of his Lord; who, conſidering the Hall, where he gives Audience, and all the other Apartments, as his Eſtate, takes Care to beautify and keep them in good Condition. Beſides the Officers of the Houſhold, and others who ſerve Quarterly, they have Captains, who command the Militia of the Country; conſiſting both of Horſe and Foot, armed with Arrows, Spears, and, often, Muſkets. Theſe People make their own Weapons; though the *Chineſe*, ſometimes, carry them Arms.

Dreſs.

THE Habit of the *Lo-lo* conſiſts in a Pair of Drawers, a Linen Veſt, that reaches to the Knee, and a Straw Hat, or one of Rattan. They go with their Legs bare, and wear nothing but Sandals. The Lords wear a *Tartar* Habit, made of Satin or Damaſk. The Ladies, over a long Gown, which reaches down to their Feet, wear a little Cloak, which comes no lower than the Waiſt: In this Dreſs they ride on Horſeback, whether in making Viſits, or performing the Marriage Ceremonies, accompanied by their Waiting-Women, their other Domeſtics walking on-foot [d].

Diviſion.

YUN-NAN is ſubdivided into nineteen [e] Diſtricts, containing ſo many Cities of the firſt Rank, and fifty-five of the ſecond and third.

21.	*San-ta fû*	0	0

Yun-nan fû. 1. *YUN-NAN FU* has no navigable River; but is built on the Side of a large and deep Lake; or, to speak in the Language of the Country, *on the Coaſt of the* South Sea. Not many Years ſince, it was remarkable for its Beauty. It was full of handſome Buildings within its Walls, which are three Miles in Compaſs; and without, adorned with pleaſant Gardens; of which, two or three are ſtill to be ſeen. A *Chineſe* Prince formerly kept his Court here; the *Tartars* having given him the Title of *King* [a]: But taking-up Arms againſt the Emperor, in 1679, his Family was ruined; and dying a-while after of old Age, his Troops were of a ſudden diſperſed.

Trade. THE Trade for Metals is greater here than in any other Province. A particular Sort of plain Silk, without any Gloſs, named *Tong-hay-twan-tſe*, that is, *The Satin of the Eaſtern Sea*, is made here of twiſted Silk. In this City the *Tſong-tû*, or Governor-General of the Provinces of *Yunnan* and *Quey chew*, reſides; as alſo the Vice-Roy of the Province.

Soil. ITS whole Diſtrict is agreeable and fertile, conſiſting of little Hills and large Plains. The Waters are very good, the Climate temperate. It produces *Lapis Armenus*, fine Marble, and the Roſe-Wood Trees. The Inhabitants have always been addicted to Arms, or Agriculture. The Horſes bred here are ſmall, but hardy and ſtrong.

Ta-li fû. 2. *TA-LI FU*, like the Capital, ſtands on a very long Lake, which abounds with Fiſh. It is large, and very populous; the Climate mild, and Soil fertile.

HERE, principally, thoſe fair Tables, and other Ornaments, are made of that moſt beautiful variegated Marble dug out of the Mountain *Tyen-ſung*, repreſenting Mountains, Flowers, Trees, and Rivers; ſo lively, that one would think they were drawn by a ſkilful Painter.

3. THE whole Country belonging to *Ling-ngan fû* conſiſts either of Plains, or little Hills and Mountains. It is watered by pretty large Lakes and Rivers; producing Plenty of Rice, Wheat, Honey, Wax, and moſt of the Fruits found in the *Indies*. 14. Pro. Yun-nan. Ling-ngan fû.

4. *CHU-HYUNG FU* ſtands in the Heart of the Province, and is a very beautiful Country, ſtored with Rivers, and incloſed with fine Mountains. The Air is good, and the Soil abounds in all Sorts of Grain: It has Plenty alſo of good Paſtures. The Mountains yield the *Lapis Armenus*, and a fine green Stone: Some of them, Silver Mines. Chû-hyung fû.

5. NOTHING can be more agreeable than the Situation of *Chin-kyang fû*. It ſtands on the North Side of a great Lake, and in a Plain incompaſſed with Mountains. Its Diſtrict is not large; but it is fertilized by Lakes and Rivers abounding with excellent Fiſh. The Inhabitants make curious Cotton Carpets. Chin-kyang fû.

6. *KING-TONG FU*, like the next, has no City under it. On the Weſt Side is a Bridge, ſupported by Iron Chains; whoſe Agitation, joined to the Sight of the Precipices, is terrible to Paſſengers. Its Diſtrict is full of very high Mountains, ſaid to contain Silver Mines; and, being well watered, abounds with Rice [b]. King-tong fû.

7. *QUAN-NAN FU* ſtands on the Borders of *Quey chew*, and is ſeparated, as it were, from the reſt of the Province, by frightful Mountains. Its Soil is fertile; but the Inhabitants are conſidered as Barbarians by the *Chineſe*. Quan-nan fû.

8. *QUANG-SI FU* ſtands on a little Plain, on the Side of a Lake, and is quite ſurrounded with Mountains, without any Thing farther worth Remark. Quang-si fû.

9. *SHUN-NING FU* is a very ſmall City, not above a Mile and half in Compaſs, ſurrounded with Mountains, which are paſſed through very narrow Villages. The Soil is generally barren, and the Manners of the Natives rude. Shun-ning fû.

10. *KU-TSING FU* [c], likewiſe, is ſurrounded with Mountains; but the Country fruitful enough. The Inhabitants of this Diſtrict are very laborious; but ſo litigious, that they ſpend moſt of their Effects at Law. Ku-chew fû.

11. THE Territory of *Yau-ngan fû*, which is ſufficiently large, conſiſts of fertile Valleys, and Mountains covered with fine Foreſts. Its Inhabitants are robuſt, and naturally warlike. It furniſhes abundance of Muſk; and very white Salt is made from the Water of a Well near the City. Yau-ngan fû.

12. *KO-KING FU* is encompaſſed with Mountains. Its one dependent City of the ſe- Ko-king fû.

[a] This was the famous *U-ſan-ghey*, who called in the *Tartars* to ſuppreſs the Rebels. [b] *Du Halde's China*, p. 7, and 122, *& ſeqq.* [c] Called, in the Table of Diviſion, and the Map, *Ku-chew fû*.

cond

cond Rank [a] is ſituate on a Lake, ſix Leagues in Compaſs. The Inhabitants of its Diſtrict are couragious and brave, uſually going armed with Bows and Arrows. They make very beautiful Carpets. The Country produces Muſk and Pine-Apples. There are ſaid to be Gold Mines in its Mountains, bordering on the Country of the *Si-fan*, or the *Lamas*.

13. *VU-TING FU* [b] is ſituate on the Borders of the Province of *Se-chwen*, in a rich and fertile Soil, well watered, and ſtored with Flocks. It has a pretty large Gariſon againſt the neighbouring Highlanders. A great deal of Muſk comes from hence. The Paſſages over ſome of its Mountains, which are rugged and ſteep, will only admit one Man at a Time; ſo that they afford the Inhabitants an inacceſſible Retreat in Time of War.

14. THE Inhabitants of *Li-kyang-tû fû* [c], and the Territory belonging to it, are deſcended from the ancient *Chineſe* Colonies. It has no City. It is ſurrounded by Mountains, which ſeparate it from the Dominions of the *Lamas*. The whole Country is well watered and fertile, yielding Amber and Pine-Apples.

15. *YWEN-KYANG FU* ſtands on the *Ho-li kyang*, a pretty large River. The Country conſiſts of Mountains, and Plains well watered; it furniſhes Abundance of Silk, and produces Plenty of Ebony, Palm-Trees, and Areka, which the Inhabitants chew with Beetel-Leaf. Peacocks are very numerous here.

16. *MONG-WHA FU* is ſurrounded with high Mountains, and its Diſtrict furniſhes more Muſk than any other in the whole Empire.

17. *YUNG-CHANG FU* is pretty large and populous, built, like the former, in the Midſt of Mountains, near an Extremity of the Province, and in the Neighbourhood of a People, whoſe rude Manners the Inhabitants partake of. The Country furniſhes Gold, Honey, Wax, Amber, and Abundance of good Silk.

18. *YUNG-NING-TU FU* [d] is ſituate at the End of the Province, near the Dominions of the *Lamas*, to the Weſt of a fine Lake [e], with four little Iſles in it. Numbers of that Sort of Cows, common in *Tibet*, are to be met with, of whoſe Tails they make Stuffs that are Proof againſt Rain, and Carpets much eſteemed. The *Chineſe* Officers alſo adorn their Standards and Helmets with them.

19. *YUNG-PE FU* ſtands amidſt Mountains, yet its Territory is fertile, having large Plains, watered by a fine Lake, Brooks and Rivers.

20. *KAY-WHA FU* [f] is one of the Keys of the Province toward *Tong-king*. Its Diſtrict is intermixed with fertile Valleys and high Mountains.

21. *SAN-TA FU* [g], which ſtands on the Borders of the Kingdom of *Ava*, is properly a Fortreſs to defend the Frontiers. The whole Country is full of Mountains, which ſerve it for a Bulwark; but the Valleys are fertile, being well watered with Rivers [h].

15. *Province* Quey chew.
Kay-wha fû.
San-ta fû.

Table of Situations.

SECT. XV.

Quey chew, *the fifteenth Province.*

Soil and Inhabitants. Forts. Mines. Cattle. Table of Diviſion. Quey-yang fû. Se-chew fû. Se-nan fû. Chin-ywen fû. She-tſyen fû. Tong-jin fû. Ngan-ſhan fû. Tû-yun fû. Ping-ywen fû. Wey-ning fû. *Table of Situations.*

[a] This is *Kyen-chwen chew*; but it ſeems to command over another, *viz. Kyew-lan chew*, about twenty-five Miles Weſt of the former. [b] In the Map, *U-ting fû*. [c] In the Tables, *Li-kyang fû*. [d] In the Map, *Yong-ning fû*. [e] Three Miles diſtant, by the Map. [f] In the Table, *Que-wha fû*. [g] This City, as well as *Yung-ning-tu fû*, is omitted in the Table of Diviſion. [h] *Du Halde*'s *China*, p. 124, *& ſeq.*

The Geography. *Soil and Inhabitants.* QUEY-CHEW, which has *Hu-quang* to the East, *Se-chwen* to the North, *Yun-nan* to the West, and *Quang-si* to the South; is full of inacceſſible Mountains, whence one Part of it is inhabited by People, who never were ſubdued [a]. The Emperors, to people this Province, have often ſent Colonies hither.

Forts. THE Whole contains ſo many Forts, and military Places, with numerous Gariſons, that the Tribute which it pays is not ſufficient to defray the Expence.

Mines. THE Mountains, interſperſed with fertile Valleys, afford Mines of Gold, Silver, Mercury, and Copper. *Cattle.* The Inhabitants breed a great Number of Cows, Hogs, and the beſt Horſes in all *China*; Wild Fowl are infinite, and have an excellent Taſte. They make no Silks in this Province, but Stuffs of a Sort of Hemp, fit for Summer Wear.

Table of Diviſion. *QUEY-CHEW* is ſubdivided into eleven Diſtricts, containing eleven Cities [b] of the firſt Rank, and thirty-eight of the ſecond and third, beſides Forts more or fewer. Its Governors are ſo numerous, not becauſe of its Extent (for it is one of the ſmalleſt, and moſt barren Provinces in *China*) but in order to keep the ſtubborn and half civilized People inhabiting it in Awe.

	Chew.	*Hyen.*
1. *Quey-yang fû*, chief City, preſides over	3	4
2. *Se-chew fû*	0	0
3. *Se-nan fû*	0	3
4. *Chin-ywen fû*	0	2
5. *She-tſin fû*	0	1
6. *Tong-jin fû*	0	1
7. *Li-ping fû*	0	1
8. *Ngan-ſhan fû*	3	5
9. *Tû-yun fû*	2	2
10. *Ping-ywe fû*	1	4
11. *Wey-ning fû*	3	3

Quey-yang fû. 1. *QUEY-YANG FU* is one of the ſmalleſt Cities in *China*, not three Miles in Compaſs. Its Houſes are built partly of Earth, and partly of Brick. As the River, whereon it ſtands, bears no Boats, it has but little Trade. Its Diſtrict is intermixed with Plains and Mountains, ſome very ſteep; and is, in a Manner, ſurrounded with Forts.

Se-chew fû. 2. *SE-CHEW FU* [c] is ſituate on the Borders of *Hû-quang*. Its Diſtrict is full of Mountains; which furniſh Red-Lead, Quickſilver, and other Metals. Its Inhabitants, although the moſt civilized in the Province, are quite ignorant of the *Chineſe* Sciences. They go, ordinarily, bare-footed, and travel over the Rocks with a ſurprizing Swiftneſs. *Quey-chew.*

3. *SE-NAN FU* ſtands on a fine River, and in a long Plain. Its Diſtrict is bounded on both Sides by Mountains; ſome of them inacceſſible, there being but one narrow Way to get-up. In Time of War, the Inhabitants retire thither with their Effects. There alſo a ſavage People hide themſelves, who have ſcarce any Correſpondence with the *Chineſe*. *Se-nan.*

4. THE Diſtrict of *Chin-ywen fû* [d], which is very ſmall, produces Pomegranates, Oranges, and the beautifulleſt Flowers in all *China*. Some of its Mountains are inhabited by People like thoſe laſt-mentioned. *Chin-ywen fû.*

5. *SHE-TSYEN FU* [e], ſituate between the two former Cities, has but a very ſmall Juriſdiction. The Country yields abundance of Quickſilver: The Mountains are peopled like the former. *She-tſin fû.*

6. *TONG-JIN FU* is one of the frontier Cities towards *Hu-quang*. Much Gold is gathered here; nor are there wanting Mines of Copper. Converſing with the *Chineſe*, has, in ſome Meaſure, civilized its Inhabitants. *Tong-jin fû.*

7. THE Country which belongs to *Ngan-ſhan fû* is full of Mountains. The Soil would be fertile enough, were the Inhabitants leſs rude, and more induſtrious. *Ngan-ſhan fû.*

8. THE Juriſdiction of *Tû-yun fû* is very ſmall, and ſeparated from the Mountains, inhabited by the *Seng-myau-tſe*, an independent People, only by a River, and very ſteep Hill. *Tû-yun fû.*

9. THE Country belonging to *Ping-ywen fû*, like the former, borders on thoſe wild independent Highlanders. The Soil produces excellent Tea, and Oranges of all Sorts. They make ſuch hempen Cloth as is before-mentioned. *Ping-ywe fû.*

10. *WEY-NING FU* [f] ſtands on a fine Lake, and in the Middle of a Plain, incompaſſed with high Mountains [g]. *Wey-ning fû.*

SITUATIONS *in* Quey-chew, *determined in* 1716.

SECT. XVI.

Concerning the Nation of the Myau-tſe.

Their Country: And Diſpoſition. Their Lords. Thoſe who are ſubdued. Wealth and Dreſs. Thoſe not ſubdued. Their Houſes. Manufactures and Dreſs. The Mu-lau *Dreſs. Muſical Inſtruments.* Myau-tſe *of* Hu-quang. *Whimſical Head Attire.* Pa-chay *and* Lu-chay. Myau-tſe *of* Quang-ſi. *Language of the* Myau-tſe. *Their Manners.*

HAVING often mentioned the *Myau-tſe* [a], in our Deſcription of the Provinces, it may be proper to give an Account of them here.

THESE People are diſperſed through the Provinces of *Se-chwen*, *Quey-chew*, *Hu-quang*, *Quang-ſi*, and along the Borders of *Quang-tong*. Under this general Name ſeveral People are comprehended: Moſt of them differ only in certain Cuſtoms, and a ſlight Variation of Language; ſuch are the *Myau-tſe* of *Se-chwen*, thoſe to the Weſt of *Hu-quang*, and thoſe to the North of *Quey-chew*.

AS they are more fierce and uncivilized than the *Lo-lo*, the *Chineſe* have built large Forts and Towns, in Places fit to cut-off all Communication among them; which has effectually bridled them. The *Myau-tſe* Lords are as abſolute over their People as the *Lo-lo*: They pique themſelves on their Bravery, and being the beſt Horſemen. In caſe they commit any Act of Hoſtility, the *Chineſe* are content to drive them back to their Mountains, without attempting to force them from thence. In vain the Vice-Roy of the Provinces cites them to appear even by Proxy, for they do juſt as they think proper.

Myau-tſe. Their Lords.

a THESE Lords have not only their Officers, like the *Lo-lo*; but alſo petty Lords under them; who, though Maſters of their Vaſſals, are feudatory, and obliged to attend with their Troops, when ordered. Their Houſes are not inferior to the beſt belonging to the *Chineſe*. The uſual Arms of the *Myau-tſe*, are the Bow and half Pike. Their Saddles are well made, being narrower and higher than the *Chineſe*, with Stirrups and painted Wood. Their Horſes ſell at an exceſſive Price, on Account of their Swiftneſs, and b Leaping; of which the *Chineſe* report incredible Things.

THE *Myau-tſe*, who dwell in the Middle and Southern Part of *Quey-chew*, differ from the former as to their Condition: They have various Names given them by the *Chineſe*, according to their Colonies [b]; but may in general be divided into unſubdued, and ſubdued. Theſe laſt are again ſubdivided into two Sorts, one obeying the c Magiſtrates of the Empire, and making Part of the *Chineſe* People (from whom they are diſtinguiſhed only by a Kind of Head-dreſs, worn inſtead of the Bonnet.) The others have their hereditary *Mandarins*, or *Chi-hyen*, who were originally inferior Officers in the *Chineſe* Army of *Hong-vû*, Founder of the laſt Royal Family, and, in Recompence, made Maſters of ſix, ten, or more Villages, conquered from the *Myau-tſe*; who, accuſtomed by Degrees to the Yoke, now look d on them as if they were of their own Nation.

Thoſe who are ſubdued.

Wealth and Dreſs.

ALTHOUGH the Juriſdiction of theſe *Mandarins* is but ſmall, yet they do not want Riches. Their Houſes are large, commodious, and kept in good Repair. They have Power to puniſh their Subjects, but not capitally; an Appeal lying from their Tribunal to that of the *Chi-fû*. Some have not the Power of judging Cauſes.

THE People wrap their Heads in a Piece of Linen, and wear nothing but a Sort of Doublet and Breeches; but the *Mandarins*, and their Domeſtics, are cloathed like the *Chineſe* of the Country. As for the *Myau-tſe*, who are not ſubdued, and poſſeſs above forty *French* Leagues in the Province of *Quey-chew*, near *Li-ping fû*; although the Miſſioners, who made the Map, paſſed along their Country on the North and Weſt Sides, yet they never ſaw one of them appear.

Thoſe not ſubdued.

Their Houſes.

THEY learned, however, from thoſe *Mandarins*, that theſe unconquered *Myau-tſe*, called *Sing-myau-tſe*, or *Ye-myau-tſe*, that is, *wild Myau-tſe*, have Houſes built of Brick, one Story high, like thoſe of the conquered *Myau-tſe*; but as they put their Oxen, Cows, Sheep, and Hogs, (for in thoſe Parts one ſees ſcarce any other Kinds

[a] That is, perhaps, the Sons of Cats; *Myau* ſignifies a Cat, and *Tſe* a Son. Way of Sneer; as, *Li-jin*, *Yau-tſe*, and many others.

[b] Alſo Nick-names, by

The Geography. of Animals, not even Horſes) in the Ground-Floor, they are ſo dirty and ſtinking, that none but themſelves can bear to lie in the upper Room.

Manufactures and Dreſs. THESE *Myau-tſe* live in great Unity, divided into Villages, each governed by the Seniors. They cultivate their Lands, and make very good Carpets; ſome of Silk of different Colours [a], others of a Kind of Hemp: But their Linen is like bad Muſlin. Their Habit is only a Pair of Drawers, and a Sort of great Coat; which they fold over their Stomach. They ſell the Timber b of their Foreſts, which having cut down, and thrown into a River that runs through their Country, the *Chineſe* Merchants, who are a little lower on the other Side, carry it off in great Floats: The Goods the *Myau-tſe* get in Exchange, remain in the Hands of a Perſon agreed upon till the Bargain is made, and are uſually Cows, Oxen, and Buffaloes; of whoſe Skins they make Cuiraſſes: They cover them with little Plates of Iron, or beaten Copper, c which render them heavy, but very ſtrong.

The Mu-lau. THOSE whom the *Chineſe* call *Mû-lau*, that is, Rats of the Wood, and who dwell within three or four Leagues of the Poſts of *Yun-nan*, throughout the Province of *Quey-chew*, are beſt apparelled of all the *Myau-tſe*. Their Habit is ſhaped like a Bag, with Sleeves wide at the Cuffs, and ſlit in two above the Elbow. Underneath there is a Veſt of a different Colour. The Seams are covered with the ſmalleſt Shells found d in the Seas of *Yun-nan*, or the Lakes of the Country. The Cap and reſt of their Dreſs are much of a-piece. The Cloth is coarſe, made from a Kind of Hemp.

Muſical Inſtruments. AMONG their Inſtruments of Muſic, there is one compoſed of ſeveral Pipes inſerted in a larger, which has a Hole, or Kind of Reed for blowing into: It yields a Sound more ſoft and agreeable than the *Chineſe Shin*, which is a Sort of Hand-Organ, that muſt be blown with the e Breath. They keep Time in dancing, and expreſs the gay, melancholy, and other Airs very naturally. They play on a Sort of Guittar, or beat an Inſtrument compoſed of two little Drums, one ſet againſt the other; which afterwards they turn upſide-down, as if they were going to break it againſt the Ground. Theſe People have no *Bonzas* of the Religion of *Fo* among them.

Myau-tſe *of* Hu-quang. IN that Part of *Hu-quang*, bordering on *Quang-tong*, and the Diſtrict of *Yung-chew fû* in f *Quang-ſi*, are *Myau-tſe*, ſtill more uncivilized. They acknowledge the Juriſdiction of the *Mandarins*, and pay the Tribute juſt as they pleaſe; for in certain Places they permit no *Chineſe* Officer to enter their Lands. They climb the ſteepeſt Rocks, and paſs-over the moſt ſtony Grounds a with incredible Swiftneſs, their Feet becoming callous, by going with them naked. *Myau*

THE Women put on their Heads a Piece of light Board above a Foot long, and five or ſix Inches broad, which they cover with their Hair, faſtening it with Wax: So that they can neither lean, nor lie down, but by reſting on their Necks; and are obliged to turn their Heads continually on the Roads, the Country being full of Woods and Thickets. When they would comb their Hair, they muſt be whole Hours at the Fire to melt the Wax: This Trouble they take three or four Times a Year; and having cleaned it, dreſs it, in the ſame whimſical Manner as before: The elderly Sort content themſelves with doing it up on the Crown of the Head into knotted Treſſes. *Whimſ Head Attire.*

THE *Myau-tſe*, on the Borders of *Quang-tong*, are called *Pa-chay*, becauſe their principal Villages are eight; thoſe on the Borders of *Quang-ſi*, *Lû-chay*, as having ſix Villages, which ſerve them for Intrenchments. Theſe petty Nations are more feared, than deſpiſed, by their *Chineſe* Neighbours; who, to hinder their Incurſions, have erected at leaſt twenty fortified Towns and Forts to the North, Eaſt, and Weſt of thoſe Countries. Near half of theſe Forts have been abandoned ſince the Acceſſion of the preſent Family; but the reſt are ſtill kept on-foot, and the *Chineſe* have at length gotten ten of theſe *Myau-tſe* to give one of their principal Men, as a Security for their good Behaviour. *Pa-chay and Lû-chay.*

THE *Myau-tſe* of the Province of *Quang-ſi*, who are originally *Chineſe*, are on another Footing. They have, for many Centuries, exerciſed the Juriſdiction of the *Chi fû*, and *Chi hyen*, &c. over their Subjects. They are originally *Chineſe*, and Deſcendents of thoſe who followed *Fû-pan* and *Ma-ywen*, the Conquerors of theſe Countries, and *Tong-king*, above ſixteen hundred Years ago, for the Emperor *Quang-vû-ti*; who confirmed them in the Authority which their Generals conferred on them. They have their Soldiers and Officers. What is very grievous to theſe People is, that they are almoſt continually at War, and deſtroying one another. Quarrels are hereditary, and the Grandchild often revenges the Death of his Great Grandfather, while the *Chineſe* and *Mandarins* look-on, not caring to interfere. *Myau Quang*

THE Language of the *Myau-tſe* of *Se-chwen*, the Weſtern Parts of *Hu-quang*, and Northern Parts of *Quey chew*, is the ſame, or differs only in the Pronunciation, and ſome particular Words: But that of the *Myau-tſe*, towards *Li-ping fû*, is reckoned a Mixture of the *Chineſe*, and the true *Myau-tſe*, being underſtood by the People of both Nations. The Language ſpoken in the *La the tle.*

[a] Sometimes all plain, or in little Squares.

North

North Parts of ſome Countries between *Quang-ſi*, *Hû-quang*, and *Quey chew*, is not underſtood by the *Myau-tſe*.

THE *Chineſe* give all the *Myau-tſe* the Character of being an unconſtant, perfidious, barbarous People, and egregious Thieves: On the contrary, *Regis*, and the other Miſſionaries, found them very faithful in reſtoring the Cloaths committed to their Truſt, attentive, laborious, and obliging. It is likely they are wronged by the *Chineſe*, who have taken from them almoſt all the Lands that were good for any Thing in the Country, and continue to ſeize on whatever they find for their Conveniency, if they can do it without Danger [a].

SECT. XVII.

Of the great Wall, Rivers *and* Lakes *of* China.

When and how built. The Gates and Forts: Towards the Eaſt: Towards the Weſt. A ſecond Wall. The chief Lakes. The Po-yang *dangerous. Dangerous ſailing on the Lake* Ho-yang. *The* Yang-tſe kyang: *Its great Depth. The* Whang-ho: *Exceeding rapid.*

THE celebrated Wall, which bounds *China* on the North, covering *Pe-che-li*, *Shan-ſi* and *Shen-ſi*, was built by the famous Emperor *Tſin-ſhi-whang-ti*, two hundred and twenty-three Years before Chriſt. Yet at that Time the Hords, or Clans of the *Tartars*, being divided under various *Khâns*, or Princes, could incommode the Empire only by ſudden Inroads. No Work in the World is equal to this. It is often carried over Mountains which ſeem inacceſſible, and ſtrengthened with a Series of Forts. Its Beginning is a large Bulwark of Stone, raiſed in the Sea, to the Eaſt of *Pe-king*, in Latitude forty Degrees two Minutes ſix Seconds. It is well terraſſed, and caſed with Brick; is from twenty to twenty-five Feet high, the uſual Height of City Walls; but much broader. *Regis*, and the other Jeſuit Miſſionaries, who aſſiſted him in making the Map of the Province, always found the Top well paved, and wide enough for five or ſix Horſes to march a-breaſt with Eaſe.

THE Gates of this Wall are defended, on the Side of *China*, by pretty large Forts: The firſt of them to the Eaſt, is called *Shan-hay-quan* [b], within a League of the Bulwark before-mentioned. The *Manchew Tartars*, who laſt conquered *China*, entered on this Side from *Lyau tong*, being called in by the *Chineſe* General, who commanded in this Part. The other Forts in *Pe-che-li*, no leſs remarkable, are *Hi-fong-ku*, *Tu-ſhe-ku*, *Chang-kya-kew*, and *Kû-pe-kew* [c]. All theſe Forts, which have been already mentioned [d], are made of Earth, caſed on both Sides with Brick: But when one enters *Shan-ſi*, towards *Tyen-ching-wey*, the Wall begins to be only of Earth, is without Battlements, and not ſo much as plaiſtered, grows narrow, and is not above fifteen Feet in Height. However, having paſſed *Sha-hû-kew* [e], (which is the Place the *Ruſſians* come to directly from *Selinghins-koi*,) it is caſed on the Outſide with Brick: Some of its Towers alſo are very large, and built of Brick, on a Stone Foundation; but it does not always continue the ſame. The *Whang-ho*, which has Centry-Boxes along its Banks, where Soldiers keep Guard Day and Night, ſupplies the Place of the great Wall towards the Borders of *Shan-ſi* and *Shen-ſi*. *Great Wall.*

BEYOND that River, Weſtward, in the Province of *Shen-ſi*, the Wall is only of Earth, low, narrow, and ſometimes of Gravel (for it ſtands on a gravelly Country:) It is in ſeveral Places quite ruined: But then the Entrance is defended by conſiderable Cities, as *Yu-ling hyen*, *Ning-hya* [f], *Lyang chew*, *Kan chew*, *Sû chew* and *Si-ning*; at which Places general Officers are poſted with Bodies of Troops. *Sû chew* [g] commands the Gariſon at *Hya-yu-quan*, through which the Road lies to *Ha-mi* [h], whoſe Inhabitants had newly ſubmitted to the Emperor: For this Reaſon, although the Wall is hereabout only of Earth, yet it is kept in better Repair than elſewhere [i]. *Towards the Weſt.*

THIS great Bulwark does not extend as far as *Si-ning chew*; but its Place is ſupplied by a pretty large Trench, which connects one Part of the Wall with another Part near that City and *Topa*, four Leagues diſtant; a little beyond which it ceaſes. This laſt Place, though neither well built, nor ſtatuted, has a great Trade, and is independent of the Emperor; belonging to a *Lama Bonza*, whoſe Family is the moſt conſiderable among the *Si-fan* or *Tû-fan*, a Nation between *China* and *Tibet*.

THE laſt Race of *Chineſe* Emperors, the better to ſecure the Place where they kept their Court, built a ſecond Wall, like the firſt. This, which is called the inner Wall, begins at the outer, almoſt due North of *Pe-king*; and running South-Weſt along the Diſtrict of *Swen-wha fû*, enters *Shan-ſi*. Then winding Weſtward by the South Bounds of *Tay-tong fû*, joins the firſt Wall *A ſecond Wall.*

[a] *Du Halde*'s *China*, p. 31, *& ſeqq.* [b] See before, *p.* 23. [c] Called, in the *Ruſſian* Embaſſies, *Kapki*. [d] See before, *p.* 23. [e] The Situation of this and the other Forts is marked in the Tables, at the End of their reſpective Provinces. [f] Near this City the Mountains ſerve in Place of the Wall. See before, *p.* 55. [g] Or, *So chew*. [h] *Kâmil*, or *Kâmul*. [i] *Du Halde*, as before, *p.* 20, *& ſeq.* See alſo Vol. III. *p.* 566, and 576.

again,

The Geography.

again, near the Weſtern Border of this Province, where it ends. At the Place where it enters *Shan-ſi*, another Wall is carried Southward along the Borders of both Provinces, for the Space of near an hundred Miles. The Miſſioners obſerve, that it remains pretty intire in *Pe-che-li* at *Nankew*, one of the principal Gates of it, ten Leagues from *Pe-king*, on the Side of a high Mountain, in the Road to *Swen-wha fu*; but in *Shan-ſi* it is fallen to Ruin in many Places [a].

Length and Guard.

THAT which we call the *Great Wall*, the *Chineſe* themſelves ſtile *Van-li Chang*, *Ching*, or *The Wall* [b] *of ten thouſand Furlongs*. Not, ſays *Le Comte*, that its Length is ſo great; but reckoning all its Windings, it cannot be leſs than five hundred Leagues. The ſame Author looks on it as a mad Attempt to carry it over Mountains, where the *Tartar* Horſe could never climb. He alſo admires how the Materials were conveyed, and made uſe of there [c]. He adds, that it could not be done without a vaſt Charge, and the Loſs of a Multitude of Men. It is ſaid, that during the Reigns of the *Chineſe* Emperors, this Wall was guarded by a Million of Soldiers: But now that Part of *Tartary* belongs to *China*, they are content with manning well the worſt ſituated, but beſt fortified Parts of it. It breaks off to give the *Whang-ho* Admittance; but all other Rivers paſs through it under Arches made therein for the Purpoſe. It is ſaid the tenth Part of the People were employed in building it; and that it was finiſhed in five Years.

The chief Lakes.

CHINA abounds with Rivers, Lakes, and Canals; on which the Cities are generally built. Among the Lakes, the chief are, 1. The *Tong-ting hû*, in the Province of *Hu-quang*, which is eighty Leagues, or more, in Circumference [d]. 2. The *Hong-ſe hû*, one Part in *Kyang-nan*, the other in *Che-kyang*. 3. The *Po-yang hû*, otherwiſe called the Lake of *Zhau chew* [e], in *Kyang-ſi*. This laſt, being thirty Leagues in Compaſs, is formed by four Rivers, each as large as the *Loire*. It is ſubject to Hurricanes, like the Seas of *China*; for in leſs than a Quarter of an Hour the Wind will veer round all the Points of the Compaſs, and ſometimes ſink the largeſt Barks.

The Po-yang dangerous.

IN approaching the moſt dangerous Part of the Lake, a Temple appears built on a ſteep Rock; on Sight of which the *Chineſe* Mariners beat a Kind of Braſs Drum, to inform the Idol of their Arrival; and, lighting Wax-Candles in Honour of it, upon the Fore-part of the Bark, burn Incenſe, and ſacrifice a Cock [f]. Barks are ſtationed here to ſuccour the Diſtreſſed: But they often prove the Merchants Ruin to gain by the Spoil, Spite of the Vigilance of the Magiſtrates. In tempeſtuous Weather you ſee the Governor of *Zau chew* waiting all Day long, by the Side of the Lake, to hinder, by his Preſence, any-one from venturing to croſs it, contrary to his Orders before-given.

THAT *China* is full of navigable Rivers, appears from the Deſcription of the Provinces; wherefore it will be ſufficient to ſpeak here of the two greateſt which run acroſs this vaſt Empire, from Weſt to Eaſt.

THE firſt, (called *Yang-tſe-kyang*, which the *Chineſe* commonly tranſlate *The Son of the Sea* [g], or *Ta-kyang*, that is, *The great River* [h], by Way of Eminence) riſes in the Mountains of the *Tu-fan*, in about thirty-three Degrees of Latitude. It receives different Names, according to the different Places it paſſes through; and, dividing into ſeveral Branches, forms a great many Iſlands full of Ruſhes, which ſerve as Fuel for the Cities round about. Firſt croſſing a Skirt of the Province of *Yun-nan*, it afterwards runs through thoſe of *Se-chuen*, *Hû-quang*, and *Kyang-nan*. Its Stream is very rapid; but, after making many Windings and Turnings in thoſe Provinces, (where it loſes and reſumes the Name of *Ta-kyang*) as far as the City of *King-chew fû* [i], it begins to be ſlackened by the Sea Tide, (which meets it at the City of *Kyew-kyang fû* [k]) and glides along ſo gently, that, thence-forward, it admits being ſailed upon; and, paſſing next by *Nan-king*, falls into the Eaſtern Sea, over-againſt the Iſle of *Tſong-ming*.

THIS River is broad, deep, and exceeding full of Fiſh. The *Chineſe* have a common Saying, *That the Sea is without a Shore, and the* Kyang *without a Bottom*. They pretend, that, in ſeveral Places, they find no Bottom, and that in others there are two or three hundred Fathom Water: But, it is probable, their Pilots have judged ſo, only becauſe they found no Bottom with their Lines, which do not exceed fifty or ſixty Fathom.

THE ſecond River is called *Whang-ho* [l], or

[a] *Du Halde*'s *China*, p. 21, *& ſeq.* [b] *Le Comte*'s Memoirs of *China*, p. 74. [c] The ſame, *p.* 75. [d] See *p.* 46. [e] Or, *Jau-chew*. [f] See Vol. III. *p.* 410. d. [g] In this they miſtake: For although the Word *Yang*, in Sound and Accent, is the ſame with that which ſignifies the Sea, yet the Character is different; being the ſame uſed anciently for a Province bounded on the South by this River, which, it is thought, from thence took the Name; becauſe the Emperor *Yu* diverted the Water which overflowed that Province into its Channel. [h] And the *Kyang*, or *River*. [i] In *Hu-quang*, about the Middle of *China*. [k] In *Kyang-ſi*, about two hundred and ſeventy-ſix Miles more Eaſtward, and four hundred from the Sea. [l] *Ho* ſeems to be uſed rather than *Kyang*, to ſhew, that, though a great River, yet it is inferior to the *Kyang*; which is the Term for larger Rivers, and *Ho* for ſmaller; though many conſiderably leſs than the *Whang-ho* have the Denomination of *Kyang*.

The yellow River: A Name given to it on Account of the Colour of its Waters, which are mixed with yellowiſh Clay waſhed off its Banks [a]. It riſes about the thirty-fifth Degree of Latitude, in the mountainous Country of the *Tartars* of *Kokonor*; which having paſſed through, it runs for awhile along the Side of the great Wall; and then taking a Sweep round the Lands of the *Ortos Tartars*, re-enters *China*, between the Provinces of *Shan-ſi* and *Shen-ſi*. Next it croſſes the Province of *Ho-nan*, with Part of *Kyang-nan*; and, after a Courſe of about ſix hundred Leagues, diſcharges itſelf into the Eaſtern Sea, not far from the Mouth of the River *Yang-tſe-kyang*.

ALTHOUGH this River is exceeding large, yet it is not very navigable; the Stream being ſo rapid, that there is no ſailing againſt it, without a ſtrong as well as fair Wind. Sometimes it breaks its Banks, and makes ſtrange Havock; ſuddenly laying whole Villages and Cities under Water: Hence they are obliged to make long and thick Dikes, in certain Places, to reſtrain its Fury. The Lands of the Province of *Ho-nan* being low, and the Banks liable, formerly, to be broken down, they raiſe, by Way of Precaution, round moſt of the Cities, at the Diſtance of more than a Quarter of a Mile, a ſtrong Incloſure, or Bank of Earth, covered with Sods [b].

Exceeding rapid.

CHAP. II.

The QUALITIES, MANNERS, *and* CUSTOMS *of the* CHINESE.

SECT. I.

Their Shape, Qualities, *and* Dreſs.

Shape of the Chineſe: *Long Nails affected: Mild and humane: Exceeding modeſt: Seldom uſe Violence, even when they rob: Keep what they borrow: Some honeſt, have learned to cheat. Merry Story: Little knaviſh Tricks: Craft and Policy: Art to carry their Point: Some very litigious: Great Admirers of Virtue: Great Capacities: Their Ingenuity: Fond of their Cuſtoms: Their Induſtry: Shifts for a Livelihood: Great Diſtreſs of many. Habit of the Men: Summer and Winter Cloaths: Confined to Colours: Their Hats or Caps: Boots, in all Seaſons: Viſiting Habits. Womens Dreſs: Little Feet: Their Head-Attire: Paſte-board Crown: Surprizing Neatneſs.*

THAT which the *Chineſe* reckon a perfect Beauty, is a large Forehead, a ſhort Noſe, ſmall well-cut Eyes, a large and ſquare Face, great broad Ears, a middle-ſized Mouth, and black Hair: For they cannot bear the Sight of yellow or red-haired People. A fine eaſy Shape is no Charm among them; becauſe their Garments are wide, and not fitted to the Body, like the *European*. They think a Man well made when he is large and fat, and fills his Chair with a good Grace.

ALTHOUGH the exceſſive Heats, which prevail in the Southern Parts, eſpecially in *Quang-tong*, *Fo-kyen*, and *Yun-nan*, give the Mechanics or Peaſants, who go naked to the Waiſt, an olive or brown Complexion, yet they are naturally as fair as the *Europeans*; and, generally ſpeaking, their Phyſiognomy has nothing diſagreeable in it. Commonly, to the Age of thirty, they have a very fine Skin and beautiful Complexion. The *Literati*, and the Doctors, eſpecially if they are of baſe Extraction, never pare the Nails of their Fingers; affecting to let them grow an Inch long, or more, with a Deſign to let People ſee that they are not obliged to work for their Living. As to the Women, they are commonly middle-ſized, with ſhort Noſes, little Eyes, black Hair, long Ears, and ruddy Complexions; there is a certain Gaiety in their Countenance, and their Features are regular [c].

Long Nails affected.

THE *Chineſe*, in general, are of a mild, tractable, and humane Diſpoſition. There is a great deal of Affability in their Air and Manner; wherein nothing appears that is either harſh, rough, or paſſionate: This Moderation is remarkable among the Vulgar themſelves. *Fontaney* [d], the Jeſuit, meeting a great Stop of Carts on the Road, was ſurprized to find, that the Carriers, inſtead of giving abuſive Language, or coming to Blows, as is common in *Europe*, ſaluted each other, as if they had been old Acquaintance, and lent their mutual Aſſiſtance to make Way. When *Euro-*

Mild and humane.

[a] See Vol. III. *p.* 416, and 524.
[b] *Du Halde's China*, p. 325, *& ſeqq.*
[c] The ſame, *p.* 281.
[d] See Vol. III. *p.* 535.

Inhabitants. Shape. *peans* have to do with the *Chineſe*, they ſhould take Care of being too haſty or warm; for they reckon Paſſion a very unmanly Vice: Not that they want Fire and Vivacity; but they learn betimes to become Maſters of themſelves.

Exceeding modeſt. THEIR Modeſty is ſurprizing: The *Literati* always appear with a compoſed Air, without uſing the leaſt unſeemly Geſture. It ſeems to be natural to the Female Sex, who live in a conſtant Retirement, and are covered to their very Hands, which never appear out of their long and wide Sleeves; even in preſenting any Thing to their Brothers, or Parents, for they lay it on the Table for them to take. They are highly offended to ſee the Popiſh Images of Saints with naked Feet: *Magalhaens* thinks, not without Reaſon [a].

Seldom uſe Violence, THOUGH naturally vindictive, when urged by Intereſt, yet they rarely take violent Meaſures, eſpecially thoſe of any Figure; diſſembling their Reſentment, and preſerving with their Enemies ſo fair an Outſide, that one would imagine they were inſenſible: But when an Opportunity of deſtroying them offers, they immediately ſeize on it. Robbers themſelves ſeldom make uſe of any other Means to gain their Ends but Craft. Some follow the Barks, and hire among thoſe who draw them along the Imperial Canal, in the Province of *Shan-tong*; where, being changed every Day, the Thieves are not eaſily known. In the Night they ſlip into them, and by the Smoke of a certain Drug, which, it is ſaid, keeps the Sailors in a ſound Sleep, carry-off what they will, unperceived. Some of theſe Thieves will dog a Merchant two or three Days together, till they find a proper Opportunity to do their Buſineſs [b]. Others on Land break through the thickeſt Walls, burn Gates, and make great Holes in them by the Help of a certain Engine, which fires the Wood without any Flame. They penetrate into the moſt private Receſſes, without ever being perceived; and, when People awake in the Morning, they are amazed to find their Bed without Curtains and Coverlets; their Chamber quite ſtripped of its Furniture, without, perhaps, any Footſteps of the Thieves, but the Hole in the Wall at which they carried them out.

Even when they rob.

Keep what they borrow. *LE COMTE* ſays, when one lends a *Chineſe* any Thing, he muſt have Sureties; for that there is no relying on their Word: That ſome begin borrowing a ſmall Sum, promiſing to reſtore the Principal with vaſt Intereſt; which they punctually perform, and then continue, upon the Credit of their Honeſty, to borrow greater and greater Sums. This they do for Years together, till at length having gotten a very conſiderable Sum, they at once diſappear.

Qualities. Dreſs.

Some honeſty. NOT but after all, ſays the ſame Author, one may meet with Honeſty and fair Dealing amongſt the *Chineſe*: For he remembers, that on his firſt Arrival in *China* with his Companions, Strangers, unknown, expoſed to the Avarice of the *Mandarins*, not one of them did them the leaſt Wrong; and, what appeared yet more extraordinary, a Commiſſioner of the Cuſtom-Houſe, People who are uſually greedy, refuſed to take a Preſent from them, notwithſtanding all their earneſt Intreaties, proteſting, that he would never accept of any Thing from People ſo long as he was in his Office: But, after all, concludes this Author, theſe are rare Examples; nor muſt you, from them, take the Character [c] of the Natives [d].

How ready to cheat. THOUGH, generally ſpeaking, ſays *Du Halde*, they are not ſo deceitful and knaviſh as *Le Comte* repreſents them; yet they ſeldom fail to cheat Strangers, if they can, and then brag of it. Some are ſo impudent as, when detected, to plead in Excuſe, their Want of Dexterity; *You ſee I am but a Bungler; you are more dextrous than I; another Time I will not venture to meddle with an* European: And in reality it is ſaid, that ſome *Europeans* have taught them their Trade [e].

Merry. WHAT happened to a Captain of an *Engliſh* Ship, was very merry. Having bargained at *Kanton* for ſeveral Bales of Silk, he went with his Interpreter to the Merchant's Houſe, to ſee if the Silk was in a good Condition. On opening the firſt Bale, it proved to his Liking; but the reſt contained nothing but rotten Silks. Upon which growing very angry, he reproached the *Chineſe* for his Knavery, in the ſevereſt Terms. The other heard him very unconcerned, and only made this Reply; *Blame, Sir, your Rogue of an Interpreter, for he proteſted to me, that you would not examine the Bales.*

Loaded with THIS knaviſh Wit is found chiefly among the Vulgar, who have Recourſe to a thouſand Tricks to adulterate every Thing they ſell. Some have the Art to open the Breaſt of a Capon, and take out all the Fleſh, then to fill up the Hole, and cloſe it ſo nicely, that the Cheat is not diſcovered till the Fowl comes to be cut-up at Table.

[a] *Magalhaens*'s Relation of *China*, p. 107; and *Du Halde*'s *China*, p. 279. [b] *Du Halde*, as before, p. 280. [c] Methinks we might, ſince this happening in a great, trading, maritime City, where tricking People are moſt likely to be found, ſhews ſuch Inſtances cannot be rare. [d] *Le Comte*'s Memoirs of *China*, p. 242, *&c. ſeq.* [e] This appears to be Fact: For theſe Frauds are practiſed chiefly upon *Europeans*, and in Port-Towns, frequented by them. Within the Country, the Honeſty of the Vulgar is as great as their Civility; which has been atteſted by the Travellers, whoſe Journals are inſerted in the third Volume.

Others counterfeit the true Hams no leſs exactly, by covering a Piece of Wood with a Sort of Earth, and then wrapping it in Hog's Skin [a]. However, it muſt be confeſſed, they ſeldom practiſe theſe Tricks on any but Strangers; and, in other Places [b], the *Chineſe* themſelves will hardly believe them.

WHEN they have any Profit in View, they employ all their Cunning to inſinuate themſelves into the Favour of Perſons, who may forward their Buſineſs, and endeavour to gain their Friendſhip by frequent Preſents and Services, without expecting any Return; aſſuming all Sorts of Characters with ſurprizing Addreſs, waiting whole Years, and turning to their Advantage the moſt trifling Occaſions, to obtain their Ends [c].

THE Lords of the Court, the Vice-Roys of Provinces, and Generals of Armies, are in perpetual Motion, to preſerve, or acquire, the principal Places of State; which being due by the Laws only to Merit, they carry on their Buſineſs a thouſand Ways underhand by Money, Favour, and Intrigue. Hence *Le Comte* allows them to be the moſt expert Politicians. They have a Genius for Politics, as well as Commerce, negotiating Affairs among themſelves. Addreſs is uſed amongſt the Princes, and other Grandees of the Realm, as much as in any Court of *Europe*: They continually apply themſelves to know the Guſto, Inclinations, Humours, and Deſigns of one another [d].

IN ſome Diſtricts the People are ſo very litigious, that they mortgage their Lands, Houſes, and Effects, for the Pleaſure of going to Law, and getting their Enemy baſtonadoed: But it ſometimes happens, that the Defendant, by Help of a larger Bribe, cauſes the Blows to fall on the Plaintiff. Hence ariſe mortal Enmities amongſt them. One of their Methods, is to fire their Enemy's Houſe in the Night-Time: But this, which by their Laws is Death, is rarely practiſed; and many abhorring ſuch Villainies, become ſincerely reconciled with their Adverſaries [e].

AFTER all, the moſt vicious *Chineſe* naturally love Virtue, and thoſe who practiſe it: Thoſe who are not chaſte themſelves, admire ſuch as are, eſpecially Widows: They preſerve the Memory of thoſe who have lived a continent Life [f], [who have ſerved their Country, are eminent for their Virtue, or have done any remarkable Action] by triumphal Arches and Inſcriptions. They are very careful to conceal their Vices from the Public. They have the greateſt Reverence and Reſpect for their Parents, and thoſe who have been their Maſters: Likewiſe for aged Men, of which the Emperor himſelf ſets the Example [g]. They deteſt every Action, Word, and Geſture, that ſeems to betray Anger, or the leaſt Emotion [h]. *Qualities. Dreſs.*

MAGALHAENS obſerves, that they are accompliſhed in moral Philoſophy, which is their chief Study, and Topics in Converſation. He adds, that their Wits are ſo quick and penetrating, that when they read the Books written by the Jeſuits, they underſtand, with Eaſe, the moſt ſubtil and difficult Queſtions, as well in Mathematics and Philoſophy, as Theology. He affirms, that he knew ſeveral, who, without any Inſtruction, as he could find by their Diſcourſes, readily comprehended the Queſtions concerning God and the Trinity; which they had read in *Buglio*'s *Chineſe* Tranſlation of *Thomas Aquinas* [i]. *Great Capacities.*

THE japanned Works, beautiful *China* Wares, and Variety of well-wrought Silks, imported from *China*, are ſufficient Proofs of the Ingenuity of the Natives. They are not leſs ſkilful in making Commodities in Ebony, Shells, Ivory, Amber, and Coral. Their Works in Sculpture, as well as their public Buildings (ſuch as the Gates of great Cities, the triumphal Arches, their Bridges, and their Towers) expreſs ſomething great and noble. They ſucceed equally in all Kinds of Arts, doing Things with a certain Kind of Elegance agreeable to their Taſte; and if they have not arrived at ſo great a Perfection as appears in Works in *Europe*, it is becauſe they are reſtrained by the *Chineſe* Frugality; which ſets Bounds to the Expences of private Perſons. *Their Ingenuity.*

IT is true, their Invention is not ſo good as that of our Mechanics: But the Tools they make uſe of are more ſimple; and they imitate any Pattern that is brought them, though they never ſaw it before. Thus at preſent they make Watches, Clocks, Glaſs, Muſkets, Piſtols, and ſeveral other Things, which they had no Notion of formerly, or made but very imperfectly [k].

HOWEVER, they are ſo vain of themſelves, that the very Rabble have the greateſt Contempt for all other Nations. They are ſo full of *Fond of their Cuſtoms.*

[a] *Du Halde*'s *China*, p. 279, *& ſeq.* and *Le Comte*'s Memoirs of *China*, p. 241. [b] That is, diſtant from the Coaſts. [c] *Du Halde*, as before; and *Le Comte*, *p.* 242. [d] *Le Comte*, as before, *p.* 243, *& ſeq.* [e] *Du Halde*, as before, *p.* 279. [f] Have died to ſave their Honour, their Friend, or the like. [g] See an Inſtance, Vol. III. *p.* 578. *Du Halde* gives the ſame, with ſome additional Honours; as, that the Emperor roſe and went to meet him, and made him Chief-Preſident of the Tribunal of the Mathematics, to which he before had belonged. [h] *Du Halde*, as before, *p.* 280, *& ſeq.* [i] *Magalhaens*'s Relation of *China*, p. 88, and 103. [k] *Du Halde*, as before, *p.* 277.

Inhabitants. Shape. their own Country, and Cuſtoms, that they a cannot be perſuaded to change any of them, or to believe there is any Thing good out of *China*. There is no getting them to do any Thing in the *European* Manner; the *Chineſe* Architects could hardly be prevailed on to build a Church, which is in the Palace, according to the Model brought from *France*. Their Ships are very ill built, and they admire thoſe that come from *Europe*; but when you adviſe their Carpenters to imitate them, they are ſurprized at the Propoſition: *It is according to the Faſhion of* China, ſay they. *But it is worth nothing*, ſay you. *It matters not*, reply they; *ſince it is uſed in the Empire, it is ſufficient, and it would be a Crime to vary from it.* However, this Anſwer proceeds partly through Fear they ſhould not pleaſe the *European*, who employs them; for thoſe who are Artiſts readily undertake and perform the Work by Directions, let the Model be what it will [a].

Their Induſtry. THE common People cannot provide for their c own Maintenance without a continual Toil; and there is ſcarce any Nation more laborious and temperate than this, being inured to Hardſhips from their Infancy. A *Chineſe* will ſpend whole Days in digging the Earth, often up to the Knees in Water; and in the Evening think himſelf happy with a little boiled Rice, Pot-Herbs, and ſome Tea. They have Recourſe to all Manner of Contrivances, for Means of Subſiſtence; and as there is not a Spot in all the Empire that lies d untilled, neither is there one Perſon, Man or Woman, though ever ſo old, deaf, or blind, but what may eaſily gain a Livelihood. They ſcarce ever make uſe of any Thing to grind their Corn in *China* but Hand-Mills; which requiring nothing more than the Motion of the Arms, employs an infinite Number of People.

Shifts for a Livelihood. THE *Chineſe* will make a Profit of Things, which appear to others to be quite uſeleſs: A great many Families in *Pe-king* ſubſiſt by ſelling e Matches; others by picking up in the Streets little Rags of Silk, Woollen, Cotten, or Linen; the Feathers of Fowls, Bones of Dogs, and Bits of Paper, which they waſh, and ſell again. They even make Sale of Ordure; for which Purpoſe a great Number of People, in every Province, carry Pails. In ſome Places they go with their Barks into the Canals, which run on the Backſide of the Houſes, and fill them at almoſt every Hour in the Day. The Peaſants come and buy f it in their Houſes, giving, in Exchange, Wood, Oil, and Pulſe. There are, in every Street, Conveniencies for Paſſengers to eaſe themſelves, whereof the Owners make a good Advantage.

YET, notwithſtanding the great Sobriety and Induſtry of the Inhabitants of *China*, the prodigious Number of them occaſions a great deal of Miſery. There are ſome ſo poor, that for Want of common Neceſſaries for their Children, they expoſe them in the Streets, eſpecially when the Mothers fall ſick, or want Milk to nouriſh them. In the great Cities, ſuch as *Pe-king* and *Kanton*, this ſhocking Sight is very common; but very rare in other Places: Others get the Mid- b wives to ſtifle the new-born Females in a Baſon of Water. The ſame Miſery produces a prodigious Multitude of Slaves, or rather Perſons, who mortgage themſelves with a Condition of Redemption. A great Number of Men and Maid-Servants are thus bound in a Family; though there are ſome who are hired, as in *Europe*. A Man ſometimes ſells his Son, and even himſelf, and Wife, at a very moderate Price: But, if he can, he chuſes to pawn his Family only [b].

Great Poverty of many.

Habit of Men. THE Garb of the Men is ſuited to the Gravity they affect: It conſiſts in a long Veſt, extending to the Ground, one of whoſe Lappets folds over the other, the upper one reaching to the right Side, where it is faſtened with four or five Gold or Silver Buttons, not far aſunder. The Sleeves, which are wide towards the Shoulder, grow narrower gradually towards the Wriſt-bands, and end in the Shape of an Horſe-ſhoe, covering all their Hands, except the Ends of their Fingers [c]. They gird themſelves with a broad Silver Saſh, whoſe Ends hang down to the Knee; and faſten to it a Caſe, containing a Purſe, a Knife, and two ſmall Sticks, which ſerve for a Fork, *&c.* Formerly the *Chineſe* did not carry a Knife; and to this Day the *Literati* very rarely do.

Summer Wear. IN Summer they wear under the Veſt a Pair of Linen Drawers, which they ſometimes cover with another Pair made of white Taffety; and, during the Winter, they put on Breeches of Satin, quilted with Cotton, or raw Silk: But if it be in the Northern Parts, they are made of Skins, which are very warm. Their Shirts (being of different Kinds of Cloth, according to the Seaſon) are very wide and ſhort; and many, to keep their Garments from Sweat in Summer, wear next their Skin a ſilken Net, which hinders their Shirt from ſticking to the Body. During f this laſt Seaſon, they go with their Neck quite bare; but in Winter wear a Collar, made either of Satin, or Sable, or the Skin of a Fox, faſtened to their Veſts: Theſe Veſts too are then lined with Sheep-ſkin, or quilted with Silk and

[a] *Du Halde*'s *China*, p. 280. [b] The ſame, *p.* 277, *& ſeq.* Alſo *Magalhaens*'s Relation of *China*, p. 121. [c] They ſerve for Gloves, or Muffs; gathering their Hands within their Sleeves in cold Weather.

Cotton. People of Quality line them quite through with the rich Sables, or fine Fox-ſkin, with a Border of Sable: In Spring they have them lined with Ermin. Over the Veſt they wear an Out-coat, with ſhort Sleeves, lined or bordered after the ſame Manner.

ALL Colours are not ſuffered to be worn indifferently: None but the Emperor and Princes of the Blood may wear yellow. Satin, with a red Ground, is affected by certain *Mandarins* on Days of Ceremony; but they are commonly b dreſſed in black, blue, or violet; and the People are generally clad in blue, or black Calico.

HERETOFORE they oiled their Hair very much; and were ſo exceeding fond of this Ornament, that many choſe to die, rather than ſhave their Heads after the *Tartarian* Faſhion. However, at preſent, they let Hair enough grow on the Hind-part, or Top of the Head, to braid into Treſſes [a].

IN Summer they wear a Kind of ſmall Hat, or c Cap, ſhaped like a Funnel: It is covered on the Outſide with Rattan, very curiouſly worked, and lined with Satin. At the Top is a large Lock of Hair, which ſpreads over it to the very Edge. This Hair, which is mighty fine and light, grows on the Legs of a certain Kind of Cows, and is dyed of a very bright Red. There is another Sort of Cap proper to the *Mandarins* and *Literati*, which the People dare not wear: It is of the ſame Faſhion with the former, but d made of Paſte-board, lined on the Inſide commonly with red, or blue Satin: The Outſide Satin is white, covered with a large Lock of the fineſt red Silk. People of Diſtinction often make uſe of the firſt Sort, eſpecially when they ride, or in foul Weather; becauſe it keeps out Rain, and defends the Head, both before and behind, from the Sun. In Winter they wear a very warm Sort of Cap, edged with Sable, Ermin, or Fox-ſkin, covered at Top with a Lock of red Silk. This e Edging of Fur is two or three Inches broad, and looks very handſome, eſpecially when made of the fine, black, ſhining Sable.

THE *Chineſe*, eſpecially thoſe of any Quality, dare not appear in public without Boots: Theſe are generally of Silk, particularly Satin, or of Calico, and fit exactly; but have neither Tops, nor Heels. When they travel on Horſeback, they are made of Neats, or Horſe-Leather, ſo well dreſſed, that nothing can be more pliable. f Their Boot-Stockings are made of Stuff, ſtitched and lined with Cotton, whereof Part comes above the Boot, and has a broad Border of Pluſh, or Velvet: But theſe, though very good for keeping the Legs warm in Winter, are almoſt intolerable in hot Weather. They have therefore another cooler Sort; but the People, often, to ſave Expence, have ſomething of this Kind made of black Cloth. Perſons of Quality wear ſuch in their Houſes, made of Silk; which are very neat and handſome. *Qualities. Dreſs.*

WHEN they go abroad, or make a Viſit of any Conſequence, over their under Garments, which are uſually of Linen, or Satin, they wear a long Silk Gown, commonly blue, with a Girdle about them; and, over all, a ſhort Coat of black or violet Colour, reaching only to their Knees, but very wide, with large and ſhort Sleeves: Alſo a little Cap, ſhaped like a ſhort Cone, and covered with looſe waving Silk, or red Hair; laſtly, Stuff-Boots on their Legs, and a Fan in their Hand [b]. *Viſiting Habits.*

As to the Female Sex, nothing adds more to the natural Charms of the *Chineſe* Ladies than the uncommon Modeſty which appears in their Looks and Dreſs. Their Gowns are very long, and cover them from Head to Foot; ſo that nothing is ſeen but their Faces. Their Hands are always hid within their wide Sleeves, which would almoſt drag on the Ground, if they did not take Care to hold them up. The Colour of their Garment is either red, blue, or green, according to their Fancy; only, ſcarce any but Ladies advanced in Years wear Violet or Black. They walk ſlowly and gingerly, with their Eyes upon the Ground, and the Head on one-ſide; ſo that they look like Nuns, or Devotees, by Profeſſion: But their Treading is unſure, and their Gait diſagreeable to Foreigners. This is owing to the forced Littleneſs of their Feet; binding them very cloſe to prevent their growing. This Inconveniency they improve as they grow-up; reckoning ſmall Feet an extraordinary Beauty, and always affecting to ſhew them as they walk. *Women's Dreſs.*

THE *Chineſe* themſelves are not certain what gave Riſe to this odd Cuſtom. That the Ancients brought little Feet in Faſhion, to oblige their Wives to keep at Home, is looked upon as fabulous by ſome. Moſt of them judge it to have been a politic Deſign, to keep the Women in continual Subjection [c]. It is certain, that they are extremely confined, and ſeldom ſtir out of their Apartment, which is in the moſt retired Place of the Houſe; having no Communication with any but the Women Servants. However, they have, generally ſpeaking, the common Vanity of the Sex; and though they are not to be ſeen by any but their Domeſtics, they ſpend ſeveral Hours, *Little Feet.*

[a] Theſe were called by the *Portugueze*, *The* Chineſe *of* Cabelo, or *of the Hair*. They followed *Koxinga*. See Vol. III. *p.* 501. a. [b] *Du Halde's China*, p. 282, *& ſeq.* Alſo *Le Comte's* Memoirs of *China*, p. 132.
[c] Why might it not be owing to Fancy, ſince ſmall Feet are almoſt every-where liked?

every

Inhabitants. Ceremonies, every Morning, in dreſſing and ſetting themſelves out. It is affirmed, that they rub their Faces with a Kind of Meal to make them look fair; but, that this Practice ſoon ſpoils their Skin, and makes it full of Wrinkles.

Their Head-Attire. THEIR Head-Dreſs uſually conſiſts in ſeveral Curls, interſperſed with little Tufts of Gold and Silver Flowers. Some adorn their Heads with the Figure of the *Fong-whang*, a fabulous Bird [a], made of Copper, or Silver, gilt, according to the Quality of the the Perſon. Its Wings are ſtretched gently over the fore Part of their Head-Dreſs, and embrace the upper Part of their Temples. Its long ſpreading Tail makes a Sort of Plume on the Top of the Head. The Body is placed over the Forehead. The Neck and Beak hang down upon the Noſe: But the Neck is joined to the Body by a ſecret Hinge, that it may eaſily play and vibrate at the leaſt Motion of the Head; whereon the Bird is ſupported by the Feet, fixed in the Hair. Women of the firſt Quality ſometimes wear an Ornament of ſeveral of theſe Birds, interwoven together, which forms a Sort of Crown; the Workmanſhip whereof alone is very coſtly.

Paſteboard Crown. THE young Ladies commonly wear a Kind of Crown made with Paſteboard, and covered with a beautiful Skin. The fore Part riſes in a Point above the Forehead, and is covered with Pearls, Diamonds, and other Ornaments. The Top of the Head is adorned with natural or artificial Flowers, mixed with little Bodkins, bearing Jewels on their Points. Women who are advanced in Years, eſpecially thoſe of the ordinary Sort, are contented with a Piece of very fine Silk, wound ſeveral Times about the Head; and called *Pau-tew*, that is, *A Wrapper for the Head.*

THE Faſhion, as to Dreſs, among the *Chineſe*, had been always the ſame, from the Commencement of the Empire to its Conqueſt by the *Tartars*; who changed nothing of their ancient Uſages, except in obliging them to dreſs after their Manner [b].

Surpriſing Neatneſs. *MAGALHAENS* obſerves, that this Nation ſurpaſſes all others in the Care which they take of their Garments; the meaneſt Body, though ever ſo poor, being decently clad, and in the Faſhion. It is ſurpriſing, continues he, to ſee them all, even the moſt miſerable, upon the firſt Day of the Year, in their new Cloaths, ſprucely dreſſed [c].

SECT. II.

Ceremonies *obſerved in their* Salutations, Compliments, *and* Viſits.

Fine Notion of Civility. Fixed Rules of Behaviour, binding on all. A Tribunal of Rites. Salutation with Men: Among the Women: Among the Quân: *And the common People. Complimental Terms. Form of Viſiting. Viſiting Billet. Viſits from one* Quân *to another. The ſeveral Formalities: From an Envoy: Order of his Proceſſion: Reception given him: Preſents made him: Form obſerved in receiving them. Formality in writing and ſending Letters.*

THERE is nothing in which the *Chineſe* ſeem more exact than in their Ceremonies and Compliments; being perſuaded, that a due Attention, in performing the Duties of Civility, goes farther than any Thing elſe, to purge the Mind of its innate Roughneſs, to infuſe a Sweetneſs of Temper, and to maintain Peace, good Order, and Subordination, in a State [d]. Among their Books, containing the Rules of Civility, there is one which has upwards of three thouſand [e]; every Thing being ſet down at large. The common Salutations, the Viſits, the Preſents, the Feaſts, and whatſoever is done in public or private, are, rather, ſo many ſtanding Laws, than Faſhions gradually introduced by Cuſtom.

THE Ceremonial is fixed for the Behaviour of all Degrees of Perſons towards one another, when they have any Buſineſs either with their Equals or Superiors. The Grandees know the Reſpect due from them to the Emperor and the Princes, and in what Manner they ought to behave to each other. Even the Mechanics, the Peaſants, and the very Dregs of the People, perform all the Formalities preſcribed them; and, in their Meetings, obſerve Politeneſs and Complaiſance. No Perſon whoever can diſpenſe with theſe Rules, pay leſs Reſpect, or exact more than they require.

WHEN the Body of the late Empreſs was carrying to be interred, one of the Princes of the Blood calling a *Ko-lau* to ſpeak with him, the *Ko-lau* approached; and having anſwered him on his Knees, the Prince left him in that Poſture, without bidding him riſe. Next Day, a *Ko-li* accuſed the Prince, and all the *Ko-lau's*, before the Emperor: The Prince, for ſuffering ſuch a conſiderable Officer to appear before him in ſo

[a] Like the *Phœnix*, among the *Greeks*. [b] *Du Halde's China*, p. 281, *& ſeq.* See alſo *Le Comte's* Memoirs of *China*, p. 125, *& ſeq.* [c] *Magalhaens's* Relation of *China*, p. 102. [d] This ſeems to be a ſelf-evident Maxim, and not to want any Example to ſupport it. [e] So alſo *Magalhaens*, as before, p. 101.

humble

humble a Poſture: The *Ko-lau's*, chiefly him who kneeled down, for diſhonouring the higheſt Poſt in the Empire; and the reſt, for not oppoſing, or, at leaſt, giving the Emperor Notice of it. The Prince excuſed himſelf, in that he was ignorant of what Cuſtom or the Law directed in the Caſe, and did not require that Submiſſion. But the *Ko-li*, in Anſwer, alledged a Law of an ancient Dynaſty.

HEREUPON, the Emperor ordered the *Li-pû* (or Tribunal of Ceremonies) to ſearch for ſuch Law in the Archives; and, in Caſe it could not be found, to make a Rule on that Head, which might take Place for the future. It is the principal Buſineſs of that Tribunal to preſerve the Ceremonies of the Empire; even Strangers are not exempted from the Obligation. Before Ambaſſadors are introduced to Court, the Cuſtom is to inſtruct them privately for forty Days together, and exerciſe them in the Ceremonies of the Country; like ſo many Comedians rehearſing their Parts before they come to act on the Stage.

ALMOST the whole of theſe Ceremonies may be reduced to the Manner of bowing, kneeling down, and proſtrating one or more Times, according to the Occaſion, Place, Age, or Quality of the Perſons; eſpecially in viſiting, making Preſents, or treating Friends.

THE common Way of Saluting, for the Men, is, to clap the Hands together before the Breaſt, moving them in an affected Manner, and to bow the Head a very little, ſaying, *Tſin-tſin*; which is a Word of Compliment, of an unlimited Signification. When they meet a Perſon, to whom they ought to pay greater Deference, after joining their Hands, they firſt lift them up, and then let them fall almoſt to the Earth, bowing their Body very low at the ſame Time. When two Perſons, who are acquainted, meet, after a long Separation, they both fall on their Knees, and bow to the Earth; then riſing again, perform the ſame Ceremony two or three Times. They commonly make uſe of the Word *Fo* in their Civilities. If any Perſon is newly-arrived, the firſt Queſtion they aſk him, is *Na-fo*, that is, *If all Things have happened well in his Journey?* When they aſked, how they do, they reply, *Kau-lau-ye-hung-fo*, *Very well, Thanks to your abundant Felicity:* When they ſee a Man who is in Health, they accoſt him with *Yung-fo*; which is as much as to ſay, *Proſperity is painted on your Face*, or, *You have a happy Countenance.*

IN the Beginning of the Monarchy, when Simplicity reigned, Women were permitted, in making a Curteſy to a Man, to uſe the Words *Van-fo*, that is, *All Happineſs* or *good Luck attend you.* But when the Purity of Manners began to corrupt, this Sort of Addreſs was not thought decent in the Sex; whoſe Salute was confined to the mute Curteſy: And, to deſtroy the Cuſtom entirely, they were not permitted to ſay the Words even in ſaluting one another. *Their Compliments.*

AMONG the common People, the chief Place is conſtantly given to the moſt aged: But if there are Strangers, it is beſtowed on him who lives fartheſt off; unleſs his Rank or Quality requires it to be otherwiſe. In thoſe Provinces where the right Hand is moſt honourable, (for in ſome the left is ſo) they never fail to give it.

WHEN two *Quân*, or *Mandarins*, meet in the Street, if their Rank be equal, they ſalute, (without either leaving their Chair, or riſing) by letting fall their joined Hands, and then lifting them up to the Head; which they repeat ſeveral Times, till they are out of each other's Sight. But if one of them be of an inferior Rank, he muſt ſtop his Chair, or alight, if he is on Horſeback, and make a profound Reverence: For which Reaſon, the Inferiors avoid ſuch Rencounters as much as poſſible. *Among the Quân,*

NOTHING is comparable to the Reſpect which Children have for their Parents, and Scholars for their Maſters; ſpeaking little, and always ſtanding in their Preſence. Their Cuſtom is, eſpecially at the Beginning of the Year, their Birth-Days, and on ſeveral other Occaſions, to ſalute them on their Knees, knocking their Foreheads ſeveral Times againſt the Ground.

REGARD is had to the Rules of Civility, no leſs in the Villages, than the Cities; and whether they are walking and converſing together, or ſaluting each other, they always make uſe of the moſt humble and reſpectful Terms. When, for Example, one takes any Pains to pleaſe them, *Tey-ſin*, they ſay, *You are laviſh of your Heart:* If you have done them any Service, the Expreſſion is, *Sye-pû-tſin*, *My Thanks can never have an End:* If they hinder a Perſon never ſo little, who is buſy, *Fan-lau*, ſay they, *I am very troubleſome: Te-tſwi, I have committed a great Fault in taking this Liberty:* When one is before-hand in doing them a Kindneſs, they cry, *Pû-kan, Pû-kan, Pû-kan, I dare not, I dare not, I dare not*; that is to ſay, *ſuffer you to take ſo much Trouble on my Account:* If you ſpeak the leaſt in their Praiſe, they reply, *Ki-kan, How dare I!* meaning, *How dare I believe the Things you ſay of me!* When they take Leave of a Friend, who has been at Dinner with them, they ſay, *Yew-man*, or *Tay-man*; *We have received you after a very ordinary Manner*; *we have treated you after a very ordinary Manner.* *And common People.* *Complimental Terms.*

UNLESS they are talking familiarly to intimate Friends, or to Perſons of an inferior Rank, they never ſpeak in the firſt, or ſecond Perſon: For to ſay, *I* and *you*, would be a groſs Incivility; wherefore, inſtead of, *I am very ſenſible of the Service that you have done me*, they will ſay,

The

Inhabitants. Ceremonies. *The Service which the Lord*, or *the Doctor*, *has done for his meaneſt Servant*, or *his Scholar*, *has ſenſibly affected me.* In the ſame Manner, a Son ſpeaking to his Father, will call himſelf his Grandſon, though he is the eldeſt Son of the Family, and has Children himſelf. They often make uſe of their proper Names, to teſtify their great Reſpect; for they have ſeveral Names, ſuitable to their Age and Rank [a]. Nor does any Nation equal them in the Multitude and Variety of honourable Titles beſtowed in their Compliments, which cannot be expreſſed in any *European* Language, for want of correſpondent Terms [b].

Form of Viſiting. ONE Article of the *Chineſe* Politeneſs, is to pay Viſits on Birth-Days, the Beginning of the New Year, the Feſtivals, at the Birth of a Son, when one of the Family marries, is raiſed to ſome Office, takes a long Journey, or dies, *&c.* Theſe Viſits, which are obligatory on all, (eſpecially Scholars, towards their Maſters, and *Mandarins*, towards thoſe they depend on) are commonly accompanied with Preſents, though frequently of no great Value. As for common Viſits, though made between Intimates, without Formality, yet Cuſtom, and the Law oblige others to perform a great many Ceremonies.

Viſiting Billet. THEY muſt begin their Viſit, by delivering the Porter a Billet, called *Tye-tſe*; which conſiſts of a Sheet of red Paper, ſlightly embelliſhed with Flowers of Gold, and folded-up like a Screen. On one of the Folds is written their Name, with the Addition of ſome reſpectful Terms, according to the Rank of the Perſon: They ſay, for Inſtance, *The tender and ſincere Friend of your Lordſhip, and the perpetual Diſciple of your Doctrine, preſents himſelf, in this Quality, to pay his Duty, and make his Reverence even to the Earth*; which they expreſs by theſe Words, *Tun-ſhew-pay*. When the Perſon viſited is a familiar Friend, or an ordinary Body, common Paper will ſerve; only if he be in Mourning, it ought to be White.

Viſits from one Quân ALL Viſits to a Governor, or other Perſon of Diſtinction, muſt be made after Dinner; for the Perſon ought, at leaſt, to abſtain from Wine: Becauſe it would ſhew want of Reſpect, for any one to appear before a Man of Quality with a Countenance which diſcovered he had been drinking; and the *Mandarin* would be offended, if he ſmelled of Wine. However, when you pay a Viſit the ſame Day you receive one, it may be done after Dinner; for then it is a Sign of your Haſte to honour the Perſon who viſited you.

To another. A *Mandarin* ſometimes contents himſelf with receiving the *Tye-tſe* from the Porter (which is the ſame as if he received the Viſit in Perſon) and deſiring the Viſitor, by a Servant, not to be at the Trouble to alight from his Chair: Then on the ſame Day, or one of the three following, he goes to return the Viſit. If the Viſitor be a Perſon of equal Diſtinction, as a *Mandarin* nearly of the ſame Order with another, his Chair is permitted to paſs through the two firſt Courts of the Tribunal, which are very large, as far as the Entrance of the Hall, where the *Mandarin* comes to receive him. When you enter the ſecond Court, facing the Hall, you find two Domeſtics, who ſometimes hold the Umbrella, and great Fan, belonging to the *Mandarin*, inclining toward each other, in ſuch a Manner, that you can neither ſee the *Mandarin* advancing, nor be ſeen by him. When you have alighted from the Chair, your Domeſtic withdraws; the great Fan that likewiſe concealed your Perſon is withdrawn, and then you are at a proper Diſtance from the *Mandarin*, to pay your Reverence.

AT this Diſtance begin the Formalities, which are ſet down, at Length, in the *Chineſe* Memorial; where you may find the Number of Bows that you are to make; the Expreſſions you are to uſe; the Titles that you are to give; the mutual Genuflections; the ſeveral Turnings you are to make, ſometimes to the Right, ſometimes to the Left; (for the Place of Honour is different in different Places;) the ſilent Geſtures, by which the Maſter of the Houſe invites you to enter; for he ſays nothing but *Tſin-tſin*; the decent Refuſal to enter firſt, by ſaying *Pû-kan*, *I dare not*; and the Salutation that the Maſter of the Houſe is to make to the Chair you are to ſit in; for he muſt bow reſpectfully before it, and duſt it lightly with the Skirt of his Garment.

As ſoon as you are ſeated, you are to declare, in a grave and ſerious Manner, the Occaſion of your Viſit; and you are anſwered with the ſame Gravity, and a great many Bows. You are likewiſe to ſit upright in your Chair, without leaning againſt the Back; to look down a little, without turning your Eyes either to one Side, or the other, having your Hands ſtretched out upon your Knees, and your Feet placed exactly even. After a Moment's Converſation, a Servant, finely dreſſed, comes in, bringing as many Diſhes of Tea as there are Perſons; and here again you muſt be very careful to obſerve the Forms in taking the Diſh, in putting it to your Mouth, and in returing it to the Servant. At length the Viſit being ended, you withdraw, making uſe of other Ceremonies. The Maſter of the Houſe conducts you to your Chair, and, when you are entered, advances a little, waiting till the Chairmen have taken it up; then being ready to de-

[a] *Du Halde's China*, p. 291, *& ſeqq.*

[b] *Magalhaens's* Relation of *China*, p. 102.

part, you bid him adieu; and he returns an Answer to your Civility.

WHEN a *King-chay*, or Envoy [a] from the Court, pays a Visit to the chief *Mandarins* of the Cities, through which he passes; at setting out, about thirty Persons go before his Chair, marching two in a Rank, some with Copper Basons in their Hands, which they beat, at Times, like a Drum: Some carry Colours, and others small japanned Boards, whereon are written, in large Characters of Gold, *King-chay-ta-jin*, that is, *the Lord* [b], *the Envoy from the Court*. Some bear Whips in their Hands, others Chains: Many carry on their Shoulders, certain Instruments, painted with Variety of Figures, and gilt; some in the Form of huge Crosses, with Dragons Heads at the Top; and others like Vergers Staves. Among the rest, there are some with high Caps, of red Felt, in Form of a Cylinder, from which hang down two large golden Feathers; whose Business it is to call to People in the Streets, to clear the Way. At the Head of this Cavalcade is a Porter, or inferior Officer of the Tribunal, who carries, in a large Letter-Case, the *Tye-tse*, or *visiting Billets*, prepared for all the *Mandarins*, and other Persons of Distinction, whom the *King-chay* designs to visit. On each Side of the Chair walk two, or four of his Domestics, finely dressed, and several others close the March; for all the rest are occasionally hired to attend him, while he stays in the City. Besides, there are fifteen who never stir from the House; six wait at the Door with Hautboys, Fifes, and Drums, as if hired to deafen the Neighbourood with the Noise of their Instruments, striking-up every Time any Person of Distinction goes in or out. The rest are employed within Doors.

THE Reader may form a just Notion of the Manner, wherein the *Mandarins* are to receive an Envoy from the Court, from the Reception given to *Bouvet*, the Jesuit, at *Nan-chang fu*; of which an Account has been already inserted [c]: But there must be added, two or three Particulars to make it compleat. 1. That before they went on board the Bark to cross the Water, the under Secretaries of the Vice-Roy, and great *Mandarins*, came to meet them, and presented the *Tye-tse*, or Billets of Complement, on Behalf of their Masters. 2. That after the Regale with Tea, the Vice-Roy, and the General, rising-up with the rest of the Company, presented the Envoy with Billets of the Presents, they were obliged to make them, of Provisions to put into their Barks, and then invited them to sit at Table. *Visits. Presents.*

3. That a little Time after the Envoys had re-embarked, the chief *Mandarins* sent them visiting Billets, and came presently themselves, one after another. The Governour of the City, accompanied by the Presidents of the two inferior Tribunals, followed the Example of the chief *Mandarins*; and their Visits were attended with as many *Li-tan* [d], or Lists of the Presents, which they were to make of Provisions and Refreshments.

IN their Passage by Water, instead of Tables covered with Victuals, which the *Mandarins* of all the Cities keep in Readiness to regale the *King-chay*; the Custom is, to send the same Sort of Provisions on board the Bark that accompanies him. One may judge of the Nature of these Presents, by that of the Vice-Roy, *viz.* two Measures, or Bushels, of fine white Rice; two Measures of Meal, one Hog, two Geese, four Fowls, four Ducks; two Bundles of Sea-Herbs, two of Stags Pizzles, which, when picked and dried, are deemed in *China* exquisite Eating; two of the Entrails of a certain Sea-Fish, two more of dried *Me-yu*, or Ink-Fish, and two Jars of Wine. The Presents of the other *Mandarins* were much the same. There is no Occasion to make any other Provision on board the Barks, because there is more than enough for the Envoy and all his Attendants. *Presents made him.*

WHEN he, who makes the Present, comes in Person, after the common Civilities, he offers you the Billet; which you take from him, and give to one of your Servants to keep; making a low Bow by Way of Acknowledgment. The Visit being over, you read the List, and take what you think proper: If you accept of every Thing set down, you keep the Billet; and sending another immediately to return Thanks, acquaint him, that you accept of the Whole: If you detain but Part, you mention the Particulars in the Billet of Thanks; and in Case you keep nothing at all, you send back the Billet and the Present, with a Billet of Thanks; upon which you write *Pi-sye*, that is, *These are precious Pearls, I dare not touch them.* *Form observed in*

IF the Donor thinks fit only to send the Present by his Servants, or, if he sends the Things with the Billet, then you observe the same Ceremonies as when he offers them in Person. But in Case he transmits the Billet before the Things are purchased, intending to buy those you pitch-on, you take a Pencil, and make Circles on the Things you accept of; which being immediately bought and sent, you write a Billet of Thanks, *Receiving them.*

[a] This is, properly, no more than a State-Messenger, only invested with greater Authority; and, for Dignity Sake, qualified with the Name of *Envoy*. [b] Or, *The great Man*. [c] See Vol. III. *p.* 544.
[d] This is a Piece of red Paper, like the *Tye-tse*; whereon is written the Name of him who offers it, and a List of Particulars.

Ceremonies. Cuſtoms. and mention what you have received; adding, a *Yu-pi*, that is, *The reſt are precious Pearls.* On ſeveral Occaſions, as in the Beginning of the Year, in the fifth Moon, *&c.* when you accept of a Preſent, Complaiſance requires you ſhould ſend another in Return. When it comes from a Perſon conſiderable, either by Birth or Office, the Receiver makes a low Bow before it.

Formality in writing EVEN the Letters, that are written by private Perſons, are ſubject to a great Number of Formalities; which often puzzle the *Literati* themſelves. If you write to a Perſon of Diſtinction, you are obliged to uſe white Paper, with ten or twelve Folds, like a Screen; they are to be accompanied with little Bags, and Slips of red Paper. You begin to write on the ſecond Folding, and put your Name at the End. A great deal of Pains muſt be taken about the Stile; which ought to be different from that uſed in common Converſation. Regard muſt alſo be had to the Character; for the ſmaller the Size, the more reſpectful. There are proper Diſtances to be kept between the Lines; and Titles to be made uſe of, according to the Rank and Quality of the Perſons. The Seal, if any be uſed, is put in two Places; that is, over the Name of the Perſon who writes, and over the firſt Words of the Letter; but they are uſually contented with putting it on a little Paper Bag which incloſes it. If the Writer is in Mourning, he puts a Slip of blue Paper over his own Name.

And ſending Letters. THE Letter being put into the Bag, they paſte a Slip of red Paper on the Middle of it, the Length of the Letter, and two Inches broad, writing thereon *Nwi-han*, that is, *The Letter is within.* They then put it into a ſecond Bag of thicker Paper, with a Band of red Paper, as before, on which they ſet down, in large Characters, the Name and Quality of the Perſon to whom the Letter is addreſſed; and on the Inſide, in ſmaller Characters, the Province, City, and Place of his Abode. The Openings at the Top and Bottom of this ſecond Bag are neatly paſted together, and the Seal impreſſed on both Ends, with theſe Word, *Hû-fong*, that is, *guarded and ſealed*; alſo, between the Seals, they write, from Top to Bottom, the Year and Day on which the Letter is delivered. When the *Mandarins* ſend Diſpatches to Court, that require more than ordinary Expedition, they faſten a Feather to the Packet; and then the Courier is obliged to travel Night and Day without ſtopping [a].

SECT. III.

Their Feaſts *and* Entertainments.

Form of Invitation. Tables, how ſet out. Compliments uſed, before ſitting down. Comedy acted. Nature of their Plays. Order of ſerving the Feaſt, and the Deſert. Money gathered for Servants. A Vice-Roy's Feaſt: Perſons invited: Manner how received: Ceremonies on ſitting down: Tables how ranged. Evening Entertainment: Concert of Muſic: Order of the Feaſt: Diſhes and Courſes. Chineſe *Broths and Cooks excellent. Hogs and Mares Fleſh. Stags Pizzles. Bird's Neſts. Bear's Paws Dainties. Dogs, Cats, and Rats, eaten. Rice Bread. Kidney-Bean Paſte. Rice Wine, how made. Mutton-Brandy, and Lamb-Wine.*

THE *Chineſe* Politeneſs is, on all Occaſions, very troubleſome and diſguſtful to the rough and unpoliſhed *Europeans*; but in nothing ſo much as in their Feaſts: For the Whole is made up of Ceremonies and Compliments. Theſe Entertainments are of two Sorts; the ordinary, conſiſting of about twelve or ſixteen Diſhes; and the more ſolemn, which require twenty-four upon each Table, as well as more Formalities. When the Ceremonial is punctually obſerved, three *Tye-tſe*, or Billets, are ſent to thoſe who are invited. The firſt Invitation is made the Day, or two Days, before the Feaſt; but this laſt is rare: The ſecond, in the Morning of the Feaſt-Day, to put the Gueſts in Mind, and intreat them not to fail coming: And the third, when every Thing is ready; and the Maſter of the Houſe is diſpoſed, by a third Billet, carried by one of his Servants, to let them know, he is extremely impatient to ſee them.

THE Hall, wherein the Feaſt is ſerved-up, is commonly adorned with Flower-Pots, Pictures, *China* Ware, and ſuch-like Ornaments. There are as many Tables as Perſons invited; unleſs the Number of Gueſts obliges them to ſet two at a Table; for they rarely put three at theſe great Feaſts. Theſe Tables are ranged in a Row, on each Side the Hall; and the Gueſts placed ſo as to face each other, ſitting in their Arm-Chairs. The fore Part of the Tables is ſet-off with Silk Ornaments of Needle-work, reſembling thoſe belonging to *Romiſh* Altars; and though there are neither Table-Cloths nor Napkins, the curious Japanning makes them look very neat. The Ends of each Table are often covered with ſeveral great Diſhes loaded with Meats ready carved, and piled up like a Pyramid, with Flowers and large Citrons on the Top. But theſe Pyramids are never touched, being only for Ornament, like the Figures made of Sugar, at Feaſts in *Italy*.

WHEN he who gives the Entertainment introduces his Gueſts into the Room, he ſalutes them

[a] *Du Halde's China*, p. 295, *& ſeqq.*

them all, one after another; and then calling for a Wine in a ſmall Cup, either of Silver, precious Wood, or Porcelain, placed on a little japanned Salver, he takes it with both Hands, and, bowing to all the Gueſt, turns his Face towards the great Court of the Houſe, and advances to the fore Part of the Hall; then, lifting up his Eyes and Hands with the Cup, pours the Wine on the Ground, by Way of acknowledging, that whatever he is poſſeſſed of, is the Gift of Heaven. He next cauſes Wine to be poured into a *China* or Silver Cup; and, after making a Bow to his principal Gueſt, places it on the Table where he is to ſit. The Gueſt returns this Civility by endeavouring to hinder him from taking the Trouble; and, at the ſame Time, cauſing Wine to be brought in a Cup, advances a few Steps, as though he would carry it to the Place of the Maſter of the Feaſt, which is always the lowermoſt; and who, in Return, prevents him, with certain common Terms of Civility. Immediately after, the Steward brings two ſmall Ivory Sticks, (called *Quay-tſe*; and by the *Engliſh*, *Chop-Sticks*) adorned with Gold or Silver, which ſerve inſtead of Forks, and places them on the Table, in a parallel Poſition, before the Chair, if there were not any placed before, as there uſually are. This done, the Hoſt [a] leads the chief Gueſt to a Chair, which is covered with a rich Carpet of flowered Silk; and then making another low Bow, invites him to ſit: But the Gueſt does not comply, till after a great many Compliments, excuſing himſelf from taking ſo honourable a Place. He next prepares to do the ſame to all the reſt; but they will by no Means ſuffer him to take ſo much Trouble.

ALL theſe Ceremonies being over, they ſit down to the Table; at which Inſtant, four or five principal Comedians, in rich Dreſſes, enter the Hall, and make low Bows all together, knocking their Foreheads four Times againſt the Ground. This they perform in the midſt of the two Rows of Tables, with their Faces towards a long Table [b], ſet out like a Buffet, full of Lights and perfuming Pans. Then riſing up, one of them preſents a long Book, containing, in Letters of Gold, the Names of fifty or ſixty Plays, which they have by Heart, for the principal Gueſt to chooſe one. He refuſes, and ſends it to the ſecond, with a Sign of Invitation; the ſecond to the third, and ſo on. But they all make Excuſes; and returning him the Book, he, at laſt, conſents, opens it, runs it over with his Eyes in an Inſtant, and pitches on the Play which he thinks will be moſt agreeable to the Company; who being ſhewed the Title by the Comedian, they teſtify their Approbation by a Nod. If there ſhould be any Thing in it liable to Objection, ſuch as one of the principal Perſons in the Play having the ſame Name with one of his Auditors, or the like, the Actor ought to apprize the Chooſer of it. *Entertainments.*

THE Repreſentation begins with the Muſic; which are Baſſoons of Braſs or Steel, whoſe Sound is harſh and ſhrill; Drums of Buffalo-Skins, Flutes, Fifes, and Trumpets, whoſe Harmony can charm none but *Chineſe*. There are no Decorations for theſe Banquet-Plays. They only ſpread a Carpet on the Floor; and the Comedians make uſe of ſome Rooms near the Balcony, from whence they enter to act their Parts. There are commonly a great Number of other Spectators in the Court, let-in by the Servants: And the Ladies, who are willing to be preſent, are placed out of the Hall over-againſt the Comedians; where, through a Lattice made of Bambû, and a Sort of ſilken Net, they ſee and hear all that paſſes, without being ſeen themſelves. *Nature of their Plays.*

AS the Feaſt always begins with drinking unmixed Wine, the Steward, on one Knee, ſays to all the Gueſts, with a loud Voice, *Tſing Lau ya, men kyu poy*, that is, *You are invited, Gentlemen, to take the Cup*. On this, every-one takes his Cup in both Hands; and having firſt moved it up to his Head, and then down below the Table, they all put it to their Mouths at once, and drink ſlowly three or four Times; the Maſter all the while preſſing them to drink it up after his Example; turning the Cup up-ſide-down, to ſhew that it is empty. Wine is ſerved two or three Times; and while they are drinking, on the Middle of each Table is ſet a *China* Diſh full of Meat ragou'd; ſo that they have no Occaſion for Knives: Then the Steward invites them to eat in the ſame Manner as he did to drink; and immediately every-one takes ſome of the Ragou very dextrouſly with his Chop-Sticks. When they have done eating of one Diſh, the Servants bring in Wine and another Diſh; and then the Steward invites them again to eat or drink. Twenty or twenty-four of theſe Diſhes are ſerved-up on each Table, with the ſame Ceremony every Time one is brought in, which obliges them to drink as often: But then they may do it as ſparingly as they pleaſe; beſides, the Cups are very ſmall. The Diſhes are nevrr taken away as they are done with; but continue on the Table till the Repaſt is over. *Order of ſerving*

BETWEEN every ſix or eight Diſhes they bring in Soop, made either of Fleſh or Fiſh, with a Sort of ſmall Loaves or Pies, which they dip into it with their Ivory Sticks: Hitherto no- *The Feaſt,*

[a] In the Original, it is the Steward, who ſeems to be confounded with the Maſter of the Houſe. [b] This muſt be placed at the upper End of the Hall.

Ceremonies. Customs.

thing is eaten but Fleſh. At the ſame Time they ſerve-up Tea, which is one of their moſt common Drinks, and taken hot as well as the Wine; the *Chineſe* never uſing to drink any Thing cold: For this Reaſon there are always Servants ready to pour hot Wine into their Cups out of Veſſels for the Purpoſe; and to put back that which is cold into others of *China*. In ſerving-up Victuals, the Waiters order it ſo as to place the twentieth or twenty-fourth Diſh on the Table juſt in the Time when the Comedy is to break-off. Afterwards, Rice, Wine [a], and Tea, is preſented. Then the Gueſts riſing, walk to the lower End of the Hall to pay their Compliments to the Maſter of the Feaſt; who conducts them into the Garden, or another Hall, to chat and reſt a little before the Fruit is brought in.

And the Deſert.

MEAN Time the Comedians take their Repaſt; and their Domeſtics are employed: Some, in carrying warm Water for the Gueſts to waſh their Hands and Faces, if they think fit; others, to take the Things off the Table, and prepare the Deſert; which likewiſe conſiſts of twenty or twenty-four Diſhes of Sweetmeats, Fruits, Jellies, Hams, ſalted Ducks dried in the Sun, which are delicious eating, and ſmall Dainties made of Things which come from the Sea. When all is ready, a Servant approaches his Maſter, and with one Knee on the Ground, in a low Voice acquaints him with it. He, as ſoon as every-one is ſilent, riſes up, and very complaiſantly invites his Gueſts to return to the Feaſt-Hall; where being come, they gather at the lower End; and after ſome Ceremonies about the Places, take thoſe they had before. Now bigger Cups are brought, and they preſs you mightily to drink large Draughts. The Play alſo is continued; or elſe, to divert themſelves more agreeably, they call for the Book of Farces, and each chooſes one, which he acts very gracefully. There is at this Service, as well as the former, five great Diſhes, for State, on the Sides of each Table; and while it laſts, the Servants belonging to the Gueſts go to Dinner, in a neighbouring Room, without any Ceremony.

Money gathered for Servants.

AT the Beginning of this Deſert, every Gueſt cauſes one of his Servants to bring, on a Salver, or in the Hand, ſeveral little Bags of red Paper, containing Money for the Cook, the Stewards, the Comedians, and thoſe who ſerved at the Table. They give more, or leſs, according to the Quality of the Perſon who made the Treat; but never any Thing, unleſs there is a Play. Every Domeſtic carries his Salver to the Maſter of the Feaſt [b]; who, after ſome Difficulty, conſents, and makes a Sign to one of his Servants to take, in order to diſtribute it. Theſe Feaſts, which laſt about four or five Hours, always begin in the Night, or when it grows duſkiſh, and do not end till Midnight; the Gueſts ſeparating, with the Ceremonies uſed in Viſits already deſcribed. The Servants, who wait on their Maſters, walk before the Chairs, carrying great Lanthorns of oiled Paper, whereon their Quality, and ſometimes their Names, are written in large Characters. The next Morning each of them ſends a *Tye-tſe*, or Billet, to thank him, who had entertained them ſo handſomely [c].

Entertainment.

BOUVET, the Jeſuit, was invited to one of theſe Feaſts at *Kanton* (when ſent by the Emperor to *Europe* [d]) along with *Tong-lau-ya*, and two other Miſſionaries, by the *Tſong-tû* of the Province [e]; who for that Purpoſe borrowed the Palace of the *Tſyang-kyung*, his uſual Reſidence being at *Chau-king fû*. Although the Ceremonies, obſerved at this Banquet, are nearly the ſame with thoſe already related; yet it was accompanied with many Singularities worth the Reader's Notice. The Place where the Feaſt was made, is a vaſt Edifice, at the Bottom of two great ſquare Courts, compoſed of three large Halls, one behind the other, which communicates, by Means of two long and wide Galleries, that have each their Courts on both Sides. The Hall in the Middle, where the Feaſt was made, which is the largeſt and fineſt of the three, was remarkable for the Length, and extraordinary Thickneſs of the Pillars, Beams, and all the Wood-Work in general.

A Vice-Roy's Feaſt.

ALL the General Officers of the Province were invited to this Feaſt, *viz.* Firſt, the Vice-Roy, the *Tſyang-kyun*, the two *Tû-tong*, and the *Yen-ywen* [f]: Next the chief *Mandarins* of the Cuſtoms; who, as they are changed every Year, bear the Title of *King-chay*, or Envoys of the Court. Laſtly, the *Pû-ching-tſe*, or Treaſurer-General, the *Ngan-cha-tſe*, and the *Tau*: Who, though General Officers, and very conſiderable, yet being inferior in Rank to the former, ſat in a different Line from them; that is, their Chairs were placed a little more behind: Which Diſtinction was obſerved alſo at Table.

Perſons invited.

THE Gueſts were received, at their Arrival, in the firſt Hall; the *Tſong-tû* going to meet the principal as far as the Staircaſe, to do them

Manner of receiving.

[a] In the Original, Wine, Rice, and Tea. [b] According to *Bouvet*, they lay them on a Table, commonly placed at the lower End of the Hall. [c] *Du Halde*'s *China*, p. 298, *& ſeqq.* [d] See Vol. III. *p.* 540. [e] The *Dutch* Ambaſſadors were treated ſplendidly, at *Kanton*, by the Vice-Roys: But the Account of the Entertainment is not circumſtantial enough to give a full Idea of the *Chineſe* Ceremonies. See Vol. III. *p.* 405. [f] This ſeems to be the Superintendant of the Salt.

Honour: They alſo advanced a few Steps, to meet the reſt as they arrived; who, to return the Civility, having firſt ſaluted the Maſter of the Feaſt in particular, and the Company in general; afterwards went, and ſaluted each in particular, according both to the *Tartarian* and *Chineſe* Manner; and received from them a like Number of Bows, with a ſurprizing Politeneſs. Theſe Ceremonies being over, they took their Places in the Elbow Chairs, ranged in two Lines, over-againſt each other, waiting for the reſt of the Gueſts; during which Time Tea was ſerved up, after the *Tartarian* and *Chineſe* Faſhions: That is to ſay, every one holding, in his right Hand, a Diſh of *Tartarian* Tea, made a low Bow to the Vice-Roy, both before and after they had drank. As for the *Chineſe* Tea, the Cuſtom is to take the Diſh in both Hands, and making a low Bow to touch the Ground therewith; then they drink it at ſeveral Sips, holding the Diſh in their left Hand.

WHEN all the Gueſts were come, they went out of the firſt Hall into the ſecond, or Feaſt-Room. On this Occaſion, many Bows were made, after the *Chineſe* Manner: Which done, the *Tſong-tû*, and chief *Mandarins*, following his Example, did the *King-chay* [a] the Honour to invite them to ſit at the uppermoſt Tables. After this, he approached to place a Cup of Wine and the Ivory Sticks on the Tables, firſt of *Bouvet*, and then of the other Gueſts; as is practiſed in the Feaſts made after the *Chineſe* Faſhion: Which Ceremony being over, each ſat down at the Table deſigned for him. Theſe Tables, ſixteen or eighteen in Number, were all ſquare, and japanned, in two Rows oppoſite to each other, and ſo diſpoſed, that the upper Tables, where the Perſons of chief Diſtinction ſat, were placed a little more forward than the reſt. They were all adorned before with violet-coloured Satin, embroidered with golden Dragons, with four Claws; and the Chairs, whoſe Arms and Back formed a Kind of Semicircle, in an oblique Poſition, covered with the ſame Sort of Furniture.

As this Feaſt was divided into two Parts, that in the Morning was conducted without much Formality; but the Evening Entertainment was accompanied with all the *Chineſe* Ceremonies. When the Gueſts went to this laſt, they found all their Tables double: That is to ſay, there was a ſecond Table placed before each, ſet with a Banquet for State-Sake; conſiſting of ſixteen Pyramids of Fleſh, Fruit, and other Sorts of Eatables, each a Foot and half high, all adorned with Painting and Flowers. Theſe, as ſoon as the Company ſat down, were all taken away, and at the End of the Feaſt diſtributed to the Servants belonging to the Gueſts; or rather to the Chairmen, and under Servants of the Tribunal. The other Table had, upon the Fore-part, a ſmall Stand, on which were a little Braſs perfuming Pan, a Box of Perfumes, a Vial of odoriferous Water, a Tube, or Horn, made of Agate, containing ſmall Inſtruments, to put the Incenſe into the perfuming Pan, and ſtir the Aſhes. At each of the two Fore-corners of the Table, was placed a ſmall japanned Board, named *Wey*, adorned on one Side with an Emblem, and on the other with ſome little Pieces of Poetry: The other Corners were furniſhed with three ſmall China Plates, full of Herbs, Pulſe, and Pickles, to procure an Appetite; between which there was a little Silver Cup on a Salver.

Entertainments.

THE Moment the Feaſt began, the Comedians appearing, the Head of them preſented *Bouvet* with the Liſts of Plays; but he excuſed himſelf from chuſing one, alledging, that Plays were not a Diverſion agreeable to Perſons of his Profeſſion. Hereupon the *Tſong-tû*, and reſt of the *Mandarins*, had the Complaiſance to content themſelves with a Concert of muſical Inſtruments; which playing methodically, by Intervals, regulated the Time of each Courſe. During the Feaſt, all the Motions and Words of the Company, as well of the Servants, were ſo very formal and affected, that an *European*, at firſt Sight, would be apter to take it for a Play, than a Feaſt, and have much ado to refrain from laughing.

Concert of Muſic.

THE Feaſt was divided into ſeveral Courſes, each opened by a Piece of Muſick. The Preludes to it, were two ſmall Cups of Wine, one after the other, containing about a Spoonful each; which two Maſters of the Ceremony, in the *Tſong-tû*'s Name, invited the Company to drink: They kneeled down in the Middle of the Hall, ſaying, very gravely, with a loud Voice, *Ta-lau-ya Tſing-tſyû*, that is, *My Lord invites you to drink*; and, after every one had drank Part of his Cup, he cried a ſecond Time, *Tſing-chau-kan*, *Drink it all, even to the laſt Drop*. This Ceremony is repeated, not only when there is an Occaſion to drink, but as often as a freſh Diſh is ſet on the Table, or touched by the Gueſts. As ſoon as the Diſh is placed, the two Maſters of the Ceremony kneeling down, invite them to take their *Quay-tſe* (or Chop-ſticks) and taſte the Victuals newly ſerved up; the *Tſong-tû*, at the ſame Time intreating them, they obey; and it is neceſſary to taſte of every Thing.

Order of the Feaſt.

THE principal Diſhes conſiſt of Ragous, Meats haſhed, or boiled (with divers Sorts of Herbs, or Pulſe) and ſerved up with the Broth in fine China Veſſels, of the ſame Size and Shape, almoſt as

Diſhes and Courſes.

[a] That is, *Bouvet* and his Companions.

deep

Ceremonies. Customs. deep as wide. They place, on each Table, twenty ſuch Diſhes, ranged four and four in a Row; ſo that at the End of the Entertainment, they all formed a Kind of Square: Thoſe who ſerve them up, receive them at the lower End of the Hall, where as many Servants belonging to the Kitchen, as there are Tables, bring them, one by one, upon japanned Salvers, and preſent them on their Knees. In order to diſtinguiſh *Chineſe Broths, and* the Courſes at the End of every fourth Diſh, they ſerved up a particular Kind of Broth, and a Plate of *Mazarine* Tarts, but of a different Taſte: The Whole was concluded with a Diſh of Tea. At length the Feaſt termines with a great many Profeſſions of Thanks; and, after a Quarter of an Hour's Converſation, every one withdraws. The *Tartars*, who do not like Reſtraint, have retrenched a great Part of theſe Ceremonies; and, though their Meat and Fiſh are cut in ſmall Pieces, their Cooks have ſuch an Art of ſeaſoning them, that they are very palatable [a].

IT muſt be obſerved, that the *Tartars* uſe the ſame Sort of Sticks as the *Chineſe*; but their Tables are little, and low, like thoſe of *Japan*; and they ſit not on Chairs, but on Cuſhions and Carpets. As to the reſt, they uſe neither Table-Cloths, Napkins, nor other Utenſils common with *Europeans* [b]. And here it may not be amiſs, to give ſome Account of the Victuals ſerved at theſe Feaſts, and of the common Diet of the *Chineſe*.

Cooks, excellent. THEIR Broths are exceeding good; and to make them, they uſe the Fat of Hogs, which in *China* are very excellent; or elſe the Gravy of different Animals, ſuch as Pork, Fowls, Ducks, *&c.* Their Haſhes, and minced Meats, are boiled up in this Gravy. In every Seaſon of the Year, they have ſeveral Sorts of Herbs (as well as Pulſe) not known in *Europe*; of whoſe Seed they make an Oil, which is much uſed in Sauces. The *French* Cooks, who have refined ſo much in every Thing which concerns the Palate, would be ſurprized to find, that the *Chineſe* can out-do them far in this Branch of their Buſineſs, and at a great deal leſs Expence. They would hardly be perſuaded to believe that, with nothing but the Beans that grow in their Country, particularly thoſe of the Province of *Shan-tong*, and with Meal made of Rice and Corn, they can prepare a great many Diſhes, quite different both to the Sight and Taſte. They vary their Ragous, by putting in ſeveral Sorts of Spices, and ſtrong Herbs.

Hogs and Mares Fleſh. THE *Chineſe* prefer the Fleſh of Hogs, to that of all other Animals, and make it the Foundation of their Feaſts. Almoſt all People keep Hogs in their Houſes, to fatten; for they eat Pork the Year round. It is far better taſted than the *European*; nor is there finer Eating in the World, than a *Chineſe* Ham. Wild Mare's Fleſh is alſo in great Eſteem: But the moſt delicious Food of all, and moſt uſed at the Feaſts of great Men, are Stags Pizzles [c], and Birds Neſts. To preſerve the Pizzles, they dry them in the Summer Sun, and roll them in Pepper and Nutmeg. They are firſt ſoaked in Rice-Water, and, after being boiled in the Gravy of a Kid, are ſeaſoned with Spices.

Stags Pizzles.

Birds Neſts. As for the Neſts, they are found on the Sides of the Rocks, all along the Coaſts of *Tong-king*, *Java*, *Kochinchina*, &c. where they are built by Birds, feathered like Swallows: The Materials are ſuppoſed to be little Fiſhes, which they catch in the Sea, and faſten to the Rocks with a viſcous Juice that diſtils from their Beaks: They have alſo been obſerved to make uſe of the Froth that floats on the Sea; as the Swallows do of Mud, to cement the Parts of their Neſts together. This Matter, when freſh, is white; being dried it becomes ſolid, tranſparent, and inclining a little to green. As ſoon as the young ones have quitted their Neſts, the People of the Place are very eager to get them down, and ſometimes load whole Barks with them. They reſemble the Rind of a large candied Citron, in Shape as well as Size; and mixed with other Meats, give them a good Reliſh [d].

Bears Paws. Dainties. NEXT to theſe, Bears Paws, and the Feet of divers wild Creatures, brought ready ſalted from *Siam*, *Kamboja*, and *Tartary*, are Dainties fit for the Tables of great Lords: Which are likewiſe furniſhed with Fowls, Hares, Rabbits, and other Animal Food common elſewhere. Though all Proviſions of theſe laſt Kinds are generally cheaper in the largeſt Cities of *China*, than they are in the Country-Towns of the moſt plentiful Parts of *Europe*; yet the People are very well pleaſed with the Fleſh of Horſes and Dogs, even though they die of Age, or Sickneſs: Nay, they do not ſcruple eating Cats, Rats, and ſuch like Animals; which are openly ſold in the Streets. It is very good Diverſion, to ſee all the Dogs (drawn together by the Cries of thoſe going to be killed, or the Smell of thoſe, already ſlain, carrying along) fall, in a Body, upon the Butchers, who are obliged to go always armed with a long Staff, or Whip, to defend them from their Attacks; and to keep the Places cloſe ſhut where they kill them, if they would do it undiſturbed [e].

Dogs eaten.

[a] *Du Halde*'s *China*, p. 300, *& ſeqq.* [b] *Navarette in Chur. Coll.* vol. 1. p. 13. [c] In great Requeſt at *Shrewſbury*, and other Places, in *England*, where they are called *Inch-Pins*. [d] *Du Halde*, as before, *p.* 302. [e] The ſame, *p.* 314.

THOUGH

THOUGH there is Corn every where in *China*, yet they generally live upon Rice, eſpecially in the Southern Parts: They even make ſmall Loaves of it, which in leſs than fifteen Minutes are prepared in the Steam of a Pot, and eaten very ſoft. The *Europeans* bake them a little at the Fire, which makes them very light and delicious. In the Province of *Shan-tong*, they make a Kind of a thin wheaten Cake, which does not taſte amiſs, eſpecially when mixed with certain Herbs, for creating an Appetite [a]. Beſides the common Herbs, Roots, and Pulſe, they have many others, not known in *Europe*, and more valuable than ours; which, in Conjunction with Rice, make the chief Food of the People everywhere [b].

NAVARETTE obſerves, that the moſt common and cheap Food, all *China* over, is called *Teu Feu*, that is, *Paſte of Kidney-Beans*. They draw the Milk out of the Beans, and, turning it, make great Cakes of it like Cheeſes, five or ſix Inches thick: The whole Maſs is as white as Snow. If eaten crude, it is inſipid; but when boiled, and dreſſed with Herbs, Fiſh, and other Things, as it generally is, it proves very good, and is excellent fried in Butter. They have it alſo dried and ſmoked, mixed with Carraway-Seeds; which is beſt of all. It is incredible what vaſt Quantities of it are conſumed, it being eaten by all People, from the Emperor and great Men, who reckon it a Dainty, to the meaneſt Peaſant. Many will leave Pullets for it: One may have a Pound (which is above twenty Ounces) any where, for a Halfpenny; and becauſe one who eats it finds no Alteration from the different Air and Seaſons, thoſe who travel make-uſe of it [c].

THOUGH Tea is their moſt uſual Liquor, yet they often drink Wine, made of a Kind of Rice different from that which is eaten. There are different Sorts, and various Ways of making it; the following is one: They let the Rice ſoak in Water, with ſome other Ingredients, for twenty or thirty Days; afterwards boiling it till it is diſſolved, it immediately ferments, and is covered with a light Froth, like that of new Wines: Under this Froth is very pure Wine; and the Clear being drawn off into well-glazed Veſſels, they make of the Lees, which remain, a Kind of Brandy, ſometimes ſtronger, and more inflammable, than the *European*. There is great Vent for it among the People. That which the *Mandarins* make uſe of, comes from certain Cities, where it is reckoned very delicious: That of *Vû-ſi hyen*, in *Kyang-nan*, is in great Eſteem, owing to the Goodneſs of the Water found there [d]: But that brought from *Shau-hing fû*, in *Che-kyang* [e], is in greater Requeſt, as being more wholeſome. *Marriages.*

THEY have a Kind of very ſtrong Spirit, or diſtilled Water, ſaid to be drawn from Mutton, which the Emperor, *Kang-hi*, drank ſometimes; but few make uſe of it beſides the *Tartars*, as it has a diſagreeable Taſte, and ſoon intoxicates. They have another very extraordinary Sort of Wine, made in the Province of *Shen-ſi*, and called *Kau-yang-tſyew*, or *Lamb's Wine*: It is very ſtrong, and has a diſagreeable Smell; but among the *Tartars* chiefly, it paſſes for excellent Liquor: None of it is carried into other Countries [f]. *Mutton-Brandy, and Lamb-Wine.*

THE *Chineſe* have ſeveral other Sorts of Liquors; ſome mentioned in the *Dutch* Embaſſies, as the *Sam-ſu* diſtilled from Milk [g]; and Bean-Broth [h]: This *Nieuhof* ſeems to call *Tartarian* Tea [i]. *Cunningham*, in his Account of the Iſland of *Chew-ſhan* [k], ſays, what is called Bean-Broth, is only an Emulſion made of the Seed of *Seſamum*, and hot Water. The *Tartars* uſe Camel's, as well as Colt's Fleſh, in their Feaſts, as great Dainties. *Other Liquors.*

SECT. IV.

Their Marriages.

Grounds for Marriage. Wives and Children, procured from Hoſpitals. Children adopted. Match-makers neceſſary. The Marriage Ceremony. Second Wives, and their Children. Second Marriages: Some forced to it: Others ſold. Divorce allowed, on ſeveral Occaſions. Other Cauſes of Divorce, defended by Caſuiſts. Dead People married. Farther Ceremonies, relating to Marriage. Womens Retiredneſs: Their Superſtition. Names given Children. Sodomites in China.

NO Obligation is reckoned more incumbent among the *Chineſe*, than that of Marriage. A Father lives in ſome Diſhonour, if he does not marry-off all his Children; and a Son is wanting in the principal Duty of a Son, if he does not leave Poſterity to perpetuate his Family. An elder Brother, though he inherit nothing from his Father, muſt bring-up the younger, and marry them: Becauſe, for want of their Father, he ought to be a Father to them; and if the Family become extinct through their Fault, their Anceſtors will be deprived of the Honours and Duties they are intitled to from their Deſcen- *Grounds for Marriage.*

Ceremonies. Cuſtoms.

dants. On theſe Principles the Inclinations of a the Children are never conſulted in Matrimony, the Choice of a Wife belonging to the Father, or the neareſt Relation; who makes the Match with the Father, or Relations of the Maiden, paying a certain Sum to them (for in *China* the Daughters have no Fortunes) which is laid out in new Cloaths, and other Things, for the Bride.

Wives and Children.

THIS is the Practice among Perſons of mean Condition; for the Grandees, the *Mandarins*, the *Literati*, and all rich People in general, expend much more than the Preſent they receive amounts to. A *Chineſe*, who is in mean Circumſtances, often goes to the Foundling-Hoſpital, and demands a Girl, to bring her up, that ſhe may be a Wife for his Son. By this Means, he ſaves the Money that he muſt otherwiſe have given to purchaſe one: The Maid is accuſtomed to have greater Reſpect for the Mother-in-Law; and there is Reaſon to believe, that ſhe will prove more ſubmiſſive to her Huſband, than another would do.

Procured from Hoſpitals.

THE *Chineſe* are ſo fond of leaving Poſterity, that it is ſaid the Rich ſometimes, who have no Children, pretending their Wife is with Child, go privately, and fetch one from the Hoſpital, who paſſes for their own Son. Theſe Children, being ſuppoſed legitimate, purſue their Studies, and obtain their Degrees of Bachelor and Doctor; a Privilege which is denied the Children taken publickly from the Hoſpital.

Children adopted.

THOSE who have no Male Iſſue, adopt a Son of their Brother, ſome other Relation, nay of a Stranger, and ſometimes give Money to the Kinſfolks for their Conſent. The adopted Child is intitled to all the Privileges of a real Son, aſſumes the Name of the Adopter, and becomes his Heir, in caſe he happens to have no Children of his own; and, if he has, the Son by Adoption ſhares the Inheritance equally with the reſt, unleſs the Father does ſomething more for his own Son. It is alſo with the ſame View, that the *Chineſe* are permitted, by the Law, to take Concubines, or rather ſecond Wives, beſides the one legitimate Spouſe; in chuſing whom, they have Regard to Quality and Birth. However, there is a Law, that prohibits the People from marrying a ſecond Wife, unleſs the firſt has arrived to the Age of Forty, without having any Children.

Match-makers neceſſary.

As the Females are never ſeen by the Men, Matches are brought to a Concluſion ſolely on the Credit of the Relations of the Maid, or the old Women, whoſe Buſineſs it is to tranſact ſuch Affairs. Theſe the Parents are very careful to engage by Preſents, to make advantageous Reports of the Beauty, Wit, and Talents of their Daughter: But they are not much relied on; and if they carry the Impoſition too far, will be ſeverely puniſhed. When by Means of theſe Go-betweens every Thing is ſettled, the Contract ſigned, and the Sums agreed upon, delivered, Preparations are made for the Nuptials: During which certain Ceremonies intervene, whereof the principal conſiſt in both Parties ſending reſpectfully to demand the Name of the intended Bridegroom and Bride; and in making Preſents to their Relations, of Silk, Calicos, Meats, Wine, and Fruits. Many conſult the fortunate Days ſet down in the Kalendar, as proper for marrying on: And this is the Buſineſs of the Relations of the future Bride, to whom are ſent Rings, Pendants, and other Jewels of the ſame Nature. All this is done by Mediators, and by a Sort of Letters, written on both Sides: But it is what is practiſed only among the Vulgar; for the Marriages of Perſons of Quality are managed and conducted in a more noble and truly magnificent Manner.

THE Day of the Nuptials being come, the Bride is put into a Chair, pompouſly adorned, and followed by thoſe who carry the Fortune ſhe brings; which, among the Vulgar, conſiſts of Wedding-Cloaths, laid up in Boxes, ſome Goods and Moveables, given by her Father. A Train of hired Men accompany her with Torches and Flambeaux, even at Noon-Day; her Chair is preceded with Fifes, Hautboys, and Drums, and followed by her Relations, and the particular Friends of the Family. A truſty Servant keeps the Key of the Door belonging to the Chair, which he is not to deliver to any-body but the Huſband, who waits at his own Door, richly dreſſed, to receive his Bride: As ſoon as ſhe is arrived, he takes the Key from the Servant, and eagerly opening the Chair, is then a Judge, if he never ſaw her before, of his good, or bad Fortune. There are ſome who, not content with their Lot, immediately ſhut the Chair again, and ſend back the Maid, along with her Relations; chuſing rather to loſe the Money they gave, than be tied to their Bargain: But this, by the Precautions that are taken, very rarely happens. When the Bride is gotten out of the Chair, ſhe walks beſide the Bridegroom into the Hall, where they make four Reverences to *Tyen* [b]; and having done the like to the Huſband's Relations, ſhe is put into the Hands of the Ladies invited to the Ceremony, with whom ſhe paſſes the whole Day in Feaſting and Diverſions; while the new-married Man treats his Friends in another Apartment.

SECOND Wives are received into the Houſe without any Formality: All they do on the Oc-

UNERAL, from du Halde.

Vol. V. Pl. 18. p. 92.

casion, being to sign a Writing with their Parents, whereby, on delivering the Sum agreed upon, they promise to use their Daughter well. These second Wives are intirely dependent on the legal Wife, whom they respect as the only Mistress of the House. The Children born of them are also deemed to belong to her, and have equally a Right to inherit; none but she has the Name of Mother: And if the real Mother happen to die, they are not obliged to go in Mourning for three Years, nor to be absent from their Examinations, nor to quit their Offices and Governments; as it is customary to do at the Death of their Father and the lawful Wife: However, very few fail to express that Token of Tenderness and Respect for their own Mother.

THERE are some, who, to gain the Reputation of good Husbands, take no Concubines without the Consent of their Wives, under Pretence of providing a greater Number of Women for their Service. Others take a second Wife, only with a View of getting a Son; and the Moment he is born, if she displeases their Wives, send her away, and give her Liberty to marry whom she thinks proper; or, which is most usual, procure her a Husband themselves. The Cities of *Yang-chew fû* and *Sû-chew fû*, in *Kyang-nan*, are famous for furnishing great Numbers of these Concubines; who are bought-up elsewhere, and educated for the Purpose [a].

THE Men, as well as Women, may, in Case of Death, marry a second Time; and are at Liberty to espouse whom they think fit, even one of their Concubines: But, in these second Nuptials, there are but few Ceremonies observed. As for Widows, when they have had Children, they become intirely their own Mistresses, free from their Parents Constraint. However, it is disreputable for such to marry a second Time, without great Necessity. A Woman of Distinction, though she was married but a few Hours, or but only contracted, thinks herself obliged to pass the rest of her Days in Widowhood; thereby to testify the Respect she preserves for the Memory of her deceased Husband, or the Person to whom she was engaged.

BUT it is otherwise with those of a middling Rank; whose Relations [b] being desirous to get-back Part of the Sum that she cost her first Spouse, may marry her again, if she has no Male Issue; and often force her to it: Nay, sometimes, the new Husband is actually procured, and the Money paid, without her Knowledge. If there happen to be a Daughter yet unweaned, she goes along with the Mother; who has no Way of avoiding this Oppression, unless her own Relations are able to maintain her, but either by reimbursing those of her deceased Husband, or else becoming a *Bonzess*, that is, a Nun; whose Condition is so contemptible, she cannot embrace it without dishonouring herself. This Violence is not so common among the *Tartars*. As soon as a poor Widow has been sold in this Manner, they have her carried in a Sedan to her Husband's House. The Law which forbids selling a Woman before the Time of their Mourning expires, is sometimes neglected; so eager they are to get-rid of them. However, when this Trespass is complained of, the *Mandarin* will suffer if he has in the least connived at it. *Marriages.*

THE Marriages duly solemnized, according to the prescribed Ceremonies, cannot be dissolved. If a Woman elopes from her Husband, he may sell her, after she has undergone the legal Correction: But the Law inflicts severe Penalties on those who secretly sell their Wives, or prostitute them to others, with all concerned in the Affair. On the other Hand, if the Husband abandons his House and Wife, after three Years Absence, she may present a Petition to the *Mandarins*; who, after they have maturely examined the Case, may license her to take another Husband: But she would be severely punished, if she married without observing this Formality. However, there are particular Cases, such as Adultery, which is very rare; Antipathy, or different Tempers; Excess of Jealousy, Indiscretion, or Disobedience; Barrenness, and contagious Distempers; wherein the Law permits a Divorce: Yet, Instances of this Kind are seldom to be found, except among the common People. *Others sold.* *Divorce allowed.*

THERE are other Circumstances which forbid Marriage, and make it void; as, 1. If a young Woman has been promised to a young Man, so far as that Presents have been sent and accepted by the Relations of both Families, she cannot marry another. 2. If any Deceit has been made use of: For Instance, if instead of a beautiful Person, who has been shewn to the Match-makers or Go-betweens, they substitute a disagreeable one; if the Daughter of a Freeman be married to his Slave; or, if a Man gives his Slave to a Free-woman, and persuades her Relations that he is his Son, or Relation. 3. If a civil *Mandarin* marries into any Family of the Province or City where he is Governor. 4. If a Son or Daughter marries during the Time of Mourning for a Father or Mother: Nay, if Promises were given before the Death, the Obligation ceases; and the young Man, who has lost his Parent is, by a Billet, to acquaint the Relations of the betrothed Damsel: However, these *On several Occasions.*

[a] See before, *p.* 26, and 27.

[b] By her Relations, are to be understood, the Husband's Relations, in whose Hands she was left.

Ceremonies. Cuſtoms.

latter do not, on this Account, think themſelves a diſengaged; but wait till the Time of Mourning is expired, and write, in their Turns, to the young Man, to put him in Mind of his Promiſe: Then, indeed, if he will not liſten to their Propoſal, the Maid is at Liberty, and may be married to another. The Caſe is the ſame, if the Father, or near Relation, is impriſoned, or any extraordinary Affliction befals a Family: For the Marriage cannot take Effect till the Priſoner gives his Conſent; and then there is no Feaſting, nor Signs of Rejoicing, at the Wedding. 5. Laſtly, Thoſe of the ſame Family, or even Name, cannot marry; though ever ſo diſtant in Point of Affinity. In like Manner, the Laws do not permit two Brothers to eſpouſe two Siſters, or a Widower to marry his Son to a Daughter of the Widow whom he takes to Wife. A Breach of the Law, in any of theſe Reſpects, is puniſhable [a].

Other Cauſes of Divorce,

THE Cauſes that make Matrimony void, taken from their Books by *Navarette*, are, 1. The Woman being talkative, and given to Prating; even though ſhe had been long married, and borne Children. The Author thinks, ſuch a legal Curb would be of great Uſe in *Europe*. 2. Diſobedience to the Father and Mother-in-law [b]. 3. To ſteal any Thing in the Houſe. 4. The Leproſy. 5. Barrenneſs. 6. Jealouſy. On this Occaſion the Author obſerves, that it being uſual for one to be better beloved than the reſt, they are never without Diſcontents; and ſome hang, others throw themſelves into Wells. He adds, that when the firſt Wife has no Children, ſhe herſelf courts the Huſband to take a Concubine; and thus ſhe ſecures herſelf from being turned-off. Among the common People, many pawn their Wives in Time of Need; and ſome lend them for a Month, or more, according as they can agree.

Defended by Caſuiſts.

THE moral Caſuiſts, among the *Chineſe*, ſay, that when a Woman has any bad Quality, it is both juſt and reaſonable to turn her out of Doors. *Zu Zu* [c], the Son of their Philoſopher *Confuſius*, turned his Wife out ſeveral Times; ſo did others, whoſe Names are mentioned in their Books. They juſtify the Ancients, who turned-away their Wives becauſe the Houſe was full of Smoak, or, they frighted the Dog with their diſagreeable Noiſe; and inſiſt, that, in ſuch Caſe, the Man may marry again: But, that Perſons of Note, ſuch as the Emperor, petty Kings, and *Mandarins*, who have Concubines to attend and offer Sacrifice to them, when dead, ought not: Yet, the Emperor *Shunchi* put-away his firſt Wife, and ſent her into her own Country, when big with Child. Two Jeſuits, at *Pe-king*, told *Navarette*, that two *Tartars*, who were Huſband and Wife, parted and married other Perſons; that *John Adams* writing to thoſe of his Society, ſaid, that the *Tartars* married till they had a Mind to take another Wife; and, that great Men uſed to change Wives, and marry one another's [d]. It is very uſual for the Parents to make Matches for their Children whilſt yet very young: Nay, ſometimes, when their Wives are with Child, they agree, that, in Caſe they prove Boy and Girl, they ſhall marry. This they call *Chi-ſo*, which ſignifies, *To mark-out Bellies*.

IN the Province of *Shan-ſi*, they have a ridiculous Cuſtom, which is to marry dead Folks: This the Author had from *Michael Trigauſius*, a Jeſuit, who lived ſeveral Years in that Province. When it falls-out, that one Man's Son, and another's Daughter die, whilſt the Coffins are in the Houſe (and they uſe to keep them two or three Years, or longer) the Parents agree to marry them. They ſend the uſual Preſents, as if they were alive, with much Ceremony and Muſic: After this they put the two Coffins together, keep the Wedding-Dinner before them, and, laſtly, lay them both in one Tomb. The Parents, from this Time, are looked-upon not only as Friends, but Relations, as they would have been, had their Children been married living.

IN that Caſe, the firſt Thing they do, is to go to the Temple of their Anceſtors. There they acquaint them particularly, how ſuch a one, their Grandſon, of ſuch an Age, deſigns to marry *N.* &c. therefore they beg their Aſſiſtance in the Affair. The Wife's Parents do the ſame. The Huſband brings a Portion to his Wife, which her Parents keep; but ſometimes they give the Daughter Part of it. When the Bridegroom's Parents ſend the Portion, it is carried in the greateſt State they poſſibly can. Before it goes the Muſic: Then follow the Tables, each carried by four Men, in a very decent Manner. Upon one of them are a Piece of Silk, Pieces of Cotton on another, Fruit on the third; Meat, Dainties, and Plate on the fourth: But the Shew and Noiſe is much more than the Subſtance.

THEY make Choice of a fortunate Day to ſend the Portion, and be married upon [e]; and having notified the ſame to their Anceſtors departed, the Bridegroom's Parents ſend a Kinſman, or ſome grave Perſon, with a cloſe Sedan, to conduct the Bride. Being come to her Houſe, ſhe takes Leave of her Parents; who having given her good Advice, ſhe gets into the Sedan, where ſhe finds a little Rice, Wheat, and other Grain, to ſignify that the Bride carries along

[a] *Du Halde's China*, p. 303, *& ſeqq.* [b] By this Subjection they endure great Miſery. [c] *Tſu-tſe*, or *Tſe-tſe*. [d] *Navarette*, as before, *p.* 66, *& ſeq.* [e] They marry commonly in one of the nine Days of the New Moon. See hereafter at the End of the Feſtivals.

with her abundance of Goods, and that her Husband's Eſtate and Income ſhall increaſe by her Aſſiſtance. As the Bride goes into the Chair, they uſually break an Egg (this is not ordered by the Ritual) to ſignify that ſhe ſhall be fruitful [a].

THE Bride being come to the Bridegroom's Houſe, which is richly adorned and ſet-out; the Father and Mother-in-law receive her with all poſſible State and Kindneſs. After they have performed their Obeiſances to Heaven and Earth, to their Kindred and Acquaintance, the Entertainment begins. The Men eat in the Forepart of the Houſe, the Women in the Inner. At Night the Bride being conveyed into the Bridegroom's Chamber, on the Table ſhe finds Sciſſars, Thread, Cotton, and other Things, to denote that ſhe is to work, and not be idle.

THE Father-in-law, after that Day, never ſees the Face of his Daughter-in-law again, till ſhe is dead, if ſhe happens to die before him. Although they live in the ſame Houſe, he never ſets his Foot in her Chamber; and if ever ſhe goes abroad, he hides himſelf, or goes out. All Relations are not allowed to talk with a Woman alone: The Couſins, who are younger than they, may; for it is imagined they will not preſume to be bold with them: But thoſe who are elder than ſuch Female, are not permitted; becauſe it is thought they may take Advantage of their Superiority, and pretend to that which is not lawful. Sometimes in the Year, the Wives go-out to viſit their Parents; which is the Extent of their Divertiſements and Recreations.

WHEN they perceive themſelves to be with Child, they repair to the Temple of their Anceſtors, to acquaint them with their Condition, and beg their Aſſiſtance towards a good Delivery. After they are brought to Bed, they return thither, to give Thanks for their happy Time, and beg of them to preſerve the Child. Some Time after, they preſent it in the ſame Temple a ſecond Time, thanking the Dead for having preſerved it till then, and deſiring they will bring it to Age of Maturity [b].

THE Parents give their Child, at Birth, the Name of the Family; which is common to all who are deſcended from the ſame Grandſire. About a Month after, they give him a diminutive, or *Milk-Name*, as they term it, being commonly that of a Flower, Animal, or ſuch like Thing. When he begins his Studies, he receives, from his Maſter, a new Name, which is joined to the Family-Name; and this he is called by at School. Being arrived to Man's Eſtate, he takes, among his Friends, another Name; and this is it which he retains, and commonly ſigns at the End of his Letters, or other Writings. In a Word, when he attains ſome conſiderable Office, he then aſſumes a Name agreeable to his Rank and Merit; which is the Name that Politeneſs requires to be uſed in ſpeaking to him. It would be an Incivility to call him by his Family-Name; unleſs the Perſon who did ſo was of a much ſuperior Rank [c]. *Mournings. Funerals.*

NAVARETTE affirms, that Sodomy is frequently practiſed in *China*, and that in the Time of the *Chineſe* Emperors, there were public Stews of Boys at *Pe-king*: That the *Tartars* ſuppreſſed them there; but that they are ſtill kept-up at *Jang chew*. Thoſe young Catamites dreſs like other Men; but very gay, and never marry [d]. *Sodomites in China.*

SECT. V.

Their Mournings, *and* Funerals.

The Ceremonies fixed. The firſt Rites. The Staff and Tablet. Tricks of the Bonzas. *Wives hang themſelves. Coffins highly prized: Their Form: Things put in. Time of ſolemn Rites. Ceremony of Condolence, practiſed by Miſſioners. The Entertainment. Funeral Proceſſion. Burying-Places. Sepulchres of the Great: Ceremonies there. Proſtration.* Bonzas *Proceſſion. Funeral of the Emperor's Brother. Term of Mourning. Mourning Colour. Corpſe kept for Years. Reſpects paid the Dead, in the Hall of Anceſtors, and at the Graves: On what Authority.* Chineſe *Bravery.*

FILIAL Piety being the great Article on which the whole Frame of the *Chineſe* Government is built, the ancient Sages of that Nation were perſuaded, that the Veneration which young Perſons ſaw given to deceaſed Relations, as if they were ſtill alive, brought them betimes acquainted with the Submiſſion and Obedience due to their living Parents. For this Reaſon, their Rituals, and other Claſſic Books, are very exact in ſetting-down the Ceremonies reſpecting the Dead, as uſed by thoſe of the eſtabliſhed Religion, who are the *Literati*, or Followers of *Confucius*. Thoſe of other Sects uſe the ſame, only mixing *The Ceremonies fixed.*

[a] In my Time, ſays *Navarette*, a Chriſtian (that is, a *Chineſe* Convert to Popery) ſeeing this Ceremony performed at the Marriage of his Daughter, in a Paſſion, threw the Egg againſt the Wall; ſaying, *Why, is my Daughter a Hen, that ſhe ſhould lay Eggs?* Methinks, his new Religion made him ſilly; for there is nothing amiſs in this Cuſtom. [b] *Navarette*'s Deſcription of *China*, p. 69, *&c ſeq.* [c] *Du Halde*'s *China*, p. 294. [d] *Navarette*, as before, *p.* 68.

Ceremonies. Customs. them with certain ſuperſtitious Rites, which in the following Account ſhall be diſtinguiſhed from the reſt.

The firſt Rites. ACCORDING to the Ritual, ſays *Navarette*, when a Man is ready to die, they take him out of his Bed, and lay him on the Ground, that he may there end his Days where he began to live. In like Manner, when a Child is born, they lay it on the Ground, as the *Jews*, and other Nations did, to ſhew they are to return from whence they came. As ſoon as he is dead, they put a little Stick into his Mouth, that it may not cloſe: This done, one of the Family, with the dead Man's Garment, gets on the Ridge of the Houſe, and ſtretching it out, calls aloud on the Soul, by Name, intreating it to return. Then he comes down, and ſpreading the Garment over the Corpſe, they wait three Days, to ſee whether it will riſe again, before it is put into the Coffin. This Ceremony is approved of by ſome Miſſioners. In ſome Places, it is performed at the Door of the Houſe.

The Staff and Tablet. THE next Thing is to make a Staff, which they call *Chung*; that the Soul may have ſomething to reſt, or kneel upon. This Staff is hung in the Temples of the Dead: They alſo make thoſe Tablets, which the Miſſioners call *Tablets of the Dead*; and the *Chineſes*, *the Thrones*, *and Seats of the Soul:* For they ſuppoſe the Souls of their deceaſed Friends to be there, and that they are fed by the Steam of the Meats left there for them. This the Author has read in their Books, and heard them declare [a]. In the third Place, they put Gold and Silver Coin into his Mouth, (which for this Intent they keep open) Rice, Wheat, and ſome other ſmall Things. Rich and mighty Men put-in Pearls. All the above Ceremonies are mentioned in the Rituals, and the Book *Kay ju*, written by *Confucius*.

Tricks of the Bonzas. AMONG the *Chineſes*, it is uſual, when the ſick Perſon is in Danger, to call the *Bonzas* to pray for the Party: They come with little Baſons, ſmall Bells, and other Inſtruments, and make a Noiſe enough to haſten his Death; but they pretend it diverts him, and eaſes his Diſtemper. If the Diſeaſe increaſes, they ſay his Soul is gone-out; and, therefore, three or four of them, in the Cloſe of the Evening, walk-about haſtily with a large Baſon, a Drum, and a Trumpet, ſeeking for it. They make a little Stop at the croſſing of Streets, play on their Inſtruments, and then go-on. The Author ſaw this practiſed ſeveral Times. They likewiſe go into the Fields upon the ſame Errand, ſinging, praying, and ſounding their Inſtruments among the Buſhes; and when they find ſome large Bee, or Waſp, they carry it, with a great deal of Noiſe and Joy, to the ſick Man's Houſe, pretending it is his Soul; and, as the Author was told, put it into his Mouth.

IT is the Cuſtom among the *Tartars*, when a Man dies, for one of his Wives to hang herſelf, to bear him Company in his Journey to the other World. In the Year 1668, a *Tartar* of Note in *Pe-king* dying, a Concubine of ſeventeen Years of Age was to give this Proof of her Affection: But her Relations, who were People of Figure, being much troubled to loſe her; they preſented a Petition to the Emperor, begging he would diſpenſe with that Cuſtom received and eſtabliſhed among his Nation. His Majeſty accordingly aboliſhed this inhuman Uſage, ordering that it ſhould be no longer in Force. The *Chineſes* have the ſame Cuſtom; but it is not common, nor approved and received by their Philoſopher. In the Author's Time, the Vice-Roy of *Kanton* being near his Death, called the Concubine he loved beſt, and putting her in mind of the Affection he had borne her, deſired ſhe would bear him Company. She gave him a Promiſe; and, as ſoon as he died, hanged herſelf.

BEFORE they put the Corpſe into the Coffin, they waſh it, uſing ſtrange Ceremonies on that Occaſion [b]. Others ſay, that they ſeldom waſh the dead Bodies; but dreſſing the Deceaſed in his beſt Cloaths [c], and laying over him the Enſigns of his Dignity, put him in the Coffin they have bought, or that he had ordered to be made in his Life-time; about which they are extreamly anxious. Thoſe who have but nine or ten Piſtoles in the World, will lay it out on a Coffin, above twenty Years before they want it, looking upon it as the moſt valuable Moveable in their Houſe: Sometimes the Son will ſell, or mortgage himſelf, to procure Money to buy a Coffin for his Father [d].

SOME Coffins are made of delicate Woods, of twelve, twenty, fifty, an hundred Ducats a-piece, or more. They are to be found, of all Sizes, in the Shops. The great *Mandarins* ſometimes ſhew their Charity in giving a Dozen, or twenty, to poor People; whoſe Corpſe, if they want a Coffin, are burned, like thoſe of the *Tartars*. Many, in their Life-time, get a Coffin, and make a Treat the Day it comes home. They keep it in Sight for ſeveral Years; and ſome now and then go into it. It is cuſtomary for the Emperor to have his Coffin ſome Time

[a] *Du Halde*, p. 310, ſays, theſe Fancies have been introduced by the *Bonzas*, and prevail only among the Vulgar, being quite oppoſite to the true *Chineſe* Doctrine: Yet, below, *Navarette* affirms, they were taught by *Confucius* himſelf. [b] *Navarette*'s Deſcription of *China*, p. 70, & *ſeqq*. [c] Which, *Navarette* ſays, are kept for that Purpoſe. [d] *Du Halde*'s *China*, p. 280, and 306.

in the Palace [a]. The Coffins for thoſe in eaſy Circumſtances, are made of Planks above half a Foot thick, and laſt a long Time. They are ſo well daubed with Pitch and Bitumen on the Inſide, and japanned without, that no bad Smell can break through them: Some are finely carved, and gilded all over. In a Word, many rich Perſons lay out, from three hundred, to a thouſand Crowns, to purchaſe a Coffin of precious Wood, adorned with Variety of Figures [b].

IN the Coffin they lay a ſmall Quilt, Bolſter, and Pillows, Coals and Wicks for Lamps: All theſe Things ſerve to ſoak-up the Moiſture that may proceed from the Corpſe [c]: They alſo put in Sciſſars, to pare their Nails; and, before the *Tartars* Time, Combs to comb their Hair. They place the Parings of the Nails they cut-off the Deceaſed, as ſoon as expired, in little Purſes in the four Corners; then they caſt their Lots, and lay-in the Body with great Shouts and Cries [d]. It would be, in their Opinions, an unheard-of Cruelty, to open a dead Body, and taking-out the Heart and Entrails, bury them ſeparately: In like Manner, it would be a monſtrous Thing to behold, as in *Europe*, the Bones of dead Perſons heaped one upon another; for this Reaſon they do not bury ſeveral Perſons, though Relations, in the ſame Grave, ſo long as the Sepulchres keep their Form.

THE *Tyau*, or ſolemn Rites, which they render to the Deceaſed, commonly continue ſeven Days, unleſs ſome good Reaſon obliges them to reduce the Number to three. During that Time, all the Relations and Friends, whom they take-care to invite, come to pay their laſt Duty to the Deceaſed; the neareſt Relations remaining together in the Houſe. The Coffin is expoſed in the principal Hall, which is hung with white Stuffs, ſometimes intermixed with Pieces of black, and violet Silk, and other Ornaments of Mourning. Before the Coffin they ſet a Table, and place on it the Image of the Deceaſed; or elſe a carved Piece of Work, whereon his Name is written [e], with Flowers, Perfumes, and lighted Wax-Candles on each Side [f]. *Navarette* ſays, that before they bewail the Dead, they place a Porringer in the Middle of the Room; then the *Bonzas* having performed ſome Ceremonies, break it, ſaying, *They open the Gates of Heaven:* After this, they begin the Lamentations, nailing up the Coffin, with abundance of Ceremonies [g]. *Mournings. Funerals.*

THOSE who come to make their Compliments of Condolence, ſalute the Deceaſed, by proſtrating themſelves, and knocking their Foreheads ſeveral Times againſt the Ground, before the Table [h]; on which they afterwards place Wax-Candles, and Perfumes brought with them, according to Cuſtom. Particular Friends accompany theſe Ceremonies with Tears, and loud Groans. While they are performing theſe Duties, the eldeſt Son, attended by his Brothers, comes from behind a Curtain, which is on one Side of the Coffin, crawling on the Ground, and ſhedding Tears, with a mournful and profound Silence. The Compliment is paid with the ſame Ceremony that is uſed before the Coffin; while the Women, from behind the Curtain, ſend forth, by Intervals, very doleful Cries. *Ceremony of Condolence, practiſed by Miſſioners.*

THE Ceremony being ended, they riſe up; and a diſtant Relation of the Deceaſed, or ſome Friend in Mourning, who received them at the Door, when they came-in, performs the Honours of the Houſe, and conducts them into another Apartment; where they are preſented with Tea, and ſometimes dried Fruits, or the like Refreſhments; after which he conducts them to their Chairs. Thoſe who live but a little Way from the City, come to pay thoſe Rites in Perſon; and ſuch as are hindered by the Diſtance of the Place, or ſome Indiſpoſition, ſend a Servant with a viſiting Billet, and their Preſents, in order to make their Excuſe. The Children of the Deceaſed, or at leaſt the eldeſt Son, are afterwards obliged to return all thoſe Viſits; but then it is ſufficient to go to the Door of every Houſe, and ſend in a viſiting Billet by a Domeſtic. *The Entertainment.*

WHEN the Day for the Funeral is fixed, Notice is given to all the Relations and Friends of the Deceaſed, who are ſure to be there at the Time. The Proceſſion is begun by Men carrying various Paſteboard Figures, repreſenting Slaves, Tigers, Lions, Horſes, *&c.* Several Companies follow, marching two and two; ſome carry Standards, Flags, and perfuming Pans full of Perfumes; others play doleful Tunes on divers muſical Inſtruments. In ſome Places, the Picture of the Defunct is elevated above all the reſt, with his Name and Dignity written in large Cha- *Funeral Proceſſion.*

[a] *Navarette*'s Deſcription of *China*, p. 71. [b] *Du Halde*'s *China*, p. 306. [c] *Du Halde* ſays, Lime is placed at the Bottom, and for that Purpoſe; to which the Pillow or Cotton put-in to raiſe the Head, and fill up Vacancies, helps. [d] *Navarette*, as before. [e] *Navarette* ſays, the Name is placed in a ſmall Tabernacle, in the midſt of an Altar, made upon the Coffin. [f] *Du Halde*, as before, p. 206, *&c.* [g] *Navarette*, as before, *p.* 71. [h] *Navarette* accuſes moſt of the Jeſuits with this Practice. He ſays, *Antonio de Gouvea*, Superior of the Miſſioners of that Society, owned to him, that he had once performed this Ceremony: That he was told, *Julius Alein*, (or *Aleni*) had done the ſame, but repented; and that another Jeſuit wrote in theſe Terms to the *Dominicans: My Hair ſtands on-end to think that a Prieſt of the true God ſhould proſtrate himſelf at the Feet of a Heathen Carcaſe, whoſe Soul, I am poſitively aſſured, is burning in Hell; and this juſt after ſaying Maſs, when, I believe, the ſacramental Species were ſtill in his Stomach.*

racters

Ceremonies. Cuſtoms.

racters of Gold; then follows the Coffin, under a the Canopy, in Form of a Dome, made of violet-coloured Silk, with Tufts of white Silk at the four Corners, which are embroidered, and curiouſly intermixed with Twiſt. The Machine, whereon the Coffin is placed, is carried by Men, ſometimes to the Number of ſixty-four. The eldeſt Son, at the Head of the other Sons, and Grandchildren, follows on foot, covered with a hempen Sack, and leaning on a Staff, with his Body bent, as if ready to ſink under his Grief. b Afterwards appear the Relations and Friends, all in Mourning; and a great Number of Chairs, covered with white Stuff, wherein are the Daughters, Wives, and Slaves of the Deceaſed, who make the Air echo with their Cries.

Burying-Places.

THE Sepulchres are built without the Cities [a], and, as often as may be, upon Eminences. It is alſo uſual to plant Pine and Cypreſs Trees round them. About a League from every City one meets with Villages, Hamlets, and c Houſes, ſcattered up and down, diverſified with little Groves; likewiſe a great many Hillocks covered with Trees, and incloſed with Walls, which are ſo many different Sepulchres, affording no diſagreeable Proſpect.

THE Form of their Sepulchres is different in different Provinces: They are, for the moſt Part, very prettily built in the Shape of an Horſeſhoe, and well white-waſhed, with the Names of the Family written on the principal Stone. The d Poor are content to cover the Coffin with Stubble or Earth, raiſed five or ſix Feet high, like a Pyramid. Many incloſe it in a Place built with Brick, like a Tomb.

Sepulchres of the Great.

AS for the Grandees and *Mandarins*, their Sepulchres are of a magnificent Structure. They build a Vault, in which they put the Coffin, and raiſe a Heap of tempered Earth over it, ſhaped like a Hat, about twelve Feet high, and eight or ten in Diameter; covering it with Mor- e tar, that the Water may not penetrate, and planting it round with Trees of different Kinds. Near to it ſtands a long Table of white poliſhed Marble; whereon is a perfuming Pan, two Veſſels, and two Candleſticks, alſo of Marble. On each Side are placed, in ſeveral Rows, a great many Figures of Officers, Eunuchs, Soldiers, Lions, Saddle-Horſes, Camels, Tortoiſes, and other Animals, in different Attitudes, diſcovering Signs of Grief and Veneration: For the f *Chineſe* are ſkilful in imitating and expreſſing all the Paſſions in their Sculptures.

Ceremonies there.

A FEW Paces from the Tomb you find Tables ſet in Halls built on Purpoſe; and while the uſual Ceremonies are performing, the Servants *Mourn. Feaſts* prepare an Entertainment to regale the Company. Sometimes, after the Repaſt, the Relations and Friends proſtrate themſelves, with expreſſing their *Proſtr.* Thanks; which Civilities, the eldeſt Son, and the other Children, return by exterior Geſtures; but with profound Silence. At the burying Places of great Lords, there are ſeveral Apartments; and after the Coffin is brought to be interred, many of the Relations ſtay there for a Month or two together, to renew their Grief every Day with the Sons of the Deceaſed [b].

ACCORDING to *Navarette*, if the dead Man *Bonzas Proc.* was a Perſon of Note, the *Bonzas* make great Proceſſions; the Mourners following them with Candles and Perfumes burning in their Hands. They offer Sacrifices at certain Diſtances, and perform the Obſequies; in which they burn Statues of Men, Women, Horſes, Saddles, and other Things, and abundance of Paper Money: All which, they c believe, in the next Life, are converted into real ones, for the Uſe of the Party deceaſed. But the *Chineſes* kill no human Creature to bear the dead Company, as ſome have affirmed. Being arrived at the Tomb, they ſacrifice to the Spirit of that Place, begging of it to be kind to the new Comer. After the Funeral, they offer before the Image of the dead Perſon, and his Tablet, for ſeveral Months together, a certain Number of Times every Month, and every Day, d Fleſh, Rice, Herbs, Fruit, Broth, and ſuch like Things; believing, as hath been before obſerved, that his Soul feeds on them [c].

THEY come, ſometimes, a great Way to viſit them, and examine the Colour of the Bones, to diſcover whether a Stranger has died a natural or violent Death; but the *Mandarin* muſt be preſent at the opening of the Coffin; and there are Officers in the Tribunals, whoſe Employment is to make this Enquiry; in which they are very e ſkilful. Some, indeed, open the Tombs to ſteal Jewels, or rich Dreſſes; but it is a Crime that is puniſhed very ſeverely [d].

THE Ceremonies obſerved at the Obſequies of *Fu.* the Grandees are very magnificent. In thoſe performed at the Death of *Ta-vang-ye*, the eldeſt Brother of the late Emperor *Kang-hi*, the Proceſſion began with a Band of Trumpeters and Muſicians; after which marched two and two, in the following Order: Ten Mace-bearers, f whoſe Maces were of gilt Copper; four Umbrellas, and four Canopies of Cloth of Gold; ſix unloaded Camels, with Sable-Skins hanging at their Necks; ſix Camels carrying Tents, and hunting Equipages, covered with great red Houſings,

[a] *Navarette* obſerves, this was a Cuſtom with both *Jews* and *Heathens*. [b] *Du Halde*'s *China*, p. 307, *& ſeq.* [c] Afterwards, he ſays, they often viſit them, weep, offer Meat, and burn ſealed Paper. See *Navarette*'s Deſcription of *China*, p. 72, *& ſeq.* [d] *Du Halde*, as before.

which

N.° 241. N. Parr Sculp Vol. II. pl. 41. p. 93.

which trailed the Ground; ſix Hounds led in a Leaſh; fourteen led Horſes unſaddled, with yellow Bridles, and Sable-Skins hanging down; ſix other Horſes, carrying magnificent Portmanteaus full of Habits that were to be burnt; ſix other Horſes with embroidered Saddles, gilt Stirrups, *&c.* fifteen Gentlemen carrying Bows, Arrows, Quivers, *&c.* eight Men bearing a Couple of *Tartarian* Girdles, from whence hung Purſes filled with Pearls; ten Men carrying in their Hands, Caps proper for every Seaſon; an open Chair, like to that in which the Emperor is carried in the Palace; another Chair, with yellow Cuſhions.

NEXT came the two Sons of the deceaſed Prince, ſupported by Eunuchs, and weeping; the Coffin, with its great yellow Canopy, carried by ſixty or eighty Men, cloathed in Green, with red Plumes in their Caps; the Agos in Companies, ſurrounded with their Servants; the Regulos, and other Princes; two other Coffins, containing the Bodies of two Concubines who were hanged [a], that they might ſerve the Prince in the other World; the Grandees of the Empire; the Chairs of the deceaſed Prince's Wife, and the Princeſſes, his Relations; a Multitude of People, *Lamas*, and *Bonzas*, cloſed the Proceſſion. The eight Banners, with all the *Mandarins*, great and ſmall, were gone before, and ranged themſelves in Order of Battle, to receive the Body at the Entrance of the Garden, where it was to be depoſited till the Tomb was built: In a Word, they reckoned above ſixteen thouſand Perſons at this Ceremony [b].

THE uſual Time of Mourning for a Parent, ought to be three Years [c]; but they commonly reduce them to twenty-ſeven Months; and, during this Time, they cannot exerciſe any public Office: So that a *Mandarin* is obliged to quit his Government [d], and a Miniſter of State the Adminiſtration of Affairs, to live retired, (at home) and give himſelf up to Grief; (unleſs the Emperor, for ſome extraordinary Reaſons, diſpenſes therewith [e], which very rarely happens) nor can he re-aſſume his Office till the three Years are expired [f]. Their continuing ſo long in this melancholy Situation, is to expreſs their Gratitude for their Parents Care of them during the three firſt Years of their Infancy; wherein they ſtood in continual Need of their Aſſiſtance. The Mourning for other Relations is longer or ſhorter, according to the Degree of Kindred [g]. This Practice is ſo inviolably obſerved, that their Annals perpetuate the Piety of *Ven-kong*, King of *Tſin*; who, being driven out of the Dominions of his Father *Hyen-kong*, by the Cunning and Violence of *Li-ki*, his Step-mother, travelled into ſeveral Countries, to divert his Uneaſineſs, as well as avoid her Snares; and when informed of his Father's Death, refuſed to take-up Arms, though invited, to recover his Kingdom, during the Time ſet apart for Mourning [h]. *Mournings. Funerals.*

WHITE is the Mourning Colour both among Princes and the meaneſt Mechanics. Thoſe who wear it compleat, have their Cap, Veſt, Gown, Stockings, and Boots, all white. In the firſt Month after the Death of a Father or Mother, the Habit is a Kind of hempen Sack of a bright red Colour, much like packing Cloth; their Girdle is a Sort of looſe Cord; and their Cap, which is of a very odd Figure, is alſo of hempen Cloth: Affecting, by this melancholy Attire, and negligent Outſide, to expreſs their inward Grief. *The Mourning Colour.*

THE *Chineſe* are permitted to keep the Dead in their Houſes, incloſed in Coffins, as long as they pleaſe; nor can the Magiſtrate ever compel them to inter them. Many, to give the greater Proof of their Reſpect and Tenderneſs for their deceaſed Fathers, keep their Corpſe by them for three or four Years; and, during the whole Time of Mourning, their Seat, in the Day, is a Stool covered with white Serge; and in the Night, they lie near the Coffin, on nothing but a Mat made of Reeds. They deny themſelves the Uſe of Meat and Wine; frequenting no Feaſts, nor any public Aſſemblies: And if they are obliged to go out of the City, which is not uſual till a certain Time be over, the Chair, they are carried in, is ſometimes covered with white Cloth: Yet, the Body muſt be buried at laſt. If the Son neglected to have it laid in the Tomb of his Anceſtors, he would live without Reputation; eſpecially in his own Family, who would refuſe to place his Name in the Hall where they pay them Honours. For this Reaſon, when *Corps kept for Years.*

[a] It is preſumed, they hanged themſelves to bear him Company, as mentioned before to have been the Cuſtom. [b] *Du Halde*'s *China*, p. 309. [c] *Navarette* ſays, it certainly laſts ſo long. [d] The ſame Author ſays, the Relations preſent a Petition to the Emperor for that Purpoſe. [e] *Navarette* takes Notice, that, in his Time, the Emperor reduced the chief Governor of *Kanton*'s Term of three Years Mourning to that of one Month; but that the Diſpenſation coſt him thirty thouſand Ducats. This he applied for, in order to keep his Poſt; which, without oppreſſing the People, as he had ſeen elſewhere, was worth to him above three hundred thouſand Ducats a Year, beſides his Salary. [f] The ſame Author ſays, they give him another Employment; but, that, ſometimes, he waits for it. [g] *Du Halde*, as before, *p.* 306; and *Navarette*'s Deſcription of *China*, p. 72. [h] But this was carrying Things too far; and he might have loſt his Kingdom through his Scruples; as the late Emperor did the Poſſeſſion of *Madrid*, and, in Conſequence, all *Spain*, for his Bigotry in ſtopping to viſit the Image of the Lady *del Pillar* at *Zaragoſa*.

Ceremonies. Customs. rich Merchants, or Persons of Distinction, die in Employments out of their own Province, it is usual to transport the Corpse to the Place where their Family resides. However, they are not permitted to enter or pass-through the Cities without an Order from the Emperor; but must keep on their Way without the Walls [a].

Respects paid the Dead BESIDES the Duties which regard the Mourning and Funeral, there are two other Sorts of Ceremonies that are usually paid by every Family to their deceased Ancestors. The first are performed in the *Tse-tang*, or *Hall of Ancestors*, which is built for this Ceremony by every Family. All the Branches thereof, sometimes eighty-seven in Number, amounting to seven or eight thousand Persons, assemble in this Hall in Spring, and sometimes in Autumn. At these Times there is no Distinction of Rank; the Mechanic, the Husbandman, the *Mandarin*, are all mixed together, and own one another. It is Age here that gives Precedence; the oldest, though the poorest, having the first Place.

In the Hall of Ancestors, THERE is in the Hall a long Table standing against the Wall, with Steps to go-up to it; whereon, commonly, is placed the Image of the most eminent Ancestor, or, at least, his Name. And on small Tablets, or little Boards, about a Foot high, ranged on both Sides, are written the Names of the Men, Women, and Children of the Family; together with the Age, Quality, Employment, and Day of the Decease of each.

THE richest among these Relations prepare a Feast. Several Tables are loaded with Variety of Dishes of Meat, Rice, Fruit, Perfumes, Wine, and Wax-Candles: Likewise, much the same Ceremonies performed as were observed by their Children, in approaching them, whilst living; and are practised, in Respect of *Mandarins*, on their Birth-Days, or when they take Possession of their Governments. As for the common People, who are not able to build proper Places for this Use, they content themselves with hanging the Names of their nearest Ancestors in those Parts of their Houses where they may be most in View [b]. *Navarette* says, their Commemoration of the Dead falls on the Day of the New-Moon; and that then the Kindred meeting in the Temple of their Forefathers, in their best Apparel, perform many Genuflexions, and offer sundry Sorts of Meats and Drinks: He adds, that Prayers and Petitions are made directly to those dead Persons [c].

And at the Graves. THE other Ceremonies are practised at least a once a Year, at the Burial-Place of their Ancestors; which being often in the Mountains, the Descendants, both Men and Children, resort thither. Some Time in *April*, they begin with plucking-up the Weeds and Bushes from about the Sepulchre [d]; after which they express Signs of Veneration, Gratitude, and Grief, according to the same Forms that were observed at their Death: They then place upon the Tomb, Wine and Victuals, with which they afterwards regale themselves.

IT cannot be denied, says our Author, but that the *Chinese* carry their Ceremonies to Extremes, especially with respect to honouring the Deceased. *Confusius* says, in the Book *Lu-nyu*, that the same Duties must be paid to the Dead, as if they were present, and alive: And one of his Disciples tells us, that when his Master made the accustomed Offerings to the Dead, he did it with great Affection. To raise his Warmth the more, he imagined, that he saw them, and heard them speak; and because they had been long deceased, often called them to mind.

THE ancient *Chinese* made use of a little Child, as a living Image, to represent the Deceased; in Place of whom their Successors have substituted an Image [e], or Tablet; because it is easier to procure a Tablet, than a Child, as often as they have Occasion to make their Acknowledgments to their dead Relations, for the Life, Fortune, and good Education received from them [f].

IT remains only to observe, with regard to the *Chinese*, that although they are said to exceed almost all other Nations in an excessive Fondness for Life; yet it is confessed, that for the most Part when they are dangerously ill, they are willing enough to die, and even to be told they are near their End [g]. Not to mention those of both Sexes, who make-away with themselves through Anger, Jealousy, Despair, Magnanimity, and other Causes.

SECT. VI.

Magnificence of the Chinese *in their* Journeys, Festivals, *and* public Works.

1. Pomp *in which they appear abroad, or travel; and in their public* Festivals, *or* Rejoicings.

Pomp of the Quan: *Of a Vice-Roy, when he appears abroad: Of the military* Quan, *when they travel: Of the Emperor's Court. New-Year*

[a] *Du Halde*'s *China*, p. 306, *& seq.* [b] The same, *p.* 309. [c] *Navarette*'s Description of *China*, p. 72. [d] *Navarette* observes, that they are very careful to keep the Sepulchres clean, and pull up the Weeds that grow about them. [e] Because, their Doctors say, a Child stands in need of a sensible Object to put him in Mind of his deceased Parents. In *Europe*, it is thought, the Men stand as much in need of such Memorandums as Children. [f] *Du Halde*, as before, *p.* 309, *& seq.* [g] The same, *p.* 280.

Festivals

Feſtival. Odd Superſtition. Feſtival of Lanthorns. The Lanthorns deſcribed. Moving Figures. Splendid Fireworks. Artificial Vine-Arbour. Odd Ceremony. Origin of this Feaſt.

ALTHOUGH the Laws have baniſhed Luxury and Pomp from the *Chineſe*, in private Life; yet they not only permit, but require the Uſe of them on public Occaſions, as when they appear abroad, or travel; when they make, or receive Viſits; when they repair to Court, and are admitted into the Emperor's Preſence.

In their Journeys.

When he appears abroad.

IT is hard to expreſs the Grandeur with which the *Quân*, or Officers, Civil and Military (whom *Europeans* call *Mandarins*, after the *Portugueze*) appear, when they go abroad, or in Proceſſion, on any public Occaſion. When a *Chi fü*, who is a Civil Magiſtrate, or *Mandarin* of the fifth Order, goes-out, the Officers of his Tribunal march in order on each Side the Street; ſome carrying before him an Umbrella of Silk; ſome ſtriking, from Time to Time, on a Copper Baſon, and giving Notice to the People, with a loud Voice, to ſhew him Reſpect as he paſſes along. Some carry great Whips, others long Staves, or Iron Chains; the Din of all which Inſtruments makes the People tremble. As ſoon as he is in Sight, all who are in the Street, ſhew their Reſpect: Not by ſaluting him in any Manner whatſoever, for that would be a Familiarity, deſerving Puniſhment; but by withdrawing out of the Way, ſtanding upright with the Feet cloſe together, and their Arms hanging; in which Poſture they continue till the *Mandarin* has paſſed-by.

WHEN the *Tſong-tû* [a], or a Vice-Roy, goes abroad, he is always accompanied with an hundred Men at leaſt in his Train, which ſometimes takes up a whole Street. Firſt, two Kettle-Drums, beating upon Copper Baſons, give Notice of the March: Next follow eight Perſons bearing Colours (with japanned Staves) whereon are written his Titles, in large Characters: Then fourteen other Enſigns, exhibiting the Symbols peculiar to his Office; ſuch as the Dragon, Tiger, *Fong whang* [b], flying Tortoiſe, and other winged Animals: Six Officers carrying a Board in Shape of a large Shovel, ſuſpended aloft; whereon the particular Qualifications of the *Mandarin* are inſcribed in Gold. Two others bearing, the firſt a large triple Umbrella of yellow Silk; the ſecond a Caſe, wherein the Umbrella is kept. Two Archers on Horſeback, at the Head of the chief Guards. The Guards armed with ſtrait Scythes, adorned with Locks of Silk in four Rows: Two other Files of armed Men, ſome carrying Maces, either with long Handles, elſe in the Form of a Hand, or Serpent of Iron; others armed with large Hammers and long Hatchets, like a Creſcent. A ſecond Company of Guards, ſome armed with ſharp Battle-Axes, others with ſtrait Scythes like the former, Soldiers carrying three-pointed Halberts, Arrows, or Axes. Two Porters with a Kind of handſome Coffer, containing the Seals of his Office. Two other Kettle-Drummers, who give Notice of the *Mandarin*'s Approach. Two Officers with Plumes of Geeſe-Feathers in their Hats, and armed with Canes, to keep the Croud in Awe. After them come two Mace-Bearers, with gilt Maces, in the Shape of Dragons, and a great Number of Officers of Juſtice; ſome holding Whips, or flat Staves, to give the Baſtonado; others armed with Chains, Whips, and Cutlaſſes, or carrying ſilk Scarfs. Laſtly, two Standard-Bearers, and the Captain, who commands the Company.

THIS is the Equipage that precedes the Vice-Roy, who appears in the Middle of the Proceſſion ſitting in a large gilt Chair, carried by eight Porters, and ſurrounded with Pages and Footmen; having near his Perſon an Officer, who carries a large Fan, ſhaped like a Skreen. He is followed by ſeveral Guards, ſome armed with Maces, in Form of Polyhedrons; others with long-handled Sabres. After theſe come ſeveral Enſigns and Cornets, with a great Number of Domeſtics on Horſeback, every one carrying ſomething for the Uſe of the *Mandarin*; as the ſecond Cap, incloſed in a Caſe, if the Weather ſhould oblige him to change the one he wears, and the like. When he is abroad in the Night, they carry ſeveral very handſome, large Lanthorns, with his Titles and Quality inſcribed on them, in order to inſpire every one with the Reverence due to him; as alſo that thoſe who are walking may ſtop, and others who are ſitting may riſe.

Of the military Quân.

THE military *Quân*, who travel commonly on Horſeback, affect no leſs Grandeur. Their Harneſs is exceeding ſumptuous, the Bits, and the Stirrups, being either Silver, or gilt; the Saddle very rich; the Bridle-Reins of coarſe-pinked Satin, two Fingers broad. From the upper Part of the Cheſt two great Locks of fine, red Hair (ſuch as their Caps are covered with) hang-down from Iron Rings, either gilt, or ſilvered. Their Retinue conſiſts of a great Number of Horſemen, Part going before, and Part behind them; without reckoning their Domeſtics, who are clad either in black Satin, or dyed Calico, according to their Maſter's Quality [c].

[a] Who commands two Provinces; the Vice-Roy, only one. [b] A Sort of *Phœnix* [c] *Du Halde*'s *China*, p. 252, *& ſiqq.* and *Le Comte*'s Memoirs of *China*, p. 159, *& ſeq.*

Chineſe Magnificence.

NOT only the Princes, and Perſons of the higheſt Rank, appear in public with a Train; but even thoſe of a meaner Quality go always on Horſeback along the Streets, or in a cloſe Sedan, followed by ſeveral Footmen. The *Tartarian* Ladies do often make uſe of Calaſhes with two Wheels; but they have not the Uſe of the Coach [a].

When they travel.

IN *Europe*, inſtead of making a great Figure upon the Road, People are commonly unprovided, and have nothing in Order: But the Cuſtom is otherwiſe in *China*, where a great *Mandarin* always travels in State. If by Water [b], his own Bark is very ſplendid, ſailing at the Head of a great Number of others, which carry his Attendants. If he goes by Land, beſides the Domeſtics and Soldiers, who precede and follow him with Spears and Enſigns; he has, for his own Perſon, a Litter, a Chair carried by Mules, or eight Men, and ſeveral led Horſes; making uſe of theſe Vehicles by Turns, according to his Fancy, and the different Changes of Weather.

Of the Emperor's Court.

BUT the *Chineſe* Magnificence never appears with ſo much Splendor, as when the Emperor gives Audience to Ambaſſadors; or when ſitting upon his Throne, he beholds, at his Feet, the principal Lords of his Court, and all the great Officers, Civil and Military, in their Habits of Ceremony, paying him Homage. It is a Spectacle truly auguſt, to ſee a prodigious Number of Soldiers under Arms, an inconceivable Multitude of *Mandarins*, with all the Marks of their Dignity, each placed according to his Rank, in exact Order; the Miniſters of State, the Preſidents of the ſupream Courts, the Regulo's, and Princes of the Blood; the Whole appearing with extraordinary Grandeur, and conveying a moſt lofty Idea of the Sovereign, to whom ſuch profound Reverence is paid [c].

New-Year Feſtival.

THE *Chineſe* affect great Magnificence in their public Rejoicings and Feſtivals, eſpecially two, which are celebrated with vaſt Expence. The one is called the *Beginning of the Year*; the other the *Feaſt of Lanthorns*. By the *Beginning of the Year*, is to be underſtood the End of the twelfth Month, and about twenty Days of the firſt Moon of the following Year; which is properly their Vacation Time: Then all Buſineſs ceaſes, they make Preſents, the Poſts are ſtopped, and the Tribunals are ſhut-up throughout the Empire. They call this *ſhutting-up the Seals*; becauſe at this Time the little Coffer, wherein the Seals of each Tribunal are kept, is ſhut-up with much Ceremony. This Vacation laſts a whole Month, and is a Time of great Rejoicing; eſpecially during the laſt Days of the old Year, which are celebrated with great Solemnity. Inferior *Mandarins* go to ſalute the ſuperior, Children their Fathers, Servants their Maſters, &c. This is called *taking Leave of the Year*. In the Evening all the Family meet, and feaſt together.

IN ſome Places they will not ſuffer a Stranger among them, although one of their neareſt Relations; for Fear that the Moment the new Year begins, he ſhould catch the good Luck, which was to light on the Houſe, and carry it away with him. On this Day, therefore, every one keeps cloſe at home, and rejoices with none but his own Family: But on the next, and following Days, they expreſs Signs of extraordinary Joy; for all the Shops are ſhut, and every-body is wholly taken-up with Sports, Feaſts, and Plays. All put on their beſt Cloaths, and viſit their Friends, Relations, and all thoſe they have any Intereſt in. They act Plays, treat each other, and mutually wiſh all Kinds of Proſperity [d].

THE *Feaſt of Lanthorns* falls on the fifteenth of the firſt Moon, on which Day all *China* is illuminated, and, to look from ſome high Place, ſeems to be on-fire. It begins on the thirteenth in the Evening, and continues to the ſixteenth or ſeventeenth. Every Perſon, both rich and poor, in City and Country, on the Sea Coaſt, or on the Rivers, lights up painted Lanthorns [e] of ſeveral Faſhions [f]; hanging them in their Courts, Halls, and at their Windows. The Rich lay-out ſometimes two hundred Franks in Lanthorns; and the chief *Mandarins*, the Vice-Roys, and the Emperor, three or four thouſand Livres [g]. On this Occaſion the Gates are left open every Evening; and the People are even permitted to enter the Tribunals of the *Mandarins*, who adorn them in a ſplendid Manner [h].

THESE Lanthorns are very large [i]; the Frames of ſome, containing ſix Panes, being of japanned Wood, adorned with Gildings. Theſe Panes conſiſt of fine tranſparent Silk, whereon are painted

[a] *Le Comte*'s Memoirs of *China*, p. 160, & *ſeq.* [b] Wherein, *Le Comte* ſays, their Magnificence is chiefly diſplayed. [c] *Du Halde*'s *China*, p. 285, & *ſeq.* [d] The ſame, *p.* 290. [e] *Le Comte* ſays, they alſo light Bonfires and Crackers: *Magalhaens*, that they play-off Squibs and Fireworks, burning in the Air in the Shape of Boats, Towers, Dragons, Tigers, &c. [f] *Magalhaens*, p. 110, ſays, that *Yang chew fu*, in *Kyang-nan*, is the moſt famous Place in the Empire, for the Beauty and Richneſs of its Lanthorns. [g] According to *Le Comte*, two thouſand Crowns. [h] *Magalhaens*, p. 111, relates a Story that ſeems to account for this Liberty. [i] The ſame Author ſays, twenty Cubits, (that is, thirty Feet) and ſometimes more, in Diameter. He adds, that they are hung in the Halls, or in the Courts, on Scaffolds erected on Purpoſe. *Le Comte* ſays, they are Halls, or Chambers themſelves, fit to viſit, or act Comedies in; and that thoſe of all Sorts lighted-up throughout the Empire may amount to two hundred Millions: If it be not a Miſtake of the Tranſlator for two hundred thouſand.

Flowers,

Flowers, Trees, Animals, and human Figures; which, being diſpoſed with Art, receive, as it were, Life from the great Number of Lamps and Candles, wherewith the Lanthorns are lighted-up. Others are round, and made of blue tranſparent Horn, very beautiful to the Sight. The Top of this Machine is adorned with Variety of carved Works; from the Corners whereof hang Streamers of Satin and Silk of divers Colours.

SEVERAL of them repreſent Sights, purpoſely to amuſe and divert the People: There you ſee Horſes galloping, Ships ſailing, Armies marching, Kings with their Retinues, People dancing, and the like; the Figures being put in Motion by Wires. Some, by Shadows, repreſent Princes and Princeſſes, Soldiers, Buffoons, and other Characters; whoſe Geſtures correſpond ſo nicely with the Words of the Operator, that one would think they really ſpoke. Others carry a Dragon ſixty or eighty Feet long, full of Lights from Head to Tail, which they cauſe to wind and turn like a Serpent.

BUT what gives a new Splendor to this Feaſt is the Fireworks, which are plaid-off in all Parts of the City; and wherein the *Chineſe* are thought to excel. *Magalhaens* relates, that he was extremely ſurprized with one he ſaw in the Province of *Se-chwen*; to which the Tyrant *Chang hyen chung* had invited him and *Buglio*: It repreſented an Arbor, covered with a Vine; all the Joiners Works burnt without conſuming: But the Vine itſelf, as well as the Branches, Leaves, and Grapes, conſumed by Degrees: What was moſt curious, the Grapes appeared red, the Leaves green; and the Colour of the Stem was imitated ſo artificially, that any Perſon might have been deceived [a]. But the Reader will be better able to judge of theſe Fireworks from the Deſcription of one which the Emperor *Kang-hi* cauſed to be plaid-off for the Diverſion of his Court; whereat the Miſſioners of his Train were preſent.

IT began by ſetting-fire to half a Dozen Cylinders planted in the Earth: Theſe ſpouted Flames in the Air; which, at the Height of twelve Feet, fell down again in golden Rain or Fire. This was followed by a Sort of Bomb-Cart, ſupported by two Stakes or Pillars; from whence proceeded a Shower of Fire, with ſeveral Lanthorns; many Sentences wrote in large Characters, the Colour of burning Sulphur; and half a Dozen branched Candleſticks, in the Form of Pillars; which, in a Moment, turned Night into Day. At length, the Emperor ſet-fire to the Body of the Machine, which preſently became all in a Blaze; being eighty Feet long, and forty or fifty broad. The Flame having caught hold of ſeveral Poles, and Paper Figures placed on every Side, a prodigious Quantity of Squibs flew up in the Air, and a great Number of Lanthorns and Branches were lighted all over the Place. This Show laſted for half an Hour; and, from Time to Time, there appeared, in ſome Places, violet or bluiſh Flames, in the Form of Bunches of Grapes, hanging on a Vine-Arbor; which joined to the Lights, that were like ſo many Stars, yielded a very agreeable Spectacle. *In their Feſtivals.*

THERE is one remarkable Ceremony obſerved at this Feſtival: In moſt Houſes, the Head of the Family writes in large Characters, on a Sheet of red Paper, or japanned Board, the following Words, *Tyen-ti*, *San-kyay*, *She-fun*, *Van-lin*, *Chin-tſay*; the Senſe of which is, *To the true Governor of the Heaven, the Earth, the three Limits* [b], *and of the ten* [c] *thouſand Intelligences.* This Paper is either put in a Frame, or paſted on a Board. At Court they place it on a Table, on which is ſet Corn, Bread, Meat, or ſome other Thing of that Nature; and then proſtrating themſelves on the Earth, offer Perfume-Sticks [d]. *Odd Ceremony.*

THE common Opinion is, that this Feſtival took its Original ſome Time after the Eſtabliſhment of their Empire, from a certain *Mandarin*, who having loſt his only Daughter near the Bank of a River, went, and ſought for her, attended by the People, who loved him for his Virtues, with Flambeaux and Lanthorns, weeping and wailing as he did; but without Effect. In regard this Story is very like that relating to the Feſtival, called by the *Chineſe*, *Long chwen*, that is, *Dragon Bark*; and by the *Portugueze* of *Ma-kau*, *Lumba lumba*, which is celebrated the fifth Day of the fifth Moon, by Diverſions on the Water [e], the *Literati* aſſign another Original for the Lanthorn Feſtival. They pretend, that the Emperor *Kye*, the laſt of the firſt Family of *Hya*, complaining of the Shortneſs of Life, as divided into Day and Night, for the Enjoyment of Pleaſures, by the Advice of his voluptuous Queen, built a Palace without Windows; wherein he aſſembled a Number of both Sexes, who went naked; and, in order to baniſh Darkneſs, had it continually illuminated with Torches and Lanthorns; from whence this Feaſt took its Riſe [f]. *Origin of this Feaſt.*

THE fifteenth Day of the eighth Moon is ſo- *Another Feſtival.*

[a] *Le Comte*, who ſeems to copy *Magalhaens*, in his Account of this *Lanthorn Feaſt*, ſeems to ridicule this Account of the Fire expreſſing the Colours of Fruits; but owns, he never ſaw theſe Fireworks. [b] Meaning, the whole World. [c] That is, an innumerable Multitude. [d] *Magalhaens*'s Relation of *China*, p. 104, & *ſeq.* *Le Comte*'s Memoirs of *China*, p. 161, & *ſeqq.* and *Du Halde*'s *China*, p. 290, & *ſeq.* [e] This ſeems to be the ſame with that mentioned before, *p.* 46. e. [f] *Magalhaens*, as before, *p.* 107. *Le Comte*, as before, *p.* 165.

Chineſe Magnificence

lemnized with great Feaſting and Rejoicing. From Sun-ſet and Moon-riſe till Midnight, they are all abroad with their Friends and Kindred in the Streets, in the Piazzas, in their Gardens, and upon the Terraſſes; feaſting, and watching to ſee the Hare which that Night appears in the Moon [a]. The preceding Days, they ſend one another Preſents of little round Loaves and Sugar-Cakes, called *Yue-ping*, or *Moon-Cakes*. The biggeſt, which are about ten Inches in Diameter, and repreſent the Full Moon, have a Hare in the Middle, made of a Paſte of Walnuts, Almonds, Pine-Apple Kernels, and other Ingredients. Theſe they eat by the Light of the Moon, and have their Muſic playing about them [b].

Other Holidays.

THE ſame Author obſerves, elſewhere, that the firſt nine Days of the Moon are great Holidays; eſpecially the ninth. He adds, that, during theſe Holidays, they marry their Children; and, that, at the Feaſt, they never fail of having one Diſh which repreſents the Apartment in the Palace incompaſſed with nine Towers [c]; each anſwering to one of the nine Days. For, they ſuppoſe the Number nine to be more excellent than all other Numbers; and endowed with the Virtue of conferring Honour, Riches, and long Life. For this Reaſon, both Rich and Poor, on the ninth Day, get upon Terraſſes and Towers in the Cities; and in the Country upon Hills, or other elevated Places; where they feaſt with their Relations and Friends. Thoſe nine Towers in the Palace were built for the ſame Purpoſe [d].

2. *Magnificence in their* public Works, *ſo far as relates to* Cities.

Kinds of public Works. Walls of Cities: Their Gates: Forts and Fortreſſes: Ornamental Towers. Temple at Nan-king. *The Porcelain Tower: The Stories: The ſpiral Top. Temples of the* Bonzas. *Triumphal Arches: Their Ornaments: Their Architecture. Other public Buildings. Private Houſes, how built. Houſes Poſition: Thoſe of the Vulgar: Of the Nobility: Of the* Quân. *Out-Houſes, Gardens,* &c. *Their Furniture, and Moveables. Beds and Curtains. Curious Stove-Beds: Their Conveniences.*

Kinds of Works.

THE Magnificence of the *Chineſe* is conſpicuous in nothing ſo much as their public Works, ſuch as the Fortifications uſed for Defence of their Cities, their Forts, and Caſtles, their Temples, Halls of their Anceſtors, Towers for Ornament, triumphal Arches, Bridges, Roads, Canals, and the like.

Public Works.

THE moſt remarkable Works that concern Cities, are their Walls and Gates, the Temples, Towers, and triumphal Arches, and other public Structures; that, on the firſt Approach, attract the Eye with Surprize: To which the prodigious Number of Barks, the Multitudes of People, and Hurry of Buſineſs, makes no ſmall Addition.

Walls.

THE Walls of moſt of the Cities of *China* are oblong Squares, built on a Line at right Angles, and facing the four Cardinal Points as near as may be. They are generally ſo high [e], that they hide the Buildings; and ſo broad, that one may ride on Horſeback on them. They are either of Brick or ſquare Stone, ſurrounded by a wide Ditch, and fenced behind with a Rampart of Earth, as well as fortified with ſquare Towers, at certain Diſtances.

Their Gates.

EVERY Entrance has two Gates; between which is a Place of Arms for exerciſing the Soldiers. When one enters the firſt Gate, the ſecond is not to be ſeen, becauſe not oppoſite. Though they are not adorned with Figures in Baſſo-Relievo, like other public Works, yet the Sight is extremely affected by the prodigious Height of the two Towers or Pavilions built over them, ſerving for Arſenals and Guard-Houſes; by their Arches, that, in ſome Places, are of Marble; by their Thickneſs, and by the Strength of the Work [f].

Forts. Fortreſſes.

THE Forts alſo, and Forteſſes, are farther Inſtances of the *Chineſe* Magnificence: Of theſe, ſome Account will be given when we come to ſpeak of the Strength and Forces of the Empire. What renders this Grandeur in Building more remarkable, is the great Number of Inſtances to be met with: For there are no fewer than one thouſand five hundred and eighty-one walled Cities, and above two thouſand eight hundred and twenty one Forts and fortified Places of ſeven different Orders or Rates; without reckoning the Towers, Caſtles, and Redoubts, three thouſand in Number, built along the famous Wall [g]; which, itſelf, for Grandeur, ſurpaſſes all the Works in the World beſides [h]. It employed every third Man, capable of working, out of every Province. For laying the Foundation in the Sea, ſeveral Ships, loaden with Iron and huge Stones, were ſunk: On this the Wall was raiſed with ſuprizing Art; the Workmen having been obliged not to leave the leaſt Chink between the Stones on Pain of Death. Hence the Work is as intire, at preſent, as when firſt built [i].

[a] See before, *p.* 20. [b] *Magalhaens*'s Relation of *China*, p. 318. [c] See before, *p.* 20. [d] *Magalhaens*, as before, *p.* 316, *&c.* [e] Thoſe of *Pe-king* are forty Feet in Height. [f] *Du Halde*'s *China*, p. 240, *&* 288. [g] See before, *p.* 5. [h] See before, *p.* 69. [i] *Du Halde*'s *China*, p. 5, *&* 262.

IN

In the moſt frequented Parts of each City, there is one or more Towers, called *Pau-ta*, which make a very beautiful Appearance on Account of their Architecture and Height; ſome conſiſting of nine, but none of fewer than ſeven Stories; one leſs than the other the higher they go, with Windows on every Side. The moſt famous Structure of this Kind is that in the City of *Nan-king*, commonly called *The Great* or *Porcelain Tower*; of which ſome Account has been already given. But *Le Comte*'s Deſcription is the beſt to be met with [a].

Public Works. Towers.

The *Pau-ghen-tſe*, or *Temple of Gratitude*, built by the Emperor *Yong-lo*, ſtanding without the City, is erected on a Pile of Bricks, which form a great Perron, ſurrounded with Rails of unpoliſhed Marble, and a Staircaſe of ten or twelve Steps. The Hall, which ſerves for the Temple, is an hundred Feet high, and ſtands on a ſmall Marble Baſis, no more than a Foot in Height; but jutting-out two Feet beyond the reſt of the Wall all-round. The Front is adorned with a Gallery, and ſeveral Pillars. The Roofs (for there often are two; one bearing on the Wall, the other covering that again;) are of japanned Tiles, green and ſhining. The Joiners Work, on the Inſide, is painted, and adorned with an infinite Number of Pieces, engaged, in different Manners, with one another; which is no ſmall Ornament among the *Chineſe*. It is true, that this Foreſt of Beams, Joiſts, Rafters, and Spars, that appear on all Sides, has ſomething very ſingular and ſurprizing; becauſe, one is apt to imagine, that there is a great deal of Labour and Expence in Works of this Kind: Though, in Reality, the Confuſion proceeds from the Ignorance of the Workmen [b], who have not yet diſcovered that lovely Simplicity, wherein the Strength and Beauty of the *European* Buildings conſiſts.

The Hall has no Light but what it receives through the Doors; of which there are, on the Eaſt Side, three very large ones, leading into the famous Tower we are going to ſpeak of, which makes Part of the Temple. It is an Octogon, about forty Feet in Diameter; ſo that every Side of it is fifteen Feet in Length [c]. It is incompaſſed on the Outſide by a Wall of the ſame Figure, which is two Toiſes (or Fathom) and an half diſtant from the Edifice; and, at a moderate Height, ſupports a Roof, covered with japanned Tiles, that ſeems to proceed from the Body of the Tower, and makes, underneath, a very handſome Gallery. The Tower has nine Stories, each adorned with a Cornice three Feet above the Windows; and a Roof like that of the Gallery, except, that it does not jut-out ſo far, as not being ſupported by a ſecond Wall. The Wall, on the Ground-Floor, is, at leaſt, twelve Feet thick, and eight and an half high, caſed with Porcelain. It is true, the Rain and Duſt have impaired its Beauty; but yet it is ſtill intire enough to ſhew that it is made of China-Ware, though of a coarſer Sort: For it is not probable, Bricks would have continued three hundred Years in ſo good Condition.

The Staircaſe, which is made on the Inſide, is ſmall, and inconvenient; becauſe the Steps are extremely high. Every Story is ſeparated by thick Beams, placed croſs-ways, which ſupport a Floor, and form a Room, the Cieling of which is adorned with Variety of Paintings; if the *Chineſe* Painters be capable of embelliſhing an Apartment. The Walls of all the upper Stories are full of ſmall Niches, containing Images in Baſſo-Relievo; which make a very pretty Sort of inlaid Work. The Whole is gilded, and ſeems to be of Marble, or poliſhed Stone; though I believe it to be nothing but Brick made in a Mould: For the *Chineſe* are ſurprizingly ſkilful in ſtamping all Sorts of Figures on their Bricks; the Earth of which being extremely fine, and well tempered, is much fitter than ours for taking the Impreſſion of the Mould. All the Stories are of an equal Height, except the firſt, which is higher than the reſt: As the Author reckoned one hundred and ninety Steps, almoſt every one ten Inches thick, by exact Meaſure, they muſt make one hundred and fifty eight Feet: If to this you add the Height of the Perron, the ninth Story, which has no Steps, and the Roof, the Tower will be from the Ground about two hundred Feet high.

The Stories.

The Top of all the Work is one of its greateſt Beauties; for it is a thick Maſt, reaching from the Floor of the eighth Story, whereon it ſtands, more than thirty Feet above the Roof. It ſeems to be incloſed in a large Iron Hoop of the ſame Height, which winds round it like a ſpiral Line, or Screw, at the Diſtance of ſeveral Feet; ſo that it looks like a Sort of hollow Cone, pierced through, riſing in the Air, with a golden Ball on the Top, of an extraordinary Magnitude. This, which the *Chineſe* call the *Porcelain Tower*, is certainly the beſt contrived, moſt ſolid, and magnificent Work in all the Eaſt [d].

The ſpiral Top.

Of Temples (called by *Europeans* Pagods) erected to fabulous Divinities, there is a prodigious Number in *China*; the moſt celebrated are

Temples of the Bonzas.

[a] *Du Halde*'s *China*, p. 240, and 288. [b] This requires farther Confirmation, *Le Comte* being apt to depreciate the *Chineſe* Works. [c] Hence one hundred and twenty Feet in Circumference: Though *Gemelli*, who borrows moſt of his Account from *Le Comte*, reckons but forty; yet makes the Wall at the Bottom twelve thick. [d] *Le Comte*'s Memoirs of *China*, p. 77, & *ſeqq.* and *Du Halde*'s *China*, p. 288, & *ſeq.*

Chineſe Magnificence.

built in barren Mountains; but the Canals cut at a great Expence, to conduct the Water from the Heights into Reſervoirs; the Gardens, Groves, and Grotto's, made in the Rocks for Shelter, againſt the exceſſive Heat, render theſe Solitudes charming.

Their Structure.

THE Structure conſiſts partly of Porticos, paved with large, ſquare, poliſhed Stones; and partly of Halls and Pavilions, which ſtand in the Corners of Courts, and communicate by long Galleries, adorned with Statues of Stone, and ſometimes of Braſs. The Roofs of theſe Buildings ſhine with beautiful Tiles japanned green and yellow, and are adorned at the Corners with Dragons of the ſame Colour, projecting forward.

THESE Temples generally have a great Tower, ſtanding by itſelf, and terminating in a Dome, to which they aſcend by a handſome Staircaſe, that winds round about it. A ſquare Temple commonly occupies the Middle of the Dome, which is often adorned with *Moſaic* Work, and the Walls covered with Stone Figures of Animals and Monſters, in Relievo [a].

THIS is the Form of moſt Temples. *Magalhaens* ſays, that they reckon about four hundred and fourſcore of theſe, which are very famous, and much frequented, by reaſon of their Riches, their Magnificence, and the Miracles pretended to be wrought by their Idols. Theſe are the Habitations of the *Bonzas* [b].

Triumphal Arches.

TRIUMPHAL Arches, called *Pay-fang*, and *Pay-lew*, are very numerous in every City: Many of them are clumſily made, and deſerve little Notice: Some are wholly of Wood, except the Pedeſtals, which are of Marble. Thoſe at *Ning-po*, according to *Le Comte*, have generally three Gates; a large one in the Middle, and two ſmall ones on the Sides: The Piers, or Jambs, are ſquare Pillars, or Poſts, conſiſting of one Stone: The Entablature is compoſed of three or four Faces, generally without any Projection, or Moulding, except the laſt, or the laſt but one; which is in Place of a Frieze, and has ſome Inſcription engraven on it. Inſtead of a Cornice, the Piers ſupport a Roof, that makes the Top of the Gate, and is only to be deſcribed by the Pencil; our *Gothic* Architecture itſelf not having any Thing ſo odd in it. Every Gate conſiſts of the ſame Parts, which differ only in Size; and, though of Stone, are joined together by Tenons and Mortiſes, as if they were made of Wood.

Their Ornaments.

THESE triumphal Arches, which are ſeldom above twenty, or twenty-five Feet high, are ſet-off with Figures of Men, Antics, Flowers, and Birds, in pierced Work; jutting out beyond the Arch in various Attitudes, with other Ornaments indifferently well carved; ſo neatly detached from the Body of the Arch, that they are joined together only by Cordons, and thus run into one another without Confuſion. This ſhows the ſuperior Skill of the ancient Workmen; for the modern triumphal Arches fall vaſtly ſhort of the old ones: The Sculpture is very ſparing, and appears coarſe: The Work is all ſolid, without being pierced, or having any Thing to enliven it.

HOWEVER, the Order, which is in both the ſame, is very different from ours, both as to the Diſpoſition and Proportion of the Parts: They have neither Chapiters, nor Cornices; and that which bears ſome Likeneſs to our Friezes, is of a Height ſhocking to an *European*: Although ſo much the more agreeable to the *Chineſe* Taſte, as it affords more Room for the Ornaments, which garniſh the Sides of the Inſcription engraven thereon; conſiſting, ſays *Le Comte*, of beautiful Figures, and emboſſed Sculptures, with Knots wrought looſe one within another, Flowers curiouſly carved, and Birds flying, as it were, from the Stone; which in his Mind are Maſter-Pieces. In ſhort, theſe Pageants, though ſlight enough, have their Beauties; and ſeveral of them placed at certain Diſtances in a Street, eſpecially if it be narrow, diſcover ſomething grand, and make an agreeable Show [c]. They reckon more than eleven hundred [d] Monuments erected in Honour of their Princes, and illuſtrious Men, or Women, renowned for Knowledge, or Virtue; which conſiſt principally in triumphal Arches, to be found in almoſt every City.

AMONG the public Buildings may be reckoned the Halls erected in Honour of Anceſtors, the Libraries, and the Palaces of the Princes and *Mandarins*. Of the firſt, there are ſeven hundred and nine, conſiderable for their Largeneſs and Beauty. Of the ſecond, two hundred and ſeventy-two, built at a vaſt Expence, finely ornamented, and ſtored with Books. Thirty-two Palaces of the Regulos, built after the Model of the Emperor's at *Pe-king*, and thirteen thouſand ſix hundred and forty-ſeven of the *Quân*. To theſe may be added ſix hundred and eighty-five Mauſoleums, or Sepulchres, famous for their Architecture and coſtly Ornaments [e].

BUT the far greater Part of ſuch Buildings, (eſpecially the Palaces of the *Quân*) though built at the Expence of the Emperor, have not the leaſt Appearance of Magnificence, more than thoſe of private Perſons, who are reſtrained, not excepting *Mandarins* and Noblemen, by ſump-

[a] *Du Halde*'s *China*, p. 289. [b] *Magalhaens*'s Relation of *China*, p. 46. [c] *Le Comte*'s Memoirs of *China*, p. 86. *Du Halde*, as before, *p.* 17, and 288. [d] *Magalhaens* makes one thouſand one hundred and fifty-nine. [e] See *Magalhaens*, as before, *p.* 45, *& ſeqq.*

tuary

tuary Laws. While *Le Comte* was at *Pe-king*, a one of the chief *Mandarins*, (who, he thinks, was a Prince) having built him an Houſe ſomewhat more lofty and ſtately than the reſt, he was accuſed before the Emperor: On which, being fearful of the Event, he pulled it down again, while the Buſineſs was under Examination [a].

THE Houſes of the middling Sort of People are very plain; for they have no Regard to any Thing but Conveniency. The Rich adorn theirs with japanned Works, Sculpture, and Gildings; b which render them very pleaſant and agreeable.

THEY commonly begin with erecting Pillars, and placing the Roof thereon: For, the greater Part of their Buildings being of Wood, they ſeldom lay the Foundation deeper than two Feet. They make their Walls of Brick or Clay; though, in ſome Places, they are all of Wood. Theſe Houſes are generally nothing but a Ground-Floor; excepting thoſe of the Merchants, which have often one Story above it, called *Lew*, where they c place their Goods.

IN the Cities, almoſt all the Houſes are covered with very thick Ridge-Tiles. They lay the convex Side downwards; and cover the Chinks, where the Sides meet, by laying on others in a contrary Poſition. The Spars and Joiſts are either round or ſquare. Upon the Spars, they lay either very thin Bricks, in the Shape of large ſquare Tiles, elſe, ſome Pieces of Boards, or Mats made of Reeds, plaiſtered over: When it d is a little dry, they lay on the Tiles; joining them, if they can afford it, with Roche-Lime [b].

WHATEVER Way the Streets are diſpoſed, the Houſes ought always to front the South, in order to avoid the Sharpneſs of the North Wind, which does not agree with the *Chineſe*: And, for this Reaſon, the Door is commonly made ſlanting in one of the Sides of the Court [c]. In moſt Houſes, after paſſing through the Porch, you enter into a Hall, thirty or thirty-five Feet long, e and half as much in Breadth: Behind which, there are three or five Rooms in a Range, from Eaſt to Weſt; the middlemoſt ſerving for an inner Hall. The Roof is ſupported by Pillars erected on Stone Baſes; in ſuch Sort, that, in a Hall of thirty Feet, there will be twenty-four Pillars forward, and as many backward, with one at each End. Theſe Pillars, which are commonly ten Feet high, ſupport great Beams, laid length-ways; and between every two Pillars, at f the Ends, they lay other Pieces of Wood, to ſupport the Timber-work of the Roof; after which, they begin to build the Walls.

THE Magnificence of the Houſes uſually conſiſts in the Thickneſs of the Beams and Pillars, in the Excellency of the Wood, and in the fine Carvings on the Gates or Doors. They have no Stairs but the Steps at the Entrance of the Houſe, which is raiſed a little above the Level of the Ground: But, along the Front, there is a cloſe Gallery, ſix or ſeven Feet wide, and lined with fine hewn Stone. There are ſeveral Houſes, whoſe middle Doors anſwering one another, diſcover, on entering, a large Series of Apartments. *Private Buildings.*

THE Vulgar uſe unburnt Bricks in building their Walls; only in Front they are caſed with burnt Bricks. In ſome Places they are made with tempered Clay; and in others of nothing but Hurdles covered with Lime and Earth: But in Houſes of Perſons of Diſtinction, the Walls are all of ground Bricks, very artificially carved. In the Villages, eſpecially of ſome Provinces, beſides being very low, the Houſes are generally made of Earth; and the Roofs ſo obtuſe, or elſe round, ſo much by Degrees, that they ſeem to be flat. They are compoſed of Reeds that lie upon the Rafters or Joiſts. In ſome Provinces, inſtead of Wood, they burn Pit-Coal, or elſe Reeds or Straw. As they make uſe of Stoves with very ſmall Chimneys, and ſometimes none at all, when Fires are made in any Place beſides the Kitchen, one is almoſt ſtifled with the Smoak; eſpecially if the Fuel be Reeds; which d is unſupportable to thoſe not uſed to it. *Thoſe of the Vulgar.*

THE Houſes of the Nobility, and rich People, are mean, compared with thoſe in *France*: It would be an Abuſe of the Term to call them Palaces, as being but a Ground-Floor, raiſed ſomething higher than common Houſes, and the Roof ſet-off with ſeveral Ornaments at Top. The Tribunals of Juſtice are not more pompous. The Courts are large, the Gates lofty, and ſometimes adorned with elegant Carvings; e but the Inner-Halls, and Chambers of Audience, are neither ſplendid, nor very neat [d]. *Of the Nobility.*

IT muſt be confeſſed, however, that the Palaces of the chief *Mandarins*, and the Princes, as well as of thoſe who are rich, and in Power, are ſurprizing for their vaſt Extent; and that the great Number of Courts, and Apartments, make Amends for want of Beauty and Magnificence. They conſiſt of four or five Courts, with as many Ranges of Buildings at the Ends; the Sides being taken-up with meaner Edifices for Offices, and lodging the Domeſtics. Every Front has three Gates; that in the Middle is the largeſt, and each Side adorned with Lions of Marble [e]. Near the Gate is a Place, incloſed with Rails, *Of the Quân.*

finely

[d] The ſame, *p.* 283, *&ſeq.* and *Le Comte*, as before, *p.* 148. [e] They ſeldom uſe Marble in their Houſes on other Occaſions, though very common.

Chineſe Magnificence.

finely japanned with either red or black: On the Sides are two ſmall Towers, wherein are Drums, and other Inſtruments of Muſic, which are played on at different Hours of the Day; eſpecially when the *Mandarin* goes-in or out, or aſcends the Tribunal.

ON the Inſide there appears firſt a large, open Place, where thoſe wait, who have any Caſe, or Petition to preſent: On each Side are ſmall Houſes, ſerving as Offices for the Officers of the Tribunal: Then you perceive three other Gates, which are never opened, but when the *Mandarin* aſcends the Tribunal: The middlemoſt is very large, and none but Perſons of Diſtinction paſs through it. Beyond this is another large Court, at the End whereof is a great Hall, where the *Mandarin* adminiſters Juſtice: Laſtly, follow ſucceſſively two very neat Halls, for receiving Viſits in, furniſhed with Chairs, and Variety of other Moveables. Such are generally the Tribunals of the great *Mandarins*.

Out-Houſes, Gardens, &c.

YOU afterwards paſs into another Court, with a Hall much handſomer than the former, where none but particular Friends are admitted, ſurrounded by Out-Houſes for the Domeſtics. Beyond this Hall is another Court, where is the Apartment of the Women and Children, with a great Gate to it, through which no Man dares enter. This Part is very neat and commodious, being furniſhed with Gardens, Woods, and Lakes, and every Thing that is agreeable to the Eye. Some delight in artificial Rocks and Mountains, pierced through, and full of Windings like a Labyrinth, to take the freſh Air in [a]. When they have Room enough, they make little Parks to keep Deer, and Ponds for Fiſh and Water-Fowls [b].

Their Furniture,

THE *Chineſe* are not curious, like the *Europeans*, in adorning and beautifying the Inſide of their Houſes, where neither Tapeſtry, Looking-Glaſſes, nor Gildings are to be ſeen. The *Mandarins* indeed, as the Emperor owns their Palaces, and they are ſo frequently removed, do not care to be at any great Expence in furniſhing them. Beſides, as Viſits are never received in the inner Apartments, but only in the great Hall before the Houſe, it is not ſurprizing, that they are ſparing of Ornaments; which would be, in ſome Meaſure, uſeleſs, as not being ſeen by Strangers.

And Moveables.

THE principal Things, that ſet-off their Halls and Apartments, are large ſilk Lanthorns painted, and hanging from the Cieling; Tables, Cabinets, Screens, and Chairs, japanned with their beautiful red and black Varniſh (ſo very tranſparent, that the Veins of the Wood appear through it) and painted with Variety of Figures, in Gold and Silver, or other Colours; the Tables, the Bouſets, and the Cabinets, are adorned alſo with fine China-Ware: All theſe appear exceeding neat and agreeable to the Eye. Beſides this, they hang up, in ſeveral Places, Pieces of white Satin, painted with Flowers, Birds, Mountains, and Landſkips [c]. On others are written, in large Characters, moral Sentences, two and two together. Some are contented with whitening, or papering the Walls of their Rooms, wherein the *Chineſe* are very ſkilful.

Beds, Curtains.

THE Beds, eſpecially of the Nobility, are curious and handſome: The wooden Part is painted, gilt, and carved: The Curtains, during Winter, in the Northern Provinces, are of double Satin; and, in Summer, either of white Taffety, adorned with Figures, or of very fine Gauze; which is both open enough to let the Air through, and cloſe enough to keep-off the Gnats, that are extremely troubleſome in the Southern Parts. The common People uſe, for the ſame Purpoſe, a very thin Cloth, made of a Sort of Hemp: Their Matraſſes are very thick, and ſtuffed with Cotton.

Stoves.

IN the Northern Provinces they make Places of hollow Bricks, in the Form of Beds, which are larger, or ſmaller, according to the Number of the Family: Beſide it is a ſmall Stove of Charcoal, whoſe Heat is diſperſed to all Parts by Pipes, terminating in a Funnel, which carries the Smoak through the Roof. In the Houſes of Perſons of Diſtinction the Stove comes through the Wall, and the Fire is lighted on the Outſide [d]; by which Means the Bed, and even the whole Houſe is warmed, ſo that they have no Occaſion for the Feather-Beds of *Europe*. Thoſe who are afraid of lying on the hot Bricks, hang a Sort of Sacking-Hammock over them, made of Cords, or Ratan.

Their manner of Living.

IN the Morning every Thing of this Kind is taken away, and Carpets, or Mats, put in their Room, on which they ſit. As they have no Chimneys, nothing can be more convenient; for the whole Family work upon them, without feeling the leaſt Cold, or being obliged to wear furred Garments. The meaner Sort dreſs their Victuals, warm their Wine, and prepare their Tea over the Mouth of the Stove. The Beds of this Sort belonging to the Inns are large enough for ſeveral Travellers at a Time [e].

[a] Some make Grottos in their Gardens, and raiſe artificial Mounts, according to *Le Comte*. [b] *Magalhaens*'s Relation of *China*, p. 272. *Du Halde*'s *China*, p. 284. [c] *Le Comte* ſays, they hang up Pictures of their Anceſtors; and, that ſome paint the Walls of their Chambers with a Kind of Architecture. [d] We preſume, like the Stoves in *Germany*, and the Northern Countries. [e] *Le Comte*, as before, *p.* 147, and 156, & *ſeq.* *Du Halde*, as before, *p.* 184, & *ſeq.*

3. *In*

3. *In their* High-Roads, Canals, Sluices, *and* Bridges.

Beautiful High-Roads. Reſting Places. The Royal Inns. Watch-Towers. Pillars in Honour of good Mandarins. *Book of Roads. Artificial Channels: The greater: The leſſer. Royal Canal: Its Courſe, Length, and Depth: By whom made: Its Origin and Source. Sluices: How paſſed: Secured by Banks. Barks hoiſted-up a ſurprizing Height. Another Canal, more about. Great Canal, its Extent. Multitude of Barks. Bridges over Canals: How built. Moſt beautiful Bridge. Admirable one. Famous Iron Bridge. Others of the Sort.*

THE Care of the *Chineſe* Government, like that of the *Roman*, extends to the high Roads, and exerts itſelf to render them ſafe, handſome, and commodious. Perſons are continually employed to keep them even, and often well-paved, eſpecially in the Southern Provinces, where they uſe neither Horſes, nor Waggons. They are commonly very broad, and in many Places dry, almoſt as ſoon as the Rain ceaſes. They have made Ways over the higheſt Mountains, by cutting through Rocks, levelling the Tops of Hills, and filling-up the Valleys. In ſome Provinces the high Roads are like ſo many great Walks, being lined on each Side with tall Trees, and ſometimes Walls eight Feet high, to keep Travellers from riding over the Fields; with Openings into the Croſs-ways leading to the Villages.

IN the great Roads, there are, at proper Diſtances, very neat reſting Places. Moſt of the caſhiered *Mandarins*, on their Return to their own Country, endeavour to recommend themſelves by Works of this Kind. There are alſo Temples, which afford a Retreat in the Day-time; but rarely any Perſon is permitted to ſtay there all Night, except the *Mandarins*, who have that Privilege. Some charitable Perſons hire Men to diſtribute Tea to poor Travellers in the Summer; and in the Winter a Kind of Water, with Ginger infuſed in it. The Inns too are very large and handſome; but thoſe on the leſſer Road very wretched, or ill-contrived.

AT the End of every Stage there is a Houſe called *Kong-quan*, appointed to receive the *Mandarins*, and others, who travel by the Emperor's Order: But generally they are not ſo elegant as might be expected, or as they are repreſented in the Relations of Authors, impoſed on by the Natives. They are ſometimes large, ſometimes ſmall: Some alſo are handſome and commodious enough. By that of *Kanton*, which is one of the common Sort, the Reader may judge of the reſt: It is of a moderate Size, conſiſting of two Courts, and two principal Buildings; one at the Bottom of the firſt Court, which is a *Ting*, or large, open Hall, for receiving Viſits: The other, ſtanding at the End of the ſecond Court, is divided into three Parts; that in the Middle ſerving for a *Salon*, or Anti-chamber, to the two great Rooms which are on the Sides, with each a Cloſet behind. This Diſpoſition is obſerved in moſt of the Houſes belonging to Perſons of any Diſtinction. The Hall and Anti-chamber are each adorned with two great Lanthorns of tranſparent Silk painted, hung-up in the Manner of a Branch: Alſo the Gate towards the Street, and thoſe of the Courts, are each enlightened with two large Paper-Lanthorns, adorned with large Characters.

In their High-Roads.

ON the great Roads, at proper Diſtances, there are a Sort of Towers, with Centry-Boxes upon them for Centinels, and Flag-Staffs to make Signals, in Caſe of Alarms. Theſe Towers are made of Turf, or tempered Earth: They are ſquare, and built ſlanting with Battlements about twelve Feet high. In ſome Provinces, there are large Bells of caſt Iron on the Top of them; but moſt of thoſe which are not upon the Road to *Pe-king*, have neither Centry-Boxes, nor Battlements. According to the Laws, theſe Towers ought to be found on all frequented Roads, at the Diſtance of every five *Li* (or half League) one ſmall, and another large alternately, with Soldiers in Guard-Houſes continually upon Duty to obſerve what paſſes, and prevent any Diſturbance. They are repaired as often as they fall to Ruin; and when the Number of Soldiers is not ſufficient, the Inhabitants are obliged to find Men.

Watch-Towers.

VILLAGES full of Temples, are very numerous on the Roads. In the great Roads over-againſt their Temples, one meets with a great many Monuments, called *She-pey*, with Inſcriptions on them; being large Stones generally of Marble, ſtanding upright upon Baſes of the ſame; wherein a Mortiſe being made, the Stones are fixed in by Means of Tenons cut at the Ends, and joined together without farther Trouble. Some of theſe Stones are eight Feet high, two broad, and almoſt one thick; though commonly the Height is not above four or five Feet, and the other Dimenſions in Proportion.

Pillars in Honour of

THE largeſt of all are erected on a Stone Tortoiſe: Some few are ſurrounded with large Halls; others only incloſed with a ſmall Brick-Building, and covered with a neat Roof: They are exactly ſquare, except towards the Top, which is ſomewhat rounded or covered with ſome Groteſque Figure, often cut out-of another Piece of Stone. The Inhabitants of the Cities erect them in Memory of their *Mandarins*, when they are ſatisfied

Good Mandarins.

Chineſe *Magnificence*

with their Government. The Officers erect them to perpetuate the extraordinary Honours beſtowed on them by the Emperor; and for ſeveral other Reaſons. When they are erected on Account of ſome Favour, or Honours received from the Emperor, they carve two Dragons variouſly twiſted [a].

Book of Roads.

MAGALHAENS obſerves, that there are printed Itineraries, or Books, containing all the Roads and Paſſages, as well by Water, as by Land, from *Pe-king* to the utmoſt Parts of the Empire; with the ſeveral Stages and Diſtances from Place to Place, ſet down for the Conveniency of the *Mandarins* and other Travellers. In this Book all the Royal Highways in the Empire are divided into eleven hundred and forty-five Days Journeys, with each a Royal Inn. Theſe eleven hundred and forty-five Places are called *Ye*, or *Chin*, that is to ſay, *Places of Entertainment and Attendance*: Seven hundred and thirty-five in the Cities of the firſt and ſecond Order, in the Frontier Towns, and in the Caſtles in the Heart of the Empire.: Two hundred and five in the Places called *Ye*; and three hundred and three in thoſe called *Chin* [b]. But there is a Difference here between the general and particular Numbers, which we cannot reconcile.

Artificial Channels.

BESIDES the Roads by Land, *China* is full of Conveniences for Travelling, or Carriage, by Water; the navigable Rivers and Canals being very numerous. The firſt are bordered with Foot-paths, and the latter with Quays of hewn Stone; and, in low, marſhy, and watery Places, very long Cauſeways have been raiſed for the Conveniency of Travellers, and thoſe who draw the Barks. There is commonly, in every Province, a great River, or broad Canal, ſerving for a Highway; whoſe Banks are often lined, to the Height of ten or twelve Feet, with fine ſquare Stone, which, in many Places, ſeem to be grey Marble, of a Slate Colour: And thoſe of ſome Canals being twenty or twenty-five Feet high, there is need of many Chaplet-Engines to raiſe the Water into the Fields.

The greater.

SOME run above ten Leagues in a ſtrait Line; as that from *Sû-chew fû* to *Vu-ſi-hyen*. That to the North-Weſt of *Hang-chew fû* extends very far in a right Line, and is every-where more than fifteen Fathom in Breadth. The Sides are lined with Stone, and bordered with populous Houſes cloſe together. The great Canals, from Space to Space, are covered with Bridges of three, five, or ſeven Arches. The middle Arch is ſometimes thirty-ſix, nay, forty-five Feet wide; and ſo exceeding high, that Barks may paſs through without taking down their Maſts. Thoſe on the Sides are ſeldom leſs than thirty; and diminiſh in Proportion to the Sloping of the Bridge. The Tops of the Arches are well built; and the Piers ſo narrow, that, at a Diſtance, the Arches ſeem to hang in the Air.

In their

THE principal Canals diſcharge themſelves, on both Sides, into ſeveral ſmall ones; which are divided again into a great Number of Brooks, that run to different Towns and Cities. They alſo often form Ponds and ſmall Lakes, whereby the neighbouring Plains are watered. Beſides theſe Canals, which are of infinite Conveniency for Travellers and trading People, the *Chineſe* have dug many others, with admirable Induſtry and Art, for the Reception of Rain, to water the Plains covered with Rice [c].

The lef

The Ro Canal.

BUT nothing of this Kind is to be compared to the great Canal, called *Yun-lyang-ho*, that is, *The Canal for carrying Merchandize*, and often *Yun-ho*, or *The Royal Canal*, which croſſes the Empire from North to South [d]. It is formed by joining certain Rivers together: But where they are wanting, or not eaſily navigated, and the Country level, the Canal is continued, as it is through *Pe-che-li*, *Shang-tong*, and *Kyang-nan*, for an hundred and ſixty Leagues together; in which Space there were few Hills, Quarries, or Rocks, to embarraſs the Workmen.

In Ca

THIS famous Canal, often mentioned in the Travels [e], begins at the City of *Tyen-tſing Wey*, or *Chew* [f], on the River *Pay*, or *Pe-ho*; and after it has croſſed the Provinces of *Pe-che-li* and *Shantong*, enters that of *Kyang-nan*, and joins the *Whang-ho*, or *Yellow River*. Having ſailed on this River for two Days, you come to another; and, preſently after, find the Canal again, which leads to the City of *Whay-ngan fû*. From thence, paſſing by many Cities and Towns, it arrives at *Yang-chew fû*, one of the moſt famous Ports in the Empire; and, a little beyond, enters the great River *Yang-tſe-kyang*, one Day's Journey from *Nan-king*. Continuing your Courſe on this River to the Lake *Po-yang*, in *Kyang-ſi*, you croſs it, and enter the River *Kan-kyang*, and aſcend the Stream as far as *Nan-ngan fû*. From thence you go by Land, twelve Leagues, to *Nan-hyong fû*, in *Quang-tong*, where you embark upon a River that carries you to *Kanton*.

Le

So that you may travel very commodiouſly, by Means of the Rivers and Canals from *Pe-king* to the fartheſt Part of *China*; being about ſix hundred Leagues by Water, excepting one Day's Journey over the Mountain *Méy-lin*. But you need never quit the Bark, provided you ſail

Pe-Di

[a] *Du Halde*'s *China*, p. 265, *&c. ſeqq.* [b] *Magalhaens*'s Relation of *China*, p. 38, *&c. ſeq.* [c] *La Comte*'s Memoirs of *China*, p. 101, *&c. ſeq.* *Du Halde*, as before, *p.* 265, 286, and 325. [d] *Page* 280. he makes it ſix hundred Leagues; *p.* 326, only three hundred. [e] See Vol. III. *p.* 417, 469, &c. [f] In *Pe-che-li*. See before, *p.* 23.

about

about through the Provinces of *Quang-ſi* and *Hû-quang*, which may be done, eſpecially if the Waters be high: For the Rivers of *Hû-quang* and *Kyang-ſi* run Northwards into the *Yang-tſe-kyang*. To facilitate the Navigation of this Canal, they commonly allow a Fathom and an half Water. But when the Stream is ſwelled, and threatens to overflow its Banks, to prevent it, they make Trenches in divers Places, which are afterwards cloſed-up again [a].

THIS grand Work, which is one of the Wonders of the *Chineſe* Empire, was executed by the Emperor *Shi-tſû*, or *Hû-pe-lye*, that is, the famous *Kûblay Khan*, Grandſon of *Jenghiz Khan*, and Founder of the twentieth Dynaſty of the *Ywen* [b]. This Prince having conquered all *China*, and being already Maſter of Weſtern *Tartary*, reſolved to fix his Reſidence at *Pe-king*, to be, as it were, in the Center of his vaſt Dominions. But, as the Northern Provinces were unable to furniſh Proviſions, and other Commodities, ſufficient for the Maintenance of his numerous Court and Troops, he cauſed a vaſt Number of Veſſels and long Barks to be built, in order to fetch them from the maritime Provinces: Yet finding this Method did not anſwer, the Veſſels often being loſt by Storms, or delayed by Calms, he undertook to remedy thoſe Inconveniences, by cauſing this Canal to be made; in which innumerable Workmen were employed at an infinite Expence.

THE great Capacity of the chief Perſon, or Perſons, concerned in conducting this grand Work, ſhines in the Choice made of a proper Place where to begin to break Ground. This they judged to be at ſome River; from which the Land on each Side declined ſo equally, that the Stream might be divided and carried contrary Ways. Upon Search, they found the *Wen-ho*, a River [c] of an ordinary Size, in the Province of *Shan-tong*, fit for the Purpoſe. The Point of Diviſion, according to the Miſſioners, is near a ſmall Eminence, three Leagues from the little City of *Wen-ſhan hyen*. This Place is called *Fû-ſhwi-myau*, or *The Temple of the Diviſion of the Waters* [d], becauſe conſecrated to *Long-vang*, who, with the *Bonzas*, is *Maſter of the Waters* [e].

The larger Quantity, after ſuch Diviſion, ſupplies that Part of the Canal which runs to the North; where, after it has received the River *Wey-ho*, from the Province of *Ho-nân*, and run a long Courſe, it falls near *Tyen-tſing-wey*, before-mentioned, into the River (*Pay-ho*) which comes from *Pe-king*, and diſcharges itſelf into the Eaſtern Ocean. The other Branch, which is ſcarce one-third Part of the Stream, running Southward, (in the Canal) towards the *Whang-ho*, or *Yellow River*, meets, at firſt, with Pools and Marſhes; ſome whereof ſerve for its Channel, and others ſupply it with Water, by Means of Sluices, called *Cha*. Theſe are opened and ſhut at Pleaſure, with wooden Planks laid acroſs the Mouth of the Sluce, in Groves cut into the Stone Piers that line it [f]. *In their Canals.* *Sluices.*

THESE are very improperly called *Dikes* [g] by Travellers, becauſe they are built in the Canal itſelf, to contract its Breadth, leaving only Space for a large Bark to paſs; and ſerve, like Sluices, to reſtrain the Water, when they want to ſtop its Courſe more or leſs. This Precaution is often neceſſary, eſpecially in Times of Drought: For the divided Stream of the *Wen-ho* not being able to furniſh more than five or ſix Feet of Water, they have endeavoured to retard, and even ſtop the Courſe of it, by the Elbows made in the Canal by frequent Turnings and Windings. Some Years, for want of Rain, there is not above three Feet of Water; which is not ſufficient to bear the great imperial Barks that carry the Proviſions and Tributes to Court. In Parts therefore ſubject to that Inconvenience, they have Recourſe to this Sort of Sluices, ſince they have no other Baſin beſides the Canal itſelf. Neither is their Number ſo great as reported, not exceeding forty-five [h], and their Breadth not above thirty Feet; nor are the Sides of the Canal lined with Stone, except here and there. They often need repairing, either in thoſe Places where the Earth, being ſandy and looſe, eaſily tumbles down; or elſe near Ponds, which, ſwelled by Rains, ſometimes break-down the Banks that are commonly of Earth; probably, the ſame that was thrown up in digging the Canal [i].

MAGALHAENS obſerves, that there is a *How paſſed,*

[a] *Du Halde*'s *China*, p. 17, 286, 326. [b] In the Year 1220. [c] *Magalhaens*, p. 117, relates, that about half a Day's Journey, Eaſt of the Canal, there lies a great Lake, between high Mountains, which formerly ſupplied a good large River that fell into the Eaſtern Sea: That the *Chineſes* having opened a Canal through the Mountain, diverted the Stream Weſtward to the Temple; and dug two other Canals for dividing the Water into two Parts, and conveying each a contrary Way: That a Bark lies acroſs the River, with its Prow facing the Temple; and that the Water coming to it, runs on one Side Northward, and on the other Southward. [d] *Magalhaens* calls it *Fwen Shyew Myau*, or *The Temple of the Spirit which divides the Waters.* It is on the Royal Canal, mid-way between the Cities *Tong-ping chew* and *Tſi-ning chew*; mentioned, *p.* 50. *Gemelli* ſays, this Water comes from a Lake Eaſtwards, conveyed by a Canal cut through a Mountain, ſtopping the natural Courſe of the River, and conveying it ſo artificially to this Temple, that when it comes over-againſt it, one half runs North, and the other half South. [f] *Magalhaens*'s Relation of *China*, p. 114. *Du Halde*, as before, *p.* 17, and 325, *& ſeq.* [g] They are thus called by *Le Comte*. See Vol. III. *p.* 518. c. [h] *Nieuhof* and *Navarette* ſay, ſeventy-two. [i] *Du Halde*, as before, *p.* 18. *Magalhaens*, as before, *p.* 115.

Chineſe *Magnificence*

great deal of Trouble and Danger in ſhooting ſome of theſe Sluices; eſpecially one, which the *Chineſes* call *Tyen-fi-cha*, or *the Queen and Miſtreſs of Heaven*; to expreſs the extraordinary Height of it. Up this Fall of Water the Barks are drawn by four or five hundred Watermen, or more, if required; who haul by a great Number of Cables and Ropes faſtened to the Prow; while others labour at Capſtans placed upon the Walls.

WHEN the Ropes are all faſtened, they begin to haul-off the Sluice leiſurely, by the Sound of a Baſon, on which at firſt they ſtrike ſlowly; but when the Bark is half raiſed above the upper Channel, the Current being then much ſtronger, they rap faſter on the Baſon, and then the Watermen hauling all together, at one Pull mount the Veſſel up, which is ſecured in the dead Water between the Sides of the Canal, and the Middle of the Current. The Barks deſcend this Fall with more Speed and Eaſe, but with more Danger: To prevent which, thoſe who hold the Cords on each Side of the Canal, hold them ſlack, or tight, as they ſee Occaſion. There are others in the Veſſel with long Poles to keep her in the Middle of the Canal. As ſoon as ſhe is gotten down into the lower Stream, the Ropes are let go, and ſhe is carried by the Current, for ſome Space [a], as ſwift as an Arrow out of a Bow.

Secured by Banks.

THE Workmen who dug the Canal had greater Difficulties to ſtruggle with beyond the *Whang-ho*: For to carry the Canal from thence to the *Kyang*, it was neceſſary to raiſe great Banks of Stone and other Works, near *Whay-ngan fû*, to reſiſt the Waters both of a great Lake, which is to the Weſt, and of the River *Quay-ho*, which overflowing in the great Rains, fell with Fury on the Canal: Theſe Works are the beſt that have been made for its Security: There are alſo ſome pretty good ones towards *Yang-chew fû*, which ſerve as Quays to that City.

BEYOND the *Yang-tſe-kyang*, the Canal (which is continued from *Chin-kyang fû*, through *Chang-chew fû*, and *Sû-chew fû*, and receives the ſeveral Canals of the Province of *Che-kyang*) is more commodious, as it is not embarraſſed with Sluices, or ſuch like Works. This is owing to the Evenneſs of the Land, the Plenty of Water which has no Deſcent, and the Nature of the Ground; Advantages not eaſily to be met with elſewhere.

IN the Countries, where there is no Danger of damaging the great Royal Canal, ſeveral little Canals have been cut into it, by the Inhabitants of neighbouring Towns, or great Villages, for Sake of Trade [b].

Barks hoiſted-up

LE COMTE obſerved, in ſome Places in *China*, where the Waters of two Canals have no Communication together, that they yet make the Barks to paſs from the one to the other, although above fifteen Feet high. At the End of the upper Canal they have built a double Glacis, or ſloping Bank of Freeſtone. When the Bark is in the lower Channel, they, by Help of Capſtans, hoiſt it up the firſt Glacis, till, being raiſed to the Top, it falls, by its own Weight, down the ſecond Glacis, into the Water of the upper Channel, where it ſcuds away for a pretty While, like an Arrow: They make it deſcend after the ſame Manner, from the higher to the lower Canal. The Author cannot imagine how theſe Barks, being commonly very long, and heavy laden, eſcape being ſplit in the Middle, when they are poiſed in the Air upon this acute Angle, which muſt needs affect the Veſſel: Yet he never heard of any ill Accident that Way, as often as he paſſed by Water; and all the Caution People take, when they have no Mind to go aſhore, is, to tie themſelves faſt to ſome Cable, for fear of being toſſed from Prow to Poop. You meet with no ſuch Sluices in the grand Canal; becauſe the Emperor's Barks, that are as large as our Frigates, could not be raiſed by Force of Arm; nay, and would infallibly ſplit in the Fall [c]. There is one of theſe Sluices in the Canals that paſs from *Shaw-hing fû* to *Ning-Po fû*. The Barks for this Purpoſe are made in Form of *Gondolas*, with Keels of a Wood hard enough to ſuſtain the Weight of a Bark [d].

IN the Province of *Quang-ſi*, they have joined the River that falls into the Sea at *Kanton* with that which, after croſſing the Province of *Huquang*, enters into the great *Kyang*, at the Place where the Royal Canal ends. The Waters, which deſcend from the Mountains in the North-Part of the Province, form, near the City *Hing-ngan hyen*, a ſmall River, which being ſtopped by a Bank [e] equal to the higheſt Ground whereon it runs, ſwells above its Channel, and diſcharges the ſurplus Water. But this Canal, which goes not far before it enters the two Rivers juſt now mentioned, is neither ſo commodious, nor well kept in Repair as the grand Canal: The Water is often ſo low, that in many Places the Barks are rather hauled along the Gravel, than carried by the Stream. However, this Road is choſen by the Merchants, who are deterred from taking that to *Kanton*, through the Province of *Kyang-ſi*; becauſe of the Expence and Trouble of carrying their Goods one Day's Journey over Land, as before obſerved.

THERE is ſome Inconveniency in travelling

[a] *Magalhaens*'s Relation of *China*, p. 115. *Le Comte*'s Memoirs of *China*, p. 104. [b] *Du Halde*'s *China*, p. 18. [c] *Le Comte*, as before, *p.* 104, *& ſeq.* [d] *Du Halde*, as before. [e] Theſe Sor

of Sluices, which are very proper for increaſing the Water, by ſtopping its Courſe, are commonly made onl of Earth, ſupported by Stakes, and their Mouths ſecured by Mats, or ſuch like Things.

fro

from *Kanton*, by the Province of *Hû-quang*; for a they must quit the River (which passing to *Shaw-chew fû*, falls into that of *Kanton*) at *I-chang hyen*, whence it is seven Leagues and an half to the fine City of *Ching-chew* (both in *Hû-quang*) where they embark on another River, which falls into the great *Kyang*; but, when the Waters are high, they are not retarded at all in the Road through *Kyang-si* and *Hû-quang*. It is doubtless of vast Advantage to the whole Empire, to have a constant Course of Trade so b easily kept-up among the Provinces, by Means of the Communication carried-on, as well by the Royal Canal, as the lesser Canals, which terminate in it, like so many cross Roads [a].

NAVARETTE makes the Length of the Royal Canal two hundred Leagues [b]. Being come to the Middle of it, he found a great Temple standing on the Bank, and near it a good Spring [c], which there divides into two small Brooks, one turning to the North, the other to c the South. This Water not being sufficient for large Vessels, they are often forced to stay for the Rains; sometimes to the Number of five hundred, sometimes eight hundred Boats. This happened in the Year 1665, when he was going up to *Pe-king*: But to remedy this Defect, they have built eighty strong Sluices, formed by two strong, Stone-Walls, carried-on from the Sides of the Canal towards the Middle of the River, leaving Room for a single Bark to pass. At d every Sluice there is a *Mandarin*, with a great many Men to help the Vessels through. When the Sluices are shut, that little Water which runs-in betwixt them in half a Day, rises above a Fathom and an half, which is sufficient to carry the Vessels through.

THEY observe great Order, and have their Precedency in passing, according to the Degrees of the Persons on board. Many who come last, buy a Place among the foremost. These Delays e make the Voyage tedious; but then the Land-Carriage would be vastly more expensive. Great Art was used in cutting of it, for it is full of Turnings and Windings, to slacken the Force of the Current. The Multitude of Boats of all Sizes which they saw in this Voyage, was so great, that the Missioners skilled in Mathematics, computed there were enough to build a Bridge from *Ma-kau* to *Goa*; which are nine hundred Leagues distant: Yet other Rivers are no less crouded; and the Author agrees with f those who affirm, that there are more Vessels in *China*, than in all the rest of the known World [d].

In their Bridges.

ALL along the Roads by Water, there is, at the End of every League, a *Tang* [e], or Guard, of ten, five, or fewer Soldiers, who correspond by Signals; in the Night shooting-off small Cannon, and in the Day-time raising a thick Smoke, made by burning Leaves and Branches of Pine, in three small Stoves, shaped like Pyramids, and open at the Top [f].

Bridges over Canals.

THE Magnificence of the *Chinese* appears no less in the Quays, that border the Canals, and Bridges that cross them, than in the Canals themselves. It is surprizing to behold of what Length and Breadth the Quays are, and what large Stones they are faced with. The Bridges, as hath been already observed, are remarkable for their Height and Structure; and as there are many of them, so, where the Canal runs in a strait Line, it makes a Perspective both stately and agreeable [g].

SOME of these Bridges have but one Arch, which is semicircular, and built of arched Stones, five or six Feet long, and only five or six Inches thick; some of them are polygonal. Several Bridges, instead of Arches, have three or four great Stones placed on Piers, like Planks; many of them ten, twelve, fifteen, and eighteen Feet long. There is a considerable Number of this Sort, neatly built, over the great Canal.

How built.

IT is no hard Matter to learn how the *Chinese* build their Bridges: For, having finished the Sides of the Arch next to the Land, when the Bridge is only to have one Arch, or raised the Piers, when it is to have several; they then take Stones four or five Feet long, and half a Foot broad, and place them alternately upright and crosswise, in such a Manner, that the Key-Stones may be laid horizontally. The Top of the Arch is commonly no thicker than one of these Stones [h]; and because the Bridges, especially when they have but one Arch, are sometimes forty or fifty Feet wide between the Piers, and consequently much higher than the Causeway, the Ascent on each End is by very flat, easy Stairs, with Steps about three Inches thick; though it would be difficult for Horses to pass-over some of them. The whole Work is generally well contrived.

THE Bridges made for Conveniency of crossing Rivers are commonly built like ours, on huge Stone-Piers, capable of breaking the Force of the Stream, and sustaining the Weight of f Arches, wide and high enough for the largest Barks to pass. They are very numerous in

[a] *Du Halde*'s *China*, p. 18, *& seq.* [b] *Du Halde* reckons it an hundred and sixty. [c] *Nieuhof* calls this the River *Luen*, (rather, *Ywen*;) and mentions the Effects of its flowing two contrary Ways, without knowing the Cause. See Vol. III. *p.* 418. [d] *Navarette*, as before, Vol. I. *p.* 27. [e] Or, *Tang-pû*. See Vol. III. *p.* 582. [f] *Du Halde*, as before, *p.* 287. [g] *Le Comte*'s Memoirs of *China*, p. 102. *Du Halde*, as before, *p.* 17. [h] So cannot be strong: But Carts never pass over them, the Bales being carried by Porters.

China;

Chineſe *Magnificence*

China; and the Emperor ſpares no Expence, a when the Benefit of the Public requires them to be built [a].

Moſt beautiful Bridge.

MANY of theſe Bridges are very handſome: That called *Lû-ko-kyau*, two Leagues and an half Weſtward of *Pe-king*, built over the *When-ho* [b], or *Muddy River*, was one of the fineſt that ever was ſeen, before Part of it was broken down by a Land-Flood in *Auguſt* 1668, after having ſtood for two thouſand Years, according to the *Chineſe*, without having received the leaſt Da- b mage. The Whole was of white Marble, well wrought, and very curiouſly built. There were on each Side ſeventy Pillars, a Pace and half diſtant [c], ſeparated by Pannels of fine Marble, whereon are delicately carved Flowers, Foliages, Birds, and ſeveral Sorts of Animals. On each Side of the Entrance of the Bridge on the Eaſt-End, there were two Lions of an extraordinary Size, on Marble Pedeſtals, with ſeveral little Lions in Stone, ſome climbing on the Backs of c the great ones, ſome getting-off them, and others creeping between their Legs: At the Weſt-End, on Marble Pedeſtals alſo, ſtood the Figures of two Elephants [d], carved with the ſame Skill [e].

That of Fû-chew fû.

THERE is ſcarce a more beautiful Bridge to be ſeen, than that of *Fû-chew fû* [f], Capital of the Province of *Fo-kyen*: The River, a Mile and an half broad, is ſometimes divided into ſmall Arms, and ſometimes interſperſed with little Iſlands. d They are all united by Bridges, which all together make eight *Li*, or Furlongs, and ſeventy-ſix *Chineſe* Fathoms. The principal Bridge alone has above an hundred Arches, built of white Stone, with carved Baniſters on each Side: Upon theſe, at the Diſtance of every tenth Foot, are placed little ſquare Pilaſters, whoſe Baſes are very large, reſembling hollow Barks. Every Pillar bears one or two croſs Stones, which ſupport Stone-Steps, more or leſs in Number, according e to the Breadth of the Bridge.

Admirable Bridge.

BUT that which ſurpaſſes all the reſt, is the Bridge of *Swen-chew fû* [g], built over a Point of an Arm of the Sea, which otherwiſe muſt be croſſed in a Bark, often not without Danger. It is two thouſand five hundred and twenty *Chineſe* Feet long, and twenty broad, ſupported by two hundred and fifty-two huge Piers, one hundred and twenty-ſix on each Side: All the Stones are of a greyiſh Colour, and of the ſame Length f and Thickneſs, as well thoſe which croſs from Pier to Pier, as thoſe which are laid acroſs to join them together.

IT is not eaſy to comprehend where they could find ſo many large Pieces of Rock, or how they could contrive to cut and place Stones of ſuch enormous Weight, high enough for Veſſels to paſs underneath. This Bridge is likewiſe ſet-off with Ornaments, made of the ſame Sort of Stone. In ſhort, the moſt remarkable Things to be ſeen elſewhere, however eſteemed in the Country, are nothing comparable to this [h].

WHERE Bridges could not be built with Stone, they have contrived other Methods for ſupplying the Place of ſuch. The famous Iron-Bridge, as it is called, in *Quey-chew*, upon the Road to *Yun-nan*, is the Work of a *Chineſe* General in former Times. On each Bank of the *Pan-ho*, a Torrent not wide, but very deep, they have built a great Gate between two huge Piers of Stone, ſix or ſeven Feet broad, and ſeventeen or eighteen high: From each of the Piers on the Eaſt-Side hang four Chains by huge Rings, which are faſtened to the Piers on the Weſtern-Side, and linked together by ſmall Chains; which make it look like Net-Work with great Meſhes: On this they have laid thick Planks faſtened together; but as they do not reach within ſome Paces of the Gate, becauſe of the bending of the Chains, eſpecially when loaded; they have ſupplied that Defect by a Floor, ſupported by Conſoles or Brackets: On the Sides of the Planks they have ſet-up little wooden Pilaſters, which d ſuſtain a ſmall Roof of the ſame Materials, the Ends whereof reſt on the Piers.

THE *Chineſe* have made ſome other Bridges in Imitation of this: There is one eſpecially pretty well known, on the River *Kin-ſha-kyang*, in the ancient Country of the *Lo-lo*, of the Province of *Yun-nan*; and in that of *Se-chwen* there are two or three others, which are ſupported only by thick Ropes; but theſe, though ſmall, are tottering, and ſo unſecure, that they are frightful to paſs.

IN the Province of *Se-chwen*, at the Foot of the Mountains poſſeſſed by the *Myau-tſe*, and in that of *Shen-ſi*, in the Diſtrict of *Han-chong fû*, they have, by Help of Conſoles, faſtened wooden Poles into the Rocks of the Mountains: On theſe they have laid thick Planks, and thus made Bridges hanging over the Valleys; which are more ſecure than the former, and ſerve for Roads ſometimes for a conſiderable Way together. *Kircher* mentions a Bridge in the ſame Province, called *The flying Bridge*, of a ſingle Arch, built f (between two Mountains) over the *Whang-ho*, near the City *Cho-ngan*, ſix hundred Feet long and ſix hundred and fifty high from the River.

[a] *Du Halde*'s *China*, p. 17, and 287. [b] *Marco Polo*, l. 2. c. 37. deſcribes this Bridge; calling it River *Puli Sangan*, the Weſt *Tartar* Name. [c] Seven Feet and an half. [d] *Du Halde* has Enſ for Elephants. [e] *Magalhaens*'s Relation of *China*, p. 11. *Du Halde*, as before, *p.* 288. [f] Mention before, *p.* 33. [g] Called alſo the Bridge of *Lo-jang*, mentioned *p.* 34, and Vol. III. *p.* 501. *Halde*, as before, *p.* 17. [i] The ſame, *p.* 34.

Nobility, Royal.

CHAP. III.

An Account *of the ſeveral* Claſſes, *into which the People of* CHINA *are divided.*

INTRODUCTION.

BEFORE we treat of the different Claſſes of People into which the *Chineſe* Nation is ivided, it may not be amiſs to enquire what Number of Inhabitants there are in the whole mpire. The Miſſioners who have travelled rough the Provinces of *Che-kyang*, *Kyang-nan*, *o-kyen*, *Quang-tong*, and ſome others, where e great Roads, as well as City, are ſo crouded, at it is troubleſome to paſs along them, have en greatly miſled in making their Computaons; ſome ſwelling the Number of People in *ina* to one hundred, two hundred, and even ree hundred Millions [a]. Not conſidering that ey are not ſo numerous in the Country from *-king* to *Nan-chang fû*, the Capital of *Kyang-* and other Parts. However, the later Miſners make no Scruple to aſſert [b], that *China* ntains more Inhabitants by far, than all *Europe* gether; and *Pe-king* alone three Millions [c].

THE Tribute paid by every Perſon in this poous Empire, between the Years of twenty ſixty, amounts to immenſe Sums; they ſay, t formerly upward of fifty-eight Millions of abitants paid this Tax. In the Poll made at Beginning of the Reign of *Kang-hi*, there e found eleven Million fifty-two thouſand and t hundred ſeventy-two Families; and fifty- Million ſeven hundred eighty-eight thouſand three hundred ſixty-four Men able to bear s: Yet neither the Princes, nor Officers of Court, the *Mandarins*, nor the Soldiers who ſerved, and been diſcharged; the *Literati*, the Licentiates, the Doctors, nor the *Bon-* Perſons under twenty Years of Age, nor reat Multitudes living either on the Sea, or he Rivers in Barks, were comprehended in Number.

HE Number of *Bonzas* is a great deal above Million, of which there are two thouſand rried at *Pe-king*; beſides three hundred and thouſand more in their Temples, eſtabliſhed fferent Places by the Emperor's Patents. *Literary* Bachelors alone are about ninety nd. It is true, the Civil-Wars, and Setnt of the *Tartars*, deſtroyed an innumeraquantity of People; but they have increaſed extremely ſince, by Means of the profound Peace [d].

AUTHORS are not well agreed about the Degrees or Claſſes into which the Inhabitants of *China* are divided. *Navarette* ſays, the *Chineſe* divide all their People into four Degrees, *Zu*, *Nung*, *Kung*, and *Zang*, that is, Scholars (or *Literati*) Huſbandmen, Handicrafts, and Merchants [e]. *Du Halde*, in one Place, affirms, that all the Inhabitants are divided into three Claſſes, the People, the *Literati*, and *Mandarins* [f]. Elſewhere he ſays, there are properly but two Orders in the Empire; one of the Nobility, and the other of the People: The firſt comprehending the Princes of the Blood, the *Mandarins* and *Literati*; the ſecond the Huſbandmen, Merchants, and Mechanics [g]. Which laſt Diviſion we ſhall follow. *Claſſes of them.*

SECT. I.

Claſs of the Nobility, *including the* Mandarins *and* Literati.

Nobility not hereditary. Princes of the Blood, of ſeveral Degrees; but without Authority: Very numerous: Their Wives and Children, are under great Reſtraints. Other Claſſes of Nobility. Family of Confuſius. *Nobles by Creation.* Verbieſt *the Jeſuit, and Family dignified. The* Literati *Nobility: How taught to read, and write. Rules for compoſing domeſtic Compoſitions. public Compoſitions. School-Maſters and Tutors. Palaces for Examination: Their Deſcription. Firſt Examination of the Candidates. Degree of Bachelor. Penalties of Neglect, and abſenting. Degree of* Licentiate. *Imperial Examination, extraordinary one. Ceremony obſerved in admitting Bachelors. Increaſe of the* Literati. *Privileged Bachelors: Thoſe admitted to Degrees: How honoured.* Licentiates *and* Doctors. *Bribery puniſhed. Uſe of Examinations. Carriage of the* Literati.

NOBILITY is not hereditary in *China*, though there are Dignities belonging to *Nobility not hereditary.*

[a] Vol. III. *p.* 553 d. [b] *Du Halde*'s *China*, p. 240. [c] This Computation, regarding *Pe-king*, more certain, as the Head of every Family is obliged to give the Magiſtrates an Account of the Number ſons who compoſe it. [d] *Magalhaens*'s Relation of *China*, p. 40. *Du Halde*, as before, *p.* 244. *arette*'s Deſcription of *China*, p. 48. [f] *Du Halde*, as before, *p.* 269. [g] The ſame, *p.* 241.

ſome

Inhabitants Classes.

ſome Families, which are beſtowed by the Emperor on ſuch of them as he judges to have the greateſt Abilities. Though a Man had been ever ſo illuſtrious, and had arrived to the prime Honours of the Empire; yet his Children have their Fortune to make, and if they want Parts, or love their Eaſe, they become like the common People, and are often obliged to follow the meaneſt Occupations. A Son may ſucceed to his Father's Eſtate; but to poſſeſs his Dignities, or Reputation, he muſt riſe by the ſame Degrees as his Father did. For this Reaſon they place their chief Dependence on a conſtant Study, as the only Road to Nobility; and they are ſure to be advanced, let their Condition be what it will, if they have a Diſpoſition for Literature. Thus one ſees every Day ſeveral very ſurprizingly jump into Honours, not much unlike the Eccleſiaſtics in *Italy*; who, though of the meaneſt Extraction, are allowed to aſpire to the prime Dignity in the *Romiſh* Church.

Princes of the Blood,

NONE but thoſe belonging to the reigning Family have any Title of Diſtinction: Theſe poſſeſs the Rank of Princes, in whoſe Favour five honorary Degrees of Nobility are eſtabliſhed, much like thoſe of Dukes, Marquiſſes, Earls, Viſcounts, and Barons in *Europe*. Theſe Titles are granted to the Deſcendants of the Imperial Family; ſuch as the Children of the Emperor, and thoſe to whom he gives his Daughters in Marriage; who have Revenues aſſigned them equal to their Dignity, but not the leaſt Power. However, there are Princes not at all allied to the Imperial Family; being either Deſcendants of the preceding Dynaſties, or ſuch whoſe Anceſtors have acquired the Title by the Services done to the Public. When the Founder of the preſent *Tartar* Family was ſettled on the Throne, he conferred on his Brothers, who were very numerous, and had contributed by their Valour to the Conqueſt of ſo many Countries, ſeveral Titles of Honour, creating ſome *Tſing-vang*, others *Kyung-vang*, and *Pey-lê*; to which the *Europeans* have given the Appellation of Regulos, or Princes of the firſt, ſecond, and third Rank. It was then determined, that from among the Children of every Regulo, one ſhould always be choſen to ſucceed his Father in the ſame Dignity.

Of ſeveral Degrees;

BESIDES theſe three Dignities, the Emperor creates others of an inferior Sort; which are beſtowed on the other Children, who are moſt worthy. Thoſe of the fourth Rank are called *Pey-tſe*, thoſe of the fifth *Kong-hew*, and ſo of the reſt. The fifth Rank is above that of the greateſt *Mandarins* in the Empire; but the Princes of the inferior Ranks have nothing to diſtinguiſh them like the former, from the *Mandarins*, either in their Equipage, or Habits, except the yellow Girdle. This is common to all the Princes of the Blood, as well thoſe who poſſeſs Dignities, as thoſe who have none; but theſe latter hide it, being aſhamed to let it be ſeen, when their Circumſtances are too low to afford an Equipage ſuitable to their Rank and Birth [a].

THE Princes of the Blood-Royal, however dignified by their Birth, have neither Power, nor Credit, in the State. They are allowed a Palace, and a Court with Officers, and a Revenue conformable to their Rank; but they have not the leaſt Authority over the People, who yet pay them the greateſt Reſpect. Formerly, when they were diſperſed in the Provinces, the Officers of the Crown remitted them their Revenue every three Months; that by ſpending it as faſt as it came to Hand, they might be diſabled from laying-up any Part of it for ſeditious Purpoſes; and they were even forbidden, on Pain of Death, to remove from the Place appointed for their Reſidence. But ſince the *Tartars* have been Maſters of *China*, the Emperor judged it more proper, that all the Princes ſhould live at Court under his Eye. They have alſo Houſes, Lands, and Rents, beſides what the Emperor allows them for their Expences, and improve their Money by the Induſtry of their Domeſtics; ſo that ſome of them are very rich [b].

ALTHOUGH the Origin of the Princes of the Blood is but five Generations backward, yet their Number amounts at preſent to no leſs than two thouſand: They hurt one another in Proportion as they multiply, for they have no Eſtates in Land; and as the Emperor cannot afford Penſions to them all, ſome of them live in extreme Poverty, and are very little eſteemed.

TOWARDS the End of the Dynaſty of the *Ming*, there were more than three thouſand Families of that Race in the City of *Kyang-chew*, ſeveral of whom were reduced to ſubſiſt upon Charity. The *Banditti*, who made themſelves Maſters of *Pe-king*, ſlew almoſt all thoſe Princes; which is the Cauſe that ſome Part of the City lies waſte. The few who eſcaped, quitting the yellow Girdle, and changing their Names, mixed with the People: But they are ſtill known to be of the Imperial Blood of the *Ming*, and one of them was a Servant of the Miſſioners, in a Houſe belonging to the Jeſuits in that City, which was built by one of thoſe Princes; who knowing that the *Tartars* ſought after him, betook himſelf to Flight, and diſappeared [c].

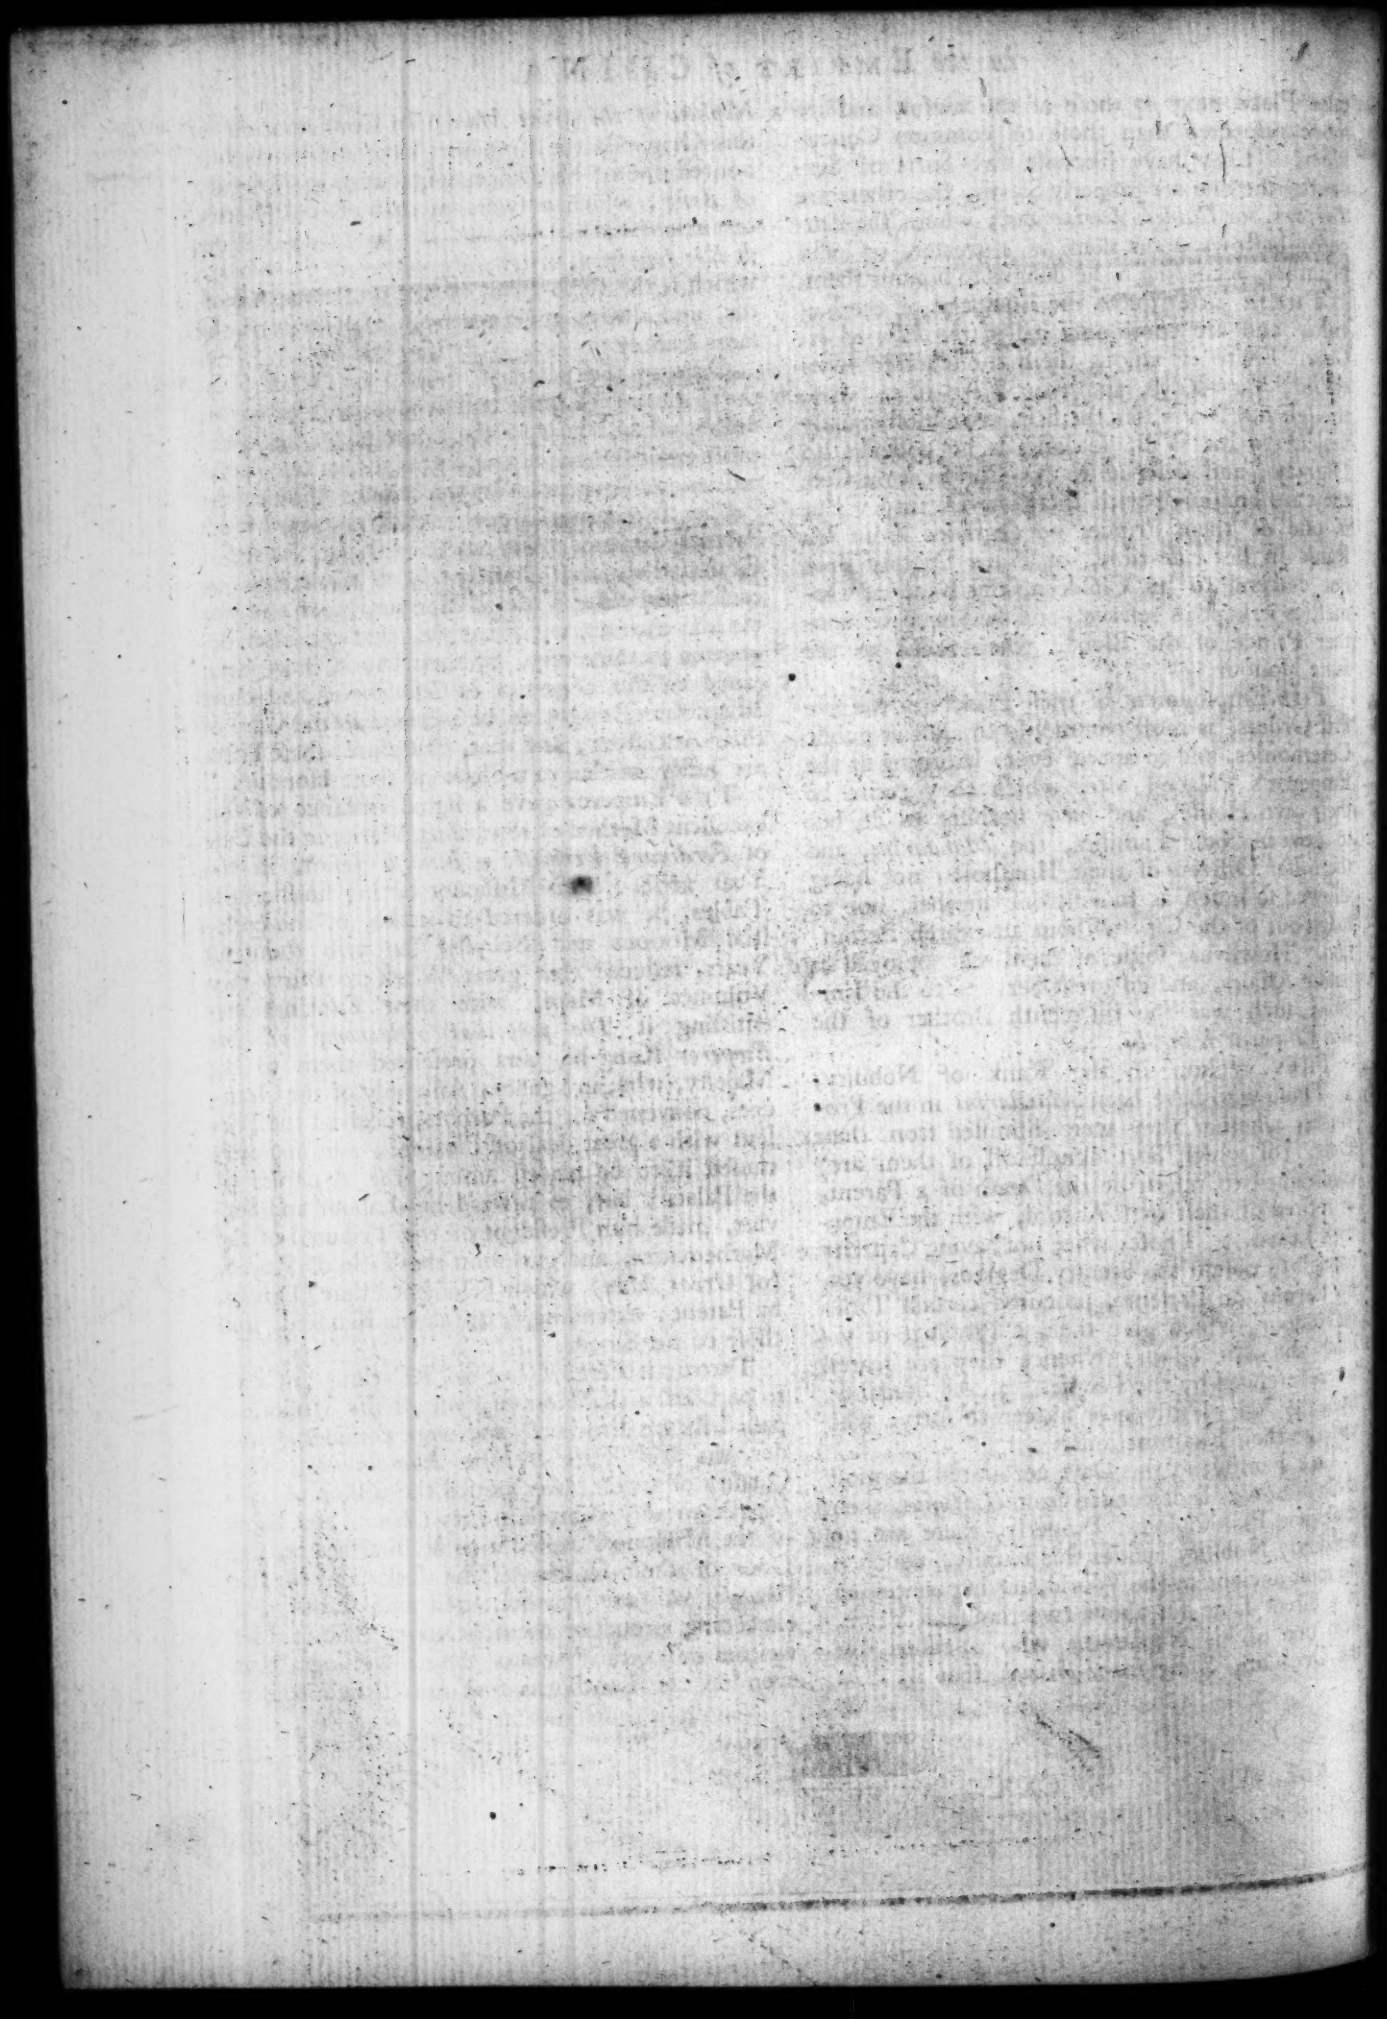
THE Princes, beſides their lawful Wife, have commonly three others, on whom the Emperor beſtow Titles, and whoſe Names are entered in the Tribunal of the Princes: Their Children

[a] *Du Halde*'s *China*, p. 269, *& ſeq.* [b] The ſame, *p.* 242. [c] The ſame, *p.* 269, *& ſeq.* *Megalhaens* ſays, *p.* 146, that the *Tartars* put all thoſe Princes to Death, according to the Practice of every new Family.

Plate LXVI. Vol. IV. p. 114

G. Childs Sculpt.

N. 164.



take Place next to those of the lawful, and are more respected than those of common Concubines. They have likewise two Sorts of Servants, the one are properly Slaves, the others are *Tartars*, or *Chinese Tartarized*; whom the Emperor bestows upon them in a greater, or lesser Number, according as he designs to honour them.

THESE latter make the Equipage of the Regulo, and are commonly called *the Men of his Gate*. There are among them considerable *Mandarins*, Vice-Roys, and even *Tsong-tú's*; who, b though not Slaves like the first, are almost equally subject to his Will, so long as he possesses his Dignity; and descend to his Children, in Case they are honoured with the same Dignity. But if one of these Princes be degraded from his Rank in his Life-time, or if his Dignity does not descend to his Children, this Kind of Domestics is kept in reserve, and bestowed on another Prince of the Blood, when raised to the same Honour.

THE Employment of these Princes of the five first Orders, is most commonly to assist at public Ceremonies, and to appear every Morning at the Emperor's Palace; after which they retire to their own Houses, and have nothing to do but to govern their Families, the *Mandarins*, and the other Officers of their Houshold; not being allowed so much as to visit one another, nor to lodge out of the City without an express Permission. However, some of them are employed in d public Affairs, and do great Services to the Empire; such was the thirteenth Brother of the late Emperor *Kang-hi*.

THEY reckon in the Rank of Nobility, 1. Those who have been *Mandarins* in the Provinces, whether they were dismissed from their Posts, (of which Sort almost all of them are) constrained to resign by the Death of a Parent, or retired of their own Accord, with the Emperor's Leave. 2. Those, who, not having Capacity e enough to obtain the literary Degrees, have yet, by Favour or Presents, procured certain Titles of Honour, which give them a Privilege of visiting the *Mandarins*; whence they are feared and reverenced by the People. 3. All Students, from the Age of fifteen or sixteen to forty, who undergo their Examinations.

THE Family, at this Day, accounted the most noble in *China*, is descended from *Confusius*, their celebrated Philosopher. Properly, there are no f hereditary Nobility besides this Family, which is the most ancient in the World, having continued in a direct Line for above two thousand Years, from one of his Nephews; who is called, on this Occasion, *Shing-jin-ti-shi-eul*, that is, *The Nephew of the great Man*. In Consideration of this Original, the Emperors have constantly honoured one of his Descendants with the Dignity of *Kong*; which answers to that of our Dukes, or ancient Earls. He who is now living, resides at *Kyo-few hyen*, in the Province of *Shan-tong*; which is the Birth-Place of his illustrious Ancestor, and always governed by a *Mandarin* of the same Family [a]. *Nobility, by Creation.*

ONE of the principal Marks of Nobility is, *Nobles by Creation.* the Titles of Honour bestowed upon Persons of distinguished Merit by the Emperor; who sometimes entails them for five, six, eight, or ten Generations, in Proportion to the Service done to the Public: Sometimes he goes farther, and, by distinct Patents, extends them to the Father, Mother, Grandfather, and Grandmother; conferring on each a particular Title of Honour, upon this noble and encouraging Principle, that the Honours granted to those who, by their Merit, have been c raised to the Dignities of *Mandarins* and chief Magistrates, ought to be ascribed to the Care of their Ancestors; and that, therefore, these latter are justly intitled to a Share of those Honours.

THE Emperor gave a signal Instance of this *Verbiest the Jesuit,* excellent Method of rewarding Merit, in the Case of *Ferdinand Verbiest*, a *Flemish* Jesuit, in the Year 1678. This Missioner having finished the Tables, he was ordered to make, of the cœlestial Motions and Eclipses for two thousand Years, reduced that great Work to thirty-two Volumes of Maps, with their Explanations, entitling it *The perpetual Astronomy of the Emperor* Kang-hi, and presented them to his Majesty, who, in a general Assembly of the Grandees, convened for the Purpose, received the Present with a great deal of Pleasure; and not only caused it to be placed among the Archives of the Palace; but, to reward his Labour and Service, made him President of the Tribunal of the Mathematics, and gave him the Title of *Ta-jin*, (or *Great Man*) which belongs to that Dignity, by Patent; extending it to all his Kindred, and those of his Blood.

THOUGH *Verbiest* had no Relations in *China* *And Family, dignified.* to partake of this Honour, yet all the Missioners passed for his Brothers, and were considered under the said Title by the *Mandarins*. This Quality of *Great Man* gained the Bishop of *Heliopolis* an easy Admission into *China*; and most of the Missioners caused it to be inscribed on the Door of their Houses. The Relations of the *Chinese*, who are thus honoured with Titles, are exceeding proud of them, causing them to be written in several Places of their Dwellings, and even on the Lanthorns that are carried before

[a] See before, *p.* 50. b.

Inhabitants Classes. them when they walk in the Night-time; which gains them great Reſpect. The Emperor, after this, conferred the ſame Titles on his Anceſtors, by ſo many Patents; one for his Grandfather, *Peter Verbieſt*; another for *Paſchaſia de Wolff*, his Grandmother; a third for *Louis Verbieſt*, his Father; and a fourth for *Ann Vanherke*, his Mother.

FROM what hath been ſaid, it appears, that, excepting the Deſcendants of *Confuſius*, and the Princes belonging to the reigning Family, no b Perſon is noble in *China* but in Conſequence of the Emperor's declaring his Merit, or advancing him to the Rank which he thinks him worthy of: All who have not taken Degrees being reckoned Plebeians. And hence, as there is no ſuch Thing as an ancient and hereditary Nobility in Families, there can be no Fear of their eſtabliſhing an Authority in the Provinces dangerous to that of the Sovereign [a].

The Literati *Nobility,* THE *Literati*, or Men of Letters, have been c ennobled merely for the Encouragement of what they call *Learning* in *China*; that is, chiefly, Hiſtory, the Laws, and Morality, as the Sciences which conduce moſt to the Peace and Welfare of Society and Government. For ſtudying theſe Sciences, they have their Schools and Halls, or Colleges, all over the Empire; in which they take their three Degrees, of *Bachelor*, *Licentiate*, or *Maſter of Arts*, and *Doctor*, as in *Europe*: Out of the two laſt Claſſes, all the Civil Officers and d Magiſtrates are choſen. And as there is no Way of arriving at Employments, but by theſe Steps, all Perſons are aſſiduous in the Purſuit of their Studies, in Hopes of obtaining their Degrees, and thereby making their Fortune.

How taught ACCORDING to the Accounts of the Miſſioners, the young *Chineſe*, ſo early as the Age of five or ſix, begin to ſtudy the Letters. But as they are ſo very numerous, (ſeventy or eighty thouſand) to allure them to it, they have choſen, for e the firſt Rudiments, about an hundred Characters, which expreſs the Things moſt frequently ſeen by them: As, the Sky, the Sun, the Moon, a Man, certain Plants and Animals, a Houſe, and the moſt common Utenſils; ſetting over them the Figures of the Things themſelves: Which, though aukwardly repreſented, quicken the Capacities of Children; and may be called *The Alphabet of the* Chineſe.

To read THEY put next into their Hands a little Book f called *San-tſe-king*, containing what is neceſſary for a Child to learn, and the Method of teaching it. It conſiſts of ſeveral ſhort Sentences, of three Characters each, ranged in Rhimes, to help the Memories of Children; who muſt learn all theſe Characters by Degrees, though many thouſands, as the *Europeans* do their Alphabet. A young *Chineſe* muſt get, at firſt, four, five, or ſix, in a Day, by repeating them to himſelf from Morning till Night, in order to rehearſe them regularly to the Maſter twice a-Day. If he is often deficient in his Leſſon, he is chaſtiſed. They make him lie flat upon a little narrow Bench, and give him eight or ten Blows upon his Drawers with a Sort of Lath. They are kept ſo cloſe to their Study, that they have ſeldom any Holidays; except a Month at the Beginning of the Year, and five or ſix Days about the Middle of it.

WHEN once they are come to the *Tſe-ſhu* [b], they are not ſuffered to read any other Books till they have gotten theſe by Heart, without miſſing a Letter; and that before they underſtand ſcarce any Thing of them; it being the Cuſtom not to explain to them the Senſe of the Characters till they know them perfectly.

AT the ſame Time that they learn the Letters, they are taught how to form them with a Pencil; for they uſe no Pens. At firſt, great Sheets of Paper, written or printed in large red Characters, are given them, that they may cover the Strokes with Black. Next, they uſe a Sheet with black Letters, not ſo large as the former; and laying a blank tranſparent Sheet over it, draw the Letters upon it. But they oftener uſe a Board covered with white, varniſhed, and divided into little Squares, wherein they write their Characters; rubbing them out with Water when they have done, to ſave Paper. They take great Care to improve their Hands: For, in the triennial Examination for the Degrees, they commonly reject thoſe who write ill; unleſs they give great Proofs of their Ability, either in the Language, or treating the Subject in their Compoſitions.

WHEN they know Characters enough for compoſing, they muſt learn the Rules of the *Ven-chang*; a Piece reſembling that Sort of Theme which the *European* Scholars make before they enter upon Rhetoric; but more difficult, becauſe its Senſe is more confined, and its Stile peculiar. They give for a Subject, but one Sentence out of the Claſſic Authors, which they call *Ti-mu*, or *The Theſis*; and this Theſis is ſometimes but one ſingle Character.

TO find whether the Children improve, in many Places, twenty or thirty Families, who are all of the ſame Name, agree to ſend their Children twice a Month into the common Hall of their Anceſtors, to compoſe. Every Head of a Family, by Turns, gives the Theme, and provides the Dinner, which is brought into the Hall: He likewiſe judges of the Compoſitions, and determines who has ſucceeded beſt. If any one of

[a] *Du Halde*'s *China*, p. 269, *& ſeqq.*

[b] The Books containing the Doctrine of *Confuſius* and *Menſius*.

this

this little Society be absent, without a sufficient Cause, his Parents are obliged to pay about twenty-pence.

BESIDES this private and voluntary Care, all the young Scholars are frequently examined by the *Mandarins* of Letters, and obliged to compose together, before the inferior *Mandarin* of that Order, called *Hyo-quan* [a], at least twice a-Year, once in the Spring, and once in the Winter. Some Governors of Cities take the like Trouble on themselves, with regard to Men of Learning in their Neighbourhood, whom they summon every Month to compose in their Tribunal; giving Rewards to those who succeed the best, and bearing the Expence of their Entertainment for that Day.

THERE are School-Masters in every City, Town, and almost every little Village, to instruct Youth in the Sciences: The Children of People of Fortune have Tutors; the Quality use Doctors, or Licentiates; the lower Classes, Bachelors. These teach them Letters, and form their Manners, instruct them in all the Ceremonies relating to Civility [b], and, when of a proper Age, the History and Laws of their Country. Infinite is the Number of these Preceptors, because very few of those, who put-up for the Degrees, obtain them. The Employment of a School-Master is accounted honourable, the Childrens Parents maintain and present them, and every-where give them the Upper-hand. *Syew Seng*, *Our Master*, *Our Doctor*, is the Name they give them; and their Pupils have the highest Respect for them as long as they live.

ALTHOUGH there are no Universities [c] in *China*, as in *Europe*; yet every City of the first Order has a great Palace set apart for Examination of the Graduates: Those in the Capitals are larger than the rest. As far as the Place will permit, they are all built after the same Manner: They are inclosed with high Walls, the Entrance is magnificent, and before it is a large Square, an hundred and fifty Paces wide, planted with Trees, having Benches and Seats for the Captains and Soldiers, who keep Centry in the Time of Examination. One enters first into a great Court, where the *Mandarins* place themselves with a *Corps-de-Garde*: At the End of this there is another Wall, with folding Gates. As soon as you enter, you cross a Ditch full of Water, over a Stone-Bridge, and come to a third Gate, at which Guards are planted, who let nobody enter without an Order from the Officers. Having passed this Gate, you discover a great Square, the Entrance to which is by a very narrow Passage. On both Sides of this Square is a vast Number of little Chambers [d], close together, four Feet and an half long, and about three and an half broad, to lodge the Students; who are sometimes to the Number of six thousand [e]. *Literati Nobility.*

BEFORE they enter the Palace to compose [f], they are stopped at the Gate, and searched with the greatest Exactness, that they may not carry-in any Books, or Writings; nothing being allowed there but Pencils and Ink. If any Fraud were to be discovered, the Offenders would be severely punished, and excluded from the Degrees of Literature. When every-body is entered, they shut-up the Gates, and the public Seal is set upon them. There are Officers of the Tribunal [g] to overlook every Thing that passes, and to prevent them from going-out of their Chambers, or speaking to one another. *Their Description.*

AT the End of the narrow Passage abovementioned, a Tower is erected upon four Arches, and flanked with four Turrets, or a Sort of round Domes; from which, if any Disturbance [h] be perceived, the Drum is immediately beaten, to give Notice, that the Disorder may be remedied. Near this Tower there are divers Apartments, and a great Hall well-furnished; in which those assemble who preside at the first Examination. Going-out of this Hall, you enter another Court, in which there is another Hall resembling the first; but more magnificently furnished, with divers Apartments for the President, and principal Officers. There are also Galleries, a Garden, and many little Apartments for the *Mandarins*, Secretaries, and inferior Officers: And, lastly, every Thing which is requisite for lodging commodiously the whole Retinue of the Examiners [i].

THE chief Persons, or Presidents, before whom the Examinations are made, are the *Fu-yuen*, the *Chi-fû*, and the *Chi-hyen*; who are the Governors of the Province, and Cities of the first and third Rank. As soon as the young Students are thought capable of passing the Examinations of the *Mandarins*, they must begin with that of the *Chi-hyen*, in whose Jurisdiction they were born. This *Mandarin*, who gives the *First Examination*

[a] That is, *Mandarins*, or *Governors of the School*. [b] See chap. 2. sect. 2. *& seqq.* [c] *Navarette* calls them *Colleges*, or *Universities*. [d] It is easy to imagine, says *Navarette*, p. 50, how great their Colleges must be: That of *Kanton* has five thousand little Chambers, or Cells, with a Chair and Table in every one; which Rooms are so contrived, that the Vice-Roy, who is in a Tower hard-by, has them all in his View. [e] *Du Halde*'s *China*, p. 374, *& seq.* [f] Which, *Navarette* says, is the Day before the Examination. [g] The same Author says, there is a Centinel placed over every two of them. [h] Or Fault, above-mentioned. [i] *Du Halde*, as before; and *Navarette*'s Description of *China*, p. 50.

Inhabitants Classes.

Theme, examines these Compositions himself, or orders them to be examined in his Tribunal; and determines which is the best. Of eight hundred Students, for Instance, there are about six hundred named, or, as they express it, have *Hyen-ming*, that is, *are inscribed to the Hyen:* Some of which contain six thousand Students. These six hundred must afterwards appear at the Examination of the *Chi-fû*, or Governor of the first-rate City; who makes a new Choice, selecting not above four hundred, who have *Fû-ming*, that is, *who are named for the second Examination.* Hitherto they have no Degree in Literature, and therefore are called *Tong-seng* (or Candidates.)

Of the Candidates.

In every Province there is a *Mandarin*, who comes from *Pe-king*, and is but three Years in his Office: He is called *Hyo-tau*, or, in the finest Provinces, *Hyo-ywen*; and generally hath Intelligence with the great Tribunals of the Empire. During his Term, he must make two Examinations: The first is called *Swi-kau*, the second *Ko-kau*; for this Purpose he is obliged to make a Circuit through all the *Fû*, or first-rate Cities of the Province.

As soon as the *Hyo-tau* arrives in a *Fû*, he goes to pay his Respects to *Confusius:* Then he explains some Passages in the Classic Authors, and the succeeding Days examines. When the four hundred Candidates, who have *Fû-ming*, go to compose in his Tribunal along with the other Students, who come from the rest of the *Hyen*, which are subordinate to that *Fû*; and if their Number be very great, they are divided into two Companies. The greatest Precautions are now used, to prevent the *Mandarins* knowing the Authors of the Compositions. The *Hyo-tau* nominates but fifteen Persons out of the four hundred, supposed to be in each *Hyen*. These take the first Degree, and are therefore said *to enter into Study*, being called *Syew-tsay*, or Bachelors. They then wear the Formalities, which consist of a blue Gown, with a black Border all-round it, and a Silver, or Pewter Bird, upon the Top of their Caps. They are no more liable to be bastonadoed by Order of the common *Mandarins*; but have a particular Governor, who punishes them if they do amiss: But if ever it appears, that Favour was the Motive of their Choice, the Envoy of the Court would be ruined both in his Reputation and Fortune.

Degree of Bachelor.

The same *Mandarins* who examine for Learning, examine for the Army. Those who are Candidates here, must shew their Ability in shooting with the Bow, and Riding; likewise their Strength, by lifting a large Stone, or some heavy Burden; if used to such Exercises. To those who have made any Progress in Learning, they give Questions to be solved, respecting Encampments, and Stratagems of War: For the Warriors, as well as the Learned, have their Classic Authors, named *Keng*; which were composed purposely for their Use, and treat of the military Discipline.

The *Hyo-tau* is obliged, by his Office, to make the Tour of his Province, and to assemble, in every City of the first Order, all the Bachelors who are dependent upon it; When, after being informed of their Conduct, he examines their Compositions, recompenses those who have made great Proficiency in their Studies, and punishes such as he convicts of Negligence. For this Purpose sometimes he divides them into six Classes: The first contains the Few who have remarkably distinguished themselves; to whom he gives, as a Reward, a *Taël*, and a Silk-Scarf: Those of the second Class receive also a Silk-Scarf, and a small Matter of Money: The third Class hath neither Reward, nor Punishment: Those of the fourth receive the Bastonado: The fifth lose the Bird with which the Cap is adorned, and become but half Bachelors: Those who have the Misfortune to be in the sixth, are entirely degraded; but this happens to very few. In this Examination, one shall sometimes see a Man of fifty or sixty Years of Age bastonadoed; whilst his Son, who composes with him, receives Applause and Rewards: But this Punishment is never inflicted, unless there be also some Complaint made of their Morals and Behaviour.

Every Graduate, who does not come to this Triennial Examination, runs the Risque of being deprived of his Title, and ranked with the common People. Nothing but Sickness, or Mourning for the Death of a Parent, can excuse him: Only the old Graduates, who upon their last Examination appeared to be superannuated, are for ever after exempted from this Attendance, without losing the Habit, Cap, or any other Honours of their Degree.

To attain the Degree of *Kyu-jin*, Licentiate, (or Master of Arts) they must pass a new Examination, called *Chu-kau*; which is held but once in three Years, in the Capital of every Province, by the great Officers, assisted by some other *Mandarins*. Two *Mandarins* come express from the Court, to preside at it. The first is called *Ching-chu-kau*, and must be *Han-lin*, that is, *of the College of the chief Doctors of the Empire:* The other is called *Fû-chu*. Out of ten thousand *Syew-tsay*, who are, for Instance, in the Province of *Kyang-si*, no more than sixty are nominated, or obtain the Degree of *Kyu-jin*. Their Gown is of a browniish Colour, with a blue Border four Fingers broad: The Bird upon the Cap is of Gold, or Copper gilt; and the Chief of them has the Title of *Kay-ywen*. It is not easy to obtain this Degree by corrupting the Judges: They must

must go the next Year to *Pe-king*, to be examined for the Degree of Doctor; and the Emperor is at the Charge of this first Journey. Those who, after having passed this Examination once, are contented with being *Kyu-jin*, either because they are in Years, or have a moderate Fortune, are excused from coming any more to this Examination, which is made at *Pe-king* every three Years. Every *Kyu-jin* is qualified to bear any Office: Sometimes they obtain Employments merely by Seniority in this Degree; and some of them have become Vice-Roys of Provinces. As soon as they have obtained any public Employment, they renounce the Degree of Doctor.

ALL the Licentiates, who are not in any Office, go to the triennial Examination at *Pe-king*, which is called the *Imperial*: For the Emperor himself dictates the Subject of the Compositions, and by the Attention he gives, and the exact Report that is made to him, is supposed to be himself the Judge. The Number of those who come to this Examination, amounts often to five or six thousand, of whom about three hundred are advanced to the Degree of Doctor. Sometimes this Preferment hath been given but to an hundred and fifty. The three principal of them are stiled *Tyen-se-men-seng*, that is, *The Disciples of the Son of Heaven*. The Chief of these is called *Chwang-ywen*, the next *Pang-ywen*, and the third *Tan-wha*. From the other Doctors, the Emperor chuses a certain Number, to whom they give the Title of *Han-lin*, that is, *Doctors of the first Order*. The rest are called *Tsin-tse*.

WHOEVER can obtain this glorious Title of *Tsin-tse*, either in Literature, or the Army, may look upon himself as a Man firmly settled, and needs not fear Want: For besides that he receives an infinite Number of Presents from his Relations and Friends, he is in a fair Way to be employed in the most important Posts of the Empire, and every-body courts his Protection: His Friends and Relations never fail to erect, in their City, magnificent triumphal Arches to his Honour, on which they inscribe his Name, the Place where, and the Time when, he received his Degree.

THE late Emperor *Kang-hi*, towards the End of his Reign, observing that the new Books which were printed, were neither so numerous, nor well-written as he could have wished, for the Glory of his Reign, and Benefit of the Public; and perceiving likewise, that these chief Doctors of the Empire neglected their Studies, in Pursuit of gainful Employments; as soon as the Examination was ended, took upon himself, contrary to Custom, to examine these chief Doctors, who so piqued themselves upon being Judges and Examiners of others. This Examination gave great Alarm, and was followed by a Judgment still more surprizing; for several of them were shamefully degraded, and sent back to their own Provinces. The Dread of such another Examination, keeps those Chiefs of the *Literati* close to their Studies. The Emperor prided himself upon this Occasion; because one of the most learned Men of his Court, who was employed in looking-over the Compositions, concurred exactly with him in Judgment, condemning all those which his Majesty had rejected, excepting one Piece, which he deemed of a doubtful Merit [a].

Literati Nobility.

OUR Author elsewhere observes farther, with Regard to the *Syew-tsay*, or Bachelors, that they who are judged fit for taking their Degree go to the Threshold of the *Ti-hyo-tau*, or *Mandarin* [b], with black Linen Garments, and a common Cap on. As soon as they are admitted into his Presence, they bow, fall on their Knees, and prostrate themselves several Times, on the Right, and on the Left, in two Lines, till the *Mandarin* gives Orders for presenting them with the Habits proper for Bachelors; which consist of a Vest, a Surtout, and a Silk-Cap. Having put them on, they return, and prostrate themselves again before the Tribunal of the *Mandarin*. From hence they march to the Palace of *Confusius*, where they bow their Heads four Times to the Ground before his Name, and before those of the most eminent Philosophers.

Ceremony observed

WHEN the *Syew-tsay* are returned to their own Country, all those of the same District go in a Body to prostrate themselves before the Governor in his Tribunal: After this he rises, and offers them Wine in Cups; which he first elevates in the Air. In several Places, Pieces of red Silk are distributed among them, of which they make a Kind of Belt: They also receive two Wands, adorned with Flowers of Silver, which they set on each Side of their Caps like a Caduceus: Then they walk, with the Governor at their Head, to the Palace of *Confusius*, to finish the Ceremony with the usual Salutation. This is, as it were, the Seal (or Test) which puts them in Possession of their new Dignity; because by that Action they acknowledge *Confusius* for their Master, and profess to follow his Maxims in the Government of the State [c].

In admitting Bachelors.

NAVARETTE, who agrees for the general with what hath been already related from *Du Halde*, adds some farther Particulars that deserve Notice. He informs us, that during the Reign

Increase of the Literati.

[a] *Du Halde's China*, p. 376, *& seqq.* [b] We presume, the same, before called, simply, *Hyo-tau*, who examined them. [c] *Du Halde's China*, p. 295.

of

Inhabitants Classes. of the *Song* Family (above six hundred and fifty Years ago, when Learning flouriſhed moſt in *China*) the Schools were then increaſed, twenty Bachelors being allotted to every Town, forty to each City, and fifty to every Metropolis. Theſe they call *Lin-ſeng*, that is, *Bachelors who have Allowance from the King*. Next they added ſixty to a Town, and an hundred and twenty to a City, ſtiled *Tſeng-ſeng*, that is, *Additional Bachelors*: Afterwards they gave Leave for all who had a Mind to take their Degrees. Theſe are diſtinguiſhed by the Name of *Fù-hyo*, which ſignifies *Bachelors clapped to the School*; ſo that there are three Degrees of them.

Privileged Bachelors. THE privileged Bachelors, who are free from farther Examinations, are called *Kung-ſeng*, and of three Sorts. The firſt ſtiled *Pa-kung-ſeng*; which implies, that they were ſuch able Rhetoricians, and their Compoſitions ſo good and elegant, that they merited their Degree, without being obliged to wait the uſual Time; which is a mighty Honour. The ſecond Claſs are the *Tſye-ſwen-kung*, who have held the Degree of Bachelors twenty Years. The laſt go by the Appellation of *Ngen-kung-ſeng*, denoting they are Bachelors privileged by the Emperor's Favour. The Sons of Carrmen, Butchers, Hangmen, and Players, as well as Baſtards, are incapable of taking any Degree.

Thoſe admitted to Degrees, THE Candidates having finiſhed their Compoſition, cloſe it up, writing their Name and Country upon it; but take Care to put a Cover over it, that it may not be read. Then it is delivered to thoſe appointed, and carried to a Room of *Mandarins*, who examine it. Such Compoſitions as deſerve to go-up to the ſecond Room, are ſet apart; the reſt are thrown-out: Of five thouſand, the one-half are rejected in this firſt Hall. Thoſe who are choſen, go-up to the ſecond; where, after being viewed, about half of them go-up again to the third, where the Magiſtrates Examiners are: Theſe pick-out fifty of the beſt and moſt elegant among them, with Precedency; as firſt, ſecond, third, *&c.* They then look-upon the Names, and calling thoſe who have merited to take their Degree, write them upon large Tables, which they hang in ſome public Place. By Virtue of this Action they become Graduates, without any further Ceremony; even as *Eleazer*, ſays our Author, by only the Ceremony of Cloathing without Unction, or Conſecration, became High-Prieſt [a]. And this is the Form of all Examinations.

How honoured. IF they find any more Compoſitions worthy of the Degree, they write down the Names of the Parties, commending them, and declaring, that if there were more allowed to take their Degrees, they deſerved it; which is accounted a great Honour. They are three Days locked-up about this Buſineſs. The Emperor is at the whole Expence, which is ſo very great, that *Navarette* forbears to mention it; becauſe he ſays, no *European* would believe it. After this, the Vice-Roy, Examiners, and other great *Mandarins*, receive the Graduates with much Honour, entertain them at a ſolemn Banquet, and give every one a Silver-Porringer, a blue Silk-Umbrello, and a Sedan, which is there carried upon Mens Shoulders.

WHEN the Tables are hung-up, many People ſtand ready to carry the News, Poſt-haſte, to the Relations of thoſe preferred; who reward them bountifully. As ſoon as the Meſſenger arrives, the whole City, or Town, makes public Rejoicing, for the Good-Fortune of their Townſman; and when he comes home himſelf, every-body viſits, congratulates, and makes him a Preſent in Silver, according to their Ability. This is done in order to bear his Charges to Court, where every *Licentiate* [b] is obliged to repair forthwith: There his Name is regiſtered in the Imperial Books, that he may be employed in the Government, when there is Occaſion. They who aſpire to be Doctors, give Notice they intend to be examined before the Emperor; who aſſigns them their Themes, and judges of their Performances. He who is at the Head of thoſe preferred to this Degree, obtains the greateſt Honour imaginable: Some of them are appointed for the Imperial College [c]; others return to their own Homes, there to wait till Employments are given them.

ALTHOUGH extraordinary Care is taken to prevent Bribery on theſe Occaſions; yet Ways are found to effect their Deſigns. In the Author's Time, the Emperor *Shun-chi* cauſed a *Licentiate*, and his Examiner, to be beheaded for this Crime: And as he was going-up to Court, he overtook another *Licentiate* carried in Chains, being accuſed with the ſame Kind of Corruption. The moſt uſual Way of bribing, is for the Candidate to go two or three Days Journey to meet the Examiner; who, if inclined to do the Buſineſs, agrees for five hundred Ducats, or more: Then they agree upon the Mark, whereby to diſtinguiſh his Compoſition from the reſt; which is commonly a Daſh, or Stroke, in ſome particular Place; or elſe the Examiner gives him the Subject, that he may have Time to ſtudy upon it, and withal directs the Uſe of a certain Character, that may put him more effectually in Mind. But if the Perſon, who is thus raiſed to his

[a] *Numb.* xx. 21, 26. [b] According to *Magalhaens*, p. 88, the Number of Bachelors, in *China*, are ninety thouſand, and of *Licentiates*, or *Maſters of Art*, ten thouſand. [c] Or, that of *Han-lin*, before-mentioned.

his Degree, is afterwards found to want Merit, they impeach the Examiner.

THIS Method of examining Scholars continually, is of excellent Uſe to keep them out of Idleneſs, and to prevent the vaſt Increaſe of them. The Emperor *Juſtinian*, to obviate theſe Inconveniencies, took away the Royal-Revenues from ſeveral Cities which had Schools. *Francis* the Firſt of *France* was much blamed for having founded many Univerſities; becauſe as they vaſtly increaſed the Number of Students, there was a Want of Soldiers, Huſbandmen, and Handicrafts.

NAVARETTE ſays, it would be well if the Scholars of *Europe* were like theirs; for they are the graveſt, the modeſteſt, and moſt orderly People in *China*, walking with their Eyes fixed on the Ground. The ſame Gravity and Stayedneſs is ſeen even in School-Boys; which the Author often obſerved with no little Surprize: Yet he ſays, they are infected with a helliſh Pride, fixed in their very Marrow and Bones, looking upon thoſe of the other Nations of the World as ſcarce Men: But the *Tartar*, who has not ſhewn much Favour to learned Men, has humbled them in ſome Meaſure [a]. Here it may be proper to obſerve, that under the Name of *Literati*, *Men of Letters*, or the *Learned*, are comprehended all Scholars, or Students; as well as thoſe who have taken ſome Degree, whether they be in Employments, or not. All *Mandarins* are *Literati*; but all *Literati* are not *Mandarins*, or Perſons in Office.

SECT. II.

The Claſs of Huſbandmen, *and the Honour paid to* Agriculture.

Huſbandmen's Privileges. Agriculture highly eſteemed: Promoted by Emperors: Feſtival in its Honour. Grand Proceſſion. Emperor turns Plowman once a Year: Preparations: Offers Sacrifice: Ploughs a Field: The Produce ſacred. Huſbandmen encouraged. Induſtry, the Effect. Manure with Ordure: Hair and Lime. Level the Land. Cultivate the Mountains. Higheſt Grounds watered. Curious Engine for that Purpoſe, and cleanſing Canals. Lands how let in China.

THE Huſbandmen in *China*, as to Rank, are preferred to Merchants and Mechanics. They are endowed with large Privileges, their Profeſſion being conſidered as the moſt neceſſary one in a State. *Navarette* obſerves, that the *Chineſes* ſay, that the Emperor ought to take them under his particular Care, and to allow them as large Privileges as may be; becauſe all the Empire ſubſiſts by their Labour and Induſtry [b]. Nay, it could not ſubſiſt without the ſtrongeſt Inclinations and Application of the Country-People that Way; *China* being ſo vaſtly populous, that if every Inch of arable Land was ſowed, as in Fact it generally is; yet the Produce would be ſcarce ſufficient to ſupport the Multitudes of Inhabitants; and the Empire is too extenſive to have its Wants that Way ſupplied from foreign Parts, even if it kept-up a Correſpondence with them. For theſe Reaſons it has always been one of the chiefeſt Cares of the Government to promote Agriculture, by honouring Huſbandmen and their Profeſſion. With this View, a Feſtival is inſtituted in Honour of Agriculture; and the Emperor himſelf, once a Year, turns Plowman, in Imitation, as it is ſaid, of the early Monarchs, whoſe Hiſtory ſeems to be calculated for the ſame End. *Huſbandmen.*

THE common Opinion, according to the Miſſioners, is, that Huſbandry was firſt taught by *Shin-nong* [c], who is at this Day reverenced as the Inventor of ſo uſeful an Art [d]; which has ſtill gained farther Credit from what is related in the Books of their ancient Philoſophers. The Emperor *Yau*, who began to reign four hundred and eighty Years after this Monarch, it ſeems, ſet-aſide his own Children in Favour of a young Huſbandman, whom he choſe for his Succeſſor. This Choice of an Emperor out of the Country, has inſpired the *Chineſe* with a great Eſteem for Agriculture. *Yu*, who ſucceeded *Shun*, came to the Throne after the ſame Manner. It is ſaid, he found out the Way, by Means of Canals, to drain-off the Water into the Sea, which at the Beginning of the Empire overflowed ſeveral low Countries, and afterwards made uſe of them to render the Soil fruitful. It is added, that he wrote ſeveral Books concerning the Manner of cultivating Land, and watering it; which induced *Shun* to appoint him to ſucceed, and has contributed much to raiſe the Credit of Agriculture, as they ſee it has been thought worthy the Care and Application of a great Prince. *Agriculture highly eſteemed:*

SEVERAL other Emperors have expreſſed their Zeal for this Art. *Kang-vang*, third Monarch of the *Chew* Family, cauſed Landmarks to be fixed, to prevent Diſputes among the Huſband- *Promoted by Emperors:*

[c] Which ſignifies the *Celeſtial Huſbandman*. He was the ſecond Emperor, who began his Reign two thouſand eight hundred and thirty-ſeven Years before the Chriſtian Æra. See *Du Halde*, as before, *p.* 137.

[d] *Navarette*, p. 53, ſays, they have raiſed magnificent Temples, where they ſacrifice to him.

Inhabitants Classes.

men. *King-vang*, the twenty-fourth of the same Race, in whose Reign *Confusius* was born, five hundred and thirty-one Years before Christ, renewed the Laws that had been made for promoting Agriculture. In a Word, the Emperor *Ven-ti*, who reigned three hundred and fifty-two Years after, raised its Esteem to a great Pitch: For this Prince perceiving, that his Country was ruined by the Wars, to engage his Subjects to cultivate the Land, set them an Example himself, by ploughing the Fields belonging to his Palace; which obliged all the Ministers and Gentlemen of the Court to do the same.

Festival in its Honour.

IT is thought, that this was the Original of a great Festival that is solemnized every Year in all the Cities of *China*, when the Sun enters the fifteenth Degree of *Aquarius*; which the *Chinese* look upon as the Beginning of the Spring. On this Day the Governor comes out of his Palace, carried in his Chair, preceded by Banners, lighted Torches, and divers Instruments: He is crowned with Flowers, and marches, in this Equipage, towards the Eastern Gate of the City, as it were to meet the Spring: He is attended with several Litters, painted and adorned with Variety of Silk Tapestry; exhibiting various Figures, and the Pourtraits of illustrious Persons, who had practised Husbandry, with Histories relating to the same Subject. The Streets are covered with Tapestry, and, at proper Distances, triumphal Arches are erected: They also hang-out Lanthorns, and make Illuminations.

Grand Procession.

AMONG the Figures, there is a Cow of Earthen-Ware, so monstrously large, that forty Men can hardly carry it. Behind the Cow, whose Horns are gilt, is a young Child with one Foot naked, and the other shod: Him they call the *Genius of Labour and Diligence*; who strikes the Earthen-Cow incessantly with a Rod, as though it were to make it advance. All the Husbandmen follow with their Instruments; after whom proceed Companies of Masquers and Comedians, acting Plays. In this Manner they march to the Governor's Palace, where they strip the Cow of her Ornaments; and drawing out of her Belly a prodigious Number of small Cows made of Clay, distribute them among the Multitude, as well as the Fragments of the Cow, which they break in Pieces. Afterwards the Governor makes a short Discourse, recommending the Care of Husbandry as one of the Things most conducive to the Good of a State.

Emperor turns Ploughman

THE Attention of the Emperors and *Mandarins* to the Cultivation of the Land is so great, that when Deputies arrive at Court from the Vice-Roys, the *Chinese* Monarch never forgets to demand in what Condition the Fields appeared to them; and the Falling of a seasonable Shower furnishes a proper Occasion for visiting a *Mandarin*, to compliment him thereupon. Every Year in Spring, which falls in *February*, the Emperor (according to the ancient Custom) goes himself, in a solemn Manner, to plough a few Ridges of Land, in order to animate the Husbandmen by his own Example; and the *Mandarins* of every City perform the Ceremony, which is as follows. The Tribunal of Mathematics having, pursuant to Orders, fixed on the twenty-fourth of the second Moon, as the proper Day for the Ceremony of Tillage, that of Rites gave Notice to the present Emperor *Yong-ching*, by a Memorial, in which were set forth the following Particulars to be observed by him, preparatory to this Festival. 1. That he should appoint twelve illustrious Persons to attend, and plough after him, *viz.* three Princes, and nine Presidents of the sovereign Courts; or the Assistants of the latter, in case they were too old, or infirm. 2. That as this Ceremony does not solely consist in the Emperor's ploughing the Earth, in order to stir-up Emulation by his own Example; but also includes a Sacrifice, which he, as chief Pontiff, offers to *Shang-ti*, to procure Plenty from him in Favour of his People: Therefore, by Way of Preparation, he ought to fast and observe Continence the three preceding Days: The Princes and *Mandarins*, who accompany his Majesty, ought to prepare themselves in the same Manner. 3. That on the Eve of the Ceremony, his Majesty is to send several Lords of the first Quality to the Hall of his Ancestors, to prostrate themselves before their Tablet, and give them Notice, as though they were yet living, that the next Day he will offer the great Sacrifice.

BESIDES these Directions to the Emperor, the Tribunal likewise prescribes the Preparations to be made by the different Tribunals: One is obliged to prepare the Sacrifice; another, to compose the Formula, which the Emperor repeats when he makes the Sacrifice; another, to carry and set-up the Tents, under which his Majesty is to dine, in case he so orders it; a fourth is to assemble forty or fifty Husbandmen venerable for their Age, who are to be present when the Emperor ploughs the Ground, with forty of the younger Sort to make ready the Plough, yoke the Oxen, and prepare the Grain that is to be sown; consisting of five Sorts, supposed to comprehend all the rest, as Wheat, Rice, Beans, and two Kinds of Millet.

ON the twenty-fourth Day of the Moon the Emperor went with his whole Court, in his Habit of Ceremony, to the Place appointed, to offer to *Shang-ti* the Spring Sacrifice; by which he is implored to increase and preserve the Fruits of the Earth. The Place is a little Hillock made of Earth, a few Furlongs South from the City.

City. On the Side of this Elevation (which ought to be fifty Feet four Inches high) is the Spot which is to be ploughed by the imperial Hands.

AFTER the Emperor had offered Sacrifices, he deſcended with the three Princes and nine Preſidents, who were to plough with him. Several great Lords carried the valuable Cheſts; which contained the Grains that were to be ſown. All the Court attended with profound Silence; then the Emperor took the Plough, and tilled the b Ground ſeveral Times backwards and forwards: When he quitted it, a Prince of the Blood held it, and ploughed; as did all the reſt in their Turns. After having ploughed in ſeveral Places, the Emperor ſowed the different Grain; and, the Day following, the Huſbandmen by Profeſſion, (forty-four of them old, and forty-two young) finiſhed the Remainder of the Field that was left untilled. The Ceremony concluded with the appointed Reward which the Emperor c beſtowed upon each of them; conſiſting of four Pieces of dyed Cotton to make Cloaths.

THE Governor of *Pe-king* goes often to viſit this Field, which is cultivated with great Care; and examines all the Ridges thoroughly, to ſee if he can meet with any uncommon Ears; ſuch as they reckon good Omens: On which Occaſion, he gives Notice, that he found a Stalk, for Inſtance, that bore thirteen Ears. In the Autumn, the ſame Governor gets in the Grain in yellow d Sacks; which are ſtowed in a Granary built for that Purpoſe, called *The imperial Magazine*. This Grain is kept for the moſt ſolemn Ceremonies: For when the Emperor ſacrifices to *Tyen*, or *Shang-ti*, he offers it as the Fruit of his own Hands; and, on certain Days in the Year, he preſents it to his Anceſtors, as if they were ſtill living.

AMONG ſeveral good Regulations made by the ſame Emperor, he has ſhewn an uncommon Re- e gard for the Huſbandmen. To encourage them in their Labour, he has ordered the Governors of all the Cities to ſend him Notice every Year, of the Perſon of this Profeſſion, in their reſpective Diſtricts, who is moſt remarkable for his Application to Agriculture; for unblemiſhed Reputation; for preſerving Union in his own Family, and Peace with his Neighbours; for his Frugality and Averſion to all Extravagance. Upon the Report of the Governor, the Emperor will ad- f vance this wiſe and diligent Huſbandman to the Degree of a *Mandarin* of the eighth Order, and ſend him Patents of an honorary *Mandarin*; which Diſtinction will entitle him to wear the Habit of a *Mandarin*, to viſit the Governor of the City, to ſit in his Preſence, and drink Tea with him. He will be reſpected all the reſt of his Days. After his Death, he will have Funeral Obſequies ſuitable to his Degree; and his Title of Honour will be written in the Hall of his Anceſtors. What Emulation muſt ſuch a Reward excite among the Huſbandmen[a]! *Huſbandmen.*

ACCORDINGLY, we find, that they are continually buſied about their Lands: If they have any Time to ſpare, they go immediately to the Mountains to cut Wood, to the Garden to look to their Herbs, or to cut Canes, *&c.* ſo that they are never idle. The Land in *China* never lies fallow. Generally, the ſame Ground produces three Crops in a Year; firſt, Rice; and before it is reaped, they ſow Fitches; and when they are in, Wheat, Beans, or ſome other Grain: Thus it continually goes round. They very ſeldom employ their Land for unprofitable Uſes, ſuch as Flower-Gardens, or fine Walks; believing uſeful Things more for the public Good, and their own. *Induſtry, the Effect.*

THE Attention of Huſbandmen is chiefly employed in the Cultivation of Rice. They manure their Land extremely well; gathering, for that Purpoſe, with extraordinary Care, all Sorts of Ordure, both of Men and Animals, or truck for it Wood, Herbs, or Linſeed Oil. This Kind of Manure, which, elſewhere, would burn-up[b] the Plants, is very proper for the Lands of *China*; where they have an Art of tempering it with Water before they uſe it. They gather the Dung in Pails[c], which they commonly carry covered on their Shoulders; and this contributes very much to the Cleanneſs of their Cities, whoſe Filth is thus taken-away every Day. *Manure with Ordure.*

IN the Province of *Che-kyang*, and other Places, when they ſow[d] Rice, they uſe Balls of Hogs, or even human Hair; which, according to them, gives Strength to the Land, and makes that Grain grow better. For this Reaſon, Barbers ſave the Hair which they ſhave off Heads, and ſell for about a Half-penny a Pound to ſuch People who carry it away in Bags; and you may often ſee Barks loaded with it. When the Plant begins to ear, if the Land be watered with Spring-Water, they mix Quick-lime with it; ſaying, that it kills Worms and Inſects, deſtroys Weeds, and gives a Warmth to the Ground, which contributes much to its Fertility. By this *Hair, and Lime.*

[a] *Du Halde's China*, p. 274, *& ſeqq.* [b] *Navarette*, p. 53, ſays, that, at certain Times, it is uſual to ſprinkle the Rice and Herbs, or water it with Man's Urine mixed with Excrement: And, that the Miſſioners thought this a Riddle, becauſe Urine burns and deſtroys all Plants in *Europe*. He adds, that there is not a Horn, Bone, or Feather, but what they burn to make Aſhes to manure their Ground. [c] See before, *p.* 76. [d] *Navarette* ſays, when they tranſplant it.

Inhabitants Classes.

Means the Rice-Fields are ſo clean, that *Navarette*, ſometimes, walked through them, looking for ſome ſmall Herb; and could never find any: So that, he concludes, the Rice, which is ſurprizingly tall and fine, draws all the Nouriſhment from the Ground [a].

Level the Lands:

THE Huſbandmen ſow their Grain, at firſt, without any Order: But when it has ſhot about a Foot, or a Foot and an half high, they pluck it up by the Roots; and making it into a Sort of ſmall Sheaves, plant it by a Line, and Chequer-wiſe; to the End, that the Ears, reſting upon each other, may ſtand more firmly, and reſiſt the Winds. But, before the Rice is tranſplanted, they level the Land, and make it very ſmooth, after the following Manner: Having ploughed the Ground three or four Times ſucceſſively, always to the Ancles in Water, they break the Clods with the Head of their Mattocks; then, by the Help of a wooden Machine, (on which a Man ſtands upright, and guides the Buffalo that draws it) they ſmooth the Earth, that the Water may be every-where of an equal Height; inſomuch, that the Plains ſeem more like vaſt Gardens than open Fields.

Cultivate the Mountains.

THE Mountains in *China* are all cultivated: But one ſees neither Hedges nor Ditches, nor ſcarce any Tree; ſo fearful they are of loſing an Inch of Ground. It is very agreeable to behold, in ſome Places, Plains three or four Leagues in Length, ſurrounded with Hills and Mountains, cut, from Bottom to Top, into Terraſſes three or four Feet high, and riſing one above another, ſometimes, to the Number of twenty or thirty. Theſe Mountains are not generally rocky, as thoſe in *Europe*, the Soil being light and porous, eaſy to be cut, and ſo deep in ſeveral Provinces, that one may dig three or four hundred Feet without meeting with the Rock. When the Mountains are rocky, the *Chineſe* looſen the Stones, and make little Walls of them to ſupport the Terraſſes; then they level the good Soil, and ſow it with Grain.

Higheſt Grounds watered.

THEY are ſtill more induſtrious. Though, in ſome Provinces, there are barren and uncultivated Mountains, yet the Valleys and Fields, which ſeparate them in a vaſt Number of Places, are very fruitful and well cultivated. The Huſbandman, firſt, levels all the unequal Places that are capable of Culture. He then divides that Part of the Land, which is on the ſame Level, into Plots; and that along the Edges of the Valleys, which is unequal, into Stories, in Form of an Amphitheatre: And as the Rice will not thrive without Water, they make Reſervoirs, at proper Diſtances, and different Heights, to catch the Rain and the Water which deſcends from the Mountains, in order to diſtribute it equally among all their Rice-Plots; either by letting it run-down from the Reſervoir to the Plots below, or cauſing it to aſcend from the lower Reſervoirs to the higheſt Stories.

FOR this Purpoſe they make uſe of certain Hydraulic Engines [b]; which are very ſimple, both as to their Make, and the Manner of playing them. It is compoſed of a Chain made of Wood, reſembling a Chaplet, or Pair of Beads [c], ſtrung, as it were, with a great Number of flat Boards, ſix or ſeven Inches ſquare, and placed parallel at equal Diſtances. This Chain paſſes through a ſquare Tube or Gutter; at the lower End whereof is a ſmooth Cylinder or Barrel, whoſe Axis is fixed in the two Sides [d]; and to the upper End is faſtened a Sort of Drum, ſet round with little Boards to anſwer thoſe of the Chain, which paſſes round both it and the Cylinder: So that when the Drum is turned, the Chain turns alſo; and, conſequently, the lower End of the Gutter or Tube being put into Water, and the Drum-End ſet to the Height where the Water is to be conveyed, the Boards filling exactly the Cavity of the Tube, muſt carry up a continual Stream ſo long as the Machine is in Motion; which is performed three Ways: 1. With the Hand, by Means of one or two Handles applied to the Ends of the Axis of the Drum. 2. With the Feet, by Means of certain large wooden Pegs, about half a Foot long, ſet round the Axel-tree of the Drum for the Purpoſe. Theſe Pegs have great, longiſh Heads, rounded on the Outſide, for applying the Soles of the naked Feet: So that one, or more Men, may with the greateſt Eaſe put the Engine in Motion, either ſtanding or ſitting; their Hands being employed all the While, the one in holding an Umbrella, and the other a Fan. 3. By the Aſſiſtance of a Buffalo, or ſome other Animal, made faſt to a great Wheel, about four Yards in Diameter, placed horizontally. Round its Circumference are fixed a great Number of Pegs, or Teeth; which, tallying exactly with thoſe in the Axel-tree of the Drum, turn the Machine with a great deal of Eaſe.

WHEN a Canal is to be cleanſed, which often

[a] *Navarette*'s Deſcription of *China*, p. 52, *& ſeq.* *Du Halde*'s *China*, p. 272. [b] Theſe muſt be the Engines which *Navarette* calls *admirable*. He ſays, he had often obſerved them; yet could not deſcribe how they ſhould be made: That they had been carried to *Manila*, and that the *Dutch* have them at *Jacatra*. He adds, that he believes there is not a better Invention in the World for draining of Wells, Springs, Ponds. [c] This is the Chaplet Engines mentioned before, *p.* 106. e. [d] But ſo as to be on the Outſide of the Tube.

happen

happens, it is divided, at convenient Diſtances, a by Dikes; and every neighbouring Village, being allotted its Share, the Peaſants immediately appear with their Chain-Engines, whereby the Water is conveyed from one to the other: This Labour, though painful, is ſoon ended, by Means of the Multitude of Hands. In ſome Parts, as the Province of *Fo-kyen*, the Mountains, though not very high, are contiguous, and with ſcarce any Valleys between; yet they are all cultivated by the Art which the Huſbandmen b have to convey the Water from one to the other through Pipes made of Bambû [a].

To this ſurprizing Induſtry of the Huſbandmen, is owing that great Plenty of Grain and Herbs that reigns in *China* above all other Regions. Notwithſtanding which, the Land hardly ſuffices to ſupport its Inhabitants; and one may venture to ſay, that to live comfortably, they have need of a Country as large again [b].

AFTER all, the Huſbandmen are generally c poor People, and have but a ſmall Parcel of Land each. The uſual Rule is, for the Landlord to have one Half of the Crop, and pay all Taxes: The Huſbandman has the other Half for his Pains [c].

SECT. III.

The Claſs of Merchants; *with the Navigation and Trade of* China. d

Chineſe *fit for Trade: Accuſed of Over-reaching.*

THE Number of Traders and Merchants in *China* is exceeding great. Where-ever you come, there ſeem to be more Sellers than Buyers. They are all very obliging, and will not refuſe Money, provided they can be ever ſo little Gainers. They are the very Reverſe of the *Japanneſes*; for theſe are rough, diſobliging, e and poſitive: When they once ſay a Thing is worth twenty Ducats, they will not abate a Croſs, though you argue it with them a Twelvemonth [d]. *Le Comte* ſays, that there is no Nation under the Sun more fit for Commerce and Traffic, or underſtand them better: That they are extremely inſinuating in their Behaviour, and that their Eagerneſs for getting Money makes them diſcover a thouſand Ways of living, and Methods of trafficking, that would not naturally f come into their Head. They turn every Thing that offers to Advantage, and undertake the moſt difficult Voyages, for the leaſt Hopes of Gain [e].

IT could only be wiſhed, ſay ſome of the Miſſioners, that the *Chineſe* Merchants were a little more honeſt in their Dealings, eſpecially when they trade with Foreigners; for they always endeavour to ſell as dear as they can, and often make no Scruple to adulterate their Goods. Their Maxim is, that he who buys, is for getting Things as cheap as poſſibly he can; and would even give nothing at all, did the Seller conſent to it: And upon this Principle they think they have a Right, on their Side, to aſk the greateſt Price. *The Dealer does not deceive*, ſay they, *it is the Buyer who deceives himſelf. The Buyer is under no Compulſion, and the Profit which the Merchant gets is the Fruit of his Induſtry.* Yet thoſe who act according to theſe deteſtable Principles, are the firſt in praiſing Honeſty and Diſintereſtedneſs in others [f]. According to *Magalhaens*, the moſt wealthy Merchants are ſuch as trade in Silk and Timber [g]. *The Merchants.*

IN treating of the *Chineſe* Commerce, we c ſhall conſider it under four Articles. Their Trade, domeſtic and foreign: Their Navigation and Shipping: Conveniency of travelling by Land: Laſtly, their Money, Weights and Meaſures.

1. *Their Trade, domeſtic and foreign.*

Home-Trade exceeds that of all Europe: *Very briſk in the very loweſt Branches. Foreign Trade inconſiderable: That to* Japan: *Commodities brought from thence. That to* Manilla *and* Batavia: *Commodities carried thither, and brought from thence. Trade to other Countries. Goods brought home. Trade of the* Europeans *to* China: *That of Gold profitable. Other Commodities exported.*

THE Riches peculiar to each Province, and *Home Trade* the Facility of conveying Merchandize by *exceeds* Means of the Rivers and Canals, have rendered the domeſtic Trade of the Empire always very flouriſhing. As to its foreign Trade, it is ſcarcely worth mentioning; for the *Chineſe* finding among themſelves all Things neceſſary for the Support and Pleaſures of Life, ſeldom go far from home. So long as *China* was governed by Emperors of its own, the Ports, from all Antiquity, were ſhut-up to Foreigners, with whom Trade was prohibited, and the Natives not ſuffered to go abroad: But the *Tartars*, ſince they became Maſters thereof, have opened them to all Nations [h].

THE Inland Trade of *China* is ſo great, that *That of all* the Commerce of all *Europe* is not to be com- *Europe.*

[a] *Du Halde*'s *China*, p. 272, *& ſeq.* [b] The ſame, *p.* 318. [c] *Navarette*'s Deſcription of *China*, p. 53. [d] The ſame, *p.* 55. [e] *Le Comte*'s Memoirs of *China*, p. 240. [f] *Du Halde*, as before, p. 534. [g] *Magalhaens*'s Relation of *China*, p. 132. It ſhould be Salt, perhaps, inſtead of Silk. [h] *Du Halde*, as before, *p.* 333, *& ſeq.*

Inhabitants Classes.

pared therewith; the Provinces being like ſo a many Kingdoms, which communicate to each other their reſpective Productions. This tends to unite the ſeveral Inhabitants among themſelves, and makes Plenty reign in all the Cities. The Provinces of *Hû-quang*, and *Kyang-ſi*, ſupply thoſe with Rice that are not well provided: That of *Che-kyang* furniſhes the fineſt Silk; *Kyang-nan*, Varniſh, Ink, and all Sorts of curious Works; *Yun-nan*, *Shen-ſi*, and *Shan-ſi*, yield Iron, Copper, and ſeveral other Metals; Horſes, b Mules, Furs, *&c.* *Fo-kyen* produces Sugar, and the beſt Tea; *Se-chwen*, Plants, medicinal Herbs, Rhubarb, *&c.* and ſo of the reſt: For it is not poſſible to give a particular Account of the Commodities peculiar to each Province [a].

Very briſk in the

ALL theſe Goods, which are readily conveyed from Place to Place along the Rivers, are ſold in a very ſhort Time: You may ſee, for Inſtance, Dealers, who, in three or four Days after their Arrival in a City, ſell ſix thouſand Caps proper c for the Seaſon. Trade is never interrupted, except on the two firſt Days of the Firſt Moon; which they ſpend in Diverſions, and the uſual Viſits of the New Year: At all other Times every Thing is in Motion, as well in the Country as Cities. The *Mandarins* themſelves have their Share in Buſineſs, there being ſome among them who put their Money into the Hands of truſty Merchants, in order to improve it in the Way of Trade.

Very loweſt Branches.

d IN ſhort, there is not any Family to the very pooreſt of all, but what with a little good Management can find Means to ſubſiſt very eaſily by Traffic. There are many of them, whoſe whole Stock does not amount to above a *French* Crown; and yet the Father and Mother, with two or three Children, beſides being maintained out of the Profits of it, procure Silk Garments for Days of Ceremony; and, in a few Years Time, enlarge their little Commerce to ſome- e thing conſiderable. Although this may ſeem not very eaſy to comprehend, yet it is no more than what happens every Day: For Inſtance, one of theſe ſmall Merchants, who has about fifty Sous [b], will buy Sugar, Meal, and Rice, and make little Cakes, which he has baked an Hour or two before Day, *to kindle*, as they expreſs it, *the Heart of Travellers*; which done, his Shop is hardly open before all his Ware is carried-off by Country-People, who come in Crowds in a f Morning to every City, by the Workmen, the Porters, the Children of the Ward, and thoſe who are in Law. This little Trade, in a few Hours, produces a Profit of twenty Sous, the Half of which is ſufficient to maintain his ſmall Family. In a Word, the moſt frequented Fair affords but a faint Reſemblance of the incredible Crowds of People to be ſeen in the Generality of Cities, who are buſy in buying or ſelling all Sorts of Commodities.

TRADE flouriſhing at ſuch a Rate in every Province of *China*, it is not at all ſurprizing that the Inhabitants ſhould be ſo negligent of foreign Trade. Thus by Sea they never paſs the *Streights of Sonda*, their fartheſt Voyage that Way reaching only to *Batavia*: In like Manner on the Side of *Malakka*, they do not go beyond *Achen*; and the Limits of their Navigation Northwards is *Japan* [c].

THIS laſt is the Country which they moſt frequent, and commonly ſet-ſail for in *June*, or *July* at fartheſt. They firſt carry Goods to *Kamboja*, or *Siam*, and freight themſelves there with ſuch as are in Requeſt at *Japan*, making two hundred *per Cent.* by their Voyage. If they go directly thither from the Ports of *Kanton*, *A-mwi*, or *Ning-po*, then they export the following Merchandizes: 1. Drugs, ſuch as Jinſeng, Birthwort, Rhubarb, Mirabolans, and ſuch like. 2. Buffalo, and Cow-Hides, *Areka* Bark, and White Sugar; by which laſt they gain ſometimes a thouſand *per Cent.* 3. All Sorts of Silks, but chiefly Satins, Taffeties, and Damaſks of different Colours, eſpecially black; ſelling for fifteen *Taël*, what coſt about ſix. 4. Silken Strings for Inſtruments, Eagle, and Sandal Wood; for which there is a great Demand among the *Japaneſe*, who are continually cenſing their Images. 5. Laſtly, *European* Cloth and Camblets, which have a quick Sale; and yielding fifty *per Cent.* ſhews how conſiderable the Profit of the *Dutch* muſt be.

THE Commodities, which the *Chineſe* Traders bring from thence, are, 1. Fine Pearls, by which they ſometimes gain a thouſand *per Cent.* 2. Red Copper in Bars, bought from three *Taëls* to four and an half, ſelling them in *China* for ten or twelve; alſo wrought Copper, ſuch as Scales, Chafing-Diſhes, Perfuming-Pans, Baſons, *&c.* Theſe go-off at a great Price in their own Country, the Copper being fine and agreeable to the Sight. 3. Sabre-Blades; they coſt but a Piaſter in *Japan*, and ſell ſometimes for ten in *China*. 4. Smooth-flowered Paper, of which the *Chineſe* make Fans. 5. Porcelain, which is very beautiful, but not ſo uſeful, becauſe it will not ſtand boiling Water: It bears much the ſame Price in *Japan*, as China-Ware at *Kanton*. 6. Japanned Works, which are not to be parallelled any-

[a] *Le Comte*'s Memoirs of *China*, p. 295. *Du Halde*'s *China*, p. 334. [b] About two Shillings *Engliſh*.
[c] *Navarette*, p. 56, ſays, the People, being covetous, of late purchaſed Leave to go to thoſe Countries. This gave many an Opportunity of ſettling there; whence all were forbidden for a Time to go beyond-Sea.

where elſe: But the *Chineſe* ſeldom meddle with them, for fear they ſhould not get them off, being extremely dear. A Cabinet not above two Feet high, and but a little more in Breadth, has been ſold in *China* for an hundred Piaſters. Thoſe who venture moſt to deal in them, are the Merchants of *A-mwi* and *Ning-po*; becauſe they carry them to *Manilla* and *Batavia*, making the *Europeans*, who are fond of ſuch Works, pay a good Price. 7. Gold, which is very fine, and a certain Metal called *Tombak*, by which they gain fifty or ſixty *per Cent.* at *Batavia*.

The Merchants.

Manilla & Batavia.

THE *Chineſe* alſo trade to *Manilla*: But ſcarce any go thither beſides the Merchants of *A-mwi*, who carry a great deal of Silk, ſtriped and flowered Satin of different Colours, Embroidery, Carpets, Cuſhions, Night-Gowns, Silk-Stockings, Tea, China-Ware, japanned Works, Drugs, *&c.* By which they are generally Gainers fifty *per Cent.* and bring back nothing but Piaſters.

THE Trade, which they carry-on the moſt regularly, as finding it moſt eaſy and gainful, is that to *Batavia*; whither Veſſels ſail every Year from *Kanton*, *A-mwi*, and *Ning-po*, towards the eleventh Moon, that is, in *December*, with the following Merchandizes.

Merchandizes and Utenſils.

1. A KIND of Green-Tea, which is very fine, and of a good Smell; but *Song-lo*, and Bohea-Tea, are not ſo much ſought after by the *Dutch*. 2. China-Ware, which is ſold as cheap there, as at *Kanton*. 3. Leaf-Gold, and Gold-Thread; which is nothing but gilt Paper. Some of this is ſold by Hand in ſmall Skains, and is dear, becauſe covered with the fineſt Gold: But that which the *Chineſe* bring to *Batavia*, is ſold only by Weight: It is made-up in Parcels, with large Hanks of red Silk, put-in on purpoſe to ſet-off the Colour of the Gold, and make the Parcels weigh heavier. The *Dutch* make no Uſe of it themſelves; but ſell it in the Country of the *Malayans*, to great Profit. 4. *Tûtenak* (or *Tuttenague*) a Metal, which partakes of the Nature both of Tin and Iron; yielding an hundred, and ſometimes an hundred and fifty *per Cent.* 5. Drugs, eſpecially Rhubarb. 6. Utenſils of yellow Copper; ſuch as Baſons, Chafing-Diſhes, great Kettles, *&c.*

Brought hither.

THEY import from *Batavia*, 1. Silver in Piaſters. 2. Pepper, Cloves, Nutmegs, and other Spices. 3. Tortoiſe-Shells, of which the *Chineſe* make very neat Toys; ſuch as Combs, Boxes, Cups, Knife-Handles, Pipes, and Snuff-Boxes, after the *European* Faſhion; which they ſell for ten Sous. 4. Sandal-Wood; alſo red and black Wood, proper for Cabinet-Work; with another red Wood, commonly called *Braſil-Wood*; which ſerves for dying. 5. Agate-Stones, ready-cut; whereof the *Chineſe* make Ornaments for their Girdles, Buttons for their Caps, and a Kind of Necklace. 6. Yellow Amber, in Lumps; which they buy very cheap. 7. Laſtly, *European* Cloth; which they have alſo at a moderate Price, and ſell again at *Japan*.

Trade to other Countries.

THIS is the greateſt Trade the *Chineſe* drive abroad. They likewiſe go, but very ſeldom, to *Achen*, *Malakka*, *Ihor*, *Patana*, *Ligor*, which belongs to the Kingdom of *Siam*, to *Cochinchina*, &c. The Trade they carry-on at *Ihor*, is the moſt eaſy and profitable. They would not get as much as would pay the Expence of their Voyage by going to *Achen*, if they failed of being there in *November* and *December*; at which Time the Ships of *Surat* and *Bengal*, are upon the Coaſt. They ſeldom import any Thing from theſe Countries, but Pepper, Cinnamon, and other Spices; Birds-Neſts, which are counted Delicacies at the *Chineſe* Tables; Rice, Camphire, Ratan-Canes (which they twiſt together like ſmall Cords,) Torches made of the Leaves of certain Trees, that burn like Pitch, and ſerve for Flambeaux; alſo Gold, Tin, *&c.*

Goods brought home.

Trade of the Europeans.

AS for the Trade carried-on in *China* by the *Europeans*; they have the Liberty of ſcarce any Port, except that of *Kanton*, at certain Times of the Year. Nor do they go-up as far as the City itſelf, but caſt Anchor at *Whang-pû*, a Place about four Leagues ſhort of it, in the River; which there is crouded with a Multitude of Veſſels. Formerly Cloths, Cryſtals, Swords, Clocks, Striking-Watches, Repeating-Clocks, Teleſcopes, Looking-Glaſſes, *&c.* were carried thither. But ſince the *Engliſh* come regularly every Year, all theſe are as cheap as in *Europe*; and Coral itſelf can hardly be ſold any longer without Loſs: So that at preſent there is no trading to Advantage with any-thing but Silver in *China*; where conſiderable Profit may be made, by purchaſing Gold [a], which is a Commodity there.

That of Gold profitable.

THE Gold to be met with in *Kanton*, comes partly out of the Provinces of *China*, and partly from foreign Countries; as *Achen*, *Cochinchina*, *Japan*, &c. and is all melted over-again in that City, except what comes from *Cochinchina*; which is commonly the moſt fine and pure that can be, when it is bought of the King of that Country: For that ſold clandeſtinely by the People is not ſo pure, and therefore they refine it at *Kanton*. The *Chineſe* divide their Gold by Alloys, as they do in *Europe*: That which is commonly ſold, is from ninety Carats to an hundred, and is more or leſs dear, according to the Time when it was bought. It is much cheaper in *March*, *April*, and *May*, than it is from *July*

[a] They get about one Third by exchanging Silver for it.

to

Inhabitants Classes. to *January*; becauſe this laſt is the Seaſon when there is the greateſt Number of Veſſels in the Port, or Road of *Kanton*.

Other Commodities exported. THERE are alſo excellent Drugs to be bought in *China*, ſeveral Sorts of Tea, Gold-Thread, Muſk, precious Stones, Pearls, Quickſilver, &c. But the Trade carried-on there by the *Europeans*, conſiſts chiefly in japanned Works, China-Ware, and Silks; of which we ſhall ſpeak particularly in the next Section [a].

2. *Their* Navigation, *and* Shipping.

Their Ships: Bulk and Structure: Their Maſting, Sails, Caulking, Anchors. Chineſe *Sailing, Maſts and Rigging. Sails of Mats, fold like a Screen. Rigging cumberſome. Stern and Rudder, very inconvenient. The Card, or Compaſs, how uſed in ſailing. The Hold, Caulking, and Anchors: Ships Crew, and Officers. Sailing on Rivers. Violent Torrent. Shipwrecks frequent. Light Barks, how rowed. Imperial Barks, Number, for carrying the Tributes, and the* Quân: *Breadth from one End to the other: The latter deſcribed. The Hold: Pole to puſh it. Proviſion Barks, Private Barks, Kind of Galleys. Uſual Way of rowing. Floating-Houſes. Rafts, or Floats.*

Their Ships: WE have mentioned, in the former Article, what is the greateſt Extent of the *Chineſe* Navigation at preſent: But there are ſome who pretend, that a long Time before the Birth of Chriſt, they had ſailed in all the Seas of *India*, by Help of the Compaſs, and diſcovered the *Cape of Good Hope*: However that be, ſays *Le Comte*, it is moſt certain, that from all Antiquity they had ſtout Ships; and that although they have not perfected Navigation any more than the other Sciences, yet did they underſtand much more of it than the *Greeks* and *Romans*; and at this Day they ſail as ſecurely as the *Portugueze* [b].

Bulk and Structure: THEIR Ships, which they call *Chwen*, in common with Boats and Barks, are named by the *Portugueze*, *Soma*, or *Sommes* [c]; but for what Reaſon, is not known. The largeſt of them carry no more than from two hundred and fifty to three hundred Tons. They are, properly, no other than flat Barks, with two Maſts, and not above eighty or ninety Feet in Length. The Forepart is not made with a Beak, but riſes-up ſomewhat like two Wings, or Horns, which make an odd Figure: The Stern is open in the Middle, to receive the Rudder, and ſhelter it from the Beating of the Waves: This Rudder is about five or ſix Feet broad, and hung with Ropes.

Their Rudder. THESE Veſſels have neither a Mizzen-Maſt, Boltſprit, nor Scuttles: All the Maſting conſiſts of a Main-Maſt, and Fore-Maſt, with ſometimes a very ſmall Top-Maſt of no great Uſe. The Main-Maſt is placed near the Fore-Maſt [d], which ſtands very forward upon the Prow: The Proportion of one to the other, is commonly as two to three; and the Length of the Main-Maſt is uſually two Thirds of the Length of the Veſſel.

Their Maſting.

Sails. THEIR Sails are made of Mats of Bambû-Cane, divided into Leaves like a Pocket-Book, and joined together by Bambû-Poles (and folding like a Screen.) At the Top there is a Piece of Wood, ſerving for a Sail-Yard; and at the Bottom, a Sort of Plank above a Foot broad, and five or ſix Inches thick; which keeps the Sail ſteady when they have a Mind to lower it, or hoiſt it up. Theſe Sorts of Ships are no good Sailers; for though they hold much more Wind than ours, becauſe of the Stiffneſs of their Sails, which do not yield to the Gale; yet as they are not built in ſo commodious a Manner, they loſe the Advantage they have over them in this Point.

Caulking. Anchors. THEIR Veſſels are not caulked with Pitch and Tar, as thoſe of *Europe*; but with a particular Sort of Gum; which is ſo good, that a Well or two, made in the Bottom of the Hold of the Ship, is ſufficient to keep it dry: For hitherto they have had no Knowledge of a Pump.

THEIR Anchors are not made of Iron, like ours; but of a Wood, which being very hard and heavy, is called *Tye-mû*, or *Iron Wood*. They pretend, that theſe are much better than the Iron ones, becauſe they never bend: However, they commonly tip the Flukes with Iron.

Chineſe ſailing. THE *Chineſe* have on board neither Pilot, nor Maſter; the Veſſel being wholly under the Management of thoſe who ſteer her. However, they are tolerable Seamen, and very good Coaſters; but indifferent Pilots in the main Sea. They lay the Head of the Ship upon the Rhumb, on which they propoſe to ſail; and hold-on their Courſe without regarding the Deviation of the Veſſel. This Negligence proceeds, no Doubt, from their making no long Voyages: Yet when they have a Mind, they ſail tolerably well [e].

THE Ship, which *Le Comte* and the other Jeſuits ſailed-in from *Siam* to *China* in 1687, carried near one hundred and twenty Tons, computed at two thouſand Pounds each. The Shape was tolerably handſome, except the Forepart, which was flat, and without a Beak. Its Maſt-

[a] *Du Halde*'s *China*, p. 334, & *ſeqq.* [b] *Le Comte*'s Memoirs of *China*, p. 231. [c] They are commonly called *Junks* alſo. *Le Comte* ſays, they are of all Rates, like the *European*; but the Model not ſo fine. [d] Within a ſmall Matter where our Fore-Maſt ſtands. [e] *Le Comte*, as before, *p.* 231, & *ſeq.* *Du Halde*, as before, *p.* 327, & *ſeq.*

ing

ing was different from that of our Veſſels, with reſpect to the Diſpoſition, Number, and Strength of the Maſts. Its Main-Maſt was placed within a ſmall Matter where our Fore-Maſt ſtands. For Stays and Shrouds it had a ſimple Rigging, which reached from Starboard to Larboard, that it might be always faſtened out of the Wind. It had alſo a Boltſprit, and Mizzen-Maſt, which was placed to the Larboard; but they were very ſmall, and ſcarce deſerved the Name: To make amends, the Main-Maſt was extremely large in Proportion to the Veſſel; and to ſtrengthen it ſtill more, it was ſupported by two Fiſhes, or Side-Beams laſhed to it, reaching from the Keelſon up to the ſecond Deck. The Place of Top-Maſt was ſupplied by two flat Pieces of Wood, ſeven or eight Feet long, ſtrongly faſtened by Pegs on the Top of the Main-Maſt, and joined together at the upper End.

Navigation, Shipping.

b

It had two Sails, the Main and Fore-Sail, both made of Mats: The firſt was forty-five Feet in Height, and twenty-eight or thirty in Breadth: The ſecond proportionable to the Maſt that carried it. They were furniſhed on both Sides with ſeveral Rows of Bambû, laid along the Breadth of the Sail, near a Foot aſunder on the Outſide, and ſomewhat farther aſunder on the Side next to the Maſt, on which they were ſtrung by Means of ſeveral Chaplets, or Rings, that took-up about a fourth Part of the Breadth of the Sail, reckoning from the Side where there were no Braces: So that the Maſts divided the Sails into two very unequal Parts, leaving more than three Quarters of them on the Side of the Braces; whereby each Sail was diſpoſed to turn upon its Maſt as upon a Hinge, and run without Difficulty towards the Stern, at leaſt twenty-ſix Points, when it was neceſſary to tack about, ſometimes bearing upon the Maſt, and ſometimes only upon the Chaplets.

c

d

The Yard ſerved for Rat-Lines above; and a great round Pole, as thick as the Yards, performed the ſame Office below: It likewiſe ſerved to keep the Sail ſtraight; which, to prevent its tearing, was ſupported in two Places with Planks, ſuſpended by two Ropes, hanging-down from the Top of the Maſt for this Purpoſe. Each of the Sails had but one Brace, one Bow-Line, and what the *Portugueze* call a *Spider*; which is a long Parcel of ſmall Tacklings on the Edge of the Sail from Top to Bottom, about two Feet aſunder, whoſe Ends are faſtened to the Brace, where they make a ſtrong Knot. This Sort of Sail folds and unfolds like a Screen. To hoiſt the Main-Sail, they made uſe of two Windlaſſes, and three Halliards, or Ropes, which paſs through as many Pulleys fixed at the Head of the Main-Maſt. In furling the Sail, after looſing the Ropes, they folded the Plates one after another, hauling them down with Hooks.

e

f

Rigging cumberſome.

The Rigging being ill-contrived, the Ordering it takes-up a great deal of Time; wherefore the *Chineſe*, to ſave Trouble, let the Sail flap to-and-fro during a Calm. The enormous Weight of this Sail, joined to that of the Wind, which acts upon the Maſt as upon a Lever, would drive the Prow under Water, if they had not prevented this Inconvenience by loading Veſſels much more behind than before. Hence it happened that, when at Anchor, the Prow was all above Water, while the Stern lay very deep under it. Indeed there is one Advantage in the Largeneſs of their Sail, and its Situation upon the Forecaſtle, that they proceed very ſwiftly, when ſteering right before the Wind; nay, they even affirm, that they can leave our beſt Sailers behind [a]. But with a quarterly, or Side-Wind, they cannot hold, and are driven out of their Courſe: Not to mention the Danger they are in, of being twined about, when they are ſurprized with a ſudden Flurry of Wind. In fine Weather they carry, beſides a Sprit-Sail, and a Top-Sail, a Driver (which was placed on the Side of the Sail that had no Braces) Bonnet-Sails, or Drabblers, and a ſquare Sail on the Mizzen-Maſt; all of them made of Calico.

Stern and Rudder

The Chamber, incloſing the Rudder, was formed by the two Sides of the Poop; which, leaving a large Opening outwards, approached nearer within, towards an acute Angle, whoſe Point was cut-off, to give the Rudder Room to play. This Rudder was hung by two Cables, whoſe two Ends were wound about a Capſtan placed on the higheſt Part of the Stern, in order to raiſe or lower it: Then two other Cables [b] paſſing under the Veſſel, were carried up to the fore Part of the Prow, where they were kept tight alſo by Help of a Capſtan; and when ſlackened, ſerved in Place of the Hinges, by which ours are faſtened to the Stern-Poſt. To augment the Force of the Steerſman, the Rudder had a Whipſtaff, ſeven or eight Feet long; but without either a Handle or Pulley: There were alſo faſtened four Tacklings, two to each Side of the Veſſel; and one of each Couple was turned ſeveral Times over the End of the Whipſtaff, to enable the Steerſman to keep the Rudder in its proper Poſition.

Very inconvenient.

A Rudder made after this Manner can ſcarcely be felt by a large Veſſel: Becauſe the Ropes eaſily ſtretch, and their continual Trembling cauſes it to wabble; hence alſo there is all

[a] *Recueren* ſays, the Junks run almoſt as ſwift as the Wind; becauſe their Sails are flat and cloſe: So that the *Dutch* Ships cannot follow them. Alſo that they tack-about upon any Courſe with a deal of Eaſe. See *Dutch Eaſt-India* Voyages in *French*, vol. 5, p. 141.

[b] Theſe two Cables, it is preſumed, were faſtened to the lower End of the Rudder.

the

Inhabitants Classes. the Difficulty in the World to keep the Veſſel ſteady on the ſame Rhumb. They have begun to make *Somas*, which the *Portugueze* call *Meſtiſas*, becauſe they fix Rudders to them after the *European* Manner, without varying the Form in other Reſpects. The King of *Siam* had ſome built, carrying ſeven or eight hundred Tun each, which were much the largeſt that ever were ſeen of the Sort.

The Card, or Compaſs, THE Pilot made no Uſe of a Mariner's Compaſs, but ſteered his Courſe by a Card of a very ſimple Make. The Rim of the Box was divided into twenty-four equal Parts, which marked the Points or Winds, and placed upon a Bed of Sand; not ſo much to ſecure the Needle [a] againſt the Agitation of the Veſſel, as to hold the Paſtils, wherewith they inceſſantly perfumed it. They likewiſe offered it Victuals by Way of Sacrifice.

How uſed in ſailing. IF the *Chineſes*, as it is affirmed, be the firſt Inventors of the Compaſs, they have made little Advantage of it. They directed the Head of the Ship to the Rhumb they deſigned to ſteer upon, by the Help of a ſilken Thread, which divided the Surface of the Card into two equal Parts, from North to South. This they performed in two different Manners: For Inſtance, to ſail North-Eaſt, they put this Rhumb parallel to the Keel of the Ship, and then turned the Veſſel about, till the Needle became parallel to the String; or elſe, which comes to the ſame Thing, putting the Thread parallel to the Keel, they made the Needle point to the North-Weſt. The Needle of the largeſt Compaſs was not above three Inches long; at one End there was a Kind of Flower-de-luce, and a Trident at the other. They were all made at *Nangaſaki*, in *Japan*.

The Hold, THE Bottom of the Hold was divided into five or ſix large Chambers, ſeparated by ſtrong wooden Partitions. Inſtead of a Pump they had only a Well at the Foot of the Main-Maſt; from whence they drew the Water with Buckets. Though the Sea ran very high, and the Veſſel was deeply laden, yet, through the Strength of its Planks, and Goodneſs of its Caulking, it ſcarce let-in any Water.

Caulking, and Anchors. THIS Caulk is a Kind of Compoſition of Lime, Oil, or, rather, Roſin, which diſtils from the Tree called *Tong-ſhu* [b], and Okam of Bambû. When the Stuff is dry, one would take it for Lime, which is the chief Ingredient, and nothing elſe. This Sort of Caulking, beſides being more cleanly, is free from that loathſome Smell of Tar, which reigns on board our Veſſels: It likewiſe ſecures their Ships againſt Accidents of Fire, which ours are expoſed to by the Pitch and Tar. *Navigation of Ships.*

THE Anchors were of Wood, only the Flukes of the Sheet-Anchor were covered with Plates of Iron. All the Tackling, as well as the Cables, were made of Ratan-Cane, or Huſks of the Coco, called, by the *Portugueze*, *Cairo*.

Ships Crew and Officers. THE Ship's Crew conſiſted of forty-ſeven Perſons, including the Officers. The Pilot had nothing to do but to ſet the Compaſs, and appoint the Courſe. The Steerſman directed the working of the Ship; and the Captain provided Neceſſaries for the Men, without giving himſelf any farther Trouble: Yet every Thing was done with ſurprizing Readineſs. This Harmony proceeds from the Intereſt that the Crew has to preſerve the Ship; every one having a Share in the Loading. The Officers and Sailors, inſtead of receiving any Pay, have the Liberty of putting a certain Quantity of Merchandizes on board the Veſſel, where each has his particular Apartment; the Space between the Decks being divided into different Cabins. In ſhort, the *Chineſe* are diligent, attentive, and laborious, wanting nothing but a little Experience to make them very good Seamen [c].

Sailing on Rivers. ALTHOUGH the *Europeans* far ſurpaſs the *Chineſe* at Sea in the Art of Navigation; it muſt be confeſſed, that, upon Rivers and Canals, they have a particular Skill that we are not Maſters of; they there manage, with a few Mariners, huge Barks, as big as our Ships.

THE Knack the *Chineſe* have to ſail upon Torrents, is ſomewhat wonderful and incredible: They make a Voyage without any Dread, which other People dare not ſo much as look upon. Beſides the ſteep Water-falls to be met with in the Canals, they aſcend by mere Strength of Arm, to paſs from one Canal to another. There are certain Rivers that flow, or, rather, run headlong quite acroſs abundance of Rocks, for the Space of three or fourſcore Leagues, forming a moſt rapid Current, which the *Chineſe* call *Chan*.

Violent Current. THESE occur in ſeveral Places of the Empire; the Author ſaw many of them in his Journey from *Nan-chang*, the capital City of *Kyang-ſi*, to *Kanton*. In one of them they were hurried along with ſuch Velocity, that all the Endeavours of the Mariners could not withſtand it: Their Bark, abandoned to the Torrent, was turned round like a Whirlegig for a long Time, amongſt the Windings which the Courſe of the Water formed; and, at laſt, daſhed upon a Rock [d], even with the Water, with ſuch Violence, that the

[a] *Le Comte*, p. 229, ſays, the *Chineſe* had no Notion of the Variation and Declination of the Needle, till convinced by Experiments, the Miſſioners made before them. [b] It diſtils an Oil not unlike the Varniſh. See the *Natural Hiſtory*. [c] *Du Halde*'s *China*, p. 328, & *ſeqq*. [d] This is an Argument indeed, why, as he ſays, Travellers ſhould not expoſe themſelves to ſuch Dangers; but not of the Skill of their Boatmen in paſſing theſe Currents.

Rudder,

Rudder, a thick Beam, broke like a Piece of Glaſs, and the whole Body of it was carried upon the Rock, where it remained immoveable: If, inſtead of touching at the Stern, it had hit Side-ways, they had been infallibly loſt.

IN the Province of *Fo-kyen*, whether one comes from *Kanton* or *Hang chew*, one is, for eight or ten Days, in perpetual Danger of periſhing. The Cataracts are continual, and always broken by a thouſand Points of Rocks, that ſcarce leave Breadth enough for the Bark to paſs. There are nothing but Turnings and Windings, while the contrary Currents, that daſh one againſt another, hurry the Boat along like an Arrow out of a Bow. You are always within two Feet of Shelves; ſo that in avoiding one, you muſt fall foul upon another, unleſs ſecured by the ſurprizing Skill of the Pilot. There are no People in the World capable of undertaking ſuch-like Voyages beſides the *Chineſe*: Yet, for all their Addreſs, there paſſes not a Day that is not memorable for Ship-wrecks; and, indeed, it is a Wonder, that all Barks do not periſh. Sometimes the Veſſel is in Pieces, and the Crew buried, before one has Time to know where he is. Sometimes, in deſcending the Falls in Rivers, the Boats, by the ſudden Plunge, ſink at the Prow, without being able to riſe again. In a Word, theſe Voyages are ſo dangerous, that *Le Comte* ſays, he never ran through ſo many Hazards in ſailing, for ten Years, more than twelve thouſand Leagues, upon the moſt tempeſtuous Seas in the World, as he had done in ten Days upon theſe Torrents.

THE Barks, they make uſe of, being built of a very thin light Timber, are more eaſily managed. They divide them into five or ſix Apartments, ſeparated by ſtrong Partitions; ſo that when they ſtrike upon a Rock, only one Diviſion is filled with Water, whilſt the other Parts remaining dry, afford Time to ſtop the Leak. To check the Rapidity of the Motion, in Places where the Water is not too deep, ſix Seamen, three on each Side, hold a long Spret, or Pole, thruſt to the Bottom, giving Way by little and little, by Help of a ſmall Rope: One End is made faſt to the Boat, and the other twined round the Pole, which ſlips but leiſurely, and, by a continual Rubbing, ſlackens the Motion of the Bark; ſo that when the Torrent (however rapid) is even and uniform, you float with the ſame Slowneſs as if you were on the calmeſt Canal.

WHEN the Stream winds and turns, they have Recourſe to a double Rudder, ſhaped like an Oar, forty or fifty Feet long; one at the Prow, the other at the Poop. All depends on plying of theſe two great Oars: The reciprocal Jerks, and cunning Shakes, they give the Bark, to drive it on, or turn it into the Current, to ſhun ſeveral Rocks at once, or cut a Torrent, and to purſue the Fall of Water, without running headlong with it, whirl it about a thouſand different Ways. It is not a Navigation, it is a Manage: For no managed Horſe labours more under the Hands of a Riding-Maſter than the Boat does under thoſe of the *Chineſe* Mariners; ſo that when caſt-away, it is not ſo much for want of Skill as Strength: For did each of them, inſtead of eight Men carry fifteen, all the Violence of the Torrents would not be able to hurry them away. *Navigation, Shipping.*

THERE is ſuch a prodigious Number of huge Barks on all the Rivers and Canals, eſpecially in the Southern Provinces, that they cannot be reckoned [a]. They ſometimes lie ſo cloſe together, for more than three Quarters of a Mile, that it is impoſſible to ſqueeze in one more amongſt them.

THAT which moſt charms the Eye, is the vaſt Number of large and beautiful imperial Barks divided into Squadrons, commanded each by its *Mandarin*, advancing in great Order. It is commonly reported, and agreeable to the printed Accounts, that the Number of thoſe employed in carrying Tribute, and all Sorts of Proviſions, from the Provinces to the Court, amounts to ten thouſand [b]. However, the Surveyors of the Tranſports of Merchandizes, who count them in their Paſſage, have often affirmed, that they never ſaw above four or five thouſand of them arrive: But even that Number is ſurprizing, when we reflect upon the Deſtination, as well as Largeneſs, of thoſe Barks; many whereof carry eighty Ton [c]. *Imperial Barks,*

THE imperial Barks are of three Sorts: 1. The *Lyang-chwen*, or *Proviſion Barks*. 2. The *Long-i-chwen*, or *Dragon-Habit Barks*. 3. The *Tſo-chwen*, or *Barks for carrying the* Mandarins *to and from Court*. Nothing can be more neat than theſe Veſſels; for they are painted, gilt, embelliſhed with Dragons, and japanned both within and without. Thoſe of the middle Size, which are moſt in Uſe, are above ſixteen Feet broad, fourſcore long, and nine in Depth from the Deck. As to the Form, they are ſquare and flat, excepting that the fore Part is ſomewhat rounded [d].

THE *Lyang-chwen*, or *Barks of the Proviſions*, are of equal Breadth from Head to Stern. Their Uſe is, to carry Proviſions from the Provinces to the Court. *Magalhaens* ſays, their *For carrying the Tributes,*

[a] *Le Comte*'s Memoirs of *China*, p. 233, 235, & *ſeqq.* [b] *Le Comte* ſays, they keep ready-equipped of thoſe deſigned for the Service of the Emperor only, nine thouſand nine hundred and ninety-nine, as the *Chineſe*, for better Sound-Sake, expreſs ten thouſand. [c] *Du Halde*'s *China*, p. 18, & 327. [d] The ſame, p. 286.

Inhabitants Classes. Number is ten thouſand. Theſe Veſſels have a their Fore-Caſtle and Quarter- Decks, with a Cabin, or Hall, in the Middle, like thoſe of the *Mandarins*, but are not quite ſo large.

THE *Long-i-chwen*, or *Barks with Dragon-Habits*, that is the Emperor's, becauſe his Arms are Dragons, are appointed to carry Stuffs, Brocades, Pieces of Silk, *&c.* from the Provinces to Court [a]. Each Bark makes but one Voyage in a Year; and carries no more than one fourth Part of its full Burden. The Maſter of it is b paid out of the Royal Treaſury, according to the Diſtance of Places: For Inſtance, if he comes from the Province of *Kyang-ſi*, which is above three hundred Leagues from *Pe-king*, they give him an hundred *Lyangs*, or *Taëls*. This Sum, it is true, ſeems too little for defraying his Expence; but then he gets what does that and a good deal more, by the Liberty of taking-in Paſſengers, as well as Goods, which paſs the Cuſtom-houſes Toll-free [b]. According to *Magalhaens*, the Number of theſe Barks is three hundred and ſixty-five [c].

And the Quân. THE *Tſo-chwen* are appointed to carry the *Mandarins* to their reſpective Governments in the Provinces, and Perſons of Diſtinction, who are ſent from, or called to, Court. Theſe are higher, but narrower, than others; being equal in Bigneſs to one of our third-Rate Men of War [d]. They have two Decks [e]; upon the firſt of which, there is a compleat Apartment, reach- d ing from one End to the other, about ſeven or eight Feet high: There a *Mandarin* may ſleep, eat, ſtudy, write, receive Viſits, *&c.* having every Thing as convenient and neat about him as in his own Palace: It is impoſſible to travel more agreeably than in theſe Barks: For which Reaſon they chuſe to travel by Water [f].

The latter deſcribed. *DU HALDE*, in another Place, is more particular. Beſides what the Maſter has for himſelf and his Family, (*viz.* his own Cabin, a Kitchen, e and two large Places, one before, the other behind) there is a Hall about ſix or ſeven Feet high [g], and eleven broad; next, an Anti-chamber, and two or three other Rooms; likewiſe, a By-place without Ornaments, all upon the ſame Deck [h]: Theſe make up the *Mandarins* Apartment. It is all japanned with the beautiful red and white Varniſh; and the Sides, as well as Cieling, adorned with Plenty of carved Work, Painting, and Gildings. The Tables and Chairs f are japanned red or black. The Hall has Windows on each Side; which may be taken away upon Occaſion. And, inſtead of Glaſs, they make uſe of very thin Oyſter-ſhells, or fine Stuffs, done over with a ſhining Wax, and embelliſhed with Flowers, Trees, and Variety of Figures. The Deck is ſurrounded with Galleries, for the Sailors to go backward and forward without incommoding the Paſſangers.

OVER this Apartment is a Sort of Platform, or Terraſs, open on all Sides, ſet apart for the Muſic; which conſiſts of four or five Hands. Underneath is the Hold, divided into ſeveral little Chambers, for ſtowing the Baggage. The Sails are like thoſe of their other Shipping. They are very convenient, becauſe better than any other for ſailing near the Wind; beſides, if the Braces happen to break, no Damage ariſes from thence to the Bark.

TO puſh forward theſe great Barks, they make c uſe of a long thick Pole, like a Crutch at one End, for applying their Shoulder; or elſe, they employ Oars of ſeveral Shapes: But the common Sort is a long Pole made like a Shovel at one End, with a Hole in the Middle, to receive the Pegs fixed on the Side of the Bark. There are others, whoſe Extremities, being continually moved to the Right and Left in the Water, like a Fiſh's Tail, cut it obliquely. This Method is the more convenient, as the Rowers take-up little or no Room in the Bark; for they are ranged on the Sides upon Planks. Their Oars, which do the Office of a Rudder, ſeldom break; and though never taken out of the Water, continually force the Bark forward. Theſe Barks are hauled along with Ropes when the Wind is contrary, or when they are obliged to go againſt the Stream. Theſe Ropes, in ſome Places, are made of Hemp, and in others of very long and fine Splinters of Cane twiſted, which are exceeding ſtrong, and never rot with the Water.

AMONG the Barks that follow the great *Mandarins* [i], there is always one, at leaſt, called the *Ho-ſhe-chwen*, or *Bark of the Proviſions*; on board which is the Kitchen, the Eatables, and the Cooks. Another is full of Soldiers for the Convoy. A third, much more ſmall and light; whoſe Buſineſs it is, to haſten before to give Notice, and cauſe every Thing to be prepared, that there be no Occaſion to wait [k].

f THERE are, beſides the imperial Barks, an in-

[a] *Magalhaens*'s Relation of *China*, p. 129, *&* *ſeq.* *Du Halde*'s *China*, p. 327 [b] *Du Halde*, as before. [c] *Magalhaens*, as before, *p.* 130. [d] The ſame Author ſays, they are made like Caravels, but higher: *Le Comte*, that they are of an equal Breadth from one End to the other. Vol. N. II. 295 p. 116.

finite Number of others, called *Lang-chwen*, al- a moſt as broad as long; but very light and ſmall in Compariſon of the former. Theſe belong to private Perſons; ſome very commodious, which are hired to the *Literati*, or rich Folks. They have belonging to them, a fair Cabin, a Bed, a Table, and Chairs; where you may ſleep, eat, ſtudy, write, and receive Viſits, with the ſame Convenience as if you were at home in your Houſe. The Prow belongs to the Mariners and Watermen; and the Maſter of the Boat lives in b the Poop, with his Wife and Children; where alſo the Victuals are dreſſed for him who hires the Bark [a]. There are others much larger, which are made uſe of by the Merchants for carrying on Trade.

YOU ſee likewiſe ſome that may be called *Galleys*; which are convenient for ſailing upon the Rivers, along the Sea-Coaſt, and among the Iſlands. Theſe Barks are as long as Merchant-men of three hundred and fifty Tons; but ſhal- c low, and draw no more than two Feet of Water. Their Oars, which are long, do not extend acroſs the Sides of the Bark, like thoſe in *Europe*; but being placed on the Outſide, in a Poſition almoſt parallel to the Sides, they are eaſily moved by a few Hands, and the Veſſel made to go very ſwiftly [b].

AS for ordinary Barks, they faſten a Kind of long Oar to the Poop, nearer one Side of the Bark than to the other; and ſometimes another d like it to the Prow, that they make uſe of as the Fiſh does of its Tail, thruſting it out, and pulling it to them again, without ever lifting it above Water. This Work produces a continual Rolling in the Bark; but hath this Advantage, that the Motion is never interrupted, as it is when the Oars are lifted-up, according to the *European* Method [c].

LASTLY, there is a prodigious Multitude of Barks where whole Families dwell, and live e more conveniently than in Houſes on Land. In the ſmalleſt Sort, which have no Cabins, they make a Kind of Tilt or Arch of thin Mats, about five Feet ſquare, to defend them from the Rain and Heat of the Sun [d].

THE Merchants trading in Timber and Salt [e], who, by the Way, are the richeſt in all *China*, inſtead of Barks to carry their Goods, uſe a Sort of Rafts, or Floats. *Magalhaens* ſaw one made f of the Timber which was cut down in the Mountains of *Se-chwen*, in the Borders of *China*. The Wood being brought to the Side of the River *Kyang*, they ſaw it into Boards, Planks, and Beams; then, boring Holes in both Ends of the Pieces, they, with twiſted Oſiers, faſten them together, forming their Float five Feet high, ten broad, and of any Length; there being ſome which reach for half a League. The ſeveral Parts of the Raft thus joined, move eaſily any Way, like the Links of a Chain. Four or five Men on the Fore-part guide it with Poles and Oars; while others, placed all along the Side, at equal Diſtances, help to conduct it. They build thereon, from Space to Space, Booths covered with Boards, or Mats, where they ſtow their Moveables, dreſs their Victuals, and take their Reſt. In the different Cities which they touch at, they ſell their Houſes along with their Timber; and thus they float above ſix hundred Leagues, when they carry their Wood to *Peking* [f]. *Travelling Carriages.*

3. *Conveniencies for* Travelling, *and carrying* Goods *by Land.*

Good Roads. Bad Inns. Robberies rare. Roads extremely duſty. Travelling in Chairs: And in the Night. Goods carried by Porters: Manner of hiring them: How they carry Goods. Carts with one Wheel. Mules, Rate of. Cuſtom-houſes not ſevere: How governed.

ROADS, whereof ſo much Care is taken, as *Good Roads.* hath been obſerved with reſpect to thoſe of *China*, muſt needs be very proper either for Travelling or Carriage. The great Number of Villages that occur full of Temples is no ſmall Conveniency to Paſſengers. Inns too are nume- *Bad Inns.* rous enough; but nothing can be more wretched, or ill contrived, excepting thoſe on the great Roads, which are very large and handſome; yet Travellers muſt carry their Beds along with them, or elſe be forced to lie on a plain Mat. The *Chineſe*, eſpecially the meaner Sort, never uſe Blankets; being content to wrap themſelves, ſometimes quite naked, in a Coverlid lined with Linen; ſo that their Beds are eaſily carried. The Entertainment is ſuitable to the Lodging; for you will have very good Luck, if you meet with either Fiſh or Meat. In ſeveral Places, however, wild Fowl, eſpecially Pheaſants, are very cheap; for, ſometimes, four may be bought for ſo many Pence. Theſe Inns conſiſt, for the general, of four Mud Walls, without any Plaiſ- f tering. All the Rafters in the Roof appear; and it is well, if you do not ſee through it in many Places; beſides, the Rooms, which are ſeldom paved, are full of Holes. In ſome Provinces, theſe Inns are built only of Earth and Reeds;

[a] *Magalhaens*'s Relation of *China*, p. 130. *Du Halde*'s *China*, p. 327. [b] *Du Halde*, as before.
[c] *Le Comte*'s Memoirs of *China*, p. 234. [d] *Du Halde*, as before. [e] The *Engliſh* Tranſlation of *Magalhaens*, has Silk inſtead of Salt. [f] *Magalhaens*, as before, *p.* 131. *Du Halde*, as before.

Inhabitants Classes. but in the Cities they are of Brick, and pretty convenient. In the North Parts one meets with what they call *Kans*; being great Brick Eſtrades, the whole Breadth of the Room, with a Stove underneath [a], and a Mat, made of Reeds, on the Top, whereon you may lay your Bed.

Robberies rare. GUARDS being poſted at ſmall Diſtances along the Roads [b], Travellers are very ſeldom in Danger from Highwaymen, who very rarely appear, except, ſometimes, in the Provinces neighbouring to *Pe-king*: But they ſcarce ever murder thoſe they rob; and when they have done their Buſineſs, march-off very dextrouſly [c]. The Throngs of Paſſengers on the great Roads, is a ſufficient Security to them againſt Robbers. One of the Miſſioners obſerves, that he was followed ſeveral Days together by one of thoſe Gentlemen, who, in all that Time, could not find an Opportunity to execute his Deſign, becauſe he no ſooner loſt Sight of one Company of Travellers, but another appeared in View.

Roads extremely duſty. IN ſhort, according to the Miſſioners, the greateſt, and almoſt only Inconvenience in Travelling, eſpecially in Winter, and in the North Part of *China*, is the Duſt; for it ſcarce ever rains in that Seaſon. The Soil being very looſe, when the Wind blows hard, it raiſes ſuch Clouds, that the Sky is darkened, and one can hardly breathe. The like Effect is produced by the Motion of ſuch infinite Numbers of People and Carriages: So that they are often obliged to cover their Faces with a Veil, or their Eyes with Glaſſes, fixed in Leather or Silk, and tied behind the Head. The Southern Provinces are indeed free from this Inconvenience, but liable to the Overflowing of the Waters; againſt which they have provided, by building a vaſt Number of Bridges.

THE uſual Way of Travelling in *China* is on Horſes; which are very good, though ordinary to look at: But the worſt of it is, that in caſe your Horſe tires on the Road, there is no getting another at the Poſt-Houſes: Becauſe all the Poſt-Horſes belong to the Emperor, and are made uſe of by none but his Couriers, or the Officers of his Court.

Travelling in Chairs. WHEN the Roads are too rough to travel on Horſeback they make uſe of Chairs, which the *Chineſe* call *Quan-kyau*, that is, *Mandarin Chairs*; becauſe much like thoſe uſed by the *Mandarins*, and little different from the Hackney-Chairs of *Paris*; only they are larger, higher, and lighter; being made of Bambû Canes, laid acroſs each other in the Form of a Lattice, and tied together very ſtrongly with Ratan. This Lattice is covered from Top to Bottom with a Piece of coloured Linen, Silk, or woollen Cloth, according to the Seaſon; over which, in rainy Weather, they put an Oil-Cloth made of Taffety. If there be but two Chairmen, the Ends of the Poles, as well before as behind, paſs through two running Knots of a ſtrong pliable Cord, hung by the Middle to a thick Stick, whoſe Ends reſt on the Shoulders of the Chairmen [d]; and then there are commonly eight, in order to relieve each other.

WHEN, to avoid the Heats, they travel in the Night, eſpecially in mountainous Countries infeſted with Tygers; they hire Guards (to be found at proper Diſtances) with Torches; which ſerve both to light them, and to ſcare thoſe wild Beaſts. They are made of Branches of the Pine-Tree dried by the Fire; and prepared in ſuch a Manner, that the Wind and Rain do but make them burn the faſter: Each Torch, which is ſix or ſeven Feet long, laſting near an Hour. However, ſcarce any travel in this Manner but thoſe ſent from Court, the *Mandarins*, and other great Lords; who being followed by large Retinues, have nothing to fear either from wild Beaſts or Robbers.

ONE great Conveniency to thoſe who travel by Land in *China* is, the Eaſe and Safety wherewith their Goods are carried by Porters, who are very numerous in every City: Theſe have their Head, to whom Perſons apply; and having agreed for the Price, which they pay beforehand, he gives them as many Tickets as there are Porters wanted; by Means whereof they are furniſhed in an Inſtant, and he becomes anſwerable for the Contents of their Bales. When the Porters have brought their Loads to the Place appointed, you give each of them a Ticket; which he carries back to his Chief, who then pays him.

IN the Cities on much-frequented Roads, ſuch as that over the Mountain of *Mey-lin* [e], there are a great many Offices, where all the Porters enter their Names, with good Security: So that you may have three or four hundred on Occaſion. Having applied to the Head of the Office, he makes out a Liſt, in a Trice, of all you have to carry; whether Boxes, or other Things; and receives from you ſo much a Pound, the Price being commonly about Four-pence halfpenny a hundred Weight for a Day's Carriage: After this you have no farther Trouble; for the Principal gives every Porter his Load, with a Note of what it contains; and when you arrive at the City you are bound to, all that belongs to you is faithfully delivered by the Correſpondent-Office.

THE Burden is faſtened by Cords to the Mid-

dle of a Bambû-Pole, whoſe Ends are borne on a the Shoulders of two Men: But if the Weight be too great, they make uſe of four Men with two Poles. They are changed every Day, and obliged to make the ſame Stages with thoſe who employ them. When one Man carries a Bundle, he lightens his Load, by dividing it into two equal Parts, and faſtening them with Cords, or Hooks, to the Ends of a flat Bambû-Pole; afterwards poiſes them on his Shoulders like a Balance, the Pole bending and riſing alternately as b he goes along. When one Shoulder is weary, he dextrouſly gives the Pole a Twiſt round his Neck upon the other; and thus ſome will carry an hundred and ſixty *French* Pounds ten Leagues in a Day.

IN ſome Provinces they make uſe of Mules for carrying the Bales and Merchandizes; but oftener Carts with one Wheel, which is very large, and placed in the Middle. On each End of the Axel-tree, which comes out on both Sides, they ſet a c Lattice, whereon they lay Loads of equal Weight. It is thruſt forwards by one Man: But if the Load be heavy, another Man, or elſe an Aſs is put before to draw it; and ſometimes both. They have Axel-trees reſembling ours, with the Wheel placed forward, as in Barrows; but they ſcarce ever make uſe of them in Journeys.

THE common Hire of Mules, for twenty-five Days, is four *Lyangs*, or *Taëls*, and an half, or at moſt five [a], according to the different Seaſons d and Price of Proviſions: Returned Mules may be had a great deal cheaper. They are much leſs than thoſe of *Europe*, but very ſtrong; their uſual Load being from one hundred and eighty, to two hundred *Chineſe* Pounds; each four Ounces heavier than the *French*.

THE Cuſtom-Houſes in *China* are not ſo rigorous as in other Countries; for they ſearch no Man, and very rarely open the Bales, or Cheſts. Nay, if a Perſon makes a tolerable Appearance, e they take nothing of him; *We ſee plainly*, ſay they, *that the Gentleman is no Merchant*. At ſome Cuſtom-Houſes they pay by the Lump, and then Credit is given to the Merchant's own Bill of Parcels. There are others that require ſo much a Load, which is eaſily ſettled. Even the Emperor's *Kang-ho* (or travelling Order) does not exempt one from paying Cuſtom: However, the *Mandarin*, out of Reſpect, lets him paſs, without requiring any-thing: But at *Pe-king* they are f generally more ſtrict.

THE Bales belonging to great Officers of the Court, on which is paſted a *Fong-tyau*, (being a large Slip of Paper, whereon is written the Time it was packed-up, with the Name and Dignity of the Owner) are never opened.

Money, Coin.

FORMERLY the Cuſtom-Houſes were ſhut-up, and the *Mandarin* belonging to them, who was of conſiderable Rank, changed every Year: But for twelve Years paſt, the Care of the Cuſtom-Houſe has been committed to the Vice-Roy of each Province, who nominates a Deputy to receive the Duties: However, the Trouble occaſioned by the Sea-Trade has obliged them of late to appoint particular *Mandarins* for thoſe of *Quang-tong* and *Fo-kyen* [b].

How governed.

4. *The* Money, Coin, Weights, *and* Meaſures.

Gold a Commodity. Standard of Silver: Its Goodneſs, how known: None coined. Their Scales. Copper Money. Gold and Silver Money. Shape of Money. Ancient Coins. Stamp and Marks. Value uncertain. Paper Money. Uncertain Coin. Coining how puniſhed. Collection of Coins. Chineſe *Weights and Meaſures: Content of a Degree.*

ONLY Silver and Copper are current in *China*, to purchaſe Neceſſaries, and to carry-on Trade. Gold is on the ſame Footing as precious Stones in *Europe*: For it is bought like other Merchandize, and the *Europeans*, who traffic there, make conſiderable Profit by dealing in it; becauſe, ſays *Le Comte*, it bears only the ſame Proportion to a Pound of Silver, as one does to ten: Whereas, among us, it is as one to fifteen; ſo that the Merchant generally gets by it a third Part.

Gold, a Commodity.

THEIR Silver is not equally fine: But as the *French* fix the greateſt Degree of Fineneſs for Gold at twenty-four Carats, they divide their Alloy into one hundred Parts, which is the Degree of the fineſt Silver. However, one meets with Silver, from ninety to an hundred Parts: Alſo ſome of eighty Parts; but this is reckoned the baſeſt Alloy, and will not paſs unleſs the Weight be augmented, till it amounts to the Value of that which is current in Trade [c]. The *Chineſe* take *French* Money as Silver of the fourſcore and fifteenth Sort: Yet thoſe, who underſtand this Metal well, judge it to be but of the ninety-third Sort at moſt: So that in an hundred Ounces of our Silver, there are ſeven of Alloy; or, which is all one, an hundred Ounces of it are worth but ninety-three of fine Silver.

Standard of Silver.

THE *Chineſe* are very ſkilful in judging, at Sight, of the Fineneſs of Silver; being ſcarcely ever miſtaken. They know the Goodneſs of it three

Its Goodneſs how known.

[a] A *Lyang*, called, by the *Portugueze*, *Taël*, is about ſix Shillings and Eight-pence; then four and an half make thirty Shillings, and five *Lyangs* thirty-three Shillings and Four-pence. [b] *Du Halde*'s *China*, p. 266, & *ſeqq.* [c] *Le Comte*'s Memoirs of *China*, p. 306. *Du Halde*, as before, p. 330.

Ways:

Inhabitants Claſſes. Ways: By the Colour; by ſeveral little Holes, which are made in it by the melting Pot; and by divers ſmall Circles, which the Air makes on the Surface of the Metal, when it cools after melting. If the Colour be white, the Holes ſmall and deep; if the Circles be many, cloſe, and very fine, eſpecially toward the Center of the Piece; then the Silver is pure: But the more it differs from theſe three Qualities, ſo much the more Alloy it has [a].

None coined. THEIR Silver is not coined, as in *Europe*; but caſt into Ingots [b], and ſo cut into Pieces, great or ſmall, as Occaſion requires, and its Value rated by the Weight. Theſe Ingots, which are the fineſt Silver, are uſed only in paying large Sums. The Difficulty is to make uſe of them in the Retail-Way; for ſometimes they are forced to put the Wedge in the Fire, and beat it thin with a Hammer, in order to cut it more eaſily into Bits; whence it happens, that they are always longer in making the Payment, than the Purchaſe. They own it would be more convenient to have Money of a fixed Value, and Weight: But then, they ſay, the Provinces would ſwarm with Clippers and Coiners; who are not to be feared, ſo long as they cut the Silver. As in cutting it ſo often, it is hard to avoid loſing ſome ſmall Particles; ſo you will ſee poor People very buſy in gathering and waſhing the Dirt, that is thrown out of the Shops into the Streets; the Trifle they find being ſufficient to ſubſiſt them [c].

Their Scales. To weigh their Silver, they generally carry about them, in a neat japanned Caſe, a Pair of ſmall Scales, not unlike the *Roman* Balance. It is compoſed of a little Plate, or Diſh, an Ivory, or Ebony Beam, and a Weight that ſlides up and down it. The Beam, which is divided into minute Parts on three Sides, is ſuſpended by ſilken Strings at one of the Ends, in three different Points, that they may more eaſily weigh Things. This Sort of Balance is exceeding exact; for any Money, from fifteen or twenty *Taëls* down to a Sou, and leſs, may be weighed therein, with ſo great a Nicety, that the thouſandth Part of a Crown will ſenſibly turn the Scale.

Copper Money. COPPER-MONEY is the only Sort that has any Characters ſtamped thereon, and is of uſe in Retail-Buſineſs: Theſe are ſmall, round Pieces, with a Hole in the Middle, which they uſe ſeparately for ſmall Change, or ſtring by Hundreds, to the Number of a thouſand. The Metal is neither pure, nor hammered. Ten of theſe Pieces go to a Sou [d], ten Sous make the tenth Part of a *Chineſe* Crown [e], called *Lyang*, and by the *Portugueze*, *Taël*, which are in Value about an hundred Sous of *French* Money [f]. Theſe ſmall Pieces, which have been the current Money of *China* in all Times, are collected by the Curious [g].

OUR Author, *Du Halde*, gives an Extract from a Book concerning Coins, written under the Dynaſty of the *Song* [h], and ſent to him (we preſume, tranſlated) by *Dentrecolles*, one of the Miſſioners of his Society; from whence we have ſelected the following Particulars.

THE Word uſed for Money is *Tſyen:* Thus they ſay *Tong-tſyen*, *Copper Money*; *In-tſyen*, *Silver Money* [i]. The ſmall Copper-Coin, of a good Alloy, have four Parts in ten Lead. Hence the red Copper loſes both Colour and Sound; and the Money, though thick, may be broken with the Fingers.

UNDER the Reign of *Yu*, Founder of the firſt Dynaſty, mentioned before [k], Gold and Silver were current, as well as Copper. There were Emperors alſo of other Races, who permitted the Uſe of foreign Coin in thoſe Metals. There was beſide, Money made of Tin, Lead, Iron, and even baked Earth; on which Figures and Characters were ſtamped. Certain little Shells, called *Pwey* in *China*, and *Kori* in *Bengal*, have likewiſe ſerved for ſmall Money; ſeveral of them going for one of the Copper-Pieces: But they did not continue long in Uſe.

WITH reſpect to the Form of Money, it has been of different Figures, under different Reigns. Since the Time of the preceding Dynaſty, the Copper Pieces have always been round, and with a ſquare Hole in the Middle, edged with a Border, riſing a little, for Conveniency of ſtringing them. In the Time of the *Han* Families [l], the Money was pierced in the ſame Manner. In the Beginning of the firſt Dynaſty, beſides the round Money, there were current ſome in the Shape of a Cutlaſs, and thence called *Tau:* Another Sort reſembled the Back of a Tortoiſe; and for this Reaſon was named *Quey:* Laſtly, others termed

[a] *Le Comte*'s Memoirs of *China*, p. 305, *& ſeq.* [b] *Magalhaens*, p. 136, ſays, in Form of a Boat, and of different Sizes and Weights, from half a Crown (or Ounce) to an hundred Crowns. [c] *Du Halde*'s *China*, p. 330. [d] A Sou, or Sol, is little more than an *Engliſh* Halfpenny. [e] The Author had better have ſaid a *Chineſe* Ounce of Silver, which the *Lyang* properly denotes; there being no Silver Coin of that, or any other Denomination, as hath been obſerved before. [f] Rather, an hundred and fifty-ſeven Sous, ſince elſewhere the Author makes it equivalent to ſeven Livres ten Sols. But it goes only for ſix Shillings and Eight-pence *Engliſh*. [g] *Le Comte*, as before, *p.* 305, *& ſeq. Du Halde*, as before, *p.* 330. [h] Which began in the Year 960. [i] So at *Kanton* they term the Piaſters and *French* Crowns. [k] *P.* 119. *d.* [l] Which began to reign about 206.

Pu,

Pû, of an odd Figure. The round Money was commonly an Inch, or an Inch and an half Diameter; and ſome twice as large. Thoſe called *Pû* and *Tau*, were five Inches long, and ſeem to have reſembled the *Cupans* of *Japan*: But, being very inconvenient for uſe, were put-down.

UNDER the *Song*, there were Pieces ſo ſmall, that they were called *Geeſe Eyes*; ſo thin, that they ſwam on the Water; and in handling were in Danger of being broken. It required no fewer than ten thouſand of them to buy a Meaſure of Rice, ſufficient to ſubſiſt a Man ten Days. But this Money did not continue long in Uſe; becauſe People refuſed to take them in the Way of Trade.

UNDER the firſt Dynaſty of the *Tang*, the Banks of the *Yellow River* having tumbled down, there were found three thouſand three hundred Pieces of Money with three Feet; but the Characters were defaced. This Coin, doubtleſs, was current under the Emperors of the three firſt Races, who kept their Court not far from that great River.

THE *Chineſe* Money is not ſtamped like thoſe of *Europe*, with the Head of the Prince; it being deemed diſreſpectful to the Majeſty of the Emperor, for his Image to be perpetually paſſing through the Hands of Dealers, and the Dregs of the People. The Inſcriptions on their Coin are commonly the pompous Titles given by the reigning Princes, to the different Years of their Reign: As, *The eternally Shining*; *The ſupreamly Peaceful*; *The Magnanimous*.

ON other Money may be ſeen the Names of the reigning Family, of the Tribunal that preſides over the Mint, or of the City where it was coined. Some are marked with the Value ſet upon them by the Prince; as, *Pwan-lyang*, that is, half a *Taël*. There is another Sort, whoſe Inſcription is *Quey-yu-ching-ti*, that is, *Money has its Run, and at length returns to the Emperor*. With regard to the Characters on the ancient Money, ſuch as the *Pû* and *Tau*, none at preſent underſtand them.

THERE are three Sorts of ancient Coin, conſiſting of a Mixture of Silver and Tin, which are engraven all over with Figures. The firſt Sort, which is round, and weighs eight *Taëls*, repreſents a Dragon in the midſt of Clouds. On the ſecond, which is ſquare, and weighs ſix *Taëls*, there is a Horſe galloping. The third, weighing four *Taëls*, is oblong, and ſhaped like the Back of a Tortoiſe, with the Word *Vang*, or *King*, in every Compartment of it. Theſe are attributed to the Founder of the *Shang* Race. *Weights, Meaſures.*

IT is ſcarce poſſible to aſſign the Value of the ancient Coin: For though the Weight is marked thereon, ſome of them paſs for much more than their intrinſic Value came to. When there has been a Scarcity, owing to the People burying it in troubleſome Times, or Foreigners invading the Country, and carrying it away by Ship-loads, the Emperor has been forced to raiſe the Value of the very ſmall Copper Pieces ten Times more than they went for before; which has, ſometimes, occaſioned popular Tumults, becauſe the Merchants raiſed the Price of Commodities in Proportion. Copper was once ſo ſcarce, that the Emperor cauſed near fourteen hundred Temples of *Fo* to be demoliſhed, and all the Copper Images to be melted down, in order to coin them into Money. At other Times, the People have been prohibited the Uſe of Copper Veſſels, or other Utenſils, and obliged to deliver them in at the Mint. *Value uncertain.*

IN the Beginning of the Reign of *Hong-vû*, Founder of the *Ming* Family, Money was become ſo ſcarce, that they paid the *Mandarins* and Soldiers partly in Silver, and partly in Paper; giving them a Sheet ſealed with an Imperial Seal [a], which paſſed for a thouſand little Copper Pieces, or a *Taël* of Silver. But the Quarrels, Law-Suits, and other Inconveniencies, which happened every Day, obliged the Emperor to put it down. Theſe Sheets are yet much ſought after by the People, and even ſome of the Quality, to hang-up to the chief Beam of their Houſes; being ſo ſimple as to imagine, that they preſerve them from all Misfortunes. This Sort of Paper-Money had been introduced before, with as little Succeſs, under the Dynaſty of the *Ywen*. It was made of the Bark of the *Ku-chu*, and not of the Mulberry-Tree, as *Marco Polo* affirms [b]. *Paper-Money.*

THERE are many ancient Coins remaining; ſome of them belonging to foreign Countries, of which no Account can be given. The ſame may be ſaid of thoſe ſtamped with the *Fong-whang* and *Ki-lin*, two fabulous Birds: With regard to which Money, the People entertain ſeveral ſuperſtitious Notions. *Uncertain Coin.*

MONEY was always coined in the Emperor's Name; none of the Princes ever claiming that Right, even in thoſe Times when they were ſo powerful as to aſſume the Title of Kings. It was formerly minted at twenty-two Places; but, at preſent, is coined only at Court, being caſt in a Mould [c].

[a] *Magalhaens*, p. 137, calls theſe *Paper Tickets*.

[b] *Du Halde* gives the Figures of them among the reſt. L. 2. c. 18. *Magalhaens* ſuppoſes, *M. Polo*, in affirming Paper-Money was current in his Time, was deceived by the counterfeit Gold and Silver Paper-Money, which the *Bonzas* burn with the dead Bodies; making the People believe, that they will turn into real Gold and Silver in the next World. Of this Sort of Paper-Money you may ſee whole Shops filled for Sale.

IF

Inhabitants Classes.

IF Silver was coined, it is probable, there would be many Debaſers of Money, ſince the ſmall Pieces of Copper are often counterfeited. This is Death by the Law; yet ſome Princes have been contented with ordering the Hand to be cut-off; others, with baniſhing the Offender. Knaves mix theſe falſe Money with the genuine; and even cut Pieces of Paſteboard in the ſame Form, and ſtring them among the reſt.

Collection of Coins.

THE late Emperor *Kang-hi* had a Cabinet of all Sorts of Coin, ranged according to the Order of the Dynaſties: Among them there is a great Number belonging to the Order of the three firſt Dynaſties, *Hya*, *Shang* and *Chew*; eſpecially the laſt, which (ſuppoſing them to be genuine) is a concurrent Teſtimony of the Truth of the *Chineſe* Hiſtory. As the Coin belonging to theſe latter Ages are wanting, as well as thoſe of the moſt diſtant Times, they have ſupplied the Deficiency with Paſteboard-Money curiouſly made, according to the Account given of them by the ancient Books; which are ſo nicely imitated, that they look like the real [a].

Chineſe Weights,

FOR the better underſtanding the Value of Money, whether ancient or modern, it muſt be obſerved, that the *Chineſe* divide their Pound into ſixteen *Lyang*, or Ounces; the *Lyang* into ten Parts, called *Tſyen* [b]; the *Tſen* into ten *Fwen* [c]; and the *Fwen* into ten *Li* of Silver. The Beam of the *Chineſe* Scales carries theſe Diviſions no farther; and yet, with reſpect to Gold or Silver of a conſiderable Weight, the Diviſion extends in the ſame decimal Manner to almoſt imperceptible Parts: For which Reaſon, it is ſcarce poſſible to convey a juſt Idea of them in our Language. They divide the *Li* into ten *Wha*; the *Wha* into ten *Se*; the *Se* into ten *Fû*; the *Fû* into ten *Chin*; the *Chin*, which ſignifies a Grain of Duſt, into ten *Ya*; the *Ya* into ten *Myau*; the *Myau* into ten *Mo*; the *Mo* into ten *Tſyun*; and the *Tſyun* into ten *Sun* [d].

And Meaſures.

MEASURES were invented as early as the Reign of *Whang-ti*, the third Emperor. A Grain of Millet was taken to determine the Dimenſions of a Line; reckoning ten Lines to an Inch, ten Inches to a Foot, *&c.* But theſe Grains being of an oval Figure, the various Ways of ranging them have occaſioned a Diverſity in the Meaſures [e], under different Dynaſties.

UNDER the preſent Dynaſty there are three Sorts of Meaſures: 1. The Foot of the Palace, (eſtabliſhed by *Kang-hi*) which is to the *Paris* Foot [f], as ninety-ſeven and an half to an hundred of the Feet uſed in the Tribunal of Mathematics. 2. The Foot of the Tribunal of public Works, called *Kong-pû*, uſed by Workmen, is ſhorter by one Line than the *Paris* Foot. 3. The Taylor's Foot, made uſe of alſo by the Mercers, is ſeven Lines larger than the *Kong-pû*.

THE firſt was the Meaſure conſtantly uſed by the Miſſioners in ſurveying the Empire; which differs from the other *Chineſe* Feet, and even from that formerly uſed in the Tribunal of the Mathematics [g]. By this Foot, *Thomas*, the Jeſuit, found a Degree to be two hundred *Li's*, or *Chineſe* Furlongs; each conſiſting of an hundred and eighty *Chineſe* Fathoms of ten Feet. As then the twentieth Part of a Degree, according to the Experiment of the Academy at *Paris*, contains two thouſand eight hundred and fifty-three Toiſes, each containing ſix Feet of the *Châtelet*, it is juſt equal to one thouſand eight hundred *Chineſe* Toiſes, or ten *Li's*; conſequently, one Degree compriſing twenty *French* great or marine Leagues, contains two hundred *Li's* [h].

SECT. IV.

Claſs of Mechanics, *and their manual Arts.*

Toys and Furniture. Great Artiſts: Painting and Filigran: Their Tools: Work abroad. Itinerant Barbers. Fiſhing with Birds: Fiſhing with Boards: Shooting Fiſh. Japanned Works. Varniſh how uſed. Another Method. Its loſt Beauty, how reſtored. Silk, its Original, and Encouragement: Goodneſs, how known: Fineſt, where made. Gold Brocades, how made. Silks moſt in Uſe: Sorts unknown in Europe. *Open Silks. The Silk of wild Silk-Worms. Woollen Manufactures: Cotton and Linen. China-Ware.*

A GREAT deal might be ſaid of this Rank of People. *China* abounds with Workmen of all Sorts that can be imagined, and in ſuch Numbers, that it is prodigious. The Curioſities they make and ſell in the Shops amaze all *Europeans*. If four large Galeons were ſent to *Nan-king*, *Sû-chew fû*, *Hang-chew fû*, or any other City like them, they might be loaden with a thouſand Varieties of Curioſities and Toys.

[a] *Du Halde*'s *China*, p. 331, *& ſeqq.* [b] The *Portugueze*, as hath been often obſerved, call the *Lyang*, *Taël*; and the *Tſyen*, *Maz.* [c] Each *Fwen* is equivalent to a *French* Sol, or Sou. [d] *Du Halde*, as before, *p.* 332. See alſo *Le Comte*'s Memoirs of *China*, p. 307. [e] *Le Comte*, p. 307, ſays, the Meaſures differ in different Provinces; and hence the Difference in the Reports of Miſſioners. [f] The *Paris* Foot is to the *Engliſh*, as 1068 to 1000, or 12$\frac{8}{100}$ Inches. [g] *Le Comte* reckons the Difference between this and the *Paris* Foot, as ninety-nine to an hundred. [h] *Du Halde*, as before, *p.* 141. Alſo his Preface, *p.* 11.

N.° 235.

R. Parr Sculp

Vol. V. Pl. 30. P. 311.

The Furniture of a Palace may be had ready-made in any of the aforeſaid Cities, and all at very reaſonable Rates [a].

THE *Chineſe* are great Proficients in Arts; though they have not brought them to that Perfection which is ſeen in *Europe*. This may be owing to the Laws which have preſcribed Bounds to the Expences of private Perſons: For the Workmen are extraordinary induſtrious; and if they be not ſo good at Invention as the *Europeans*, yet they eaſily comprehend their Directions, and imitate their Models tolerably well [b]; which is evident from the Glaſs, Watches, Piſtols, Bombs, and many other Pieces of Workmanſhip made in ſeveral Places of the Empire. But they have had, Time out of Mind, Gun-powder, Printing, and the Uſe of the Compaſs; novel Arts in *Europe*, and for which, perhaps, we are obliged to them [c].

THEY paint Flowers, Birds, and Trees indifferently [d]; but fall ſhort in the Shadowing, and are very bad at human Figures [e], very much admiring our Paintings, though they are but ordinary ones: Yet ſome of them, who have learned at *Manilla* and *Ma-kau*, have proved great Artiſts. The Filigran the *Chineſes* make at *Manilla*, which they learned of the *Indians*, has aſtoniſhed the *Europeans*. The *Italians* now begin to imitate it in ſome Meaſure. In *Kanton* they make very good Spectacles, proſpective, burning, and looking Glaſſes ſo like ours, that it is hard to know them aſunder. Not long before the Author came from thence, he underſtood, that they made them of Pebbles ground ſmall, for want of fine Sand; which they have not.

THE Tools Mechanics uſe are much like ours, except here or there one. The Taylors uſe no Thimble, but only a Rag tied about the Ball of the Thumb: They, for the moſt Part, ſew ſtanding; only leaning againſt a Table, on which their Work lies [f].

THERE are Mechanics, of all Sorts, in every City: Some work in their Shops, others go-about the Streets to be hired; but the greater Part are employed in private Families. For Inſtance, if you want a Suit of Cloaths, the Taylor comes betimes in the Morning to your Houſe, and returns home in the Evening: It is the ſame with reſpect to other Handicrafts, who all bring their Tools along with them, even to the Smith with his Anvil and Stove [g], to make Things of common Uſe. *Mechanics.*

THE Barbers carry on their Shoulders a Stool, their Baſon, their Pot, and Fire, with a Towel and Clouts: They give Notice of their Approach with a little Bell, and, when called, very dextrouſly on the Spot, whether it be in the Street, in the Middle of a Square, at the Door of a Houſe, or any-where elſe, ſhave the Head, ſet the Eyebrows in Order, clean the Ears with proper Inſtruments, ſtretch-out the Arms, and rub the Shoulders; all for eighteen Deniers (or leſs than a Halfpenny) which they receive with a great many Thanks; and then ring the Bell again in Queſt of another Jobb [h]. The Shoemakers go-about the ſame Way: They mend Shoes, and ſole them for Three-pence, ſo as to laſt a Year or two, with ſuch as do not go much: But the Author knew not after what Manner, or what it is they uſe to tan ſo rarely [i]. *Itinerant Barbers.*

THE Fiſhermen, beſides Nets and Lines, the firſt uſed in their great Fiſheries, the latter in their ſmall, in ſeveral Provinces fiſh with a Kind of Cormorant, reſembling a Raven [k]; which they train for the Purpoſe, as we bring-up Dogs to catch Hares. At Sun-riſe, one may ſee, on the Rivers, a conſiderable Number of Boats, and ſeveral of theſe Birds ſitting at the Head of them; who, at the Signal given, by ſtriking the Water with an Oar, fly into the River, one here, another there; and diving to the Bottom, ſeize the Fiſh they light-on by the Middle; then riſing, carry it to the Bark: The Fiſherman receiving it, takes the Bird, and holding its Head downwards, paſſes his Hand along the Neck, to make it diſgorge the ſmall Fiſh that it had ſwallowed, but is hindered from going into the Gullet, by a Ring put-on the lower-Part of the Neck; which, after the Fiſhing is quite over, they take-off, and give them ſomething to eat. When the Fiſh happens to be too large for one Bird, they mutually aſſiſt each other; one takes the Tail, another the Head, and bring it to the Boat to their Maſter. *Fiſhing with Birds.*

THEY uſe another eaſy Way of taking Fiſh: For this Purpoſe they have long, narrow Boats, nailing on each Side, from one End to the other, a Plank two Feet broad. This Plank is japan- *Fiſhing with Boards.*

[a] *Navarette*'s Deſcription of *China*, p. 53. [b] The ſame Author ſays, they imitate any Thing to Perfection. [c] *Le Comte*'s Memoirs of *China*, p. 229. [d] The Author obſerves, that they make Trees, Birds, and Flowers, of Silk, better than they paint them. At *Nan-king*, they make them of Wax, to ſuch Perfection, that the Miſſioners were amazed at them. [e] *Du Halde*, p. 281, ſays, they paint Flowers, Animals, and Landſkips, with Skill; but are very ignorant in drawing human Figures; maiming and diſfiguring themſelves in ſuch a Manner, that they look more like Scaramouches than *Chineſes*. [f] *Navarette*'s Deſcription of *China*, p. 53. [g] The ſame Author ſays, their little Bellows is as uſeful, and much more convenient than thoſe in *Europe*. [h] *Du Halde*'s *China*, p. 277. [i] *Navarette*, as before, *p.* 54. [k] See the Figure, and Vol. III. *p.* 418.

Inhabitants Classes.

ned with very white, ſhining Varniſh, and ſlants a gently, till it almoſt touches the Top of the Water. In the Night-time, when it is uſed, they turn it towards the Moon, that the Reflection may increaſe its Splendor: So that the Fiſh, which are ſporting, eaſily miſtaking the Colour of the japanned Plank, for that of the Water, leap often on that Side, and fall either on the Plank, or into the Boat.

Shooting Fiſh.

IN ſome Places, the Soldiers ſhoot the Fiſh very dextrouſly with Arrows, which are faſtened b to the Bow with Packthread; as well to prevent their being loſt, as to draw-out the Fiſh when it is ſhot. In other Places, there is ſuch a great Quantity in the Mud, that Men ſtanding-up to the Girdle in the Water, pierce them with a three-forked Spear [a].

Japanned Works.

OF all the Manufactures, which Art produces among the *Chineſe*, the chief are varniſhed Goods, Silks, and China-Ware. They varniſh Tables, Chairs, Cabinets, Bedſteads, and almoſt c all Sorts of wooden Moveables, as well as Utenſils of Copper, Tin, *&c.* This gives them a beautiful Luſtre, and rich Appearance, eſpecially when painted with Figures in Gold, or Silver. Indeed the Varniſh-Works, made at *Kanton*, are neither ſo beautiful, nor ſo ſerviceable by a great deal, as thoſe that come from *Japan*, *Tong-king*, and *Nan-king*, Capital of *Kyang-nan:* Becauſe they are fitted-up too haſtily, and only to pleaſe the Eye of the *Europeans*. To japan a d Piece of Work well, requires at leaſt a whole Summer: But the *Chineſe* have rarely any ſuch ready-made; for they commonly wait till the Arrival of Ships, before they begin, that they may do them according to Directions.

Varniſh, how uſed.

THE Varniſh is neither a Compoſition, nor ſo great a Secret as ſome have imagined: It iſſues, like Gum, from a Tree; of which, and its Qualities, we ſhall ſpeak hereafter [b]. We ſhall only mention here, how it is applied. This is done e in two different Manners: The firſt, which is moſt ſimple, is immediately upon the Wood: After it has been well-poliſhed, they do it over, two or three Times, with *Tong-yew*, a Kind of Oil; and when it is well-dried, lay-on their Varniſh as often. It is ſo tranſparent, that the Grain of the Wood appears clearly through it; and, therefore, if they have a Mind to conceal the Materials, they apply the Varniſh a great Number of Times; and then it becomes ſo f gloſſy, that it reſembles a Looking-Glaſs. When the Work is dry, they paint Flowers, Men, Birds, Trees, Mountains, Palaces, *&c.* with Gold, or Silver; over which they lay Varniſh once more, but lightly; both to preſerve, and give it a Gloſs.

THE other Manner requires more Preparation: For it is laid upon a Kind of Maſtic, or Paſteboard, compoſed of Paper, Flax, Lime, and ſome other Materials; which being well-beaten, and glued upon the Wood, makes a Ground very ſmooth and firm: On this they paſs the Oil before-mentioned two or three Times, and then apply ſeveral Lays of Varniſh, letting each dry one after another. Every Workman has his own Way of doing Things.

BY ſpilling hot Liquors upon theſe japanned Works, the Varniſh often grows dull, and turns yellow. The Means (ſays a *Chineſe* Author) to reſtore its ſhining Black, is to expoſe it a whole Night to a white Froſt; or elſe, which is better, to hold it for ſome Time in the Sun [c].

IT is agreed by the beſt Authors, that Silk and Silk-Worms came originally from *China*; from thence it paſſed to the *Indians*, from them to the *Perſians*, and from theſe latter to the *Greeks* and *Romans*; among whom, at its firſt Introduction, about the Year 500, it was valued at its Weight in Gold. The moſt ancient *Chineſe* Writers agree, that before the Reign of *Whang-ti*, when the Country was but newly cleared, the People were cloathed in Skins of Animals; which being inſufficient, after they came to multiply, one of the Emperor's Wives invented the making of Silks. However, it is difficult to meet with early Memoirs that mention Silk-Worms. Several Empreſſes, in the ſucceeding Ages, have employed themſelves in breeding them, and manufacturing their Silk. An Orchard of the Palace having been allotted for a Plantation of Mulberry-Trees, her Imperial Majeſty, attended by the Queens, and prime Ladies of the Court, went thither in Ceremony, and gathered the Leaves of three Branches which her Handmaids bended down. The fineſt Pieces of Silk, made by herſelf, or Order, were devoted to the Ceremony of the grand Sacrifice offered to *Shang-ti*. Thus the Silk Manufacture ſeems to have been encouraged by the Empreſſes, as Agriculture by the Emperors: But the former, for ſome Time paſt, have not troubled themſelves about Silk [d].

THE *Chineſe* judge of the Goodneſs of Silk by its Whiteneſs, Softneſs, and Fineneſs. If it feels rough, it is a bad Sign. Often, to give it a Gloſs, they dreſs it with Rice-Water, mixed with Lime, which burns it; ſo that when brought to *Europe*, it will not bear Milling: Though nothing takes the Mill better than ſound Silk; which a *Chineſe* Workman will mill above an

[a] *Le Comte*'s Memoirs of *China*, p. 237, *& ſeqq.* *Du Halde*'s *China*, p. 316, *& ſeq.* [b] In the *Natural Hiſtory*. [c] *Du Halde*, as before, *p.* 336, *& ſeqq.* [d] The ſame, *p.* 353.

Hour together without breaking a Thread. The Mills are very different from those in *Europe*, and far less cumbersome. Two or three sorry Blades of Bambû, with a Cog-Wheel, are enough. It is surprizing to see with what simple Instruments they work the finest Stuffs.

THE Silks of *Che-kyang* are, without Comparison, finer and better than those of other Provinces. Of this Silk are made the finest Stuffs in the Province of *Kyang-nan*; where are the greatest Number of good Workmen, and whence the Emperor is supplied with Silks for his own Use, and for Presents to his Lords. The Silk at *Kanton*, which comes from *Tong-king*, is not any Thing so good [a]. The great Trade at that Port draws thither Crouds of the best Workmen [b], who could make as rich Silks as any in *Europe*, were they sure of Vent; but usually confine themselves to the plainest Sorts, because the *Chinese* chuse the useful before the agreeable.

FOR their Gold-Tissue, they do not draw the Gold into Wire, to twist with the Thread; but cutting a long Sheet of gilt Paper into small Slips, very artfully roll them about the Silk [c]. These Stuffs look very fine when fresh; but being soon tarnished with the Air, they are unfit for Garments: None but *Mandarins* and their Ladies wear them; and that but seldom.

THE Silks most in Use among the *Chinese* are plain and flowered Gauzes, which are their Summer wear; Damasks of all Sorts and Colours; striped Satins, black *Nan-king* Satins, coarse Taffeties, or small Mohairs, which are very serviceable: Besides several other Sorts; some like flowered Grogram; others with open Flowers, like Gauze; some striped, in very good Taste, masqueraded, or embroidered with Roses, *&c.* Crapes, Brocades [d], Plush, and several Sorts of Velvet. That of the Crimson-dye is the deerest; but often counterfeit: Yet, a few Drops of the Juice of Lemon mixed with Lime, and sprinkled here and there, discover the Cheat.

IN short, the *Chinese* make an infinite Number of Silks that the *Europeans* have no Name for: But there are two Sorts most commonly worn among them: 1. A Sort of Satin, called *Twan-tse*, stronger and less glossy than what is made in *Europe*: Some are plain; others varied with Flowers, Trees, Birds, Butterflies, *&c.* 2. A particular Taffety, called *Chew-tse* [e], of which they make Drawers and Linings. Though close, it is so pliant, that neither folding nor squeezing it with the Hand ever crumples it [f]: Besides, it will wash like Linen, without losing much of its Gloss; which they give it with the Fat of the River *Porpus*, called, by the *Chinese*, *Kyang-thu*, or *The Hog of the River* Yang-tse-kyang; where it is found. This Fat is purified by washing and boiling; then, with a fine Brush, they spread it over the Taffety from Top to Bottom, the same Way, on that Side they would give a Gloss to. The Workmen burn the same in their Lamps instead of Oil; the Smell driving away the Flies, which, otherwise, would damage the Silk [g]. *Mechanics.*

LE COMTE observes, that they make use of another Kind of Stuff in Summer, called *Cha*; which is neither so close nor glossy as *French* Taffety, but much more substantial: Although several People desire to have it smooth and even, yet most wear it powdered with great Flowers pierced through, and cut like *English* Lace: These Piercings are often so numerous, that one can scarce discern the Body of the Silk. Garments made thereof, are extraordinary convenient and neat; so that all Persons of Quality use them: Besides, a whole Piece, enough to make a long Vest and Surtout, will not cost above two Guineas [h]. *Open Silks.*

THE Province of *Shan-tong* yields a particular Silk, found in abundance on Trees and in Fields. It makes the Stuff called *Kyen-chew*. This Silk is produced by a small Sort of wild Worms, very like Caterpillars; not in Cods, but very long Threads, which stick to small Trees or Shrubs: These make a coarser, but more lasting Silk than what the House-Worms spin: But the Worms eat the Leaves of other Trees besides the Mulberry. Such as are not acquainted with this Silk, would take it for a Russet-Stuff, or a coarse Drugget. *The Silk of*

THERE are two Sorts of Worms which spin this Silk; one, called *Tswen-kyen*, larger and blacker than ours; the other, *Tyau-kyen*, which is smaller: The Threads of the first are of a Russet-grey; those of the latter more black; and the Silk has a Mixture of these two Colours; the same Piece, sometimes, seeming to be divided into grey, yellow, and white Stripes. This Silk is very thick, never cuts, lasts long, washes like Linen; and when good, will not stain, even with Oil. It is in great Vogue among the *Chinese*; and, sometimes, as dear as Satin, or their *Wild Silk-Worms.*

[a] Yet, *Le Comte* says, they are more valued by Foreigners, and go off best of any. [b] *Navarette*, p. 54, says, there were ninety thousand Looms at *Kanton*. [c] *Le Comte* says, sometimes, they weave the Slips of Paper in, without rolling it on the Thread. [d] The same Author says, the Figures on their Brocades are not raised upon the Ground by a Mixture of raw Silk, as is practised in *Europe*, which makes the Work not so durable: All the Silk in these is twisted; and the Flowers are distinguished only by the Difference of Colours and Shadowing. [e] Or, *Su-sa*. [f] *Le Comte* says, it is sold by Weight. [g] *Le Comte*'s Memoirs of *China*, p. 138, *& seqq.* *Du Halde*'s *China*, p. 354. [h] *Le Comte*, as before, *p.* 140.

Inhabitants Classes. beſt wrought Silks. They make a falſe *Kyen-chew* of the Waſte of the *Che-kyang* Silk; by which, without Care, one may be eaſily deceived.

A SILK Manufactory has been ſet-up at *Kanton*, within theſe few Years, for making Ribbands, Stockings, and Buttons; which has had very good Succeſs: The Stockings are ſold for a *Lyang* a Pair [a]; and a Dozen of the largeſt Buttons, for no more than Six-pence [b].

Woollen Manufactures. ALTHOUGH Silk is the chief Wear of the *Chineſe*, yet they are not without Woollen or Linen Manufactures. Wool is very common and cheap, eſpecially in the Provinces of *Shan-ſi*, *Shen-ſi*, and *Se-chwen*, where they feed abundance of Flocks; yet the *Chineſe* do not make Cloth. That wherewith the *Engliſh* furniſh them, is highly eſteemed; but, being much dearer than the fineſt Silks, they buy but little of it. The *Mandarins* make ſtudying Gowns, for the Winter, of a Kind of coarſe Ruſſet, for want of better Cloth. As for Druggets, Serges [c], and Tammies, there are ſcarce any better than theirs; they are uſually wrought: Being worn by the *Bonzas*, they are commonly the Manufacture of their Wives; and there is a great Trade driven with them throughout the Empire.

Cotton and Linen. COTTON-CLOTH is very common [d]: They uſe alſo, for the Summer, Nettle-Linen for long Veſts: But the Cloth which is moſt valued, and to be found no-where elſe, is called *Ko-pû*, becauſe made of the Plant *Ko*, found in the Province of *Fo-kyen*. It is a Kind of creeping Shrub, ſpreading over the Fields, whoſe Leaves are much bigger than the Ivy: They are round and ſmooth, green within, and downy on the Out-ſide: The Stems of ſome are as thick as one's Finger, very pliable, and cottony, like the Leaves. When they begin to dry, they leave them to rot in Water; as they do Flax and Hemp. The firſt Skin is peeled-off and thrown-away: The ſecond, which is much more fine and delicate, they divide by the Hand into very ſlender Threads, and weave it, without either beating or ſpinning it. This Linen is tranſparent, and pretty fine; but ſo cool and light, that one would think he had nothing on his Back [e].

China-Ware. As for the *China* Ware, which is the third great Article in their Mechanic Arts, ſome Particulars have been already mentioned relating to it. But, that the Reader may have a more compleat Account both of this and the Silk Manufacture, we ſhall inſert Abſtracts of two Treatiſes relating to them, ſent from *China* to *Du Halde*, by *Dentrecolles*, a Jeſuit Miſſioner. The firſt, relating to Silk and Silk Worms, was extracted by him from a *Chineſe* Author. The ſecond, concerning the *China* Ware, was the Produce chiefly of his own Enquiry.

I. *The Manner of breeding* Silk-Worms, *and procuring* Silk.

Wild Mulberry-Trees, how to be managed: The right Trees, how pruned. A proper Soil: When old, how renewed. Apartment for the Silk-Worms, how furniſhed. Worms, how fed: How choſen, and garbled: Females, how diſpoſed: Eggs to be rejected: Bath for the Eggs: Directions for hatching ſome: After the Hatching, Young how treated: The Nurſe, how choſen. Rules concerning Worms: Their Antipathies: Their Diſeaſes: Their Mewing: The oftener they eat, the more Silk they yield. How dieted. Diſeaſes from Cold: From Heat, and Want of Room. How treated while ſpinning their Cods. Some kept for Breed: The reſt deſtroyed; and how: Another Way. Seaſon beſt for raiſing Silk-Worms. How to preſerve Eggs, and ſpin Webs. The Manufacture.

ACCORDING to a *Chineſe* Author, who wrote of the Silk-Worms, under the *Ming* Family, which began in 1368, there are two Sorts of Mulberry-Trees. The one called *Sang*, or *Ti-ſang*, cultivated for Sake only of the Leaves. The other, called *Che*, or *Ye-ſang*, growing in Foreſts, are little and wild; the Leaves ſmall, rough, roundiſh, ending in a Point, and ſcalloped round the Edges. The Fruit is like Pepper, their Branches thorny, and in Cluſters. Some Silk-Worms, as ſoon as hatched in the Houſe, are laid on theſe Trees to ſpin their Cods; where they grow bigger than the domeſtic ones: And though their Work is not ſo good, yet it is valuable; as may be judged from what has been ſaid before of the *Kyen-chew*.

THE Foreſts of theſe Trees muſt be cut into Paths, for the Keepers to weed them, and drive away Birds. The Leaves, not touched by the Worms in the Spring, ought to be pulled-off in Summer; for if left-on, thoſe of the ſucceeding Spring will be corrupted by the Circulation of the Sap from thoſe old Leaves. Theſe Trees which are cultivated like the true Mulberries, ought to be planted thinly, and the Ground ſown with Millet, to correct the Rankneſs of the ſmall Leaves. If ſuch Worms ſhould be diſcovered in

[a] Or Ounce of Silver, ſix Shillings and Eight-pence. [b] *Du Halde's China*, p. 104, and 354, *& ſeq.* [c] *Magalhaens*, p. 141, ſays, thoſe of an Aſh, or Cinnamon-Colour, are very fine and coſtly, worn by old People, and Perſons of Quality. [d] The ſame Author, *p.* 141, ſays, it is incredibly plenty, and of many different Colours. [e] *Le Comte's* Memoirs of *China*, p. 141, *& ſeq.*

Europe,

Europe, they ſhould be gathered before they change into Moths, in order to preſerve their Eggs from being loſt; which being hatched next Year, the Worms ſhould be laid again on the ſame Trees. The Worms that ſpin the Silk for the *Kyen-chew*, feed on young Leaves of Oak; and, perhaps, the Houſe-Worms would feed on the ſame.

WITH Regard to the true Mulberry-Trees, thoſe which ſhoot their Fruit before their Leaves, are unwholeſome. The young Plants, with ſhrivelled Rinds, are not fit for Uſe: But thoſe that have the Bark white, few Knots, and large Buds, produce large Leaves, good for Nouriſhment. The beſt Trees are thoſe that yield the feweſt Fruit, which divide the Sap. If you ſow Mulberry-Seed ſteeped in Water, wherein has been ſteeped the Dung of Poultry, fed with Mulberries freſh from the Tree, or dried in the Sun, they will be barren as to Fruit.

YOUNG Trees, that have been ſtripped too much of their Leaves in the three firſt Years, become weak and backward: So do thoſe which are not clean pruned. In the fifth Year the Roots gall: The Remedy is to unearth the Roots, and cutting-off the moſt entangled, cover them with a proper Mould, and ſprinkle it with Water. When the Trees grow old, they may be recovered by lopping-off the exhauſted Branches in *March*, and grafting ſound Shoots in their Stead. They languiſh, if Worms lodge their Seed in them; but the Worms are killed with a little ſtrong Oil poured on them.

THE Soil for Mulberry-Trees ought to be neither ſtrong, nor too hard: It may be mended with the Mud of Rivers, any Dung, or Aſhes. Above all, they ſhould be pruned in *January*, by a ſkilful Hand, leaving only thoſe Branches that ſhoot-out from the Tree ſeparately, and without bending, and four Buds on each Branch. At the End of Autumn, before the Leaves grow yellow, they ſhould be gathered, and dried in the Sun; then being pounded ſmall, and kept in Earthen-Pots cloſe ſtopped with Clay, where no Smoke comes, in Spring it will be like Meal, and fit to feed the Worms after moulting.

WHEN Trees grow old, beſides the Method of ingrafting, they alſo procure new Plants, either by twiſting together quick and ſound Branches in ſmall Tubs, filled with good Mould; or by bending, at Spring, the long Branches left unpruned, and ſticking their Ends in manured Soil: Thus taking Root in *December*, they are cut from the Body of the Tree, and tranſplanted in the proper Seaſon. They alſo ſow the Mulberry-Seed, which muſt be choſen from the beſt Trees, and from the Fruit that grows about the Middle of the Branches. This Seed ought to be mixed with the Aſhes of the burnt Branches. Next Day the Whole is to be ſtirred in Water: The uſeleſs Seed floats; the good ſinks to the Bottom: Theſe, after being dried in the Sun, muſt be ſowed, mixed with an equal Quantity of Millet, which defends the Trees in growing from the Scorching of the Sun. *Silk-Worms.*

WHEN the Millet is ripe, they ſet Fire to it in windy Weather. The enſuing Spring, the Trees ſhoot with a great deal more Strength. The Branches muſt be pruned away till the Plants are grown to a proper Height, and then the Tops cut, to make the Branches ſhoot-out on the Sides: At length the young Trees are tranſplanted, at the Diſtance of eight or ten Paces, in Lines four Paces aſunder; but not directly oppoſite to each other, perhaps to prevent their overſhading.

THE Apartment of the Silk-Worms ought to be on a dry, riſing Ground, and near a Rivulet; becauſe the Eggs muſt be waſhed often in running Water; and far from Dunghils, Sinks, Cattle, and all Noiſe; for diſagreeable Smells, and the leaſt Fright (even the Barking of a Dog, or Crowing of a Cock) diſorders them, when newly hatched. The Room ſhould be ſquare, and Walls very cloſe, for Sake of Warmth: The Door South, at leaſt South-Eaſt, but never in the North; and covered with a double Mat, to keep-out chill Air: Yet there ſhould be a Window on every Side, that the Air may have a free Paſſage, when requiſite. At other Times they are kept ſhut: They are of white, tranſparent Paper, with moveable Mats behind, to admit, or exclude the Light on Occaſion: Alſo to keep-out pernicious Winds; ſuch as the South, and South-Weſt; which ſhould never enter the Apartments. In opening a Window, to let-in a refreſhing Breeze, Care muſt be taken to keep-out Gnats and Flies; for they leave their Ordure on the Silk-Caſes, which renders the Winding extremely difficult: So that it is beſt to haſten the Work before the Fly-Seaſon. Small Lizards, and Rats, which are very greedy after Silk-Worms, muſt be deſtroyed by Cats. *Apartment for the Silk-Worms.*

THE Chamber muſt be furniſhed with nine or ten Rows of Shelves in Stories, about nine Inches one above the other, ranged in ſuch a Manner, as to form an open Space in the Middle, leaving a free Paſſage quite round. On theſe they placeRuſh-Hurdles pretty open, that the Warmth firſt, and then the cool Air may eaſily penetrate them. Upon theſe Hurdles they hatch and feed the Worms, till ready to ſpin. As it is very material, that the Worms ſhould hatch their Eggs, ſleep, waken, feed, and caſt their Skins together; a conſtant and equal Warmth ſhould be kept in their Apartment, by having Fire covered in Stoves at the Corners of the Room, *How furniſhed.*

Inhabitants Claſſes. Room, or elſe a Warming-Pan carried up-and-down it; the Fire being covered with Aſhes to ſuppreſs the Flame and Smoke, which is hurtful. Cow-Dung dried in the Sun is the moſt proper Fuel for this Purpoſe, the Worms liking the Smell of it.

Worms, how fed. THEY ſpread over each Hurdle a Bed of dry Straw, chopped ſmall; and upon that put a long Sheet of Paper, ſoftened by gentle Handling: When the Sheet is fouled by their Ordure, or Leavings, they cover it with a Net; and this b with Mulberry-Leaves, the Smell of which draws-up the Swarm: Then taking it off again gently, place it upon a new Hurdle, whilſt they clean the old one. The *Chineſe* Author adviſes farther, that there ſhould be a Wall, or cloſe Paliſade, at a little Diſtance round the Chamber, eſpecially on the Weſt-Side, that in letting-in the Air on this Side, the ſetting Sun might not ſtrike upon the Worms.

How choſen, THE Cods, which are a little pointed and c cloſe, fine, and leſs than the others, contain the Male Moths; thoſe rounder and bigger, thicker and more clumſy, the Females: They chuſe their Brood often in the Cods. Thoſe which are clear, ſomewhat tranſparent, clean, and weighty, are the beſt. But it is better to do it when the Moths are come-out; which happens a little after the fourteenth Day of their Retirement. Thoſe which break-forth a Day before the reſt, muſt not be uſed; but ſuch as come-out the next Day in Crouds, d are to be choſen. The lateſt muſt be rejected; ſo muſt thoſe which have bending Wings, bald Eye-brows, a dry Tail, and a reddiſh Belly, without Hair. Theſe rejected Moths muſt be put in a Place by themſelves.

And garbled. WHEN the Choice is made for Breed, they lay the Males and Females together upon Sheets of Paper, which muſt be made of the Mulberry-Tree Bark, (not of hempen Cloth) and ſtrengthned with Silk or Cotton Thread, glued on the e Back-ſide; becauſe, when they are covered with Eggs, they muſt be dipped three Times in a proper Water. Theſe Sheets muſt be ſpread on Mats, well covered with Straw; and when the Moths have been together about twelve Hours, the Males muſt be taken away, and placed with the rejected Moths. Should they continue any longer Space, the Eggs of that later Conception would not be hatched with the others; which Inconveniency ſhould be avoided.

Females, how diſpoſed. IT is proper to give the Females Room, and cover them; for Darkneſs hinders them from ſcattering their Eggs too-much. When they have done laying, they muſt be kept covered for four or five Days: Afterwards, all theſe Moths, with thoſe which were ſet aſide, or taken dead a out of the Cods, muſt be buried deep in the Earth; for it would infect any Animal to touch them. Some aſſert, that if they were buried in ſeveral Places of a Field, it would neither produce Brambles, nor any prickly Shrubs, for ſeveral Years: Others pretend, there is nothing better to fatten Fiſh kept in Ponds [a].

Eggs rejected. AS to the Eggs; thoſe which ſtick together in Clots muſt be thrown away; and then the Sheets hung-up to the Beam of the Room, which muſt be opened in the Front, ſo that the Wind may come-in, but the Sun not fall upon them, that Side of the Sheet, on which the Eggs are laid, muſt not be turned outwards: The Fire which heats the Room, muſt neither blaze nor ſmoak. Care muſt be taken likewiſe, that no hempen Ropes come near either the Worms or Eggs. When the Sheets have hung thus for ſome Days, they are taken-down, and rolled-up looſely, with the Eggs inwards; and then hanged-up again during the Summer and Autumn.

Eggs waſhed. AT the End of *December*, or in *January*, when there is an intercalary Month, they put the Eggs into cold River-Water, or Water with a little Salt diſſolved in it, taking care that it does not freeze; and clap a China-Diſh over them, that the Sheets might not ſwim. After two Days, they take them out, and hang them up again: When they are dry, they roll them up a little tighter, and incloſe each ſeparately, ſtanding on one End, in an Earthen Veſſel. After that, once in about ten Days, in a ſheltered Place, where there is no Dew, they expoſe the Sheets, for about half an Hour, to the Sun, ſhining bright, after a Shower; and then cloſe them up as before. Some put them into a Lye, made of Mulberry-Tree Aſhes, for a whole Day; and then lay them ſome Moments in Snow-Water, or elſe hang them up three Nights on a Mulberry-Tree, to receive the Snow or Rain, if not too violent. Any of theſe Sorts of Baths render the Silk cloſer and ſtronger, as well as eaſy to wind: But their chief Uſe is, to cheriſh the internal Heat in the Eggs.

THE Time to think of hatching the Eggs, is when the Mulberry-Trees begin to have Leaves; for they are haſtened, or hindered, according to the different Degrees of Heat, or Cold, imparted to them. They are forwarded, if the Sheets be often ſpread abroad, or rolled-up looſely f in laying them by: By doing the contrary they are hindered. When they are ready to come-out, the Eggs ſwell, and their Roundneſs becomes a little pointed. The third Day before they are hatched, about Ten of the Clock, in a clear Sky, a little Wind ſtirring (as is common at that Seaſon) the Rolls of Paper are taken-out of the

[a] *Du Halde's China*, p. 375, & *ſeqq.*

Veſſel,

Veſſel, ſtretched at Length, and hung-up with the Back-ſides towards the Sun, till they acquire a kindly Warmth: Then they are rolled-up cloſe, and ſet upright in the Veſſel, in a warm Place. Next Day the ſame Operation being repeated, the Eggs are obſerved to change Colour, and turn of an Aſh-grey: Then they clap two Sheets together, and roll them tighter, tying the Ends.

THE third Day, towards Night, they unrol the Sheets, and ſtretch them on a fine Mat; the Eggs then appear blackiſh: If there are any Worms hatched, they muſt be caſt-away; for thoſe Worms, which are not hatched with the reſt, never agree with them in the Time of caſting their Slough, of waking, of eating, nor, which is the principal, of making Cods. Theſe odd Worms would much increaſe the Care and Trouble, and occaſion Loſs by putting Things out of Courſe: After this they roll three Sheets together very looſe, and carry them into a pretty warm Place, ſheltered from the South-Wind. Next Day, about Ten or Eleven of the Clock, taking-out the Rolls, and opening them, they find them full of Worms, like little black Ants. The Eggs not hatched in about an Hour afterwards, muſt be thrown-away; as well as thoſe with a flat Head, that are ſhrivelled, and as it were ſcorched, of a ſky-blue, yellow, or Fleſh-Colour; the good Sort being the Colour of a Mountain ſeen at a Diſtance.

IT is adviſeable firſt to weigh the Sheet containing the new-hatched Worms; then to hold it ſloping, and turned almoſt upſide-down, upon a long Sheet of Paper ſtrewed with Mulberry-Leaves, prepared in the Manner before-mentioned. The Smell will attract the little hungry Worms; but the moſt ſluggiſh may be helped down with a Feather, or by gently ſlapping the Back of the Sheet; which being weighed by itſelf, will give exactly the Weight of the Worms: Whence they compute, very nearly, how many Pounds of Leaves will be neceſſary to feed them; alſo the Weight of the Cods they ought to produce, barring Accidents.

THEY next provide a Woman to take Care of the Brood. Before ſhe takes Poſſeſſion of the Room, ſhe muſt waſh herſelf, and put-on proper Attire, that hath no ill Smell: She muſt not have eaten for ſome Time before, nor handled wild Succory; the Smell of which is very prejudicial to the tender Worms: She muſt be cloathed in a ſingle Habit, without Lining, that ſhe may judge the better of the Degree of Warmth in the Place, and accordingly augment, or diminiſh the Fire; for theſe Inſects muſt be very nicely managed before their firſt Moulting. Every Day is a Year to them, and has in it the four Seaſons: The Morning is Spring, the Middle of the Day Summer, the Evening Autumn, and the Night Winter.

Silk-Worms.

IT has been found by Experience, that, 1. As long as the Eggs are kept before they are hatched, they require much Cold. 2. When hatched, and like Ants, they want as much Heat. 3. When become Caterpillars, and near Mewing-Time, they need a moderate Heat. 4. After the great Mewing, they muſt be kept cool. 5. When upon the Decline, and growing old, they ought to be warmed by Degrees. 6. A great Heat is neceſſary when they are working their Cods.

Rules concerning Worms.

EVERY Thing ought to be removed that might incommode them: They have a particular Averſion to Hemp, wet Leaves, or thoſe heated by the Sun, and when newly hatched, to Duſt raiſed by Sweeping; to the Moiſture of the Earth, Flies, and Gnats; the Smell of broiled Fiſh, burnt Hair, Muſk, Smoak; Breath ſmelling of Wine, Ginger, Lettice, wild Succory; all great Noiſes, Naſtineſs, the Rays of the Sun, the Light of a Lamp in the Night; Air paſſing through Holes or Chinks, a high Wind, much Cold, or Heat, and eſpecially a ſudden Change from one to the other. With reſpect to their Food; Leaves covered with Dew, thoſe dried in the Sun, or a high Wind, or tainted with an ill Savour, are the moſt common Cauſes of their Diſtempers. The Leaves ſhould be gathered two or three Days before-hand, and kept in a clean, airy Place, where there is Room enough; not forgetting, during the firſt three Days, to give them the tendereſt Leaves, cut into little Threads with a ſharp Knife, that they may not be bruiſed; which would ſpoil their Taſte. Obſerve alſo, that, in ſtocking yourſelf with Leaves, you make uſe of a wide Net, to prevent their being ſqueezed too cloſe; and that they may dry in carrying, and not wither.

Their Antipathies.

Their Diſeaſes.

AT the End of three or four Days, when they begin to turn white, augment their Food; but cut it not ſo ſmall: When they become blackiſh, they muſt have a greater Quantity of Leaves, whole as from the Tree: As they turn white again, and eat with leſs Appetite, leſſen their Meals a little; leſſen them more as they grow yellow: When they become quite yellow, and are ready to mew, then give them nothing: Every Mewing-time they muſt be treated in the ſame Manner.

Their Mewing.

To be more particular: Theſe Worms eat equally Day and Night. After they are hatched, they muſt have forty-eight Meals the firſt Day; two every Hour: The next thirty; but the Leaves not cut ſo ſmall: The third Day, they muſt have leſs ſtill. If their Food be not proportioned to their Appetite, they will be overheated, which would ruin all. As cloudy and rainy,

The oftener they eat

Inhabitants Claſſes.

rainy Weather takes away their Stomach, immediately, before their Repaſt, light a Wiſp of very dry Straw, the Flame of which muſt be all alike, and held over the Worms, to free them from the Cold and Moiſture that benumbs them; or elſe, remove the Blinds from the Windows, and let in the full Day-light.

The more Silk they yield.

EATING ſo often haſtens their Growth; on which the chief Profit of the Silk-Worms depends. If they come to Maturity in twenty-three or twenty-five Days, a Hurdle covered with b them, whoſe Weight amounted to a *Tſyen*, (which is a little more than a Drachm) will produce twenty-five Ounces of Silk; but if not till twenty-eight Days, they yield no more than twenty Ounces; and but ten, if they are a Month or forty Days in growing.

How dieted.

WHEN they come to full Growth, give them an eaſy Food, a little at a Time, and often, as when young. If they digeſt it not, when they begin to ſpin, the Cods have a ſaltiſh Moiſture, c that renders the Silk very difficult to wind. In a Word, when they have been hatched twenty-four or twenty-five Days, the more their Work is deferred, and the more Leaves they conſume, the leſs Silk they will produce. After they have caſt their Skin, which is a ſickly Affair, you muſt give them Leaves cut ſmall, a few at a Time, but often.

Diſeaſes from Cold,

THEY contract Diſeaſes from either too much Cold or Heat. To prevent the former, a juſt d Heat muſt be kept in their Room. But if a Cold has ſeized them, by the Windows not being cloſe ſhut, or the Mulberry Leaves well dried, it deſtroys their Appetite, and cauſes a Sort of Flux; for, inſtead of Clots, they void a watery Slime: In that Caſe, the Smell of burnt Cow-dung will ſtrangely revive them.

From Heat and

THE Diſorders proceeding from Heat, are occaſioned either by letting the Worms faſt too long, by the Quality and Quantity of their Food, e by an inconvenient Situation, or by the Air becoming ſultry hot of a ſudden. In this laſt Caſe, they open one or more of the Windows; but never on that Side the Wind blows: And if the Air be too hot, they ſet a Veſſel full of Water before the Window. The Room may alſo be ſprinkled with Water. For an Exceſs of internal Heat, they ſtrow over their Food, a little moiſtened, the above-mentioned Meal of Mulberry Leaves, reduced to a very fine Powder, which f invigorates them; but abate an Ounce of Leaves for every Ounce of the Meal.

Want of Room.

THE moſt common and dangerous Sickneſs among the Worms proceeds from Over-heatings, cauſed by an inconvenient or ſtrait Situation: For, as ſoon as they are hatched, they require a great deal of Room; eſpecially when they are a grown Caterpillars, and abound in Moiſture. Though not cleanly themſelves, they ſuffer much by Naſtineſs: Their Clots, which they caſt in abundance, quickly ferment, and heat them, if not timely ſwept-off with a Feather, or, which is better, by often removing the Worms from one Hurdle to another; eſpecially when near Mewing. They muſt all be removed at the ſame Time, and very gently. The leaſt Squeeze, or Fall, would enfeeble them. Some, for a ſpeedy Relief, throw upon them dry Ruſhes, or Straw, cut ſmall, and ſtrowed over with Mulberry Leaves; which draw them out of the Clots that over-heat them. When they become pretty well grown, the Worms belonging to one Hurdle muſt firſt be divided, and put on three new ones; afterwards on ſix; and ſo on to the Number of twenty or more: For being full of Humours, they muſt be kept at a due Diſtance one from another.

THE critical Moment for removing them, is when they are of a bright yellow, and ready to ſpin, into a proper Apartment ready prepared for them to work in. The *Chineſe* Author propoſes a Sort of rough Piece of Timber-work, or long Roof, very little ſloping, and the Inſide clear. This muſt be divided all round into Partitions, each with a Shelf, where they place the Silk-Worms; who will afterwards range themſelves each in his Diſtrict. This Machine ought to have Room for a Man to go-in, and keep a ſmall Fire in the Middle, to defend the Worms from Moiſture and Cold, which are much to be feared at this Time. There muſt be but juſt Fire enough to yield a gentle Heat; which makes the Worms more eager at Work, and the Silk more tranſparent.

THIS numerous Swarm muſt be ſurrounded with Mats at a little Diſtance, which muſt alſo cover the Top of the Machine, to keep-off the outward Air; and, becauſe the Worms love to work in the Dark. However, after the third Day's Work, they take away the Mats from one o'Clock to three, to let the Sun into the Room; but ſo, that the Rays may not ſtrike upon theſe little Labourers. They are preſerved from the Terror of Thunder, and the Lightning, by being covered with the Sheets of Paper that were uſed when on the Hurdles.

IN ſeven Days, the Cods being finiſhed, they are gathered, and laid in Heaps, till they have Time to wind-off the Silk. But they firſt ſet apart the Cods, deſigned for Propagation, upon a Hurdle, in a cool, airy Place: For the Moths being bruiſed, or over-heated, by the Cods lying upon one another, will not ſucceed ſo well, eſpecially the Females, which would lay none but ſickly Eggs. In about ſeven Days more, the

Moths come out of their Cods. To kill the Moths in thoſe you would not have bored, without damaging the Work, is the next Care.

THEY muſt not be put into the Kettle, but as they can be wound-off; for if they were to ſoak too long, it would hurt the Silk: The beſt Way would be, to employ Hands enough to wind them off all together. The *Chineſe* Author affirms, that five Men may wind-off thirty Pound of Cods in a Day, and ſupply two others with as much Silk as they can make into Skains, that is, about ten Pounds: For want of this, he directs three Ways to preſerve the Cods from being bored.

FIRST, To let them lie a whole Day in the Sun; which, though prejudicial to the Silk, certainly kills the Flies. Secondly, To put them in *Balneo Mariæ*; throwing an Ounce of Salt, and half an Ounce of Rape-Oil, into the Copper; which are ſuppoſed to make the Silk better, and eaſier to wind.

THE Machine which holds the Cods muſt go very ſtrait into the Copper; the Top of which muſt be covered and luted, ſo that no Steam may get out. But if this Bath is not rightly ordered, a great Number of the Flies will bore their Cods: Therefore the firm and hard Cods, whoſe Silk is coarſer, may be left longer in *Balneo Mariæ* than the fine and ſlender Cods. When the Flies are killed, the Cods muſt be ſpread upon Mats, and covered, when a little cool, with ſmall Willow or Mulberry Branches.

THE third, and beſt Way of killing the Moths is, to fill great Earthen Veſſels with Cods, in Layers, of ten Pounds each; throwing-in four Ounces of Salt with every Layer, and covering it with large dry Leaves, like thoſe of Water-Lily; then ſtopping the Mouth of the Veſſels very cloſe, the Flies will be ſtifled in ſeven Days: But if the leaſt Air gets in, they will live long enough to pierce their Cods. In laying the Cods in the Veſſels, ſeparate the long, white, and glittering ones, which yield a very fine Silk, from thoſe that are thick, dark, and blue, like the Skin of an Onion, which produce a coarſe Silk.

So much for the Method of raiſing Worms in the Spring, which is the general Seaſon; although ſome hatch Eggs in Summer and Autumn, and almoſt every Month after the Spring-Crop: But were all to do ſo, the Mulberry-Trees would hardly furniſh Food enough: Beſides, if they are exhauſted in one Year, they decay, and fail entirely the Spring following. For this Reaſon the Author holds it beſt, to hatch but few Worms in Summer, and only to provide Eggs for Autumn. He prefers this Seaſon to the Spring for raiſing Worms: 1. Becauſe the Spring being the Seaſon for Rain and Winds in the Southern Parts, the Profit expected from the Labour of theſe Inſects is more uncertain than in Autumn, when the Weather is generally ſerene. 2. Though, in Autumn, the Worms cannot have ſuch tender Leaves as in the Spring, yet they have nothing to fear from the Stings of Gnats and Muſkettos. *China-Ware.* *Raiſing Silk-Worms.*

THE Silk-Worms bred in Summer muſt be kept cool, and the Windows covered with Gauze to keep-out the Gnats. Thoſe raiſed in Autumn, are to be kept cool at firſt; but after their Mews, and when they ſpin, they muſt be kept warmer than in the Spring, becauſe of the cold Night-Air. In ſhort, the Eggs, they lay, do not always anſwer.

IF you keep the Summer-Eggs to be hatched in Autumn, incloſe them in an Earthen Pipkin, and ſet it in a large Pan of cold Spring-Water, which muſt reach as high as the included Eggs: For if the Water be higher, they will periſh; if lower, many will miſcarry for want of Strength. Theſe Directions being obſerved, they will hatch in twenty-one Days; if they be longer, they either die, or make a very bad Sort of Cods. *How to preſerve Eggs.*

WHEN the Silk-Worms are ready to ſpin, if you lay them on the Top of a Cup, covered with Paper, they will ſpin a Piece of Silk flat, thin, and round, like a large Wafer. Theſe are not clogged with that viſcous Matter which the Worms emit in the Shells, when long incloſed. They are likewiſe as eaſy to wind as the Cods, without requiring to be wound in ſo much Hurry. *And ſpin Webs.*

WHEN the Silk is wound-off, they immediately ſet upon manufacturing it; for which the *Chineſe* have very ſimple Inſtruments. But as Figures will convey infinitely a better Idea of them than Words, we have inſerted Plates, repreſenting the various Utenſils that ſerve in managing the Worms, with the ſeveral Tools and Inſtruments employed in working thoſe fine and beautiful Silks which come from *China* [a]. *The Manufacture.*

II. *Of the* China-Ware, *and its Manufacture.*

The Name: Where made: Account, how procured. Heads treated of.

WHAT we call *China*, and *China-Ware*, is by other Nations of *Europe* called *Porcelain*. This laſt Word is not uſed (as ſome have ſuppoſed) by the *Chineſe*, who cannot pronounce the Syllables; not having the Sounds in their Language, nor even the Letter *r*: But, probably, came from the *Portugueze*, who call a *The Name.*

[a] *Du Halde*'s *China*, p. 359, *& ſeqq.*

Inhabitants Claſſes. Cup, or Porringer, *Porcellana*; although they generally give to this Kind of Ware the Name of *Loca*, and the *Chineſe* that of *Tſe-ki* [a].

PORCELAIN is ſo common in the Empire, beſides Earthen-Ware of the uſual Kinds, that the ordinary Utenſils of the Houſe are made of it; as, the Diſhes, Plates, and Cups, Flower-Pots, Jars, and other Veſſels, which ſerve for Ornament as well as Uſe. The Chambers, Cloſets, and even Kitchens, are cumbered with it. The very Maſons employ it to cover Roofs; and, b ſometimes, to incruſt Marble Pillars and the Outſide of Buildings [b].

Where made. THE fine China-Ware, which is of a lovely ſhining White, and a clear Sky-blue, comes all from *King-te-ching*, a Village or Town of the Province of *Kyang-ſi*; but exceeding large and populous [c]. It is not above three Miles [d] diſtant from *Few-lyang*, a City of the third Rank, whereon it depends, lying in the Diſtrict of *Jau-chew fû* [e], one of the Cities of the firſt Rank in c that Province. This curious Ware is made in other Provinces; as thoſe of *Quang-tong* and *Fo-kyen*: But Strangers cannot be deceived therein, being quite of a different Colour and Fineneſs: For that of *Fo-kyen* is as white as Snow, but has no Gloſs, and is not painted with various Colours. The Workmen of *King-te-ching*, allured by the great Trade driven by the *Europeans* at *A-mwi*, formerly carried thither all their Materials, but loſt their Labour; for they could ne- d ver make it there with Succeſs. Others ſucceeded no better at *Pe-king*; whither they were brought by Order of the late Emperor *Kang-hi*: So that *King-te-ching* alone has the Honour to ſupply all the World with Porcelain; which is ſought for even by the *Japanneſe*.

Account, how procured. As *Dentrecolles*, the Jeſuit, had a Church in *King-te-ching*, and there were ſeveral among his Converts, who both made China-Ware, and traded in it, he obtained from them an exact e Knowledge of every Thing relating thereto: Beſides, he had ſeen every Thing himſelf, and conſulted the *Chineſe* Books that treat on this Subject; eſpecially the Hiſtory or Annals of *Few-lyang* before-mentioned: For it is a Cuſtom in *China* for every City to print a Deſcription of its Diſtrict, comprehending its Situation and Extent, Nature of the Soil, and Manners of the Inhabitants; the Perſons diſtinguiſhed for Arms, Learning, or Integrity; the extraordinary Events; above f all, the Merchandizes, and Proviſions, which are exported or ſold there. Theſe Annals, however, make no Mention of the Inventor of China-Ware, nor whether the Diſcovery was owing to Chance or Deſign: They only ſay, that it was exquiſitely white, without any Defect; and, that whatever was exported, had no other Name but *The precious Jewels of* Jau-chew.

Heads treated of. WHATEVER relates to this Manufacture, according to the Jeſuit [f], may be reduced to the following Heads, *viz.* The Materials whereof compoſed, and their Preparation with the Oil or Varniſh with which the China is glazed: The different Kinds of Porcelain, and the Manner of making it: The Colours which embelliſh it, and the Art of laying them on: The Baking, and Method taken to give it a proper Degree of Heat. In the laſt Place, he makes ſome Remarks on the ancient and modern Porcelain; and ſhews, why the *European* Patterns cannot always be imitated by the *Chineſe* Workmen [g].

(1.) *The* Materials *of* China-Ware, *and how prepared; with the* Oil *or* Varniſh *uſed for glazing it.*

Firſt Earth, how prepared. Second Sort of Earth: Its Qualities: How prepared. The She-kau. *Oil of Stone, for glazing. Oil of Lime and Fern. Varniſh of burnt Gold. Gilding and Painting with the Violet Colour.*

PORCELAIN conſiſts of two Sorts of Earth, *Pe-tun-tſe* and *Kau-lin*; which are brought down the River in Barks from *Ki-mwen*, in Form of Bricks [h]: For *King-te-ching* produces no Materials fit for the Purpoſe. The *Kau-lin* *Firſt how prepared.* is mixed with ſhining Particles. The *Pe-tun-tſe* is ſimply white, and of a very fine Grain. This latter is made of Stones; but all Sorts are not fit. The right Sort ought to have a greeniſh Caſt. When they have dug the Pieces of Rock out of the Quarries, they break them with great Iron Mallets, and then, in Mortars, reduce them to very fine Powder. This is caſt into a great Jar full of Water, and ſtirred-up ſtrongly with an Iron Shovel: Then having reſted a few Minutes, there riſes, on the Surface, a Sort of Cream four or five Inches thick; which they take-off, and pour into another Veſſel full of Water. This Work they repeat ſo long as there f appears any Scum at-Top; after which they take-out the groſs Parts at Bottom, and pound them afreſh.

[a] *Du Halde*'s *China*, p. 339. [b] *Le Comte*'s Memoirs of *China*, p. 150. [c] See before, *p.* 30. [d] Rather, Leagues. [e] *King-te-ching* is about forty Miles from *Jau-chew*. [f] This Account is taken from the *Lettres Edifiantes*, where there are two Pieces written by *Dentrecolles* on the Subject. [g] *Du Halde*, as before, *p.* 338, *& ſeq.* [h] Some Authors pretend, that Porcelain is compoſed of Egg-Shells, or Shells of a certain Fiſh, buried for twenty, thirty, or an hundred Years.

WITH

WITH Regard to the ſecond Jar, they wait a till there is formed at the Bottom a Kind of Paſte; then pouring the Water gently off, throw the Paſte into large wooden Moulds, to dry: But before it is quite hard, they divide it into ſmall Bricks, which they ſell by Hundreds; and to this Shape, and its Colour, it owes the Name of *Pe-tun-tſe*: But as the Makers generally mix it with groſſer Matter, the Workmen are obliged to purify it again at *King-te-ching*, before they uſe it.

THE *Kau-lin* is found in pretty deep Quarries, in the Heart of certain Mountains, whoſe Surface is covered with a reddiſh Earth. It is found in Lumps, and made into Bricks in the ſame Manner as the *Pe-tun-tſe* [a]. The fine Porcelain receives its Firmneſs from the *Kau-lin*: Though they have lately found-out a Kind of ſoft Stone, or Crayon, which is uſed in the Room of *Kau-lin*, called *Wha-ſhê*, becauſe it is glutinous, and partakes ſomething of the Nature of Soap. The China made of it is ſcarce, and much dearer than the other Sort [b]: The Grain of it is exceedingly finer, and the Painting far better: It is alſo vaſtly lighter, but much more brittle; and it is difficult to hit upon the true Degrees of baking it. Some content themſelves to make a fine Glue of it, wherein they dip the Porcelain when it is dry, that it may take one Lay before it receives the Colour and Varniſh; by which Means it acquires a good deal of Beauty.

WHEN they have taken the *Wha-ſhê* out of the Quarry, they waſh it in River, or Rain-Water, to ſeparate the yellow Earth that ſticks to it. They then break it, and put it into a Tub of Water to diſſolve, preparing it in the ſame Manner as the *Kau-lin*. It is affirmed, that Porcelain may be made of it, thus prepared, without any Mixture. One of the Jeſuit's Converts, to eight Parts of it put two of *Pe-tun-tſe*: They ſay, if more of the latter be added, the Porcelain will ſink down in the Oven, for Want of a Body, or rather a proper Coheſion of the Parts. Sometimes they diſſolve a Parcel of the *Wha-ſhê* Bricks in Water, and making a very clear Paſte of it, with a Pencil dipped therein, trace ſeveral Fancies upon the Porcelain; to which, after it is dry, they give the Varniſh. When it is baked, theſe Deſigns appear, being of a different White, and not unlike a thin Vapour ſpread over the Surface. The White of the *Wha-ſhê* is called *White of Ivory*.

THEY paint Figures on the Porcelain, alſo with *She-kau*, a Kind of Stone, or Mineral like Alum; which gives another Kind of white Colour. Before it is prepared, it muſt be burnt; afterwards they break it, and manage it like the *Wha-ſhê*, in order to procure the Cream. *China-Ware.* *The* She-kau.

BESIDES the Barks loaded with *Pe-tun-tſe* and *Kau-lin*, which lie along the Bank-Side at *King-te-ching*; there are others full of a whitiſh liquid Subſtance: They call it *Pe-yew*, or *Oil of Stone*; but the Name *Tſi*, or *Varniſh*, would be more proper than that of *Yew*, or *Oil*. It is produced from a very hard Stone [c], which they chuſe before the *Pe-tun-tſe*; becauſe whiter, and the Spots of a deeper Green. The Hiſtory of *Few-lyang*, though it does not enter into Particulars, ſays, the Stone proper for the Oil has Spots of the Colour of Cypreſs-Leaves, or red Marks on a browniſh Ground, much like the Plant called *Toad-Flax*. *Oil of Stone for glazing.*

THIS Stone having been prepared like the *Pe-tun-tſe*, and the Cream, or pureſt Part, put into the ſecond Jar; to about an hundred Pounds thereof they add a Pound of *She-kau*, made red-hot in the Fire, and beaten ſmall. This is, as it were, the Rennet which gives it a Conſiſtence, though they take Care to keep it always liquid.

THIS Oil of Stone is never uſed alone; but is mixed with another, which is, as it were, the Soul of it. They make ſeveral Strata, or Lays of quick Lime, reduced to Powder (by throwing on a little Water with their Hands) with Lays of dry Fern [d] between; and then ſetting Fire to the Fern, when the Whole is conſumed, divide the Aſhes between five or ſix new Lays of dry Fern; or, if more, the Oil will be ſo much the better. Having gotten a ſufficient Quantity of the Aſhes of Lime and Fern, they throw them into a Veſſel full of Water, adding one Pound of *She-kau* to an hundred Pound of it. By ſtirring the Mixture well, a Skin or Cruſt appears upon the Surface, which is put into a ſecond Veſſel; and when there is formed a Kind of liquid Paſte at the Bottom, they pour-off the Water; and this is the ſecond Oil, which is to be mixed with the preceding for this Purpoſe. Both ought to be equally thick, which they try by dipping ſmall Bricks of *Pe-tun-tſe* into each. Ten Meaſures of Oil of Stone ought to be mixed with one of the Oil of Fern and Lime-Aſhes: The moſt ſparing never put-in leſs than three Meaſures. This Oil may be adulterated and increaſed, by putting Water to it; and, to conceal *Oil of Lime and Fern.*

[a] The Author believes, that the white Earth of *Malta*, called *St. Paul's Earth*, is of the ſame Nature, though without the ſhining Particles. [b] The Author ſays, a Load of *Wha-ſhê* coſts a Crown; that of *Kau-lin*, but twenty Sous. [c] This, ſays the Author, is not ſtrange, ſince it is pretended, that Stones are formed of the Salts and Oils of the Earth. [d] Formerly, beſides Fern, they uſed the Wood of the Tree, which bears a Fruit like a Medlar, called *Se-tſe*: But it is now ſcarce; and hence, perhaps, the China-Ware made at preſent is not ſo beautiful.

Inhabitants Classes.

the Fraud, adding *She-kau* in Proportion; which hinders the Matter from being too liquid.

Varniſh of burnt Gold.

THERE is another Kind of new-invented Varniſh, called *Tſi-kin*, that is, *Varniſh of burned Gold:* But the Author ſhould rather call it *Varniſh of the Colour of Caſt-Braſs, of Coffee,* or *of a dead Leaf.* This is drawn from common yellow Earth, in the ſame Manner as the *Pe-tun-tſe*; and, when prepared, they uſe none but the fineſt Matter, which they caſt into Water, and make a Kind of Glue of, about the Thickneſs b of the *Pe-yew*, or common Varniſh, with which it is mixed. Both muſt be of an equal Conſiſtence; and if the Varniſhes enter the *Pe-tun-tſe* Bricks, when dipped in them, they are deemed fit for incorporating. They likewiſe put into the *Tſi-kin*, Oil of Lime and Fern-Aſhes, of the ſame Conſiſtence as the *Pe-yew*; mixing more or leſs of theſe two Varniſhes with the *Tſi-kin*, according as they would have it, deeper or clearer; to know which, ſeveral Trials muſt be made. c For Inſtance, they put two Cups full of the *Tſi-kin* to eight of the *Pe-yew*; and to four Cups full of this Mixture, they put one Cup of Varniſh made of Lime and Fern.

Gilding and Painting with Violet.

A FEW Years ago they found the Art to paint with the *Tſwi* [a], or Violet-Colour; and to gild the China. They have alſo tried to apply a Mixture of Leaf-Gold with Varniſh and Powder of Flint, in the ſame Manner as they do the red Oil: But they found, that the *Tſi-kin* Varniſh d looked more beautiful and gloſſy. At one Time they made Cups, laying the gilt Varniſh on the Outſide, and the pure White within: But they have varied their Method ſince, by ſticking in one or two Places, a round or ſquare Piece of wet Paper; which, as ſoon as the *Tſi-kin* was laid-on, they took-off, and then painted the Spots with red or blue; varniſhing them alſo when the Ware was dry. Some filled-up theſe empty Spaces with a blue or black Ground, in e order to gild them after the firſt Baking [b].

(2.) *Manner of making* China-Ware.

The Manufactory. Materials, how prepared, and mixed. China made with the Wheel; and in Moulds. Mould, how uſed; and how made.

The Manufactory.

IN the leaſt-frequented Part of *King-te-ching*, they have incloſed a Place with Walls, where f they have built vaſt Penthouſes, under which appears abundance of Earthen-Veſſels, in Rows one above another. Within this Incloſure an infinite Number of Workmen live and work, each having his particular Taſk. One Piece of China-Ware, before it is fit for the Furnace, paſſes through the Hands of above twenty Perſons, and of ſeventy before it is baked.

THE firſt Labour conſiſts in purifying the *Pe-tun-tſe* and *Kau-lin*, from the groſſer Parts: The former is managed in the ſame Manner as it was by the Maker. The Pieces of *Kau-lin* being put whole into a very clean Baſket, and ſo let-down into a Veſſel full of Water, diſſolve of themſelves.

THESE two Materials being thus prepared, muſt be mixed in a juſt Proportion: For making fine China-Ware, there goes an equal Quantity of each; for the middle Sort, they put four Parts of *Kau-lin* to ſix of *Pe-tun-tſe*; and for the worſt, they allow one Part of the former to three of the latter. This done, they throw the Maſs into a large hollow Place, well-paved, and plaiſtered, where they tread, and knead it till it grows hard. This Work is very laborious, and continually going forward to ſupply the Workmen. The Matter being thus wrought, they ſpread Pieces of it on Slates, where they knead and roll it every Way, taking Care that there be no hollow Places in it, or any foreign Matter mixed with it; for a Hair, or a Grain of Sand, would ſpoil the Ware: And if the Maſs is not well-kneaded, the China will crack, ſplit, run, and warp. Of this Paſte the Porcelain-Veſſels are made; ſome with the Wheel, others in Moulds only, and afterwards finiſhed with the Chiſel.

ALL the ſmooth Ware are made with the Wheel. A Tea-Cup, when it comes from that Engine, is very imperfect, not unlike the Crown of a Hat, before it is formed on the Block. The Workman gives it the Wideneſs and Height required, and parts with it almoſt as ſoon as he has taken it in Hand; for he gets but three Derniers (or the Value of Half a Farthing) for a Board; and every Board contains twenty-ſix Pieces. The Foot of the Cup is nothing then but a ſhapeleſs Piece of Earth, which is hollowed with a Chiſel, when the Cup is dry, and has received all the Ornaments intended for it. From the Wheel it paſſes to a ſecond Workman, who places it on its Foot; and ſoon after to a third, who puts it in a Mould (fixed on a Sort of turning Wheel) and gives it the Figure: A fourth poliſhes the Cup with a Chiſel, eſpecially towards the Edges; and to make it of a proper Thinneſs, to render it tranſparent, ſcrapes it ſeveral Times, moiſtening it a very little, if dry, leſt it ſhould break. When the Cup is taken-out of the Mould, it muſt be rolled gently thereon, without preſſing it more on one Side than the other; for elſe it would not be exactly round, or would warp.

THE great Pieces of Porcelain are made at twice:

[a] Rather *Tſyu*. See afterwards.

[b] *Du Halde's China*, p. 339, *& ſeqq.*

twice: One Half is ſupported upon the Wheel a by three or four Men, while it is ſhaping; and the other Half being almoſt dry, is joined to it, by Means of ſome of the ſame Matter moiſtened in Water, which ſerves inſtead of Mortar, or Glue. When the Whole is quite dry, they trim the joining Place with a Knife, on both Sides; which, when varniſhed, looks as ſmooth as the reſt. By the ſame Means they apply Handles, Ears, Relievos ready prepared, and other Parts, to the Veſſels. In like Manner Mould- b Works, that are fluted, or repreſenting Animals, groteſque Figures, Idols, Buſts, beſpoken by the *Europeans*, and the like, conſiſt of three or four Pieces, which are joined, and finiſhed with Inſtruments proper to hollow, poliſh them, and add ſeveral Touches wanting in the Mould. Flowers and other Ornaments, that ſeem, as it were, engraved, are impreſſed on the China with Seals and Moulds.

WHEN a Model is given them, which they c cannot imitate by the Wheel, they take the Impreſſion with a Sort of Earth; and then ſeparating the Mould, in ſeveral Pieces, from the Model, let it dry gently. Having ſet this Mould near the Fire for ſome Time before they uſe it, they put-in Stuff, according to the Thickneſs the China is to be of, and preſs it in every-where with the Hand: Then placing it for a Minute or ſo at the Fire, the Figure looſens from the Mould; and the different Parts thus worked ſe- d parately, are united again with the Stuff made ſomewhat liquid. The Author had ſeen Figures of Animals thus made quite ſolid. They firſt let the Maſs harden; then giving it the Figure propoſed, finiſhed it with a Chiſel, or added Parts that were made ſeparately. It is next varniſhed and baked; then being painted and gilded, is baked a ſecond Time. Such Sort of Works, which are very troubleſome to make, and extreamly dear, ought to be ſheltered from the e Cold; for when they do not dry equally, the Parts that are moiſt, crack; to avoid which, they ſometimes make Fires in the Laboratories.

THE Moulds are made of a yellow, fat Earth, found not far from *King-te-ching*. They firſt knead it, and when it is become ſomewhat hard, beat it very much; then giving it the Figure required, finiſh it upon the Wheel. To haſten a Work, a great Number of Moulds are made, for employing ſeveral Workmen at the ſame f Time; and with Care they will laſt a long While: When cracked too, or flawed, they may be repaired [a].

(3.) Colours *for embelliſhing* China, *and the Art of laying them on.* *China-Ware.*

China-Ware Painters. The Azure, or Lapis Armenus, *how prepared: Where found. The red Colour. Other Colours, how made. Red Oil Colour. The blown Red. Compound Colours: Of White: Of Green: Of Yellow: Of Black: Of Violet-Colour, and how prepared. Unvarniſhed China: Colours proper for it. Black China-Ware. Pinked China. Marbled China. Olive China. Tranſmutation China. Gilding and ſtrengthening the Edges. Exceeding white Varniſh. Cautions in Baking. Figured China: A curious Sort. Art in Varniſhing.*

THE *Wha-pey*, or Painters, are as poor as the other Workmen: They are ignorant of all Rules, and generally perform no better than an *European*, who had ſerved at the Trade but a few Months: For all this, they have a Knack of painting Porcelain, as well as fine Gauze, Fans, and Lanthorns, with Flowers, Animals, and Landſkips; which are juſtly admired. *China-Ware Painters.*

THE Painting-Part is divided, in the ſame Work-houſe, among a great Number of Hands. It is the ſole Buſineſs of one to ſtrike the firſt-coloured Circle, near the Edges of the Ware: Another traces the Flowers; which are painted by a third. It belongs to one to draw Rivers and Mountains; to another Birds, and other Animals: As for the Figures of Men, they are commonly the worſt done of all.

CHINA is made of all Colours. The Ground of ſome is like our Burning-Glaſſes; that of others is quite red, done either with Oil-red, or Blown-red, and froſted with little Points, like our Paintings in Water-Colours. In ſhort, ſome e are painted with Landſkips, ſet-off with Gilding: All theſe Sorts are very beautiful, but extreamly dear.

THE Annals of *King-te-ching* ſay, that formerly People made uſe only of white Porcelain. It was firſt painted with the *Lyau*, or *Azure* [b]; which is thus prepared: Firſt, They calcine it, by burying it for twenty-four Hours in the Gravel of the Furnace, before it is heated, incloſed in a Porcelain Box well luted; then they reduce it to an impalpable Powder, as they do other Colours, in great Porcelain Mortars, whoſe Bottoms, as well as Peſtel-Heads, are unglazed; and paſſing it through a Searſe, put it into a glazed Veſſel, pouring thereon boiling Water: Then ſtirring it about, they take-off the Scum, and decant the Water very gently. This muſt be *The Azure, how prepared.*

[a] *Du Halde's China*, p. 342, & *ſeq.*

[b] This is *Lapis Armenus.*

repeated

Inhabitants Classes.

repeated twice. After which, they grind the Blue, while yet moiſt, and like a very fine Paſte, for a conſiderable Time in a Mortar.

Where found. THE Author was aſſured, that this Azure is found in Coal-Pits, or among the red Earth that lies near them; wherever any of it appears on the Surface, more will be found by digging. It exiſts in the Mine in ſmall Pieces, about the Bigneſs of the middle Finger; but flat, and not round. The coarſe Azure is common enough; but the fine is very ſcarce, and not eaſily diſtinguiſhed by the Eye: They try it by painting a Cup, and then baking it. Could *Europe* furniſh this fine *Lyau*, or *Azure*, and the beautiful *Tſyu* [a], which is a Kind of Violet, they would be charming Commodities for *King-te-ching*. The latter is ſold for a *Lyang* and eight *Tſyen*, or nine *Francs*, the Pound; and a Box of fine *Lyau*, containing only ten Ounces, for two *Lyangs*, which is twenty Sous an Ounce.

The red Colour. THE Red is made of *Tſau-fan*, or Copperas. They put a Pound of it into a Crucible, which they lute well to another. On the Top of this laſt there is a ſmall Opening, covered in ſuch a Manner, that it may be eaſily uncovered when there is Occaſion: Then they put kindled Charcoal all about it; and, to make the Reverberation the ſtronger, encloſe it with Bricks. The Matter is not brought to Perfection till the black Smoak ceaſes, and a Kind of a ſmall, thin Cloud ſucceeds. Then taking a little of this Matter, and moiſtening it with Water, they try it upon Fir-wood: If it produces a bright Red, they take away the Fire; and when it is quite cold, they find a ſmall Cake of Red at the Bottom of the Crucible: But the fineſt Red adheres to the Crucible that is above. A Pound of Copperas yields four Ounces of Red.

Other Colours, how made. THOUGH the Porcelain is naturally white, and becomes ſtill more ſo by Means of the Glazing, yet a white Colour is ſometimes uſed in painting it. This White is made with a Powder of tranſparent Flint, calcined in the Furnace, after the ſame Manner as the *Lapis Armenus*, or *Azure*. To half an Ounce of this Powder they add an Ounce of powdered Ceruſe, or White-Lead; which alſo enters into the Compoſition of the Colours. For Inſtance, to make a Green, to one Ounce of Ceruſe, and half an Ounce of powdered Flint, they add three of what they call *Tong-wha-pyen*; which, according to the Information the Author could get, muſt be the fineſt Scales of hammered Copper. The Green thus prepared, becomes the Mother of the Violet, which is made by adding a Quantity of the White; and is the deeper, the more there is of the Preparation of Green. The Yellow is made by mixing ſeven Drachms of prepared White with three Drachms of the Copperas Red. The above-mentioned Colours applied to Porcelain, after it has been varniſhed and baked, do not appear till it has received the ſecond Baking. According to the *Chineſe* Book, they are laid on with Ceruſe, Saltpetre, and Copperas: But the *Chriſtian* Potters mentioned nothing but White-Lead; which is mixed with the Colour when diſſolved in Gum-Water.

b THE red Oil-Colour, called *Yew-li-hong*, is made with the Powder of red Copper, and that of a Stone, or Flint, which has a reddiſh Caſt. A *Chriſtian* Phyſician told *Dentrecolles*, that this Stone was a Kind of Alum, uſed in Phyſic. They beat the whole in a Mortar; mixing with it young Mens Urine and the Oil of *Pe-yew*: But the Author could never diſcover the Quantities of theſe Ingredients; which they make a Secret. They lay this Compoſition on the China,

c without employing any other Varniſh; taking Care, that, in the Baking, it does not run to the Bottom of the Cup. This Copper-Powder is made of the Copper and Lead ſeparated from the Silver Ingots of baſe Alloy uſed for Money. Before the melted Copper congeals, they dip a Bruſh ſlightly in Water, and, ſtriking the Handle of it, ſprinkle the Water on the Copper. This cauſes a Skin to riſe upon the Surface, which they take-up with ſmall Iron Tongs, and plunge into

d cold Water: Whence the Copper-Powder is made; which increaſes as often as they repeat the Operation. The Author is of Opinion, that if the Copperas was diſſolved in *Aqua-fortis*, this Powder of Copper would be fitter for the Red. But the *Chineſe* have not the Art of making either that or *Aqua-regia*.

To make the other Kind of Porcelain, with *Che-wi-hong*, or Blown-red: They take a Pipe, and covering one End with a fine Gauze, apply

e it gently to the red Powder ready prepared, which the Gauze takes-up; then blowing through the other End upon the China, it appears covered with ſmall red Specks. This Sort of Ware is ſtill dearer and ſcarcer than the former; becauſe more difficult to make. The Blue is blown on with more Eaſe. They could duſt it over with Gold and Silver in the ſame Manner, if any would be at the Expence. They ſometimes blow the Varniſh on, when the Porcelain is ſo fine and ſlender

f that it cannot be handled, unleſs laid on Cotton. Of which Sort ſome were made for *Kang-hi*.

THEY compound the Red, which is made of *Tſau-fan*, or Copperas, thus: To a *Lyang*, or *Taël* [b], of Ceruſe, they put two *Tſyen* of this Red, and mix them dry, by paſſing both together through a Searſe. Then they incorporate the

[a] Called *Tſwi* before, *p.* 148. c.

[b] See the Weights, *p.* 136.

with Water and common Glue, reduced to the Conſiſtence of Fiſh-Glue. This cauſes the Red to ſtick when applied to the China, and prevents its running.

To make a White, they add to one *Lyang* of Ceruſe, three *Tſyen*, and three *Fwen* of the impalpable Powder of the moſt tranſparent Flints, calcined in the Gravel of a Furnace, as before-mentioned; making uſe of Water, only to incorporate them [a].

THEY make a deep Green, by adding to a *Lyang* of Ceruſe, three *Tſyen*, and three *Fwen* of the Powder of Flints, with eight *Fwen*, or near a *Tſyen* of *Tong-wha-pyen*. This laſt is nothing but the Droſs of the Scales of Copper, that fly-off on hammering it, when melted, freed from the leaſt Particles of that Metal which are not proper for a Green.

As for the yellow Colour; it is made by adding a *Lyang* of Ceruſe, three *Tſyen*, and three *Fwen* of the Powder of Flints, and one *Fwen*, eight *Li*, of pure Red: But ſome put two *Fwen* and an half of this laſt. One Part green to two Parts white, makes a very bright Sea-green. Two Cups full of a deep Green to one of a Yellow, make the *Kû-lû* Green; which reſembles a Leaf ſomewhat faded.

To make a Black, they reduce the Azure with Water to a thickiſh Liquid, mixing therewith common Glue macerated in Lime, and boiled to the Conſiſtence of Mouth-Glue. When they have painted the Porcelain, that is to be baked over-again, with this Colour, they cover the Places with White; and, in baking, the White incorporates with the Black, like the common Varniſh with the Blue.

A *LYANG* of Ceruſe, three *Tſyen*, and three *Fwen* of the Powder of Flints, and two *Li* of Azure, make a deep Blue inclining to a Violet. Some think, there ſhould be eight *Li* of the Azure. The deep Violet is made of the *Tſyu* [b]; which is a Stone or Mineral reſembling *Roman* Vitriol. The Author, by the Anſwers he received to his Queſtions, concludes it to be gotten-out of the Lead-Mines; and that hence it inſinuates itſelf, like the Ceruſe, into the China. It is found at *Kanton*: But that which comes from *Pe-king* is beſt; being ſold for a *Lyang* and eight *Tſyen* [c] a Pound. When melted, or ſoftned, the Goldſmiths uſe it like Enamel; putting it on a ſlight Lay of either common or Fiſh-Glue, to prevent its wearing-off.

To prepare the *Tſyu*, they reduce it to a fine Powder, which they cleanſe by ſtirring it in a Veſſel full of Water; the Cryſtal falling to the Bottom. The Maſs thus moiſtened, loſes its fine Colour, and ſeems inclinable to an Aſh; but recovers its Violet Hue again, as ſoon as the Porcelain is baked. The *Tſyu* will keep as long as they deſire; and when they go to paint, it is ſufficient to moiſten it with Water, mixed, if they think proper, with a little common Glue. This, as well as the other Colours before-ſpoken of, is uſed only upon China baked a ſecond Time. *China-Ware.*

To gild or ſilver China-Ware, they add two *Fwen* of Ceruſe to two *Tſyen* of Gold or Silver Leaves, carefully diſſolved. The Silver has a great Luſtre upon the Varniſh *Tſi-kin*. But the ſilvered Veſſels ought not to remain ſo long in the little Furnace, or Oven, as thoſe that are gilt; becauſe the Silver would diſappear before the Gold would attain a proper Luſtre.

THEY ſometimes take Diſhes, that have been already baked in the great Furnace, but not varniſhed, and dip them in the Veſſel wherein the Colour is prepared, if they would have them all of the ſame Colour: But, if of different Colours, like the Ware called *Whang-lû-wan*, which are divided into Squares, one green, another yellow, *&c.* they lay-on theſe Colours with a large Pencil. This is all they do to this Sort of China; unleſs, that, after it is baked in the great Oven, they put a little Vermilion on the Mouths of ſome Animals, or the like: For this Colour diſappears in the Fire, neither is it very laſting. *Unvarniſhed China,*

Likewiſe, in baking them a ſecond Time, they muſt be placed at the Bottom of the Furnace, and under the Vent-Hole, where the Fire is not ſo fierce; becauſe a ſtrong Fire would diſcharge the Colours.

COLOURS proper for this Sort of Porcelain are prepared thus: To make a Green, they take *Tong-wha-pyen*, Saltpetre, and Powder of Flints; but in what Proportion, the Author could not learn. When they are reduced ſeparately into an impalpable Powder, they are to be incorporated together with Water. The moſt common Blue, mixed with Saltpetre and Powder of Flints, makes a Violet. The Yellow is made by adding, for Inſtance, three *Tſyen* of Copperas-Red to three Ounces of Powder of Flints, and three Ounces of White-Lead. To make the White, they put four *Tſyen* of the Powder of Flints to a *Lyang* of Ceruſe. *Colours proper for it.*

THE Colour of the black Porcelain, called *U-myen*, is of a Lead Kind, reſembling that of burning Glaſſes; and the Gold they add, makes it yet more agreeable. They mix three Ounces of Azure with ſeven of common Oil of Stone, and lay it on when the China is dry. By varying the Proportion, you may have the Colour *Black China-Ware.*

[b] Before called *Tſwi.*

[c] That is, nine Livres, or about eight Shillings and Three-pence.

more

Inhabitants Classes.

more or less deep. After baking it, they apply a the Gold; and then bake it over-again in a particular Furnace.

THE shining or Looking-Glass Black, called *U-king*, (which owes its Origin to a Caprice of the Furnace) is given to the China by dipping it in a liquid Mixture of prepared Azure, a little thickish: To ten Ounces of powdered Azure (the finest is not necessary) they put one Cup of *Tsi-kin*, seven of *Pe-yew*, and two of Oil of Ashes of Fern burnt with Lime. This Mixture b carries its Varnish along with it in baking. This Sort of Ware ought to be placed towards the Middle of the Furnace, and not near the Arch, where the Fire is most fierce.

Pinked China.

THEY make a Kind of Porcelain, almost pierced through, like pinked Work, with a Cup in the Middle; which makes but one Piece with the Part that is pinked. This Sort the Author had not seen: But he saw other Ware, whereon the *Chinese* and *Tartarian* Ladies were painted to c the Life; the Drapery, the Complexion, and Features, being curiously expressed, and, at a Distance, appeared to be enamelled.

Marbled China.

IT is observable, that when the Oil of white Flints only is used on the Ware, it becomes a particular Sort, called *Tswi-ki*, being marbled, and full of an infinite Number of Veins; so that, at a Distance, it seems as if it had been broken to Pieces, and put together again; exhibiting a Sort of *Mosaic* Work [a]. The Colour that this d Oil gives is a White, a little upon the Ash; and in case the China be blue, on applying this Oil, it will appear marbled, and as if it were cracked, when the Colour becomes dry.

Olive China.

PORCELAIN, called *Long-tsivn*, inclining to an Olive-Colour, was the Fashion in *China* when *Dentrecolles* wrote. Some of it is named *Tsing-ko*, from a Fruit much like an Olive. They give the China this Colour by mixing seven Cups of the *Tsi-kin* Varnish with four Cups e of the *Pe-yew*, two Cups, or thereabouts, of Oil of Lime and Fern-Ashes, and one Cup of *Tswi-yew*, or the Oil of Flints. The *Tswi-yew* causes a Number of small Veins to appear on the Porcelain; but if applied alone, the Ware is brittle, and yields no Sound.

Transmutation China.

THEY brought the Author a Piece of Porcelain called *Yau-pyen*, or *Transmutation*; perhaps, owing either to the Defect or Excess of Heat in the Furnace. The Workmen intended to make f Vessels of Blown-red, but an hundred Pieces were entirely lost; and that in Question came out of the Furnace like a Kind of Agate.

Gilding, and

WHEN they are ready for Gilding, they grind the Gold small, and dissolve it in a China Cup, till it settles into a Kind of Hemisphere. They there let it dry; and when they want it, dissolve it by Bits in Gum-Water. With thirty Parts of Gold they incorporate three Parts of Ceruse, and lay it on the Ware as they do Colours. As the Gold thus applied grows dull after a-while, they restore it, by moistening the China with fair Water, and rubbing the Gilding afterwards with a Piece of Agate. But they must be careful to rub the Vessel always the same Way; for Instance, from Right to Left.

To prevent the Edges of the China from flawing, they strengthen them with powdered Charcoal made of Bambû, stripped of its green Rind [b]; mixing it with the Varnish, which it renders of an Ash-Colour-Grey. They lay this Mixture with a Pencil on the Edges of the dry China, going to be put on the Wheel. The Author believes, that Charcoal, made of the Willow, or, rather, Elder-Tree, which partakes something of the Nature of Bambû, may supply the Want of it in *Europe*. He also observed, that before the Varnish is laid on the China, (the fine especially) they smooth it, by taking-off the smallest Inequalities with a Pencil made of very small Feathers, which they just moisten in Water, and pass lightly over all the Vessel.

WHEN they would give the Ware an uncommon Whiteness, either for Sake of that Colour, or to paint, gild, and bake it again, they put thirteen Cups of *Pe-yew* to one Cup of Fern Pot-Ashes, made equally fluid. The China on which this Varnish is laid, may be exposed to the intensest Heat of the Furnace. But it is so strong, that when they intend to paint the Ware blue, they put only seven Cups of *Pe-yew* to one Cup of the Lime and Fern-Ashes Varnish; otherwise, after baking, the Colour will not appear through it.

IT is proper to observe, that the Porcelain done-over with the Varnish, which contains much Fern-Ashes, ought to be baked in a temperate Part of the Furnace, that is, next the three first Rows, about a Foot or Foot and half from the Bottom: For if placed at-Top, the Ashes would quickly melt, and run to the Bottom of the Ware [c]. The same happens to the Oil-red, the Blown-red, and the *Long-tswi* occasioned by the Copper-Powder, an Ingredient of this Varnish: That Station is proper for the China done-over with the *Tswi-yew* Varnish which produces the Veins.

WHEN the Vessel is to be entirely blue, the

[a] This is the Sort with which *Le Comte* was much taken; and supposes to be effected by exposing the bak China, when hot, to the cold Air. See his Memoirs of *China*, p. 150. [b] They affirm, the Ashes of t Rind would make the China crack in the Furnace. [c] If a Copper Farthing was put a-Top of one of upper Piles, it would, when melted, pierce all the Cases and Vessels immediately under it, making a H through every one of them.

dip it into *Lyau*, or Azure, prepared and moiſtened in Water to a proper Conſiſtence. As for the Blown-blue, called *Tſwi-tſing*, they uſe the fineſt Azure prepared in the Manner already explained: They blow it on the Veſſel; and when dry, give it the ordinary Varniſh, either alone, or mixed with *Tſwi-yew*, if they would have it veined.

THERE are Workmen who trace upon the dry Azure, whether blown or otherwiſe, Figures, with a long Needle, which appear when the Ware is varniſhed and baked. There is not ſo much Labour beſtowed as one would imagine on the China emboſſed with Flowers, Dragons, and ſuch like Fancies: For, after tracing them with an Engraver, they only make ſlight Notches about them to give a Relievo, and then lay-on the Varniſh.

THERE is a Kind of Porcelain which is made in the Manner following: They, firſt, lay-on the ordinary Varniſh, and bake it; then, painting it, bake it again. Recourſe is often had to the ſecond Baking, purely to hide Defects, by applying Colours to the faulty Places. The Load of Colours on this Sort of China recommends it to a great many People; but one uſually perceives Inequalities in it.

THE Colours being incorporated with the baked and varniſhed China-Ware, by Means of the Ceruſe, gave Riſe to a Conjecture of the Author, that if White-Lead was likewiſe uſed in the Colours painted on Glaſs, and the Glaſs afterwards baked a ſecond Time, the Art of painting thereon might be recovered.

ON this Occaſion he obſerves, that the *Chineſe* had once the Art of painting Fiſh, or other Animals, on the Sides of a Porcelain Veſſel; which did not ſhew themſelves till the Veſſel was full of Liquor. They call this Kind of China-Ware *Kya-tſing*, that is, *Azure put in a Preſs*. What they have preſerved of the Art is as follows: The Veſſels, to be painted in this Manner, muſt be very thin. They lay-on the Colour pretty ſtrongly on the Inſide; and generally paint Fiſh, as moſt proper for the Purpoſe. The Colour being dry, they ſpread on it a thin Lay of Porcelain Paſte; then varniſhing the Inſide of the Veſſel, put it on the Wheel. They make the Outſide as thin as poſſible; and then dipping it in the Varniſh, bake it in the common Furnace. It may be ſaid, that, even at preſent, the fineſt Azure revives upon the China, after having diſappeared: For when they lay it on the Ware, it is of a paliſh Black; but when dry and varniſhed, it is entirely hidden, the Ware becoming white; but the Fire diſcloſes all the Beauty of the Colours.

AFTER all, there is a great deal of Art in laying-on the Oil, or Varniſh, with reſpect both to Quantity and Equality. China that is thin and ſlender, is done over with it twice very ſlightly: For if the Lay ſhould be too thick, the Ware would warp immediately. Theſe two Lays are equivalent to one, commonly given to the fine Porcelain of a ſtronger Make; and are applied, the firſt by ſprinkling, and the other by dipping. They take the Cup by the Outſide in one Hand, and holding it ſloping over the Pot of Varniſh, with the other throw into it as much as will ſprinkle it all over: This is repeated to a great Number of Cups; and as ſoon as the firſt becomes dry, to oil them without, they put one Hand within the Cup, and, with the other, applying a ſmall Stick to the Middle of the Foot, dip it quick into the Veſſel. *China-Ware. Art in Varniſhing.*

IT has been ſaid before, that the Foot of the Cup is left unfaſhioned; and, in reality, it is not put-on the Wheel to be hollowed, till after it has been varniſhed. Within the Hollow they paint a ſmall Circle, and, often, a *Chineſe* Character; and then varniſh it, which is the finiſhing Stroke: For immediately after, it is carried from the Laboratory to the Oven [a].

(4.) *The* Furnaces, *or* Ovens, *for baking the* China.

Furnace, how built. Veſſels, how ranged. Oven, how heated. Caſes for baking the China: How piled: What Earth made of. Structure of the Oven. The Spy-Holes. Baking, how managed. Signs when finiſhed. The Quantity of Wood.

THE Furnaces of this Kind, when ſmall, may be made of Iron; but they are generally of Earth. That which *Dentrecolles* ſaw, was about a Man's Height, and almoſt as bulky as a Wine-Caſk. It was built with a Sort of large ſquare Tiles, about half an Inch thick, a Foot and half long, and a Foot broad, placed one upon another, and very well cemented; having been ſo ordered, before they were baked, as when laid-together, to ſuit the Roundneſs of the Furnace. It ſtood about half a Foot from the Ground, upon two or three Ranges of thick, but narrow, Bricks; with a firm Incloſure of Brick-work round it, which had at the Bottom three or four Vent-Holes. Between this Incloſure and the Furnace, was a Space left of about half a Foot, except in two or three Places; which being filled-up, were a Kind of Buttreſſes to the Furnace. *Furnace, how built.*

THEY fill it with the Porcelain that are to be baked a ſecond Time, piled one upon another, putting the ſmaller into the larger; but ſo, that *Veſſels, how ranged.*

[a] *Du Halde's China*, p. 345, *& ſeqq.*

Inhabitants Claſſes.

the Sides that are painted may not touch; for that would ſpoil them. When the China cannot eaſily be piled in this Manner, they place them by Ranges in the Furnace, from Bottom to Top; covering each with Plates made of the ſame Earth the Furnace is of, or even with Pieces of the Caſes belonging to the Porcelain.

Oven, how heated.

THIS done, they cover the Top with Bricks, ſuch as the Sides are made of; which jambing one within another, are cemented with Mortar, or tempered Earth; only a Hole is left in the Middle, for inſpecting the Ware. They afterwards kindle a good Quantity of Charcoal, both under the Furnace, and on the Top; from whence they throw it into the Space between the Incloſure and the Oven. When the Fire is fierce, they look, from Time to Time, through the Opening, which is covered only with a Piece of a broken Pot; and when the Veſſels appear with a Gloſs, and the Colours bright and lively, they firſt withdraw the Fire, and then the China. The Author has often been ſurprized to ſee a Porter carry ſteadily on his Shoulders, two long narrow Boards ranged with China-Ware; and paſs in that Manner through ſeveral Streets full of People, without breaking any of his Cargo.

Caſes for baking

IN a Kind of Porch, before the Furnaces, ſtands a Heap of Boxes and Caſes made of Earth, for encloſing the China-Ware: Every Piece, however inconſiderable, having its Caſe; as well thoſe with Lids as thoſe without. Theſe Lids, which ſtick but weakly to the lower Part, during the baking, are eaſily ſevered by a little Stroke given them. As for the ſmaller Pieces, ſuch as Tea and Chocolate-Diſhes, one Caſe ſerves ſeveral. Within the Caſe, they put a Bed of very fine Sand, ſpread over with the Duſt of *Kau-lin*, that the Sand may not ſtick to the Foot of the Cup. Over this Caſe another, furniſhed likewiſe with China-Ware, is put within it, ſo as to cover it entirely, without touching the Veſſels below: Thus they fill-up the Oven with large Piles of Earthen Caſes, or Boxes.

The China.

As for the ſmall Ware, incloſed in large round Caſes, each Piece is ſet on an Earthen Saucer, two Crowns thick, and ſufficiently broad; whoſe Baſe alſo is ſprinkled with the Duſt of *Kau-lin*. When theſe Caſes are ſomewhat large, they put no China-Ware in the Middle, becauſe it would be too far from the Sides; and ſo, for want of Strength, might open and give-way, which would endamage the whole Pile. Theſe Caſes are four Inches in Height; and Part of them are unbaked, as well as the Ware. In putting the China into the Caſes, the Workman does not handle it, for Fear of ſoiling, denting, or breaking it (for nothing is more brittle;) but he takes it off the Board, by Means of a little String faſtened to the two Prongs, ſomewhat crooked, of a wooden Fork; this he holds in one Hand, while with the other he diſpoſes the two Ends of the String croſswiſe, to incloſe the Veſſel; which he thus lifts gently up, and places in the Caſe on its Saucer, with incredible Quickneſs.

THE two Bottom-Caſes of each Pile are empty; becauſe there the Heat is not ſtrong enough: And, beſides, Part of them is covered with the Gravel, placed at the Bottom of the Furnace, the better to ſupport the Piles of China, which in the Middle are at leaſt ſeven Feet high: For the ſame Reaſon, the Top-Caſe of the Pile is empty likewiſe. The Oven is filled in every Part, except immediately under the Vent-Hole: In the Middle ſtand Piles of the fineſt China, at the Bottom the coarſer Sort, and at the Mouth that which is ſtrongly coloured. All the Piles are placed very near each other, and join together at Top, at Bottom, and in the Middle, by Pieces of Earth, placed ſo ſkilfully, as to admit a free Paſſage for the Flame on all Sides.

ALL Earth is not proper to make Caſes. There are three Sorts uſed: One is yellow, and common enough; of which they make the Bottoms: Another, called *Lau-tû*, is a ſtrong Earth: The third, being oily, is named *Yew-tû*. Theſe two laſt are gotten in Winter from certain deep Mines, not to be worked in Summer: They are made not far from *King-te-ching*. If they are mixed in equal Proportion, the Caſes coſt ſomewhat more; but laſt a long While: When the yellow Earth prevails, they ſeldom laſt above two or three Bakings before they break to Pieces. If a Caſe is cracked, or even ſplit, they bind it with an Oſier; which, though it takes Fire, for this once preſerves the Vehicle. They take Care not to fill the Oven with new Caſes; one Half, at leaſt, muſt have been baked before: Theſe are placed at Top and Bottom of the Piles, and the unbaked ones in the Middle.

THE Ovens, or Furnaces, are placed at the farther End of a long Porch, which ſerves inſtead of Bellows, and is withal a Warehouſe: It is of the ſame Uſe as the Arch in Glaſs-Houſes. The Ovens formerly, according to a *Chineſe* Author, were only ſix Feet high, and ſix broad: They are now two Fathom (or twelve Feet) high, and almoſt four wide: The Arch (or Rounding at Top) grows narrower as it approaches the Vent-Hole, and is, as well as the Body of the Oven, ſo thick, that one may walk upon it without being incommoded by the Fire.

BESIDES this Mouth, the Furnace has five or ſix Openings about its Head, like ſo many Eyes; which are covered with broken Pots, to allay the Air and Fire of the Oven. When they want to ſee how the China is baked, they uncover the Eye, which is neareſt the great Vent-Hole, and with Iron-Tongs open one of the Caſes. If the Ware

Ware is done enough, they diſcontinue the Fire, and keep the Door of the Oven remaining ſhut for ſome Time. This Oven has a deep Hearth of equal Extent with itſelf, and a Foot or two wide. They aſcend by a Plank to place the Ranges of China in the Oven: When the Fire is lighted, they immediately ſhut the Door, leaving only an Opening to throw-in thick Pieces of Wood, a Foot long. At firſt the Oven is heated for a Day and a Night; and then two Men relieving each other, continually throw-in Wood. One Baking generally conſumes an hundred and eighty Load. Formerly, according to a *Chineſe* Author, they burned two hundred and forty Load; and twenty more, if the Weather proved rainy; although the Ovens were leſs by one half, than they are now. They kept but a ſmall Fire during ſeven Days and Nights; and on the eighth Day made a very briſk one.

IT muſt be obſerved, that the Caſes containing the ſmaller Ware had been baked before by themſelves, and that they did not open the Oven-Door till five Days after the Fire was out: They kept that of the large Ware ſhut for ten Days: At preſent, indeed, they delay taking the large Veſſels out of the Oven for a few Days; becauſe otherwiſe they would crack: But as for the ſmall, if the Fire ceaſes in the Evening, they will withdraw them next Morning, that they may ſave Wood, perhaps, in the next Baking. As the China-Ware is then burning-hot, the Operator, who takes it out of the Oven, makes uſe of long Slings hung-about his Neck.

The Porcelain baked in the ſmall Oven, is fit to take-out, if on Inſpection they find, that all the Ware appears fire-red to the Bottom; that they are diſtinguiſhable one from another, as placed in the Pile; that thoſe which are painted look ſmooth, and that the Colours are incorporated with the Ware, in the ſame Manner as Varniſh is with the fine Blue, by the Heat of the great Oven. As for the Ware baked a ſecond Time in the great Oven; this they judge ſufficiently baked, 1. When the Flame comes-forth no longer red, but whitiſh. 2. When they ſee the Caſes red-hot. 3. When after taking a Veſſel from one of the Top-Caſes, and letting it cool, they find the Varniſh and Colour to their Liking. And, laſtly, when they can ſee the Gravel ſhine at the Bottom of the Oven.

THE Author has been ſurprized to find, that after burning at the Entrance of the Oven an hundred and eighty Load of Wood in one Day, on the next no Aſhes ſhould be found on the Hearth. The People ſhould be well-ſeaſoned to the Fire who feed theſe Ovens. It is ſaid, they put Salt in their Tea, that they may drink as much as they will without being incommoded: But how ſhould ſalt Liquor quench Thirſt? *China-Ware.*

FEW Bakings ſucceed quite well, and oft the Whole is loſt, both the Ware and Caſes being reduced to a Maſs as ſolid as a Rock. Too fierce a Fire, or inſufficient Caſes, may ruin all. It is no eaſy Matter to regulate the proper Degree of Heat; for the Alteration of the Weather has an immediate Effect on the Fire, Fuel, and China itſelf: Thus an hundred Workmen are ruined for one who grows rich; an hundred ruin themſelves by ſtill trying their Fortunes, in Hopes to get enough to ſet-up a Merchant's Shop. No Wonder then, that *China* is ſo dear in *Europe*. Beſides, what is ſent thither, is almoſt always made from new Models, often ſo whimſical, that it is difficult to ſucceed; and the *Europeans* refuſe it for the leaſt Defect: In which Caſe it muſt ſtick on the Maſter's Hands; becauſe it is not in the *Chineſe* Taſte [a]. *Few Bakings ſucceed.*

(5.) Skill *of the* Workmen, *and the* Porcelain *of different Times compared.*

Surprizing Workmanſhip. Impracticable Patterns. China-Ware, Patron of. Muſical Inſtruments. Ancient and modern Ware. Large Jars. Counterfeit China. China, how pieced. Walls of King-te-ching, *how built.*

IT muſt be confeſſed, that the Workmen perform ſuch ſurprizing Works, as Strangers would think impoſſible. For Inſtance, the Author has ſeen a large Lanthorn, like that of a Ship, all of one Piece of China; through which one Candle ſufficiently enlightened a whole Room. The hereditary Prince ordered this to be made ſeven Years ago. In like Manner, he ſaw Jars above three Feet high without the Lid; which roſe like a Pyramid a Foot high. They conſiſted of three Pieces, ſo artfully put together, that the Joining could not be perceived. But he was told, that only eight out of twenty-four, ſucceeded well; the reſt being ſpoiled. Theſe Urns were beſpoken by the Merchants at *Kanton*, for the *European* Trade; Wares of ſo high Price not taking in *China*. *Surprizing Workmanſhip.*

THERE is another Kind of Porcelain, difficult to make; and therefore very ſcarce. It is exceeding thin, and ſmooth within and without: Yet you ſee Ornaments, as a Round of Flowers, or the like, engraven on it. As ſoon as it is off the Wheel, they clap it on an engraved Mould: Thus the Inſide takes-off the Figures; and the Outſide they make thin with a Chiſel.

HOWEVER, the *Chineſe* Workmen cannot perform every Work that is required of them. *Impracticable Patterns.*

[a] *Du Halde's China*, p. 348, *& ſeqq.*

Inhabitants Classes. The *European* Merchants require, ſometimes, a China-Slabs in one Piece, big enough to make the Top of a Table, a Seat, or Picture-Frame: But this is not practicable; the largeſt they can make being but a Foot, or thereabouts: If they exceed that Size, though ever ſo thick, they will warp. The Thickneſs alſo renders theſe Works ſomewhat difficult; and, therefore, inſtead of moulding them ſolid, they make two hollow Outſides, which they join, leaving a Vacancy within. They put but one Piece acroſs, making, b on both Sides, two Holes to frame them by; as in Cabinet-Work.

Fruitleſs Attempts. THE Hiſtory of *King-te-ching* mentions ſeveral Works commanded by Emperors, which were attempted in vain. The Emperor *Kang-hi*'s Father ordered ſome to be made, almoſt in the Faſhion of our Orange-Tree Tubs; therein to breed the red, golden, or ſilver Fiſh. They were to have been three Feet and an half high; the Bottom, half a Foot, and the Sides four c Inches thick. They laboured three Years together on theſe Works, and made two hundred Veſſels; but not one ſucceeded. The ſame Emperor ordered Slabs for the Front of a Gallery, each three Feet high, two and an half broad, and half a Foot thick; but they could not be made. The hereditary Prince likewiſe beſpoke divers Inſtruments of Muſic; particularly a Sort of ſmall Organ, called *Tſeng*, about a Foot high, conſiſting of fourteen Pipes, whoſe Harmony is d agreeable enough; but it could not be executed.

China Ware, Patron of, THE Statue of *Pû* (for every Profeſſion has its Patron Saint) owes its Origin to theſe Models, which the Workman cannot ſucceed in. It ſeems, one of the Emperors, having commanded them to make him ſome Pieces, after a Pattern he gave them; and the Officers treating the poor Men with Rigour, for repreſenting the Thing as impracticable: At length one of them, weary of the ill Treatment, in Deſpair threw himſelf into e the burning Furnace, and was conſumed in an Inſtant. However, the China-Ware then in the Oven proving perfectly fine, and to the Emperor's liking, this Deſperado paſſed ever after for a Hero, and became the Idol preſiding over the Porcelain-Works.

And muſical Inſtruments. ALTHOUGH the Workmen could not make an Organ, they anſwered the Prince's Expectation with regard to Flutes, Flagellets, and an Inſtrument named *Yun-lo*, compoſed of nine f ſmall round Plates, a little concave, of different Tones. They hang them in a Frame at different Heights, and ſtriking them like a Dulcimer, they return a little tinkling Sound, which agrees in Concert with other Inſtruments, and the Voice. But they ſucceed beſt in the groteſque Work, and repreſenting Animals: They make Ducks, and Tortoiſes, that will float on the Water. The Author has ſeen a Cat painted to the Life: In her Head they had placed a Lamp, the Flame of which made the two Eyes; and they aſſured him, that the Rats were frighted with it in the Night. They alſo make abundance of Statues of *Quan-in*, a Goddeſs famous in *China*; who is repreſented holding a Child in her Arms, and is invoked by barren Women. She may be compared to the antique Statues of *Venus* and *Diana*, with this Difference, that thoſe of *Quan-in* are extremely modeſt.

WITH reſpect to the Porcelain of different Ages, the *Chineſe* are divided in their Opinions; ſome giving the Preference to the ancient, whilſt others cry-up the modern. It is an idle Notion which prevails in *Europe*, that the beſt Porcelain requires a long Time to be buried in the Earth. It is true, that in digging old Ruins, and on cleanſing Wells long out of Uſe, ſometimes, fine Pieces are found, which have been hid in troubleſome Times. On the other Hand, the Author has found ſome in ſuch Places which, probably, were ancient, but not comparable to the preſent Works; whence, he concludes, there was then, as now, Porcelain of all Prices. For the leaſt Utenſil of the earlieſt Emperors, *Yau* and *Shun*, which have preſerved their Beauty, wherein alone their Value conſiſts, they will give the greateſt Sums. All that the Porcelain gets by lying in the Ground, is a Change of its Colour or Complexion, like Ivory or Marble, which ſhews it to be old.

ACCORDING to the Annals of *King-te-ching*, there were formerly Jars of fifty-eight or fifty-nine [a] *Lyangs* Price, which is more than eighty Crowns. Theſe Annals add, that for each an Oven was built on Purpoſe, and no Expence ſpared. The *Mandarin* of *King-te-ching*, who was the Author's Friend, made Preſents to his Patrons at Court, of the *Kû-tong*, or old Porcelain, which he had the Art to make himſelf, or, rather, to counterfeit: For this Purpoſe he employed a great many Workmen. The Matter of theſe falſe Antiques is a yellowiſh Earth, gotten near *King-te-ching*. They are made very thick: A Plate, which the *Mandarin* gave *Dentrecolles*, of his own Manufacture, having been as heavy as ten common ones.

THERE is nothing particular in this Sort of China-Ware excepting the Varniſh, which is made of a yellow Stone; and being mixed with a larger Quantity of common Oil, dyes the Veſſels a Sea-green: When baked, they throw them into very fat Broth, made of a Capon, and other Meats; then bake them again, and lay them in

[a] About eighteen Pounds.

the

the naſtieſt Puddle they can find, for the Space of a Month, or more: After they are taken-out, they paſs for Pieces three or four hundred Years old, or, at leaſt, of the preceding Dynaſty of the *Ming*, when Porcelain, of this Thickneſs, was the Court Taſte. Theſe falſe *Kû-tong* ſo far reſemble the true, that they do not ring when ſtricken, nor yield the leaſt Noiſe if held to the Ear.

ALTHOUGH Porcelain be not ſo tranſparent as Glaſs, it is leſs brittle. Good Porcelain hath a clear Sound, as well as Glaſs. A Diamond cuts Glaſs; ſo alſo they uſe a Diamond to piece broken Porcelain; making little Holes, as with a Needle, in the Ware, and twiſting therein very fine Braſs Wire, render it fit for Service again, the Place where it was broken being ſcarce perceptible; which Buſineſs is a Trade in *China*.

KING-TE-CHING has been enlarged with the Droſs and Rubbiſh of the broken Ware and Ovens. They build every Day; and there is not an Houſe but is ſurrounded with Walls. The Bricks, which are long and broad, are not laid flat-ways, but on the Edge; being placed alternately with their Faces and Ends outward, a ſlight Lay of Mortar laid round the middle Bricks, bind them and the croſs Bricks together. The Back of the Wall is made in the ſame Manner. Theſe Walls grow narrower as they riſe, till, at Top, they are no more than a Brick's Length or Breadth; the Spurs, or croſs Bricks, being ſo placed as not to meet thoſe on the oppoſite Side.

THUS they build the Walls hollow, or like Caſes, with two Sides; and as they run-up every two or three Rows of Bricks, fill the Cavity with the broken Pots, throwing over it Earth tempered like a thinniſh Mortar; which binds the Whole into one Maſs, and holds the Bricks together. At a Diſtance, theſe Walls appeared as if made of fine grey Stone poliſhed: And, what is ſurprizing, if covered at-Top with good Tiles, will ſtand an hundred Years. The Truth is, they do not bear any Timber-work; which is always ſuſtained by maſſy wooden Pillars.

THE reſt of the Rubbiſh is commonly thrown on the Banks of the River below *King-te-ching*, where it gains on the Stream, and, at length, becomes fit to build Streets on [a].

III. *The* Paper, Ink, *and* Pencils *of* China; *with the Manner of* printing *and* binding Books.

1. *Of the* Paper Manufacture.

Boards uſed to write on. Paper made of Bark. Cotton-Paper. New Kind invented. Hempen-Paper. Very large Paper. Vaſt Conſumption. Bambû-Paper, how made. Another Sort. Paper-Moulds. Sheets, how dried. Paper moſt in Uſe. Faning the Paper. Art of Silvering with prepared Talc; and of renewing old Paper. Many Sorts of Paper. *Paper Manufacture.*

THIS Manufacture, among the *Chineſe*, is ſo curious, that it deſerves Notice no leſs than the Silk and Porcelain. In the moſt remote Ages of their Empire, they had no Paper (which they call *Chi*) but wrote upon Boards, and broad Pieces of Bambû. Inſtead of a Pen, or Pencil, they made uſe of an Iron Stile, or Bodkin: They wrote alſo on Metal; and the Curious ſtill preſerve Plates, on which there are Characters very neatly traced. It is a great While, however, ſince the Uſe of Paper was found out. Their Paper is ſo fine, that many *Europeans* have thought it was made of Silk; not conſidering that Silk cannot be beaten into a Paſte [b]. *Boards uſed to write on.*

THE *Chineſe* make their Paper of the Bark of the Bambû, and other Trees, uſing only the ſecond Skin of it, which is ſoft and white: This they beat in clear Water. The Frames they make uſe of to take-up this Matter, are long and broad; ſo that they have Sheets ten or twelve Feet long, and ſometimes more: They dip every Sheet into Water, wherein *Fan*, or Alum, is diſſolved, which ſerves inſtead of Size; and hence it is called *Fan-Paper*. This Alum hinders the Paper from ſoaking-in the Ink, and gives it a Luſtre as if ſilvered over, or varniſhed; but then makes it liable to crack. This Paper is more white, ſoft, and compact, than the Paper of *Europe*; without having the leaſt Roughneſs that can ſtop the Pencil, or ſeparate the Hairs: But being made of Bark, it is apt to take Moiſture, the Duſt ſticks to it, and the Worms inſenſibly get into it; which ſpoils their Books, unleſs they often beat them, and expoſe them to the Sun. *Paper made of Bark.*

BESIDES this Sort, they have Paper made of Cotton, which is the whiteſt, fineſt, and moſt uſed; beſides not ſubject to the Inconveniencies juſt now mentioned: For it keeps as well, is as durable, and as white as the *European*. What follows is taken from a curious Work, written under the preſent *Tartar* Family, which treats of the Invention of the *Chi*, or Paper; its Materials, Qualities, Form, and the different Sorts of it. The Author confeſſes, that although the Invention is very ancient, its Original is not preciſely known. They wrote on little Pieces of Bambû, ſoftened by Fire, and poliſhed; but without ſtripping the Rind off. This appears *Cotton-Paper.*

[a] *Du Halde's China*, p. 351, *& ſeqq.*

[b] Yet this ſeems contradicted, *p.* 158. a.

from

Inhabitants Classes.

from the Characters *Kyen* and *Tſe*, then uſed inſtead of *Chi*, to ſignify the Matter on which they wrote. They cut the Letters with a fine Graver; and of theſe little Plates, threaded one after another, they made a Volume: But being cumberſome, they were unfit for Uſe. Ever ſince the Dynaſty of the *Tſin*, before Chriſt, they wrote upon Pieces of Silk, or Linen, cut to the Size they deſigned their Book. Hence the Letter *Chi* is compoſed ſometimes of the Character *Se*, which ſignifies Silk; and ſometimes of the Character *Kin*, which denotes Linen.

New Kind invented.

AT length, in the Year 95, under the *Tong-han*, or Eaſtern *Han*, in the Reign of *Ho-ti*, a great *Mandarin* of the Palace invented a better Sort of Paper, which was called *Tſay-hew-chi*, or *Paper of the Lord Tſay*. This *Mandarin* reduced, by boiling, the Bark of different Trees, worn-out Pieces of Silk, and old Hempen-Cloth, to a Kind of thin Paſte; of which he made different Sorts of Paper. He made ſome alſo of the Knots of Silk, which they called *Flaxen Paper*. Soon after, the *Chineſe* brought theſe Diſcoveries to Perfection, and found-out the Art of poliſhing their Paper.

Hempen-Paper.

FROM another Book, intitled *Sû-i-kyen-chi-pû*, which treats of the ſame Subject, we learn, that in the Province of *Se-chwen*, the Paper is made of Hemp: That *Kau-tſong*, the third Emperor of the great Dynaſty of the *Tang*, cauſed an excellent Paper to be made of that Plant, on which all his ſecret Orders were written: That in *Fo-kyen* it is made of ſoft Bambû: In the Northern-Provinces, of the Bark of the Mulberry-Trees: In *Che-kyang*, of Wheat, or Rice-Straw: That in *Kyang-nan*, they make a Parchment of the Skin found in the Cods the Silk-Worms ſpin, called *Lo-wen-chi*; which is fine and ſmooth, being fit for Inſcriptions and Cartridges: In ſhort, that in *Hû-quang*, the Tree *Chu*, or *Kû-chu*, furniſhes the principal Materials for Paper.

Large Paper.

SPEAKING of the different Sorts of Paper, our Author mentions one Kind, of which the Sheets are three, and ſometimes five [a] *Chang* in Length: He ſhews how it is dyed of different Colours, and ſilvered over, without uſing any Silver; an Invention aſcribed to the Emperor *Kau-ti*, of the *Tſi* Dynaſty. He treats of the Paper of the *Koreans*, which he ſays is made of the Cods the Silk-Worms ſpin; and reports, that they paid their Tribute to the Emperor in Paper, even from the ſeventh Century.

Vaſt Conſumption of it.

THE Conſumption of Paper in *China* is exceeding great. Beſides the prodigious Quantity that is uſed by the *Literati*, it is inconceivable how much is conſumed in private Houſes. One Side of their Rooms is nothing but Saſhes, covered with Paper: On the Walls, which are plaiſtered over, they paſte white Paper, to preſerve them white and ſmooth. The Cieling is made of Frames covered with Paper, on which they draw divers Ornaments. In ſhort, in the greater Part of the Houſes, there is nothing to be ſeen but Paper, which is renewed every Year.

ONLY the inward Bark of different Trees is uſed to make Paper: But the whole Subſtance of the Bambû and Cotton-Shrub is employed in this Manufacture. Out of a Wood of the largeſt Bambû's, they ſelect Shoots of a Year's Growth, about the Thickneſs of the Calf of a large Man's Leg: Having ſtripped them of the firſt green Rind, and ſplit them into ſtrait Pieces of ſix or ſeven Foot long, they throw them in a Pond of muddy Water to macerate. In about a Fortnight they are taken-out of the Mud, waſhed in clean Water, and, being ſpread in a large dry Ditch, are covered with Lime. In a few Days they are taken-out again, waſhed a ſecond Time, and reduced to a Sort of Threads, which are expoſed to the Sun to dry and whiten: Then they are thrown into large Coppers, and throughly boiled; and, laſtly, reduced by Peſtles to a fluid Paſte.

UPON Mountains, and in uncultivated Places, they find a Plant, that ſhoots in long and ſlender Tendrils, like a Vine; the Rind of which is very ſmooth and ſlippery, as the Name *Hau-teng* expreſſeth: It is alſo called *Ko-teng*, becauſe it produces little ſouriſh Pears, of a whitiſh Green, that are good to eat. Its Branches, which are about as big as Vine-Shoots, creep along the Ground, or twine about Trees. According to our *Chineſe* Author, when the Shoots of the *Ko-teng* are ſoaked four or five Days in Water, there comes-out an unctuous ſizy Juice [b], reſembling a Sort of Glue or Gum. This they mix with the Paſte which the Paper is made of; taking care not to put-in too much, nor too little: But the due Quantity, Experience muſt teach. When they have beaten this Mixture, till it becomes like a thick clammy Water, they pour it into large deep Reſervoirs, made with four Walls Breaſt-high, and the Sides and Bottom ſo well cemented, that the Liquor can neither run-out, nor ſoak-in. Then the Workmen being placed at the Sides of the Reſervoir, take-up with their Moulds the Surface of the Liquor, which almoſt inſtantly becomes Paper.

[a] A *Chang* is ten Feet. We have been informed, that there are in *London*, in private Hands, Sheets above ſeventy Feet in Length. It is ſurprizing how they can manage the Frames, or have Vats large enough to dip them in. [b] Perhaps for Want of *Ko-teng*, the Berries of Miſſelto, naturally viſcous, might be uſed; or the inner Bark of Holly, which being rotted and pounded, is reduced to Bird-Lime.

THE

THE Mould (whoſe Frame is eaſily taken to-pieces, raiſed, or lowered) is made with Threads of Bambû, drawn fine as Wire, through Holes made in a Steel-Plate: Afterwards, they are boiled in Oil till throughly ſoaked, that the Mould may not ſink deeper than is requiſite to take-up the Sheets of Paper.

WHEN they would make Sheets of an extraordinary Size, the Frame is ſuſtained by Strings, and a Pully. The Moment it is drawn-up, the Workmen placed at the Sides of the Reſervoir, b aſſiſt to take the Sheet off with great Expedition. They then lay them on a hollow Wall, whoſe Sides are well whitened; into which, at one End, by Means of a Pipe, they convey the Heat of a neighbouring Furnace; the Smoak paſſing-out at the oppoſite End through a ſmall Vent-Hole. By Help of this Sort of Stove, they dry the Sheets almoſt as faſt as they make them.

FOR making Paper, they chuſe thoſe Trees which have moſt Sap; as, the Mulberry, Elms, c the Body of the Cotton-Shrub, Hemp, and divers other Plants unknown in *Europe*. Firſt, they ſcrape-off lightly the thin outſide Bark of the Tree, which is greeniſh; then take-off the inner Rind in very long thin Slips; which having blanched in Water, and in the Sun, afterwards prepare them in the ſame Manner as the Bambû.

BUT the Paper moſt in uſe, is that made of the innner Rind of the Tree called *Chu-kû*, otherwiſe *Kû-chu*; which Paper, therefore, is d called *Kû-chi*. When its Branches are broken, the Bark peels-off in long Slips, like Ribbands. By its Leaves, one would take it for a wild Mulberry-Tree; but its Fruit is more like that of the Fig-Tree. It grows to the Branches without any Stalk: If plucked before perfectly ripe, the Place yields a Sort of milky Juice, juſt like the Fig. It agrees in ſo many Particulars with the Fig and the Mulberry-Trees, that it might be thought a Sort of Sycamore: Nevertheleſs, it is more like the *Adrachne*, a Kind of Strawberry-Tree, which is of a moderate Height, and the Bark ſmooth, white, and glittering; but apt to crack in Summer for want of Moiſture. The *Chu-kû*, as well as the Strawberry-Tree, grows on Mountains, and in ſtony Places [a].

TO harden the Paper, and make it bear Ink, the *Chineſe* dip it in Alum-Water: The *Europeans* call this *Faning the Paper*, becauſe *Fan* is the *Chineſe* Word for Alum. Their Method of f doing it is this: They cut ſix Ounces of very white and clean Fiſh-Glue, very ſmall, and throw it into twelve Porringers of clean Water, which they boil; ſtirring it all the while, to prevent Lumps: Then they diſſolve in it three Quarters a of a Pound of Alum, white, and calcined. This Mixture is poured into a great wide Baſon, acroſs which they lay a ſmall Stick, ſmooth and round; then, cloſing the Edge of every Sheet in a different Stick, cleſt from one End to the other, they dip the Sheet gently; and drawing it out as ſoon as it is wetted, by ſliding it over the round Stick, ſtick the other, that holds it, in a Hole in the Wall, where the Sheet hangs to dry. This gives the *Chineſe* Paper, its Body, Whiteneſs, and b Luſtre. One of their Authors ſays, the Art came from *Japan*.

Paper-Manufacture.

THEY have likewiſe the Secret of ſilvering Paper, with very little Charge, and without uſing Leaf-Silver: Take ſeven *Fwen*, or two Scruples, of Glue made of Neats-Leather, three *Fwen* of white Alum, and half a Pint of clean Water; ſimmer theſe over a ſlow Fire till the Water is conſumed, that is, till there ariſes no more Steam: Then ſpreading, upon a very c ſmooth Table, ſome Sheets of Paper, they daub over it with a Pencil, in an equal Manner, two or three Lays of the Glue: If it does not lie even, do it over again. Then take Powder of Talc, prepared as explained hereafter, which ſift through a Sieve, or Piece of threaded Gauze, ſpreading it uniformly upon the Sheets: After which, they hang them in the Shade to dry. This done, they are laid a ſecond Time upon the Table, and rubbed gently with clean Cotton, to d take-off the ſuperfluous Talc, which ſerves again for the ſame Purpoſe. With this Powder diluted in Water, and mixed with Glue and Alum, you may draw any Figures upon Paper.

Art of Silvering

TO prepare the Talc [b], take that which is fine, tranſparent, and as white as Snow. That which is brought by the *Ruſſians* is better than what comes from the Province of *Se-chwen*. After boiling it about four Hours, it muſt be left in the Water a Day or two: Then waſh it well, e and, putting it into a Linen Bag, break it to Pieces with a Mallet. To ten Pound of this add three of white Alum, and grind both in a little Hand-Mill: Then ſifting the Powder through a Silk Sieve, put it into Water juſt boiled-up; which muſt be poured-off when grown clear. The Matter which remains at the Bottom, and becomes hard on being expoſed to the Sun, muſt be pounded in a Mortar, till reduced to an impalpable Powder. This Powder ſifted again, is f fit for Uſe.

With prepared Talc,

THERE is a long Village before the Burying-Places, without one of the Suburbs of *Pe-king*, inhabited by People who renew old Paper, to anſwer the great Demand for that Commodity; having the Art of reſtoring it to its original

And renewing old Paper.

[a] *Du Halde's China*, p. 366, *& ſeqq.* [b] The *Chineſe* call this Mineral *Yun-mwa-che*, which ſignifies the Stone pregnant with Clouds; becauſe every Flake, which they break off, is a Kind of tranſparent Cloud.

Beauty

Inhabitants Classes.

Beauty and Uſefulneſs. It matters not whether the Paper has been written-on, or ſtuck againſt Walls, paſted on Frames, or ſerved for other Purpoſes. The Workmen, who purchaſe it very cheap out of the Provinces, keep a good Stock in their Houſes (which have each an Incloſure of Walls that are very ſmooth, and well whitened:) And if there happens to be a pretty deal of fine Paper, ſort it. They carry this old Stuff in flat Baſkets near a Well, where, upon a little paved Place, which has a ſmall Deſcent, they waſh it with all their Strength; rubbing it with their Hands, and ſtamping-on it with their Feet, to get the Filth out. Afterwards, they boil the Maſs; and having beaten it till fit to make Paper, pour it into a Reſervoir, or Vat, for that Purpoſe. This Paper is but of a middling Size. When they have made a pretty large Heap of it, they carry it into the neighbouring Incloſure; where, ſeparating the Sheets with the Point of a Needle, they ſtick them up wet againſt the Wall, to dry by the Heat of the Sun. This being done in a very little Time, they take them off, and collect them together [a].

Paper, many Sorts.

NAVARETTE ſays, Paper is ſo extraordinary cheap, that he bought above five hundred and fifty Sheets for two Ryals and an half, (Fifteenpence.) He adds, that there are a thouſand ſeveral Sorts of Paper of different Fineneſs, and of different Colours; of which they make very curious Figures for their Houſes and Temples [b].

2. Chineſe *Ink, and Pencils, for writing.*

Chineſe *Ink: Of its Materials and Form: When invented, and brought to Perfection: Receipts to make it: How made at* Whey-chew: *Its Goodneſs how known: To mend broken Sticks. Pencils for Writing.*

Chineſe Ink.

THE Ink uſed in *China*, is made of Lamp-black, procured by burning ſeveral Sorts of Matter; but, chiefly, Pine-wood, or Oil [c]. To correct the Smell of which, they mix Perfumes with it. Of theſe Ingredients they make a Kind of Paſte, which they put into wooden Moulds of various Shapes, and with different Ornaments. The uſual Impreſſions are of Men, Dragons, Birds, Trees, Flowers, and the like. The Form of the Lump is commonly that of a Truncheon [d], or of their Writing-Tables; and one of the Sides is generally covered with *Chineſe* Characters. The beſt Ink is made at *Whey-chew* [e], a Town in the Province of *Kyang-nan*. It is dearer, or cheaper, according to the Degree of Goodneſs. The *Europeans* have, without Succeſs, endeavoured to counterfeit this Ink. It is uſeful in Drawing, becauſe they can give it what Degree of Shade they pleaſe [f]. They have alſo a red Ink in *China*; but it is uſed chiefly in the Titles of Books. Every Thing which relates to Writing is ſo reputable among the *Chineſe*, that even the Workmen, employed in making the Ink, are not looked upon as following a ſervile and mechanical Employment.

THE Author quoted in the Article of *Chineſe* Paper, furniſhes the following Particulars concerning their Ink: He affirms, that it has been invented Time out of Mind; but was many Years before it attained to its preſent Perfection. At firſt they uſed to write with a Sort of black Earth; as the Character *Me*, which ſignifies *Ink*, by its Compoſition imports. According to ſome, they drew a black Juice out of this Earth, or Stone. Others ſay, that by rubbing it, wetted, upon Marble, they procured a black Liquor. Others again, that it was calcined; and being reduced to a very fine Powder, was made into Ink. In ſhort, this Stone is mentioned in a moral Reflection of the Emperor *Vû-vang*, who flouriſhed eleven hundred and twenty Years before Chriſt.

UNDER the firſt Emperors of the *Tong*, about the Year 620, the King of *Korea* preſented the Emperor with ſome Pieces of Ink, which were made of Lamp-black; produced by burning old Pine-Trees, and incorporated with Size made of Hartſhorn, to give it a Conſiſtence. This Ink had ſuch a Luſtre, that it looked as if it had been varniſhed over; which raiſed the Emulation of the *Chineſe*, who, at length, about 900, brought it to its preſent Standard.

IN 1070, they invented a Sort called *Yu-mi*, or *imperial Ink*, becauſe uſed in the Palace. It was made from Oil, whoſe Smoke was gathered in a brazen Concave, and a little Muſk added, to give it a pleaſant Odour.

THE following Receipt [g], taken from the *Chineſe*, perhaps may ſuffice to make the Ink of a good Black, which is looked-on as an eſſential Property. Burn Lamp-black, and Horſe-Chef-nuts [h] in Crucibles, till they have quite done

[a] *Du Halde*'s *China*, p. 369, *& ſeq.* [b] *Navarette*'s Deſcription of *China*, p. 49, *& ſeq.* [c] *Le Comte* ſays, they generally uſe Hog's Greaſe mixed with Oil. [d] The Shape of the Sticks, commonly called *Japan Ink*, which come to *England*, is an oblong Square, the Length of three Inches. [e] See before, *p.* 27. [f] *Du Halde*, as before, *p.* 370. *Le Comte*'s Memoirs of *China*, p. 188. [g] *Du Halde* gives another from a *Chineſe* Author: But the Names of the vegetable Ingredients being unknown to *Europeans*, we have omitted it, as uſeleſs. [h] Without doubt, they mean the Horſe-Cheſnut Tree, or the true Cheſnut made into Cakes, which comes from *Lyau-tong*.

ſmoak-

smoaking: Then diſſolve ſome Gum *Tragacanth* a in Water, and when it becomes of a proper Conſiſtence, add the other Ingredients, ſtirring all together with a Spatula, to make a Paſte fit to put into Moulds; too much of the Horſe-Cheſnut will give it a Violet-black.

A MUCH more ſimple and eaſy Method was communicated to *Contancin*, the Jeſuit, by a *Chineſe*, as ſkilful in this Matter as any one can be expected to be, conſidering how careful the Workmen are to conceal their Secrets. They b put five or ſix lighted Wicks into a Veſſel full of Oil, and lay upon this Veſſel an Iron Cover, in Shape of a Funnel, at a proper Diſtance, to receive all the Smoak. When it has gathered enough, they take it off, and, with a Gooſe's Feather, gently bruſh the Bottom; letting the Soot fall upon a dry Sheet of ſtrong Paper: It is this Black that makes their fine and ſhining Ink. That which ſticks faſt to the Cover being coarſer, is uſed for an ordinary Sort. When they have c taken-off the Lamp-black, they beat it in a Mortar; adding Muſk, or ſome odoriferous Water, with a thin Size of Neats-Leather, called *Nyew-kyew*, to incorporate the Ingredients. When brought to the Conſiſtence of Paſte, they put it into Moulds; ſtamping upon the Ink, with a Seal, the Characters or Figures they deſire, in Blue, Red, or Gold Colour; and then dry them in the Sun, or Wind.

IN *Whey-chew fû*, before-mentioned, the Mer- d chants have little Rooms, where they keep lighted Lamps all Day; every Room being diſtinguiſhed by the Oil which is burnt in it, and, conſequently, by the Ink which is made therein: For being ſo plenty and cheap, it cannot all be made of the Soot procured from the Oil of *Gergelin*, or *Seſamum*, as many of the *Chineſe* imagine.

IT is ſaid, that, in the Diſtrict of the ſame City, they have Furnaces, of a particular Structure, to burn old Pines, and to convey the Smoak e through long Funnels into little cloſe Cells hung with Paper. After a-while they open the Doors, and, from the Walls and Cielings, take-off the Soot in abundance. At the ſame Time the Roſin is drawn from the Fuel by Means of other Pipes, laid even with the Floor. They perfume the Cells by burning Muſk and Drugs; whoſe Odours mixing with the Soot, the Ink made thereof has no ill Scent.

THE Miſſioner obſerves, that the Nature of f the Wood, which is burnt, contributes greatly to the Goodneſs of the Ink; and thinks, that the Soot which is gotten from the Furnaces of Glaſs-Houſes, and uſed by the Painters, is the propereſt for imitating *Chineſe* Ink.

THE following uſeful Remarks are taken from the *Chineſe* Author already quoted. 1. To diſtinguiſh the different Degrees of Goodneſs of Ink newly made, wet the Ends of the ſeveral Pieces, and rub them on a Veſſel varniſhed with the fineſt Varniſh, called *Twan-quang-tſi*: When the Proofs are dry, hold the Veſſel to the Sun; and if the Colour of the Ink is entirely like that of the Varniſh, you may be ſure, that it is of the fineſt Sort. It is much inferior, if the Black be of a bluiſh Hue; but if it be Aſh-coloured, it is the leaſt valuable of all.

Ink, Pencils.

Its Goodneſs, how known.

2. THE Way to preſerve the Ink from any Damage, is, to ſhut it up in a cloſe Box, along with ſome perfectly ripe Mugwort: If expoſed to the Sun, it will crack, and fall in Pieces.

3. IF a Stick happens to break, reduce ſome *To mend broken Sticks.* of the ſame Ink to a Paſte upon the Marble, then rubbing the broken Pieces with it, ſqueeze c them together; and after lying a Day to dry, it will be as whole and firm as ever.

4. IF you would have your Ink delicate, before you temper it, let the Marble be well waſhed: For if ever ſo little of the Ink, uſed the Day before, be left thereon, it ſpoils the freſh Ink. Obſerve too, that the Marble muſt be waſhed with boiled Water, that hath ſtood till it is cold. The beſt and moſt proper Stones for preparing the Ink are called *Twan-ſhe*.

5. WHEN the Ink has been preſerved a long d Time, it is never uſed for Writing; but becomes, according to the *Chineſe*, an excellent Remedy for the Bloody-Flux, and Convulſions in Children. They pretend, that by its *Alkali*, which naturally abſorbs acid Humours, it ſweetens the Acrimony of the Blood. The Doſe for grown Perſons, is two Drachms in a Draught of Water or Wine [a].

THE *Chineſe* do not uſe Pens, like the *Europe-* *Pencils for Writing.* e *ans*, but a Pencil made with Hair; particularly of the Rabbit, which is ſofteſt. When they write, they have upon the Table a little poliſhed Marble, with a Hollow at one End to contain Water: In this they dip their Stick of Ink, and rub it upon the ſmooth Part; leaning more or leſs hard, according as they would have it more or leſs black. When they write, they do not hold the Pencil obliquely, as Painters do; but perpendicularly, as if they would prick the Paper. They write f from the Right to the Left, and from the Top of the Paper to the Bottom. In like Manner they end their Books where we begin ours; and our laſt Page is with them the firſt.

THE Marble, Pencil, Paper, and Ink, are called *Pau-tſe*, or *The four precious Things*; and

[a] *Du Halde's China*, p. 370, *& ſeqq.*

Inhabitants Classes. the Men of Letters in *China* delight as much in having them neat, and placed in Order, as our military Gentlemen do in ranging their Arms in Form, and keeping them bright [a].

(3.) Printing *and* Book-binding.

Printing in China, *and* Europe, *compared. Characters cut in Wood. Printing with Types: But without Presses. Their printing Ink; and Book-binding.*

Printing in China THE *Chineſe* have had the Art of Printing from Time immemorial [b]; though in *Europe* it is ſtill in its Infancy: But their Method of Proceeding is very different. As our Characters are but few, and repreſent ſimple Sounds, or Letters, by whoſe Combinations Words and Sentences are formed, unlike the *Chineſe*, which expreſs compound Sounds, or Words; we make uſe of ſeparate Types, each the Figure of ſome Letter; which being put together, and ranged in Lines one after another, form, as it were, a ſolid Body of Metal of given Dimenſions; from which being ſecured in a proper Frame, the Sheets are printed-off, by Means of a Preſs for that Purpoſe.

And Europe *compared.* ON the contrary, the *Chineſe* having no Letters properly, but a new Character for every Word, they become infinite; and, therefore, it is thought more convenient to engrave, or cut their Compoſitions in Wood [c], than caſt Types for them: The Uſe of which, after all, perhaps, their Multitude would render impracticable. It is true, the *Europeans* may employ as many Types, as the *Chineſe* have Characters; but then that Number of Types is owing to there being many Thouſands of a Sort. Thus the ſame Letters, which ſerved in compoſing one Page, being ſeparated again, may ſerve for the next; and ſo on for every other Page of the Book: Whereas the *Chineſe* muſt have as many Blocks cut, as there are Pages in their Books: Whence it often requires a large Room to hold the Forms belonging to a ſingle Volume.

Characters cut in Wood. WITH Regard to the Manner of doing this, the Miſſioners obſerve, that the Piece to be printed, being tranſcribed by ſome good Writer, upon a fine, tranſparent Paper, the Engraver paſtes each Leaf upon a Plate, or Block of the Apple-Tree, Pear-Tree [d], or any other hard Wood; and carves-out the Characters, by cutting-away the reſt of the Wood, ſo exactly, that it is hard to know the Copy from the Original, whether it be in their own, or the *European* Characters, which are cut in the ſame Manner, and printed in *China*.

THIS Manner of printing is convenient; becauſe it ſaves the Trouble of compoſing, and they print the Sheets only as they ſell them, without running the Riſque, as in *Europe*, either of printing many Hundreds more than they ſell, or being at new Charges for future Impreſſions.

THE *Chineſe*, nevertheleſs, are not ignorant of the Manner of Printing in *Europe*, having moveable Types in Wood, for the Convenience of correcting *The preſent State of China*, which is printed at *Pe-king* every three Months. It is reported, that at *Nan-king*, and *Sû-chew fû*, they print in this Manner ſome little Books, very neatly and correctly.

IN Affairs that require Diſpatch; as when an Order comes from Court, containing many Articles, and muſt be printed in one Night, they have another Method of doing it: They cover the Block with yellow Wax, and trace-out the Characters with a ſurprizing Quickneſs.

THEY uſe no Preſs, as in *Europe*; their wooden Plates, and unalumed Paper, would not bear it. Their Manner of Printing is thus: Having fixed the Block, or Plate, level and firm, they dip a Bruſh, that may be uſed at both Ends, in the Ink, and rub the ſame with it; but ſo that it may not be wetted either too much, or too little: If too much, the Letters will be blurred; if too little, it will not print-off: Then they paſs another Bruſh, oblong, and ſoft, gently over the Paper, and preſs it down more or leſs, as there is more or leſs Ink upon the Plate; which when once in Order, they can take-off three or four Sheets without dipping the Bruſh in the Ink.

TO make this Ink, they take Lamp-black, and pounding it well, expoſe it to the Sun: Then ſifting it, the finer the better, temper it with a ſpirituous Liquor, till it comes to the Conſiſtence of Size, or of a thick Paſte; but it muſt not clot. This they diſſolve over the Fire, putting to every ten Ounces of Ink almoſt an Ounce of Neats-Leather Glue, and then add Water, to bring it to a proper Thinneſs [e].

THEIR Paper being thin and tranſparent, will bear printing only on one Side; and hence it is, that every Leaf of the Book is folded; the Fold being at the Edges, which are placed very even, and the Opening at the Back; where, contrary to the *European* Method, they are cut, and ſown together. There is a black Line drawn upon the Folds, which ſerve like the Holes made by

[a] *Du Halde*'s *China*, p. 372. *Le Comte*'s Memoirs of *China*, p. 184. [b] *Trigautius* and others ſay, ſixteen hundred Years before Chriſt. [c] The firſt Books printed in *Europe* were printed from Blocks, cut in the ſame Manner. [d] *Navarette* ſays, the Pear-Tree is beſt. [e] *Du Halde*, as before, *p.* 373.

the

the Points in our printed Sheets, to direct the Binder how to fold them truly.

THEY cover their Books with a neat Sort of Pasteboard, of a grey Colour; or else with a fine Satin, or flowered Silk. Some are bound with red Brocade, interspersed with Gold and Silver Flowres. This Manner of Binding, though inferior to ours, is very neat and convenient [a]. *Their Astronomy.*

CHAP. IV.

ALTHOUGH the *Chinese* have a Taste for Learning, and excellent Faculties for acquiring any Kind of Literature; yet they have made no great Progress in the speculative Sciences; chiefly because they are not among the Number of those, the Study of which is attended with Reward. However, as they could not transact their Affairs without some Knowledge in Arithmetic and Astronomy, Geometry and Geography, Natural Philosophy and Physic; they cultivate those Branches of Learning more than the rest. But the Studies, to which they most addict themselves, and which, in Fact, are properly the Sciences of the *Chinese*, are the Language and Rhetoric, their History and Laws, with Morality and Politics. To these Parts of Knowledge; which are certainly, of all others, most useful to Man, and conducive to the Welfare of Society, they have wisely given the Preference; and to engage their Youth in general the more diligently to bend their Studies that Way, have made the Attainment of them the only Road to Honours and Preferment.

SECT. I.

Of their Arithmetic, Geometry, *and* Astronomy.

Their Arithmetic: Their Geometry. Astronomy cultivated early; and Eclipses observed. State of Astronomy among the Chinese: *Their Year: Their Months. Method of calculating. Cycle of sixty Years. Division of the Day. Sun-Dials. Ways for knowing the Watches. Tribunal of Astronomy. Solemnity of notifying and observing Eclipses. The* Chinese *Kalendar. Three Tribunals. Three Sorts of Kalendars published, and Ceremony observed in presenting them to the Emperor, Princes, and great Officers: Distributed through the Empire.* Chinese *Veneration for their Kalendar. The* Chinese *Constellations: Order of their Signs. Faults of the Kalendar pointed out by* Verbiest. Arab *Astronomer reproved by the Emperor: Confesses his Ignorance.* Verbiest's *Prediction of the Length of the Sun's Shadow verified. The* Mandarins *Surprize. Ignorance of the* Arab: *Faults in his Kalendar ordered to be examined, by celestial Observations. Charge proved.* Chinese Mandarins *dissatisfied. Rashness of one punished.* Verbiest *rewarded. Intercalary Month retrenched.*

ACCORDING to the *Chinese* History, they have applied themselves to the Study of Mathematics from the earliest Ages: They have the four principal Rules of Arithmetic, teaching how to add, substract, multiply, and divide: But it is not by Calculation that they put these Rules in Practice, having no arithmetical Characters, like ours, consisting of nine Figures and a Cypher. *Their Arithmetic.*

IN casting-up Accounts, they make use of an Instrument called *Swan-pan*, which is composed of a small Board: Ten or twelve parallel Rods, or Wires, cross it from Top to Bottom, each strung with seven little Balls of Bone, or Ivory, that slip up and down; and are so divided by a Partition in the Middle, that there are two on one Side, and five on the other. The two, (which are in the upper-Part of the Board) stand for five Units each; and the five in the lower-Part, stand each for a single Unit. In joining, or separating these Balls, they reckon much in the same Manner as we do with Counters: But with such extraordinary Facility and Readiness, that they will easily keep Pace with a Man who is reading a Book of Accompts, let him read ever so quick; and cast-up the most considerable Sums more expeditiously than the *Europeans* can with Figures.

As for their Geometry, it is superficial enough; being very little versed, either in the Theory, or Practice. If they undertake to solve any Problems, it is rather by Induction, than any fixed Principles: However, they want not Skill in measuring their Land, the Extent and Bounds whereof they settle accurately enough; their Method of surveying being easy, and very exact [b]. *Their Geometry.*

THE *Chinese* pretend to have cultivated Astronomy from the Foundation of their Empire, and *Astronomy cultivated early,*

[a] *Le Comte*'s Memoirs of *China*, p. 188. *Du Halde*'s *China*, p. 373, *&c.* p. 213, *&c.* *Du Halde*, as before, vol. 2. p. 125, *&c.*

[b] *Le Comte*, as before,

Chineſe Learning.

looked upon themſelves as the greateſt Maſters of that Science in the World; although their Progreſs is nothing ſo great as might have been expected from the Time they have ſpent in that Study. It muſt be confeſſed, that no Nation has applied more conſtantly to make Obſervations, Perſons having in all Ages been appointed to watch the Motions of the Heavens, Night and Day; inſomuch that it has ever been one of the principal Employments of the *Literati*. Their Aſſiduity, in this Reſpect, was looked-upon as a Thing of ſuch Importance, that the Laws even puniſhed with Death the Negligence of thoſe to whom the State had intruſted that Employment. This appears from a Paſſage in the *Shu-king* [a], one of their ancient Books, relating to *Hi* and *Ho*, two Aſtronomers; without whoſe Knowledge an Eclipſe of the Sun had happened two thouſand one hundred and fifty-five Years before Chriſt. This Eclipſe has been verified by ſeveral Mathematicians among the Jeſuits; and was of ſuch a Kind, as could not be ſeen in any Part of *Europe* or *Aſia*, except *China*.

And Eclipſes obſerved.

OF the thirty-ſix Eclipſes of the Sun, related by *Confuſius*, in his Book, intitled, *Chun-tſyû*; there are but two falſe, and two doubtful: All the reſt have been often verified not only by the *Chineſe* Aſtronomers under the Dynaſties of the *Han*, the *Tang*, and *Ywen*; but alſo by ſeveral *European* Miſſioners. The Jeſuits *Adam Schaal*, *Kegler*, and *Slaviſek*, calculated many of them; (the firſt cauſing his Calculation to be printed in *Chineſe*;) and *Gaubil* has examined them all; which, excepting four, agree exactly (as to the Time and Day marked by the *Chineſe*) with his Calculus, according to the aſtronomical Tables he made uſe of [b].

THE Eclipſe of 776 before Chriſt, is in the Text of the *Shi-king*, and *Chineſe* Hiſtory, as well as in the Aſtronomy of the *Han*. The Eclipſes found in the *Shu-king*, *Shi-king*, and *Chun-tſyû*, are calculated in the Aſtronomies belonging to the Dynaſties of the *Tang* and *Ywen*, compiled in the Time of thoſe Families. The other Obſervations, given by *Gaubil*, were taken from the Text of the Hiſtories written in the Time of the Dynaſties, under which the Obſervations were made.

State of Aſtronomy

THIS laſt-mentioned Miſſioner, who made it his Buſineſs to diſcover how far the ancient *Chineſe* were ſkilled in Aſtronomy, informs us [c], that he had peruſed the State of the *Chineſe* Heavens, compoſed more than an hundred and twenty Years before Chriſt; wherein is found the Number and Extent of their Conſtellations, and what Stars then anſwered to the Solſtices and Equinoxes, all by Obſervation; likewiſe the Declination of the Stars, with the Diſtance of the Tropics, and two Poles. He adds, that the *Chineſe* were acquainted with the Motion of the Sun and Moon from Weſt to Eaſt; likewiſe of the Planets and fixed Stars, though they did not determine the Motions of the latter till four hundred Years after Chriſt: They had alſo a pretty exact Knowledge of the Solar and Lunar Months, and gave nearly the ſame Revolutions to *Saturn*, *Jupiter*, *Mars*, *Venus*, and *Mercury*, as the *Europeans* do. It is true, they never had any Rules with reſpect to Retrogradation and the Stations: Yet in *China*, like as in *Europe*, ſome have ſuppoſed the Heavens and Planets to revolve about the Earth, others about the Sun: But the Number of the latter is ſmall; nor is there any Appearance of this Syſtem even in their Calculations, it being to be found only in the Writings of ſome particular Perſons. They expreſſed in Numbers the Quality of the Eclipſes, the Quantity eclipſed, the Parts that were viſible, *&c.* But he was not certain as to the Method uſed in calculating them. Theſe Figures were written above an hundred Years before Chriſt. There are pretty exact Calculations of Eclipſes in that Time; but the Numbers are obſcure, and underſtood at preſent by few of the *Chineſe* themſelves.

KEGLER, Preſident of the Tribunal of the Mathematics, had an old *Chineſe* Map of the Stars, made long before the Jeſuits landed in *China*; wherein were exhibited the Stars inviſible to the naked Eye, whoſe Places are found by Teleſcopes to be accurately marked, Regard being had to their proper Motion.

EVER ſince the Dynaſty of the *Han*, who reigned before the Coming of Chriſt, you meet with Treatiſes of Aſtronomy: By which Books it appears, that the *Chineſe* have, for above two thouſand Years, been acquainted with the Length of the Solar-Year, conſiſting of three hundred ſixty-five Days and almoſt ſix Hours: That they even knew the diurnal Motion of the Sun and Moon, and how to obſerve the Sun's Meridian-Altitude by the Shadow of a Gnomon: That by the Length of thoſe Shadows, they calculated tolerably well the Height of the Pole, and the Sun's Declination: That they knew pretty exactly the right Aſcenſion of the Stars, and Time of their paſſing the Meridian; how the ſame Stars, in the ſame Year, riſe or ſet with the Sun; and how they paſs the Meridian ſome-

[a] It is alſo in the Text of the moſt ancient Hiſtory of *China*. [b] *P. Gaubil*'s Calculations, with reſpect to ſixteen of theſe Eclipſes, have been publiſhed by *P. Souciet*, in his *Obſervations Math. Aſtron. Geogr.* vol. 1, *&c.* p. 17. [c] In two Letters publiſhed by *Souciet*, in the Work before quoted.

times

times at the Riſing, ſometimes at the Setting: That they have given Names to the Stars, and divided the Heavens into various Conſtellations: That to them they referred the Places of the Planets; that they diſtinguiſhed the fixed Stars, and had particular Signs for that Purpoſe. In ſhort, (concludes *Gaubil*) it is demonſtrable from reading the *Chineſe* Hiſtory, that they have always had the Knowledge of many Things relating to Aſtronomy.

TRIGAULT, or *Trigautius*, who entered *China* in the Year 1619, and had read more than an hundred Volumes of their Annals, affirms, that the celeſtial Obſervations of the *Chineſe* began ſoon after the Deluge; and that they made theſe Obſervations not like us, according to Hours and Minutes, but by whole Degrees: That they have obſerved a great Number of Eclipſes, and ſet-down the Hour, Day, Month, and Year, wherein each happened; but neither the Duration, nor Quantity of the Obſcurations: That, in ſhort, they have taken more Notice of Comets and new Stars, than the *European* Aſtronomers: All which Obſervations, as well of Eclipſes, as Comets and Conjunctions, are of great Service in aſcertaining their Chronology [a].

THE *Chineſe* Year commences from the Conjunction of the Sun and Moon, or from the neareſt New-Moon to the fifteenth Degree of *Aquarius*: Which Sign, according to us, the Sun enters about the End of *January*, New-Style; and ſtays therein almoſt all *February*. From this Point their Spring takes its Beginning; the fifteenth Degree of *Taurus* begins their Summer-Quarter; the fifteenth of *Leo*, their Autumn; and the fifteenth of *Scorpio*, their Winter.

THEY have twelve Lunar-Months; among which, there are ſome ſmaller, of twenty-nine Days; and ſome larger, conſiſting of thirty. Every five Years they have intercalary Months, to adjuſt the Lunations with the Courſe of the Sun. Their Year conſiſts of three hundred and ſixty-five Days, and ſomewhat leſs than ſix Hours; and according to an Epocha regulated from the Winter-Solſtice (which was the fixed Point of their Obſervations, as the firſt Degree of *Aries* is of ours, reckoning from an hundred to an hundred Degrees) they calculated the Motions of the Planets, and adjuſted every Thing by Equation-Tables. Some ſuppoſe, that they received them from the *Arabians*, who entered *China* with the *Tartars*: They had a long Time before the Science of Numbers, under which they veiled the Secrets of their Polity, which they taught only to Princes.

IF you will believe their Hiſtory, a Solar-Cycle, or Revolution, not unlike the Olympiads of the *Greeks*, has been in uſe among them above four thouſand Years: This Cycle conſiſts of ſixty Years, and is among them a Sort of Age to regulate their Annals [b]. The Years of this Cycle are diſtinguiſhed by the Names of their twelve Hours, diverſely combined with ten other Terms which they have invented [c]. *Their Aſtronomy.* *Cycle of ſixty Years.*

THEY divide the Weeks, like the *Europeans*, according to the Order of the Planets: To each of which they aſſign four Conſtellations, allowing one for every Day in the Month, and reckoning the twenty-eight ſucceſſively by ſeven and ſeven, throughout the Year.

THEIR Day begins, like ours, at Midnight; and ends at Midnight following; but is divided only into twelve Hours, each equal to two of ours; nor do they reckon, like us, by Numbers, but by Names, and particular Figures. They likewiſe divide the natural Day into an hundred Parts, and every one of theſe Parts into an hundred Minutes; ſo that it contains ten thouſand Minutes: Which Diviſion they obſerve the more exactly, as they are generally perſuaded, that there are fortunate and unfortunate Minutes, according to the Poſition of the Heavens, and the ſeveral Aſpects of the Planets. According to them, the Hour of Midnight is happy; becauſe, ſay they, the World was created in that Hour. They believe alſo, that in the ſecond the Earth was produced; and that Man was formed in the third [d]. *Diviſion of the Day.*

THE *Chineſe* have no Clocks to mark the Time of the Day; but they make uſe of Dials, and other Sorts of time-keeping Inſtruments. They have very ancient Sun-Dials, which formerly were divided into four great Parts, and each of them into four and twenty leſſer; making in all an hundred. This Sort of Dialling ſeemed very irregular to *Le Comte*, who could not ſee for what Uſe it was intended. But ſince they have received the new Kalendar from the Miſſionaries, they have regulated their Dials by Hours, and reckon their Time almoſt as the *Europeans* do, only their Hour is twice as large [e]. *Sun-Dials.*

IN all the Cities and Towns throughout *China*, there are two Towers; one called the *Drum-Tower*, the other the *Bell-Tower*; which ſerve to diſtinguiſh the five Watches of the Night, which are longer in Winter, than in Summer. They begin the firſt, by giving one Stroke upon the Drum; which is anſwered by another: And this is repeated at the Diſtance of a Minute or two, till the ſecond Watch; during which they ſtrike two Strokes, and ſo on through the reſt of the Watches; and as ſoon as Day breaks, they redouble their Strokes, as they *Ways for knowing*

do

Chineſe Learning.

do at the Beginning of the Night: So that, let a Man wake when he will, he may know what Time of Night it is [a].

THEY make Things of Perfume-Paſtils, in the Shape of a Fardingale, to burn for any Number of Hours; which are marked on the Sides, for Sake of thoſe who burn them in the Night, and would know how the Time paſſes [b].

The Watches.

MAGALHAENS obſerves, that theſe Paſtils, or Ropes, are made of Sanders, and other odoriferous Wood, beaten to Powder, then mixed into a Paſte, and formed in Moulds: Then they wind it round at the Bottom, leſſening the Circle gradually, till it comes to be of a conic Figure; which enlarges, from Time to Time, to one, two, or three Hands Breadth, and ſometimes more: Such a Roll laſts one, two, or three Days, according to the Quantity; and ſome made for their Temples, will burn, ten, twenty, or thirty Days. Theſe Wicks reſemble a Fiſher's Net, or a String wound-about a Cone; which they hang-up by the Middle, and light at the lower-End: There are generally five Marks upon them, to diſtinguiſh the five Parts of the Watch, or Night; and this Manner of meaſuring Time is ſo juſt, that you ſhall never obſerve any conſiderable Miſtake. Perſons who would riſe at a preciſe Hour, hang, at the Mark, a little Weight; which, when the Fire reaches it, falls into a Copper-Baſon, placed underneath; and wakes them with the Noiſe of the Fall [c].

Tribunal of Aſtronomy.

ASTRONOMY has been always ſo highly eſteemed by the *Chineſe*, that they have erected, purely for its Service, a Tribunal; which is one of the moſt conſiderable in the Empire, and ſubordinate to that of Rites [d]. At the End of every forty-five Days, this Tribunal is obliged to preſent the Emperor with a Figure, exhibiting the Diſpoſition of the Heavens: Wherein are ſet-down the Alterations of the Air, according to the different Seaſons, with Predictions relating to Diſeaſes, Drought, Scarcity of Proviſions, and the Days on which there will be Wind, Rain, Hail, Thunder, Snow, *&c.* much in the Nature of what our Aſtrologers inſert in their Almanacks [e]. Beſides theſe Obſervations, the principal Care of this Tribunal is, to calculate Eclipſes, and notify to the Emperor, by a Memorial, ſome Months before, the Day, Hour, and Part of Heaven, in which they will happen, how long laſt, and how many Digits will be obſcured. Theſe Eclipſes muſt be calculated for the Longitude and Latitude of the chief City in every Province, and a Type thereof ſent by the

Solemnity of notifying

Tribunal of Rites, and the *Ko-lau's* who keep theſe Obſervations and Predictions, throughout the Provinces and Cities of the Empire, that they may be there obſerved in the ſame Manner as at *Pe-king*, where the Court reſides. The Ceremonies, on this Occaſion, are as follow.

A FEW Days before the Eclipſe happens, the Tribunal of Rites cauſes a Writing, in large Characters, to be fixed-up in a public Place, notifying the Circumſtances thereof, as before recited. Notice muſt be given alſo to the *Mandarins* of all Orders, that they may appear, in proper Habits, and with the Enſigns of their Dignity, in the Court of the aſtronomical Tribunal, to wait for the Commencement of the Eclipſe: They have all great Tables, whereon the Eclipſes being delineated, they employ themſelves in conſidering, and reaſoning about them. The Moment they perceive the Sun or Moon begin to be darkened, they fall on their Knees, and knock their Foreheads againſt the Ground. At the ſame Time there is heard a dreadful Rattling of Drums, and Kettle-Drums, throughout the City, purſuant to the ridiculous Notion which prevails, that by this Noiſe they ſuccoured thoſe uſeful Planets, and prevented the celeſtial Dragon from devouring them. Although the Learned, and People of Quality conſider Eclipſes as mere natural Effects; yet they are ſo wedded to their Cuſtoms, that they ſtill continue their ancient Ceremonies.

WHILE the *Mandarins* are thus proſtrate, there are others at the Obſervatory, who carefully examine the Beginning, Middle, and End of the Eclipſe, and compare their Obſervations with the Schemes given them. They afterwards carry theſe Obſervations, ſigned and ſealed with their Seals, to be preſented to the Emperor; who likewiſe obſerves the Eclipſes in his Palace, with equal Attention. The ſame Ceremonies are practiſed every-where elſe.

THE principal Work of this Tribunal, is the Kalendar, or Almanack, which is diſtributed every Year throughout the Empire. No Book in the World bears ſuch a large Impreſſion, or is publiſhed with ſo much Solemnity. There is always prefixed the Emperor's Edict, by which it is forbidden, under Pain of Death, either to make-uſe of, or offer to publiſh any other Kalendar, or to alter any Thing therein, upon any Pretence whatſoever. It is neceſſary to print ſeveral Millions of Copies; becauſe every-body is deſirous of having this Book for his Direction.

THREE Tribunals are eſtabliſhed at *Pe-king* to

[a] *Magalhaens*'s Relation of *China*, p. 120. *Le Comte*'s Memoirs of *China*, p. 81. [b] *Navarette*'s Deſcription of *China*, p. 54. [c] *Magalhaens*, as before, *p.* 125. [d] It is called alſo the Tribunal of Mathematics, by the Miſſioners. [e] The *Chineſe* being no leſs addicted to the Follies of judicial Aſtrology than the *Europeans*.

prepar

prepare ſo many Kalendars, which muſt be preſented to the Emperor. One of theſe Tribunals is near the Obſervatory: The ſecond is a Kind of Mathematical School, where they explain the Theory of the Planets, and the Method of calculating: In the third, which is pretty near the Palace, all Affairs are managed, and Acts diſpatched, that relate to Aſtronomy.

As there are three Tribunals for the Mathematics, there are likewiſe three Claſſes of Mathematicians; and, till lately, there was a fourth, b compoſed of *Mohammedan* Aſtrologers. It is the firſt of theſe Claſſes which is employed in preparing the Kalendar, calculating Eclipſes of the Sun and Moon, and making all the other aſtronomical Supputations.

THEY publiſh every Year three Kinds of Kalendars, both in the *Tartarian* and *Chineſe* Languages: In the leaſt of the three, which is the common Kalendar, you find the Year divided into Lunar-Months, with the Order of the Days c in each; the Hour and Minute of the Riſing and Setting of the Sun; the Length of the Days and Nights, according to the different Elevation of the Pole in every Province; the Hour and Minute of the Conjunctions and Oppoſitions of the Sun and Moon, that is, the New and Full Moons; the firſt and laſt Quarters, called, by Aſtronomers, *The Quadratures of this Planet*; with the Hour and Minute when the Sun enters into every Sign and half Sign of the Zodiac.

THE ſecond Kalendar contains the Motion of the Planets for every Day in the Year, not unlike *Argol*'s *Ephemerides*; in which their Places in the Heavens are ſet down, with an exact Calculation of their Motion to every Hour and Minute: They add thereto, the Diſtance of each, in Degrees and Minutes, from the firſt Star of the neareſt of their twenty-eight Conſtellations; with the Day, Hour, and Minute of its Entrance into every Sign: But mention no other Aſpects, e except the Conjunctions.

THE third Kalendar, which is preſented in Manuſcript to the Emperor only, contains all the Conjunctions of the Moon, with the reſt of the Planets, and their Appulſes to the fixed Stars, with the Extent of a Degree of Latitude; which requires a great Exactneſs in the Calculus and Supputations.

FOR this Reaſon there are five Mathematicians upon the aſtronomical Tower, who continually, f Day and Night, obſerve the Heavens; one has his Eye fixed on the Zenith, and each of the others on one of the four Cardinal Points, that they may be thoroughly acquainted with all that paſſes in the four different Quarters of the Heaven; of this they are obliged to keep an exact Account, and tender every Day, ſigned with their Names and Signatures, to the Preſidents of the Tribunal of Mathematics, who preſent them to the Emperor. *Their Aſtronomy.*

ON the firſt Day of the ſecond Month, the Almanack for the Year following muſt be preſented to the Emperor; who having ſeen and approved of it, the under Officers of the Tribunal add to each Day, the aſtrological Predictions and Judgments before-mentioned. Afterwards, by the Emperor's Orders, they are diſtributed among the Princes, Lords, and great Officers of *Pe-king*; and ſent to the Vice-Roy of every Province, who remits it to the Treaſurer-General of the ſame. This latter cauſes it to be reprinted, and diſtributes the Copies to all the ſubordinate Governors; keeping the Blocks, from whence the Impreſſion is taken, in his Tribunal. At the Head of the Kalendar, which is printed in the Form of a Book, appears, in Red, the great Seal of the Tribunal of Aſtronomy, with the Emperor's Edict, forbidding, under Pain of Death, to ſell or print any other. *Ceremony obſerved*

THIS Kalendar is diſtributed every Year with a great deal of Ceremony: On that Day, all the *Mandarins* of *Pe-king* repair early in the Morning to the Palace. On the other Hand, the *Mandarins* of the aſtronomical Tribunal, in the Habits of their reſpective Dignities, and with the Enſigns of their Offices, according to their Degrees, reſort to the uſual Place of their Aſſemblies, to accompany the Kalendars. On a huge d gilded Machine, in Form of a ſquare Pyramid, conſiſting of ſeveral Stages, one above another, are placed the Kalendars to be preſented to the Emperor, the Empreſs, and the Queens: They are in large Paper, covered with yellow Satin, and neatly incloſed in Bags of Gold Cloth. This Machine is carried by forty Footmen cloathed in Yellow, and followed by ten or twelve ſmaller Machines, gilt, and ſurrounded with red Curtains; upon which are placed the Kalendars intended for the Princes of the Blood, bound with red Satin, and incloſed in Bags of Cloth of Silver. Immediately after, ſeveral Tables advance, covered with red Carpets, on which are placed the Kalendars of the Grandees, the Generals of the Army, and the other Officers of the Crown, all ſealed with the Seals of the aſtronomical Tribunal, and covered with a yellow Cloth; each Table bearing the Name of the *Mandarin*, or Tribunal, to which the Kalendars belong. *In preſenting them*

THE Bearers ſet down their Burdens at the laſt Gate of the great Hall; and ranging the Tables on each Side the Paſſage, called *Imperial*, leave nothing in the Middle but the Machine that carries the imperial Kalendars. Laſtly, The *Mandarins* of the Aſtronomical Academy take the Kalendars of the Emperor and the Queens, and lay them on two Tables, covered with yellow. *To the Emperor,*

Chineſe Learning.

low Brocade, which ſtand at the Entrance of the imperial Hall; where, falling on their Knees, and then proſtrating themſelves three Times on the Earth, they deliver the Books to the Stewards of the Palace; who walk in Order, according to their Rank, and preſent them to the Emperor: After which, the Eunuchs carry them to the Empreſs and Queens [a].

Princes, and great Officers.

MEAN-WHILE the aſtronomical *Mandarins* return to the great Hall; and among the *Mandarins* of all Degrees, who attend there, diſtribute the reſt of the Kalendars in the following Manner: Firſt, All the Princes ſend their chief Officers to the imperial Paſſage, where they receive, on their Knees, the Kalendars for their Maſters, and the *Mandarins*, belonging to their Houſhold: Thoſe for the Court of each Prince, amounting, at leaſt, to twelve or thirteen hundred. Afterwards, the Lords, the Generals of the Army, and the *Mandarins* of all the Tribunals, appear, and receive, on their Knees, a Kalendar from the aſtronomical *Mandarins*. When the Diſtribution is finiſhed, they all reſume their reſpective Ranks in the Hall; and turning themſelves towards the moſt inward Part of the Palace, at the firſt Signal given, fall on their Knees, and make the uſual Proſtrations, in Acknowledgment of the Favour done them by the Emperor.

Diſtributed through the Empire.

IN Imitation of the Court, the Governors and *Mandarins* of the Province receive the Kalendar after the ſame Manner in the capital City; each according to his Rank. As for the People, there is no Family, be they ever ſo poor, but what buy it: For which Reaſon, they never print fewer than twenty-five or thirty thouſand [b] in every Province. In ſhort, the Kalendar is ſo highly reverenced, and reckoned of ſo great Importance to the State, that, to declare one's ſelf ſubject and tributary to the Prince, it is ſufficient to receive his Kalendar; and to refuſe it, is the ſame as ſetting up a Standard of Rebellion.

The Chineſe Conſtellations.

THE *Chineſe* Aſtronomers divide the Heavens into twenty-eight Conſtellations; wherein they comprehend all the fixed Stars, as well thoſe which are in the Zodiac, as thoſe that lie near it. This Diviſion is ſaid to have been made by the Emperor *Yu*, to diſtinguiſh the ſeveral Manſions of the Moon; the *Chineſe* being guided more by the Lunations, than the Solar-Revolutions. The Spaces, which they allow to their Conſtellations, are not of equal Dimenſions; but, all together, form a Circle of three hundred and ſixty Degrees. Upon theſe Principles they make Quadrants; the Shadow of whoſe Stile marks the Revolutions of all the celeſtial Orbs; with the Hour and Quarter of the Day or Night in which each Conſtellation comes to the Meridian of *Pe-king*.

IN Conſequence of beginning the Year, by the neareſt New-Moon to the Month of *February*, *Piſces* is their firſt Sign, *Aries* their ſecond, and ſo on. Likewiſe, becauſe twelve Signs are ſufficient for the twelve Solar-Months, and the Lunations do not always quadrate with theſe Signs, they have intercalary Lunations, to which they aſcribe the ſame Sign as the precedent had; thereby to recommence the Courſe of the Months according to the Signs attributed to them: Hence, ſome of their Months follow the Order of the Signs, others have Days out of the Signs, and ſome want Days.

IN regard the *Chineſe* were obliged, from Time to Time, to correct their aſtronomical Tables, which were imperfect, and that many enormous Faults had crept into the Kalendar publiſhed by their Aſtronomers, who ſucceeded *Adam Schaal*, they had Recourſe again to the Miſſioners; who, at that Time, were in the public Priſons of the City, loaded with nine Chains, and cloſely guarded, by Means of an *Arabian* Aſtronomer, and *Yang-quang Syen*, a *Chineſe Mandarin*, who had repreſented them, and their Religion, as teaching Doctrines deſtructive of the Government [c]. The late Emperor *Kang-hi*, who was then young, and in the ſeventh Year of his Reign, ſent four *Ko-lau's*, or chief Miniſters of State, to aſk them, if they knew of any Faults in the Kalendar, either for that, or the ſucceeding Year; which had both been made according to the ancient aſtronomical Tables of the *Chineſe*. *Verbieſt* anſwered, that they were full of Faults; particularly, in giving thirteen Months to the following Year. His Majeſty having been informed of this and ſeveral other groſs Errors, which that Jeſuit pointed out, ordered the Miſſionaries to attend at the Palace the next Morning.

At the Hour appointed, *Verbieſt*, accompanied with *Buglio* and *Magalhaens*, being conducted into the great Hall of the Palace, where all the *Mandarins* of the aſtronomical Tribunal expected them, diſcovered, in their Preſence, the Errors of the Kalendar. Hereupon, the young Emperor, who had never ſeen them, ſent for them with the *Mandarins*, aſſembled on this Occaſion, into his own Apartment; and cauſing *Verbieſt* to be placed over-againſt him, *Can you*, ſaid he, looking on him with a chearful Air, *make it evidently appear, whether the Kalen-*

[a] *Du Halde*'s *China*, vol. 2. p. 131, & *ſeqq.* 166. f.

[b] This makes, in all, but four hundred and fifty thouſand; which falls vaſtly ſhort of the Number of Families in *China*, or the Millions ſaid to be publiſhed,

[c] See Vol. III. *p.* 504, & *ſeqq.*

agrees with the Heavens, or not? The Jeſuit replied, "That it was a Thing eaſily demonſtrated; and that the Inſtruments in the Obſervatory were made to the End, that Perſons who were employed in Affairs of State, and had not Leiſure to ſtudy Aſtronomy, might, in an Inſtant, examine the Calculations, and find if they agreed with the Heavens, or not. If your Majeſty deſires to ſee the Experiment, continued *Verbieſt*, let there be placed in one of the Courts a Style, a Chair, and a Table, of what Size you pleaſe, and I will immediately calculate the Projection of the Shadow at any Hour propoſed. By the Length of the Shadow it will be eaſy to determine the Altitude of the Sun; and from the Altitude, his Place in the Zodiac: Whence it may be judged, whether his true Place is marked in the Kalendar for every Day."

THE Expedient pleaſing the Emperor, he aſked the *Mandarins*, If they underſtood this Manner of Supputation, and could predict the Length of the Shadow? The *Mohammedan* boldly replied, that he underſtood it; and that it was a ſure Rule to diſtinguiſh the true from the falſe: But added, "That Care ought to be taken how they made uſe of the *Europeans*, and their Sciences, which would become fatal to the Empire; and took Occaſion to inveigh againſt the Chriſtian Religion."

AT this, the Emperor changing his Countenance [a], ſaid to him, "I have commanded you to forget what is paſt, and mind only to prepare a good Aſtronomy: Dare you launch out in ſuch a Manner in my Preſence? Have not you yourſelf preſented me with ſeveral Petitions, deſiring, that able Aſtronomers might be ſearched for throughout the Empire? Though they have been theſe four Years ſought-after, they are not found yet: And though *Ferdinand Verbieſt*, who underſtands Aſtronomy perfectly well, was at Hand in this very Court, you never mentioned one Word of him to me. Hence you plainly diſcover yourſelf to be a very prejudiced Man, and that you do not act with Sincerity [a]." His Majeſty then reſuming a chearful Look, put ſeveral Queſtions to the Jeſuit concerning Aſtronomy; and ordered the *Ko-lau*, with other *Mandarins*, to determine the Length of the Style for calculating the Shadow.

As theſe *Ko-lau's* went to work in the Palace itſelf, the *Mohammedan* Aſtronomer freely acknowledged, that he was not acquainted with *Verbieſt*'s Manner of ſupputing the Shadow; whereof the Emperor being immediately informed, he was ſo offended with the Impudence of this Pretender, that he intended to have puniſhed him on the Spot: But, conſidering it would be better to defer it till the Experiment had diſcovered his Impoſture in the Preſence of his Protectors, he ordered, that the Miſſionary ſhould make his Calculation by himſelf that very Day; and, that, next Morning, the *Ko-lau's*, and other *Mandarins*, ſhould go to the Obſervatory to inſpect the Length of the Shadow caſt by the Style preciſely at twelve o'Clock. *Their Aſtronomy.*

THERE was in the Obſervatory [b] a ſquare Braſs Pillar, eight Feet three Inches high, erected on a Table of the ſame Metal, eighteen Feet long, two broad, and an Inch thick; which, from the Baſe of the Column, was divided into ſeventen Feet, each Foot into ten Inches, (as they call them) and each Inch into ten Minutes. Quite round, along the Edges, was a ſmall Channel made in the Braſs, about half an Inch broad, and of the ſame Depth, filled with Water, to bring the Table to a parallel Poſition. This Machine ſerved, formerly, to determine the Meridian-Shadows; but the Pillar was then much bended, and did not ſtand at Right-Angles with the Table. *Predicts the Length of*

THE Length of the Style being fixed at eight Feet, four Inches, and nine Minutes, *Verbieſt* faſtened to the Pillar a ſmooth Board, parallel to the Horizon, preciſely at the determined Height; and, by Means of a Perpendicular let-fall from the Board to the Table, he marked the Point from whence he was to begin to reckon the Length of the Shadow; which, by his Calculation, was to be, next Day at Noon, ſixteen Feet ſix Minutes and an half: For the Sun was then near the Winter-Solſtice; and, conſequently, the Shadows were longer than at any other Time of the Year.

ACCORDINGLY, at the Time appointed, the Shadow fell exactly upon the tranſverſe Line which the Miſſioner had traced on the Table, to mark the End of the Shadow; at which all the *Mandarins* ſeemed ſtrangely ſurprized. *The Sun's Shadow.*

THE Emperor, who was mightily pleaſed with this Account, ordered, that *Verbieſt* ſhould perform the Experiment again, the next Day, in the great Court of the Palace; aſſigning two Feet two Inches for the Length of the Style. The Jeſuit having prepared a Plank well planed [c], divided into Feet and Inches; and another, fixed perpendicularly, to ſerve for a Style, next Day, carried this Machine to the Palace where the *Mandarins* met. Theſe Officers ſeeing the Shadow (whoſe

[a] This was a beautiful Rebuke, worthy the great Endowments of that moſt excellent Monarch, and much beyond his Years. [b] See before, *p.* 9, a Deſcription of the Obſervatory. [c] It was made in the Night-time by *Magalhaens*, and had three Skrews; by which it was eaſy to give it an horizontal Poſition.

Chineſe Learning.

His Prediction verified.

Length, by the Calculus, was marked on the horizontal Board four Feet three Inches four Minutes and an half) appeared very long, becauſe, as yet, it had not reached the Plank, but fell on one Side upon the Ground, the *Ko-lau's* whiſpered and ſmiled, believing, that the Miſſioner had miſtaken the Matter. But, a little before Noon, the Shadow coming to the horizontal Board, ſhortened all of a ſudden; and, appearing near the tranſverſe Line, at the Hour, fell preciſely upon it [a].

The Mandarin's Surprize.

HEREUPON, the *Tartarian Mandarin* diſcovering his Surprize more than any of the reſt, cried out, *What an extraordinary Maſter have we here!* The reſt ſpoke not a Word; but, from that Moment, ſays our Author, conceived a laſting Jealouſy againſt the Miſſioner. They acquainted the Emperor with the Succeſs of the Obſervation, and preſented him with the Machine; which he graciouſly received: But being unwilling to determine too haſtily about an Affair, which appeared very nice to the *Chineſe*, was deſirous, that *Verbieſt* ſhould make a third Trial, next Day, in the Aſtronomical Tower; which he did with ſuch Succeſs, that his Enemies themſelves, who, by the Emperor's Order, had aſſiſted at all the Operations, could not avoid doing him Juſtice, and praiſing the *European* Method.

Ignorance of the Arab.

THE *Mohammedan* Aſtronomer had no other Knowledge of the Heavens than what he gathered from certain old *Arabian* Tables; which he followed in ſome Things. However, he had been labouring above a Year, by Order of the Regents of the Empire, at the Correction of the Kalendar, which they knew did not correſpond with the Courſe of the Heavens. He had already made the Kalendar of the following Year, after his Manner, in two Volumes, and preſented it to the Emperor, who ordered *Verbieſt* to examine them. Nor was it a difficult Matter to find a great Number of Faults; for, beſides every Thing being ill diſpoſed, and worſe calculated, they abounded with manifeſt Contradictions. It was a Medley of *Chineſe* and *Arabic*; inſomuch, that it might as well be called an *Arabian* as a *Chineſe* Kalendar.

Faults in his Kalendar.

THE Jeſuit made a ſmall Collection of the moſt groſs Errors in each Month, with reſpect to the Motion of the Planets, and put them at the Bottom of his Petition, which was preſented to the Emperor; who, as if the Welfare of the whole Empire was at Stake, immediately called a general Aſſembly of the Regulos his Relations, the *Mandarins* of the higheſt Claſs, and the principal Officers of all the Orders and Tribunals of the Empire, and ſent *Verbieſt*'s Petition to them, that they might conſult what was proper to be done on the Occaſion.

THE Governors, ſet over him by his Father, for whom he had long concealed an Averſion, having condemned the *European* Aſtronomy, and protected the *Chineſe* Aſtronomers, his Majeſty, by the Advice of ſome he moſt confided in, laid hold of the Occaſion to cancel all the Acts they had paſſed; and, for that End, had made this Aſſembly as auguſt and ſolemn as poſſibly he could.

THEY there read *Verbieſt*'s Petition: Whereupon the Lords, and principal Members of the Council, unanimouſly declared, that the Correction of the Kalendar, being an important Affair, and Aſtronomy a difficult Science, which very few underſtood; it was neceſſary to examine publickly, and by the Inſtruments of the Obſervatory, the Faults mentioned in the Petition, or Memorial. This Decree of the Council having been confirmed by the Emperor, *Verbieſt*, and the *Mohammedan* Aſtronomer, were ordered to prepare, without Delay, for the Obſervations of the Sun and Planets that were to be made, and to write down the Manner of making them along with the Calculus. This the Miſſioner did, and preſented the ſame to the *Mandarins* of the Tribunal of Rites.

THE firſt Obſervation being to be made on the Day the Sun enters the fifteenth Degree of *Aquarius*; a large Quadrant, which the Jeſuit placed eighteen Days before, with his Seal affixed to it, on the Meridian, ſhewed, by its Ruler, the Altitude of the Sun for that Day, and the Minute of the Ecliptic, where he was to arrive at Noon. At which Time, preciſely, the Sun paſſed through one of the Sights, and fell, as was expected, on the Hour; while a Sextant, of ſix Feet Radius, ſettled at the ſame Time to the Altitude of the Equator, ſhewed the Sun's Declination. Fifteen Days afterwards, he had the ſame Succeſs in obſerving, with the ſame Inſtruments, the Sun's Entrance into *Piſces*. This Obſervation was neceſſary to determine, whether the intercalary Month ought to be taken-out of the Kalendar, or not: Which the Meridian-Altitude of the Sun, and its Declination that Day, plainly proved in the Affirmative.

WITH Regard to the Places of the other Planets, which were to be obſerved in the Night; he calculated their Diſtances from the fixed Stars, and ſeveral Days before, in Preſence of certain *Mandarins*, marked on a Planiſphere, thoſe Diſtances at the Hour fixed by the Emperor. On the Evening appointed, he ordered his Inſtruments to be carried to the Obſervatory, where

[a] *Du Halde's China*, vol. 2. p. 134, *& ſeq.*

there

there was a vaſt Concourſe of *Mandarins*; who were fully convinced, by ſeeing every Thing fall-out to a Tittle, as the Miſſionary had foretold and calculated, that the Kalendars, which the *Mohammedan* had preſented the Emperor, were full of Faults. His Majeſty, on being informed of this, ordered, that the Affair ſhould be examined in his Council, where the Aſtronomers *Yang-quang-ſyen*, and *U-ming-when*, whoſe Kalendars were cenſured, found Means, contrary to Cuſtom, to be preſent; and, by their Artifices, divided the Votes of the Aſſembly.

THE *Mandarins*, who were at the Head of the Council, could not bear with Patience, that the *Chineſe* Aſtronomy ſhould be aboliſhed, and that of *Europe* eſtabliſhed in its Stead. They maintained, that it was inconſiſtent with the Majeſty of the Empire to alter any Thing in this Science; and that it was better to retain the ancient Aſtronomy, although a little defective, than to introduce a foreign one. They aſcribed to the two Aſtronomers, the Glory of ſtanding-up for their Country, and looked upon them as zealous Defenders of the Grandeur of their Anceſtors.

THE principal *Tartarian Mandarins* were of a contrary Sentiment, adhering to that of the Emperor, who favoured *Verbieſt*. Both Parties argued with a great deal of Warmth; when at length *Yang-quang-ſyen*, depending on the Protection of the Miniſters of State, whom he had gained, addreſſing himſelf to the *Tartars*, *If you give Way to* Ferdinand, ſaid he, *by receiving the Aſtronomy he has brought you, aſſure yourſelves, that the Empire of the* Tartars *will not continue long in* China. So raſh a Declaration was received with Indignation by the *Tartarian Mandarins*; who immediately informing the Emperor of it, his Majeſty commanded, that the Offender ſhould be loaded with Irons, and confined in the common Priſon.

AT the ſame Time *Verbieſt*, receiving Orders to reform the Kalendar, and the Aſtronomy of the whole Empire, had the Direction of the Tribunal of the Mathematics conferred on him. Hereupon he preſented a Memorial to the Emperor, ſetting-forth the Neceſſity of retrenching from the Kalendar the intercalary Moon, which, even according to their own Calculations, belonged to the following Year. The Members of the Privy-Council, to whom this Memorial was referred, looked upon it as a melancholy Thing, to lop-off a whole Month from the Kalendar, which they had ſo ſolemnly received: But as they neither could, nor durſt contradict the new Director, they thought proper to ſend the chief Preſident of the Council to him.

THE *Mandarin*, accoſting the Miſſionary with a chearful Air, *Take heed*, ſays he, *what you do: You are going to make us contemptible among the neighbouring Nations, who follow and reſpect the* Chineſe *Kalendar, by letting them know we have been ſo groſly miſtaken, that there was a Neceſſity of retrenching a whole Month from the preſent Year: Cannot you palliate this Matter, or find-out ſome Expedient to ſave our Reputation? If you can, you will do us great Service. Verbieſt* replied, that it was not in his Power to reconcile the Heavens with their Kalendar, and that there was an indiſpenſable Neceſſity of ſtriking-out that Month. They then immediately publiſhed an Edict throughout the Empire, importing, that, according to the Calculations of the Jeſuit, it was neceſſary to take-away the intercalary Month; and all Perſons were forbidden to reckon it for the future [a].

SECT. II.

The Knowledge *of the* Chineſe *in the other Parts of* Mathematics.

Fabulous Deſcriptions. Ignorance of foreign Parts, and Mathematics. Contrivance in Optics: Another in Catoptrics. Perſpective Figures. Static Engine. Sailing Waggon. Meteors and Colours. Thermometers.

THE Account which has been already given of the imperial Palace, and public Works of the *Chineſe* [b], ſhews, that although their Architecture is very different from that of *Europe*; yet it has its Beauty and Order, as well as Conveniency. The *Atlas* of *Martini*, with the Maps he has publiſhed, taken from the *Chineſe* Authors, and what has been obſerved elſewhere concerning the Provincial Surveys, and particular Topographies [c] of every City, ſhews alſo, that they have not neglected Geography, ſo far as relates to their own Empire: But as for other Kingdoms, which they ſay are ſeventy-two in Number, they place them, at random, round it in the Sea, like ſo many little Iſlands, without diſtinguiſhing them either by Longitude, or Latitude; they brand them with contemptible Names, and deſcribe their Inhabitants as Monſters.

Architecture, Geography.

ONE they term *Syau-jin-que*, or the Kingdom, whoſe Inhabitants are all Dwarfs, and ſo little, that they are conſtrained to tie themſelves ſeveral in a Bunch together, for fear of being carried-away by the Eagles and Kites. Another *Nyu-jin-que*, or the Kingdom where all the Inhabitants are Women; who conceived by looking-on their Shadow in a Well, or in a River, and

Chineſe *Learning.*

bring-forth none but Girls. A third *Chwen-ſinque*, or a Kingdom, whoſe Inhabitants have a Hole in their Breaſts, into which they ſtick a Piece of Wood, and ſo carry one another from Place to Place. The fourth, a Kingdom where they have Bodies like Men, and Faces like Dogs. The fifth, a Kingdom where the People have ſuch long Arms, that they reach down to the Ground; and the like. In ſhort, they repreſent the Inhabitants of *Tartary*, the Iſland of *Japan*, the Peninſula of *Korea*, and the other Countries bordering on *China*, under the Title of *The four barbarous Nations*.

Ignorance of foreign Parts,

OF latter Time, having underſtood ſomething of *Europe*, they have added it to their Maps, as if it was ſome deſart Iſland. Hence it was, that the Vice-Roy of *Quang-tong*, in the Year 1668, after he had ſpoken of the Embaſſy of the *Portugueze*, in a Memorial which he ſent to the Emperor, added theſe Words: *We find very plainly, that* Europe *is no more than only two little Iſlands in the Middle of the Sea* [a]. When the *Chineſe* firſt ſaw the *Europeans*, they aſked, if they had any Cities, Towns, or Houſes in *Europe*. But ſince then, they have often found their Miſtake. One Day ſome of the *Literati* deſiring *Chavagnac* the Jeſuit to ſhew them a Map of the World, they ſought a long Time for *China*; and at length took the Eaſtern Hemiſphere for it, thinking *America* appeared too large for the reſt of the World. The Miſſioner let them alone for a While in their Error, till one of them deſiring an Explanation of the Letters and Names, he ſaid; *The Hemiſphere you look-upon contains* Europe, Africa, *and* Aſia: *In* Aſia *here is* Perſia, *the* Indies, *and* Tartary. Where then is *China*, cried they? *It is this little Corner of the Earth*, replied he; *and theſe are the Bounds of it*. Upon this they looked aſtoniſhed at one another, ſaying, in *Chineſe*, *It is very ſmall*. This Ignorance of theirs was owing to their Want of Commerce with foreign Countries [b].

And Mathematics.

THE other Parts of Mathematics were entirely unknown to the *Chineſe*; nor is it above a Century ſince they began to perceive their Ignorance upon the Miſſionaries firſt Arrival in *China*. The late Emperor *Kang-hi*, whoſe favourite Paſſion was to acquire new Knowledge every Day, was never weary of ſeeing and hearing them; while the Jeſuits, perceiving how neceſſary his Protection was to the Progreſs of their Religion, omitted nothing that might excite his Curioſity, and ſatisfy his Thirſt. They firſt gave him an Inſight into Optics, by preſenting him with a pretty large Semi-Cylinder of a very light Kind of Wood; in the Middle of whoſe Axis was placed a Convex-Glaſs, which being turned towards any Object, exhibited the Image within the Tube in its natural Figure. The Emperor greatly pleaſed with this Contrivance, which was wholly new to him, deſired, that a Machine of the ſame Kind might be made in his Garden at *Pe-king*, whereby, without being ſeen himſelf, he might ſee every Thing that paſſed in the Streets, and neighbouring Places. For this Purpoſe a large Cloſet, or *Camera obſcura*, being built adjoining to the Garden-Wall, they made a large Window, ſhaped like a Pyramid; at the Point whereof, which looked towards the Street, they fixed a large Ox-Eye, or Glaſs, directly oppoſite to the Place where there was the greateſt Concourſe of People. With this Sight the Emperor was extreamly pleaſed; but more his Queens, who never ſtirring-out of the Palace, could no otherwiſe behold what was doing abroad.

GRIMALDI produced another Inſtance of the Wonders of Optics, in the Jeſuits Garden at *Pe-king*. He made, upon each of the four Walls, a human Figure of the ſame Length as the Wall; which was fifty Feet: There was nothing ſeen on the Front but Mountains, Foreſts, Chaiſes, and the like; but from a certain Point you perceived the Figure of a Man, handſomely ſhaped, and well-proportioned. The Emperor honoured the Jeſuit's Houſe with his Preſence, and beheld theſe Figures a long Time with Admiration. The Grandees, and principal *Mandarins*, who came in Crouds, were not leſs affected: What ſurprized them moſt, was to ſee Figures appear with ſo much Regularity and Symmetry upon the Walls, which were very irregular, and in ſeveral Places pierced with Doors and Windows. It would be tedious to mention all the Figures that were drawn confuſedly, and yet appeared diſtinctly from a certain Point, or were reduced to Order by Help of Conic, Cylindric, and Pyramidical Mirrors.

IN Catoptrics, they preſented the Emperor with all Sorts of Teleſcopes and Glaſſes, for making Obſervations of the Heavens, and on the Earth; for taking great and ſmall Diſtances; for diminiſhing, magnifying, multiplying, and uniting Objects. The firſt of this laſt Kind was a Tube made like an octogonal Priſm, which being placed parallel with the Horizon, exhibited eight different Scenes; and in ſo lively a Manner, that they might be miſtaken for the Objects themſelves: This, joined to the Variety of Painting, entertained the Emperor a long Time. Their next Preſent was likewiſe a Tube, wherein was a Polygon-Glaſs; which, by its different Faces, collected ſeveral Parts of different Objects to form an Image: So that inſtead of Landſkips,

[a] *Magalhaens*'s Relation of *China*, p. 61, & *ſeq.*

[b] *Du Halde*'s *China*, vol. 1. p. 280.

Woods,

Woods, Flocks, and an hundred other Things a epreſented in the Picture, there appeared a hu- nan Face, an intire Man, or ſome other Figure, n a very diſtinct and exact Manner. Thirdly, They ſhewed him a Tube with a Lamp in it, he Light of which came through a little Hole of Pipe, at the End whereof was a Convex-Glaſs: Then moving ſeveral ſmall Pieces of Glaſs, ainted with divers Figures, between the Light nd the Glaſs, the Figures were thrown upon he oppoſite Wall, appearing either very large, b r ſmall, in Proportion to its Diſtance. This, rom the Surprize it gives to thoſe unacquainted ith it, is called the *Magic-Lanthorn*.

NOR was Perſpective forgotten: *Bruglio* gave he Emperor three Draughts, performed accord- g to Rules, and hung-up to View three Copies f them in the Jeſuits Garden at *Pe-king*: The *Mandarins* who came to ſee them, were all ſur- rized, not being able to conceive how it was oſſible, on a plain Cloth, to repreſent Halls, c Galleries, Porticos, Roads, and Avenues, reach- g as far as the Eye could ſee, ſo naturally, as t firſt Sight to deceive the Spectator.

STATICS likewiſe had their Turn. They reſented his Majeſty with a Machine, conſiſting nly of four Wheels, with Cogs, and an Iron- andle; by Help of which a Child raiſed ſeveral houſand Weight without Difficulty, and ſtood s Ground ſingly againſt twenty of the ſtrongeſt len.

WITH Relation to Hydroſtatics, they made, r the Emperor, Pumps, Canals, Wheels, and veral other Machines proper to raiſe Water ove the Level of the Springs: By one of this ind, they conveyed the Water out of the Ri- r called *the ten thouſand Springs*, into the nds belonging to the Emperor's Demeſne. rimaldi made a Preſent likewiſe to that Mo- rch, of an Hydraulic-Engine of a new Inven- on; wherein appeared a continual *Jet d' Eau*, e Caſcade, a Clock that went very true, the otions of the Heavens, and an Alarm-Watch, ually juſt.

THE Pneumatic-Engines did not leſs excite Majeſty's Curioſity: They cauſed a Waggon be made of light Wood, about two Feet long, the Middle whereof they placed a brazen Veſ- full of live Coals, and upon that an Æolipile*, Wind of which iſſued through a little Pipe on a Sort of Wheel made like the Sail of a f indmill. This little Wheel turned another h an Axel-tree, and by that Means the Wag- was ſet a-running for two Hours together; but, for fear there ſhould not be Room enough for it to proceed conſtantly forward, it was con- trived to move more circularly, in the following Manner. To the Axel-tree of the two Hind- Wheels was fixed a ſmall Beam; and at the End of this Beam, another Axel-tree paſſed through the Stock of another Wheel, ſomewhat larger than the reſt; and, according as this Wheel was nearer or farther from the Waggon, it deſcribed a greater or leſſer Circle. The ſame Contrivance was likewiſe applied to a little Ship with four Wheels; the Æolipile was hidden in the Middle, and the Wind iſſuing out of two ſmall Pipes, filled the little Sails, and made them turn round a long Time.

Mathematics.

WHENEVER any extraordinary Phænomenon, *Meteors and Colours.* ſuch as a Parhelion, Rainbow, Halo of the Sun and Moon, *&c.* appeared in the Heavens, the Emperor immediately ſent for the Miſſionaries to explain the Cauſes of them. They compoſed ſe- veral Books concerning theſe natural Wonders; and, to ſupport their Explications in the moſt obvi- ous Manner, contrived a Machine to exhibit thoſe Appearances in the Heavens. This was a Drum, made very cloſe without, and whitened on the Inſide; the inward Surface of which repreſented the Heavens. The Light of the Sun entered at a ſmall Hole, and, paſſing through a triangular Priſm of Glaſs, fell upon a little poliſhed Cylin- der, by which it was reflected upon the Conca- d vity of the Drum, and there exactly painted all the Colours in the Rainbow; marking, at the ſame Time, the Parallel which the Sun moved in that Day. From a Part of the Cylinder a little flattened, was reflected the Image of the Sun: And by other Refractions and Reflections were ſhewn the Halos about the Sun and Moon, with all the reſt of the Phænomena relating to celeſtial Colours, according as the Priſm was more or leſs inclined towards the Cylinder.

THEY likewiſe preſented the Emperor with *Thermome- ters.* e Thermometers, to ſhew the ſeveral Degrees of Heat and Cold: To which was added, a very nice Hygrometer, to diſcover the ſeveral Degrees of Moiſture and Dryneſs. It was a Drum of a pretty large Diameter, ſuſpended by a thick String, made of Cat-gut, of a proper Length, and parallel to the Horizon: The leaſt Change in the Air, contracting or relaxing the String, cauſes the Barrel to turn ſometimes to the Right, f ſometimes to the Left; and alſo ſhrinks or ſtretches to the Right or Left, upon the Cir- cumference of the Drum, a very ſmall String, which draws a little Pendulum, that marks the

* An Æolipile ſignifies a *Wind Ball:* It conſiſts of a Ball of Braſs or Copper, with a long Pipe; and is to filled with Water by heating the Ball, which rarifying the incloſed Air, makes Room for the Water, that es-in through a Pipe, when applied thereto; and when it is filled, the Water, by a briſk Fire, is rarified, eturned into Air; which iſſues from the Pipe with vaſt Force.

Chineſe *Learning.*

ſeveral Degrees of Humidity on one Side, and a on the other thoſe of Dryneſs.

ALL theſe different Inventions of human Wit, till then unknown to the *Chineſe*, abating ſomewhat of their natural Pride, taught them to have a leſs contemptible Opinion of Foreigners, and begin to look-on the *Europeans* as their Maſters [a].

SECT. III.

Their Skill *in* Natural Philoſophy, *and* Medicine.

Natural Philoſophy. Medicine in Eſteem. Principles of Life. Body, Diviſions of; compared to a Lute. Conformable Parts. Canals of Life through the Body: How compoſed, and governed by the Elements. Nature of the Pulſe. Whole Art of Phyſic. Way of feeling the Pulſe: Diſeaſes diſcovered by it. Their Medicines: Chiefly, Simples. Viſits and Fees. Different Pulſes. Indications and Natures. Chief Remedy, Abſtinence. Regimen. Way of Cupping. Chineſe *Herbal.*

THE *Chineſe* cultivate Natural Philoſophy, and lay down certain Principles for explaining the Compoſition of Bodies, their Properties, and Effects [b]. They have a good many Books that treat of this Science, where there are very refined Reaſonings upon the Nature of different Things. And the Errors to be met with in thoſe Works, proceed rather from the ſmall Commerce they have with other Nations, than from any Defect of Penetration in the Authors. Be this as it will, thoſe Faults with which their Phyſics abound, have prevented their making any great Progreſs in Medicine; to which their ſmall Skill in Anatomy, the other Foundation of the healing Art, is a farther Obſtacle: For they ſcarce knew the Uſes of the Parts of the human Body, and, conſequently, were unacquainted with the Cauſes of Diſtempers; depending on a doubtful Syſtem of the Structure of the human Frame [c].

Medicine in Eſteem.

HOWEVER, the Study of Medicine has always been greatly eſteemed by this Nation: Not only becauſe it is uſeful for the Preſervation of Life, but becauſe they believe there is a cloſe Connection between it and the Motions of the Heavens. There were, formerly, imperial Schools for the Improvement of Medicine: But the Phyſicians, at preſent, in greateſt Eſteem, are thoſe whoſe Anceſtors were Phyſicians before them, and tranſmitted their Knowledge from Father to Son.

THE *Chineſe* hold two natural Principles of Life, *Yang*, or *Vital Heat*, and *In*, or *Radical Moiſture*; of which the Spirits and Blood are the Vehicles: Out of theſe two Names, and their Characters, they have made the Name and Character of Man, called *Jin* in their Language. Theſe two vital Principles, according to them, are lodged in all Parts of the Body, in order to give them Motion and Strength.

THEY make three Diviſions of the Body: 1. Into the right and left Part; to each of which belongs an Eye, an Arm, an Hand, a Shoulder, a Leg, and a Foot. 2. Into three Parts; the upper, extending from the Top of the Head to the Breaſt; the middle Part, from the Breaſt to the Navel; and the lower, from the Navel to the Sole of the Foot. 3. Into Members and Inteſtines.

THE principal Members wherein the radical Moiſture is lodged are ſix; three on the left Side, the Heart, the Liver, and one of the Kidneys; three on the Right, as the Lungs, the Spleen, and the other Kidney; which laſt is called *The Gate of Life.*

THE Inteſtines, or Entrails, in which they place the vital Heat, are likewiſe ſix in Number; three on the Left, the ſmall Guts, or *Pericardium*, the Gall-Bladder, and the Ureters; three on the Right, the great Guts, the Stomach, and the third Part of the Body.

THEY likewiſe acknowledge certain mutual Relations among the Members and the Inteſtines; as, between the ſmall Guts and the Heart, the Gall-Bladder and Liver, the Ureters and Kidneys on the left Side; and on the Right, between the great Guts and Lungs, the Stomach and Spleen, the third Part of the Body and right Kidney. From theſe Parts the vital Heat and radical Moiſture paſs to all other Parts of the Body, by Means of the Spirits and Blood; the Circulation whereof ſeems to have been known to them from the earlieſt Ages.

THEY likewiſe ſuppoſe, that the Body, on account of the Nerves, Muſcles, Veins, and Arteries, is a Kind of Lute, or muſical Inſtrument, whoſe Parts yield divers Sounds, or, rather, have a certain Kind of Temperament peculiar to themſelves, by Reaſon of their Figure, Situation, and various Uſes; and, that the different Pulſes, which are like the various Tones and Stops of theſe Inſtruments, are infallible Signs whereby to judge of their Diſpoſition, in the ſame Manner as a String, touched in different Parts, ei-

[a] *Du Halde*'s *China*, vol. 2. *p.* 126, *& ſeqq.* *Halde*, as before, vol. 1. *p.* 394; and vol. 2. *p.* 183.

[b] *Le Comte*'s Memoirs of *China*, p. 213.

ſtro

trongly or gently, gives different Sounds, and hews whether it be too ſlack or too tight.

AFTER they had eſtabliſhed theſe twelve Springs of Life in the Body of Man, they earched after outward Signs whereby to diſcover he inward Diſpoſitions of thoſe twelve Parts. Theſe, they imagine, they have found in the Head, which is the Seat of all the Senſes that erform the Animal Operations; and, ſuppoſing eceſſary Relations between theſe Senſes and the ources of Life, aſſert, that there is a Confor- nity between the Tongue and the Heart, the oſtrils and the Lungs, the Mouth and the pleen, the Ears and the Kidneys, the Eyes and he Liver. They think likewiſe that, from the olour of the Viſage, Eyes, Noſtrils, and Ears; rom the Sound of the Voice, and the Reliſh hich the Tongue either feels or deſires, they an conclude, with Certainty, concerning the emperament of the Body, and the Life or eath of a ſick Perſon.

FOR communicating the radical Moiſture and ital Heat from their Fountains, above-men- ioned, to other Parts of the Body, they have ſtabliſhed twelve Ways or Canals. They ſay, hat by one, called *Shau-ſhun-in-kin*, the radical Moiſture paſſes from the Heart to the Hands: y the ſame Ducts, the Viſcera, which are united o the Heart, convey the vital Heat; and this anal of Heat is called *Shew-tay-yang-king:* Theſe wo Origins joined, make one of the Sources of ife: That the Liver ſends the radical Moiſture the Feet, by the Canal *So-kve-in-king*; but e vital Heat is conveyed to them from the Gall- ladder, by the Duct *So-ſhau-yang-king:* That e Kidneys ſend the radical Moiſture through nother Paſſage; and the Ureters the vital Heat. heſe Canals keep up the Communication of ife in the left Side of the Body.

THAT on the right Side, the Lungs convey e radical Moiſture to the Reins, by the Duct *ew-tay-in-king*; and the great Guts, the vital eat, by the Canal *Sheng-yang-ming-king*. That om the Spleen the radical Moiſture goes to the et, by *So-yang-ming-king*; and the vital Heat the Stomach, by *So-tay-in-king*. That from e right Kidney, or the Gates of Life, the radi- Moiſture paſſes to the Hands, by *Shew-kve-in-*; and the vital Heat of the third Part of the dy to the Feet, by *Shew-ſhyau-yang-king*.

WHEN this Knowledge of the Structure of a man Body (which is conformable to the anci- Anatomy of the *Chineſe*, and, as plainly ap- rs, not very accurate) is acquired, they then ceed to the Knowledge of the exterior Bodies; ich may cauſe Alterations in the Body of Man. HESE Bodies are the Elements, which, ac- ding to them, are five in Number; the Earth, tals, Water, Air, and Fire: All theſe unite in compoſing a human Body; which is diſpoſed in ſuch a Manner, that one Element prevails more in ſome Parts than others. Thus, Fire predominates in the Heart, and the chief Viſcera, which lie near it; and the South is the Point of the Heavens that principally hath Reſpect to theſe Parts, becauſe Heat reſides there. They alſo obſerve the Affections of the Heart in Summer. The Liver and Gall-Bladder are referred to the Elements of Air, and both have a Relation to the East, which is the Place from whence Winds and Vegetations proceed; and the Diſpoſition of thoſe Parts ought to be obſerved in Spring. The Kidneys and Ureters belong to the Water, and correſpond to the North; whence Winter is the moſt proper Time to obſerve their Indications. The Lungs and great Inteſtines are governed by the Metals, as well as by the Weſt and the Autumn, which is the Time of their Indications. Laſtly, The Spleen and Stomach participate of the Nature of the Earth, and are referred to the Middle of the Heavens, between the four Cardinal Points; and the third Month of every Seaſon is the particular Time of their Indications. The right Liver, and third Part of the Body, are ſubject to Fire and Water, and receive the Impreſſions of the Heart and Kidneys, which they communicate to all the other Parts. They reaſon much in the ſame Manner as the *European* Phyſicians do, concerning the Agreement and Diſagreemeut of theſe Elements with the Body of Man, to account for the Alterations and Diſeaſes incident thereto.

Phyſic, or Medicine.

Governed by the Elements.

BY the different Kinds of Pulſe, they pretend to diſcover, infallibly, the good or bad Condition of the ſeveral Parts of the Body, according to the following Principles. It is Motion, ſay they, that makes the Pulſe, and this Motion is cauſed by the Flux and Reflux of the Blood and Spirits, which are conveyed to all Parts of the Body by the twelve Canals before-mentioned. Every Thing that moves, puts ſome moveable Body in Motion; and every Thing that is moved, either yields or reſiſts: Thus, as the Blood and Spirits, being in a continual Motion, puſh againſt and preſs the Veſſels in which they are conveyed, there muſt neceſſarily ariſe a Beating of the Pulſe. By a thorough Knowledge of theſe Beatings and Percuſſions, the Diſpoſition of the Body, and the Affections which they receive from the Elements, are diſcovered. By theſe Beatings one may know the Nature of the Blood and Spirits, with the Defects and Exceſſes that may happen therein: And it is the Part of ſkilful Phyſicians to regulate and reduce them to their due Temperament.

Nature of the Pulſe.

BLOOD-LETTING is very rarely practiſed among them, although they are acquainted with it. The Uſe of Clyſters they learned from the *Portugueze* of *Ma-kau:* Yet, becauſe it came from

Whole Art of Phyſic.

Chineſe *Learning.* from *Europe*, they call it the *Remedy of Barbarians*. In ſhort, the whole Science of Medicine among them conſiſts in the Knowledge of the Pulſe, and the Uſe of Simples, which they have in great Plenty, and recommend as Specifics in divers Diſtempers. They pretend, by the Beating of the Pulſe only, to diſcover the Cauſe of the Diſeaſe, and in what Part of the Body it reſides: In Effect, their able Phyſicians predict, pretty exactly, all the Symptoms of a Diſeaſe; and it is chiefly this that has rendered them ſo famous in the World. In the Motion of the Pulſe, there are two Things to be obſerved: The Place where it is perceptible, and its Duration. This has obliged the *Chineſe* Phyſicians to point-out the Places of the Body, where the Pulſe may be examined, and the Time of its beating.

Way of feeling the Pulſe. WHEN they are called to a ſick Perſon, they firſt ſet a Pillow under his Arm; then placing their four Fingers along the Artery, ſometimes gently, and ſometimes hard; they take a conſiderable Time to examine the Beating, and diſtinguiſh the minuteſt Differences: According as the Motion is more or leſs quick, ſtrong, or weak, uniform, or irregular, they diſcover the Cauſe of the Diſeaſe. So that without aſking the Patient any Queſtions, they tell him where the Pain lies, whether in the Head, Stomach, or Belly; and whether it be the Liver, or Spleen, which is affected. They likewiſe foretel when his Head ſhall be eaſier, when he ſhall recover his Appetite, and when the Diſorder will leave him.

Diſeaſes diſcovered by it. OUT of many Inſtances that might be produced to put this Aſſertion beyond Doubt, the Author relates one: A Miſſionary falling dangerouſly ill in the Priſon of *Nan-king*, the Chriſtians, who perceived they were in Danger of loſing their Paſtor, prevailed on a topping Phyſician to make him a Viſit. After he had well conſidered the Patient, and felt his Pulſe, with the uſual Ceremonies, he off-hand made-up three Medicines, which he had ordered him to take, one in the Morning, the other at One in the Afternoon, and the third in the Evening. The Patient found himſelf worſe the following Night, loſt his Speech, and was thought to be dead: But early next Morning there was ſo great a Change, that the Phyſician, after feeling his Pulſe, aſſured him that he was cured, and that he need do nothing more than obſerve a certain Regimen, till he had thoroughly recovered his Health; which he did by this Method.

Their Medicines. SOME Phyſicians, when they viſit their Patients, bring in their Chair, or by a Servant who follows them, a Cheſt with ſeveral Drawers divided into forty ſmall Compartments, well furniſhed with Roots and Simples, which are adminiſtred according to the Nature of the Diſtemper, and are either ſudorific, or proper for purifying the Blood and Humours, for ſtrengthening the Stomach, for diſpelling Vapours, ſtopping Fluxes, or giving a gentle Purge. There are others who carry no Cheſt, but preſcribe Phyſic, leaving their Patients at Liberty, either to take it of them, or to buy it of the Druggiſts, who have great Shops furniſhed with very excellent and coſtly Medicines: There are Fairs alſo where nothing but Simples and Remedies are ſold.

AFTER reſtoring Health by ſimple Decoctions in order thoroughly to extirpate the Diſeaſe, they make uſe of their Cordials, which they have of all Sorts, and are generally compoſed of Herbs, Leaves, Roots, Fruit, and dried Seeds. The *Chineſe* Phyſicians allow their Patients to drink Water, but order it to be boiled; and commonly debar them from all other Nouriſhment: Nor are they ſuffered to eat more than a very ſmall Matter, be their Hunger ever ſo great. The Reaſon they give is, that the Body being indiſpoſed, the Stomach is not fit to perform its Function, whence there proceeds a bad Digeſtion.

SOME think it beneath them to diſpenſe Phyſic; and theſe commonly expect much more for their Viſits, than others. What makes the Fortune of many, is their curing *Mandarins* of Diſtinction, or other rich Perſons; from whom beſides being feed every Viſit, they receive conſiderable Gratifications. The Fee required for theſe Viſits, and for their Medicines, is very moderate. After the firſt Viſit, they never attend the Patient any more, unleſs they are ſent for: So that he is at Liberty to chuſe another Phyſician, if he is not pleaſed with the Medicines given by the former; which frequently happens. One meets alſo with a Kind of Quacks who pretend to cure Diſtempers by Means of a Parcel of Receipts, which they pick-up; agreeing to be paid conditionally that they recover the Patient [a].

ACCORDING to a *Chineſe* Treatiſe, called *Secret of the Pulſe* [b], different Pulſes are to be felt in different Diſeaſes: In thoſe of the Head you muſt conſult the Pulſe of the left Wriſt; likewiſe in Diſeaſes of the Liver: But it muſt be examined at the Joining of the Wriſt, with the Bone of the Cubit. In Diſtempers of the Stomach, feel the Pulſe of the right Wriſt;

[a] *Du Halde's China*, vol. 2. p. 183, & *ſeq.* in his Deſcription of *China*, vol. 2. p. 184.

[b] The Tranſlation of this Tract is inſerted by *Du Halde* communicated by *Harvieu*, a Miſſioner of the Society.

in thoſe of the Lungs, that in the Joint of the ſame Hand. In Diſeaſes of the Reins, the Pulſe muſt be examined above the Joint at the End of the Cubit of the Hand, on the ſame Side as the ailing Kidney.

THERE are, in the Pulſe, a thouſand Variations, according to the Difference of Sex, Age, Stature, and Seaſons; each of which has its proper Pulſe. The ſame Author mentions various Kinds of Pulſes, which he divides into three Claſſes, putting ſeven in the firſt, eight in the ſecond, and nine in the third. Of theſe he gives the Names, explains the Nature, and aſſigns the Indications. Among the reſt, he obſerves, that the *Superficial* denotes Windineſs; the *Hollow*, Want of Blood; the *Slippery*, Abundance of Phlegm; the *Full*, Heat; the *Long-tremulous*, Laſſitude; the *Short-tremulous*, ſharp Pain; the *Overflowing*, too much Heat; the *ſmall Pulſe*, too much Cold; the *Deep*, Pain from intercepted Air, or the Interruption of the Spirits; the *Slow*, a Kind of Rheumatiſm in the Breaſt; the *Sharp*, Barrenneſs, or a Diſpoſition that Way; the *Sluggiſh*, Want of internal Heat; the *Flying-low*, Obſtructions in the Blood-Veſſels; the *Soft*, or *Fluid*, ſpontaneous Sweats, and a Diſpoſition to a Conſumption of the Lungs; the *Feeble*, a great Waſting, and dull Pains, as if in the Bones; the *long Pulſe* indicates the Spirits to be plenty, and in good Order; the *Short*, that the Spirits fail, or are troubled; the *Slender like a Hair*, Failure of Spirits; the *Variable*, Diſorder of the Spirits; the *Embarraſſed* and *Confined*, exceſſive Heat; the *Empty*, Loſs of Blood, Fears, and convulſive Motions; the *precipitate*, or *hurrying Pulſe*, Inquietudes, and a Delirium; the *hard Pulſe* denotes Loſs of the Semen in Men, and of Blood in Women.

As to the Nature of each Pulſe, he explains it often in ſuch a Manner, as muſt ſeem ſtrange to an *European*. For Inſtance, he ſays the *ſuperficial Pulſe* cauſes a Senſation like that of the Blade of a ſmall Onion; that the *ſlippery* Pulſe feels like Pearls under the Finger; that the *ſharp* Pulſe makes an Impreſſion not unlike that of a Knife ſcraping a Bambû-Cane; that the *moveable* Pulſe yields a Senſation like that made by Stones, when touched in the Water [a].

THERE is ſomething very fantaſtic, or quackiſh, methinks, in his Explication of the ſeven Pulſes that indicate Danger of Death. 1. When the Pulſe, being felt in the Morning, ſeems to bubble under the Fingers like Water over a great Fire, it is a ſure Sign that the Patient has not long to live. 2. It is a Sign Death is equally near, if the Pulſe ſeems like a Fiſh, whoſe Head is ſtopped, and cannot move, but ſinks with its Tail not very regularly. 3. When the Pulſe, after beating in a *Hurry*, becames of a ſudden *ſlow* and *ſluggiſh*, there is Danger of Death, but not ſo near. 4. If the Pulſe, by the Hardneſs of its Beats, reſembles in ſome Sort a Bullet of Stone, or dried Earth ſhot out of a Croſs-Bow, both the Lungs and Stomach want Spirits. 5. If the Pulſe ſeem like Drops of Water that fall into a Houſe through ſome Crack, or Hole in the Roof, and in its Return is ſcattered and diſordered, much like the Twiſts of a Cord which is unravelled; then the Bones are dried-up to the very Marrow. 6. If the Motion of the Pulſe, at the Extremity of the Cubitus in both Arms, reſembles the Pace of a Frog embarraſſed in Weeds, or that of a Toad, Death is certain. 7. If its Motion reſembles the haſty Pecking of a Bird, then there is a Failure of Spirits in the Stomach, the Heart but ill performs its Function, and the Blood is in no good Condition. There are ſeveral Pulſes more that indicate Danger, which the Tranſlator has added.

Phyſic, or Medicine.

Predictions from the Nature

IN this Treatiſe, Directions likewiſe are given for feeling the Pulſe, together with Prognoſtics from thence in various Diſeaſes. The different Pulſes in the Arms, and internal Parts, as of the Heart, Liver, Lungs, *&c.* are alſo conſidered; and laſtly, you meet with Diagnoſtics and Prognoſtics taken from the Face of the Patient, and other Parts of his Body. The Author, or Authors of this Piece (for it ſeems to be a Collection from ſeveral) is very preciſe in his Deciſions, determining, to a few Hours, the Fate of his Patient. For Inſtance, he obſerves, that when the *hard* Pulſe, which denotes the Diſeaſe to be in the Kidneys, has a Motion like that of a Bird in pecking, the ſick Perſon will die next Day between Nine and Eleven in the Morning, One and Three in the Afternoon, Seven and Nine in the Evening, or One and Three in the Morning following.

And Beats of the Pulſe.

THEY pretend to no leſs Nicety in their Predictions, from the Number of Beats without Interruption. It is ſaid, that according to an ancient Book, if the Pulſe, after forty ſucceſſive Beats, omits one; then one of the noble Parts is deſtitute of Spirits, and the Perſon will die four Years after in the Spring. All Authors ſince then agree, that when the Pulſe beats fifty Times without ſtopping, the Perſon is in perfect Health, and good Conſtitution: But that if after fifty ſucceſſive Beats one fails, then one of the noble Parts is deſtitute of Spirits, and Death will follow five Years after: If at the End of thirty Beats, three Years after. If the Pulſe of the left Wriſt, after nineteen Beats, ſinks, riſes, and ſinks again; the Liver is quite decayed, and Re-

[a] See *Du Halde's China*, vol. 2. p. 184, *&* *ſeqq.*

Chineſe Learning.

medies are vain. The ſame is remarked of the Pulſe at the Extremity of the right Cubitus; and if after ſeven agreeable Beats it ſinks, and ſinks again, without riſing for a long Time, the Patient has but a few Hours to live: If it ſtop after two Beats, he commonly dies in three or four Days; if after three Beats, he may live ſix or ſeven; if after four, he hardly outlives eight Days; and ſo of the reſt in Proportion [a].

THIS may ſuffice to give the Reader a Notion of the Doctrine of the *Chineſe*, concerning the Pulſe. By being ſo very particular in every Reſpect, they ſeem to have taken a vaſt deal of Pains to compleat their Syſtem; but their Explanations and Judgments are ſo affected and poſitive, that the Whole ſeems rather the Fruits of the Phyſician's Invention to amuſe the Public, than of his Experience. Let us return to the Remarks of the *Europeans*.

Poſitive Judgments.

LE COMTE obſerves, that in feeling the Pulſe, they hold the Patient's Hand a Quarter of an Hour at leaſt; ſometimes the Right, ſometimes the Left, and ſometimes both at the ſame Time: At laſt, as if inſpired, they play the Prophet: *You were never troubled with the Head-ach*, ſay they, *but with an Heavineſs that hath made you drowſy; or elſe you have loſt your Appetite; but you will recover it again in three Days preciſely. This Evening, about Sun-ſet, your Head will be freer: Your Pulſe indicates Pain in the Belly, unleſs you have eaten ſuch or ſuch Meat: This Indiſpoſition will laſt five Days, after which it will ceaſe.* Thus they find-out, or prognoſticate in all Maladies, pretty exactly, when they are expert in the Science.

Pulſe, how felt.

THEY feel the Pulſe in ſuch a Manner, as would make a Man ſmile, who is not accuſtomed to it. After they have applied their four Fingers along the Artery, preſſing ſtrongly and uniformly the Patient's Wriſt, they relax them by Degrees, till the Blood, that was ſtopped by the Preſſure, hath reſumed its uſual Courſe: A Moment after, they begin again to preſs the Arm cloſe, which they continue a conſiderable Time: This done, as if they were going to touch the Frets of a muſical Inſtrument, they riſe and fall their Fingers ſucceſſively one after another, pinching ſoftly, or hard, ſometimes ſlower, ſometimes faſter, till ſuch Time as the Artery anſwers to the Phyſician's Touches, and the Strength, Weakneſs, Diſorder, and other Symptoms of the Pulſe be manifeſt.

Tricks of Quacks.

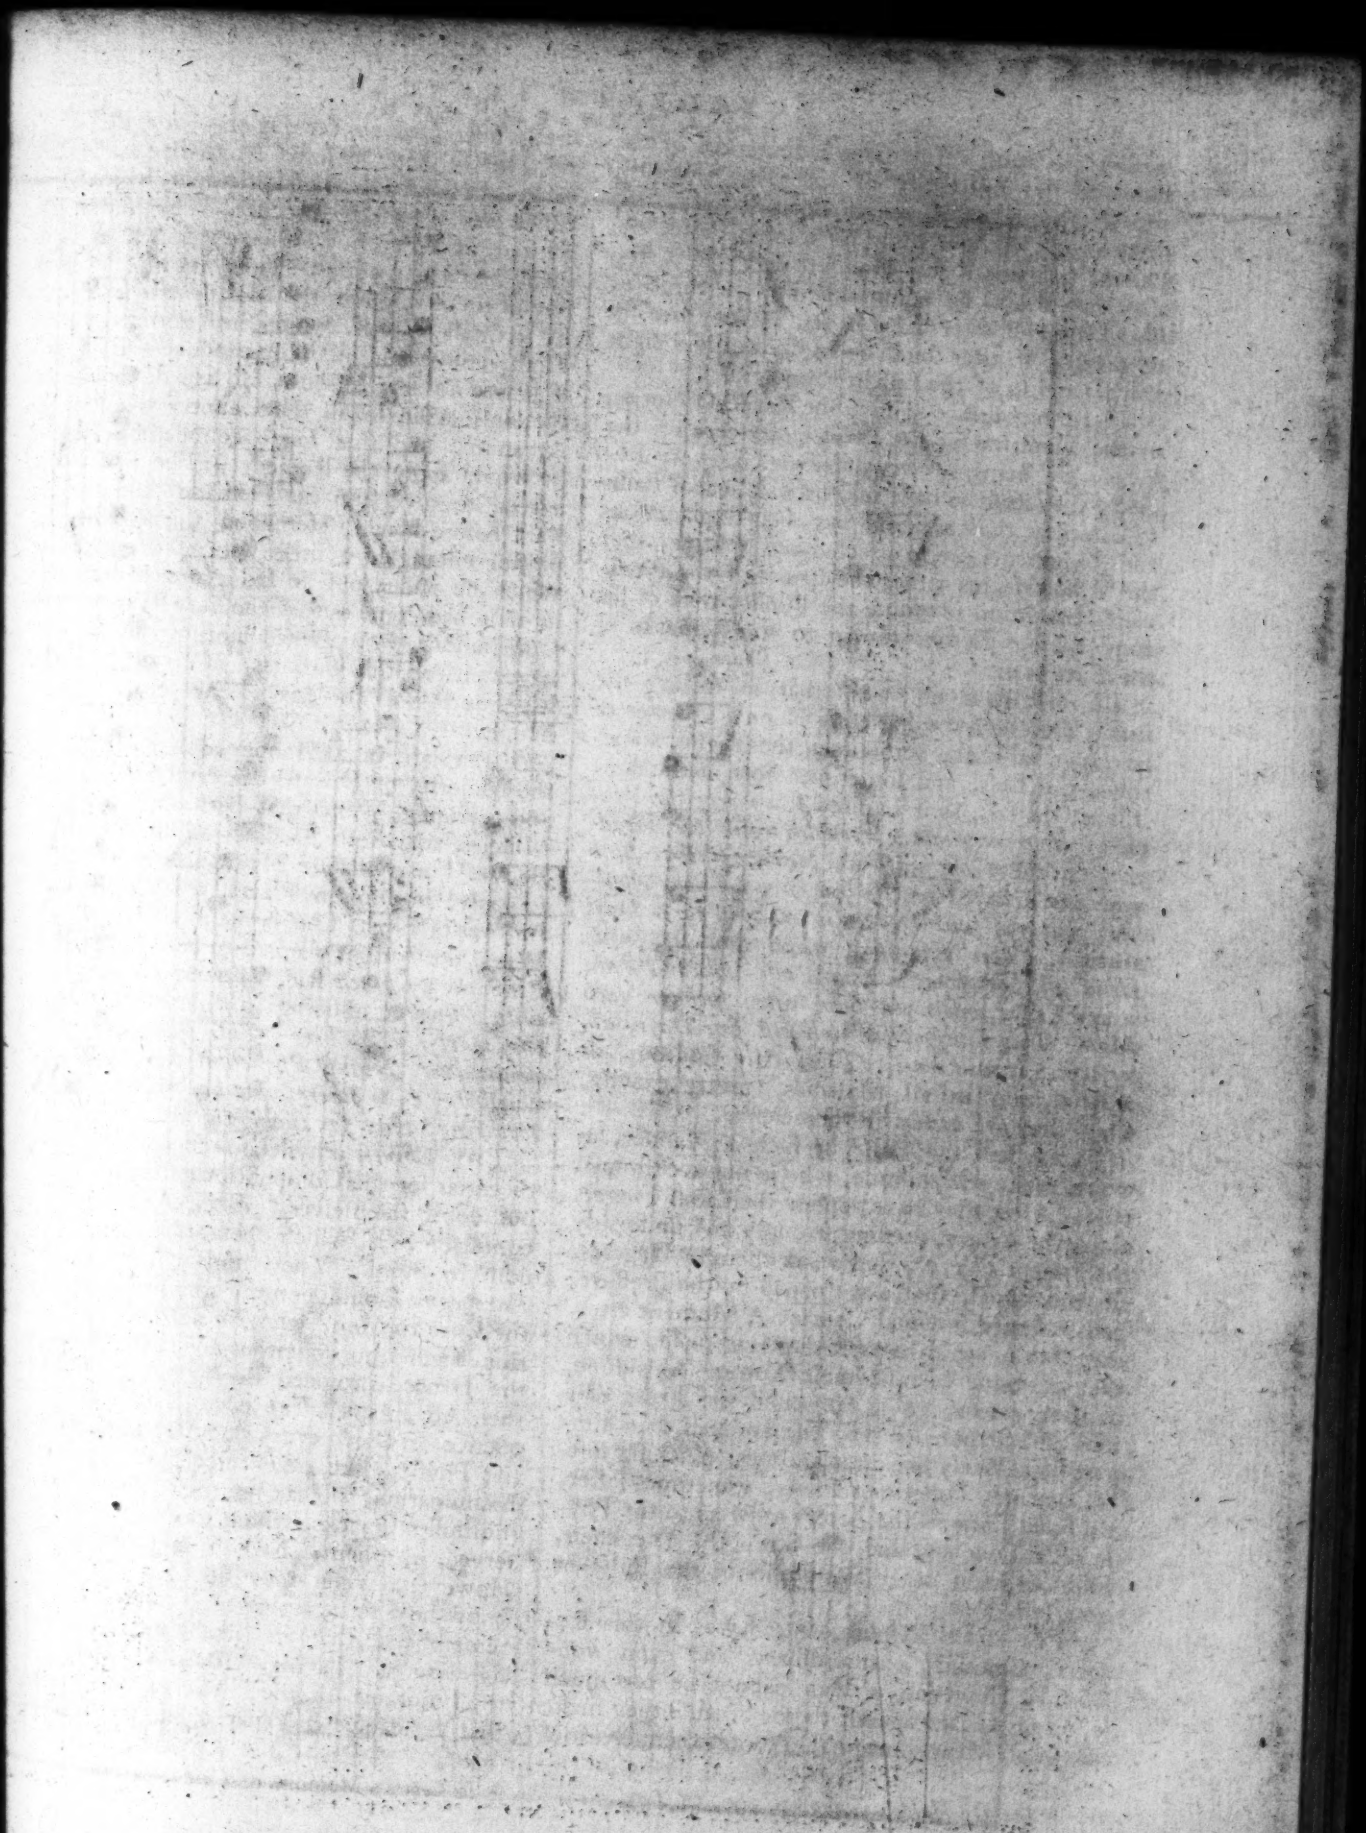
WITHOUT Diſpute, they have, in this Reſpect, ſomething extraordinary, and even wonderful: However, a Man cannot be too much upon his Guard againſt them, becauſe they make uſe of all Means imaginable to get themſelves ſecretly inſtructed concerning the Patient's Condition, before they viſit him: Nay, they are ſo cunning as to feign a Kind of Diſtemper, which ſometimes they themſelves procure. The Author was aſſured, by a Perſon who having ſent for a Phyſician, and a Surgeon, to cure him of a Wound, one of them told him the Malady was occaſioned by a ſmall Worm, which had gotten into the Fleſh, and would infallibly produce a Gangrene, if it was not fetched-out: He added, that he was the only Man in all the Country who had this Arcanum, and that for a conſiderable Reward he would apply the Remedy. The ſick Perſon agreed to give him his Demand, and paid him Part before-hand. Hereupon this cheating Sophiſter entangled a little Worm in his Plaiſter, which he pulled-out an Hour after in Triumph, as if it had come out of the very Wound. His Companion, who gained nothing by the Management of this Buſineſs, afterwards detected it; but it was too late to ſave the Patient his Money.

THEY are in a Manner alſo perſuaded, that the Majority of Diſeaſes are cauſed by malignant and corrupted Wind that hath ſlipped into the Muſcles, and doth ill-affect all the Parts of the Body: The moſt ſure Means to diſſipate them is to apply, in different Places, red-hot Needles, or Buttons of Fire: This is their ordinary Remedy. When the Author ſeemed to be ſurprized at this Practice, a *Chineſe* ſaid, *They treat you in* Europe *with a Sword*, alluding to Phlebotomy, *but here they martyr us by Fire: This Mode will probably never alter, becauſe Phyſicians feel not the Miſchief they do to others, and are not worſe paid for torturing, than for curing us* [b].

THE *Chineſe* Phyſicians do not employ Apothecaries for the Compoſition of their Medicines, but do it themſelves. Their Remedies uſually conſiſt of Pills, which operate by Sweat, but ſeldom by Stool. They think it ſtrange, that the *Europeans* ſhould commit the principal Point of the Cure to Men, who are not concerned in curing them; nor ſolicitous about the Goodneſs of the Drugs, provided they get rid of them to their Advantage: Yet what is of worſe Conſequence, in *China* every-body is admitted to practiſe Phyſic, like other mechanic Arts, without Examination, or taking their Degrees; which multiplies Quacks, whom the Vulgar, though ill-ſerved by them, have a mighty Opinion of. However, when they diſcover a Cheat, they know how to be revenged on him. Our Author remembers, that an Inhabitant of the City of *Sû-chew fû*, having loſt his Daughter through the Ignorance of the Phyſician, was ſo enraged that he cauſed a Paper to be printed, wherein

[a] See *Du Halde*'s *China*, p. 190, *& ſeqq.*

[b] *Le Comte*'s Memoirs of *China*, p. 215, *& ſeq.*



Chinese Airs, *from* du Halde.

the bad Conduct of the pretended Doctor was laid open, with ſeveral Reflections tending to decry him: He affixed Copies of it in all public Places, and cauſed them to be diſtributed to the principal Houſes of the City. This Revenge, or, as he termed it, this Zeal for the public Good, had the Effect he promiſed himſelf. The Phyſician loſt, together with his Reputation, all his Practice; and was reduced to ſo great an Extremity, that he quickly found himſelf in no Condition to kill any-body [a].

NAVARETTE ſays, there are good Phyſicians in *China*, who are all their own Apothecaries, and ſome very expert at diſcovering the Indiſpoſition by the Pulſe: Yet that the greater Part are mere Farriers, becauſe there are no Examinations, nor Degrees to be taken for Phyſic; every-body, who will, being at Liberty to practiſe it.

THEY never bleed, or vomit [b], give Glyſters, or Purges. They know nothing there of Potions. Their greateſt Cure is a regular Diet, which is agreeable to *Galen*; who ſays, that the Body of a Man is oftener found to fall into mortal Diſeaſes through Exceſs, than Want. The firſt Thing they do, is to forbid Fiſh, Fleſh, and Eggs: They allow Rice-Broth, Rice boiled thin, ſome Herbs ſalted, and, upon Recovery, Gooſe-Eggs ſalted; alſo Salt-Fiſh dried and roaſted. The ſame Method is obſerved in *Japan*, *Tonking*, *Kochinchina*, and all other Countries as far as *India*, and the Mogul's Empire. Very little Rhubarb is uſed in *China*, although ſo plenty, that it is ſold for half a Rial, or Three-pence a Pound. They uſe more of that called by them *Fu-lin*, and by the *Europeans*, *China-Root*.

THEY never examine the Patient's Urine. In ſome ſlight Indiſpoſitions they uſe Cupping, whoſe Method the Author likes better than that practiſed in *Europe*. Their Cups are made of Braſs, and have a little Hole at the Top, which they ſtop with Wax: Having put a ſmall lighted Wick ſtanding on the Part, they cover it with the Cupping-Veſſel, which draws well; then taking the Wax off the Hole with a Needle, the Air goes out, and the Cup, of itſelf, gently comes-off the Fleſh. He adds, that there are many good Surgeons, who do their Buſineſs very well, without all that Variety of Inſtruments uſed among the *Europeans* [c].

LE COMTE informs us, that *Viſdelou*, one of the ſix Jeſuits ſent to *China* in 1685 [d], was very intent in tranſlating the *Chineſe* Herbal, explaining the Virtues and Qualities of all their medicinal Plants. He adds, that the ſame Miſſioner, who had accompliſhed himſelf in the Knowledge of Books, deſigned to annex particular Remarks of his own [e]: Probably this is the *Pen-tſau*, or Herbal, inſerted by *Du Halde*, in his Deſcription of *China* [f]; to which he has joined a Book of *Chineſe* Receipts, or Remedies, uſed in curing Diſeaſes. *Muſic.*

SECT. IV.

The Taſte *of the* Chineſe *for* Muſic, Poetry, *and* Hiſtory.

The Chineſe *Muſic: Nature of it. Very imperfect. Academy eſtabliſhed.* Chineſe *Inſtruments.* European *Organs. Clocks and Watches. Chime of Bells. Their Poetry: Nature of it. Rhetoric and Logic. Their Novels. Their Plays, and Actors. Their Tragedies, Account of one. Their Hiſtory: The Materials: Matters treated of, how preſerved.*

THE *Chineſe* pretend to have been the firſt Inventors of Muſic, and boaſt of having formerly brought it to the higheſt Perfection: But if what they ſay be true, it muſt have ſtrangely degenerated; for it is at this Juncture ſo imperfect, that it ſcarcely deſerves the Name. It is certain, that in former Times it ſeems to have been in great Eſteem; and *Confuſius* himſelf undertook to introduce the Rules belonging to it into every Province, whoſe Government he was intruſted with. Their Hiſtories ſpeak much of the Excellence of their Muſic, and the *Chineſe*, at this Day, greatly bewail the Loſs of the ancient Books which treated of this Art. However that be, at preſent Muſic is ſeldom uſed but at Plays, Feaſts, Marriages, and on ſuch-like Occaſions. The *Bonzas* employ it at Funerals. *The* Chineſe *Muſic.*

WHEN they ſing, they raiſe and fall their Voice a Third and a Fifth, or an Octave; but never by Semi-tones. In like Manner, the Beauty of their Concerts does not conſiſt in the Variety of Voices, or the Difference of Parts; but all ſing the ſame Air, as is the Practice throughout *Aſia*. They like the *European* Muſic well enough, provided there be only one Voice to accompany the Inſtruments: But as for the moſt curious Parts of Muſic, I mean the Contraſt of different Voices, of grave and acute Sounds, Dieſes, Fugues, and Syncopes, they are not at all agreeable to their Taſte, appearing to them a confuſed Diſcord. *Nature of it.*

[a] *Le Comte*'s Memoirs of *China*, p. 228, *& ſeq.* [b] It is cup in the Tranſlation; but Cupping appears to be in Uſe lower down. [c] *Navarette*'s Deſcription of *China*, p. 54, *& ſeq.* [d] Afterwards made titular Biſhop of *Claudiopolis*. [e] *Le Comte*, as before, *p.* 220. [f] Vol. 2. p. 208, of the *Engliſh* Tranſlation.

Chineſe *Learning.* *Very imperfect.*

THEY have no muſical Notes, nor any Symbols to diſtinguiſh the Diverſity of Tones, the Raiſing or Falling of the Voice, and the other Variations that conſtitute Harmony: However, they have certain Characters that expreſs the different Tones. Their Tunes, which played, or ſung by a good Voice, have ſomething agreeable in them, are learned almoſt wholly by Rote, or by the Ear; nevertheleſs they make new ones from Time to Time, and the late Emperor *Kang-hi* compoſed ſome himſelf. In the Year 1679, that Monarch ſending for the Jeſuits *Grimaldi* and *Pereira*, to play upon the Organ and Harpſicord, which they had formerly preſented him; he ſeemed to take great Pleaſure in the *European* Airs. Then he ordered his Muſicians to play a *Chineſe* Tune, and touched the Inſtrument himſelf in a very graceful Manner. Meantime *Pereira* taking his Pocket-Book, pricked-down the Tune; and when they had made an End, repeated it as perfectly as if he had practiſed long before.

Academy eſtabliſhed.

THIS ſo ſurprized the Emperor, that he could ſcarce believe it; admiring how the Miſſionary could, in ſo ſhort a Time, have learned an Air, which had given him, and his Muſicians, no ſmall Trouble, and become a thorough Maſter of it, by Help of certain Characters: Nor could he be ſatisfied, till he had made ſeveral farther Trials, and ſung many different Airs; which the Jeſuit pricked, and repeated immediately, with the greateſt Exactneſs. This Prince afterwards eſtabliſhed an Academy for Muſic, compoſed of all thoſe who were moſt ſkilled in that Science, and committed to the Care of his third Son, who was a Man of Letters, and had read a great deal. They began by examining all the Authors who had written on this Subject, cauſing all Sorts of Inſtruments to be made after the ancient Manner, and according to ſettled Dimenſions. Theſe Inſtruments appearing faulty, they were corrected by the more modern Rules; after which they compiled a Book in four Volumes, with this Title, *The true Doctrine of the* Li-ti, *written by the Emperor's Order.* To theſe they added a fifth, containing the Elements of *European* Muſic, compoſed by *Pereira* the Jeſuit.

Chineſe *Inſtruments.*

THE *Chineſe* have invented eight Sorts of muſical Inſtruments, which they think come neareſt of any Thing to a human Voice. Some are of Metal, like our Bells, others of Stone, and one among the reſt has ſome Reſemblance to our Trumpet: Others are made with Skins like Drums, of which there are ſeveral Kinds, and ſome ſo heavy, that to fit them for beating-on, they muſt be propped with a Piece of Wood. They have vaſt String-Inſtruments: But the Strings are generally of Silk, ſeldom of Gut, ſuch as the Cymbals, carried-about by blind People, and their Violins; each of which Kinds has but three Strings, and is played-upon with a Bow: But there is one with ſeven Strings, very much eſteemed, and not diſagreeable when played-upon by a ſkilful Hand. There are others alſo, but they are made wholly of Wood, being pretty large Tablets, which they clap againſt each other. The *Bonzas* uſe a little Board, which they touch with much Art, and in good Time. In ſhort, they have Wind-Muſic: Such are their Flutes, which are of two or three Sorts, and an Inſtrument compoſed of ſeveral Pipes, which has ſome Reſemblance of our Organ, and withal an agreeable Sound; but is very little, being carried in the Hand [a].

THE Organ above-mentioned preſented to the Emperor, having been very ſmall, and defective in many Things; *Pereira* made a larger, and placed it in the Jeſuits Church at *Pe-king*. The Novelty and Harmony of this Inſtrument charmed the *Chineſe*; but what aſtoniſhed them moſt was, to hear it play of itſelf, *Chineſe*, as well as *European* Airs, and ſometimes making a very agreeable Mixture of both.

IT is well-known, that the Jeſuit *Ricci* owed his favourable Admiſſion into the Court, to a Clock and Repeating-Watch, which he preſented to the Emperor; who was ſo charmed with it, that he built a magnificent Tower purpoſely to place the Clock in; and becauſe the Queen-Mother had a Deſire for a Watch of the ſame Kind, the Emperor, who was loth to part with it, had Recourſe to a Stratagem, by ordering it to be ſhewn her, without winding-up the ſtriking Part; ſo that not finding it according to her Fancy, ſhe might ſend it back again; as in Effect ſhe did. The Miſſioners did not fail afterwards to gratify the Emperor's Taſte, by ſending for great Quantities of this Sort of Works. The Chriſtian Princes, who had the Converſion of this great Empire at Heart, aſſiſted them very liberally; ſo that the Emperor's Cabinet was ſoon filled with all Sorts of Clocks, moſt of which were of very curious Workmanſhip.

PEREIRA, who had a ſingular Talent for Muſic, placed a large and magnificent Clock on the Top of the Jeſuits Church. He cauſed a Set of ſmall muſical Bells to be caſt, and hung them in a Tower appointed for that Purpoſe: The Hammer of each was faſtened to an Iron-Wire; which raiſing it, let it fall again upon the Bell. Within the Tower alſo was a large Barrel, upon which certain *Chineſe* Airs were ſet with ſmall Pegs; and juſt before the Hour, the

[a] *Du Halde's China*, vol. 2. *p.* 125.

Barrel

N°. 140. *I. Basire sculp.* Vol. 4. Plate XXXIX. p. 182.

Barrel being disengaged from the Cogs of a Wheel, by which it was stopped, was presently set in Motion by a great Weight, the String whereof was wound-about the Barrel: So that the Pegs raising the Wires of the Hammers, according to the Order of the Tune, each Bell rang in its Turn, and thus distinctly played one of the finest Airs of the Country; which was followed by the Hour, striking on a large Bell of a deeper Tone. This was a Diversion entirely new, as well to the Court as the City; both Great and Small running continually to hear these Chimes [a].

FROM their Music, let us proceed to their Poetry, and Eloquence. These Arts must be of great Antiquity in *China*, it being generally observed, that in all Countries Poetry and Oratory have been cultivated long before other Sciences were even thought of; and that the first Histories of all Nations were composed in Verse, as the best Way to hand them down to Posterity, especially when Writing was not in Use.

BESIDES the ancient Books of the *Chinese*, some of which are in Verse, the Poems of *Kyu-i-wen* are extreamly delicate and sweet. Under the Dynasty of the *Tang*, *Li-tsau-pe* and *Tu-te-mwey*, did not yield to *Anacreon* and *Horace*. In short, in *China*, as formerly in *Europe*, the Philosophers are Poets; and among all their celebrated Writers, *Tseng-nan-fong* is the only one who has not written in Verse; for which Reason he is compared to the Flower *Hay-tang*; which would be perfect, were it not insipid [b].

To understand well in what the Excellency of the *Chinese* Poetry consists, it is necessary to be skilled in their Language; but as that is no easy Matter, we cannot give the Reader a very good Notion of it. Their Compositions of this Kind are somewhat like the Sonnets, Rondeaux, Madrigals, and Songs, of our *European* Poets: Their Verses are some long, some short; that is, have more or fewer Words in them, their Beauty consisting in the Variety of their Cadence and Harmony. They ought to have a Relation to each other, both in the Rhime and Signification of their Words, which have among themselves a Variety of Tones agreeable to the Ear. They have another Kind of Poetry without Rhime, which consists in the Antithesis, or Opposition of the Thoughts, insomuch that if the first Thought relates to the Spring, the second shall concern the Autumn; or if the first concerns the Fire, the other shall relate to the Water; which Manner of Composition has its Difficulties, and requires some Skill. Nor are their Pos destitute of Enthusiasm: Their Expressions are often allegorical, and they know how properly to employ the Figures that render the Stile more lively and pathetic [c]. *Poetry, Plays.*

NEVERTHELESS, their Rhetoric is almost intirely natural; they being acquainted with very few Rules proper to adorn and embellish the Diction: They content themselves with reading the most eloquent Compositions; therein observing the Turns that are most likely to affect the Mind, and make such an Impression as they aim at. *Rhetoric and Logic.*

THEIR Eloquence does not consist in a certain Arrangement of Periods, but in lively Phrases and noble Metaphors, as well as bold Comparisons; and, chiefly, in Maxims and Sentences taken from the ancient Sages; which being expressed in a sprightly, concise, and mysterious Stile, contain a great deal of Sense, and Variety of Thoughts, in a very few Words.

THEIR Logic, which is refined to such a Pitch in *Europe*, is in no better a State. They have invented no Rules to bring Argumentation to Perfection, and shew the Method of defining, dividing, and drawing Consequences. They follow nothing but the natural Light of Reason; by which only, without any Assistance from Art, they compare several Ideas together, and draw Consequences sufficiently just [d].

WITH these Helps the *Chinese* have published a vast Number of Books on all Sorts of Subjects; as, Agriculture and Botany, the liberal, military, and mechanical Arts, Philosophy and Astronomy. But, they have been of most Use to them in composing their Histories, Plays, Books of Knight-Errantry, Romances, and Novels. These last are not unlike those to be met with in *Europe*; with this Difference, that ours generally consist of nothing but Love-Adventures, or ingenious Fictions, which corrupt the Mind at the same Time they divert the Fancy: Whereas, the *Chinese* Novels are commonly very instructive, as well as pleasant, containing Maxims for the Reformation of Manners, and almost always recommending the Practice of some Virtue. These Stories are often intermixed with four or five Verses, to enliven the Narration [e]. *Du Halde* has inserted three or four Pieces of this Kind by Way of Specimen. *Their Novels.*

PLAYS must be very common in *China*, since, as hath been already observed [f], they are acted at every considerable Entertainment: But neither the three Unities, of Action, Time, and Place, nor the other Rules observed by the *Europeans*, to give Regularity and Grace to these Sorts of Works, are to be found in them. The whole Design of their Authors being to divert their Countrymen, *Their Plays.*

Chineſe *Learning.*

and move their Paſſions; to inſpire them with the Love of Virtue, and an Abhorrence of Vice; they think it ſufficient if they ſucceed thus far. They make no Diſtinction between Tragedies, which do not differ from their Novels, excepting, that Perſons are introduced ſpeaking on a Theatre. In the printed Plays, the Names of the Perſons are ſeldom ſet down; becauſe they always begin by telling the Spectators who they are, and the Parts they are to act.

And Actors.

A COMPANY of Comedians conſiſts of eight or nine Actors, who have each their proper Parts allotted, much like the *Italian* Comedians and *French* Strollers: Frequently, the ſame Player acts ſeveral different Parts; otherwiſe, as the *Chineſe* repreſent every Incident, and in the Dialogue Form, the Company would be too numerous: But then the Spectator is liable to be puzzled. This might be remedied by a Maſk; but Maſks are ſeldom uſed, except in Interludes; and are worn only by Villains and the Chiefs of Robbers.

Their Tragedies,

THE *Chineſe* Tragedies are intermixed with Songs; and they often break-off Singing, to recite two or three Phraſes in the uſual Manner of ſpeaking. It ſhocks an *European* to ſee an Actor fall a-ſinging in the Middle of a Dialogue: But it muſt be conſidered, that among the *Chineſe*, the Singing is to expreſs ſome great Emotion of the Soul; ſuch as Joy, Anger, Grief, or Deſpair: For Inſtance, a Man who is filled with Indignation againſt a Villain, ſings; another, who animates himſelf to Revenge, ſings; a third, who is ready to make himſelf away, likewiſe ſings.

THE Songs in ſome Plays are difficult to be underſtood, eſpecially by *Europeans*, becauſe full of Alluſions to Things unknown to them; and Figures of Speech which they have much ado to comprehend. The Airs belonging to the Songs of the *Chineſe* Tragedies are but few, and, in the Impreſſion, they are placed at the Head of the Songs; which are printed in large Characters, to diſtinguiſh them from Proſe.

Account of one.

THE Tragedies are divided into ſeveral Parts, which may be called Acts: The firſt is named *Sye-tſe*, and reſembles a Prologue or Introduction: The Acts are called *Chè*, which may be divided, if one will, into Scenes, by the Entries and Exits of the Actors.

FOR a Specimen of the *Chineſe* Plays, the Author has inſerted a Tragedy, intitled, *Chau-ſhi-ku-eul*, that is, *The little Orphan of the Houſe of* Chau. It was tranſlated by *de Premare* the Jeſuit, from a Collection of an hundred of the beſt Plays compoſed under the Dynaſty of the *Ywen*, (or *Weſtern Tartars*) and contains an hundred Volumes divided into four *Tau*. It is the eighty-fifth of the Collection, and begins the thirty-fifth Volume. There are but five Actors; although near a Dozen Perſons ſpeak, if we reckon the Guards and Soldiers [a].

As for Hiſtory, no People have been more careful to write and preſerve the Annals of their Empire. Thoſe ſo much venerated Books contain every Thing conſiderable that paſſed during the Reign of the firſt Emperors who governed *China*: There you find the whole Hiſtory and Laws of the Emperor *Yau*, with all the Care that he took to eſtabliſh a Government in his Dominions: There you read the Regulations made by his Succeſſors *Shun* and *Yu*, to improve Morality, and eſtabliſh the public Tranquillity; the Cuſtoms in Force among the petty Kings, who governed the Provinces dependent on the Emperor; their Virtues, Vices, and Maxims of Government; their Wars with each other; the great Men who flouriſhed in their Time, and all other Events, which deſerve to be tranſmitted to Poſterity.

THEY have obſerved the ſame Method in recording the Hiſtory of the following Reigns. But what the *Chineſe* are remarkable for, is the great Care they have taken to free it from that Partiality which the Flattery of ſycophantic Writers might have introduced. One of their Precautions conſiſts in chuſing a certain Number of diſintereſted Doctors, whoſe Buſineſs it is to obſerve all the Words and Actions of the Emperor; and, as faſt as they come to their Knowledge, to ſet them down, unknown to each other, in a looſe Sheet of Paper, which they put into a Cheſt through a Slit made for the Purpoſe.

THEY relate therein, with great Sincerity, every Thing, good or bad, that has been ſaid or done: For Inſtance, ſuch a Day the Emperor forgot his Dignity; he was not Maſter of himſelf, and gave Way to Paſſion: Another Day he hearkened to nothing but his Reſentment and Anger in puniſhing ſuch an Officer unjuſtly, or in diſannulling an Act of the Tribunal without Cauſe. Again, in ſuch a Year, and on ſuch a Day, the Emperor ſhewed ſuch a Mark of paternal Affection for his Subjects; he undertook a War for the Defence of his People, and the Honour of the Empire; and in the midſt of the Applauſes of the Court, who congratulated him for ſuch an Action, conducive to the Good of the Empire, he appeared with an Air full of Modeſty and Humility, as if inſenſible of ſo unjuſt Praiſes.

THE Cheſt, in which theſe Sheets are depoſited, is never opened, either while the Prince is living, or any of his Family upon the Throne

[a] *Du Halde's China*, vol. 2. p. 175.

But when the Crown passes to another House, they collect all these Memoirs; and after comparing them together, in order to discover the Truth [a], compose the Annals of such an Emperor out of them.

THE Account which every City prints of whatever considerable happens in its District [b], contributes not a little to enrich the History of their Nation. In these local Histories are mentioned the extraordinary Events and Prodigies, with the Monsters that are born at certain Times: For Instance, the Serpent which a Woman was delivered of, and suckled, at *Fû-chew fû*; or the little Elephant with his Trunk, brought forth by a Sow at *King-te-ching*; although there are no Elephants in that Country: Which Facts are related in the Annals of these two Cities [c].

SECT. V.

The Sciences *peculiar to the* Chinese.

1. *Of their* Moral Philosophy, Laws, *and* History.

Chinese *Sciences: Original and Use. Five moral Duties: Duty of Children to their Parents: Of Subjects to Princes; and to each other: Of ancient standing.* Chinese *Laws. Their History. Their classical Books. The* I-king, *explained by* Confusius, *and others.* Fo-hi's *Fiction. The* Shu-king. *The* Shi-king. *The* Chun-tsyu. *The* Li-ki.

WE come now to those Parts of Knowledge which may be properly called the *Chinese* Sciences: These are their Language, and a good Stile; their History and Laws, Morality and Politics. We have already shewn the Reason why they prefer these practical Sciences to the speculative [d], which are in so much Esteem everywhere else: And as they have, for a long Succession of Ages, applied their Thoughts to the Improvement of them, it is no Wonder, if they have brought them to greater Perfection than all other Nations beside.

IT is certain, that Peace and good Order are the most desirable Objects of Society; and therefore the *Chinese* are most intent in cultivating the Studies most likely to promote those Ends. After having settled a good Form of Government, or System of Politics, their next Care was to support and preserve it. This, they judged, was best done two Ways; first, by regulating the Manners of the Nation in general, and introducing the Rules of Civility and good Behaviour amongst the different Ranks of People; secondly, by encouraging the Study of Morality, their Laws, their History and Language. As the most effectual Means of doing this, it has been ordained, that all Posts and Employments in the Government, both civil and military, should be conferred on those who are best qualified in this Sort of Learning, and on none else: At the same Time, the better to enable Persons, of all Conditions, to pursue their Studies, as well as to distinguish those who have made the greatest Proficiency therein, Schools and Halls, (which may be called Universities) have been erected in all Cities and Towns through the Empire; wherein Youth are educated at the public Expence, and undergo strict Examinations, in order to obtain the three Degrees of Literature, which intitle them to Honours and Preferments [e]. Were none to be admitted into the Senates of *Europe*, without being qualified in the same Manner, the Legislators would never make bad Laws for want of Knowledge, nor be over-reached by the Artifices of wicked Ministers.

Moral Philosophy.

THE *Chinese* Philosophers, we are told, reduce all their Morality to five principal Duties, *viz.* The Duties of Fathers and Children; those of Prince and Subjects; of Husband and Wife; of elder and younger Brothers; and, lastly, of Friend to Friend. Almost all their Books treat only of the Obedience due from Children to Parents, and of Scholars to Masters; of the Loyalty of Subjects to the Prince; of the Respect due from the Wife to the Husband; of the Affection that ought to reign amongst Brethren; and of the reciprocal and inviolable Attachment amongst Friends.

Five Moral Duties.

With regard to the Duty of Children to Parents: Neither the adult Age of the Son, nor high Rank to which he is elevated, nor any bad Treatment which he might have received, can excuse him from the Respect, the Complaisance, and the Love which he owes to his Parents. This Sentiment is carried so far among the *Chinese*, that the Laws give to Fathers an absolute Authority over their Families; empowering them even to sell their Children to Strangers, if they are dissatisfied with their Conduct. A Father who accuses a Son, before a *Mandarin*, of any Failure, in Point of Respect, has no Occasion to bring Proofs; for the Son is always presumed to be culpable, and the Father to be in the right.

Duty of Children

THE Case is different with regard to the Son;

To their Parents.

[a] This implies, that the Sincerity of some of the Authors is doubtful. [b] See before, *p.* 146. e. [c] *Le Comte*'s Memoirs of *China*, p. 261; and *Du Halde*'s *China*, p. 146, *& seq.* [d] See before, *p.* 163. b. The same, *p.* 114, *& seqq.*

Chineſe Sciences.

he would be conſidered as a Monſter who ſhould pretend to complain of his Father; and there is even a Law which prohibits a Magiſtrate from hearing an Accuſation of the Kind. Indeed, if the Petition of the Son be ſigned by the Grandfather, it may be admitted; but in caſe the leaſt Article of it ſhould be falſe, the Son runs the Hazard of his Life. *It is the Son's Duty*, ſay they, *to obey, and have Patience: With whom will he bear, if not with his Father?*

BUT if a Child ſhall proceed ſo far as to give his Father any opprobrious Language; or if he is ſo tranſported with Fury, as to ſtrike, or to kill him; which, however, very rarely happens, ſuch a Crime puts the whole Province in an Alarm; his Relations are puniſhed [a], and the Governors frequently depoſed: It being always preſumed, that the unfortunate Child could never have reached to ſuch a horrid Pitch of Guilt, but by Degrees; and that the Scandal might have been prevented, had thoſe, who ought to have watched over his Conduct, puniſhed the firſt Faults committed by a Perſon infected with ſuch bad Diſpoſitions. No Puniſhment is thought ſevere enough for ſo ſhocking a Crime: The Malefactor is condemned to be cut in a thouſand Pieces, his Houſe is deſtroyed, and a Monument reared to excite Horror for ſo execrable an Action [b].

Of Subjects to Princes,

THE Reader has already ſeen an Inſtance of the great Veneration paid by Children to their Parents in the Article of Mourning for the Dead [c]. This Obedience and Submiſſion to their natural Fathers, in which they are educated from their Infancy, diſpoſes them the more eaſily to the Obſervance of the next Duty, which regards their Princes, Governors, or Maſters; and theſe two Principles are the chief Baſis of the *Chineſe* Morals and Politics.

THE two next Duties which reſpect Huſband and Wife, elder and younger Brethren, contribute not a little to ſupport the two firſt; and the great Advantage of them appears in that exquiſite Harmony and Order, which generally reigns in private Families, where that Strife, Noiſe, and Broiling, which is found ſo commonly between Man and Wife, as well as Brothers and Siſters, in other Countries, is ſeldom heard of. The ſame happy Influence, which theſe two Principles have in private Life, is introduced into public Society by the fifth and laſt; which concerns the Obligations between Friends: Under which Denomination are included all Sorts of People, who

And to each other.

are not Relations, Strangers as well as Neighbours and Acquaintance. Theſe Obligations conſiſt in the Modeſty and Circumſpection that is to be obſerved in the Behaviour of every Body in particular, and the mutual Civilities and Compliments that are to be paid by all Perſons to one another, according to their reſpective Ages, Qualities, and Merit.

THE Rules of Decorum, both as to Words and Geſtures, of which ſome Account has been already given [d], have introduced into the Air and Manners of the *Chineſe*, ſuch a Reſerve, Complaiſance, and Diſpoſition to Politeneſs, as prompts them to prevent one another in paying thoſe Reſpects, which each has a Right to require; and to diſſemble, or even to ſtifle, a Reſentment. According to them, nothing conduces more to ſoften and poliſh Mankind, than this [e]: While a Ferocity, natural to certain Nations, increaſed by a brutal Education, renders the People intractable, diſpoſes them to Rebellion, and throws States into Convulſions [f].

THESE Principles of Morality among the *Chineſe*, are almoſt as old as their Monarchy itſelf, they being taught in the ancient Books of their firſt Sages, all whoſe Maxims are founded upon theſe different Duties; by which, in all Ages, they have regulated their Manners and Actions. This appears from two moral Treatiſes written by *Chineſe* Authors, and inſerted by *Du Halde*, in his Deſcription of *China* [g]. The firſt and moſt ancient of theſe Treatiſes, was tranſlated by *Hervieu*, under this Title, *A Collection of Maxims, Reflections, and Examples relating to Manners:* The other, which is a modern Compoſition, was done into *French* by *Dentrecolles*; both Jeſuits already mentioned. From this laſt Piece, which is in great Reputation, it is evident, that the moral Philoſophy of the *Chineſe* is of a popular Nature, tending rather to reform the Manners of Mankind, than to increaſe the Number of its own Diſciples [h].

THE *Chineſe* Laws, which is the ſecond Article to be conſidered, are all grounded on the ſame Principles of Morality, and right Reaſon, and fitted to ſupport the Government, according to its original Conſtitution. Theſe are to be found in their ancient claſſical Books, which we ſhall ſpeak of preſently; and in the Edicts, Declarations, Ordinances, and Inſtructions of the Emperors of the ſeveral Dynaſties, or Races, which have reigned in *China*. *Du Halde* has

[a] This ſeems to be a very juſt Law: For generally ſpeaking, the Faults of the Children are owing to the Neglect, or ill Example of the Parents. Nothing would go farther to reform the Manners of the People, than a Law of this Kind, with proper Limitations. [b] *Du Halde*'s *China*, vol. 2. p. 37, & *ſeq.* See alſo *Le Comte*'s Memoirs of *China*, p. 272. [c] See before, *p.* 91. [d] The ſame, *p.* 78. [e] See an Inſtance, vol. 3. p. 535. e. and ſeveral in *Navarette*'s Travels, *p.* 499. [f] *Du Halde*, as before, *p.* 38. *Le Comte*, as before, *p.* 277. [g] Vol. 2. p. 39. [h] See *Du Halde*, as before, *p.* 39.

publiſhed

published a curious Collection of these [a], together with the Remonstrances and Discourses of their most able Ministers, upon good or bad Government. It is intitled, *The imperial Collection*, having been made by the late Emperor *Kang-hi*, who added Remarks of his own to most of them. These Pieces well deserve the Perusal of such as would be acquainted with the *Chinese* Maxims of Government, or improve themselves in that Sort of sound Politics, which has the Interest of a Nation, rather than of Governors, for its Object.

THE History of *China* is very voluminous, as well on Account of the long Succession of Emperors, for above four thousand Years, as of the Circumstantialness wherewith all Transactions and Events of any Consequence are related. They have also the particular Histories, or Annals, of the petty Kings, who formerly reigned in the Provinces, written with the same Minuteness, and Impartiality, as that of the Emperors [b]. There are several very copious Works of this Kind, particularly one, containing an hundred Volumes in Folio, which is in the King of *Prussia*'s Library. The *Chinese* have also a great Number of Authors, who have written the Histories of their Times, or particular Reigns, those of Revolutions, like that of the *Tartars*, or other extraordinary Events. Hence this Study is laborious enough, and it requires a very good Memory, as well as great Application, to digest such a Multitude of Instances of a different Nature, in order to apply them according to the several Occasions that may occur; either to form a right Judgment, confirm their Reasonings, or support their Opinion in any Point relating to Government.

2. *The* classical, *or* canonical Books *of the first Order.*

THE ancient classical Books of the *Chinese* above-mentioned, contain the Morality, Laws, and History of the Empire in the earliest Ages. These, from their Number called *U-king*, or *the five Volumes*, are in Effect their sacred Writings, being held in no less Veneration by them, than the *Pentateuch*, or the *Old Testament*, is by the *Jews*, the *New Testament* by *Christians*, or the *Koran* by *Mohammedans*. The other Books, which are of the greatest Authority in *China*, are only Comments, or Interpretations upon them: The chief of which, are those written in four Books, by *Confusius*, and his Disciple *Meng-tse*. The *U-king* are called the *Classic*, or *Canonical Books of the first Order*; the Comments, those of the *second Order*. The Word *King* signifies *a Doctrine sublime, solid, and invariable*; because founded upon fixed Principles. The first of the five canonical Books is called *I-king*, or *the Book of Transmutations*, and purely symbolical, consisting in a Table of sixty-four Characters, or Figures, which are double, each composed of three Lines, some whole, others broken, or divided into two, and placed in a parallel Position. For Instance, one Figure consists of three whole Lines, another of three broken Lines, a third of two whole Lines and one broken into two, a fourth of two broken Lines and one whole Line; and so on, in Order, by their different Combinations, to express different Things, or Ideas, which their Inventor *Fo-hi*, the Founder of the *Chinese* Monarchy, annexed to them. These are more properly arbitrary Signs of Things, than Hieroglyphics, and were the Original of the *Chinese* Characters; which by augmenting the Number of the Strokes, and giving them a greater Variety of Forms and Positions, are capable of representing an infinite Number of Things: Whereas *Fo-hi*'s being vastly more confined, could exhibit but a few.

Canonical Books.

The I-king.

Explained by Confusius.

THIS mysterious Work, we are told, exercised the ablest Men in *China*, till the Time of *Confusius*. The Emperor *Ven-vang*, who attempted it, lived eighteen hundred Years after *Fo-hi*: His Son *Chew-keng* proceeded in the same Design; but both Comments only perplexed this Ænigma, by Ænigmas equally obscure. The clear Explication of these puzzling Lines, it seems, was reserved for the above-mentioned Philosopher, who appeared four hundred Years after, and unriddled not only them, but the dark Interpretations of the two Emperors. He makes them to contain Doctrines relating partly to the Nature of Beings, especially the Elements, and their Properties; and partly to Morality, and the right governing of Mankind; being persuaded [e], that those symbolical Lines contained Mysteries of great Importance to the Welfare of States.

And others.

THESE are reckoned, by able Critics, the only Commentaries that were written by *Confusius*: And his Disciples affirm, that he was so little satisfied with them, that when he grew old, he wished to live some Years longer, that he might new-model his Work. After all, the Interpreters rather deserve the Name of Authors, than Interpreters; for the *I-king* is full of Obscurities, and Things hard to be understood: In Process of Time, this Obscurity occasioned a Multitude of Errors, and Superstitions; for falling into the Hands of certain Doctors in the corrupt Ages, they altered and falsified the Text, wresting the Sense to vain Prognostics, Divinations, and Magic; and hence they have been called *the Book of Lots.*

[a] See his Description of *China*, vol. 1. p. 454. [b] See before, *p.* 182, and 186. e. [c] At least he was judicious enough to give it that Term, and form an Explication agreeable to his Design.

Chineſe Sciences.

Fo-hi's Fiction.

THE *Literati* have the utmoſt Eſteem for this Book, and many ancient Authors expreſs their Regret for having loſt the real Meaning of it, while they retain only a ſuperficial [a] one. *Fo-hi*, by this Work, rendered himſelf the Father of Science, and good Government, in *China*. To give the greater Reputation to his Figures, he pretended, that he ſaw them on the Back of a Dragon, which aroſe from a Lake, and is ſince become the Arms of the Emperor. But what chiefly contributes to the great Authority of the *I-king*, is, firſt, the Tradition that it eſcaped the general Deſtruction by Fire, which all other literary Monuments underwent, by Command of the Emperor *Tſin-ſhi-whangti*, about two hundred Years after *Confuſius*, and before Chriſt. Secondly, the great Encomiums beſtowed on it by the beſt Writers in all Ages, who ſuppoſe it full of excellent, moral, and political Maxims [b]; though in Effect they know nothing of the Matter, and it might have been no more than a Kind of Drawing, or Experiment, in ranging two Sorts of Lines in as many different Manners as they would admit of.

The Shu-king.

THE ſecond of the five chief canonical Books is called *Shu-king*, otherwiſe *Shang-ſhu*, that is, *the Book ſpeaking of ancient Times*. It is divided into ſix Parts, whereof the two firſt contain the moſt memorable Events in the Reigns of the ancient Emperors *Yau*, *Shun*, and *Yu*, who are looked-on as the Legiſlators and Heros of the *Chineſe* Nation. *Yu* founded the firſt Dynaſty of *Hya* two thouſand two hundred and ſeven Years before Chriſt, which laſted four hundred and fifty-eight Years. The third Part contains the Tranſactions under the ſecond imperial Family, which began in *Ching-tang* one thouſand ſeven hundred and ſeventy-ſix Years before the Chriſtian Æra, and laſted ſix hundred Years: Therein are recited the wiſe Ordinances of this Emperor, with the fine Inſtructions of the Miniſter *Tſong-whey*, and wholeſome Regulations of *Fuywe*, another *Ko-lau*. The Emperor *Kau-tſong*, having ſeen this Perſon in a Dream, cauſed him to be ſearched for; and he was found among a Company of Maſons.

THE three laſt Parts of the *Shu-king* contain the Hiſtory of the third Race, which was founded by *Vu-vang* eleven hundred and twenty-two Years before Chriſt, and continued eight hundred and ſeventy-three Years; intermixed with many excellent Maxims and Regulations, for the public Benefit. *Du Halde* has given ſome Extracts from this Book, made by *de Premare* the Jeſuit [c].

The Shi-king.

THE third canonical Book of the firſt Order, is called *Shi-king*, conſiſting of Odes, Songs, and Verſes [d], compoſed under the third Race; wherein the Manners, Cuſtoms, and Maxims of the petty Kings, ſubordinate to the Emperor, are deſcribed. *Confuſius* beſtows great Encomiums on them, and declares, that the Doctrine they contain is very pure and holy; but as ſome of the Pieces are extravagant and impious, ſeveral Interpreters ſuſpect that they have been foiſted in among the reſt. Theſe poetical Compoſitions (whoſe Stile is very obſcure, from their *Laconic* Stile, and Number of old Proverbs) may be divided into five different Kinds. The firſt contains the Encomiums of Men, illuſtrious for their Virtues and Talents; with many Inſtructions accuſtomed to be ſung in the Solemnities, Sacrifices, Obſequies, and Ceremonies, inſtituted in Honour of Anceſtors. The ſecond reports the Uſages eſtabliſhed in the Empire, in a Kind of Romances, compoſed by private Perſons, not ſung, but recited before the Emperor, and his Miniſters; whoſe Defects, as well as thoſe of the People, are freely cenſured. The third is ſtiled *Compariſon*; becauſe its Meaning is explained by Similies and Compariſons. The Manner of the fourth riſes to the Sublime; becauſe the Odes commonly begin with certain bold Strokes of the Marvellous, which prepare the Mind of the Reader to be attentive to what follows. The fifth comprizes the Verſes that are ſuſpected, and were reckoned by *Confuſius* to be apocryphal. *Du Halde* has inſerted ſome Odes from this Book, tranſlated by the Miſſioner before-mentioned [e].

THE *Chun-tſyu*, or fourth canonical Book of the firſt Order, was not admitted into the Rank of the *King*, till the Reign of the *Han* Dynaſty. It was written in the Time of *Confuſius*, and, conſequently, much inferior to the other three. Some make that Philoſopher the Author, but the Majority reject this Opinion: Many hold, that it contains the Hiſtory of the Kingdom of *Lû*, at preſent the Province of *Shan-tong*, where *Confuſius* was born. Others maintain, that it is an Abridgement of what paſſed in the different Kingdoms, into which *China* was divided, before united by *Tſin-ſhi-whangti* before-mentioned: For this Reaſon, ſome learned Men would have it degraded to the ſecond Claſs of canonical Books: However, the *Chineſe* have a peculiar Value and Fondneſs for it.

IN this Volume, the Actions of many Princes, with their Vices and Virtues, are deſcribed: Likewiſe the Rewards and Puniſhments attending them, are exhibited, as in a Mirror. The Hiſtory begins with *In-kong* [f], who poſſeſſed the

[a] He might have ſaid, an imaginary one. [b] *Du Halde*'s *China*, p. 399, & *ſeq.* [c] The ſame, *p.* 400, & *ſeqq.* [d] *Shi* ſignifies *Verſe*. [e] *Du Halde*, as before, *p.* 408, & *ſeq.* [f] This anſwers to the forty-ninth Year of the Emperor *Ping-vang*, thirteenth of the Race of the *Chew*.

Kindom of *Lû*, and ends with *Ngay-king*, the twelfth Prince, comprizing the Space of two hundred and forty-one Years under ten Kings: This Book is intitled *Spring and Autumn*, in Alluſion to the flouriſhing State of an Empire, under a virtuous Prince, and its declining Condition under a vicious one. *Ko-ſhi*, a Diſciple of *Confuſius*, compoſed a learned Commentary on this Work, called *Que-yu*, or *the Maxims of Government*.

THE *Li-ki*, or *Memorial of the Laws, Duties, and Ceremonies of a civil Life*, the fifth canonical Volume, contains twelve Books, which *Confuſius* compoſed from the different Works of the Ancients: It is believed, that its principal Author was *Chew-kong*, Brother to the Emperor *Vu-vang*, already mentioned: It comprehends likewiſe the Works of ſeveral of that Philoſopher's Diſciples, as well as other Writers, more modern, and leſs to be depended on. The Cuſtoms and Ceremonies, both ſacred and profane, are there treated of; together with the Uſages of all Kinds that were practiſed, eſpecially in the Times of the three firſt Dynaſties of the *Hya*, *Shang*, and *Chew*: It treats likewiſe of the Duties of Children to their Parents; of Wives to their Huſbands; of the Rules of true Friendſhip; of Civilities at Feaſts; of Hoſpitality, Funeral-Honours, War, Muſic, and many other Things proper to preſerve Society: But as three hundred Years after this Compilation was made by *Confuſius*, all the Copies were burnt by *Tſin-ſhi-whang*'s Order, already mentioned, and no more of the Book could be recovered, than a few Leaves ſaved from the Flames, and what the old Men had been able to retain by heart; it is ſuſpected of being mixed with ſeveral ſpurious Matters: Beſides, many Uſages are found in it not received at preſent; for which Reaſon the *Chineſe* own, that it ought to be read with a great deal of Caution [a].

3. *The* claſſical, *or* canonical Books *of the ſecond Order.*

The Tay-hyo. *The* Ching-yong. *The* Lun-yu. *The* Meng-tſe. *The* Hyau-king. *The* Syau-hyo.

THE canonical Books of the ſecond Order are four; which were compoſed by *Confuſius*, or his Diſciples: To theſe there are added two more, which are almoſt of equal Reputation with the reſt. *Noël* the Jeſuit-Miſſioner, famous for his aſtronomical, and other Obſervations, relating to *China*, and the *Indies*, made a *Latin* Tranſlation of theſe Books, printed at *Prague* in 1711; from which *Du Halde* has given Extracts, which will be mentioned in their reſpective Places.

THE firſt Book of this ſecond Order is the *Tay-hyo*, or *grand Science*; becauſe deſigned for the Inſtruction of Princes and Noblemen in well-governing. *Confuſius* is the Author, and his Diſciple *Tſong-tſe*, the Commentator. It treats firſt of the Care they ought to take in governing themſelves, that they may be able afterwards to govern others; and of Perſeverance in the ſovereign Good, which, according to him, is nothing elſe but the Conformity of their Actions with right Reaſon. To ſucceed herein, *Confuſius* ſays, that it is neceſſary to examine well into the Nature of Things, and endeavour to acquire a true Knowledge of Good and Evil; to fix the Will towards the Love of this Good, and the Hatred of this Evil; to preſerve Integrity of Heart, and regulate the Manners: That when a Man is thus renewed, he will find no Difficulty to renew others, and Peace will ſoon flouriſh in the Empire, as well as private Families. The Doctor *Tſeng*, to give his Maſter's Doctrine its full Scope, explains it in ten Chapters. *Canonical Books.*

THE ſecond Book is named *Chong-yong*, or *the immutable Medium*: It is the Work of *Confuſius*, and treats of the Medium that ought to be obſerved in all Things; and that all, eſpecially thoſe intruſted with the Government of Nations, ought to follow this Middle, or Mean, in which Virtue, he ſays, conſiſts. The Book is divided into thirty-three Articles, in which he inſiſts, that the Law of Heaven is engraven in the Nature of Man; and that the Light of Reaſon is the Guide he ought to follow: He deplores the unhappy State of Mankind, whereof ſo few follow this middle Path; and explains what is the Mean of ſeveral Virtues: He ſhews, that this Science is difficult in Speculation, but eaſy in Practice; and that it extends to the moſt common Actions of Life: He confirms his Doctrine by Examples of Princes, who have obſerved this Medium; and ſhews the great Advantages ariſing from thence. Laſtly, that to acquire this Perfection, it is not neceſſary to undergo Auſterities, and perform difficult Things; it ſufficing to apply one's ſelf ſimply to the Purſuit of this Virtue. *The* Chong-yong.

LUN-YU, or *the Book of Sentences*, is the third Volume of this ſecond Order, divided into twenty Articles; ten are taken-up with the Account given of *Confuſius* by his Diſciples; the other ten conſiſt only of Queſtions, Anſwers, or Sayings, of the Philoſopher, or his Diſciples, on the Virtues, good Works, and the Art of governing well. This Collection abounds with as fine Maxims, and Sentences of Morality, as any aſcribed to the ſeven wiſe Men of *Greece*. Among the reſt, he ſays, that it is impoſſible a Flatterer ſhould be virtuous: That a wiſe Man does not grieve for being little known to Men, but becauſe they are not ſufficiently known to *The* Lun-yu.

[a] *Du Halde*'s *China*, p. 414, & *ſeq.* *Le Comte*'s Memoirs of *China*, p. 190, & *ſeqq.*

Chineſe *Science.*

him: That he who approves of the evil Sects, ſuch as thoſe of the *Ho-ſhang*, and *Tau-tſe* Bonzas [a], does Hurt to himſelf, and Injury to the Empire; and that there is no true Doctrine but what they received from the ancient Sages, which teach them to follow right Reaſon: That the wiſe Man has nothing in view, but the Beauty of Virtue; and the Fool thinks of nothing, but the Conveniencies and Pleaſures of Life. *Du Halde* has given ſeveral Extracts from this Volume.

The Meng-tſe.

THE fourth Book is ſtiled *Meng-tſe*, or *the Book of Doctor Meng*, called by *Europeans Mencius*. He was related to the Kings of *Lû*, and the Diſciple of *Tſe-tſe*, Grandſon of *Confuſius*, whoſe Senſe and Energy he expreſſed beſt of all that Philoſopher's Followers. His Work is divided into two Parts, the firſt containing ſix Chapters, the ſecond eight; and treats of good Government almoſt throughout: As at that Time the whole Empire was involved in civil Wars, he proves, that Peace and Tranquillity were not to be reſtored by Force of Arms, but by Examples of Virtue: Theſe Diſcourſes are connected in Form of Dialogues, or Converſations, which he had either with his Diſciples, or with Princes; and to illuſtrate what he advances, makes uſe of Similitudes agreeable to the ancient Cuſtom. *Du Halde* has inſerted an Abridgement of the Whole.

The Hyau-king.

THE fifth Book is intitled *Hyau-king*, or *of filial Reſpect*: It is a ſmall Volume, and contains only the Anſwers of *Confuſius*, to his Diſciple *Tſeng*, concerning the Duty of Children towards their Parents, which he makes the Foundation of the wiſe Government of the Empire: In this Tract therefore, filial Duty is carried to the greateſt Pitch: No Virtue is made ſo ſublime and neceſſary, as the Obedience of a Son; or Crime deemed ſo enormous, as that of filial Diſobedience. The Obligation is equally laid on Princes with the meaneſt People; and thoſe are reckoned to have attained to the Perfection of Virtue, who, by their own Example, have propagated filial Love and Reſpect: Yet, it is acknowledged, that neither the Son ought to obey his Father, nor the Miniſter the Prince, in caſe they ſhould command any Thing contrary to Juſtice, or Civility.

The Syau-hyo.

THE ſixth, and laſt claſſical Book, is named *Syau-hyo*, or *the School of Infants*: It was compoſed by *Chu-hi*, a Doctor, under the *Song* Family, about the Year of Chriſt 1150: It is a Collection of Maxims and Examples both ancient and modern, divided into Chapters and Paragraphs: It treats more particularly of public Schools, of the Honours due to Parents, Kings, Magiſtrates, and aged Perſons; of the Duties of Man and Wife; of the Manner of regulating the Heart, the Geſtures of the Body, Food and Raiment; the Deſign of the Author being to inſtruct Youth, and reform their Manners. *Du Halde* has given an Extract of the Maxims added by the Compiler, to thoſe found in the ancient Books [b].

4. *The Life of* Kong-fû-tſe, *or* Confuſius, *the great* Chineſe *Philoſopher.*

Time of his Birth. Idea of God. His Parentage, Studies, and Marriage. Propoſes a Reformation. His Preferment. Reſigns his Places. His Diſciples numerous. His virtuous Aims. Courage and Firmneſs. His great Modeſty. Pernicious Miſtake. His laſt Sickneſs, and Death. His Sepulchre. His Perſon. His Morality excellent. Honours paid him. Halls and Feſtival. Ceremony of the Sacrifice. Emperor's Offering.

Time of his Birth.

CONFUSIUS [c] was born in a Town [d] of the Kingdom of *Lû*, now the Province of *Shantong*, in the twenty-firſt Year of *Ling-vang*, twenty-third Emperor of the *Chew* Race, five hundred and fifty-one Years before Chriſt, and two before the Death of *Thales*, one of the ſeven Sages of *Greece*. He was contemporary with the famous *Pythagoras* [e], and ſomewhat earlier than *Socrates*: But *Confuſius* has had this Advantage above the other three, that his Glory has increaſed with the Succeſſion of Years, and ſtill ſubſiſts throughout the greateſt Empire in the World, which thinks itſelf indebted to him for its Duration and Splendor.

His Life.

THIS wiſe Philoſopher, without being ſolicitous to ſearch into ſuch impenetrable Secrets as the Origin of the World, like *Thales*, or the Nature of future Rewards and Puniſhments, like *Pythagoras*; ſolely confined himſelf to ſpeak concerning the Principle of all Beings; to inſpire a Reverence, Fear, and Gratitude for him; to inculcate, that nothing, not even the moſt ſecret Thought, eſcapes his Notice; that he never leaves Virtue without Reward, nor Vice without Puniſhment, whatever the preſent Condition of both may be. Theſe are the Maxims ſcattered throughout his Works, and on which he endeavoured a Reformation of Manners.

[a] Theſe Sects were not in *China* for ſeveral Centuries after *Confuſius*; perhaps, they are put in by the Miſſioner, by Way of Explanation; but they could not poſſibly be meant by *Confuſius*. [b] *Du Halde*'s *China*, p. 418, and 441. [c] This is a Corruption of *Kong-fû-tſe*, his true Name. [d] Called *Kyo-feu hyen*: See before, *p.* 50. [e] The Author might have added, and with *Solon*, the celebrated Philoſopher and Legiſlator.

CONFUSIUS was but three Years old when a
e loſt his Father *Sho-lyang-he*, who died about
he Age of ſeventy-three. This old Man en-
oyed the higheſt Offices of the Kingdom of
ang, yet left no other Inheritance to his Son,
ut the Honour of deſcending from *Ti-yé*, the
wenty-ſeventh Emperor of the ſecond Race of
he *Shang*: His Mother, whoſe Name was *Shing*,
nd who drew her Pedigree from the illuſtrious
amily of the *Yen*, lived twenty-one Years after
he Death of her Huſband.

IN his moſt tender Age, he was obſerved to
ave the Wiſdom of a diſcreet Man; Play and
hildiſh Amuſements were not at all to his Lik-
ng: A grave, modeſt, and ſerious Air gained
im the Reſpect of thoſe who knew him: He
ad ſcarce attained his fifteenth Year, when he
pplied himſelf ſeriouſly to the Study of the an-
ient Books. At the Age of nineteen he mar-
ied, and had but one Wife; by her he had a
on, called *Pe-yu*, who died at the Age of fifty:
This latter left an Heir, called *Tſú-tsë*, who
treading in the Steps of his Grandfather, by his
Merit obtained the chief Employments of the
Empire.

WHEN *Confuſius* was more advanced in Years,
nd thought he had made conſiderable Progreſs in
he Knowledge of Antiquity, he propoſed to re-
tore the Form of a wiſe Government, and
hereby procure a Reformation of Manners in
he ſeveral little Kingdoms, of which the Em-
ire was compoſed: For then each Province was
diſtinct Kingdom, had its particular Laws, and
was governed by its own Prince, who levied
Taxes and impoſed Tribute, conferred Dignities
nd Employments, declared War, when they
thought proper, againſt their Neighbours; and,
though dependent on the Emperor, often became
formidable to him by their Power. As Ambi-
ion, Corruption, and Luxury prevailed in all
hese little Courts, *Confuſius* undertook to baniſh
hoſe Vices, and to introduce the oppoſite Vir-
ues in their Stead, by his Preaching and Ex-
mple.

HIS Integrity, extenſive Knowledge, and the
plendor of his Virtues, ſoon cauſing him to be
nown, ſeveral Places in the Magiſtracy were
ffered him; which he accepted of, ſolely with a
iew of propagating his Doctrine, and reform-
ng Mankind. When he found his Succeſs did
ot anſwer his Expectation, he preſently threw-
p his Employments, to go in Queſt of a more
ractable People. Of this he gave ſeveral Proofs,
pecially in the fifty-fifth Year of his Age; for
aving been promoted to the chief Poſts in the
Kingdom of *Lû*, his native Country, in leſs than
ree Months the King, the Grandees, and the People, were become quite different from what they were before. This ſudden Change alarmed the neighbouring Princes, who concluded, that the King of *Lû* would become too powerful, if he continued to follow the Counſels of ſo wiſe a Man. By Advice, therefore, of the King of *Tſi*, it was concluded, under Pretence of an Embaſſy, to ſend a Preſent to the King of *Lû*, and the great Lords of his Court, of a conſiderable Number of beautiful Girls, who had been educated in Singing and Dancing [a], and had all the Charms requiſite to captivate the Heart. This Stratagem ſucceeded, for the Preſent was received with Joy, and thenceforward the Buſineſs of the State gave Way to Pleaſure. *Confuſius* endeavoured, by Remonſtrances, to bring back the deluded Prince to his Reaſon; but when he found it was to no Purpoſe, he laid-down an Employment, which could be of Uſe no longer to the People, and left the Court. *Life of* Confuſius. *Reſigns his Places.*

HE from thence paſſed through the Kingdoms of *Tſi*, *Ghey*, and *Tſú*, to no Effect. The Auſterity of his Morals made his Politics dreaded; nor were the Miniſters of thoſe States willing to countenance a Rival, who was able quickly to ruin their Authority. Thus wandering from Province to Province, he came at laſt into the Kingdom of *Shing*, where he was reduced to the greateſt Indigence, without laying-aſide his Greatneſs of Soul, and uſual Conſtancy. He had ſo often in his Mouth the Maxims and Examples of *Yau*, *Shun*, *Yu*, *Ching-tang*, and *Ven-vang*, that thoſe Heros of Antiquity ſeemed to be revived in him. Hence it is not ſurprizing, that he had ſuch a Number of Diſciples, who were inviolably attached to him; for they reckon three thouſand, of whom five hundred poſſeſſed with Honour the higheſt Truſts in ſeveral Kingdoms; and among theſe there were ſeventy-two ſtill more diſtinguiſhed than the reſt, for the Practice of Virtue. His Zeal inſpired him even with a Deſire of croſſing the Sea, and propagating his Doctrine in the moſt diſtant Climates. *His Diſciples numerous.*

HE divided his Diſciples into four different Claſſes. The firſt conſiſted of thoſe who were to cultivate their Minds by Meditation, and to purify their Hearts by the Care of acquiring Virtue. The moſt eminent of this Sort were *Meng-tſe-kyen*, *Jen-pe-myew*, *Shun-kong*, and *Yen-ywen*: This laſt died at the Age of thirty-one, to the great Affliction of his Maſter. The ſecond Claſs was of thoſe whoſe Buſineſs it was to reaſon juſtly, and to compoſe perſuaſive, as well as elegant Diſcourſes. The moſt admired among theſe were *Tſay-ngo*, and *Tſú-kong*. The Employment of the third Claſs was to ſtudy the Rules of good Government, to give the *Mandarins* an Idea of

[a] Perſons in ſeveral Cities make a Trade of this, particularly at *Yang-chew*. See before, *p.* 27.

it,

Chineſe *Sciences.*

it, and to teach them to acquit themſelves worthily in the public Offices. The moſt eminent, in theſe Reſpects, were *Jen-yeu* and *Ki-lû*. In ſhort, to write, in a conciſe and elegant Stile, the Principles of Morality, was the Province of the Diſciples of the laſt Claſs; among whom, *Tſû-yen*, and *Tſû-hya*, deſerved great Commendations. Theſe ten choice Diſciples were the Flower and chief of *Confuſius*'s School.

His virtuous Aims.

THE whole Doctrine of this Philoſopher tended to reſtore human Nature to its primitive Luſtre and Beauty, received from Heaven; which had been obſcured by the Darkneſs of Ignorance, and Contagion of Vice. The Means he propoſed to Mankind for obtaining it, was to obey, honour, and fear the Lord of Heaven; to love their Neighbours as themſelves; to conquer irregular Inclinations; never to take their Paſſions for the Rule of their Conduct; but to ſubmit to Reaſon, and liſten to it in all Things; ſo as neither to act, ſpeak, nor think contrary to it, on any Account whatever.

As his Actions never contradicted his Maxims; and as by his Gravity, Modeſty, Mildneſs, and Frugality, his Contempt of earthly Enjoyments, and a continual Watchfulneſs over his Conduct, he was himſelf an Example of the Precepts he taught in his Writings, and Diſcourſes, each of the Kings ſtrove to draw him into his Dominions. The Prince of *Chew* was a great Admirer of his; but after his Death, the Philoſopher became of a ſudden, through the Envy of his Courtiers, the Ridicule of the ſenſeleſs Populace, who made ſatirical Songs on him: Yet this unworthy Treatment gave him no Uneaſineſs. At this Time his Reſolution was conſpicuous; for when a great Officer of the Army, who hated *Confuſius*, though he had never offended him, held-up his Sword to give him a mortal Blow, he did not diſcover the leaſt Concern, or Emotion, though his Diſciples diſperſed through Fear. On the contrary, when ſome of thoſe who had moſt Affection for him, preſſed him to make haſte away, to avoid the *Mandarins* Fury, *If* Tyen, replied he, *protect us, of which he has juſt given a very evident Proof, what Harm can the Rage of* Whan-ti *do us, notwithſtanding he is Preſident of the Tribunal of the Army?* This ſhews he held a particular Providence, or the Interpoſition of Heaven in the Affairs of this World.

Courage and Firmneſs.

His great Modeſty.

THE Virtues of this *Chineſe* Philoſopher were ſtill more heightened by his charming Modeſty. He was never heard to praiſe himſelf, and could hardly bear the Encomiums others beſtowed on him: To which he anſwered only by reproaching himſelf, for taking ſo little Care in watching-over his own Actions, and neglecting to practiſe Virtue. When any one admired his Doctrine, and the ſublime Principles of Morality which he taught; far from aſſuming the Honour to himſelf, he confeſſed, that it was derived from thoſe wiſe Legiſlators, *Yau* and *Shun*, who lived fifteen hundred Years before him.

ACCORDING to a Tradition univerſally received amongſt the *Chineſe*, he was frequently heard to repeat theſe Words, *Si-fang yew-ſhing-jin*, importing, that, *in the Weſt, the true Saint was to be found.* It is not known who the Perſon was, concerning whom he ſpoke: But it is certain, that ſixty-five Years after the Birth of Chriſt, *Ming-ti*, the fifteenth Emperor of the *Han* Family, equally affected with the Words of this Philoſopher, and the Image of a Man who appeared to him in a Dream, as coming from the Weſt, ſent *Tſay*, and *Tſin-king*, two Grandees of the Empire, into thoſe Parts, with Orders not to return till they had found the holy Perſon, whom Heaven had revealed to him, and had learned the Law which he taught: The Meſſengers terrified with the Dangers and Fatigues of the Journey, ſtopped ſomewhere in the *Indies*; for the Place is uncertain, where they found the Image of a Man named *Fo*, who had infected thoſe Parts with his monſtrous Doctrine about five hundred Years before the Birth of *Confuſius*; and having informed themſelves in the Superſtitions of this Country, on their Return to *China*, they propagated that Idolatry.

CONFUSIUS having finiſhed his philoſophical Labours, and in particular the hiſtorical Work of *Chun-tſyû*, died in the Kingdom of *Lû*, his native Country, aged ſeventy-three, in the forty-firſt Year of the Reign of *King-vang*, the twenty-fifth Emperor of the Race of the *Chew*. A few Days before his laſt Sickneſs, he told his Diſciples with Tears in his Eyes, that he was pierced with Grief, to ſee the Diſorders which reigned in the Empire, adding, that *the Mountain was fallen, the high Machine deſtroyed, and the Sage were no more to be ſeen.* His Meaning was, that the Edifice of Perfection, which he had endeavoured to raiſe, was almoſt overthrown. He began, from that Time, to languiſh; and at length turning himſelf towards his Diſciples, *The Kings*, ſaid he, *refuſe to follow my Maxims, and ſince I am no longer uſeful on the Earth, it is neceſſary that I ſhould leave it.*

HAVING ſpoken theſe Words, he fell into a Lethargy, which continued ſeven Days; at the End whereof he expired, in the Arms of his Diſciples. When *Ngay-kong*, who then reigned in the Kingdom of *Lû*, heard of the Death of the Philoſopher, he could not refrain from Tears. *Heaven is not ſatisfied with me*, cried he, *ſince it has taken* Confuſius *from me: In Effect, the Sages are precious Gifts, which Heaven beſtows on the Earth; and their Worth is moſt known by the Loſs of them.*

THIS

THEY built his Sepulchre near the City *Kyew* [a], on the Side of the River *Su*, in the ſame ſpot where he uſed to aſſemble his Diſciples: It was ſince then been incloſed with Walls, and at preſent looks like a ſmall City. He was lamented by the whole Empire [b], but eſpecially by his Diſciples, who went in Mourning, and bewailed him, as if he had been their Father. Theſe Sentiments, full of Veneration which they had for him, increaſing with Time, he is at preſent conſidered as the great Maſter, and chief Doctor of the Empire.

HE was tall, and well-proportioned: His Breaſt and Shoulders were broad, his Air grave and majeſtic, his Complexion olive, his Eyes large, his Beard long and black, his Noſe a little flat, and his Voice ſtrong and piercing: On the Middle of his Forehead there was a Swelling, or Kind of Wen, which disfigured him a little, and cauſed his Father to call him *Kyew*, that is, *little Hill*: A Name he ſometimes gave himſelf out of Modeſty and Humility [c].

LE COMTE, from whom *Du Halde* has taken almoſt all his Account of this eminent Philoſopher, relates ſome farther Paſſages of his Life, particularly a Diſcourſe between his Grandfather and him, when but a Child; and his Defence of the *Chineſe* canonical Books, at the Age of ſixteen, againſt a great *Mandarin*, who reflected on them as obſcure, and unprofitable: On which Occaſion the young Philoſopher read his Superior ſo ſevere a Lecture, that he ran the Danger of his Life [d]: But as he is repreſented ſaying, that the Senſe of them ought to be underſtood only by the Learned; that the People would undervalue them, if they comprehended the Meaning of them; and that they ought to ſubmit their Judgments to the Learned; it ſeems rather to be an Invention of the Jeſuit to ſupport the ſame Doctrines taught in the *Romiſh* Church by the Authority of this *Chineſe* Sage, and the rather becauſe *Confuſius* himſelf afterwards took no ſmall Pains to explain thoſe Books, and render them intelligible to all.

THIS Author declares, that ſcarce any Thing can be added either to his Zeal, or the Purity of his Morality, they were ſo ſuperlative. He thinks, he ſometimes ſpeaks like a Doctor of the new Law, rather than a Man who was brought-up in the Corruption of the Law of Nature [e]; and that which perſuades him, that Hypocriſy had no Share in what he ſaid, is, that his Actions never belied his Maxims. In fine, his Gravity and Mildneſs in the Uſe of the World, his rigorous Abſtinence (for he paſſed for the ſobereſt Man of the Empire) his Contempt of the good Things of the World, that continual Attention and Watchfulneſs over his Actions, and then (which we find not among the Sages of Antiquity) his Humility and Modeſty would make a Man apt to judge, that he was not a mere Philoſopher formed by Reaſon, but a Man inſpired by God, for the Reformation of this new World. *Life of Confuſius.*

THE whole Empire, from the very Time of his Death, have honoured him as a Saint [f], and influenced Poſterity with a Veneration for him; which, in all Probability, will never have an End, but with the World. Kings, after his Deceaſe, built Palaces for him in all the Provinces; whither the Learned, at certain Times, go to pay him Honours. There are to be ſeen, in ſeveral Places, theſe Titles of Honour, written in large Characters; *To the great Maſter*, *To the head Doctor*, *To the Saint*, *To him who taught Emperors and Kings*. However, which is very extraordinary, the *Chineſe* did never deify him, although they have given the Quality of God, or, as they ſpeak, *of pure Spirits*, to many *Mandarins*, much inferior to him; as if Heaven, ſays *Le Comte*, was unwilling, that the Perſon to whom it had given Birth for the Reformation of Manners, ſhould after his Death adminiſter Occaſion of Superſtition and Idolatry [g]. *Honours paid him.*

IN every City a Palace is erected, which ſerves for the Aſſemblies of the *Literati*, who have given it ſeveral Names; as *Pwan-king*, or *the Royal Hall*; *Ta-ſhing-tyen*, *the Hall of Wiſdom, or Perfection*; *Ta-hyo*, *the great College, or School*; *Qua-hyo*, *the College of the Empire*. On the Walls are hung divers ſmall Boards, gilt and japanned, inſcribed with the Names of the moſt famous Philoſophers, and ſuch as have diſtinguiſhed themſelves in the Sciences, *Confuſius* being at their Head. *Halls and Feſtival.*

To this great Man the Emperors have ordered, that the Doctors and *Literati* ſhould annually celebrate, as it were in the Name of the Empire, a Feſtival, according to the Ceremonial. Every Thing is prepared the Evening before; a Butcher comes, and kills a Hog, and the Servants of the Tribunal bring Wine, Fruits, Flowers, and Herbs, which they place on a Table, ſet with Wax-Candles, and Perfuming-Pans. On the Morrow the Governors, Doctors, and Bache-

[a] Where he was born. [b] Who, *Le Comte* ſays, honoured him as a Saint. [c] *Le Comte*'s Memoirs of *China*, p. 193, & *ſeqq*. *Du Halde*'s *China*, p. 415, & *ſeqq*. [d] *Le Comte*, as before, *p*. 198. [e] Is not this an Argument, that the Light of Reaſon is ſufficient to reſtore the Law of Nature, at any Time, to its full Purity and Luſtre, however degenerated, corrupted, or obliterated, by the Craft of Men? [f] It was obſervable, according to the ſame Author, that he never eat any Thing but he firſt proſtrated himſelf on the Ground, and offered it to the Lord of Heaven. [g] *Le Comte*, as before, *p*. 199, & *ſeq*.

lors,

Chineſe Sciences.

lors, repair with Drums beating, and Hautboys a ſounding, to the Feaſt-Hall; where the Maſter of the Ceremonies commands them ſometimes to bend forwards, ſometimes to kneel-down, ſometimes to bow to the very Earth, and ſometimes to ſtand-up.

Ceremony of

WHEN the Hour for beginning the Ceremony is come, the chief *Mandarin* takes, ſucceſſively, Meat, Wine, Pulſe, and preſents them before the Tables of *Confuſius*; the Muſic playing all the while to Verſes ſung in Honour of this great b Philoſopher. They afterwards repeat his Encomium, which is ſeldom more than eight or ten Lines, in Praiſe of his Knowledge, Wiſdom, and good Morals. The Formula is the ſame throughout all the Cities of the Empire; and theſe Honours, which are in effect paid to all the Learned in the Perſon of *Confuſius*, inſpire the Doctors

The Sacrifice.

with great Emulation. The Ceremony is concluded with repeated Bows and Reverences at the Sound of Flutes and Hautboys, and with reci- c procal Compliments among the *Mandarins*. Laſt of all, they bury the Blood and Hair of the Animal that has been offered; and burn, in Token of Joy, a large Piece of Silk, which is faſtened to the End of a Pike, and hangs to the Earth in Manner of a Streamer. They afterwards go-into the ſecond Hall, to pay certain Honours to the ancient Governors of Cities and Provinces, who are famous for behaving well in their Employments. Then they paſs-into a third Hall, where d the Names of Citizens, illuſtrious for their Virtues and Talents, are exhibited; and there perform ſome farther Ceremonies.

Emperor's Offering.

It is reported, that the *Chineſe* Emperor *Kyatſing*, before he began his Studies, went to the Palace of *Confuſius* to offer before his Tablet Praiſes and Preſents, as Marks of his Reſpect for all the ancient Doctors of the Nation; eſpecially for the Prince *Chew-kong*, and that Philoſopher. He likewiſe made a Speech, promiſing to apply e himſelf aſſiduouſly to read over, repeatedly, the Works left by theſe great Men, and ſage Maſters of Antiquity, containing the Maxims, according to which Poſterity ought to regulate their Manners[a].

SECT. VI.

Of the Chineſe *Language.*

Differs from all others. Senſe of Words varied by ſeveral Means. Do not ſing their Words. A Character for every Word. Their Dictionaries. Egyptian *Hieroglyphics:* Chineſe *more convenient: When firſt invented. Style of the* Chineſe: *Eſteem for their Characters. Dialects of the* Chineſe. Mandarin *Dialect: The uſed in Books: Another Sort. The* Chineſe *Language eaſy to learn: The Characters compared with the* European: *Difference whence. Not fit for writing with in other Languages.* Chineſe *Words not to be written by* European. *The Vowels.* Engliſh *Orthography beſt. Certain Words, how pronounced.*

THE Knowledge of the *Chineſe* Language and to write a very fair Hand, is, as has been before obſerved, a Part of the *Chineſe* Learning; and as all, who will, may aſpire to Employments, the very meaneſt of the People learn to write and read.

THE *Chineſe* has no Reſemblance with any dead or living Language that we are acquainted with: All others have an Alphabet of a certain Number of Letters, which, by their various Combinations, form Syllables and Words: Whereas this has no Alphabet, but as many Characters, and different Figures, as there are Words and Changes; which makes the Number ſo very great, that ſome reckon them to amount to fifty-four thouſand four hundred and nine [b], others to fourſcore thouſand: While the Number of their Words does not exceed three hundred and thirty, which are all Monoſyllables, indeclinable, and, excepting a few, end with a Vowel, or the Conſonant *N*, or *Ng*.

THESE few Syllables are, notwithſtanding ſufficient to treat of all Manner of Subjects; becauſe, without multiplying Words, the Senſe is varied, almoſt to Infinity, by the Difference of Accents, Inflections, Tones, Aſpirations, and other Changes of the Voice: It is true, this Variety of Pronunciation, to thoſe who are not well verſed in the Tongue, is a frequent Occaſion of miſtaking one Word for another: For Example, the Word *chu* ſounded by drawling out the Voice and raiſing the Voice, ſignifies *Lord* and *Maſter*, but pronounced in an even Tone, with a long means *a Hog*: When expreſſed quick and light it ſignifies a *Kitchen*; but ſounded in a ſtrong and maſculine Tone, remitted towards the End it intends a *Column*. In like Manner, the Syllable *Po*, according to its different Accents [c] and Way of Pronunciation, has eleven different Meanings. It ſignifies, *Glaſs*, to *boil*, to *winnow Rice*, *prudent*, *liberal*, to *prepare*, *an old Woman*, to *break* f or *cleave*, *inclined*, *as little as may be*, to *waſh*, *a Slave*, or *Captive*. Whence we may conclude that this Language, which appears ſo barren, and confined by the ſmall Number of Monoſyllables that compoſe it, is nevertheleſs copious and ſignificant.

[a] *Du Halde's China*, p. 295, *& ſeq.* [b] So *Magalhaens.* [c] Theſe Accents the Miſſioners have marked on the Words to facilitate learning the Language. *Magalhaens* illuſtrates his Account of the Language both by giving the Words accented, with eleven Marks invented by *Lazaro Catanco* the Jeſuit, and in Chineſe Characters.

AGA

AGAIN, the ſame Word variouſly compounded, denotes an Infinity of different Things: *Mû*, for Inſtance, by itſelf, ſignifies a *Tree*, or *Wood*; but when compounded, has many other Senſes; *Mû-lyau*, ſtands for *Wood prepared for building*; Mû-lan, *Bars*, or *wooden Grates*; Mû-hya, *a Cheſt*; Mû-ſyang, *a Preſs*; Mû-tſyang, *a Carpenter*; Mû-ul, *a Muſhroom*; Mû-nu, *a Kind of ſmall Orange*; Mû-ſing, *the Planet* Jupiter; Mû-myen, *Cotton*, &c. This Word may be joined to ſeveral others; and has as many different Significations as Combinations. Thus the *Chineſe*, by differently ranging their Monoſyllables, make ſet Diſcourſes, and expreſs themſelves very clearly and gracefully. In ſhort, they, by Habit, diſtinguiſh the ſeveral different Tones of the ſame Monoſyllable ſo well, that they comprehend its various Senſes, without the leaſt reflecting on the Accents that determine it.

WE muſt not imagine, as ſome Authors have related, that they ſing in ſpeaking, and make a Sort of Muſic; for this would be very diſagreeable to the Ear: On the contrary, theſe different Tones are ſo nicely ſounded, that Strangers would find it difficult to perceive their Difference; eſpecially in the Province of *Kyang-nan*, where the Accent is moſt perfect. We may form a Judgment of it from the guttural Pronunciation in the *Spaniſh* Tongue, and by the different Tones in the *French* and *Italian*; which, though hardly diſtinguiſhable, have different Meanings, that gave Riſe to the Proverb, *The Tone is all.*

As the *Chineſe* have no written Accents to vary the Sound, they are obliged to have as many different Figures or Characters for the ſame Word as there are Tones, which vary its Meaning. Beſides, there are Characters which ſtand for two or three Words [a], and ſometimes entire Sentences: For Inſtance, to write theſe Words, *Good-morrow, Sir*, inſtead of joining the Characters for *Good* and *morrow* with that of *Sir*, a different one muſt be uſed; which, by itſelf, expreſſes theſe three Words: Theſe Things are what ſo greatly multiplies the *Chineſe* Characters, and makes the Art of joining the Monoſyllables very difficult. After all, the barely joining them in this Manner, though ſufficient to write ſo as to be underſtood, is yet but mean, and uſed only by the Vulgar. In Compoſition, though the Words are the ſame, the polite and maſterly ſtile is quite different from what is uſed in Diſcourſe; which, in a Man of Letters, would look ridiculous. It is no difficult Matter to judge how many Years muſt be required to learn ſuch a vaſt Number of Characters, to diſtinguiſh them when they are compounded, and to remember their Shape and Meaning. However, the Perſon who is Maſter of ten thouſand, may expreſs himſelf in this Language, and read a great Number of Books; he who knows moſt, is the moſt learned: But the generality underſtand not above fifteen or twenty thouſand; and few Doctors more than forty thouſand. *Their Language.*

THIS prodigious Number of Characters is collected in their Vocabulary, called *Hay-pyen*; and as in *Hebrew*, there are radical Letters which ſhew the Origin of Words, and how to find thoſe derived from them, when looked for in Dictionaries; ſo likewiſe the *Chineſe* have their radical Characters: For Inſtance, the Characters of Mountains, Trees, Man, the Earth, and a Horſe. And, farther, you muſt learn to diſtinguiſh in every Word thoſe Strokes or Figures, which are above, beneath, on the Sides, or in the Body of the radical Figure. There was a Dictionary made by Order of the late Emperor, which, at the firſt compiling, contained ninety-five Volumes [b]; moſt of them very thick, and in a ſmall Character: Yet this Work did not comprehend all the Language, ſince it was found neceſſary to add a Supplement to it, in twenty-four Tomes. No other Language in the World would take-up near ſo many Volumes; and, conſequently, is more abundant [c]. *Their Dictionary.*

BESIDES this great Vocabulary there is a ſhorter, containing only eight or ten thouſand Characters, which is uſed in learning to read or write, to underſtand or compoſe Books: When this ſmaller is defective, they have Recourſe to the larger. The Miſſionaries, in like Manner, have collected all the Terms, that may ſerve to inſtruct the People in their Religion, that are uſed in Converſation, and found in common as well as difficult Books.

CLEMENT of *Alexandria* attributes three Sorts of Characters to the *Egyptians*; the firſt Epiſtolary, or fit for writing Letters, like thoſe of our Alphabet; the ſecond Sacerdotal, proper only for the ſacred Writings, in the ſame Manner as the Notes for Muſic; and the third Hieroglyphical, uſed only for public Inſcriptions on their Monuments. This was done two Ways; one by proper Images, or ſomething that came near the Things they would repreſent; as when they expreſſed the Moon by a Creſcent: The other by ænigmatical Figures and Symbols; as a Serpent bent round with the Tail in its Mouth, to ſignify the Year, or Eternity. The *Chineſe* have always had a like Variety of Characters. In the Beginning of their Monarchy, they com- *Egyptian Hieroglyphics.*

[a] They can, by combining thus, form new Characters at any Time, to expreſs new Words and Ideas. Perhaps, this may be the *Hay-pyen*. [c] But this may be queſtioned, if what the *Arab* Authors tell us be true, of a Dictionary made for a King of *Arabia*, which required a Team of forty Horſes to draw it.

Chineſe *Sciences.*

municated their Ideas by drawing on Paper the natural Images of the Things they would expreſs: For Inſtance, a Bird, Mountains, Trees, wavy Lines, in order to expreſs Birds, Mountains, a Foreſt, and Water [a].

THIS Method of explaining their Thoughts was very imperfect, and required Volumes to expreſs a few Things: Beſides, an infinite Number of Objects could not be repreſented by Drawing; ſuch as the Soul, the Thoughts, the Paſſions, Beauty, Virtues, Vices, the Actions of Men and Animals, and many others which have neither Body nor Shape: For this Reaſon, they changed by Degrees their old Manner of Writing; and compoſed more ſimple Figures, inventing many others to expreſs thoſe Things that do not come within the Verge of the Senſes.

Chineſe *more convenient.*

NEVERTHELESS, theſe more modern Characters are truly hieroglyphical [b]; firſt, becauſe they conſiſt of ſimple Letters which retain the Signification of the primitive Characters: Formerly, for Inſtance, they repreſented the Sun, called *Je*, by a Circle ⊙; now they repreſent it by two upright Strokes croſſed by three tranſverſe. Secondly, becauſe human Inſtitution has affixed to theſe Figures the ſame Ideas that the firſt Symbols naturally repreſented; and every *Chineſe* Letter has its proper Signification, which it always preſerves, though joined with others. *Tſay*, for Inſtance, which ſignifies *Misfortune*, *Calamity*, is compoſed of the Letter *Myen*, a *Houſe*; and the Letter *Ho*, *Fire*; becauſe it is the greateſt Misfortune to ſee one's Houſe on Fire. However this be, the Characters of *Kochinchina*, *Tong-king*, and *Japan*, are the ſame as the *Chineſe*, and ſignify the ſame Things. Thoſe Nations, though their Languages are ſo very different, that, in ſpeaking, they do not in the leaſt underſtand each other, yet they very well underſtand each others Writing; and their Books are in common. Their Characters are in this reſpect like the numerical Figures [c], which are uſed by ſeveral Nations under different Names; but their Meaning is every-where the ſame [d].

When firſt invented.

As to the Original of the *Chineſe* Characters, before the Commencement of the Monarchy, little Cords with ſliding Knots, each of which had its particular Signification, were uſed in tranſacting Buſineſs. Theſe are repreſented in two Tables by the *Chineſe*, called *Ho-tû*, and *Lo-ſhu*. The firſt Colonies who inhabited *Se-chwen*, had no other Literature beſides ſome arithmetical Sets of Counters made with little knotted Cords, in Imitation of a String of round Beads; with which they calculated and made up all their Accompts in Commerce: Theſe they carried about with them; and, ſometimes, uſed as Belts for girding-in their Cloaths. In ſhort, for want of Characters, there is no Account of what paſſed in thoſe Times, either from Annals, or any written Tradition. Afterwards, *Fo-hi*, the firſt Emperor, invented Lines to expreſs his Ideas, as is ſuppoſed, of certain natural Things; and being taught the Art of Combination, by Means of the two ancient Tables above-mentioned, drew up his Linear Table [e], as his firſt Eſſay. Theſe Lines not being ſufficient to expreſs every Thing, he ſet about inventing more extenſive Characters. His Succeſſors, *Shin-nong* and *Whang-ti*, increaſed their Number: And when they had formed, one after another, a ſufficient Quantity, they then attempted to make Books [f].

THE Stile of the *Chineſe*, in their Compoſitions, is conciſe, allegorical, and ſometimes obſcure to thoſe not well verſed in the Characters. It requires Skill to make no Miſtakes in reading an Author: They ſay many Things in a few Words: Their Expreſſions are lively, animated, and intermixed with bold Compariſons and noble Metaphors. To expreſs, for Inſtance, *Let none dare think of deſtroying the Chriſtian Religion which the Emperor has approved of by an Edict*: They would write, *The Ink that wrote the Edict of the Emperor, in favour of the Chriſtian Religion, is not yet dry, and you go about to deſtroy it*; they affect, eſpecially, to inſert in their Writings Sentences and Paſſages taken from the five canonical Books; and, as they compare their Compoſitions to a Picture, they alſo compare thoſe Sentences to the five principal Colours uſed in Painting; in this their Eloquence chiefly conſiſts. Laſtly, they value themſelves extremely in writing neatly, and drawing their Characters truly; and there is great Regard had to this, in examining the Compoſitions of Candidates for Degrees.

THEY even prefer a beautiful Character to the moſt finiſhed Picture; and it is common to ſee a Page of old Writing, if well performed, ſold very dear. They honour their Characters in the moſt common Books; and if by chance they find any printed Leaves, they gather them up with Reſpect: They think, it would ſavour of Breeding to tread on them, or even throw them away in a careleſs Manner. Joiners and Maſons

[a] *Du Halde*'s *China*, vol. 1. p. 363, & *ſeqq.* and *Magalhaens*'s Relation of *China*, p. 69, & *ſeqq.* [b] think not. They appear to us to be real Characters, as before obſerved, but not hieroglyphics; for thoſe had either ſome natural, or ſymbolical Reſemblance of the Things they repreſented: Theſe have none, but arbitrary Characters, to which the Inventors have annexed certain ſimple Ideas, and by joining two or more together form compound Ideas, and expreſs their Thoughts. [c] It is in Effect a *real*, or univerſal, *Character*, ſuch as Biſhop *Wilkins* has invented and publiſhed in a Book under that Title. [d] *Du Halde*, as before, *p.* 364, & *ſeq.* *Magalhaens*, as before, *p.* 69. [e] See before, *p.* 185. [f] *Du Halde*, as before, *p.*

for the generality, will not venture to tear a printed Sheet, which they find paſted againſt the Wall or Wainſcot, for Fear of committing a Fault.

FROM what has been ſaid, the *Chineſe* Language may be diſtinguiſhed into three Sorts [a]; that of the common People, that of polite Folks, and that of Books. The firſt, though not ſo elegant as the two others, is yet not ſo much inferior to the *European* Languages, as may be thought; ſince it has none of thoſe Defects that are ſometimes aſcribed to it. The Miſſioners, who come to *China*, and are not yet Maſters of the Language, find equivocal Meanings, where there is not the leaſt Shadow of any: For Want of taking ſufficient Pains at firſt, to pronounce the *Chineſe* Words with their Aſpirations and Accents, they are able to underſtand but imperfectly what the *Chineſe* ſay, and find it difficult to make themſelves underſtood: But the Fault is apparently in themſelves, and not in the Language. We are told, in ſome Relations, that the Learned, in converſing, often trace Characters with the Finger, or their Fan, upon their Knees, or in the Air [b]: If they do ſo, it muſt be out of Vanity, or Cuſtom, rather than Neceſſity; or becauſe the Word they would expreſs, may be ſeldom uſed, like our Terms in Navigation, Muſic, and Surgery.

NEXT above this vulgar and rude Language, which varies according to the different Provinces, is pronounced a hundred Ways, and uſed in Compoſitions of the loweſt Claſs, there is a more poliſhed and refined Dialect, called the *Mandarin Language*; which is nearly what the *Latin* is in *Europe* amongſt Eccleſiaſtics, and the Learned. This Language is properly what was formerly ſpoken at Court, in the Province of *Kyang-nan*; from whence it was, by ſlow Degrees, propagated all-over the Empire; but it is beſt ſpoken in the Provinces adjoining to that. They have an infinite Number of Hiſtories and Novels, written in this Dialect with the utmoſt Elegance, which may be eaſily read and underſtood; and through them all is a Purity and Politeneſs, equal to the beſt Writings of *Europe*.

THE third Sort of Language is that of Books, which are not written in a familiar Stile: This is not uſed in Diſcourſe, but only written; nor could it be eaſily underſtood without Help of the Letters; but it is read with Pleaſure, running in a neat and flowing Stile: Each Thought is generally expreſſed in four, or in ſix Characters: One finds nothing to ſhock the niceſt Ear; and the Variety of Accents, artfully managed, affords a Sound altogether ſoft and harmonious. The Difference between the Books written in this Dialect, and thoſe called *King*, conſiſts in the Matter they treat of, which is neither ſo ſolemn, nor elevated; and in the Stile, which is neither ſo conciſe, nor ſo grand; there being many Degrees of Superiority before one can arrive to the majeſtic and ſublime Brevity found in thoſe Writings. In ſublime Subjects, no Pointing is uſed: The Learned, for whom only theſe Compoſitions are deſigned, are left to judge where the Senſe concludes; and the Skilful among them, are never miſtaken in this Particular. *Their Language.*

THE *Chineſe* have, moreover, an ancient Sort of Language, and Character, in which there are ſome Books, that the Learned muſt underſtand; but it is uſed at preſent only for Titles, Inſcriptions, Seals, and Devices. They have alſo a common Running-Hand, in which they engroſs Deeds, Contracts, Obligations, and Acts of Juſtice; as the *Europeans* have a particular Character for Law-Buſineſs. Laſtly, they have a Letter, which requires a particular Study, on Account of the Variety of Strokes and Abbreviations [c], or Interweavings, which render it difficult. The chief Uſe of this Character, is to write any Thing for Diſpatch [d]. *Another Sort.*

NOTWITHSTANDING the ſeeming Difficulties of the *Chineſe* Language, and that ſome Miſſioners have repreſented the Learning of it as extreamly tedious, painful, and almoſt inſuperable; yet others ſpeak of it in a very different Manner. *Magalhaens*, for Inſtance, affirms, that it is eaſier to attain, than the *Greek*, the *Latin*, or any other Languages of *Europe*; and much leſs difficult than the Languages of thoſe other Countries, where the Jeſuits are employed in Miſſions. He lays it down as a Thing certain, that a Perſon who applies himſelf induſtriouſly to ſtudy the *Chineſe* Language, by a good Method, may be able, in a Year's Time, to underſtand and ſpeak it very well: And affirms, that the Miſſioners, in two Years Time, became ſo perfect in it, as to be able to confeſs, catechize, preach, and compoſe, with as much Eaſe, as in their native Tongue, although they are generally Perſons far-advanced in Years; adding, that they could never attain to the ſame Perfection in the *European* Languages, although they have generally a Dependence upon one another [e]. *The* Chineſe *Language*

[a] The Author makes three Sorts of Languages, which is not ſo exact. There are indeed two Sorts, the *Chineſe*, and that ſpoken by the Inhabitants of *Fo-kyen*, which he does not mention. That this laſt is eſſentially different, appears, among other Things, from hence, that it has the Letter or Sound *r* in it, which is wanting in the *Chineſe*. [b] So ſays *Le Comte*. Why does not the Author name him? [c] A Sort of Short-Hand. [d] *Du Halde*'s *China*, p. 365, *&* *ſeq.* [e] *Le Comte*, p. 177, wonders *Magalhaens* ſhould write thus. He thinks ſome Miſſioners had better have laboured in the Mines. He denies that learning the *Chineſe* depends on the Memory, but the Imagination and Ear, on Account of the Tones. He adds, that a Word, though pronounced ill, may be underſtood; but the Accent muſt be exactly hit to make the Senſe intelligible.

Chineſe Sciences. *Eaſy to learn.*

To confirm this by Reaſon, he obſerves, that as the acquiring a Language depends greatly on the Memory; ſo one which has ſo few Words as the *Chineſe*, muſt be far eaſier to learn, than any of the others above-mentioned, which comprize many Thouſands, as it requires only a Memory to retain the Accents [a]. How far this Argument is concluſive, we ſhall not pretend to ſay, ſince the Accent may be as difficult to remember, as a new Word. If we conſider every Word, ſimple, or compound, in the *Greek*, *Latin*, or any other *European* Language, as a ſingle Character, conſiſting of a Combination of various Letters, in the ſame Manner as the *Chineſe* Characters do of Strokes; perhaps it may be found to contain as many different Characters as the *Chineſe*, and, conſequently, may be as difficult to learn.

The Characters compared *With the* European.

THE great Difference between the *Chineſe* and *European* Characters, has been, in ſome Meaſure, explained in the Article of Printing [b]: The only Conformity they have together is, that as our Alphabet is made-up of twenty-four Letters, formed out of ſeven Strokes [c]; ſo all the *Chineſe* Characters are formed out of ſix [d]. The *Chineſe* is the very Reverſe of all other Languages, in having an infinite Number more of Letters, as we may ſay, than Words; and not a great many more Words, than ſome other Languages have Letters. It is true, though in the *European* Alphabets they reckon but about twenty-four Letters, yet in Effect there are great Numbers more, if it be conſidered, firſt, that they are diverſified into Capitals, *Roman*, *Italick*, &c. that there are ſeveral Variations of them for Writing, as in Round-Hand, Secretary, Court, Text, *German*, and the like [e]: That there are ſeveral Sorts of Punctuations, as the Period, the Comma, the Apoſtrophe, the Accents, the Parentheſis, the Points of Interrogation and Admiration, with many others: That Arithmetic has its Cyphers, or Figures; and Aſtronomy, Geometry, and Muſic, their reſpective Signs, Marks, or Characters. In a Word, that there are few Arts, or Sciences, which have not ſome characteriſtical Figures proper to them, that ſerve to expreſs certain Ideas more conveniently than by Words at Length [f]: Yet all theſe put together fall infinitely ſhort of the Number of Characters, which the Nature of the *Chineſe* Writing obliges them to make uſe of.

Difference, whence.

HOWEVER, if *Europeans* are ſurprized at this great Number of Characters, the *Chineſe*, we are told, admire no leſs how with ſo few Letters the *Europeans* can expreſs all their Words, when theirs require ſo many: But this will be no Matter of Wonder, if it be only conſidered, that Words are compoſed by a Combination of a few ſimple Sounds, formed by the Organs of Speech, and that the *European* Characters are contrived to expreſs Sounds, but the *Chineſe* to ſignify Words, and, conſequently, muſt be infinitely more numerous. How they came to think of one Method, and not the other; or, in caſe they thought of both, why they preferred one to the other, is hard to determine: Only this we know, that but for this Preference we ſhould have had no Inſtance in the World of a whole Language repreſented in a verbal or real Character: For though the *Egyptians*, *Mexicans*, and other Nations, had Characters of the ſame Nature [g], yet very few of them are remaining; neither do they appear to have been, in any Reſpect, ſo judiciouſly contrived, ſo uniform, or ſo capable of expreſſing all the Varieties of compound and ſimple Ideas, as the *Chineſe*.

IT is difficult to expreſs the *Chineſe* Words in *European* Characters; but impoſſible to expreſs the *European* in *Chineſe*; not only on Account of its wanting ſeveral Sounds to be found in the other Languages, but alſo becauſe the *Chineſe* Characters expreſs Words inſtead of ſimple Sounds, at hath been before obſerved, or the Sounds of two or more Letters together inſtead of one: The Vowels however muſt be excepted; each of which has a particular Character. Now as all the Words in this Language are ſingle Syllables, and thoſe not exceeding three hundred and thirty, it is evident, that no greater a Number of Syllables in any other Language can be expreſſed in *Chineſe* Characters; and that as one-fourth Part of them are of ſuch a Nature as to be found no-where elſe, conſequently, not above two hundred and fifty foreign Syllables can be expreſſed by them. Thus, although a *Chineſe* may write the *Engliſh* Words *Sing-ſong*, or *New-king*, in his own Characters, yet he could not write *fine Wool*, or *old Count*; becauſe, as appears from the following Tables, there are no ſuch Words in his Language. When they would write or pronounce any *European* Words, the Syllables of which are not to be found among their three hundred and thirty Words, they make uſe of thoſe which come neareſt them. Thus, inſtead of pronouncing *Holland*, they would ſay *Go-lan-ki*; for *Holſtein*, *Ho-eul-ſe-te-in*; for *Stockholm*, *Se-tyau-ko-ulma*; and for *Alexowitz*, *O-li-ſhe-ye-ſi-ſhe*.

[a] *Magalhaens*'s Relation of *China*, p. 77, & *ſeq.* [b] See before, *p.* 162. [c] Or rather, four different Strokes, two and three of the ſeven being the ſame Strokes placed in different Poſitions. [d] Rather, four or five at moſt. [e] To theſe we may add Short-hand, which affords a great Number of Characters. [f] *Du Halde*'s *China*, p. 365, & *ſeq.* [g] This ſeems to prove, that the Thought of expreſſing Words by Characters more naturally occurred, than that of expreſſing Sounds.

As the *Chineſe* want the Sounds of *b*, *d*, *r*, *x*, and *z*, which frequently occur in the *European* Languages, the Difficulty is increaſed. The *d*, as well as *t*, they commonly expreſs by *ki*, as appears from the Word *Holland*; for *b* they uſe *p*: Yet, both the *d* and *z* ſeem to be ſounded in this Word *I-tsë*, which ſome pronounce *I-dſe*: But the *Chineſe*, who can ſay diſtinctly *I-dſe*, cannot ſay *da*, *de*, *di*, *do*, *du*; nor *za*, *ze*, *zi*, *zo*, *zu*. Inſtead of *r* they uſe *l*, or, rather, a Word beginning with *l*; as in *Fu-lan-tſu-ſe*, *France*; for *x*, *ſhe*, as in *O-li-ſhe-ye-ſi-ſhe*, *Alexowitz*, above-mentioned.

In like Manner, we are told, it is in vain to attempt the *Chineſe* Words in *European* Characters: For not only many of them would be ill expreſſed, but, after a Perſon had gotten to the Bottom of a Page, he would not be able to underſtand what he had written. This is a Circumſtance not peculiar to the *Chineſe* Language, but common to all; there being ſcarce any one but what hath ſome Sounds peculiar to it, that cannot be expreſſed by the Letters or Characters of other Nations. Thus, the *Engliſh* have no Letter anſwering to the *French J* Conſonant [a]; nor the *French* any correſponding with that of the *Engliſh*. However, there are few Sounds or Words, either in the *Chineſe*, or any other Language, but what may be expreſſed by the *Engliſh* Letters, either ſimple or compound. But it is not the ſame with the *French*; whoſe Alphabet is the moſt ſcanty and imperfect of all the *European* Nations: For, beſides the *J* Conſonant, they want the *Ch*, *K*, *Q* and *W*, of the *Engliſh*, Sounds which occur in moſt other Languages; eſpecially thoſe called the *Oriental*: Nor can they with any Juſtneſs ſupply the Defect by joining two or three Letters together. And this is the Reaſon why, as *Du Halde* obſerves, many Words can neither be pronounced nor written by them, rather than that which he aſſigns, *viz.* That the Teeth of the *Chineſe* are placed in a different Manner from ours; the upper Row ſtanding-out, and, ſometimes, falling upon the under Lip, or, at leaſt, on the Gums of the under Row, which lies inward; the two Rows ſcarce ever meeting together, like thoſe of the *Europeans*.

All the *Chineſe* Words, written in *European* Letters, terminate either with one of the five Vowels, *a*, *e*, *i*, *o*, *u*, or with an *n* [b]; which is ſometimes ſingle, producing *an*, *en*, *in*, *on*, *un*; and ſometimes followed by a *g* [c], making *ang*, *eng*, *ing*, *ong*, *ung* [d]. Their Vowels alſo have different Sounds, like the *European*; or, rather, we have not Letters enough to expreſs all the open Sounds and Diviſions of them, which we call Vowels, that are to be found either in the *Chineſe* Language, or our own.

Their Language.

With regard to the following Table the Reader may obſerve three Things: 1. That the Words contained under the ſeveral Letters, are formed agreeably to one common Rule in the *Chineſe* Language; though they are not equally numerous under each. 2. That, according to the *Portugueze* and *French* Way of Writing, many of them appear to be of two or three Syllables; and muſt be ſo pronounced, if the common Way of Reading be followed: Whereas, according to our own Way of writing them, they are all Monoſyllables, agreeably to the Genius of the *Chineſe* Language. 3. That the Change of Orthography, from the *Portugueze* and *French* to the *Engliſh*, is natural as well as neceſſary.

Engliſh Orthography beſt.

The chief Difficulty is in pronouncing certain Characters conſiſting of double Conſonants, which are not uſed in our Language; but as we have ſeveral other double, and even ſome treble Conſonants, a little Practice muſt make this eaſy. For Inſtance, it cannot be very difficult for an *Engliſhman*, who can ſay *bran*, *ſling*, *prong*, *ſwing*, *ſtrong*, &c. to pronounce in one Sound, *Swen*, *ywen*, *Syang*, *Kyang*, *Hyang*, *Sven*, *lwi*, *tſyen*; for the ſame Rule is to be obſerved in pronouncing *Sw*, *yw*, *Sy*, &c. together, that is obſerved in pronouncing, *br*, *fl*, &c. that is, to pronounce them as if they were but one Letter; which is learned by putting a Vowel between, and pronouncing it very quick, ſo as by Degrees to throw it quite out.

Certain Words, how pronounced.

An Alphabetical Table of all the Words which compoſe the *Chineſe* Language, according to the *Engliſh*, *Portugueze*, and *French* Pronunciation.

The Eſtabliſhed, or Natural.

CHAP. V.

The RELIGIONS *of* CHINA.

INTRODUCTION.

IN *China*, like other Countries, the Inhabitants are divided by different Religions: The principal are four. The firſt is that of Nature, which is properly the eſtabliſhed Religion, being profeſſed by the *Literati*, and all Perſons concerned in the Government. The ſecond is that broached by *Lau-kyun*, a Philoſopher; which ſeems to be a Corruption of the Law of Nature, reſtored afterwards by *Confuſius*. The third is the Religion of the Impoſtor *Fo*, which conſiſts of the groſſeſt Idolatry, or Saint and Image-Worſhip, being the very Counter-part of the *Romiſh*. The fourth is that called *Ju-kyau*, which ſeems to be a Refinement on the firſt, and is profeſſed by a ſect among the *Literati*. To theſe may be added the *Jewiſh*, *Mohammedan*, and *Romiſh* Religion, which have gained ſome Footing in the Empire.

THE Knowledge we have of the firſt four Religions [b], is owing chiefly to the Jeſuit Miſſioners, who, to their own Obſervations, have added ſeveral Extracts from the *Chineſe* Authors. But whether it proceeds from their Negligence, to enquire into Things, or a ſtrong Propenſity of miſrepreſenting other Religions, they have treated of them all, but the firſt, very imperfectly, inaccurately, and, it is to be ſuſpected, in many Inſtances contrary to Truth. It is remarkable, with Regard to the Religion of *Fo*, that they ſuppreſs ſome Things, and diſguiſe others, as if with Deſign to conceal the exact Reſemblance it has with their own. But the Tranſlator of *Du Halde* has drawn the Parallel; which it would be criminal to omit, eſpecially at this Juncture. On the other Hand, they charge the Sect of *Ju-kyau* with Atheiſm, poſſibly to free the eſtabliſhed Religion, from

[a] In the Words of this Form, which generally come at the End of each Letter, the *o* is ſo obſcure, or mute, that it ſeems to be an *e*. Hence ſome pronounce *when*, *hoon*, or *hun*. [b] The Miſſioners reckon three Sects, viz. thoſe of *Confuſius*, *Lau-kyun*, and *Fo*.

Religions. which they have borrowed ſome Things in their own Worſhip, from that Imputation thrown on it by their Adverſaries: However this be, we ſeem ſtill to be very little acquainted with the real Syſtems of thoſe three Sects.

SECT. I.

Of the Eſtabliſhed Religion *of* China, *which is agreeable to the* Law of Nature.

Chineſe *Worſhip of the Deity. Emperor, high Prieſt. Sacrifices eſtabliſhed. Temple built. Separate Worſhip. Future State. Free from Idolatry, to what owing. Principal Faſts in uſe.*

IT is the common Opinion of Authors, that ſome of the Deſcendants of *Noah*, after the Diſperſion, having penetrated into *China*, about two hundred Years after the Deluge, there founded this vaſt Monarchy, and eſtabliſhed natural Religion; of which many Traces are to be found in their canonical Books of the firſt Order, already ſpoken of [a].

Chineſe Worſhip THE chief Object of Worſhip amongſt the *Chineſe*, is the ſupream Being, and Principle of all Things; whom they adored under the Name either of *Shang-ti*, that is, *ſupream Emperor*, or *Tyen* [b], which with them ſignifies the ſame Thing: *Tyen*, ſay the Interpreters, *is the Spirit that preſides in Heaven, becauſe Heaven is the moſt excellent Work produced by this firſt Cauſe.* It is taken alſo for the material Heavens, the Senſe being to be determined by the Subject to which it is applied. The *Chineſe* ſay, that the Father is the *Tyen* of the Family; the Vice-Roy, the *Tyen* of the Province; and the Emperor, the *Tyen* of the Kingdom, *&c.* They likewiſe honour, but with a ſubordinate Worſhip, inferior Spirits, depending on the ſupream Being; which, according to them, preſide over Cities, Rivers, Mountains, *&c.*

Of the Deity. IT appears, eſpecially from the *Shu-king*, that this *Tyen*, or firſt Being, is the Creator of all Things, ſolely independent, Almighty, Omniſcient, knowing even the Secrets of the Heart; who watches over the Conduct of the Univerſe, ſo that nothing whatever happens but by his Orders; who is holy, without Partiality, and only affected with the Virtue of Mankind; ſuperlatively juſt, puniſhing Wickedneſs in the moſt ſignal Manner, even in Kings, whom he depoſeth: That public Calamities are his Warnings for beginning a Reformation of Manners, and are ſtill followed by Acts of Mercy and Goodneſs: That Prodigies, or extraordinary Appearances, are ſent to give Notice of the Miſeries wherewith the State is threatened, that Men may reform their Manners, as the ſureſt Way to appeaſe the Anger of Heaven: Of theſe ſeveral Paſſages are produced as Inſtances.

THE Emperors have always thought themſelves chiefly obliged to obſerve the primitive Rites, the ſolemn Functions of which belong to them alone, as being the Heads of the Nation: Thus they are Emperors to govern, Maſters to teach, and Prieſts to ſacrifice, for the greater Honour of the Deity. *Fo-hi*, who is ſuppoſed to have been one of the Heads of the Colony [c], which came to ſettle in this extream Part of the Eaſt, bred, in a domeſtic Park, ſix Sorts of Animals, to ſerve as Victims in his Sacrifices; which he ſolemnly offered twice a Year, at the two Solſtices, called the *Feſtivals of Gratitude to Tyen*; at which Time the Tribunals, as well as the Shops, were ſhut-up; nor were the People even permitted, on thoſe Days, to undertake any Journey. *Shin-nong*, his Succeſſor, appointed two others at the Equinoxes: The firſt in Spring, in Favour of Agriculture; the other in Autumn, after Harveſt; the Firſt-fruits of which he offered to *Shang-ti*: He likewiſe cultivated the Field, which furniſhed the Corn and Fruits for the ſame Sacrifice.

WHANG-TI, who ſucceeded *Shin-nong*, exceeding the reſt in Zeal, built a large Temple, for offering the Sacrifices under Shelter, and inſtructing the People in their principal Duties. *Shau-hau*, Son of *Whang-ti*, increaſed the Pomp of the Sacrifice with Concerts of Muſic: But the laſt Years of his Reign were diſturbed by the Conſpiracy of nine *Chew-hew*, or feudatory Princes. Their Deſign being to ſubſtitute the Fear of Spirits to that of *Shang-ti*, they had Recourſe to Magic; by which Means they diſturbed Houſes with evil Spirits, and ſo terrified the People with their Deluſions, that they tumultuouſly required Sacrifice ſhould be offered to thoſe Spirits: But *Chwen-hyo*, his Nephew and Succeſſor, extirpated the Race of the nine Enchanters, and reſtored Order in the Sacrifices.

HAVING reflected on the Inconvenience of aſſembling an active, reſtleſs People, in the ſame Place where the Emperor performed thoſe Rites, he ſeparated the Place of Inſtruction from that of Sacrifices, and eſtabliſhed two great *Mandarins* as Preſidents, choſen from among the Sons of the deceaſed Emperor; one of whom was charged with the whole Ceremonial, and the other took Care of the Inſtruction of the People. He alſo

[a] See before, *p.* 185. [b] *Tyen* is properly *Heaven*, and *Tyen-chu*, *Lord of Heaven*; which laſt Title the Miſſioners, for better Certainty, gave the Deity. [c] But this is a mere Chimera. See *Univerſal Hiſtory*, vol. 1. p. 116, in the Note.

ſettled

settled Rules for chusing the Victims, ordering, a that they should neither be lame, nor defective, nor of any other Sorts of Animals, but the six appointed by *Fo-hi*: Likewise, that they should be well-fed, and of a Colour agreeable to the four Seasons wherein the Sacrifices were made [a].

IT is true, that although the canonical Books, especially the *Shu-king*, place the Souls of virtuous Men near *Shang-ti*; yet it does not appear, that they have spoken clearly of everlasting future Punishments. In like Manner, though b they affirm, that the supream Being created all Things out of nothing; yet they have not treated of it so distinctly as to judge, whether they mean a Production of all Things out of nothing: However, they have not denied the Possibility thereof; nor, like certain *Greek* Philosophers, asserted, that the Matter of the Universe is eternal. Again, the Missioners do not find, that they have treated explicitly concerning the State of the Soul; on the contrary, they seem c only to have confused Notions of it, no Way agreeable to the Truth: Yet it cannot be doubted, but that they believe the Soul exists after its Separation from the Body, as well as the Certainty of Apparitions [b].

IT is observable, that there is not to be found, in the canonical Books, the least Footstep of idolatrous Worship, till the Image of *Fo* was brought into *China*, several Ages after *Confusius*: That from the Time of that Philosopher, Ma- d gic, and divers other Errors, had infected the Minds of many: But the Learned, adhering to the Doctrine which they received from their Forefathers, had no Share therein.

THAT which has contributed greatly to the Preservation of the Religion of the early Ages in *China*, and preventing its being wholly destroyed, is, that the supream Tribunal of Rites has been established in the Empire, almost from the Time of its Foundation, with full Authority e to condemn, or suppress any Superstitions that might arise. The Missionaries, who read the Decrees of the *Mandarins* composing this Tribunal, have observed, that though they sometimes in private practised certain Superstitions [c]; yet when they assembled in a Body to deliberate about them, they openly condemned them.

CHINA, for many Ages, was a Stranger to the Superstitions to be met with in other Nations; who having but a very gross and imperfect Idea f of the Deity, fell by Degrees to honour the Heros of the Country with the Title of Gods. Whatever Veneration the *Chinese* have had for their greatest Emperors, they never paid Adoration to any but the supreme Being; and though they have discovered their Esteem and Respect for the Memory of great Men, who have been distinguished by their Rank, their Virtues, and Services, yet they have rather chosen to preserve their Memory by Tablets, (like those hung up in Honour of good Magistrates) inscribed with their Names and short Encomiums, than by Pictures or Images. *The Established, or Natural.*

HOWEVER, the Troubles that happened in the Empire, the civil Wars which divided it, and the Corruption of Manners, which became almost general, had entirely banished the ancient Doctrine: But *Confusius* revived it, by giving fresh Reputation to the ancient Books [d].

MAGALHAENS observes, that the *Chinese* have four principal Fasts, generally answering to the four Seasons: For when they design to perform their solemn Sacrifices, they fast the three preceding Days; and when they would implore the Favour of Heaven in Time of Famine, Pestilence, Earthquakes, extraordinary Inundations, or any other public Calamity, during these Days, the *Mandarins* live apart from their Wives; and, remaining Day and Night in their Tribunals, neither eat Flesh, drink Wine, nor discourse of any Business, especially in criminal Matters. The Emperor also keeps himself solitary in his Palace, upon the East Side of the supreme imperial Hall [e]. *Principal Fasts.*

WHAT relates to the moral Part of this established Religion, may be found in the Account already given of the canonical Books [f].

SECT. II.

Sect of the Tau-tse [g].

The Sect's Original: Of the Epicurean *Kind. Liquor of Immortality: Emperors deluded by it: Yet support and honour this Sect. Folly of one. Impiety of another. Sacrifice to the Devil. Juggling Tricks. History of* Lau-tse: *His Course of Life and Death: Vanity and Folly.*

LAU-KYUN [h], is the Name of the Philoso- *The Sect's Original.* pher who gave Rise to this new Sect: His

[a] *Du Halde*'s *China*, vol. 1. p. 64, *& seqq.* [b] To prove this, the Author produces nothing but a Parcel of Dreams; only, one of them ascribed to *Confusius*, was judged by a learned Man to have been a real Apparition. [c] *Le Comte* says, this is owing to their being sprung, for the most Part, from idolatrous Families. [d] *Le Comte*'s Memoirs of *China*, p. 316, *& seqq.* and *Du Halde*, as before, *p.* 646, *& seq.* [e] *Magalhaens*'s Relation of *China*, p. 304. [f] See before, *p.* 185. [g] *Tau-tse* is the Name of a Book written by *Lau-kyun*. [h] He is also called *Li-lau-kyun*, and commonly *Pe-yang*, or *Lau-tan* [*P. Couplet. Scient. Sinens. proœm. Declar.* p. 24.] His Name was *Li*, and his Surname *Eul*; but as he came into the World with white Hair, he was called *Lau-tsë*, or the *old Boy*. See *Du Halde*, vol. 2. p. 167.

Religions. Diſciples, to make his Birth extraordinary, affirm, that he lay fourſcore Years in his Mother's Womb, and came into the World by making his Way through her left Side, which killed her. His Books are ſtill extant; but ſuppoſed to be much altered by his Followers: Nevertheleſs, they contain ſeveral Maxims and Sentiments worthy of a Philoſopher, concerning the moral Virtues, and avoiding Honours, the Contempt of Riches, and that Elevation of the Soul, which, raiſing itſelf above terreſtrial Things, believes, that it has a Sufficiency in itſelf. Amongſt his Sentiments, there is one which he often repeated; eſpecially when he ſpoke of the Production of the World: *Tay*, ſays he, (that is, the Law or Reaſon) *hath produced one, one hath produced two, two have produced three, and three have produced all Things* [a]. By this, ſays the Author, he ſeems to have had ſome Knowledge of the Deity [b]; but it was a very groſs one.

Of the Epicurean *Kind.* THE Morality of this Philoſopher, and his Diſciples, nearly reſembles that of the *Epicureans*; it conſiſts in putting-away vehement Deſires and Paſſions, capable of diſturbing the Peace and Tranquillity of the Soul. According to them, it ought to be every wiſe Man's Care to paſs his Life free from Anxiety and Uneaſineſs; and to this End, never to reflect on what is paſt, nor be inquiſitive after what is to come. They affirm, that to be agitated with ruffling Cares, to be buſied about great Projects, to give one's ſelf up to Ambition, Avarice, and other Paſſions, is to toil more for Poſterity than ourſelves; and, that it is Madneſs to purchaſe the Happineſs of others, or purſue even our own, at the Expence of our Repoſe: Becauſe, whatever we look upon as Happineſs, ceaſes to be ſo, if it is accompanied with Trouble, Diſtaſte, and Inquietude, and the Peace of the Soul be ever ſo little diſturbed.

Liquor of Immortality. FOR which Reaſon, theſe Sectaries affect a Calm, that ſuſpends, as they ſay, all the Functions of the Soul: But as this Tranquillity muſt needs be diſturbed with the Thoughts of Death, they boaſt of having found out a Liquor called *Chang-ſeng-yo* [c]; by Means whereof they may become immortal. They are addicted to Chymiſtry, and much infatuated with the Notion of the Philoſophers Stone. They are likewiſe fond of Magic; and perſuaded, that, by the Aſſiſtance of the Demons whom they invoke, they can ſucceed in their Deſigns. The Hope of eſcaping Death, induced a great Number of *Mandarins* to ſtudy this diabolical Art: The Women eſpecially, being naturally curious, and exceeding fond of Life, madly gave into theſe Extravagancies. At length, certain credulous and ſuperſtitious Emperors brought this impious Doctrine in Vogue, and greatly multiplied the Number of its Followers.

THE Emperor *Tſin-ſhi Whang-ti*, the Book-burner [d], was perſuaded by theſe Impoſtors, that they had actually found the Liquor of Immortality. *Vu-ti*, the ſixth of the *Han* Dynaſty, addicted himſelf wholly to the Study of magical Books, under a Leader of this Sect, (which he had embraced) named *Li-ſhau-kyun*. Hereupon, the Court was immediately filled with an innumerable Croud of theſe falſe Doctors. About this Time one of his Queens died; and being inconſolate for her Loſs, one of theſe Impoſtors, by his Inchantments, cauſed her to appear before that Monarch. And this Apparition, with which he was ſurprized and terrified, more ſtrongly attached him to the Sect. He ſeveral Times drank the Liquor of Immortality: But, at laſt, perceived he was as mortal as ever; lamenting too late his fooliſh Credulity.

HOWEVER, the new Sect ſuffered no Prejudice by the Emperor's Death; for it found Protectors in his Succeſſors. Two of their moſt famous Doctors having been authorized to propagate the Worſhip which was paid to the Demon in a great Number of Temples already erected through the Empire, they ſold every-where, at a high Price, little Images, repreſenting the Croud of Spirits of Men, whom they had ranked among their Gods, and named *Syen-jin*, that is, *Immortals* [e]. This Superſtition increaſed to ſuch a Degree, that, under the Emperors of the *Tang* Dynaſty, they gave its Prieſts the Title of *Tyen-tſe*, that is, *Heavenly Doctors*. The Founder of this Race erected a ſtately Temple to *Lau-kyun*; and *Hven-tſong*, the ſixth Emperor of the ſame Dynaſty, cauſed his Statue to be brought with great Pomp into the Palace [f].

THE Succeſſors of the Head of this Sect were always honoured with the Dignity of great *Mandarins*, and reſide in a Town of the Province of *Kyang-ſi*, where they have a magnificent Palace. Crouds of People flock thither from the neighbouring Provinces, to procure Remedies for their Diſeaſes, or to learn their Deſtiny, and what is to happen in the Courſe of their Lives. They receive of the *Tyen-tſe* a Billet filled with magical Characters, and go-away well ſatisfied with the Sum they pay for it.

BUT the *Tau-tſe* gained Ground chiefly under the Dynaſty of the *Song*; whoſe third Emperor

[a] See *Couplet. Scient. Sinen. proœm. Declar.* p. 24. [b] He means the Trinity. [c] *Yo*, Medicine *Chang*, erernal; *Seng*, Life. [d] See before, *p.* 186. [e] Here the Author unfairly repreſents the Saints, or Heros, as Gods; and to countenance the Matter, miſrenders *Syen-jin Immortals*, inſtead of *immortal Men*. [f] *Du Halde*'s *China*, p. 648, & *ſeq.* *Le Comte*'s Memoirs of *China*, p. 324, & *ſeqq.*

Chin-tſong, was ridiculouſly led-away with their Tricks and Forgeries. Theſe Impoſtors, in a dark Night, hung-up a Book on the principal Gate of the imperial City, filled with Characters and magical Sentences for invoking Demons, giving out, that it had fallen from Heaven: Hereupon, the credulous Prince, out of great Veneration, went on-foot to fetch it; and after receiving it with the moſt profound Reſpect, carried it in a triumphant Manner into the Palace; where he incloſed it in a gold Box, and kept it with abundance of Care. Theſe Cheats were the Men who introduced that Multitude of Spirits, till then unknown; whom they worſhipped as independent Deities, and honoured with the Name of *Shang-ti*: They even deified ſome of the ancient Kings, and prayed to them.

WHEY-TSONG, the eighth Emperor of the ſame Line, carried the Superſtition to ſuch a Pitch, as to give the Name of *Shang-ti*, or *Supreme Lord*, to a Doctor of this Sect called *Shang-i* [a]; who had acquired a great Reputation under the Dynaſty of the *Han*. Till that Time, the Idolaters themſelves had diſtinguiſhed *Shang-ti* from other Deities. Thus a famous *Ko-lau*, who had written on this Subject, attributes the Ruin of the *Song* intirely to this [b] Impiety. In ſhort, this Sect got Footing by Degrees, partly through the Protection of the Princes abovementioned, partly by flattering the Paſſions of the Grandees, and partly by the Impreſſions of Wonder and Terror which they made on the Minds of the People. The Compacts of their Prieſts with Demons, the Lots which they caſt, and the ſurprizing Effects of their magical Arts, infatuated the Multitude, ſtill extremely prejudiced in Favour of theſe Impoſtors; who are generally called to heal Diſeaſes, and exorciſe [c] Demons.

THEY ſacrifice to this Spirit of Darkneſs three Sorts of Victims; a Hog, a Fiſh, and a Fowl: They drive a Stake in the Earth as a Kind of Charm, and trace upon Paper odd Sorts of Figures, accompanying the Stroke of their Pencil with horrible Cries and Grimaces. They make a frightful Din with Kettles and little Drums: And though often they do not ſucceed, yet they know how to procure Reſpect and Authority by their Inchantments. They buy great Numbers of profligate Fellows, who follow the Trade of Divination. Though they have never ſeen the Perſon who conſults them, they tell his Name, and all the Circumſtances of his Family, in what Manner his Houſe is ſituated, how many Children he has, their Names and Age; with an hundred other Particulars, which may be naturally enough ſuppoſed known to the Demons, and are ſtrangely ſurprizing to weak and credulous Minds [d] among the Vulgar. *The Eſtabliſhed, or Natural.*

SOME of theſe Conjurers, after invoking the Demons, cauſe the Figures of the chief of their Sect, and of their Idols, to appear in the Air. Formerly they could make a Pencil write of itſelf, without any-body touching it, upon Paper or Sand, the Anſwers to Queſtions. They likewiſe cauſe all the People of any Houſe to paſs in Review in a large Veſſel of Water; wherein they alſo ſhew the Changes that ſhall happen in the Empire, and the imaginary Dignities to which thoſe ſhall be advanced who embrace their Sect. In ſhort, they pronounce myſterious Words without any Meaning; and place Charms on Houſes, as well as Mens Perſons. Nothing is more common than to hear of theſe Sorts of Stories; and though, ſays our Author, it is very likely that the greater Part of them are only Illuſions, yet it is not credible, that all ſhould be ſo: For, many Effects ought, in Reality, to be attributed to the Power of the [e] Devil [f]. *Juggling Tricks.*

CHIN, a Philoſopher of the Sect of modern *Literati* [g] gives the following Account of the Birth, Death, and Doctrines of *Lau-kyun*, or *Lau-tſe*. This Perſon, ſays he, was born towards the End of the Dynaſty of the *Chew*, near the City of *Lin-pau*, in the Diſtrict of *Ho-nan* His Father, ſurnamed *Quang*, was a poor labouring Peaſant, and ſeventy Years old before he could meet with a Wife; when having gained the Affections of a Country Wench, of the Age of forty, he married her. This Woman being one Day in a ſolitary Place, of a ſudden conceived by the ſimple Commerce and Union of the vivifying Virtue of Heaven and Earth, and went with Child fourſcore Years. The Maſter, whom ſhe ſerved, vexed that ſhe ſhould be ſo long without being delivered, turned her out of Doors; upon which *Hiſtory of Lau-tſe.*

[a] And have not the Popes been called Gods by ſome of the *Romiſh* Doctors, which is equally impious? [b] And yet both the Sect itſelf, as well as the Popes, are ſtill in being; which ſhews ſuch Concluſions to be groundleſs. [c] One Impoſture naturally begets another; and why may not the Prieſts of *Aſia* make Gain of them as well as the Prieſts of *Europe?* [d] Is not *Du Halde* himſelf one of theſe weak and credulous Perſons, ſince he believes all the impoſing Stuff which the *Tyen-tſe* give out to bring Gain and Veneration to themſelves? [e] *Du Halde*, in a Note, obſerves, the wiſer Sort of People in *China* ſay, that theſe are falſe Reports ſpread by thoſe Impoſtors; and that there is nothing real in them. The wiſe and honeſt Sort of People in *Europe*, doubtleſs, will ſay the ſame: Notwithſtanding, the Jeſuit, to keep-up Prieſtcraft, and the Influence of the *Romiſh* Clergy, over the Ignorant, impiouſly aſcribes Power to the Devil, as if he would propagate Manicheiſm, or the Belief of two Principles. [f] *Du Halde*, as before, *p.* 649. [g] Part of his Book, tranſlated by *Dentrecolles* the Jeſuit, often before mentioned, is inſerted in *Du Halde*'s *China*, vol. 1. *p.* 665.

ſhe

Religion. ſhe was conſtrained to wander about the Country, till, at length, under a Plum-Tree, ſhe brought forth a Son [a], with Hair and Eyebrows as white as Snow. The Mother, who was ignorant of her Huſband's Family Name, and knew only his Surname, called the Infant after the Tree under which it was born: Then, obſerving that the Tips of his Ears were exceeding long, ſhe took from thence his Surname, and called him *Li-eul*, *Plum-Tree Ear*; but the People, who ſaw him ſo very white, called him *Lau-tſe*, or *The old Boy*.

His Courſe of Life. WHEN he had attained a certain Age, he became Library-keeper to an Emperor of the *Chew*; by whoſe Favour he obtained a ſmall Government. He made himſelf a Proficient in ancient Hiſtory, and the Knowledge of the Rites of the early Ages: It was that which induced *Confuſius* to go and diſcourſe him about the Ceremonial, and the Talents of a good *Mandarin* [b]. *Lau-tſe*, in his old Age, foreſaw the approaching Downfal of the *Chew* Dynaſty. He got on the Back of a black Cow, and, bending his Courſe Weſtward, arrived at the Entrance of a diſmal Valley: This Paſſage was guarded by an Officer, named *I-hi*. The Book *Tau-tſe*, containing five thouſand Sentences, was compoſed by him in the City of *Chew-ſhe*, in the Diſtrict of *Tſin-chwen*.

And Death. At length he died, and his Tomb is to be ſeen at *U*. This was the Beginning and End of *Lau-tſe*: He could not, while he was living, prevent the Ruin of the Race of the *Chew*, whoſe Subject and *Mandarin* he was; and yet they would have us believe all the Fables which are confidently reported about his pretended Merit; and, among the reſt, that, after his Death, he was placed at the Top of all the Heavens in Quality of the three Purities.

WITH regard to his Doctrine, the ſame Author, whoſe Name is *Chin*, aſks, what a fine Syſtem it is which has nothing for its Principle, and only teaches Indolence and Inactivity? To ſhew the Delicacy of his Reaſoning, he cites a Paſſage from the Inſtructions he gave his Diſciples; wherein, ſpeaking in Praiſe of whatever is ſoft and contrary to the canonical Books, which extol Firmneſs, he ſays, *Conſider my Tongue, does it not ſubſiſt whilſt it is ſoft and flexible? On the contrary, is not that which deſtroys our Teeth their own Hardneſs?*

Vanity and Folly. THE ſame Philoſopher alſo contemns his Arrogance, in affirming, that he had found Means to ſteal from Nature the vivifying Virtue, and could diſpoſe of it juſt as he pleaſed. He adds, after ſuch Pretences as theſe, he who had the moſt, vaſt, and ambitious Deſires of all Men, is ſo ſilly as to tell us, that all is Vanity; that we ought to ſet our Hearts on nothing, though he himſelf was more fond of Life than any other Perſon; that there is nothing commendable, but a State of Inactivity and Indolence; yet he himſelf was always vigorous in his Purſuits. *Chin* farther ridicules him for pretending to make others immortal, and yet dying himſelf before he was an hundred. Laſtly, he makes a Compariſon between the Doctrines of *Lau-tſe* and *Fo*; of which ſome Account will be given in the next Section [c].

SECT. III.

Of the Sect of Fo, *or* Fwe.

1. *Account of it from the* Miſſioners.

Origin of this Sect. Strange Birth of Fo: *Transformed to a God: Teaches contrary Doctrines: Fables invented of him: Is invoked. Bonzas moral Precepts. Arts to fleece People. An Inſtance. Story ſhewing how they gull the Credulous. Knaviſh Tricks. Prieſts, how propagated. Pilgrimages. Paſſports for Heaven. Images. Sanctified Cheats. Impoſing Tricks. A knaviſh Mendicant. Sneer on a Jeſuit. Their Sway in Families. Conſecrated Trifles, for the other World. Aſſemblies of Men. Faſting, and Abſtinence: A Trick to get Money; and Cloak for Vice. Arts to keep their Followers ſtanch. Interior Doctrine of* Fo: *In what it conſiſts. Quietiſm: Stupidity, Perfection: Its Progreſs oppoſed.*

ABOUT ſixty-five Years after the Birth of Chriſt, the Emperor *Ming-ti* introduced a new Sect in *China*, which is ſtill more dangerous than the former, and has made a much more rapid [d] Progreſs. This Prince, on Occaſion of a Dream which he had, calling to Mind a Sentence ſaid to be often in the Mouth of *Confuſius* [e], viz. *That the holy One was to be found in the Weſt*, ſent Ambaſſadors into the *Indies* to diſcover who this Saint was, and ſearch for the true Law which he taught. The Ambaſſadors ſuppoſing they had found it among the Worſhippers of the Idol *Fo*, or *Fwe* [f], carried it into *China*, with

[a] The monſtrous Birth is here turned into a monſtrous Pregnancy. [b] One of the Sect had alledged, that the Deſire of long Life was the End of his Viſit. [c] *Du Halde*'s *China*, p. 669, *& ſeq.* [d] *Couplet* ſays it has infected all the *Chineſe* Books and Sects, excepting the *Mohammedan*. *Proœm. Declar. ubi ſupr.* p. 2 This and the following Notes are, for the general, thoſe of the Tranſlator of *Du Halde*. [e] See before *p.* 190. a. [f] Called alſo *Fwe-kyau*, *Fo tſe*, and *She*, or *She kya*, (corruptly *Shaka* by the *Japaneſe*) which laſt Name, *Couplet* obſerves, *p.* 28, that the whole Body of the *Bonzas*, (or Clergy) as well as their Religion, is underſtood.

the Fables and Superſtitions, the Doctrine of the *Metempſychoſis*, and the Atheiſm wherewith the *Indian* Books were filled. The Author ſays, that if the extraordinary Things, which his Diſciples relate of him, are not ſo many Inventions, he ſhould be apt to believe with St. *Francis Xavier*, that he was rather a Spirit than a real [a] Man.

THEY relate, that he was born [b] in that Part of the *Indies* which the *Chineſe* call *Chung-tyen-cho*: That his Father (named *In-fan-vang*) was the King of this Country; and his Mother, called *Mo-ye*: That ſhe was delivered of him through her right Side [c], and died ſoon after he was born: That when ſhe conceived, ſhe almoſt conſtantly dreamed ſhe had ſwallowed an Elephant [d]; and that hence aroſe the Honours paid to white Elephants by the Kings of the *Indies*, who often make War upon each other to procure this Sort of Animal: That he ſtood upright upon his Feet as ſoon as he came into the World; and walked ſeven Paces, pointing with one Hand to the Heaven, and the other to the Earth: Nay, that he even ſpoke, and pronounced diſtinctly the following Words, *There is none, either in Heaven or on Earth, who ought to be adored but I alone.*

AT the Age of ſeventeen he married three Wives, and had a Son, called by the *Chineſe Mo-hew-lo* [e]. At nineteen he forſook his Wives, and all earthly Cares, to retire into a ſolitary Place, under the Guidance of four Philoſophers, called by the *Indians*, *Joghi*. At thirty, he was of a ſudden transfuſed by the Divinity, and became *Fo*, [or a Deity] called by the *Indians*, *Pagod*. Henceforward looking upon himſelf as a God, he minded nothing elſe but propagating his Doctrine, doing the moſt wonderful Things [f]; and, by the Novelty of his Miracles, procured the Peoples Veneration. The *Chineſe* (of the *Bonzian* Sect) have deſcribed theſe Prodigies, and repreſented them in Cuts in ſeveral large Volumes. It is ſcarcely credible how many Diſciples this chimerical God gained: For they reckon fourſcore thouſand who were employed by him in propagating his impious Tenets through the Eaſt. Among this great Number there were ten moſt diſtinguiſhed for their Rank and Dignity, who publiſhed five thouſand Volumes in Honour of their Maſter. The *Chineſe* call his Followers, (or rather Prieſts) *Seng* and *Ho-ſhang*; the *Tartars*, *Lamas*, or *La-ma-ſeng*; the *Siameſe*, *Talapoins*; and the *Japanneſe*, (or rather the *Europeans*) *Bonzas*. *Sect of Fo.*

HOWEVER, this new God found himſelf mortal as other Men; for he died at the Age of ſeventy-nine. Finding Death approach, he declared to his Diſciples, that, till that Moment, he had ſpoken to them ſolely in Parables and Figures; under which, for forty Years, he had concealed the Truth: But, that being about to leave them, he would communicate his real Doctrine; which was, that there is no other Principle of Things but Emptineſs and Nothing; that from Nothing all Things proceeded, and to Nothing all will return; this being the End of all our Hopes. But his Diſciples adhered to what he firſt taught; and their Principles are directly oppoſite to Atheiſm. *Teaches contrary Doctrines.*

HIS Diſciples did not fail to ſpread a great Number of Fables after his Death [g], and eaſily perſuaded credulous People, that their Maſter had been born eight thouſand Times: That his Soul had ſucceſſively paſſed into different Animals; and that he had appeared in the Form of an Ape, a Dragon, a white Elephant, *&c.* This was plainly done with Deſign to eſtabliſh the Worſhip of this falſe God, under the Shape of various Animals: Accordingly theſe different Creatures, through which the Soul of *Fo* was ſaid to have paſſed, were adored in ſeveral Places; the *Chineſe* themſelves built many Temples to all Sorts of Images, which multiplied exceed- *Fables invented of him.*

[a] Could the *Bonzas* themſelves believe any Thing more ſtupid than theſe Jeſuits, who yet are every Moment ridiculing the Stupidity of the *Bonzas?* [b] *Le Comte* ſays, a thouſand Years before Chriſt. [c] On Occaſion of his monſtrous Birth, *Couplet* obſerves, that this Saviour of Mankind, as his Followers call him, had more of the Nature of a Viper than a Man; and, that the Name *Foe*, (as he writes it) being compounded of *Non* and *homo*, intimates as much. [d] *Couplet* has it, that the Mother dreamed, a white Elephant paſſing down her Throat, entered into her Womb; whence ſhe was reported to have conceived by an Elephant: But that others more rightly conjectured, that the Devil, ſtealing human Seed, got her with Child in the Shape of that Beaſt. (*Coupl. ubi ſupr.* p. 28.) This is Philoſophy, and Divinity, truly worthy of the Jeſuits. [e] According to *Couplet*, *Lo-hew-lo*. [f] The Author ſays, by the Aſſiſtance of the Devil. He had better have denied he did any ſuch Things. [g] Our Author omits ſeveral very material Things related by others. *Couplet* tells us, that his Body was burned with odoriferous Wood, according to the Cuſtom of the Country; and his Aſhes, as they ſay, diſtributed among Men, Spirits, and Dragons of the Sea: That one of his Teeth was ſent as a Preſent to the King of the Iſland of *Ceylan*, where it was worſhipped, till *Conſtantine*, the Duke of *Braganza*'s Brother, having taken it with other Spoil, burnt it, and ſcattered the Aſhes; refuſing to releaſe it for a vaſt Sum: And, that the *Portugueze* Hiſtorians, in calling it the Tooth of an Ape, have not erred, ſince *Fo* is worſhipped in *Ceylan* in the Figure of an Ape, as he is worſhipped in other Places under various Forms and Names. (*Coupl. ubi ſupr.* p. 29.) By this Paſſage, it appears, that the Religion of the *Bonzas* has a great Connection with that of the *Indians*, if it be not at Bottom the very ſame: Yet the Miſſioners take little or no Notice of this Conformity.

ingly,

Religions. ingly throughout the Empire. *Mo-o-kya-ye*, a Disciple more dear to him than all the reſt, he truſted with his greateſt Secrets, and charged more particularly to propagate his Doctrine [a]: He enjoined him not to make uſe of Proofs and Arguments to ſupport his Tenets; but only to put, at the Head of his Works, which he ſhould publiſh, theſe few Words: *It is thus that I have learned.*

Is invoked. THIS *Fo*, in one of his Books, ſpeaks of a Maſter more ancient than himſelf, called by the *Chineſe*, *O-mi-to*, and corruptly by the *Japanneſe*, *Amida*: This Perſon appeared in the Kingdom of *Bengal*, and the *Bonzas* pretend, that he attained to ſuch a high Degree of Sanctity, and had acquired ſuch abundant Merit, that it is ſufficient, at preſent, to invoke him to obtain Pardon for the greateſt Crimes [b]. On this Account, the *Chineſe* of this Sect have continually in their Mouths theſe two Names, *O-mi-to*, *Fo* [c]: They think, that after the Invocation of theſe pretended Deities, they are effectually purified, and may give a Looſe to their Paſſions afreſh, ſince to wipe-off the Score they have nothing to do, but to invoke them again [d]. The laſt Words of *Fo*, when he was dying, gave Riſe to a Sect of Atheiſts among a few *Bonzas*. A third Sect endeavoured to reconcile the two Doctrines, by the Diſtinction of the exterior, and the interior: The firſt being more ſuitable to the Capacity of the People, prepared their Minds to receive the ſecond; which was fit only for elevated Minds, and remains like the Arch, after the Center-Frame, on which it was built, is taken away.

Bonzas moral Precepts. THE Morality, which the *Bonzas* are very careful to inculcate, is contained in the exterior Doctrine: They ſay, there is great Difference between Good and Evil; that after Death there will be Rewards for the Well-doers, and Puniſhments for thoſe who have done Evil: That there are Places appointed for the Souls of both, wherein they are ſtationed according to their Merit: That the God *Fo* was born for a Saviour to Mankind, and to bring back thoſe to the Way of Salvation who had ſtrayed from it: That it was he who expiated their Sins, and procured them a happy new Birth in the other World: That there are five Precepts to be obſerved; the firſt, not to kill any living Creature; the ſecond, not to take what belongs to others; the third prohibits Impurity, the fourth Lying [e], and the fifth drinking of Wine.

BUT, above all Things, they muſt not be wanting in the Practice of certain charitable Works, which their Guides preſcribe: "Uſe "the *Bonzas* well, ſay they, and furniſh them "with every Thing neceſſary for their Subſiſtance; build them Monaſteries and Temples, that by their Prayers, and their Penances, they inflict on themſelves for the Expiation of your Sins, they may deliver you from "the Puniſhments you are liable to [f]. At the "Funeral-Obſequies of your Relations, burn "gilt and ſilver Paper, together with Garments "and Silks; all which, in the other World, "ſhall be changed into Gold, Silver, and real "Garments: By this Means your departed "Kindred will be ſupplied with the Things "they want, and have wherewithal to gratify "the eighteen Guardians of the infernal Regions; who without theſe Bribes would be inexorable, and treat them with great Rigour. "If you neglect theſe Commands, you muſt expect nothing after Death, but to be delivered "over to the moſt cruel Torments: Your Soul, "by a long Courſe of Tranſmigrations, ſhall "paſs into the vileſt Animals; and you ſhall appear again in the Form of a Mule, a Horſe,

[a] But it does not appear, that ever he thought of laying Claim to a Supremacy on theſe Words; as the *European* Popes have done on Words not ſo ſtrong. [b] Here theſe *Aſiatic* Catholics have gotten the Doctrine of Merits and Supererogation: And, indeed, the *European* Catholics ſeem to have copied almoſt all their Religion from them. [c] This is like the Papiſts *Jeſu Maria*. [d] This anſwers to the Popiſh Confeſſion, and Invocation of Saints at privileged Altars, *&c.* whereby the moſt atrocious Sins are pretended, in like Manner, to be expiated and done away. [e] It being abſolutely neceſſary for every Religion to have the Appearance of Goodneſs, the *Bonzas* have taken Care to teach the moral Doctrines; but, as a due Obſervance of them, is utterly inconſiſtent with their Views of becoming rich and powerful, they have taken no leſs Care to ſet them aſide by other Doctrines; which, to the unthinking or major Part of Mankind, may appear equally good and neceſſary. And this is the very Courſe taken by the Church of *Rome*. They admit the Decalogue; but, by their ſanguinary Laws againſt Heretics, (made to ſecure their Uſurpations) they have firſt repealed the Command againſt Murder; whence have ariſen their Cruſades, Maſſacres, Perſecutions, ſolemn Executions, Dragoonings, Confiſcations, Baniſhments, *&c.* By decreeing no Faith is to be kept with Heretics, they authorize Perjury, and diſſolve one of the chief moral Bonds of Society; and, by making it lawful to ſpoil Heretics and ſeize their Poſſeſſions, they have abrogated the Command which forbids Robbing and Stealing: By the Doctrine of the depoſing Power in the Pope, they violate the Obedience due to Sovereigns, and overturn civil Government. Thus, after admitting the moral Principles, which are of an univerſal Nature, they teach their Followers to violate them with reſpect to all Mankind; excepting thoſe of their own Perſuaſion, who make but a ſmall Part of the Whole. [f] Can the Author be angry with the *Bonzas* for this, or think they do miſs? Do not the *Komiyo* Clergy inculcate the very ſame Doctrine among the Laity?

"

" a Dog, a Rat, or ſome other Creature ſtill " more contemptible."

IT is hard to deſcribe what an Influence the Dread of theſe Chimeras has on the Minds of the credulous and ſuperſtitious *Chineſe* [a]; which will appear from a Story related by *Le Comte* [b]. Being in the Province of *Shen-ſi*, he was called one Day to baptize a ſick Perſon, who was an old Man of ſeventy. It ſeems, he lived on a ſmall Penſion given him by the Emperor, and the *Bonzas* had aſſured him, that as out of Gratitude he ſhould be obliged to ſerve him in the next World, his Soul would infallibly paſs into one of the Poſt-Horſes which carry Diſpatches of the Court into the Provinces. For this Reaſon they cautioned him not to ſtumble, wince, bite, or hurt any-body; and exhorted him to run faſt, eat little, and be patient; by which Means they ſaid he would move the Compaſſion of the Gods, who often convert a good Beaſt at length into a Man of Quality, and make him a conſiderable *Mandarin*. The Thoughts of theſe Things cauſed him to tremble, and diſturbed his Dreams every Night. He ſometimes, in his Sleep, fancied himſelf harneſſed, and ready to ſet-out at the firſt Laſh of the Rider's Whip. This made him awake in a Sweat, and half diſtracted, not knowing whether he was ſtill a Man, or a Horſe. As he had heard, that thoſe of the Miſſioners Religion were not ſubject to ſuch Miſeries, but that the Men would always be Men, and the ſame in the next World as they are in this; he deſired to be of the ſame Community, and, if you will believe the Jeſuit, died a good *Roman-Catholic* [c].

THE Doctrine of the Tranſmigration of Souls is proper to authorize the Frauds and Artifices, which they contrive to excite the Liberality of the People; as appears from another Story told by *Le Comte*. Two of theſe *Bonzas*, one Day perceiving, in the Court-Yard of a rich Peaſant, two or three large Ducks, began to ſigh, and weep bitterly. The good Woman, who obſerved them from her Chamber, coming out to learn the Cauſe: *We know*, ſaid they, *that the Souls of our Fathers have paſſed into the Bodies of theſe Creatures; and the Apprehenſion we are under of your killing them, will certainly kill us with Grief. I own*, ſaid the Woman, *that we had reſolved to ſell them; but ſince they are your Parents, I promiſe to keep them.* This not being what the *Bonzas* wanted, *Perhaps*, ſaid they, *your Huſband will not be ſo charitable as yourſelf, and you may depend on it, that it will be fatal to us, if any Accident happens to them.* In ſhort, after a great deal of Diſcourſe, the honeſt Peaſant was ſo moved with their counterfeit Sorrow, that ſhe gave them the Ducks to bring-up for ſome Time: They received the Birds with great Reſpect, making twenty Proſtrations before them; but that very Evening killed, and feaſted on them. *Sect of Fo.*

THE *Bonzas*, to continue their Sect, buy Children of ſeven or eight Years old, and inſtruct them in their Myſteries for fifteen or twenty Years, to qualify them for the Office: But they are generally very ignorant, few of them underſtanding the Principles whereon their Doctrines are grounded. As there are different Degrees among the *Bonzas*, ſome are employed in begging of Alms; others, who have acquired a Knowledge of Books, and ſpeak politely, make it their Buſineſs to viſit the Learned, and inſinuate themſelves into the good Graces of the *Mandarins*; but the Number of theſe is ſmall. There are likewiſe, among them, venerable old Men, who preſide over the Aſſemblies of Women: However, theſe Aſſemblies are not very numerous, nor to be met with in many Places. Though the *Bonzas* have not a regular Hierarchy, yet they have their Superiors, whom they call *Ta-ho-ſhang*, that is, *great Bonzas*; and this Rank greatly adds to the Reputation they have acquired by their Age, their grave and modeſt Carriage, and by their Hypocriſy. There are Monaſteries of theſe *Bonzas* to be found every where. *Prieſts, how propagated.*

IN every Province, there are certain Mountains with Temples thereon, which have greater Credit than the reſt: To theſe they go very far on Pilgrimage; and the Pilgrims, as ſoon as they are at the Foot of the Mountain, kneel-down, and proſtrate themſelves at every Step they take in going-up. They who cannot go on Pilgrimage, requeſt ſome of their Friends to buy them a large printed Sheet, marked, at one Corner, by the *Bonzas*; in the Middle of which is the Figure of the God *Fo*, with a vaſt Number of ſmall Circles drawn round-about it, and on its Garments. The Devotees, of both Sexes, wear on their Neck, or Arm, a Sort of Roſary, compoſed of an hundred middle-ſized Beads, and eight large ones: On the Top is a large Bead, reſembling one of the little Snuff-Boxes, ſhaped like Gourds. In turning theſe Beads between their Fingers, they pronounce theſe myſterious *Pilgrimages.* *Beads.*

[a] Why is it hard to conceive, that the ſuperſtitious *Chineſe* ſhould be frightened with ſuch Chimeras, when the Author knows the Laity of his own Religion are frightened in no leſs a Degree with the like Chimeras; ſuch as Purgatory, no Salvation out of the Pale of their Church, Power of Demons, Witches, Sorcery, *&c.* If it be genuine, for this Author having had a fertile Genius, ſeems to have made uſe of it often, to invent Influences. [c] *Le Comte*'s Memoirs of *China*, p. 326, *& ſeqq.* *Du Halde*'s *China*, p. 650, *& ſeqq.*

Religions. Words, *O-mi-to*, *Fo*; the Signification of which they themſelves do not underſtand [a]: They make above an hundred Genuflexions, after which they draw-out one of theſe red Circles upon the Sheet of Paper.

Paſſports for Heaven. THE Laity invite the *Bonzas*, from Time to Time, to come to their Houſes to pray, and to ſeal and make authentic the Number of Circles which they have drawn. They carry them, in a pompous Manner, to Funerals, in a little Box cloſely ſealed-up by the *Bonzas:* This they call *Lú-in*, that is, a Paſſport for travelling from this Life to the next [b]: This Paſſport is not obtained without paying ſeveral Ounces of Silver; but, ſay they, we ought not to begrudge this Expence, becauſe we are ſure of a happy Voyage.

Images. AMONG the Temples of their falſe Gods [c], there are ſeveral famous for the Beauty and Largeneſs of their Structure, as well as for the ſtrange Shapes of their Images: Some are ſo monſtrous, that the poor *Chineſe*, at the Sight of them, through Fear fall-proſtrate, and knock their Forehead ſeveral Times againſt the Ground.

Sanctified Cheats. As the *Bonzas* have no other View, than to get Money, and whatever Reputation they may have acquired, are in Reality nothing but the Dregs of the Empire, they are well-acquainted with the Art of cringing before People. They affect Mildneſs, Complaiſance, Humility, and a Modeſty which deceives at firſt Sight: While the *Chineſe*, who look no farther than the Outſide, take them for ſo many Saints; eſpecially when to this ſanctified Appearance they join rigorous Faſting, and riſing ſeveral Times in a Night to worſhip *Fo*, ſeeming to ſacrifice themſelves, in ſome Sort, for the public [d] Good.

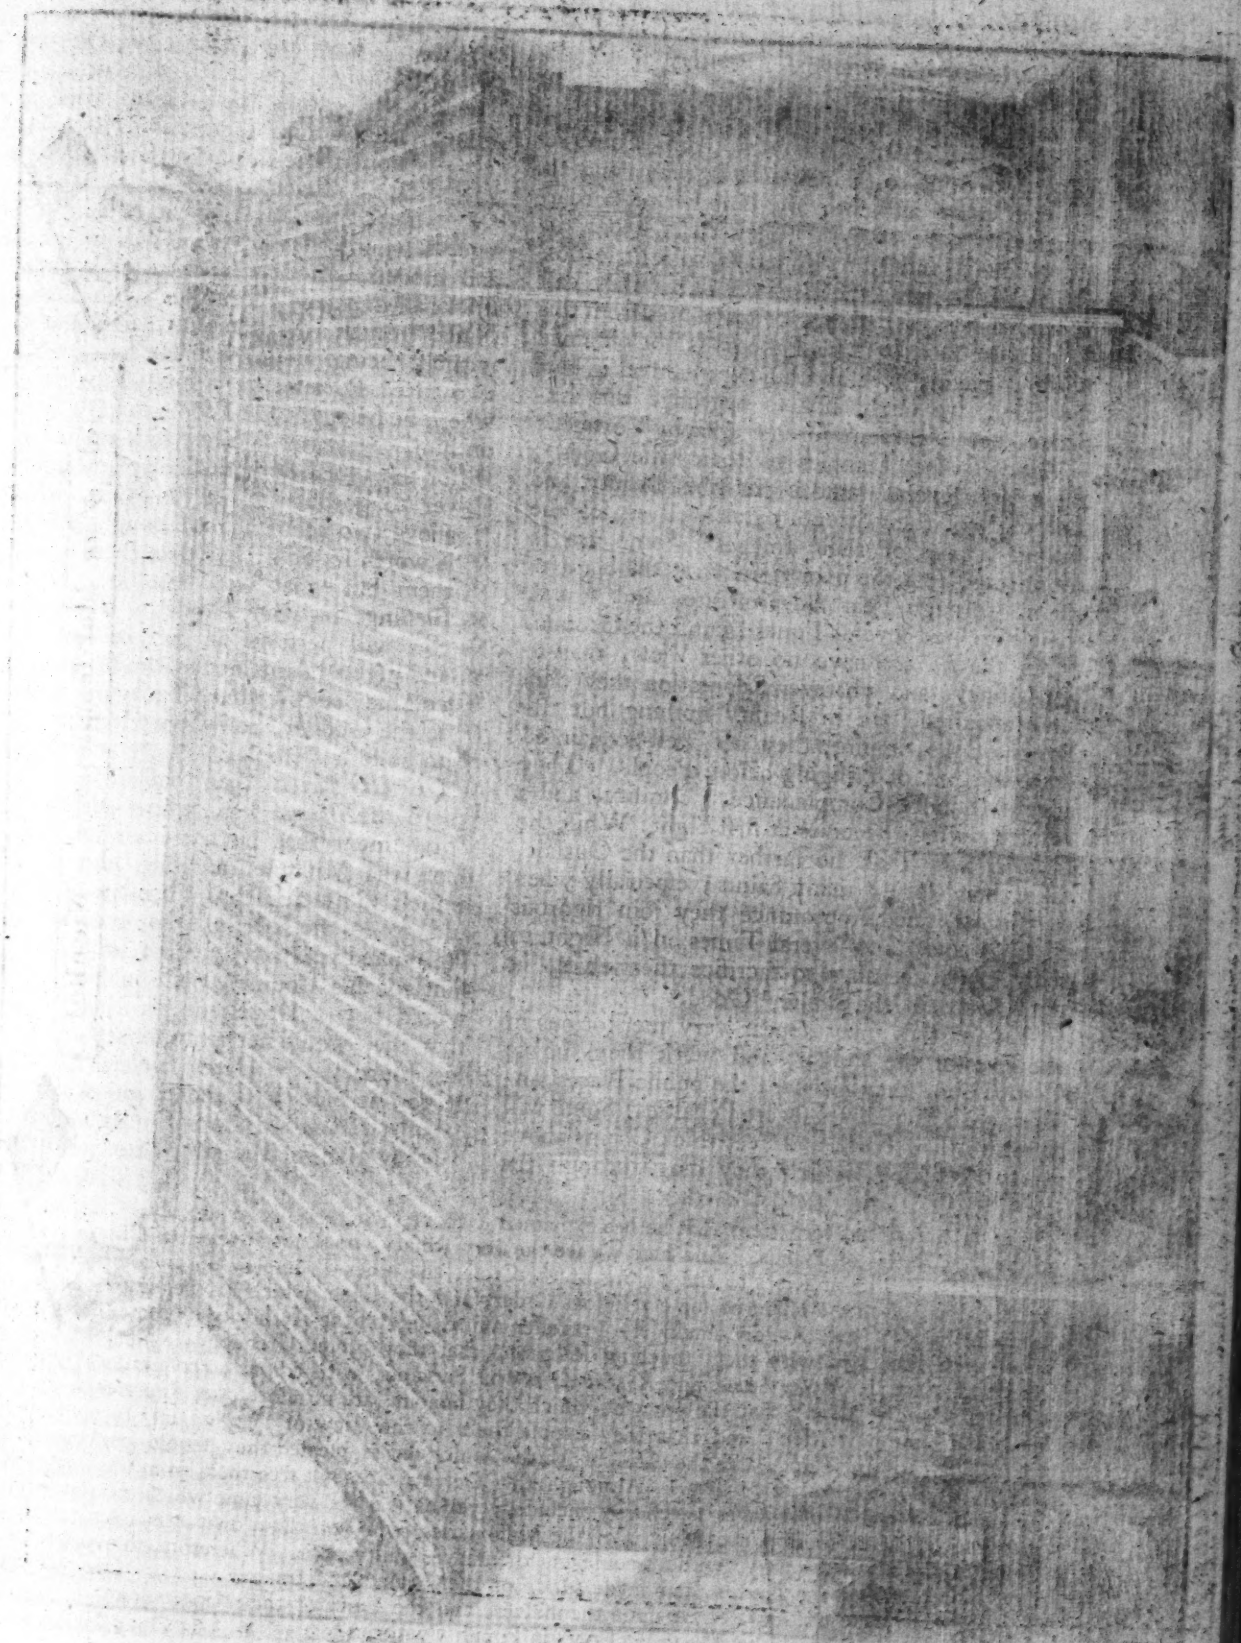
Impoſing Tricks. THAT they may appear very meritorious in the Eyes of the Vulgar, and work them up to Compaſſion, they frequent the public Places, inflicting on themſelves ſevere Penalties: Some will faſten to their Neck and Feet thick Chains above thirty Feet long, which they drag through the Street with a great deal of Pain, and ſtopping at every Door, *You ſee*, ſay they, *how dear it coſts us to expiate your Sins, cannot you afford us ſome trifling* [e] *Alms?* You meet with others all over bloody, by beating their Heads with a great Stone: But among theſe Kinds of Penances, there is none more ſurprizing than that which is related by *Le Comte.*

HE met, one Day, in the Middle of a Village, a young *Bonza*, who was affable, mild, and modeſt, ſtanding upright in a cloſe Chair ſtuck all-over on the Inſide with long, ſharp Nails, in ſuch a Manner, that he could not lean without being wounded: He was carried, by two hired Porters, very ſlowly into the Houſes, where he beſought the People to have Compaſſion on him. "I am, ſaid he, ſhut-up in this Chair "for the Good of your Souls, and reſolved ne- "ver to go-out till all the Nails (which were "above two thouſand) are bought: Every Nail "is worth ſix Sols; but then there is not one of "them but what will become a Fountain of "Bleſſings in your Houſes. If you buy any, "you will perform an Act of heroic Virtue, "and give an Alms not to the *Bonzas* on whom "you may beſtow your Charity other Ways, but "to the God *Fo*, to whoſe Honour we intend "to build a Temple."

LE COMTE then paſſed near the Place where the *Bonza* was, who made him the ſame Compliment that he had done the reſt. Hereupon the Miſſioner adviſing him not to give himſelf ſo much uſeleſs Torment in this World, and go to the *Romiſh* Temple to be inſtructed: He replied very mildly, that he was obliged to him for his Counſel, but much more ſo, if he would buy a Dozen of his Nails, telling him, that they would certainly make him fortunate in his Journey. "Here, ſaid he, turning himſelf "to one Side, take theſe, which upon the Faith "of a *Bonza* are the beſt in my Chair, becauſe "they give me the moſt Pain: However, they

[a] The Author has forgotten, that he has explained it above, where we have alſo obſerved, that this anſwers to the *Jeſu Maria* of Papiſts. And here we ſee the very Roſary, or Beads, as well as Pilgrimages in uſe with them. [b] This anſwers to the Figure of the Croſs, and other Trumpery put into the Coffins of deceaſed Papiſts, burying in the Habit of ſome religious Order, and the like; which Privileges are not granted for nothing neither. [c] A very intelligent Traveller aſſures us, on the Authority of ſome Travellers of Credit, who have diſcourſed with them touching Religion, that they proteſt ſtrenuouſly againſt adoring more than one God; that the *Dalay Lama*, and *Kûthkbtû*, are his Servants, with whom he communicates for the Inſtruction and Good of Men; that the Images, which they honour, are no more than Repreſentations of the Divinity, and ſome holy Men; and that they expoſe them to the View of People, only to put them in Mind of their Duty towards God, and the Acts of Virtue which he is pleaſed they ſhould perform. [*Gen. Hiſt. of Turks, Moguls*, &c. vol. 2. *p.* 409.] Although this Defence does not free them from the Charge of Idolatry, which the Worſhip of Images neceſſarily includes; yet as it is the very ſame which the *Romiſh* Prieſts make, methinks it ought to ſtop the Mouths of the Miſſionaries, who, on their own Principles, cannot charge the Sectaries of *Fo* with Idolatry, without confeſſing themſelves guilty of it. Wherefore, to avoid the Retort, they have miſrepreſented the *Bonzas*, and made Gods of their Saints and Images. [d] One would think theſe *Romiſh* Prieſts were writing a Satire upon themſelves, and the Laity of their Communion. [e] Is not this, in Effect, the Practice of the *Mendicant* Friers in Popiſh Countries?

"are



N.° 142. N. Parr Sculp. Vol. N. pl. 44. p. 210.

" are all of the ſame Price [a]." He pronounced these Words with an Air and Action, which, on any other Occaſion, ſays the Miſſioner, would have made me laugh.

THE ſame Motive of getting Alms, cauſes theſe *Bonzas*, as many as are deſired, to repair to the Houſes of both Poor and Rich, the Inſtant they are ſent for; where they ſtay as long as the Perſons pleaſe, and when there is any Aſſembly of Women, they bring with them a grand *Bonza*, who is diſtinguiſhed from the reſt by his Precedence, by the Reſpect the other *Bonzas* pay him, and by his Habit, which is worn only by thoſe of his Rank.

THESE Aſſemblies of the Ladies bring them in a fine Revenue, there being, in every City, ſeveral Societies, of ten, fifteen, or twenty, who are commonly of a good Family, and advanced in Years; or elſe Widows, and, conſequently, have Money to diſpoſe of. Theſe they make Superiors (or Lady Abbeſſes) of the Society in their Turns for one Year; and it is generally at the Superior's Houſe that the Aſſemblies are held, all the reſt contributing a certain Sum of Money, to defray the common Expences neceſſary for keeping-up Order. On the Day when the Aſſembly is held, there comes a pretty aged *Bonza*, who is Preſident, and ſings the Anthem to *Fo*. The Devotees join their Voices, and after they have ſeveral Times cried *O-mi-to*, *Fo*, and beaten upon ſome ſmall Kettles, they ſit down to Table, and regale themſelves; but this is only the ordinary Ceremony.

ON the more ſolemn Days, they adorn the Houſe with ſeveral Images, and groteſque Paintings, repreſenting, in an hundred different Manners, the Torments of Hell. The Prayers and Feaſting laſt for ſeven Days, the grand *Bonza* being aſſiſted by ſeveral inferior, who join in the Concert. During theſe ſeven Days, their principal Care is to prepare and conſecrate Treaſures [b] for the other World. To this Purpoſe they build a little Palace with Paper painted and gilt, omitting no Part belonging to the Houſe: This they fill with ſeveral Hundreds of Paſteboard Boxes painted and varniſhed, containing Ingots of Gold, or Silver (that is to ſay, of gilt Paper) which are deſigned to redeem them from the dreadful Puniſhments that *Yen-vang*, or the *King of Hell*, inflicts on thoſe who have nothing to give him. They put a Score by themſelves, to bribe the Officers of the Tribunal of this *King of Shadows*; the reſt, as well as the Houſe, is for Lodging, Boarding, and buying ſome Employments in the other World. They ſhut all theſe little Boxes with Padlocks of Paper, and then lock the Doors of the Paper-Houſe, keeping the Key with great Care.

Sect of Fo. *Conſecrated Triſles*

WHEN the Perſon, who has been at the Expence, happens to die, they firſt burn the Houſe, in a very ſerious Manner: Then they burn the Keys of it, and the little Cheſts, that ſhe may be able to open them, and take out the Gold and Silver, which is to be no longer mere Paper, but will be tranſmuted into fine Silver and Gold; againſt which tempting Metal *Yen-vang* is not Proof, nothing being more eaſy than to corrupt [c] him. This Hope, joined to that outward Show which attracts the Eyes, makes ſuch an Impreſſion upon the Minds of theſe poor *Chineſe*, that nothing but an extraordinary Miracle of Grace can undeceive them [d]. By theſe Means they have acquired ſo great an Aſcendant over them, that Images are every-where to be met with, which the blind *Chineſe* invoke inceſſantly, eſpecially in Times of Sickneſs, when they are to go any Journey, or when they are in [e] Danger.

For the other World.

AS there are Aſſemblies of Women, where the *Bonzas* preſide, there are likewiſe Aſſemblies of Men, which they call *Chang-chay*, or *Faſters*. Every Aſſembly has its Superior, who is, as it were, Maſter of the reſt, and has under him a great Number of Diſciples, called *Fû-ti*, to whom they give the Name of *Tsë-fû*, which ſignifies *Doctor-Father* [f].

Aſſemblies of Men.

[a] This is a curious Piece of Raillery from one idolatrous Prieſt to another: For the *Bonza*, doubtleſs, knew him to be a Popiſh Prieſt, who traded with Reliques, and ſuch Sort of Trumpery, as well as himſelf. [b] This, with the Merits above-mentioned, anſwers to the imaginary Treaſure of the *Romiſh* Church. [c] This ſtands in Place of Indulgences, for delivering out the Treaſure of the Church, and of Maſſes for the Dead: This is their Trick for getting Money, under Pretence of delivering the Souls from Purgatory. The Cheats of the *Bonzas*, you ſee, are exactly the ſame at Bottom, and all directed to the ſame Ends, as thoſe of the *Romiſh* Church, from which they differ only in the Contrivance and Manner of carrying them on. [d] This is the very Caſe of the *Romiſh* Laity, who are, as it were, inchanted by the great Security and Hope given them by their Religion; which likewiſe is calculated by its exterior Pomp to dazzle the Eyes, and work on the Affections, inſtead of the Underſtandings of its Votaries: So that as the ſame Cauſes produce the ſame Effects, the *Romiſh* Miſſionaries muſt expect the ſame Infatuation, and Obduracy, from the *Chineſe* Laity of the Sect of *Fo*, that the Proteſtant Divines experience from the *Romiſh* Laity, who are, generally ſpeaking, no leſs ignorant and bigotted in their Way, than the Followers of *Fo*. [e] This anſwers to the Papiſts aſcribing the Power of Protection, and healing Diſeaſes, to their Saints; whom they invoke for that Purpoſe, commonly at their Shrines, or before their Images, in *Romiſh* Countries. [f] *Du Halde*'s *China*, vol. 1. p. 653, *&* *ſeqq.* *Le Comte*'s Memoirs of *China*, p. 334, *&* *ſeqq.*

Religions.

WHEN they are induſtrious, and have gained any Reputation, they eaſily obtain this Office: They preſerve, in a Family, ſome old Manuſcript, handed-down, from Father to Son, for ſeveral Generations: This Book is full of impious Prayers, which no-body underſtands [a], and none but the Head of the Family can repeat. Sometimes theſe Prayers are followed with ſurprizing Effects; nor needs there any Thing more to raiſe a Man to the Quality of *Tsë-fû*, and gain a great Number of Diſciples.

Faſting and Abſtinence.

THE Days on which the Aſſemblies are held, all the Diſciples have Notice to appear, and no Perſon dares ſtay-away. The Superior being ſeated at the lower-End of the Hall, towards the Middle, they all proſtrate themſelves before him, and then form two Ranks, one to the Right, the other to the Left. When the Time is come, they recite theſe unintelligible Prayers; after which they place themſelves at the Table, and plunge themſelves into all Manner of Exceſs [b]; for nothing can be more pleaſant than theſe *Chineſe* Faſters. To ſay the Truth, they refrain, all their Life-time, from the Uſe of Fleſh, Fiſh, Wine, Onions, Garlic, and every Thing that heats the Blood; but they know how to make themſelves amends with other Proviſions, and eſpecially by the Liberty of eating as often as they [c] pleaſe.

Trick to get Money.

IT is not to be ſuppoſed, that this Sort of Abſtinence is any great Trouble to a *Chineſe*; for there are great Numbers who do not profeſs the Art of Faſting, and yet are contented with Rice and Herbs, as not being able to purchaſe Fleſh [d]: Nor is it any Surprize, that the Profeſſors of this Sect ſhould be ſo very ſtrict, that nothing can prevail on them to break their Abſtinence; for it is an eaſy Trade to them, by which they gain conſiderable Revenues.

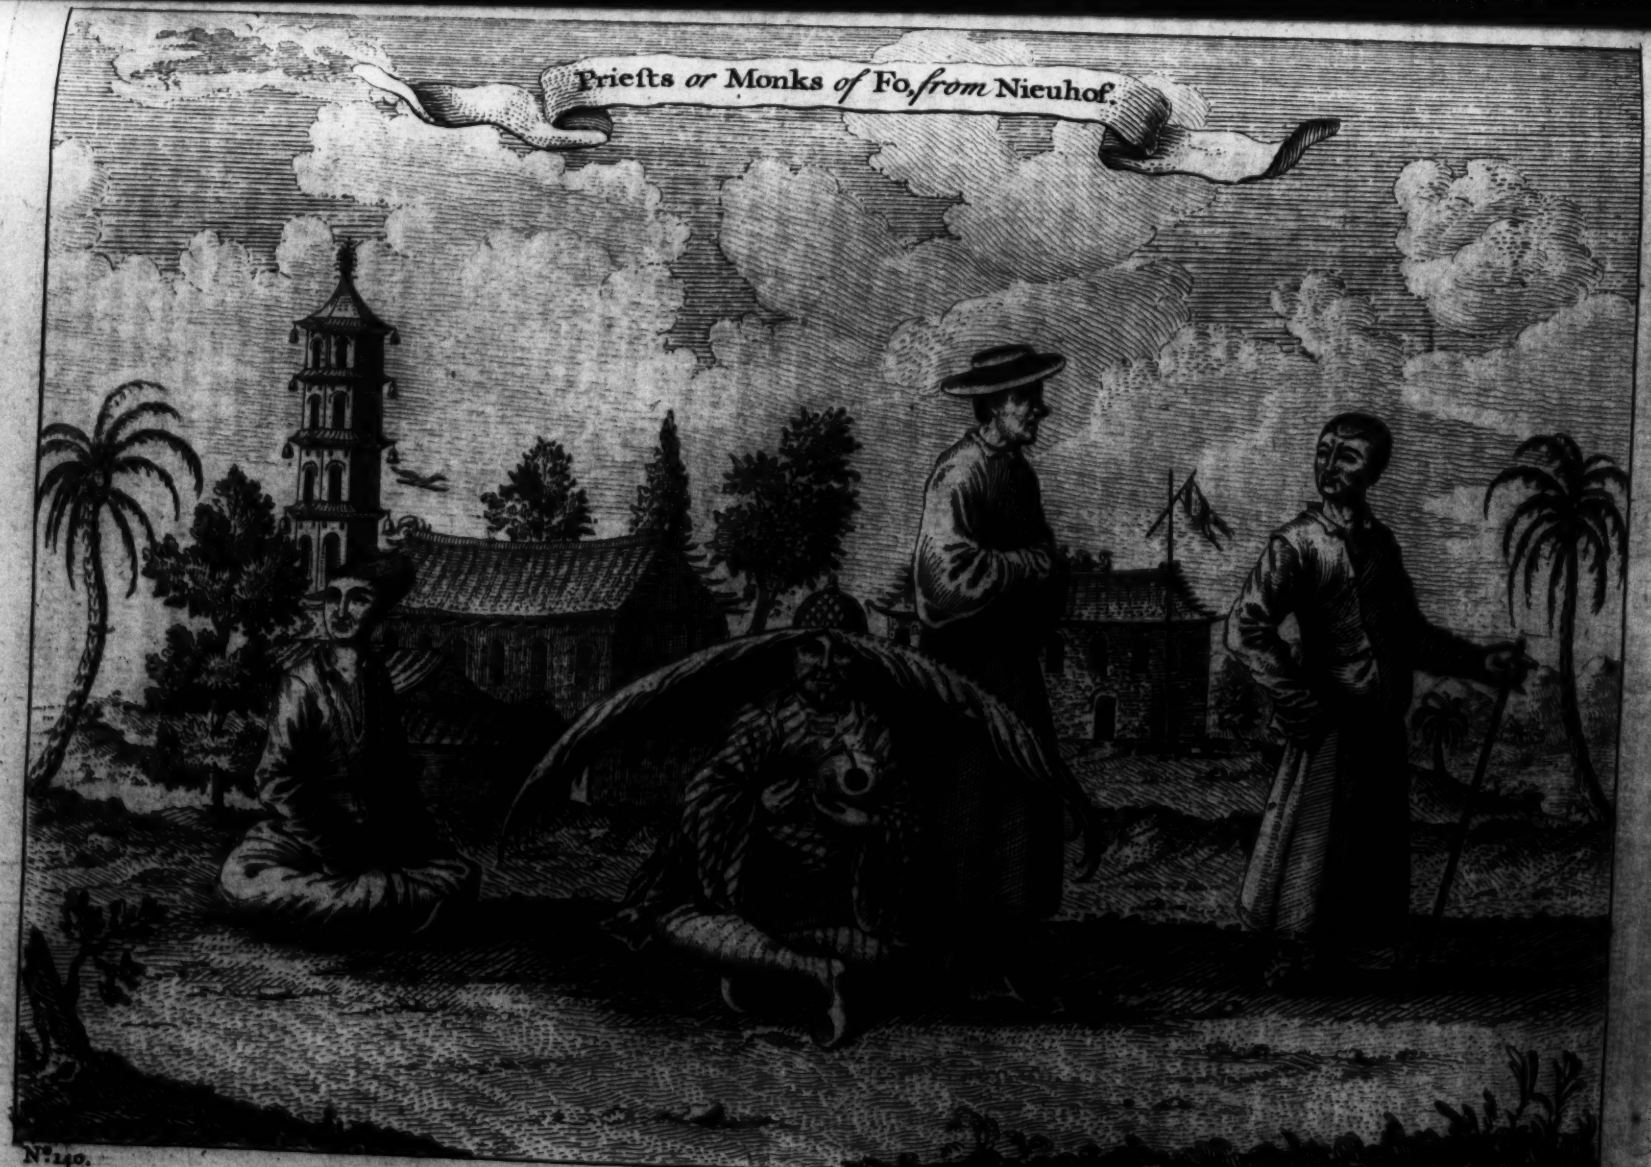
WHEN once they have obtained the Degree of *Tsë-fû*, and gained a great Number of Diſciples, the Contribution which each of them is obliged to pay on the Days of Meeting, amounts to a conſiderable Sum in a Year: Beſides, the Practice of Faſting is an excellent Device for covering all the Irregularities of an infamous and libertine Life, and for acquiring a Reputation of Sanctity at a very ſmall [e] Expence.

IN ſhort, there are no Stratagems, nor ridiculous Inventions, which theſe Miniſters of Satan have not Recourſe to, in order to keep their Followers ſtaunch in their Devotion to the God *Fo*, and to alienate them from the Miſſioners [f]. One while they perſuade them, that they ſeek only to ſtrengthen themſelves by the Number of their Diſciples, in order to execute Deſigns deſtructive to the State; that they gain their Diſciples by Help of Money; and that they never want Money, as having the Art of counterfeiting it. Sometimes they make them believe, that the Miſſionaries pluck-out the Eyes of their Proſelytes to make Teleſcopes of, for obſerving the Stars; at other Times, they pretend, that their Deſign in coming to *China* is to make Converts, which are ſcarce in *Europe*; that when once a Perſon, who has gone over to them, comes to die, there is no eſcaping out of their Hands; and, that, by Means of certain Charms which they caſt upon Souls, they force them to paſs over into *Europe*: Behold, ſay they, what Dangers we are expoſed to from them!

THESE Extravagancies, pronounced with an Air of Confidence and Authority, do not fail to impoſe on credulous Minds. However, it muſt be confeſſed, they do not make much Impreſſion on the better Sort [g]: For, notwithſtanding the ſanctified Looks which the *Bonzas* put-on, they are known, for the moſt Part, to lead debauched

[a] How then does he know they are impious? What Abſurdities Malice betrays theſe Jeſuits into! [b] How is this poſſible, when it appears they want the proper Means of Debauchery? [c] This is only a bare Aſſertion of an Enemy. But ſuppoſing it Fact, is it more than what is practiſed by the *Romiſh* Prieſts themſelves, as well as the Laity, who regale themſelves on faſting Days with the moſt delicious Things they are allowed to eat, beſides drinking Wine, and other heating Liquors, which the *Bonzas* abſtain from. [d] This is a paultry Way of running-down the *Bonzian* Faſting: For is it not the Caſe of the poor and ordinary Sort of People in Popiſh Countries, eſpecially *Spain*, *Portugal*, &c. [e] I cannot but admire the Weakneſs of the Author in making theſe Diſcoveries, and uſing Arguments, which not only may be turned on the Prieſts of his Religion, but have actually been retorted on them by Proteſtant Divines. All that can be ſaid, is, that they write not for Proteſtants, but for Popiſh Bigots, who never make uſe of their Senſes. [f] Is not this the very Practice of the Popiſh Clergy themſelves? Do not they, for this End, keep the Bible out of the Hands of the Laity; perſuade them, that all are damned but thoſe of their own Communion, and that Proteſtants allow Salvation in their Church; forbid them to read Proteſtant Books, or hear their Arguments; and tell a thouſand monſtrous and ridiculous Lies, to inſpire them with Hatred to their Perſons as well as their Religion? The Motive to all this, on both Sides, is the Fear of loſing their Wealth and Power. But the greateſt Security the *Bonzas* can have againſt the Progreſs of Popery among them, is the great Conformity between the two Religions: For, by the Change, their Followers ſee they will be juſt in the ſame Condition they were before; there being nothing of Novelty to induce them, excepting what ariſes from the Difference of a few Forms. Beſides, they muſt naturally have a greater Reſpect for the Saints, Images, and Ceremonies of their own, than thoſe of a foreign Manufacture. [g] Nor do the *Romiſh* Abſurdities and Superſtitions gain Credit with the better Sort: But ſuch are called Heretics, and treated as Malefactors, (by the rigid Clergy of that tyranizing Church) if they dare ſpeak their Minds.

Lives.

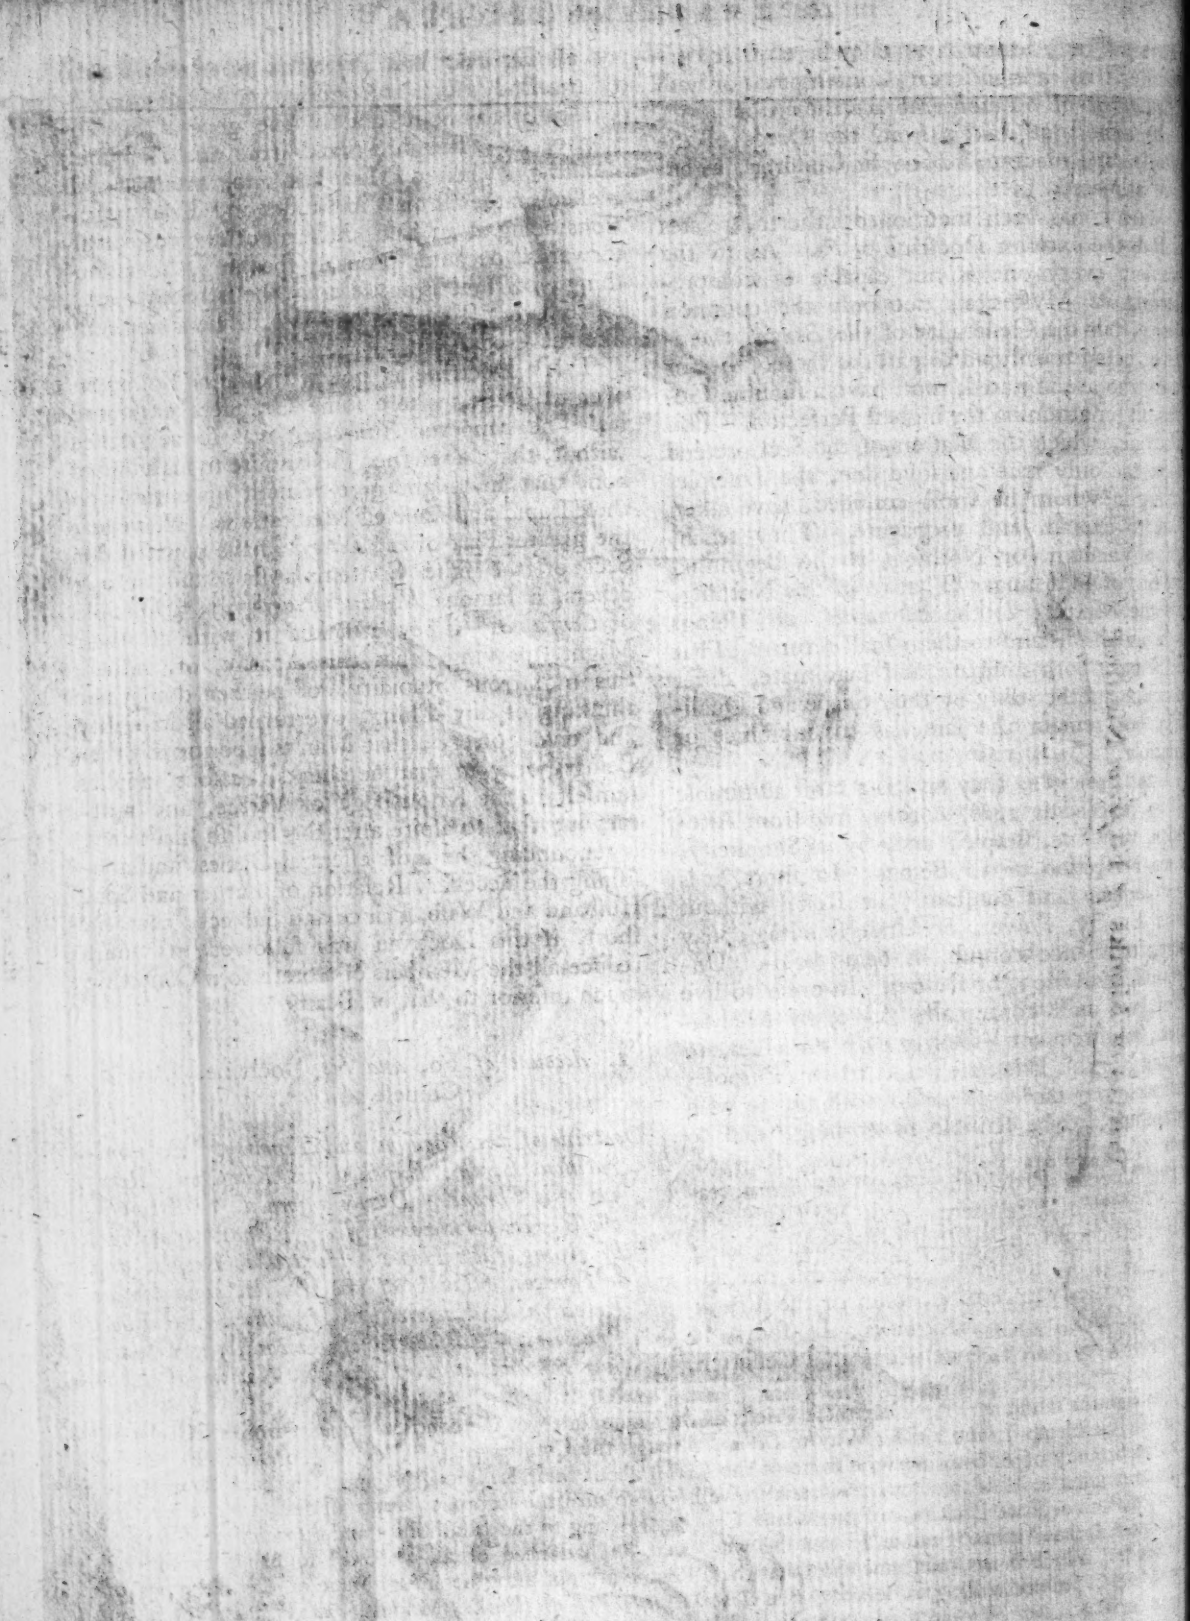


N°140.

I. Basire sculp.

Vol. 4, Plate LII, p. 220.

XL



Lives. The Author ſays, elſewhere, that, generally, they are in great Contempt; nor will any *Chineſe* of Faſhion embrace their Condition, being almoſt all taken from the Dregs of the People, and made-up of bought Children, as before intimated.

WHAT has been mentioned hitherto, relates only to the exterior Doctrine of *Fo*. As to the interior, every one is not capable of comprehending its Myſteries; not only the common People, but the Generality of the *Bonzas* themſelves, being too ſtupid to partake thereof[a]: For thoſe who are initiated, muſt have a ſublime Genius, fit for attaining the higheſt Perfecton. This Doctrine, which the Maſters of the Sect pretend to be the only true and ſolid one, the Diſciples of *Fo*, in whom he moſt confided, have taken Care to explain and propagate. They teach, that a Vacuum, or Nothing, is the Beginning and End of all Things: That from this Nothing, and the Mixture of the Elements, all Things were produced, and to them ſhall return: That all Beings, both animate and inanimate, differ from one another only by their Shape and Qualities; but remain the ſame as to Subſtance or Principle.

THIS Principle, they ſay, is a moſt admirable Thing, exceeding pure, entirely free from Alteration, very fine, ſimple; and, by its Simplicity, is the Perfection of all Beings: In ſhort, it is very perfect, and conſtantly at Reſt, without either Energy, Power, or Underſtanding; nay more, its Eſſence conſiſts in being void of Underſtanding, Action, or Deſires. In order to live happy, we muſt continually ſtrive, by Meditation, and frequent Victories over ourſelves, to become like this Principle; and to this Purpoſe, muſt accuſtom ourſelves to do nothing, to wiſh for nothing, to be ſenſible of nothing, and to think of nothing. Vices or Virtues, Rewards or Puniſhments, Providence, and the Immortality of the Soul, are quite out of the Queſtion; all Holineſs conſiſts in ceaſing to be, and in being ſwallowed up in nothing. The nearer one approaches to the Nature of a Stone, or the Trunk of a Tree, the more perfect he is: In ſhort, it is in Indolence, and in Inactivity, in a Ceſſation of all Deſires, and Privation of every Motion of the Body, in an Annihilation of all the Faculties of the Soul, and in the general Suſpenſion of all Thought, that Virtue and Happineſs conſiſt. When a Man has once attained this bleſſed State, all his Viciſſitudes and Tranſmigrations being at an End, he has nothing to fear afterwards, becauſe, properly ſpeaking, he is nothing; or if he is any Thing, he is happy; and, to ſay every Thing in one Word, he is perfectly like the God *Fo*.

Sect of Fo.

THIS Doctrine is not without its Followers even at Court, where ſome Grandees embraced it: The Emperor *Kau-tſong* was ſo bewitched with it, that he reſigned the Empire to his adopted Son, that he might give himſelf up entirely to theſe ſtupid and ſenſeleſs Meditations. However, the greater Part of the *Literati* have oppoſed this Sect of the falſe Contemplatiſts; and among others, a famous *Ko-lau*, *Pwey-ghey*, a Diſciple of *Confuſius*. They attacked it with all their Might, proving, that this Apathy, or, rather, this monſtrous Stupidity, of neither doing nor thinking of any Thing, overturned all Morality and civil Society; that Man is ſuperior to other Beings, only in that he thinks, reaſons, applies himſelf to the Knowledge of Virtue, and practiſes it; that to aſpire after this fooliſh Inactivity, is renouncing the moſt eſſential Duties, and aboliſhing the neceſſary Relation of Father and Son, Huſband and Wife, Prince and Subject; that, in ſhort, if this Doctrine was followed, it would reduce all the Members of a State to a Condition much inferior to that of Beaſts[b].

Its Progreſs oppoſed.

2. *Account of* Fo, *and his* Doctrine, *from a* Chineſe *Author.*

Doctrine of the Vacuum and Ternary. Fo's *miraculous Birth: Expelled his Kingdom: Recovers his Throne. Duties enjoined. Metempſychoſis: Its pernicious Effects: Encourages Vice, by giving falſe Hopes: Hurtful to People, and to Princes. Tricks of the Prieſts, who foment Rebellions: Enemies to Induſtry. Ruinous Practices. Miſchiefs of Credulity: Of the Spirits, and other Fictions. Notion of Hell.*

[a] Although the Miſſioners repreſent theſe Prieſts as very ignorant, yet the contrary appears from the Relation of a *Romiſh* Gentleman, who, in his Way to *China*, through the Country of the *Mungals*, (or *Mongols*) having had an Opportunity of diſcourſing with ſome of the *Lamas* about their Religion, began to reproach them for ſo. cially deceiving the Vulgar: But they knew ſo well how to turn the Reproach upon himſelf, by putting him Mind of ſome delicate Doctrines of the *Roman* Church, relating to the Infallibility and Supremacy of Popes, at he aſſured the Author, whoſe Friend he was, that he had need of all his Skill to bring himſelf off h Honour: Which ſhews, continues he, that theſe People are not altogther ſo ignorant of the Religions of her Nations as we are willing to believe. See *General Hiſtory of the* Turks, Moguls, *and* Tartars, vol. 2. p. 9, 490; alſo *p.* 488. We ſhall only add, that if they are not ignorant of other Religions, it is not probable, ey are ignorant of their own, though they are ſhy in divulging it, as the ſame Author obſerves. [b] *Du* lde's *China*, p. 656, *& ſeq.* *Le Comte*'s Memoirs of *China*, p. 335, *& ſeqq.*

Whim-

Religions. *Whimſical Fable. Origin of Guardian Spirits.*

Doctrine of the Vacuum

THE *Chineſe* Philoſopher, already mentioned, gives a ſomewhat different and more compleat Account of *Fo*, and his interior Doctrine, than the Miſſioners: According to him, ſays *Chin*, the whole World is a mere Vacuum, without any Thing real in it: Purſuant to which fine Principle, he would have us think of nothing, but reduce the Heart to a mere Vacuum, that is, empty it of all Affections; and go ſo far, as even to forget ourſelves, as though we had no Exiſtence. We have Eyes and Ears, and yet we muſt neither ſee nor hear any Thing: Theſe Organs ought to be void of every Object, that is their State of Perfection. We have Mouths, Hands, and Feet; and yet all theſe Members muſt be inactive. His great Principle is, that the wonderful Ternary of the *Tſing*, the *Ki*, and the *Shin*, that is, the *fine*, the *ſubtile*, and the *ſpiritual*, comes to its greateſt Perfection when it is united, and makes but one: As for the Soul, its Duration, ſays he, is infinite; for it is never deſtroyed. Agreeably to this, the Sectaries ſay, that every Thing is empty in the viſible World, and that the *Yang*, or Spirit, only is immortal; that the great Doctrine of *Fo* and *Tau* ſwallows up all in nothing; the Soul only excepted, which will exiſt and live for ever.

And Ternary.

Fo's miraculous Birth.

As to the Hiſtory of this Enthuſiaſt; his Mother beholding, in a Dream, a great white Elephant, at the ſame Inſtant perceived herſelf with Child: It grew conſiderably every Day; and, at length, made his Way through his Mother's Side, tearing her Bowels. Is it becauſe he killed his Mother at his Birth that the idolatrous People faſt, make Proceſſions, and an hundred other Things of the ſame Nature, to obtain all Kind of Happineſs for their Mothers? Can it be imagined, that this *Fo*, who could not ſave his own Mother, is able to protect any-body's Mother [a]?

Expelled his Kingdom.

HE reigned in one of the Kingdoms Weſtward of this Empire; where he was Supreme both in Temporals and Spirituals. He had a Queen and a Concubine of very great Beauty, of whom he made Goddeſſes. His Kingdom abounded with Gold, Silver, Merchandizes, the Neceſſaries of Life, and eſpecially precious Stones: But though it was rich and fruitful, the Extent of it was ſmall, and its Inhabitants had neither Strength nor Courage; inſomuch, that the Dominions of *Fo* were ſubject to frequent Invaſions from the Nations which ſurrounded them. This obliging him at length to abandon his Kingdom, and embrace a ſolitary Life, he applied himſelf to exhort the People to the Practice of Virtue, and publiſhed his Doctrine of the *Metempſychoſis* which he had invented, whereby the Soul was to migrate backwards and forwards from one Body into another; obſerving however a certain Order, by which Virtue was rewarded, and Vice puniſhed.

HE infatuated the neighbouring Kingdoms with theſe ridiculous Imaginations; his Deſign being to intimidate his Perſecutors, and to perſuade them, that if they continued to ravage his Territories, they ſhould, after this Life, be changed into Dogs, Horſes, and even into wild Beaſts. Thus, in twelve Years, he drew after him a prodigious Number of ignorant People; with whoſe Aſſiſtance he re-aſcended his Throne, became very powerful, and, marrying again, had a numerous Iſſue. Such was the Effect of his Artifices; and while he talked to his Diſciples about nothing but the Emptineſs of earthly Poſſeſſions, he eagerly ſought after them himſelf, and procured as many as he poſſibly could.

THIS Sect, ſays *Chin*, preſcribes nothing but a few idle Prayers for the Attainment of Happineſs, and a State of Serenity; whereas our Sages exhort us to ſubdue our Paſſions, to govern our Deſires, and to perform our ſeveral Duties; which is a very difficult Taſk. You find, in the Doctrine of theſe Sects, this unintelligible Language, *Fo-ſhi-i, Shin-eul, Yew-ſang Syang*; that is, *According to the Sect of* Fo, *the Body of* Fo, *the Trunk or Subſtance is one, but it hath three Images. Lau-ſhi-i, Shin-eul, Fwen Sang-tſing*; that is, *According to the Religion of* Lau, *the Body of* Lau, *the Trunk or Subſtance is one, but it is diſtinguiſhed into three Purities.* Theſe Sectaries, to make themſelves underſtood, have Recourſe to Compariſons: A Branch of an Elder-Tree, planted in the Earth, leaves, at length, a Quinteſſence of the Nature of the Elder-Tree; a Fox, dying in his Hole, leaves behind him vivifying Spirits wherewith he was animated [b]. It is thus they pretend, that, after the Death of their Maſter, there remained ſomething of his Perſon, which was born again in this lower World.

[a] This is like the Proteſtant Argument againſt the *Romiſh* Saints, who cannot be ſuppoſed able to protect their Votaries, when they cannot protect their own Images, Reliques, &c. And we ſhall find, that moſt of the Author's Arguments conclude equally againſt Popery, and the Religion of this Impoſtor.

[b] Women Idolaters believe they often ſee Spirits in the Shape of Foxes, and call them *Hû-li-tſing*. Thus Apparitions are propagated; prepoſſeſs but the Mind with any Abſurdity, and People will fancy, nay, ſwear, they have frequent Demonſtrations of its Truth: Of this, all Times and Countries furniſh Inſtances.

To enter into a more particular Account of a the Whims of the Sect of *Fo*, in the Book of his Diſciples, intitled, *The Utility of the Houſe*, it is ſaid, that the Body is our Habitation: That the Soul is an immortal Gueſt who lodges there; and, like a Traveller, paſſes from one Inn to another: That a Child is nouriſhed with its Mother's Milk, in the ſame Manner as the Inhabitants of a Country drink of a River wherewith it is watered. This Doctrine of the Tranſmigration of Souls, repreſenting the Body as nothing but a tranſitory Habitation, according to the Philoſopher *Chin*, tends to root out of Peoples Minds both the Reſpect due to their Parents, and the proper Care for themſelves. There are ſome, ſays he, who go on Pilgrimage to Temples, ſituate on the Top of ſteep Rocks; and after ſaying their Prayers, as if they were ſure of being heard, caſt themſelves headlong down the Precipice: Others are laviſh of their Lives, in giving themſelves up to the moſt ſhameful Exceſſes: Others, who meet with Obſtacles to their unlawful Paſſions, go, by Conſent, and hang or drown themſelves, that, when they are born again, they may become Huſband and Wife.

WOMEN and Maids, who are generally greatly devoted to *Fo*, are eaſily ſeduced by the *Bonzas* and *Tau-tſe*, a Sort of People very ſkilful in amorous Intrigues: They inſinuate to them, that the Body, which they only paſs through, is nothing but a contemptible Cottage, which they ought not to give themſelves any Trouble about; and that many of their Sex, when they grant the Favours required of them, have been enjoyed by *Fo* without knowing it: *At preſent*, continue they, *you are the weak and ſervile Sex, but we promiſe you faithfully, that when you are born again into the World you ſhall become Men.* It often happens, that Ladies, and young Girls of excellent Parts, and the beſt Families, are diſhonoured by theſe Varlets; and being thus debauched, at length make a Trade of Libertiniſm, which they never forſake [a].

THOSE who give into theſe ridiculous Chimeras affirm, that the Good or Evil of the preſent Life is the Conſequence of their Actions, while they were in a pre-exiſtent State, and ſo think they have a Toleration, by this goodly Principle, to abandon themſelves to Debauchery, and ſeize the Property of other Perſons with Impunity. *You muſt underſtand*, they will ſay, *that we only take-back what belongs to us; for we are very poſitive, that you owed us ſuch a Sum in a former Life.* If a Libertine, who lays Snares for a young Girl, knows ſhe is addicted to the Worſhip of *Fo*, he will ſay to her, *Do not you remember, that before you were born you promiſed to marry me? But your haſty Death deprived me of the Right which I at preſent demand; from thence proceeds the tender Diſpoſition of our Hearts, and the favourable Opportunity we now enjoy.* You may perceive, that this monſtrous Doctrine of the Tranſmigration ſerves as a Veil to cover the moſt flagrant Wickedneſs, and moſt ſhameful Diſorders [b]. *Sect of Fo.*

THE Sectaries of *Fo* are perſuaded, that they may give themſelves up to the moſt criminal Actions with Impunity; and that, provided they burn a little Incenſe in the Night-time, or repeat a few Prayers before an Image, their Crimes are not only blotted-out [c], but being under its Protection, they are ſkreened from the Purſuit of Juſtice: One ſingle Inſtance will make this plain. A Thief found Means to get into the moſt inner Apartment of the imperial Palace, but was diſcovered, and ſeized by the Officers in Waiting; who, after ſearching his Cloaths, ſtript him, and found his Body covered over with Slips of Paper filled with Sentences of *Fo* [d]; which he imagined would prevent his being ever diſcovered, or at leaſt ſecure his Eſcape. *By giving falſe Hopes.*

THE Devotees of this Sect are entirely taken-up with making Pilgrimages to certain Mountains; and live exceeding ſparingly, that they may be able to purchaſe Perfumes to burn before the Images. They are inſenſible to the Neceſſities of a Father, or Mother, who ſuffers from Cold, or Hunger, for Want of Cloaths and Food; their only Care being to gather a Sum of Money ſufficient to purchaſe a rich Picture-Frame for the Altar [e] of *Fo*, and other ſtrange Deities.

[a] How often do we hear of the like Diſorders among the Female Sex, and Prieſts in the Church of *Rome*? How often do the Intrigues of Monks and Nuns come to Light? What Libertiniſm was lately diſcovered in ome of the Convents at *Paris*? All *Europe* has rang of the late Story of *P. Gerrard* and Miſs *Cadiere*, with many others. The *Bonzas* make uſe of the Doctrine of the Tranſmigration, and the *Romiſh* Prieſts that of onfeſſion, to debauch the Sex; but of the two, this laſt is by much the fitter for the Purpoſe. [b] *Du Halde*'s hina, p. 670, *& ſeq.* [c] Is there not the ſame eaſy Remiſſion of Sins promiſed in the Church of *Rome*, on aying two or three Prayers before an Image, or privileged Altar, over and above what is obtained by Indulences, Pardons, *&c.* [d] Theſe are like the Papers containing what they call the Goſpel of St. *John*, rayers or Sentences out of the Litanies of Saints, the Legends, or other Books; which, as well as the Croſs nd *Agnus Dei*'s, Papiſts carry about them as Charms to protect them againſt Accidents, and drive away il Spirits. [e] The ſame ill Conſequences happen daily in *Popiſh* Countries. How many Parents have diſherited their Children, and reduced their Families to Beggary, in order to leave all their Subſtance to the hurch; not for the Good of their Souls, as they imagine, but for the Good of the Prieſts?

Religions. Hurtful to People.

How many, among the Vulgar, do believe every Thing they are told concerning the Churches and Monaſteries, which are built in the moſt ſolitary and inacceſſible Places? They take it for granted, that they are the Manſions of Virtue and Innocence, and even many are tempted to paſs their Days in theſe Sorts of Retreats, that they may imitate *Fo* in his ſolitary Life. To this End you will ſee them all-of-a-ſudden renounce their Wives, Children, and Poſſeſſions. What monſtrous Folly is this! All the pompous Exhortations of *Fo* and *Lau* upon the Vacuum, and upon the Perfection ariſing from an abſolute Renunciation of all Enjoyments, are ſo many Snares, by which a great Number of People have ſuffered themſelves to be caught, thinking they could really put their Leſſons in Practice; but they ſoon found them to be impracticable. The Empire of the Conſtitution prevailing, the Paſſions, by being curbed and reſtrained, have only become more ungovernable, and led them into the moſt enormous Exceſſes [a].

And to Princes.

THIS Deluſion is not confined to the People only, if Rebel-Armies have beſieged the Capital, and invading Nations made the Empire tributary; theſe Misfortunes have happened purely through the Princes Heads being turned with the Maxims and Superſtitions of *Lau* and *Fo*, whereby they have become incapable of governing their Subjects. Was not *Lyang-vû-ti* reduced to die of Famine at *Tay-ching?* Was not *Whey-tſong* carried captive into the ſandy Deſarts of *Tartary?* Did not *Hven-tſong* ſhamefully flie to the Mountains of *Se-chwen?* And what Miſery did he not ſuffer there? Thus have theſe falſe Sects made Dupes of our Emperors [b], and brought the Monarchy to the Brink of Ruin.

Tricks of the Prieſts,

AMONG the Artifices wherewith the Miniſters of thoſe two Sects ſeduce the Minds of the Credulous, they make uſe of a common Stratagem well-calculated for the Purpoſe: When they initiate any Perſon into their Myſteries, they oblige him to look into a Veſſel of Water, where he ſees himſelf in the Condition he then is: They then bid him look a ſecond Time, and he appears in the Condition he ſhall be when born again, provided he continues ſincerely devoted to their Deities. By their Skill in the magic Art it is ſo ordered, that a rich Man firſt beholds himſelf in the Shape of a ſick Man, or a common Beggar in the utmoſt Want; and thereupon takes a Reſolution to conſecrate all his Subſtance to the Idol-Temples. After this good Work is performed, they perſuade him to look a ſecond Time into the Veſſel of Water, and then he ſees himſelf in the Habit of a King, a General of the Army, or Prime-Miniſter of State. If a Maid, ſhe beholds herſelf dreſſed in the Robes and Jewels of an Empreſs, a Queen, or favourite Concubine of the Prince; and this is to be their happy State when they enter anew into the World.

BY theſe Kinds of Inchantments, they cunningly diſpoſe the People to Rebellion: Thus prepared, they readily take-up Arms, fight Battles, and plunder opulent Cities. By ſuch Methods, during the *Han* Dynaſty, two Rebels cauſed infinite Miſchiefs, which were renewed under that of the *Ywen*, and more lately in the Reign of the *Ming*, by other Ringleaders of Rebellion, who deſtroyed ſeveral Millions of Men. You might have ſeen thoſe Monſters in Nature, for whom no Puniſhments could be great enough, boaſt of their Crimes even under the Executioner's Sword; and ſtill influenced by the Inchantment, cry out, *We die content, we are upon the Point of entering into that delightful Abode in the Weſt, where* Fo *waits to receive us, and make us partake of his Bliſs* [c].

THERE are four Sorts of Profeſſions of abſolute Uſe in the Empire, for providing Neceſſaries, and maintaining good Order therein, viz. thoſe of the *Literati*, Huſbandmen, Mechanics, and Merchants: But the Diſciples of *Fo* and *Lau* are continually exhorting People to abandon theſe Profeſſions, and to embrace, inſtead of them, thoſe of *Ho-ſhang* [d] and *Tau-tſe* for the Male, and thoſe of *Ku* and *Mi* [e] for the Female Sex. Theſe *Bonzas* and *Bonzeſſes* live at the Expence of the Public, and ſtick at no Lies, Tricks, and Frauds, to procure Alms: They likewiſe give themſelves up to Sloth and Luxury, not denying themſelves any Pleaſures that a corrupt Imagination can ſuggeſt [f], and even trampling under-foot the Laws of Nature and Society. *Ta-mo*, the Perſon ſo much cried-up, who came out of the Weſt into *China*, ſpent, as reported, nine Years in

[a] May not all this be applied to the celibate and monaſtic Lives of the Prieſts, Monks, and Nuns of the *Romiſh* Church? [b] Thus was the late King *James* a Dupe to the Counter-part of *Foiſm*, Popery, and owed all his Misfortunes to it. [c] The like Inſtances of Cruelty and Rebellion we have had in the Cruſades, the Maſſacres of *Paris* and *Ireland*, the Deſtruction of the *Indians* by the *Spaniards*, the ſeveral Rebellions from the Beginning of Queen *Elizabeth*'s Reign to that at preſent on-foot; all the natural Effects of the Spirit of Popery which, like its Siſter *Foiſm*, makes a Merit of Inhumanity, having changed the Chriſtian Spirit of Meekneſs, Mercy, and Love, into Violence, Cruelty, and Hatred. [d] Theſe are what we call *Bonzas*, or rather those of the unmarried Sort. [e] Theſe Orders we know nothing of; for we meet with the Names of them nowhere elſe, any more than ſeveral other Particulars mentioned by this *Chineſe* Author. [f] This may be applied to the *Romiſh* Monaſtics of both Sexes.

the Mountain *Tſong* in continual Contemplation. He remained immoveable, with his Eyes fixed upon the Wall, without changing his Situation; and yet this contemplative Sluggard wanted none of the Neceſſaries of Life, but was plentifully ſupplied with all Sorts of Proviſions and Cloaths.

SUPPOSE, after his Example, every private Perſon ſhould take it into his Head to imitate this Kind of Life, what would become of the moſt neceſſary Profeſſions? Who would take Care of cultivating the Fields, and carrying-on the Manufactories? Whence would they have Garments and Food to ſupport Life? Can it be imagined, that a Doctrine, whoſe Practice, if it were univerſal, would overturn the Empire, ſhould be the true Doctrine? Beſides, it is incredible how much Money is ſquandered in building and repairing their Temples, gilding and adorning the Images, celebrating Feſtivals, and making Proceſſions to their Honour: All theſe Inventions ſerve for nothing elſe but to ſwallow-up the Riches of numerous Families. I have but lightly touched theſe Articles, ſays *Chin*; for there would be no End of relating all the Diſorders theſe Sectaries have cauſed in the Empire.

THOSE who are fond of popular Notions, continues he, paſs their Lives in a Kind of Drunkenneſs, and finiſh them in a Dream. They are ſwallowed-up in a Heap of raſcally Fables, from which it is not poſſible for them to get looſe; and the Hope of obtaining a happy Life, through the Protection of Spirits, increaſes their Infatuation. This Inclination of the greater Part of Mankind, joined to their Credulity, was what put it into the Heads of *Lau* and *Fo* to eſtabliſh a Place of Rewards, a Hell, a Palace for the Rulers of the Waters, and the reſt of the Deities, without mentioning Spirits of an inferior Order, and extraordinary Men, become immortal. They have, above all, diſplayed the Advantages which their Gods beſtow; and have placed in Heaven a *Yo-whang*, Chief of all the pretended immortal Beings, who delegates to theſe Spirits their Employs, ſuch as to preſide over Rain, to diſtribute Rewards and Puniſhments, *&c.*

IN the Book *Yo-whang* [a], we find theſe Words: *In the Weſt there was a Prince of the Kingdom of* Pure Virtue. *This King being forty Years old without having a Son, he and the Queen* Pau-ywê *obtained one, through the fervent Prayers they addreſſed to* Lau-kyun; *and this Son is the* Yo-whang *of whom we ſpeak.* Another Text of the Book *Hven-û* affirms, *That in the Weſtern Parts there is a Place called* The Kingdom of pure Joy: *That the King thereof being without Children, obtained one of* Lau-kyun; *and it is he who is honoured under the Name of* Hven-û Tſû-tſe. Let us add what is related in the Hiſtory of *Fo*, wherein it is aſſerted, *That in the Weſt there is a Kingdom of* Pure Innocence; *and the Prince, who is Heir to the Crown, is* Fo *himſelf. The Woman whom he eſpouſed was called* Na-to, *and had a Son whoſe Name was* Mo-hew-lo. *Soon after, the Father ſpent twelve Years in Solitude, and, during his Contemplations, was transformed into* Fo. *Sect of* Fo.

WHAT Fictions are here! Can it be imagined, that the Thing, whereof no Footſteps are now to be found, was formerly the Wonder of the World? Run over the Countries, Weſt of *China*, and you will meet with nothing but *Barbarians*: Where then ſhall we find the Kingdom of pure Virtue, *&c.* which theſe Books mention; or a Race of Men with three Heads, ſix Shoulders, and eight Hands [b]; or People who live two or three hundred Years, and yet experience none of the Inconveniencies of old Age? How then can you fancy ſuch Places to be the Abode of immortal Beings? In ſhort, the Fables they relate, concerning the King of Heaven, and Generaliſſimo of the Spirits, are invented only to abuſe the Credulity of the Vulgar [c]. *And other Fictions.*

THE Sectaries of *Fo* believe, that there is a ſubterraneous Hell, conſiſting of nothing but a Heap of Earth, Water, and Stones: That it is governed by a God called *Yen-vang*; that there are alſo *Lo-han*, which is to ſay, Spirits who rule the Deſtiny of Mankind [d]: Theſe convey the Soul into the Body at the Moment of Birth; and drag it away, at the Time of Death, to the Place of Puniſhment, where it is cruelly tormented by other Spirits [e]. They are taught likewiſe, that if a Man in this Life has practiſed Virtue, he ſhall be born again to a State of Wealth and Splendor: That if even Beaſts have lived well, according to their Condition, they ſhall find themſelves transformed into Men: That, on the contrary, a Perſon who gives himſelf up to ſhameful Vices, and follows his irregular Appetites, ſhall, in his Turn, become a Beaſt: That if Animals are more cruel than is ſuitable to their Nature, they paſs not into a new Life after Death, but have their Souls entirely annihilated: That the God *Yen-vang*, and the other Judges, his Miniſters [f], fix the Moment of the Birth of all Mankind; alſo if they ſhall marry, and to whom; if they ſhall *Notion of Hell.*

[a] The Prieſts of *Fo* have their Scriptures, Liturgy, Legends, Lives of Saints, and Books of Devotion in great Numbers, for the Uſe of their Followers. [b] The Images of *Fo*, and ſome of their Heros, are repreſented in ſuch Form. [c] *Du Halde*'s *China*, p. 672, *& ſeqq.* [d] There is one over him, and the greateſt of all, called *He-kang-ſang*, who is one of the thirty-ſix *Kang* of the *Tau-kya*. [e] In caſe the Soul ſhould go to Hell, ſays *Navarette*, p. 73, the *Bonzas* have contrived Ways and Means to fetch it out. They have alſo invented Bulls of plenary Indulgence, and Bulls for the Dead; ſome of which coſt fifty Ducats. But why not, as well as the Prieſts of his own Church? [f] That is, we preſume, the *Lo-han*.

Religions. have Children, and what their Diſpoſition will be; and whether rich or poor; in ſhort, that whatever is to happen to them, is written in the Book of *Yen-vang*; that hence their Fate is inevitable, and no Alteration can be expected.

Whimſical Fable. To confute this Doctrine, the Philoſopher produces a Paſſage from the *Hven-û-chwen*, one of their own Books, which is pleaſant enough: A Perſon, called *Pung*, lived to the Age of eight hundred Years, and married ſeventy-two Wives, one after another. The laſt, dying in her Turn, aſked the Anceſtors of *Pung* in the other World, what might be the Reaſon that her Huſband lived ſo many Ages? Is it, becauſe his Name, added ſhe, was not recorded in the Regiſter of *Yen-vang*? Yet, we are told, none can eſcape him. I will teach you the Myſtery, replied the Grandfather of *Pung*: The Name and Surname of my Grandſon, your Huſband, are certainly in the Book, but in the following Manner; when it was neceſſary to bind up the Leaves, the Officer, employed to do it, took, by Miſtake, the Leaf on which the Deſtiny of *Pung* was written, twiſted it like a Lace, and with it ſewed the reſt together [a]. As the Woman could not keep the Secret, *Yen-vang* ſoon heard of the Story; ſo that taking the Book and examining the Lace, he blotted-out the Name of *Pung*, who died that very Inſtant. This Story, continued the Philoſopher, proves the direct contrary of their Doctrine; for here is an Inſtance of one who eſcaped the Penetration of *Yen-vang*: Nor could they be certain, that others had not eſcaped by a like Trick.

Origin of Guardian-Spirits. WITH reſpect to Guardian-Spirits, the Philoſopher obſerves, that the Doctrine was not known before the Dynaſties of the *Hya* and *Shang*, when Dwellings were firſt encompaſſed with Walls and Ditches, in order to defend them from Thieves and Rebels: At length, they erected a *Ching-whang* [b], and built Places deſigned for its Honour; they alſo built others in Honour of the *Tû-ti* [c]. When they took it in their Heads to give their Spirits the pompous Name of *Ti-ti*, becauſe they were looked-on as the nurſing Fathers of the People, they divided them into different Claſſes; giving the Title of *She-ſhin* [d] to thoſe to whom they attribute the Care of the Fields and cultivated Lands; that of *Tû-ti* to thoſe whoſe Office was to preſide over Villages, to look after the Health of the Inhabitants, and maintain Peace among them. The Spirits appointed to guard the Inſide of Houſes, and Places of public Aſſemblies, were reverenced under the Name of *Chun-lyew* [e]. They conſigned to others the deſart and mountainous Countries, in Hopes that they would facilitate the Tranſportation of Proviſions and Merchandizes, honouring them under the Title of Spirits of the high Mountains: In ſhort, thoſe who were placed in the Cities, encompaſſed with Walls and Ditches, were worſhipped by the Name of *Ching-whang*, as Spirits who preſerved ſuch Cities from public Calamities. Theſe Spirits, the Sectaries of *Fo* believe, often wrought Prodigies, and appeared in the Shape of Men [f].

3. *Some farther* Particulars *taken from the* Miſſioners.

Abſurd Idolaters. An Image proſecuted for Breach of Promiſe: Is convicted and caſt. Horrid Piece of Roguery detected. The Prieſts puniſhed. The Lama-Bonzas. *Conformity with Popery: How accounted for. Remarkable Image.*

THE *Bonzas* teach, that there are Rewards hereafter for the Good, and Puniſhments for the Bad; and that this has occaſioned different Places to be ſet apart for the Souls of Men, according to every one's Merit: Likewiſe, that the God *Fo* was the Saviour of the World; that he was born to teach the Way of Salvation, and to make Expiation for all our Sins. Although his Followers are ſo much devoted to the Worſhip of Saints and Images, yet they ſometimes treat them with very little Reſpect: For if the People, after long praying to them, do not obtain what they deſire, as it often happens, they turn them off as impotent Gods: Others uſe them in a moſt reproachful Manner; loading them with hard Names, and ſometimes with Blows [g]. *How now, Dog of a Spirit*, ſay they to them, *we give you a Lodging in a magnificent Temple, we gild you handſomely, feed you well, and offer Incenſe to you; yet, after all this Care, you are ſo ungrateful as to refuſe us what we aſk of you.* Hereupon they tie this Image with Cords, pluck him down, and drag him along the Streets, through all the Mud and Dunghills; to puniſh him for the Expence of Perfume which they have thrown away upon him [h]. If in the mean Time it happens, that they obtain their Requeſt, then, with a great deal of Ceremony, they waſh him clean, carry him back, and place him in his Nich again; where they fall down to him, and

[a] The *Chineſe* Books are often bound in this Manner. [b] *Ching* ſignifies a *Wall*, and *Whang* a *Ditch*.
[c] *Tu* Earth, and *Ti* a Place. [d] *She* ſignifies a *Place without the City*. [e] Name of the Place where their Tablets are. [f] *Du Halde*'s *China*, p. 675, *& ſeq.* [g] Do not the *Portugueze* treat their *Saints* in much the ſame Manner? [h] Did not the *Portugueze* do the very ſame at *Liſbon* to their *Saint Antonio*, after the Loſs of the Battle of *Almanza* in *Spain*?

make

make Excuſes for what they have done. *In Truth*, ſay they, *we were a little too haſty, as well as you were ſomewhat too long in your Grant. Why ſhould you bring this Beating on yourſelf? But what is done, cannot be now undone; let us not therefore think of it any more: If you will forget what is paſt, we will gild you over again.*

A FEW Years ago, there happened an odd Affair at *Nan-king*: A Man, whoſe only Daughter was very ill, having tried all the Phyſicians, as well as Prayers, Offerings, Alms, Sacrifices, to no Purpoſe, the *Bonzas*, for Sake of a Fee, promiſed, that an Idol [a], whoſe Power they mightily boaſted, ſhould grant her Recovery. For all this, the Woman dying, the Father, out of Meaſure grieved, reſolved to revenge himſelf: Accordingly he put-in his Complaint to the Judge of the Place; in which he urged, that this Idol deſerved an exemplary Puniſhment for having broken his Word. *If this Spirit*, ſaid he, *could cure my Daughter, it is palpable Cheating to take my Money, and yet let her die: If he could not do it, what does he ſignify? And how came he by his Quality of Godſhip? Do you worſhip him, and the whole Province offer him Sacrifice, for nothing at all?* So that, as he concluded, the Non-performance was owing either to the Malice or Weakneſs of the Idol [b]: He judged, that he ought to be puniſhed corporally, his Temple pulled down, and his Prieſts ſhamefully diſmiſſed.

THE Buſineſs ſeeming of Conſequence to the Judge, it was tranſmitted to the Governor; and from him to the Vice-Roy. This latter, after he had heard the *Bonzas*, who were extremely concerned at it, took their Part, and adviſed the Proſecutor not to perſiſt in the Cauſe any longer; telling him, that he was not wiſe to concern himſelf with this Sort of Spirits, who were naturally ill-tempered, and might play him ſome ſcurvy Trick. The *Mandarin* added, that the *Bonzas* had engaged, the Idol ſhould do what was reaſonable on his Part, provided he did not carry Things too high.

BUT the Man, who was almoſt mad for the Death of his Daughter, proteſted, that he would ſooner periſh than relinquiſh his Pretenſions againſt the Idol; who fancied, continued the Proſecutor, that he might commit any Sort of Injuſtice without Puniſhment, becauſe, he thought, no-body would be bold enough to take him to Taſk. The Vice-Roy was fain therefore to grant a Trial: He ſent the Caſe to the foreign Council at *Pe-king*; who remitting it back again, he ſubpœnaed the Parties. The Devil, who has but too many Friends among all Sorts of Men, ſays our facetious Author, had alſo his Share among the Lawyers and Proctors [c]: Yet he was overpowered by his ſubtil Adverſary; who had gained the Judges by a large Bribe. In ſhort, after a great many Hearings, the Man carried his Point. The Idol was condemned to a perpetual Baniſhment, as uſeleſs to the Kingdom; his Temple was to be plucked-down; and the *Bonzas*, who repreſented him, were ſeverely chaſtized. Can any one, ſays *Le Comte*, who has not loſt his Senſes, adore Gods of this Character, weak, fearful, and whom one may affront ſafely [d]? Yet, inſtead of coming hereby to a Knowledge of the Weakneſs of their Gods, the People grow more and more [e] blind every Day [f].

Sect of Fo.

And caſt.

ALTHOUGH the Generality of the People are prejudiced in Favour of the Prieſts, yet the wiſer Sort are always upon their Guard, and the Magiſtrates always take great Notice of what they do in their reſpective Diſtricts. A few Years ago, a Governor of a Town happening to ſee a great Number of People gathered in the Highway, had the Curioſity to ſend to know what was the Occaſion of their meeting there. The *Bonzas* were ſolemnizing an extraordinary Feſtival: They had ſet a Machine upon a Stage, with a little Rail round the Top, over which a young Man put-out his Head; one could ſee nothing at Liberty but his Eyes, which he rolled-about as if diſtracted. Below this Machine an old *Bonza* appeared upon the Stage, who told the People, that the young Man, whom they ſaw, was going to ſacrifice himſelf, according to Cuſtom, by throwing himſelf headlong into a deep River, that ran by the Road-Side. *He cannot die*, added the Prieſt, *if he would, becauſe at the Bottom of the River he ſhall be received by charitable Spirits, who will give him as good a Welcome as he can deſire; and indeed it is the greateſt Happineſs that can poſſibly befal him: An hundred Perſons have deſired to ſacrifice themſelves inſtead of him, but him we chuſe before the reſt, becauſe of his Zeal, and other Virtues.*

Horrid Piece of Roguery detected.

WHEN the *Mandarin* had heard this Speech, he ſaid, *That the young Man, indeed, had a great deal of Courage; but he wondered much, that he did not himſelf acquaint the People with this his Reſolution: Let him come down a little*, continued he, *that we may talk with him.* The *Bonza*,

[a] It ought to be Spirit, Saint, or Image. [b] Might not the ſame Accuſation lie againſt the *Romiſh* Idols, when no Cure is performed on thoſe who invoke them? [c] The Lawyers muſt not take this ill, ſince he does not except the Clergy themſelves. [d] Behold an Argument againſt the Worſhip of Saints, Images, or even the Hoſt, who all have been, and daily are affronted by Proteſtants and others, with Safety and Impunity. [e] It is the very Caſe of the Popiſh Laity. [f] *Le Comte*'s Memoirs of *China*, p. 328, *& ſeqq.*

Religions. who was confounded at this Order, did all he could to hinder it, proteſting, that the whole Sacrifice would be ineffectual, if he ſpoke a Word, nay, if he did but open his Mouth; and that for his Part, he could not anſwer for the Miſchief ſuch a Thing would bring-upon the Province. *For the Miſchief you talk of*, replied the *Mandarin*, *I will be reſponſible*; and then he commanded the young Man to come down: But he gave no other Anſwer to theſe Commands, than hideous Looks, and Diſtortions of his Eyes, which almoſt ſtarted out of his Head.

The Prieſts puniſhed. *You may from hence*, ſaid the *Bonza*, *judge what Violence you offer him in commanding him down. He is already almoſt diſtracted, and if you continue your Command, you will make him die with Grief.* As this did not make the *Mandarin* change his Reſolution, he ordered ſome of his Retinue to go-up, and bring him down. They found him tied Hand and Limb, with a Gag in his Mouth; from which Fetters being freed, he cried out, as loud as he could bawl, *Ah! my Lord, revenge me againſt theſe Aſſaſſins, who were going to drown me. I am a Bachelor of Arts, and was going to* Pe-king, *to aſſiſt at the Examinations there: Yeſterday a Company of* Bonzas *ſeized-on me by Violence, and this Morning early bound me to this Machine, in the Manner you have ſeen, with an Intent to drown me this Evening, in order to accompliſh their accurſed Ceremonies at the Expence of my Life* [a]. When he began to ſpeak, the *Bonzas* were marching-off; but the Officers of Juſtice, who always attend the Governors, ſtopped ſeveral: The Chief of them, who had pretended juſt before that the young Man could not be drowned, was himſelf immediately thrown into the River, but no charitable Spirits came to his Aſſiſtance. The others were carried to Priſon, and afterwards received the Puniſhment which they deſerved [b].

The Lama Bonzas SINCE the *Tartars* have been Emperors of *China*, the *Lamas*, another Sort of *Bonzas*, have been eſtabliſhed there. Their Habit is different from thoſe of *China*, both in Shape and Colour; but their Religion is the ſame, differing only in a few ſuperſtitious Practices [c]. Theſe *Lamas* are Chaplains to the *Tartar* Nobility, who live at *Pe-king*; but in *Tartary* they themſelves are the Gods [d] which the People worſhip [e].

Conformity with Popery. FROM the above Accounts of the Religion of *Fo*, however imperfect, or diſguiſed, the Reader may perceive a moſt ſurprizing Conformity between it, and that of *Rome*: We ſhall not ſay that of Chriſtians in general, although it is circumſtanced with an incarnate God, a Saviour, a Holy Spirit, and a Ternary, which ſome of the Miſſioners conſider as an Emblem of the Trinity, and others a Trinity in Effect. However that be, we find, in this Religion, every individual Article, great and ſmall, of which the *Romiſh* Syſtem is compoſed: Such as the Worſhip of Images, praying to Saints, and for the Dead; Purgatory, Pardons, Indulgences, Confeſſion, Abſolution, Penance; Exorciſm, the Treaſure of the Church, Merits and Works of Supererogation; the Pretence to work Miracles; a Hierarchy, or different Orders of Prieſts, with a Pope at their Head; Monks and begging Friars, Nuns; in ſhort, every Thing in Speculation and Practice down to Holy-Water and the Beads. They have not, indeed, a Wafer-God, which they firſt adore, and then devour; but they have a living Divinity in human Form, tranſubſtantiated, or transformed, as they believe, from Time to Time; who dwells among them perſonally, and is therefore, we think, a much more rational Object of Worſhip.

THE Miſſioners, confounded at this exact Conformity of the *Romiſh* Faith, with a Religion which is confeſſedly idolatrous, and one continued Scene of Prieſtcraft, uſe ſeveral Arts to conceal the Reſemblance; ſome mentioning one Part of its Doctrines, others different Parts, none the Whole; and thoſe who are moſt copious on the Occaſion, recite them in a looſe, ſcattered Way, without any Method, or Order. After all theſe Diſguiſements, the Reſemblance appears ſo glaring, that many, to account-for it, have made a hardy Step, and pretend, that it is a Corruption of Chriſtianity, meaning the *Romiſh* Religion. Some affirm, that the *Neſtarians* converted the People of *Tibet* and *Tartary* about the ſeventh and eighth Centuries: Others will have it, that the Faith was preached there in the Time of the Apoſtles [f]. We call this a hardy Step, becauſe they know, that according to the *Chineſe* Hiſtory, *Fo*'s Religion ſprung-up above a thouſand Years before Chriſt: *Cauplet*, and others, have related this Circumſtance from thence.

IT is true, *Du Halde*, in his Account of the Birth of *Fo*, omits the Time (very likely by Deſign) which we have in a Note ſupplied from *Le Comte* [g]: But he has mentioned it on ſeveral

[a] Was this a greater Piece of Villany than what the Monks of *Baſil* acted on *Jetzer*, cauſing him to be marked with the five Wounds by a pretended Viſion of the Virgin *Mary*? Ought they not to forbear cenſuring the *Bonzas*, when they are at leaſt as bad themſelves? [b] Juſt like the Monks of *Baſil*, who had tormented *Jetzer*. [c] He ſays, *p.* 63, that they are the moſt ſuperſtitious of all the *Bonzas*. [d] What a monſtrous Falſehood is this? Sure *Le Comte* could not ſay this out of Ignorance? [e] *Le Comte*'s Memoirs of *China*, *p.* 337, *& ſeqq.* [f] See *Du Halde*'s *China*, vol. 2. p. 387. [g] See before, *p.* 207. Note [b].

Occaſion

Occaſions elſewhere; and in a Note [a] upon a Paſſage of *Chin*'s Dialogue acknowledges, that *Fo* lived five hundred Years before *Pythagoras*; which comes to the ſame Thing: He adds, that *Pythagoras* took his Doctrine of the Metempſychoſis, or Tranſmigration of Souls, from the Diſciples of *Fo*. This being the Caſe, is it not more likely, that the *Romiſh*, or *Greek* Miſſioners, brought the Syſtem of *Fo* out of the Eaſt, than that the *Lamas*, or *Bonzas*, copied after theirs? We ſhall conclude this Article with a Paſſage to the Purpoſe from *Navarette*. The famous Idol, called *San-pau*, ſays this Author, which has been repreſented as an Image of the Trinity, is exactly the ſame with that which is on the high Altar of the Monaſtery of the *Trinitarians* at *Madrid*. If any *Chineſe* whoſoever was to ſee it, he would preſently ſay, the *San-pau* of his Country was worſhipped in theſe Parts [b].

SECT. IV.

1. *The Sect of certain* Modern Literati, *called* Ju-kyau.

Decay of Learning. Ancient Books corrupted, by modern Interpreters. Broach new Doctrines: That of the Tay-ki: *Their Explanation of it: An inanimate Principle, yet intelligent and perfect. Doctrine of the* Li: *Fall into Contradictions. Miſtake of the Miſſioners rectified by the Emperor. The Grandees and* Literati. *Inſincerity of the Miſſioners. Another new Sect. Folly and Superſtition. Ridiculous Notion. Fortune-telling. Drawing of Lots. The* Fong-ſhwi. *A* Mandarin *Fool. Stupid Superſtition. Changes in Religion, how accounted for.*

THE Troubles which the different Sects, and the Wars cauſed in the Empire, entirely baniſhed the Love of the Sciences, introducing, in their Stead, Ignorance and Corruption of Manners, which prevailed there for many Ages. But the Taſte which the Imperial Family of the *Song* had for the ancient Books, and their Eſteem for Men of Letters reviving, by little and little, an Emulation for Literature, there aroſe among the principal *Mandarins*, Perſons of Genius and Merit, who undertook to explain not only the ancient canonical Books, but the Interpretations made thereon by *Confuſius*, his Diſciple *Mencius*, and other celebrated Writers.

THESE Interpreters, who gained a great Reputation, appeared about the Year of Chriſt 1070. The moſt famous were *Chu-tſe* and *Ching-tſe*, who publiſhed their Works under the Reign of the ſixth Prince of the *Song*: *Chu-tſe* [c] diſtinguiſhed himſelf ſo greatly by his Capacity, that they honoured him with the Name of *Prince of the Literati*. In a Word, about the Year 1400, *Yong-lo*, third Emperor of the *Tay-ming* Family, made Choice of forty-two of the moſt able Doctors, whom he commanded to reduce the Doctrine, fit for the Learned to follow, into one Body; and to adhere chiefly to the Commentaries of *Chu-tſe* and *Ching-tſe*. *Sect of modern Literati.*

THESE *Mandarins* applied themſelves to this Work; and beſides interpreting the canonical Books with thoſe of *Confuſius* and *Mencius*, they compoſed another, containing twenty Volumes, and gave it the Title of *Sing-li-ta-tſwen*, that is, *of Nature, or Natural Philoſophy*. They followed, according to Orders, the Doctrines of the two Writers above-mentioned; and that they might not ſeem to deviate from the Senſe of the ancient Books, which are ſo much eſteemed in the Empire, endeavoured by falſe Interpretations, and wreſting the Meaning, to make them ſpeak their own Sentiments. The Authority of the Emperor, the Reputation of thoſe *Mandarins*, their ingenious and polite Stile, the new Method of handling the Subject, with their Vaunts of underſtanding the ancient Books, gave a great Reputation to their Works, and many of the *Literati* were deluded thereby. *By modern Interpreters.*

THESE new Doctors pretended, that what they taught was founded on the *I-king*, the moſt ancient of the *Chineſe* Books: But their Explanations were very obſcure, and full of equivocal Expreſſions, as well as Contradictions. They made uſe of certain Terms, aiming to have it thought they ſtill retained the old Doctrines, and yet in Reality advanced a new one. They ſeem to ſpeak like the Ancients, with Relation to the Object of Worſhip; and at the ſame Time give to thoſe Words ſuch an impious Senſe, as deſtroys all Sort of Worſhip. The following is a Sketch of their Syſtem, which it is hard to make Senſe of, and perhaps the Inventors did not well underſtand it themſelves. *Broach new Doctrines.*

THEY gave the firſt Principle of all Things the Name of *Tay-ki*; for which, they ſay, they are beholden to the two Expoſitors. *Chu-tſe* himſelf confeſſes, it was known neither to *Fo-hi*, Author of the *I-king*, nor to his Interpreter *Ven-vang* [d]. In Effect *Couplet*, who was well-verſed in the *Chineſe* Authors, affirms, that it occurs no-where through all the canonical Books, except in a ſhort Appendix at the End of *Confuſius*'s Expoſition of the *I-king*, where he ſays, that *the Tranſmutation contains the* Tay-ki; *and that the latter produces two Qualities, the Perfect* *That of the* Tay ki.

[a] Vol. 2. p. 670. [b] *Chur.* Coll. vol. 1. p. 241. [c] In the Original *Chu hi*, which ſeems to be a Miſtake. [d] See before, *p.* 185,

and

Religions. *and the Imperfect: That these two Qualities produce four Images; and that these four Images produce eight Figures.* According to the most skilful Expositors, *Confusius*, by the *Tay-ki*, meant nothing else than the first Matter.

Their Explanation of it.

ALTHOUGH they say, this *Tay-ki* is something not to be expressed, that it is impossible to explain it, that it is separated from Imperfections and Matter, and that one cannot find a Name suitable to it; yet they endeavour to give such an Idea of it, as may authorize their Opinion. And as these two Words *Tay-ki*, signify *great Pole*, or *the Ridge of a House*, they say, it is with respect to other Beings, what the Ridge is with respect to an Edifice; that it serves to unite together, and preserve all the Parts of the Universe, just as the Ridge unites and supports all the Parts which compose the Roof of a House. They compare it also to the Root of a Tree, and Axel-tree of a Waggon: They call it the Pivot, on which the Whole turns; the Basis, the Pillar, and the Foundation of all Things. "It is not, say they, a chimerical Being like the "Vacuum of the *Bonzas*; but it is a real Being, "which had Existence before all Things, and "yet is not distinguishable from them: For it is "the same Thing with the Perfect, and the Imperfect, the Heaven, and the Earth, and the "five Elements; insomuch that every Thing "may, in some Sense, be called *Tay-ki*."

An inanimate Principle

THEY say likewise, that it ought to be considered as a Thing immoveable, and at Rest: When it moves, it produces *Yang*, which is a perfect subtile, active Matter, and in continual Motion: When at Rest, it produces *In*, a gross imperfect Matter, and without Motion. This is not unlike a Man who keeps himself at Rest while he profoundly meditates upon a Subject, and proceeds from Rest to Motion, when he has investigated what he meditated upon. From the Mixture of these two Sorts of Matter, arise the five Elements, which by their Union and Temperament form the Universe, and the Difference that is found amongst Bodies. Hence arise the continual Vicissitudes of the several Parts of the Universe, the Motion of the Stars, and the Immobility of the Earth, with the Fruitfulness or Sterility of the Plains. They add, that this Matter, or rather this Virtue diffused through Matter, produces, disposes in proper Order, and preserves all Parts of the Universe: That it is the Cause of all the Changes, and yet is ignorant of its own regular Operations.

Yet intelligent and perfect.

HOWEVER, nothing is more surprizing than to read of the Perfections that these Commentators attribute to their *Tay-ki*: They give it infinite Extension and Immensity: It is, say they, a most pure and perfect Principle, without either Beginning, or End: It is the Idea, the Model, and the Source of all Things, and the Essence of all other Beings: In short, in other Places, they consider it as an animated Being, and give it the Name of Soul and Spirit. They even speak as if they looked upon it as the Supream Understanding, which produced all Things, did they not disagree with themselves [a], and in endeavouring to reconcile their System with the ancient Books, fall into the most manifest Contradictions. Some Passages also of their Books have induced the *Chinese* to raise Temples to *Tay-ki*. To this same Being, they likewise give the Name of *Li*: It is this, say they farther, which joined to Matter is the Composition of all natural Bodies, which constitutes each particular Being, and which distinguishes it from all others. Their Method of Reasoning is as follows: You make out of a Piece of Wood, a Stool, or a Table: But the *Li* gives the Wood the Form of the Table, or Stool; and when they are broken, the *Li* of neither subsists any longer.

THEY reason the same Way with respect to Morality: They call *Li*, that which establishes the reciprocal Duty between the Prince and Subject, Father and Son, Husband and Wife: They give likewise the Name of *Li* to the Soul, because it informs the Body; and when it ceases to inform it, the *Li* is said to be destroyed: In the same Manner, say they, as frozen Water, dissolved by Heat, loses the *Li*, whereby it became Ice, and reassumes its Fluidity and natural Being. In short, when they have disputed in this perplexed and scarce intelligible Manner, concerning the Nature of the *Tay-ki* and *Li*, they necessarily fall into Atheism; inasmuch as they exclude every efficient supernatural Cause, and admit no other Principle, than an inanimate Virtue united to Matter [b], to which they give the Name of *Li*, or *Tay-ki*.

BUT they find themselves most embarrassed when they attempt to elude the numerous Passages in the ancient Books, which speak distinctly of Spirits, of Justice, of the Providence of a Supream Being, and the Knowledge which he has of the Secrets of Mens Hearts, *&c.* Likewise when they endeavour to reconcile them to their own gross Conceptions, they inevitably fall into fresh Contradictions, destroying in one Place what they establish in another: Of which we shall pro-

[a] It is rather to be feared, that the Missioners mistake the Meaning of the *Chinese* Authors for Want of understanding the Language, as the Emperor *Kang-hi* alledged against them. See vol. 3. p. 596.

[b] This seems to be contradicted by the Author saying below, that they admit an intelligent governing Being; consequently these inanimate Principles must be no other than an Instrument in the Hand of the former.

duce a few Inſtances. They teach diſtinctly, a that the Soul, by the Empire which it has over its Motions and Affections, may come to the Knowledge of the ſupream Soul, that Underſtanding which governs all Things: That likewiſe the bare Conſideration of that wonderful Manner by which the ſeveral Beings propagate themſelves, each Species producing its Likeneſs, proves evidently, that there is one great intelligent Being, which preſerves, governs, and conducts all Things to their proper Ends in the moſt convenient Manner: They go ſo far as to deny this Being to be either inanimate, or material: They even affirm, that it is a Spirit, that it contains the Excellence of all other Beings, and gives Being to every Thing which ſubſiſts.

THE truly Learned retain the ancient Principles. Nevertheleſs, as there are *Literati*, who, by following the modern Commentators, and explaining every Thing by natural Cauſes, acknowledge no other Principle than a blind and material celeſtial Virtue; the Miſſionaries, newly come to *China*, were induced to believe it was the common Opinion of the Learned. They agreed, however, to change their Sentiments, provided the Emperor ſhould explain the true Signification of the Words *Tyen* and *Shang-ti*, by declaring, that he underſtood by thoſe Words, *the Lord of Heaven*, and not *the material Heaven*. *Maigrot*, the apoſtolic Vicar in *Fo-kyen*, inſiſted, that the Emperor ſhould explain it: They therefore, in 1700, conſulted that Prince in ſuch a Manner, that he could not perceive their Driſt in applying to him.

HEREUPON his Majeſty declared, by an Edict which was preſerved in the Archives, inſerted in the public Gazettes, and ſpread all over the Empire; *That it was not to the viſible and material Heaven that Sacrifices were offered, but only to the Lord and Maſter of Heaven, the Earth, and all Things; and that for the ſame Reaſon, the Tablet, before which thoſe Sacrifices were offered, bear this Inſcription, To* Shang-ti, *that is to ſay,* To the ſupreme Lord: *That it is through Reſpect that none dare call him by his proper Name; and that they uſe to invoke him by the Name of the* Supreme Heaven, Bountiful Heaven, and Univerſal Heaven, *in the ſame Manner as when they ſpeak with Reverence of the Emperor, they call him not by his own Name, but ſay,* The Steps of his Throne, the ſupreme Court of his Palace: *That theſe Names, though different as to the Terms, are yet the ſame, if Regard be had to the Signification.* On another Occaſion, ſpeaking in public, he affirmed, *The learned* Chineſe *ſay, like him, that the Principle of all Things is called* Tyen, Heaven, *in a noble and figurative Stile; juſt as the Emperor is called* Chau ting *from the Name of his Palace, which is the Place wherein the imperial Majeſty ſhines with greateſt Splendor.* *Sect of modern Literati.*

THEY conſulted likewiſe the Princes, the Grandees of the Empire, the chief *Mandarins*, and principal *Literati*, and, among others, the firſt Preſident of the imperial Academy, compoſed of the moſt eminent Doctors, who are properly the Emperor's *Literati*: All appeared ſurprized to find there ſhould be learned Men in *Europe* who believed that the *Literati* of *China* honoured a lifeleſs inanimate Being, ſuch as the viſible and material Heaven; and unanimouſly declared, that in invoking *Tyen* or *Shang-ti*, they invoked the ſupreme Lord of Heaven, the Author and Principle of all Things, the Diſtributer of all Good, who ſees every Thing, who knows every Thing, and whoſe Wiſdom and Providence governs this Univerſe. What! cried ſome of them, do we think that every Family ought to have a Head, every City a Governor, every Province a Vice-Roy, and the whole Empire an independent abſolute Maſter? And can we doubt there is a firſt Intelligence, a ſupreme Being, a ſovereign Lord of the Univerſe, who governs with Wiſdom and Juſtice? Do not our ancient Books teach us this? And have we not learned it from our primitive Sages[a]? *The Grandees, and* Literati.

THE Author enlarges much on his Proofs from the Emperor's Edicts and Diſcourſes on various Occaſions: But, as more than enough has been already ſaid to clear-up the Point in Diſpute, in Favour of the Jeſuits againſt their Adverſaries, we ſhall detain our Readers no longer on this Subject. We ſhall only obſerve, farther, that we are ſo far from thinking any among the *Literati* guilty of Atheiſm, that, we are of Opinion, the Jeſuits have wronged what they call the modern Sect, in making them Atheiſts, as much as the *Dominicans*, and others, have injured thoſe of the eſtabliſhed Religion, in imputing the ſame impious Principle to them. *Inſincerity of the Miſſionaries.*

THERE is a particular Sort of *Literati* very numerous in *China*, who have compoſed a Syſtem out of all the reſt, and endeavoured to reconcile them together. Some of the Learned, when they become *Mandarins*, either through Prejudice of Education, (as having been the Children of idolatrous Parents) for Sake of ſome private Intereſt, or out of a polite Complaiſance to the People, and to maintain the public Tranquillity, ſeem to embrace the Opinions of the ſeveral different Sects. At the ſame Time, they appear as forward as the other *Literati* in declaiming againſt *I-tû-an*, that is, *falſe Sects*: But Experience ſhews, that they are as much Slaves to *Fo-* *Another new Sect.*

[a] *Du Halde*'s *China*, vol. 1. *p.* 658, *& ſeqq.* *Le Comte*'s Memoirs of *China*, p. 340.

Religions. as the Vulgar themſelves. Their Wives, who are ſtrongly attached to Idolatry, uſually have a Kind of Altar in the moſt honourable Part of their Houſes, whereon they place a Company of Images finely gilt; and here, whether out of Complaiſance, or otherways, theſe pretended Diſciples of *Confuſius* often bow the Knee. Though any of them ſhould have Conſtancy enough to reſiſt the Torrent, at leaſt, he will have much Difficulty to withſtand the imaginary Methods made uſe of for diſcovering what is to come. When any of the Family lies a-dying, he ſeldom fails to ſend for the *Bonzas* to burn gilt Papers, and perform the other Ceremonies: Unleſs he did this, inſtead of paſſing for a Philoſopher, he would be looked upon as a very wicked Man.

Folly and Superſtition.

THE groſs Ignorance of the *Chineſe* Doctors, as well as the Vulgar, in what regards Nature, makes great Numbers attribute its moſt common Effects to ſome evil Genius: But this prevails chiefly among the common People, and eſpecially the Women, who endeavour to appeaſe it by impious and ridiculous Ceremonies. Sometimes, this evil Genius is one of their Idols, or, rather, the Demon who inhabits it[a]; at other Times, ſome high Mountain, a great Tree, or an imaginary Dragon, which they ſuppoſe to be in the Sky, or at the Bottom of the Sea: Or elſe, which is ſtill more extravagant, it ſhall be the Quinteſſence of ſome Animal; for Inſtance, a Fox, an Ape, a Tortoiſe, a Frog, *&c.* This is what they call *Tſing*, or elſe *Yau-quay*, or *Quay-ſing-li*, which ſingnifies *Monſter*, or ſome very ſurprizing Thing.

Ridiculous Notions.

THEY affirm, that theſe Animals, after they have lived a long Time, have the Power of purifying their Eſſence, and of diveſting themſelves of whatever is groſs and earthly; and that this moſt ſubtile Part which remains, delights to diſturb the Imagination of Men and Women. A Fox thus purified, is terribly to be feared. When they are ſick, and the Fever begins to make them rave, it is undoubtedly the Demon that torments them: Preſently they ſend for the *Tau-tſe*; and it is inconceiveable how many juggling Tricks they perform, and what Din they make in the Houſe. It is thus that the People, and even the Smatterers among the Learned, are deluded: But three Things chiefly contribute to keep them in Ignorance.

Fortune-telling.

THE firſt is what they call *Swan-ming*, that is, *telling of Fortunes*. The Country is full of thoſe People who calculate Nativities, who are generally blind, and go from Houſe to Houſe, playing on a Kind of Theorbo, and offering to tell one's Fortune for about an Half-penny. It is ſurprizing to hear the Extravagancies they utter concerning the eight Letters that compoſe the Year, the Day, the Month, and Hour of a Perſon's Birth; which, for that Reaſon, is called *Pa-tſe*. They foretel, in a general Manner, the Misfortunes wherewith you are threatned: They commonly promiſe Riches and Honours, with great Succeſs in Trade or Study: They will acquaint you with the Cauſe of your own Diſtemper, or that of your Children, and the Reaſon of your Father's and Mother's Death, which they always pretend is owing to ſome Spirit that has been offended; adding, that it muſt be appeaſed, and a certain *Bonza* muſt be ſent for, *&c.* If their Predictions prove falſe, the People are ſatisfied with ſaying, *This Man did not underſtand his Buſineſs.*

THE ſecond Thing is drawing the Lots, called *Pa-qua*, or *Ta-qua*, in order to conſult the Spirits often. There are ſeveral Ways of doing this; but the moſt common is to go before an Image, and burn certain Perfumes, knocking the Forehead ſeveral Times againſt the Ground. There is alſo near the Image a Box full of flat Sticks half a Foot long, inſcribed with ænigmatic Characters, which paſs for ſo many Oracles. After making ſeveral Bows, they let-fall one at a Venture; the Senſe of whoſe Characters is explained by the *Bonza*, who preſides often at the Ceremony; or elſe they conſult a large Writing which is ſtuck againſt the Wall, whereby they diſcover all the Conjuration. This is what they practiſe when they are about undertaking any Buſineſs, ſetting-out on a Journey, going to ſell or buy Goods, marrying their Children, and upon an hundred other Occaſions, in order to ſecure a lucky Day, and happy Succeſs.

THE third Contrivance, (which, though the moſt ridiculous of all, is what the *Chineſe* are moſt infatuated with) they call *Fong-ſhwi*, that is, *Wind and Water*; by which they mean, the happy or unhappy Poſition of a Houſe, and eſpecially a Burying-place. If, by Chance, a Perſon builds a Houſe in a Poſition ſo contrary to his Neighbours, that one of the Corners of his is oppoſite to the Side of the other's, it is ſufficient to make the latter believe that all is loſt: It creates an Hatred that cannot be extinguiſhed ſo long as the new Houſe ſtands; and is even Grounds for a Proſecution before the *Mandarins*. But if this has no Effect, the only Remedy he has left, is to ſet-up a Dragon, or ſome other Monſter, made of baked Clay, on the Middle of his Roof: The earthen Dragon muſt give a terrible Look towards the fatal Corner which

[a] The Author makes uſe of the Words *Idol* and *Demon* to delude his Readers, and make them imagine the are different from the Images and Saints of the Church of *Rome*, though they are exactly of the ſame Nature

threaten

threatens him; and opens a dreadful Mouth, as it were, to ſwallow-up the evil *Fong-ſhwi*, that is, *the bad Air* [a]; and then he will remain a little more ſecure.

THIS was the Method taken by the Governor of *Kyen-chang* to defend himſelf againſt the Jeſuits Church, which is built upon an Eminence, and overlooks his Palace, ſtanding at the Foot of it. He had likewiſe the Precaution to turn the Apartments thereof a little Sideways; and raiſed, about two hundred Paces from the Church, a Kind of Building, or Gatehouſe, three Stories high, to ward-off the unlucky Influence. By Misfortune, this ſecond Gate became the ſuppoſed Cauſe of the ſecond Governor's Death: For this *Mandarin* having been troubled with a Defluxion of groſs Humours in his Breaſt, and ſpit very white Phlegm, it was taken for granted, that this Houſe of three Stories, whoſe Walls were very white, was the Occaſion of his Diſorder; whereupon they were immediately daubed-over with Black, in order to produce a contrary Effect: But this Expedient not ſucceeding, they imagined it was applied too late; and accordingly the *Mandarin* died. After which, upon a like Conceit, they were white-waſhed again, as at firſt.

THIS ſuperſtitious Fancy regards not only the Situation of the Houſe, but alſo the Place for the Door, the Day and Manner of building the Stove for dreſſing the Rice, and many other Particulars: But that wherein the *Fong-ſhwi* diſplays itſelf moſt, concerns the Sepulchres of the Dead. There are a Sort of Impoſtors, who make a Trade of finding-out all the Mountains and Hills which have a lucky Aſpect; and when, after performing a great many juggling Tricks, they have fixed on a Place, no Sum of Money is thought too great for the Purchaſe of that happy Piece of Ground.

THE *Chineſe* look-upon the *Fong-ſhwi* as a Thing, in ſome Senſe, more precious than Life itſelf; becauſe, they are perſuaded, that the Happineſs or Unhappineſs of Life depends upon this ridiculous Chimera. In ſhort, if any Perſon has greater Talents and Capacity than others of the ſame Age; if he attains his Doctor's Degree early, or is raiſed to an Employment; if he has ſeveral Children, or lives to a good old Age; all this is owing neither to his Wit, Skill, nor Probity; but it is, becauſe his Houſe is happily ſituated, or, the Sepulchre of his Anceſtors has an admirable *Fong-ſhwi* [b].

WHAT has been related concerning the ſeveral *Chineſe* Sects, may help to account for the Manner in which the Changes of Religion, from good to bad, and from worſe to better, have happened in other Countries. As the Religion of Nature is found to be the firſt which was propagated in *China*, it may be preſumed, that the ſame took Place originally in all other Kingdoms of a very ancient ſtanding. This Religion prevailed till the Ambition and Luxury of the provincial Kings introduced a general Corruption of Manners, attended with Ignorance; which made Way for Superſtition and the pernicious Principles of *Lau-tſe* to enter. But, ſhortly after, *Confuſius*, that great and virtuous Philoſopher, aſſiſted by ſeveral of the Learned, at the utmoſt Hazard of his Eaſe and Safety, attempted to reſtore natural Religion to its ancient Purity, and ſucceeded. This muſt alſo be the Caſe where Men of true Virtue and Reſolution join their Endeavours zealouſly to bring about a Reformation. Jewiſh.

MATTERS continued in this State for above a thouſand Years; when the *Chineſe* having again degenerated in their Morals, the Doctrine of *Fo* found an eaſy Admiſſion, and ſpread, like a rapid Inundation, over the whole Empire, under the Encouragement of a ſuperſtitious Emperor, who brought it in, and two of his Succeſſors. Thus we ſee how eaſily the pureſt Religion may loſe Ground, and the moſt execrable Principles be introduced by the Authority of weak or wicked Princes, when once Corruption has debauched the Morals of a Nation. The ſame will certainly prove to be the Caſe with Liberty, whenever the Majority of a People have loſt their Virtue, and become venal. As ſoon as ever theſe deſtroying Evils appear to get Footing in any Country, thoſe who have the leaſt true Regard for the common Good and Safety, ſhould immediately undertake the glorious Taſk of *Confuſius* and his Aſſociates: Nor need they doubt Succeſs, although they had to do with a much more perverſe, corrupt, and thoughtleſs Race of Men than the *Chineſe*. *How accounted for.*

SECT. V.

The Riſe and Progreſs of the Jewiſh, Mohammedan, *and* Romiſh *Religion in* China.

1. *Of the* Jewiſh *and* Mohammedan.

Jewiſh *Synagogue. Pulpit of* Moſes. *Tabernacles. Incenſe Pans. The great Hall. Their ſacred Books: Number of them: Interſperſed with Fables. Retain old Ceremonies. Worſhip* Confuſius. *Their Origin.* Mohammediſm *increaſes in* China.

[a] By this Word *Fong-ſhwi*, they underſtand not only a corrupt Air, which cauſes Diſeaſes; but alſo a Kind of Curſe, which extends even to Poſterity. [b] *Du Halde's China*, p. 663, *& ſeqq.*

Religion.

THE Miſſioners at *Pe-king* having been long deſirous to be informed concerning the *Jews*, who for many Centuries had been ſettled at *Kay-fong fû*, the Capital of *Ho-nan*, ſent Orders, in 1704, to *J. P. Gozani* [a], who then attended the Church there, to inquire into their Cuſtoms. Purſuant thereto, that Jeſuit viſited them in their *Li-pay-ſu*, or Synagogue, (for they have only one) where they all were aſſembled. He there had a long Conference with them, and ſaw their Inſcriptions; ſome in *Chineſe*, the reſt in *Hebrew*. They ſhewed him their *King*, or religious Books, and permitted him to go into the moſt ſecret Place [b] of their Synagogue, reſerved ſolely for their *Chang-kyau* or Ruler thereof [c]; who never goes into it but with the moſt profound Reverence.

Jewiſh Synagogue.

Pulpit of Moſes.

IN the Middle of their Synagogue is a magnificent Pulpit [d], ſtanding very high, with a noble Cuſhion richly embroidered in it: This is *Moſes*'s Pulpit; on which, every *Saturday*, (their Sabbath) and the moſt ſolemn Days, they lay the Book of the *Pentateuch*, and read it. There alſo is ſeen the *Van-ſwi-pay*, or Tablet, on which the Emperor's Name is written; but there are no Statues or Images. Their Synagogue looks to the Weſt; to which Quarter they turn [e] whenever they pray to God; whom they worſhip under the Names of *Tyen*, *Shang-tyen*, *Shang-ti*, *Tyau-van*, *We-ſhe*, or *Creator of all Things*; and *Van-we-ſhu-kay*, or *Governor of all the Univerſe*, (as appears from their *Pay-tang*, and *Pay-pyen*, or Inſcription): Names (as they told the Author) borrowed from the *Chineſe* Books.

Tabernacles. Incenſe-Pans.

GOZANI ſaw no Altar [f]; there was nothing but *Moſes*'s Pulpit before-mentioned, an Incenſe Pan, a long Table, and ſome large Candleſticks, with Tallow-Candles. On ſome Tables were thirteen Kinds of Tabernacles, in Form of an Ark, with little Curtains before them: Twelve repreſented the Tribes of *Iſrael*, and the thirteenth *Moſes*; whoſe ſacred *King*, (or Pentateuch) was ſhut-up in each of them [g].

GOING-OUT of the Synagogue is a large Saloon [h], where was nothing except a great Numberſe of Incenſe-Pans. They told *Gozani*, that this was the Place where they honoured their *Shing-jins*, or *Great Men of their Law*. The largeſt of theſe Pans, which is for the Patriarch *Abraham*, ſtands in the Middle of the Hall. Next to it, are thoſe of *Iſaac*, *Jacob*, and his twelve Children, called by them *She-ul-kung-pay-tſe* [i], that is, *the twelve Deſcents* or *Tribes of* Iſrael. Then follow thoſe of *Moſes*, *Aaron*, *Joſhua*, *Eſdras*, and ſeveral other illuſtrious Perſons, both Men and Women.

FROM this Apartment he was conducted to *the Hall of Gueſts*, in order to diſcourſe. Here, on comparing his Bible with their *Shing-king*, or Pentateuch [k], he found both the Chronology and Deſcents of the Patriarchs, with their Ages, to be exactly correſpondent.

THEIR Synagogue bears ſome Reſemblance to the Churches in *Europe*. It may be walked round on the Inſide, and is divided into three Naves; the middle one for the Table of Perfumes or Incenſe, *Moſes*'s Pulpit, and the *Van-ſwi-pay* [l], or Emperor's Tablet, with the Tabernacles before-mentioned: This Nave is as the Choir of the Synagogue. The two others are for Prayer and Worſhip.

THEY call their Law *Kû-kyau*, the *ancient Law*; *Tyen-kyau*, the *Law of God*; and in their Inſcriptions *Iſalel-kyau*, the *Law of Iſrael*. *Gozani* prevailed with the Ruler to let the Curtains of one of the Tabernacles be undrawn, and get one of the Books unfolded; being written on long Pieces of Parchment, and rolled round Sticks, in a very clear and diſtinct Character. One of theſe Books eſcaped the great Inundation

[a] This Account of the *Jews* is taken from a Letter of *Gozani*, to be found in the ſeventh Tome of the *Lettres Edifiantes & Curieuſes*, written by the Jeſuit Miſſioners, and publiſhed by *Du Halde*, who, vol. I. p. 678, refers to it. It has been tranſlated by Mr. *Lockman*, and inſerted, with Notes, in his Collection, begun from thoſe Letters, of which two Octavo Volumes were printed in 1743, under the Title of *The Jeſuits Travels*. It is followed by ſome *Remarks* ſent by the ſame Miſſioners for farther Illuſtration. The few Notes with the Word *Remarks* at the End, are taken from them; moſt of the reſt from the Tranſlator's. *Gozani*'s Account being very confuſed, as well as defective, we have reduced it to better Order. [b] Anſwering to the *Hekhal* of the *European Jews*, where the Books of the Law are kept; or rather, to the Holy of Holies of the *Old Teſtament*. [c] The ſame as the High Prieſt anciently. [d] This anſwers pretty nearly to the Theba, or Deſk, in the *European* Synagogues; where the Law is read on the Sabbath, and other ſolemn Days. [e] Becauſe *Jeruſalem* lies that Way in reſpect of *China*. [f] He could expect to ſee none, ſince they are permitted to ſacrifice no-where but in *Jeruſalem*. *Remarks*. [g] Theſe Tabernacles are peculiar to the *Chineſe Jews*. *Remarks*. [h] It appears, according to *Gozani*, that the Synagogue was divided into three Parts: 1. The Holy of Holies. 2. The Part where the Pulpit or Chair ſtood. 3. The Hall. It is much more like the Veſtibulum, or Portico of the ancient Temple, than the Place where the *Jews* now aſſemble in the *European* Synagogues. [i] In the Tranſlation, *Chel-cum-pai-ſe*. [k] Obſerve, the Author gives it three different Names, ſimply *King*, *Fa-king*, and *Shing-king*. [l] In the Tranſlation, and, perhaps, Original, *Van-ſay-pay*: But faultily, we preſume, inſtead of *Van-ſwi-pay*, as above, which ſignifies *the Tablet of ten thouſand Years*, a Name given to the Emperor.

of the *Whang-ho*, (or *Yellow River*) which overflowed the City of *Kay-fong fu* [a], Capital of *Ho-nan*. But as it happened to get Wet, whereby the Characters were half effaced, the *Jews* caused the twelve Copies above-mentioned to be taken of it. In two other Places of this Synagogue they preserved, in old Chests, a great Number of little Books; into which they have divided the Pentateuch, (called by them *Ta-king*) and the other Books of their Law. They use them for Prayer; and shewed *Gozani* several, which, as he imagined, were written in *Hebrew* [b]: Some of them were new; the rest old, and half torn: But all kept with greater Care than if they had been Gold.

THE Names of these five Books, according to the Ruler of the Synagogue, are *Bereshith*, *Veelesemoth*, *Vayicra*, *Vaied-abber*, and *Haddabarim* [c], which, in a Body, they call *Tawra*; and that they divide them into fifty-three Volumes [d], viz. *Genesis* into twelve, *Exodus* into eleven; and the three following Books into ten Volumes each, which they call *Quen*. He said, they had the Titles of some other Books of the *Old Testament*, but wanted several; and that there were some which they were not at all acquainted with. Certain Persons present added, that some Books were lost by the Inundation of the River beforementioned. That they had several Books besides the Pentateuch, appeared from their speaking to him, concerning the Books of *Judges*; of *David*, *Solomon*, and *Ezekiel*, who gave Life to the withered Bones; of *Jonah*, who was three Days in the Whale's Belly, *&c.*

THE Author was surprized to find that their ancient Rabbi's had blended several ridiculous Tales with the Facts related in Scripture, and even interspersed the five Books of *Moses* in this Manner [e]. They told him such extravagant Stories on this Occasion, that he could not forbear laughing; whence he suspected, that these *Jews* were *Talmudists*, who pervert and corrupt the Sense of the Bible. Besides the Bible, they are possessed of other *Hebrew* Books, called *San-tso*. These composed by the ancient Rabbi's, and stuffed with the most extravagant Stories, comprehend their Rituals, and the Ceremonies they now use.

a They seem to entertain very odd Notions concerning Paradise and Hell: Probably, borrowed from the *Talmud*. *Jewish.*

THEY still retain several Ceremonies of the Old Testament, as Circumcision. They observe the Sabbath, and other Feasts of the old Law; particularly that of unleavened Bread. They have also their paschal Lamb, in Remembrance of the *Israelites* coming out of the Land of *Egypt*, and their Passage through the *Red-Sea*. They do not make Fires, or dress Victuals on *Saturdays*; preparing every Thing the Day before. And whenever they read the Bible in their Synagogue, they cover their Face with a transparent Veil, in Memory of *Moses*, who came-down from the Mountain with his Face covered. *Retain old Ceremonies.*

b

THERE being among them some Bachelors and Under-Graduates, on asking whether they worshipped *Confusius*, both they and their Ruler answered, that they honoured him in the same Manner as the *Chinese* Literati: That they joined with them in the Ceremonies performed in the Halls of their great Men; and paid the Honours due to their Ancestors by the Custom of *China*, in the Hall contiguous to their Synagogue: That they offered the Flesh of Animals, except Swine, Sweetmeats, and Incense, in China-Dishes, at the same Time making Prostrations: That they only used Incense-Pans, without either Inscriptions or Images, in their Houses, and the Halls of their Ancestors. When *Gozani* spoke to them about the *Messias* promised in Scripture, and his Actions, they seemed greatly surprized; having never heard of any Jesus excepting the Son of *Sirach*, mentioned in their Bible. After all, the Jesuit says, but without shewing any Reason, that he found them to be People not much to be depended on. *Worship Confusius.*

c

d

THEY told him also, that their Ancestors came from the Kingdom of *Judah*, in the West, which had been conquered by *Joshua*, after his passing-out of *Egypt* through the *Red-Sea*; and that they first appeared in the Empire under the *Han-chau*, or Dynasty [f]. There were many Families of them at first [g]; but their Number being reduced, there are now only seven; who marry among themselves, and never with the *Whey-whey*, or *Their Origin.*

e

[a] This happened in 1642. See before, *p.* 48. [b] The Jesuit must indeed have been utterly unskilled in *Hebrew*, as he owns, if he did not so much as know the Characters. [c] The *European Jews* call them *Bereshith*, *Ue lleshemot*, *Vaykre*, *Valedeber* and *Elle-haddebarim*; and as the Eastern *Jews* call the first *Brasitbra*, it looks suspicious to Mr. *Lockman*, that the *Chinese Jews* should give *Genesis* the Title *Bereshith*, which is used by the *Jews* of *Europe*. [d] Or Sections. The *European Jews* do the same, reading one every *Saturday*, and the Whole in the Year. *Remarks.* [e] This ought to be understood rather of the Gloss, or Comment, than the Text. *Remarks.* [f] The *Han* is the fifth of the twenty-two Dynasties. It began two hundred and six Years before Christ, and ended two hundred and twenty after Christ: So that one cannot, by this Account, tell within four hundred Years when they entered *China*. [g] They must have been pretty numerous in 845, provided an Ordinance made in the fifth Year of the Emperor *Vu-tsong* (which answers to that Year of Christ) relates to them; for the *Bonzas* of *Ta-tsing*, or *Judea*, and *Mu-ha-pa*, in all three thousand, are condemned, as well as the other *Bonzas*, to return to a secular Life. See *Du Halde*'s *China*, vol. 1. p. 518, *& seq.*

Religion. *Mohammedans*; with whom they have nothing in common, either as to Books or religious Ceremonies. They even turn-up their Whiskers in a different Manner.

THEY are called *Tyau-kin-kyau*, signifying, that they abstain from Blood; and that they cut the Sinews and Veins of such Animals as they kill, in order that the Blood may flow-away the easier. The *Chinese* first gave them this Name; which they willingly received, as it distinguished them from the *Mohammedans*, whom they call *Ti-mo-kyau* [a]. They told him, that the Missioners had sent twice to treat with them: *Fi-lo-te*, or *Rodiguez de Figueredo*, under the *Ming* Dynasty; and *Ngen-li-ke*, or *Henriquez*, under the present *Tsing* Family [b].

Mohammedism *increases* As to the *Mohammedans*, they settled above six hundred Years ago in divers Provinces; where they live in Quiet, and are never disturbed, because they never disturb others on the Score of Religion. At first, they increased their Numbers solely by the Alliances and Marriages they contracted; but, for some Years past, they have made a considerable Progress by Help of Money. They every-where buy-up Children; whose Parents, unable to educate, make no Scruple to sell them. During a Famine, which wasted the Province of *Shan-tong*, they purchased above ten thousand. They marry them; and either buy or build a considerable Share of a City, and even whole Country Towns, to settle them in. Hence, by little and little, they are grown to such a Head in many Places, as not to suffer any to live among them who goes not to the Mosk; by which Means they have multiplied exceedingly within these hundred Years [c].

In China. IT appears by this imperfect Account of the Missioners, that the *Mohammedans* must be possessed of considerable Wealth, acquired, doubtless, by Trade, to have been able to propagate themselves by the Means above-mentioned. We are told, that they traded by Sea, from *Siraf* in *Persia* [d], so long ago as the eighth or ninth Century: But they seem to have entered *China* by Land, probably, with the Army of the Western *Tartars*, under *Jenghiz Khân*, or his immediate Successors.

2. *The Rise, Progress, and Extirpation of the* Romish *Religion* in China.

Christianity preached early in China. Romish *Missioners, their first Admission.* Ricci *settles at* Shaw-chew, Nan-chang, *and* Nan-king. *Arrives at* Pe-king. *Persecution raised by a Friar: Another by a* Mandarin. *Emperor converted.* Schaal *promoted. A general Persecution by another* Mandarin. *Missioners condemned. Jesuit Impostures. Persecution in the Provinces. The Mission thrives. The* French *Jesuits received at Court. A new Persecution raised against them. Sentence of the Tribunals reversed. The Mission thriving, is ruined at last by papal Incroachments. Useful Remark.*

THE Missioners would have it believed, that Christianity was preached very early in *China*. In Proof of this, they produce two Monuments: The first is the Breviary of the Church of *Malabar*, where [e] St. *Thomas* is said to have converted the *Chinese*. The second is a Monument, or Marble Table, ten Foot long, and five broad, said to be discovered in 1625, in digging near *Si-ngan fû*, the Capital of *Shen-si*. The Inscription on this Table, after speaking of the Trinity, the Birth and Ascension of Christ, the End of his Coming, and Piety of his Ministers, relates, that one of them, named *O-lopwen*, came from *Judea* to *China* in the Year 636: That *Tay-tsong*, who then reigned, did him great Honour; and, on examining his Doctrine, published an Edict in its Favour. He likewise ordered a Church to be built; to which *Kau*, his Successor, added several more: That some Years after, the *Bonzas*, alarmed at the Progress of the Faith, raised a Persecution against it; which was soon quashed by the Care of *Kau*: That the succeeding Emperors, especially *Sochong*, built Churches, made Offerings at the Altars, every Year for forty Days; served the Priests of four Churches in Person, fed the Poor, cloathed the Naked, healed the Sick, and buried the Dead; and that in Memory hereof, the Monument was erected in 782.

ON one of the Sides, and at the Bottom of the Marble, there is a long Inscription, partly in the Eastern *Syriac* or *Chaldaic*, and partly in the *Chinese* Characters; also the Names, in *Syriac*, of the Missioners, consisting of Bishops, Priests, and Deacons, who came from *Judea* to preach the Gospel in this Empire. Their Entrance, we are told, is confirmed by some *Arabic* and other Oriental Manuscripts, found by *Abbe Renaudot*, and *de Thevenot*, Keepers of the *French* King's Library [f]. The original Copy is preserved in the Library of the Jesuits College at

[a] Before said to be called *Whey-whey*. [b] Jesuits Travels, vol. 2. p. 12, & *seqq*. [c] *Le Comte's* Memoirs of *China*, p. 339. *Du Halde's China*, p. 678. [d] See the Introduction to our first Vol. p. 3. d. [e] In a Lesson of the second Nocturn of the Office of St. *Thomas*. [f] For all this, it has several spurious Marks on it, and is in all Probability a Forgery of the Jesuits, as many Protestant Writers have observed.

Rome;

Rome; and *Kircher* has publiſhed [a] a Tranſcript, with a literal Verſion and Paraphraſe. *Du Halde* dares not venture to affirm, that the Emperors, mentioned in the Inſcription, deſerved the Encomiums beſtowed on them; and acknowledges, that if they favoured the Preachers of the Goſpel, they were no leſs inclined to give Protection to the idolatrous Sects.

THE Jeſuits are at a Loſs to know how long Chriſtianity maintained its Ground in the Empire; confeſſing, that the very Memory of it muſt have been extinct for ſeveral Ages, ſince there was not the leaſt Footſteps of it in the Year 1552; when *Francis Xavier*, their Saint and Apoſtle of the *Indies*, landed on the Iſland *Shang-chwen-ſhan*, or *Sanſian* [b], where he died without having ſet Foot in *China*. For thirty Years after, the Miſſioners at *Ma-kau* endeavoured, to no Purpoſe, to gain Admittance. At length, the *Tſong-tû* of *Quang-tong* having cited the *Portugueze* of that City to appear before him, *Roger*, the Jeſuit, was ſent to *Shau-king fû*; where he was ſo well received by the Vice-Roy, that he petitioned for Leave to reſide in the Province, which was granted: Whereupon he and *Paſia* began a Kind of Settlement; but that *Mandarin* being ſoon after diſgraced, and fearing a Complaint, in caſe any Strangers were found in the Place of his Reſidence, he obliged them to return to *Ma-kau*.

THUS their Hopes of ſettling a Miſſion were daſhed: But when they leaſt expected it, one of the new Vice-Roy's Guards, hearing of the large Reward promiſed to any one who ſhould procure the Re-eſtabliſhment of the Miſſioners, brought-about that Affair with his Maſter, and repaired to *Ma-kau*. Hereupon *Roger* and *Ricci* followed the *Chineſe* to *Shau-king*, where they ſoon had a Patent from the Vice-Roy, permitting them to ſettle where they thought proper. Theſe two Miſſioners became very acceptable to the *Chineſe*, eſpecially *Ricci*, by his Sweetneſs of Temper, and inſinuating Behaviour; but above all, his Skill in Mathematics and the Language did him great Service. They were delighted with a general Map he made, though it repreſented their Country very ſmall to what they imagined it; after which he compoſed a Catechiſm, explaining the Chriſtian Morality, and many Converts were made. In ſhort, he gained ſuch Reputation to the Miſſioners, that every-body of Note in *Shau-king* viſited them; while the meaner Sort raiſed Mobs, and inſulted them at their Houſe.

AT length two Strangers breeding ſome Jealouſies in the Minds of the People, it was thought neceſſary to ſend *Roger* to *Ma-kau*; yet a few Years after, when there was leſs Danger, *Antony Almaida* came to his Aſſiſtance. He had now been ſeven Years in the Miſſion, when a new Vice-Roy, who had a Mind for the Jeſuits Houſe, which he thought fit for a public Structure, ordered *Ricci*, and his Companion, to depart the Empire. Finding Petitions and the Solicitations of the chief Magiſtrates ineffectual, they obeyed; but at *Kanton* received Orders to come-back, and had *Shau-chew* aſſigned them for their Reſidence. Here he changed the Habit of the *Bonzas*, which rendered him contemptible, for that of the *Literati*. This gained him Reſpect, and favoured the Reception of his Doctrine, which began to ſpread in the Province: But to eſtabliſh it there, he ſaw it was neceſſary, that it ſhould be reliſhed in the Capital of the Empire, where he reſolved, if poſſible, to go, in no leſs Hopes, it ſeems, than of converting the Emperor, and his Court [c].

Romiſh.

ABOUT this Time *Tayko-ſama*, King of *Japan*, having raiſed a numerous Army, with which he intended firſt to conquer *Korea*, and then invade *China*, the Emperor ſummoned to his Court all the *Mandarins* who had any Skill in the Affairs of War. *Ricci* obtained from one of them, who was his Friend, the Favour to follow him as far as the Province of *Kyang-ſi*, thinking to prevail on him, by Degrees, to carry him to *Pe-king*: On the Way the Bark was wreck'd, and *Ricci* narrowly eſcaped drowning. The *Mandarin* was ſo affrighted, that he continued his Journey by Land, but would permit *Ricci* to proceed no farther than *Nan-king*; where another *Mandarin*, who had formerly loaded him with Kindneſſes, ordered him forthwith to depart, and puniſhed the Perſon who received him into his Houſe.

At Nan-chang.

RICCI returned to *Nan-chang*, the Capital of *Kyang-ſi*, where he met with a favourable Reception from the *Mandarins*, and even the Vice-Roy. Here *Cataneo*, *Longobardi*, and others, joined him. Some Time after the Governor going to *Pe-king*, *Ricci*, with two other Jeſuits, had Leave to follow him: Yet their Stay there being but ſhort, and the War with *Japan* having increaſed the Diſtruſt of Strangers, little Good was done for that Time: But at the Defeat of the *Japan* Army, and Death *Tayko-ſama* ſoon after, he ſettled at *Nan-king*, without any Difficulty. Here Preſents for the Emperor arriving from *Ma-kau*, he obtained a Paſs from one of the principal Magiſtrates, to carry them to *Pe-king*. He ſet-out, but at *Lin-tſin-chew* refuſing to let an Eunuch, who managed the Cuſ-

And Nan-king.

Religion.

toms, have the Credit of conveying the Curiosities, that Officer impriſoned the Jeſuit, and his Attendants; under Pretence that a Crucifix, which he carried in his Portmanteau, was a Charm to take-away the Emperor's Life. They had all been ſacrificed to his Reſentment, had not the favourable Report, he had before given of the Miſſioner, hindered him from carrying his Accuſation to Court.

Arrives at Pe-king.

AT laſt an Order arrived to ſend-up the Stranger, who, ſoon after he reached *Pe-king*, was brought to the Palace, where he was well-received by the Emperor, and his Preſents accepted; among which was a large Clock, and a repeating Watch. His Majeſty allowed him to chuſe a Houſe in *Pe-king*, for himſelf, and his Companions, aſſigned them a Maintenance, and gave them the Liberty of one of the Courts of his Palace. Being thus, after twenty Years Labour, ſettled in the capital City, they fell vigorouſly to the Work of making Converts. Among the Numbers which embraced their Faith, they tell us of *Li*, a great *Mandarin* at *Pe-king*; a whole Family of Princes of the Blood at *Nan-chang fû*, with *Paul Syu*, a *Ko-lau*, and his Daughter *Candida* at *Nan-king*, beſides many *Literati* and *Mandarins*, at that, and other Places. This Lady, at her own Expence, printed religious Books, and Compoſitions, built Churches in ſeveral Provinces, and bought Houſes for rearing-up Foundlings. In ſhort, the Number of Proſelytes increaſed to ſuch a Degree, that the Province of *Kyang-nan* alone contained ninety Churches, forty-five Oratories, and four Kinds of Congregations: 1. For the Worſhip of the Virgin *Mary*. 2. That of Angels. 3. That of Chriſt's Paſſion. 4. That of the *Literati*, under Protection of their Saint, *Ignatius*. Theſe laſt met the firſt of every Month, to repeat the Inſtructions they had compoſed upon the ſeveral Articles of the *Romiſh* Faith; and ſuch as were approved of by the Miſſioners, were recited on the *Sunday* following in the Churches; which proved of great Service in making Converts.

Perſecution raiſed

THE *Bonzas* enraged, it ſeems, at the great Progreſs they made, raiſed ſeveral Perſecutions, which were preſently quaſhed: But one kindled at *Ma-kau*, by a *Dominican* Friar, on Occaſion of the Rector of the Jeſuits determining a Diſpute in Favour of the *Franciſcans*, againſt the Vicar-General, put the Miſſion in the utmoſt Danger. *Never was there a more helliſh Piece of Revenge*, ſays our Author, *than was contrived by one of that Cabal, who could willingly have ſeen the Religion periſh in* China, *provided the Jeſuits had been involved in its Ruin.* He informed the *Chineſe*, that the Ambition of the Jeſuits was aſtoniſhing, and that preaching the Faith was only a Pretence to raiſe *Cataneo*, a Miſſioner of their Order, to the imperial Throne: That the Places they were ſettled at, between *Kanton* and *Pe-king*, favoured their Deſign; and that the *Dutch* Fleet, which appeared a little before on the Coaſt, was intended for their Aſſiſtance: That the Governor of the City, and his Troops, were in their Intereſt; and that their Friends in *China* were to be joined by the Chriſtians of *Japan*.

THIS News being tranſmitted to the Magiſtrates of *Kanton*, the other Cities of the Empire ſoon took the Alarm. It was given-out, that *Ricci* had been put to Death at *Pe-king*; and *Francis Martinez* paſſing through *Kanton* during this Ferment, endeavoured to hide himſelf, but was diſcovered by a recanting Convert, and condemned to the Baſtonado, under which he died. Had theſe Reports reached the Emperor, our Author takes it for granted, that his Religion would have been effectually cruſhed: But the Magiſtrates were ſoon convinced, that they had been groſly impoſed upon.

RICCI, whoſe Conſtitution was ruined by the Load of Buſineſs which he had on his Hands, died in 1610, at the Age of eighty-eight, twenty-ſeven of which he ſpent in *China*. The Emperor *Van-lye* allotted the Spot of Ground for his Sepulture, which was afterwards the Jeſuits Burying-Ground, and continued his Favour to the other Miſſioners: But in 1617 a violent Perſecution was raiſed againſt them by a *Mandarin* of *Nan-king*: Some were cruelly drubbed, others impriſoned, or baniſhed, ſuch as were at Court being obliged to retire to *Ma-kau*. Thus Matters continued till the Irruption of the *Tartars*, when *Tyen-ki*, the ſucceeding Monarch, by the Advice of *Paul Syu* before-mentioned, ſent for the *Portugueze* to manage the Artillery, and recalled the Miſſioners, who lived peaceably under *Tyen-ki* and *Whay-tſong*, or *Tſong-ching*, his Succeſſor in 1628.

ABOUT the Year 1631, *Adam Schaal*, the Jeſuit, being ſent to Court, ſoon gained the Favour of the Emperor, and the Grandees, by his Skill in Mathematics. The ſame Year the *Dominicans* and *Franciſcans* entered *China*, to ſhare in the Miſſion, which we are told throve greatly; but the Wars which enſued in 1636, and laſted above twenty Years, almoſt quite ruined it. During theſe Diſtractions, however, the Jeſuits boaſt of numerous Converts, ſome very eminent for their Rank; as *Thomas Kyu*, Vice-Roy of *Quang-ſi*; and *Luke Chin*, Generaliſſimo of the *Chineſe* Armies againſt the *Tartars*; *Pan Achilles*, a great Eunuch, with fifty Ladies of the Court; nay, the *Chineſe* Emperor [a] himſelf, a

[a] This was *Yung-lye*, proclaimed by the Army in 1646. He fixed his Seat at *Shau-king fû*, in *Quang-tung*.

he Empreſs: The firſt baptized by the Name of a *Conſtantine*, the latter by that of *Helena*. They ive us a Letter of hers to the Pope, written in 650, and his Holineſs's Brief to her Majeſty: ut a few Years after, all theſe fair Proſpects va-iſhed with the Flight of the *Chineſe* Emperor, nd thorough Conqueſt of the *Tartars* [a].

ADAM SCHAAL, who remained alone at *Pe-king*, to take Care of the Church there, was o ſooner known to *Shun-chi* the *Tartar* Em-eror, than he was careſſed by him, and made b reſident of the Tribunal of the Mathematics, hich had for three hundred Years been under he Direction of *Mohammedan* Aſtronomers. He eformed the Kalendar, which endeared him ſtill ore to his Majeſty, who ſent for fourteen Miſ-oners to Court, among whom was *Ferdinand erbieſt*. According to the Author, the Em-eror would have embraced the *Romiſh* Religion, ut for his Queens, who were bigotted to the *Bonzas*. He grew cool, however, to *Schaal*, for c ften cenſuring his laſt Marriage: Yet on his Death-Bed ſent for him, and treated him with uch Kindneſs.

On the Acceſſion of *Kang-hi*, then but eight ears old, the *Bonzas* were expelled the Palace, hile *Schaal* was advanced to be Preceptor to the oung Monarch. Thus by his Credit he ſaved *Ma-kau* from being deſtroyed in common with ther Places along the Coaſt, to hinder *Ku-ſhing*, r *Koxinga*; from getting Proviſions; and pre-d ented ſeveral Perſecutions raiſed in the Provin-es by the *Bonzas*. But it was not long before general Perſecution was ſet on-foot by *Jang-uang-ſyen* [b], one of the *Literati*, who, we are old, by his Violence and Intrigues made himſelf eared by the greateſt *Mandarins*. He publiſhed Book, and preſented a Petition to the four Re-ents, filled with Invectives againſt both the Miſ-oners, and their Religion. He affirmed, among e reſt, "That they had been baniſhed their e own Country for Sedition, and were come into *China* to raiſe a Rebellion: That *Adam*'s intention, in obtaining ſuch great Authority at *Pe-king*, was to introduce a Multitude of Strangers into the Empire; who, by his Di-rection, travelled over the Provinces, and took Plans of the Cities, in order to facilitate the Conqueſt of them: That the Number of their Followers, who were as ſo many Sol-diers liſted under them, were almoſt infinite; f and that every Year great Numbers of Stran-gers arrived at *Ma-kau*, who only waited for a favourable Juncture to put their Deſign in Execution."

HE likewiſe produced a Book publiſhed by *Adam*, exhorting the *Chineſe* and *Tartars* to em-brace Chriſtianity, which contained a Liſt of all the Churches in the Provinces, and Magiſtrates who had been baptized. *Jang-quang-ſyen* repre-ſented this as a Muſter-Roll of an Army ready to take the Field on the firſt Signal; and the Me-dals and Beads they carried, to be the ſecret Marks by which the Conſpirators were known to one another. Laſtly, he ſhewed the Figure of Chriſt crucified, in the Books diſtributed by the Miſſioners, ſaying, *Behold the God of the* Europeans *nailed to a Croſs, for having at-tempted to make himſelf King of the* Jews: *This is the God they invoke to favour the Deſign they have formed, of making themſelves Maſters of* China.

Romiſh. By another Mandarin.

THE Conſequences of this Accuſation have been already related [c], we ſhall therefore be the briefer here. *Adam*, who was then in his ſeventy-eighth Year, was with the reſt of the Miſſioners loaded with Irons, and on his Knees appeared before the Tribunal, while on Account of his Infirmities, *Verbieſt* gave Anſwers for him. *November* 12, 1664, they were all impriſoned, and next Year the *Mandarins* in Council pronounced the Chriſtian Law [d] falſe and pernicious, and that *Adam*, and his Companions, deſerved to be puniſhed as Seducers of the People, and Propa-gators of a falſe Doctrine. All they could ſay was to no Effect. They firſt condemned *Adam* to be ſtrangled, which is the moſt honourable Death; but afterwards changed the Sentence to cutting into ten thouſand Pieces, which is the moſt ignominious Puniſhment. This Sentence was ſent to the Princes of the Blood, and four Regents, for their Confirmation.

Miſſioners condemned.

"God then, ſays our Author, declared him-"ſelf in Favour of his Servant, whom hitherto "he ſeemed to have abandoned. Every Time "they attempted to read the Sentence, a terri-"ble Earthquake forced the Aſſembly to quit "the Hall. The Conſternation of the People, "and eſpecially that of the Queen, Mother of "the deceaſed Emperor, who imputed thoſe "fearful Events to the unjuſt Sentence of the "Magiſtrates, obliged the Regency to open the "Priſons to all, excepting thoſe guilty of cer-"tain Crimes, particularly that of broaching, "or profeſſing a falſe Doctrine [e]; whereby the "Jeſuits were detained in Priſon, while twelve "hundred others were diſcharged. But the "Earthquake, continues *Du Halde*, which was "renewed more violently than ever, and a Fire "which conſumed moſt of the Palace, joined to

Jeſuit Impoſtures.

[a] *Du Halde's China*, vol. 2. p. 5, *& ſeqq.* [b] See before, Vol. III. p. 504. [c] The ſame, *p.* 504, *&* [d] That is, as taught by the Miſſioners. [e] Obſerve the Abſurdity! Is it probable that they ſhould im-the Evil to the Injuſtice of the Sentence againſt the Miſſioners, and yet ſet the Guilty free inſtead of them?

"ſeveral

Religion, "several other Prodigies [a], opened the Eyes of a "the unjuſt Judges, and convinced them, at "laſt, that Heaven intereſted itſelf in Favour of "the Priſoners, who were then ſet at Liberty." But *Adam Schaal* did not long ſurvive theſe Hardſhips, for he died in 1666.

Perſecution in the Provinces. THE Perſecution raged no leſs in the Provinces, where the Miſſioners ſuffered a hard Impriſonment; and then, to the Number of twenty-five, were baniſhed to *Kanton*, four remaining ſtill at Court. However, the Author pretends, b that Vengeance purſued their Enemies; that the firſt Regent, who was the chief Perſecutor, died a natural Death [b]; the ſecond was condemned to Execution, his third Son cut in Pieces, and the reſt beheaded: That *Jang-quang-ſyen*, the Author of this Perſecution, made Preſident of the Mathematical Tribunal in Place of *Adam*, was degraded, and ſentenced to Death; and that though in Conſideration of his great Age, the Emperor changed the Sentence to Baniſhment, c he died, in his Journey, of a peſtilential Ulcer.

Verbieſt *advanced.* AN Event that happened a few Years after, brought the Miſſioners again into Favour: For the Emperor having diſcovered a great many Faults in the Kalendar, he was adviſed, by ſome Perſons about him, to conſult the *Europeans*. Accordingly they were ſent for, and the Kalendar put in the Hands of *Verbieſt* to correct it; which he did, and for his Reward, as has been before related [c], he was made Preſident of the d Tribunal of Mathematics, vacant by the Diſgrace and Death of *Jang-quang-ſyen*. Soon after the Emperor publiſhed an Edict, inviting all, who had ſuffered Wrong during his Minority, to apply to him for Redreſs. *Verbieſt* laid-hold of this Opportunity, and gave-in a Petition, ſetting forth the Abuſe of his Authority, by baniſhing the Miſſioners, and condemning their Doctrine. It was rejected by one Tribunal, but another declared *the Chriſtian Law had been wrongfully* e *condemned; that it was good, and taught nothing inconſiſtent with the Welfare of the State* [d]. Accordingly the Chriſtian Grandees were reſtored to their Places, *Verbieſt* to his Honours, and the Miſſioners being recalled, were in 1671 put in Poſſeſſion of their Churches. By the Edict all the Subjects of the Empire were prohibited to embrace the *Romiſh* Faith: Notwithſtanding which, upwards of twenty thouſand *Chineſe* were baptized that Year, beſides the Emperor's maternal Uncle, and one of the eight *Tartar* Generals.

The Miſſioners reſtored.

AFTER this *Verbieſt*, being called to Court, taught the Emperor Mathematics for two Years, and on Occaſion of a Book publiſhed by a *Mandarin*, obtained an Edict, that none ſhould give Chriſtianity the Name of a falſe Religion. He ingratiated himſelf farther, by founding light Braſs Cannon, fit for Carriage over the Mountains (thoſe of the *Chineſe* being of Iron) by whoſe Aſſiſtance the *Tartars* forced the Intrenchments of *U-ſan-ghey*, the famous *Chineſe* General, who had invited-in the *Tartars*, and was then himſelf in Rebellion againſt them. This Event procured a Peace, and ſettled *Kang-hi* ſecurely in the Throne [e]. As *Verbieſt* grew in Favour with the Emperor, the Miſſioners gained Reſpect among the Grandees, and Converts increaſed ſo faſt, that he wrote to *Europe*, inviting his Brethren to ſhare his Labours. Theſe Letters procured him a Brief of Thanks from the Pope for his Zeal, and excited *Louis* XIV. of *France* to improve the Sciences, and propagate the *Romiſh* Faith at the ſame Time, by ſending over Perſons proper for the Purpoſe.

ACCORDINGLY *de Fontaney*, *Tachard*, *Gerbillon*, *Bouvet*, *Le Comte*, and *Viſdelou*, ſix Jeſuits, were choſen from a great Number who offered themſelves. After being admitted into the Academy of Sciences, they were furniſhed with Mathematical Inſtruments, regular Penſions, and magnificent Preſents. They ſet-ſail from *Breſt* [f] in *March* 1685, in Quality of the King's Mathematicians. *Tachard* was detained at *Siam*, whither the Chevalier *de Chaumont* went as Ambaſſador: The other five ſet-ſail for *Ning-po* in *China*, where being arrived, they met with ſome Oppoſition from the Vice-Roy; but by Means of *Verbieſt* were ſoon called to Court. They arrived at *Pe-king* in *February* 1688; but before they reached it, that Jeſuit died. We are told that he always wore, under the Habit of his Dignity, a Hair-cloth Frock, or was girt with an Iron-Chain ſtuck with Points [g]: That he was buried magnificently at the Emperor's Charge; and that his Majeſty made his Eulogium, which the Author has inſerted, with the Order of his Funeral. He was ſucceeded as Preſident of the Tribunal of Mathematics by *Grimaldi*, an *Italian* Jeſuit.

[a] As this Account of Prodigies is proved to be falſe, from the Teſtimony of another Miſſioner, Vol. III. p. 506, it may be preſumed the Whole is falſe, as it appears to be from the ſame Place. [b] The Author mentions neither when theſe Things happened, nor for what Cauſe the Sentences were paſſed on theſe Perſons; doubtleſs that they might be thought more immediate Judgments on them for acting againſt the Miſſioners. [c] See before, *p.* 168, *&c ſeqq.* [d] This is falſe, if by Chriſtianity is to be underſtood the *Romiſh* Faith; as they were convinced of it at laſt, which was the Cauſe of the Miſſioners Expulſion. [e] *Du Halde's China*, 13, *&c ſeq.* [f] See their Voyage, Vol. III. *p.* 514. [g] This is to come-up, though in a very ſmall Degree, to the Severities of the *Bonzas:* But we have only the Jeſuit's Word for it; for they never appear in View.

T

THE twenty-first of *March* the *French* Missioners were brought before his Majesty, who kept *Gerbillon*, and *Bouvet* about his Person. After learning the *Tartar* Language, he employed the former, and *Pereyra*, another Jesuit, as Interpreters to his Ambassadors, who were sent to *Ni-po-chew*, or *Nerchinskoy*, to treat with the *Russians* about the Limits of both Empires, and were very instrumental in concluding the Peace; by which *Yak-sa* on the River *Amûr* [a] was yielded to the *Chinese*, and demolished.

AFTER this *Kang-hi* went through a Course of Mathematics, under the Direction of *Thomas*, *Gerbillon*, and *Bouvet*, whom he conversed with, and treated in the most familiar Manner, making them sit-down by him often on the same Stool. They translated and composed Books for him. He continued his Studies for five Years, joining always the Practice to the Theory; by which Means he became so able a Mathematician, that he composed a Book of Geometry for the Instruction of his Children, whom he taught himself.

FOR all the Missioners at Court were in such Favour with the Emperor, yet their Religion being but barely tolerated, and the *Mandarins* in the Provinces having a natural Aversion to them, either as Foreigners and Innovators, or through the Instigation of the *Bonzas*, they were always in Danger of a Persecution, which at length broke-out violently at *Hang-chew fû* in *Che-kyang*, where the Vice-Roy, and other *Mandarins*, renewing the Edict of 1669, forbad the Exercise of the *Romish* Religion under grievous Penalties, and treated it as a false and pernicious Sect. He seized on several Churches, and gave them to the *Bonzas*: *The Crosses*, says our Author, *were broken, the Altars prophaned, and the holy Images abandoned to the Insults of Unbelievers.* A great many Converts, with *Intorcetta* the Jesuit, were dragged before the Tribunals; whereof some were imprisoned, and others sorely bastonadoed.

GERBILLON then attending the Emperor in *Tartary*, applied himself to Prince *So-san*, who was his Majesty's near Relation, one of the Prime-Ministers, and Grand-Master of the Palace. This Regulo having written to the Vice-Roy two Letters to little Effect, the Missioners resolved to crave Audience of the Emperor, who sent them this odd Sort of Answer: *That he was surprized to see them so much infatuated with their Religion, and so busied about a World in which they had never been. That his Advice was, they should enjoy the present Life; adding, that your God is surely uneasy about the Pains you are at, and is powerful enough to do himself Justice, though you do not concern yourselves in his Matters.* The Missioners thunder-struck with such a Message, vented their Grief on their Knees at the Palace-Gate; which being reported to the Emperor, he sent an Officer to tell them there was no Way to stop the Persecution, but either for him to check the Vice-Roy secretly, or for them to obtain a favourable Decree from the Tribunals. Romish.

THEY chose this last Method, and drew-up a Petition, sending it privately to the Emperor to peruse: But that great Monarch not thinking it calculated to make an Impression on the *Chinese*, was so condescendingly good, as to write one himself in the *Tartarian* Language [b], and sent it the Missioners to alter as they thought fit. It was presented to his Majesty on a Day of Audience by the Jesuits *Pereyra* and *Thomas*; but being sent to the Tribunal of Rites, their Sentence was, that the former Edicts ought to be adhered to. The Emperor piqued at this Judgment, rejected it, and ordered the *Mandarins* to examine it a second Time. This sufficiently declared his Intention; yet their second Answer was no more complaisant than the first. His Majesty finding them absolutely determined against the Missioners and their Religion, that he might not exasperate his Subjects too-far, resolved to sign the Decree: However, in Pity to the Anguish the Jesuits were reduced to by so fatal a Turn, he consulted Prince *So-san*, who persuaded the Emperor to exert his Authority on this Occasion, undertaking himself to render the *Mandarins* more tractable [c]. *Sentence of the*

PURSUANT to this Advice, the Emperor issued-out a Writ directed to the *Ko-lau*, and Members of the *Li-pû*, signifying his Will, that all the former Edicts published against the Christian Law, should be torn and burned. *So-san* attended the Assembly, and though no Convert, argued the Case of the Missioners so strenuously, and explained the Ten Commandments so pathetically, that they acknowledged there was no Danger in such a Law [d], and thereupon gave a Sentence to this Effect: That the Missioners, for their Services, deserved Regard: That they were guilty of no Immorality, and did no Harm to any: That their Doctrine resembled in nothing that of the false Sects, nor tended, in the least, *Tribunals reversed.*

[a] So called by the *Russians*; by the Eastern *Tartars*, *Saghalian Ula*; and by the *Chinese*, *He-long-kyang*, or the *Black-Dragon River*. [b] The Author inserts a Translation of it. [c] *Du Halde's China*, p. 18, & *seqq.* [d] Nor would there be any Danger in Popery, was it conformable to the Ten Commandments; but indeed nothing can be more contrary in all the prime Articles.

Religion, to promote Sedition: That they ſhould [a] be allowed to have Churches, and to preach their Religion as well as the *Bonzas*. The Emperor ſigned this Petition the ſecond of *March* 1692, and cauſed it to be publiſhed all-over the Empire; but adviſed the Miſſioners to write to their Brethren in the Province, *not to preſume too much on that Grace, and to behave ſo circumſpectly, that he might receive no Complaints of them.* Which let them ſee, ſays our Author, that he had not approved of Chriſtianity without doing himſelf ſome Violence [b]; and that in ſo doing he ſacrificed all his political Views to the Affection he had for the Miſſioners, *&c* [c].

The Miſſion thriving, THIS Liberty, granted the Miſſioners, increaſed Converts, and brought-over many Jeſuits from *France*, *Louis* XV. appointing a yearly Revenue of nine thouſand two hundred Livres for twenty of them in *China* and the *Indies*. The Emperor purſued his Studies, in the Courſe of which he was attacked by a malignant Fever, followed ſoon after by a tertian Ague, of both which *Gerbillon* and *Bouvet* cured him. As a Reward, he gave them a large Edifice in the *Whang-ching*, or firſt Court of his Palace, with half an adjoining Field to build a Church on, and fifty Ounces of Silver towards carrying-on the Work; beſides furniſhing Part of the Materials, and appointing *Mandarins* to ſuperintend it. Four Years were employed in raiſing and adorning this Temple; which, it ſeems, is one of the moſt beautiful and regular in all the Eaſt: But it was ſcarce finiſhed in *December* 1702, when the Cenſors of the Empire repreſented that the Building was too extravagant, and ought to be demoliſhed as an Encroachment on the Laws: But the Emperor ſilenced them, telling them it was done by his Order, to reward their Services.

Is ruined at laſt MATTERS ſeemed to go-on well in Favour of the Miſſioners, when the Diſputes which aroſe among them about the Meaning of the Words *Tyen* and *Shang-ti*, threw Things into Confuſion again, and proved more fatal to their Religion, than all the Perſecutions it had met with. As an Account has been already given of this Controverſy [d], which ended in the Expulſion of the Miſſioners, and Overthrow of all their Labours in *China*, for more than a whole Century together, we ſhall only obſerve here, that our Author tells us, three hundred Churches were deſtroyed, or converted to profane Uſes, and three hundred thouſand Chriſtians expoſed to the Rage of the Infidels by this Event; while their Religion was overthrown, without the leaſt Hope of ever getting Admiſſion again: That there were in the Provinces indeed three Jeſuits, and ſome Prieſts, who mingled with the Converts, and being *Chineſes*, were eaſily concealed: Skilful Catechiſts were likewiſe ſent every Year to the ſeveral Churches, to inſtruct and furniſh them with Books of Devotion [e].

THIS is the State to which the *Romiſh* Miſſion in *China* was reduced, by the Decree of the Emperor in 1723; on which Occaſion it may not be amiſs to add a Remark of the Tranſlator of *Du Halde*. The Court of *Rome*, whoſe Miſſioners, ſays he, by an unparallelled Indulgence of the *Chineſe* Monarch, had ſettled in *China*, could not content itſelf with a Toleration to preach their Religion, but muſt endeavour to make a Dupe of the Prince to whom they owed all: But *Kang-hi* foreſaw too well the Conſequences of allowing the Pope to claim any diſpenſing Power, in the leaſt Point, that concerned Civil Inſtitutions. He well knew, that the yielding to the Jeſuits in one Article, would have introduced another, till by their Incroachments they might have endangered his Empire: So he very wiſely choſe rather to drop them entirely.

THE Uſe I would make of this Obſervation, continues the Tranſlator, is, That had our *European* Princes, in former Days, been as wiſe as *Kang-hi*, the Church of *Rome* could never have arrived to the Pitch of Inſolence ſhe has done, in claiming either an Authority independent of, or inconſiſtent with the Civil Power [f].

[a] See before, *p.* 208. e. To which may be added, Idolatry in the Worſhip of Saints, Images, and the conſecrated Wafer, with the diſpenſing Power in all Caſes. [b] This appears from ſeveral other Inſtances in *Du Halde*, particularly an Anſwer to the Miſſioners, Vol. II. *p.* 326. [c] Yet, at other Times, this Jeſuit, and the reſt, inconſiſtent with themſelves, or one another, repreſent *Kang-hi* as having a great Propenſity to their Religion. [d] See Vol. III. *p.* 585, *& ſeqq.* [e] *Du Halde's China*, p. 28, *& ſeqq.* [f] See the Note to *Du Halde*, p. 37.

CHAP.

Antiquity.

CHAP. VI.

The CONSTITUTION *and* GOVERNMENT *of* CHINA.

SECT. I.

Antiquity *and* Extent *of the* Chineſe *Monarchy.*

Chineſe *Hiſtory of ancient Times: Very uncertain. Where free from Doubt. Miſſioners differ in their Opinions. Difficult to judge where lies the Truth.* Chineſe *Empire, Extent. Tributary Countries. Table of Dynaſties.*

ALTHOUGH *China* ſeems to be a Country of great Antiquity, and its Hiſtorians have given their Monarchy a very early and ſplendid Original; yet it is far from being clear, either when it was firſt peopled, or the *Chineſe* began to make any Figure as a Nation. The common Opinion is, that the Monarchy was founded by *Fo-hi*, who, according to their Account, began his Reign two thouſand nine hundred and fifty-two Years before the Chriſtian Æra. Others more zealous for the Honour of their Country, run its Original a great many Ages higher: But when one comes to look critically into their Annals, he finds Room for large Deductions.

FO-HI is repreſented by their Authors as having the Body of a Serpent [a]. The Length of his Reign, and that of his ſix Succeſſors, are unknown; though it is reckoned five hundred and ninety-five Years paſt from his Inauguration to that of *Yau*, the ſeventh Emperor, to whoſe Reign they aſſign ſeventy-two Years, and fifty to that of his Succeſſor *Shun*. To theſe nine Emperors (who reigned before the twenty-two Races of their Kings) they aſcribe all their Laws, and their Sciences; their Regulations in Government, Morality, and Religion; their Agriculture, and Manufactures; with the ſeveral Inſtruments belonging to each Art. But theſe Things ſerve to render their Hiſtory ſuſpicious, agreeable to the Remark of the Tranſlator of *Du Halde*. "Many of the firſt Reigns, ſaith "he, ſeem to be fictitious, and to be written "by the early *Chineſe* Hiſtorians, partly to give "their Nation the Reputation above all others, "for Antiquity, Wiſdom, Politeneſs, wholeſome Laws, and other Advantages; and a "partly to form Models and Characters for the "Imitation of Princes. It ſeems very ſtrange, "continues the Tranſlator, that not only all "their Sciences, but all their Arts and Utenſils, "even to thoſe of the Plough and Kitchen, "ſhould be invented by their firſt Emperor; as "if there were no Men elſe of Genius, or Capacity, among them in thoſe early Times [b]." We might add alſo, that it is unlikely they ſhould ſo early, and without any Communication with other Nations, bring Things to the ſame Degree of Perfection which they are found in at preſent. b *Very uncertain.*

HOWEVER theſe Things be, a third Party among the *Chineſe* reject the firſt ſeven Emperors as uncertain, beginning their Monarchy with *Yau*: From whoſe Reign, we are told, their Hiſtory is very exact, and coherent, tranſmitted by cotemporary Writers, and ſupported by Obſervations of Eclipſes, mentioned in the Courſe of their Annals; the firſt of which occurs in the Reign of *Chong-kang*, fourth Emperor of the firſt Dynaſty, or *Hya*, 2155 Years before Chriſt, and has been verified by the *European* Aſtronomers [c]. c

IN 1729, a chronological Table was publiſhed at *Rome*, in three Sheets, by *Fouquet*, titular Biſhop of *Eleutheropolis*, formerly a Jeſuit and Miſſioner, which began no higher than the Reign of *Lye-vang*, four hundred and twenty-four Years before Chriſt. It was compoſed by *Nyen*, a young *Tartar* Lord, well-verſed in Hiſtory, who was Vice-Roy of *Kanton* in 1720. He took it from the *Kang-mû*, or *Great* Chineſe *Annals*, whoſe Authors take Notice, that the Chronology, before that Time, appeared not ſufficiently certain; at leaſt ſo far as concerns the Beginning and End of Reigns, and the Succeſſion of Years, compared with the *Kya-tſe*, or *Chineſe* Cycle [d]. Moſt of the Miſſioners are of the ſame Sentiments, probably grounded on the Authority of the *Kang-mû*. *Fouquet* accounts it one of the prime Uſes of the Table he publiſhed, *That it fixes the Æra of the* Chineſe *Hiſtory ſo far as is genuine, about four hundred Years before Chriſt*; and ſays, *there are ſome who think, not without ſtrong Reaſons, that it might be brought* d *Where free from Doubt.* e

[a] *Shin-nung*, the Head of an Ox, beſides other Fables. See *Couplet. Tab. Chron. Mon. Sinic.* Pref. p. 10.
[b] *Du Halde's China*, vol. 1. p. 133. Note k. [c] See before, *p.* 164. b. [d] *Du Halde*, as before, *p.* 133, & *ſeq.*

Government. *ſtill lower.* He allows the *Chineſe* Nation to be almoſt as old as the Deluge, but denies their Hiſtory deſerves much Credit, if you aſcend more than four hundred Years before Chriſt; *and this*, ſays *Fourmont*, *is an Opinion, at preſent, pretty common among the Jeſuit Miſſioners.*

Miſſioners differ

THE ſame Author obſerves, that *Maigrot*, Biſhop of *Conon*, does not believe the *Chineſe* Cycle very ancient, ſaying, it is without Grounds aſcribed to *Whang-ti*, the ſecond from *Fo-hi*; and that the Author of the above-mentioned b Annals firſt applied it to Years and Ages, it having been uſed before only to number the Days. He allows, indeed, of the Exiſtence of the three firſt Races, and even of *Shun*, *Yau*, *Fo-hi*, and *Shin-nung*; but denies the Chronology of ancient Times to be certain, and ſuppoſes the Annaliſt has adjuſted both the Years and Eclipſes [a], according to his Fancy.

PREMARE, in his Letter againſt *Renaudot* [b], diſtinguiſhes the *Chineſe* Chronology into fabulous, uncertain, and ſure. This Remark he takes from the moſt celebrated of their Hiſtorians, who are Enemies to Partiality, and reckon the Times betwixt *Fo-hi* and *Ghey-lye-vang* [c], uncertain (that is, not to be ranged according to an exact chronological Series) and that preceding *Fo-hi* is fabulous: Yet he allows, that *China* was peopled above two thouſand one hundred and fifty-five Years before Chriſt, whereof he reckons the ſolar Eclipſe, which happened that d Year (and is inſerted in the *Chineſe* Hiſtory) as a Demonſtration [d].

In their Opinions.

As theſe Miſſioners only give their Opinion on the *Chineſe* Chronology, without producing their particular Reaſons, they only ſerve to create Doubts in their Readers. They are accuſed, indeed, with raiſing theſe Objections on a religious Account, imagining, that if the *Chineſe* Chronology be admitted, it will overthrow the Verity of the Scripture Chronology, according e to the *Hebrew* Computation, as placing the Beginning of the Monarchy near ſix hundred Years earlier than the Flood. On the other Hand, others think, that as there are two other Computations, *viz.* the *Samaritan* and *Septuagint*, which place the Deluge many hundred Years earlier, and are deemed at leaſt as authentic, if not more ſo, they ought rather to adhere to one of them, than reject the *Chineſe* Chronology.

Difficult to judge

THIS is the Opinion of moſt of the Learned f of late, and, among the reſt, of Mr. *Fourmont*; who vindicates the Certainty of the *Chineſe* Chronology, as well as Hiſtory, againſt the Objections of the Jeſuits on the contrary Side. He argues, 1. That *Confuſius* living in the Time of *Ling-vang*, one hundred and forty-one Years before *Ghey-lye-vang*, and writing himſelf the *Chun-tſyu*, containing the Annals of two hundred Years; the Chronology is therefore fixed for eight hundred and eighty-five Years before Chriſt, that is, to the Time of *Li-vang* [e], or higher. 2. That the *Chineſe* having fixed Epochas, and Obſervations of Eclipſes, the Hiſtorians could not miſtake in ranging the Times [f]. 3. He aſks, why the Times before *Ghey-lye-vang*, ſhould not be more exact than the Chronology of the *Greek*, *Latin*, and even *French* Annals, ſince thoſe of *China* are written with ſo much Care?

FOURMONT makes uſe of other Argu- c ments by Way of Inference, in Behalf of the *Chineſe* Chronology: But he judiciouſly obſerves, that without a diligent Examination of that Variety of Books, which he mentions relating to the *Chineſe* Hiſtory, a Critic will never be able to judge abſolutely of the Truth, either of any Event, or its Date [g]; and thus the Diſpute may remain for ever undecided: However, upon the Whole, we may allow the *Chineſe* Monarchy to have had a Beginning as early as the *Perſian*, d *Aſſyrian*, *Babylonian*, or any other recorded by the *Greek*, or *Latin* Hiſtorians.

As to its Extent, we are not to ſuppoſe it was always the ſame as at preſent. In the Reign of *Whang-ti*, the third Emperor, it was bounded Southward by the *Kyang*: It has acquired a vaſt Augmentation within theſe laſt hundred Years. We are told, the Monarchy begun in the Province of *Shen-ſi*, and increaſed by Degrees: That the ſeveral Provinces, of which the Em- e pire is at preſent compoſed, were formerly Kingdoms. It is true, they are repreſented as having always been dependent on the Emperor; but it is not probable they became ſo, till forced to it, which muſt have been a Work of Time. The Province of *Yun-nan* is allowed to be a Conqueſt of theſe latter Ages; and in *Fo-kyen* the ancient Language of the Country ſtill exiſts. The preſent Family hath added all the Eaſtern, and great Part of Weſtern *Tartary* (including the f Territories of the *Mongols*, or *Mogols*, and *Kalka*) to the Empire, which is bounded Northward

[a] That cannot be, becauſe the Eclipſes have been found to happen in the Years wherein they are placed: But they might have been calculated many Ages after they happened, in order to inſert them to ſerve as Vouchers for their Hiſtory. [b] *Lettres Edif.* tom. 19. p. 457. [c] The ſame with *Lye-vang* before-mentioned. [d] See *Fourmont. Hiſt. Critiq. Sur Hiſt. Anc. Peupl.* tom. 2. p. 402, *&* *ſeq.* quoted in the Note on *Du Halde's China*, vol. 1. p. 134. [e] Tenth Emperor of the *Chew*. [f] Provided they had a ſufficient Number. [g] *Fourmont*, as before, *p.* 404, 405 and 411.

by the great River *Saghalian-Ula*, or *Amûr*; from a whence, to the South-Point of the Island *Hay-nan* in the South, it measures upwards of nine hundred *French* Leagues.

BESIDES, there are many Kingdoms, as *Korea*, *Tong-king*, *Kochinchina*, *Siam*, &c. which are tributary to the Emperor of *China*; who sometimes appoints, and must always confirm their Kings.

WE shall here add a Table of the first Emperors, and the twenty-two Dynasties; Reference b being frequently had to them in this Description.

The first FOUNDERS of the EMPIRE.

1. *Fo-hi.*
2. *Shin-nong.*
3. *Whang-ti.*
4. *Shau-hau.*
5. *Chwen-hyo.*
6. *Ti-ko.*
7. *Chi.* The Length of the Reigns of these seven Emperors is unknown [a].
8. *Yau*, he reigned seventy-two Years alone, and twenty-eight in Conjunction with *Shun*.
9. *Shun* reigned alone fifty Years.

ORDER of the *Dynasties* [b], or *Imperial Families*.

	According to *Du Halde*.			According to *Fourmont* [c].	
Dynasties.	Emperors.	Duration.	Beginning.	Duration.	
1. *Hya*	17	458	Year 2207	441	
2. *Shang* or *Ing*	28	644	before 1766	664	
3. *Chew*	35	873	Christ 1122	874	
4. *Tsin*	4	43	248	42	
5. *Han*	25	426	206	425	
6. *Hew-han*	2	44	Year of 220	45	
7. *Tsin*	15	155	Christ 265	155	
8. *Song*	8	59	420]	59	
9. *Tsi*	5	23	479]	23	
10. *Lyang*	4	55	502]	55	
11. *Chin*	5	33	557]		
12. *Sbwi*	3	29		37	
13. *Tang*	20	289	618	289	
14. *Hew-lyang*	2 [1]	16	907	16]	
15. *Hew-tang*	4	13	923	13]	
16. *Hew-tsin*	2	11	936 [e]	11]	
17. *Hew-han*	2	4	947	4]	
18. *Hew-chew*	3	9	951	9]	
19. *Song*	18	319	960	328	
20. *Yuen*	9	89	1280	88	
21. *Ming*	16 [d]	276	1268	277	
22. *Tsing*	3	[92	1645		

[a] Some of their Historians also add a great many Emperors between *Fo-hi* and *Whang-ti*. [b] The Word, in the *Chinese*, is *Chau*; which signifies neither Dynasty, Race, Family, nor Succession; but a certain Number of Years; the whole Time which any Race possessed the Dominion, being called the *Chau* of such a Race. For Instance, the *Hya-chau*, that is, the *Chau* of the *Hya*, or the Space of Time, during which the *Hya* reigned: So they say, the *Shang-chau*, or the *Chau* of the *Shang*, &c. *Fourm. Refl. Critiq. Sur Hist. Anc. Peupl.* tom. 2. p. 397. [c] *Refl. Crit. Sur Hist. Anc. Peuples*, vol. 2. p. 441, & *seqq.* from whence this is added. [d] In the Original, by Mistake, 236. [e] In the Original this Number, and the following, are transposed by Mistake. [f] *Le Comte*'s Memoirs of *China*, p. 248. [g] *Du Halde*'s *China*, p. 248, and 306.

Principles of.

SECT. II.

The Principles *of the* Chinese *Government.*

Government perfect. Fundamental Principle. Wholesome Constitution. Qualifications in Princes. Tyranny detestable with the Chinese.

AMONGST the several Models and Plans of Government which the Ancients framed, we shall perhaps meet with none so perfect and exact, as is that of the *Chinese* Monarchy: And this is the more to be admired, in case, as the Natives pretend, it has from the Beginning been in the same Vigour and Perfection that we find it at present. However that be, the Constitution of the *Chinese* Government is so judiciously contrived, that it cannot well fall to Decay, like that of other States; and if it should, has c in itself the Means of recovering its original Strength. *Government perfect.*

THE *Chinese* never heard of the Name of Republic, till the Arrival of the *Hollanders*; nor could they understand how a State could regularly be governed without a King: They looked upon a Republic to be a Monster with many Heads, formed by the Ambition, Fickleness, and corrupt Inclination of Men in Times of public Disorder and Confusion [f].

d THE political Government of *China* entirely turns on the reciprocal Duty of Parents and Children. The Emperor is called the Father of the Empire; the Vice-Roy is the Father of the Province under his Command; as the *Mandarin* is of the City which he governs. The ancient Sages were convinced, that the profound Respect, infused into Children for their Parents, renders their Disposition perfectly submissive; that this Submission preserves Peace in Families; e that Peace in Families produces Tranquillity in Cities; that this Tranquillity prevents Insurrections in the Provinces, and establishes Order throughout the Empire [g]. On the other Hand, as the People pay the Submission of Children, they expect their Governors will treat them with the Affection of Parents, defend them from Injuries and Oppression, do them impartial Justice, and comfort and relieve them in Distress. *Fundamental Principle.*

AND hence it is, that although *China* is an absolute Monarchy, perhaps the most despotic in f *Wholesome Constitution.*

the

Government. the World; yet the Conſtitution is founded on a ſuch excellent Maxims, and the ſeveral Offices and Regulations in the Government ſo well calculated for the public Benefit, that there is, perhaps, no Nation in the World which enjoys more reaſonable Liberty, or whoſe Perſons and Properties are better ſecured againſt the Violence and Oppreſſions of Officers belonging to the Crown. As ſo vaſt a Power is veſted in the Emperor, the *Chineſe* think too much Care cannot be taken in forming the Minds of the Princes who are next to the Throne.

Qualifications ACCORDING to *Confuſius*, a virtuous Prince ought to have nine Qualities, or do nine Things. 1. To accompliſh and govern himſelf well, that he may be a Guide and Example to all his Subjects. 2. To honour and cheriſh Men of Learning and Virtue, and frequently to converſe with, and conſult them upon the Affairs of his Empire. 3. To love his Uncles, his Couſins, and all other Princes of the Blood; to grant them thoſe Favours and Rewards which they deſerve, as well as to let them ſee, that he values and prefers them before all other Perſons within his Dominions. 4. To be reſpectful and courteous to his Nobility, which are not of the Blood-Royal, advancing them to Wealth and Honour, that the World may ſee how much he conſiders them above the common Sort. 5. To incorporate himſelf, as it were, with the reſt of his Subjects, *In Princes.* to equalize and unite his Heart to theirs, and to regard and eſteem them as Part of himſelf. 6. To love his People with true Affection, to rejoice in their Welfare, and their Joy, and to be afflicted at their Calamity and Sadneſs; ſo that the meaneſt Perſon in the Empire may be perſuaded, that the Sovereign loves him as one of his Children. 7. To invite to his Court all Sorts of Workmen, and Artiſts, for the quick Diſpatch of all publick and private Buſineſs. 8. To careſs and treat with all imaginable Civility and Liberality, foreign Ambaſſadors, that they may perceive him endowed with a royal and generous Soul; to take Care alſo, that they may return into their reſpective Countries with full Security and Satisfaction. 9. To cheriſh all the Lords of the Empire, and treat them in ſuch a Manner, that inſtead of harbouring the leaſt Thought of Revolt, they may become the Bulwarks and Fortreſſes of the State [a]. By obſerving theſe Rules, the Commentators ſay a Prince will acquire Renown, and anſwer the End of his Advancement.

Tyranny deteſtable. THE *Chineſe* have the ſtrongeſt Averſion to Tyranny and Oppreſſion, which they ſay proceeds not from the Abſoluteneſs of the Prince's Power, but from the Irregularity of their Paſſions, and Perverſeneſs of their Wills, in Oppoſition to both the Voice of Nature, and Laws of God. The *Chineſe* are of Opinion, that the Obligation, which is laid on their Kings not to abuſe their Power, is a Means rather to eſtabliſh, than deſtroy it; and that the Reſtraint, which they lay on their Paſſions, does no more diminiſh their Power, or Authority here on Earth, than the like Conſtraint derogates from the Majeſty and Power of the Almighty, who is not the leſs powerful, becauſe he cannot do Evil [b].

SECT. III.

Of the Emperor's Authority, Grandeur, *and* Family.

1. *His* Authority, Councils, *and* Seals.

Can raiſe Taxes: Chuſe a Succeſſor: Diſpoſes of Employs. Changes of Miniſters, without any Noiſe. Ennobles the Dead: Deifies Perſons. Farther Power. Checks upon his Authority: Is told his Faults: Intereſt. Examines every Thing. Councils of State. The Imperial Seal. Seals of Princes, and the Quân.

THE Emperor's Authority is abſolute. Although every one be perfect Maſter of his Eſtate, and enjoys his Lands free from Moleſtation; yet the Emperor can lay what Taxes he thinks fit upon his Subjects, to ſupply the preſſing Wants of the State. This Power, however, he ſeldom makes Uſe of, and never without the utmoſt Neceſſity. There is a Cuſtom likewiſe of exempting every Year one or two Provinces from bearing their Proportion in the Tax, eſpecially if any of them have ſuffered through the Sickneſs of the People, or if the Lands, through unſeaſonable Weather, have not yielded ſo good an Increaſe as is uſual. No Sentence, of any Tribunal whatever, is of Force till ratified by the Emperor: But thoſe that proceed immediately from himſelf, are perpetual and irrevocable; the Vice-Roys and Tribunals of the Provinces being obliged to have them regiſtered and publiſhed immediately in all Places of their Juriſdiction.

HE chuſes, for his Heir, ſuch of his Sons he judges fitteſt to ſucceed him; and if he thinks there is none of his Family capable of governing well, pitches on one of his Subjects, whom he deems moſt worthy. But Inſtances of this Kind are only to be found in the earlieſt Times [c]. In caſe he prefers, to the eldeſt Son, one who has more Merit, his Name becomes immortal: But if after being declared his Succeſſor, he becomes

[a] *Magalhaens*'s Relation of *China*, p. 193, *& ſeq.* an Inſtance before, *p.* 119. d.

[b] *Le Comte*'s Memoirs of *China*, p. 248.

wantiug in his Duty, or commits any great Mis- demeanour, it is in the Emperor's Power to exclude him, and name another in his Place; for otherwise his Majesty would lose his Reputation. The late Emperor *Kang-hi* deposed, in a very singular Manner, his only Son by his lawful Wife, on suspecting his Fidelity. It was surprizing to see him, who but a little before was almost equal to the Emperor, loaded with Irons. His Children and principal Officers were involved in the same Fate; and the public Gazettes were immediately filled with Manifestos, wherein the Emperor informed his Subjects of his Reasons.

THE Emperor disposes, in the same Manner, of all the Employments of the Empire, without being obliged to confer them on the Persons proposed by the Tribunals, although he generally confirms their Choice, after he has himself examined those to whom the Employments fell by Lot, in the Manner hereafter explained. As to the principal Posts of *Tsong-tú*, Vice-Roy, *&c.* they are always nominated by the Emperor himself, who raises and degrades them according to their Capacities and Merits (for, generally speaking, no Place in the Empire is venal;) even the Princes of the Blood have no Right to either their Titles, or Honours, without his express Permission. When his Conduct does not answer the Expectation of the Public, he loses his Dignity and Revenues, by Order of the Emperor; and is no longer distinguished, except by the yellow Girdle, worn by Men and Women of the Imperial Blood, who are allowed but a moderate Pension out of the Imperial Treasury [a].

SUCH Changes in *Europe* would cause Heartburnings and Factions in the State: But in *China* they are brought-about without any the least Disturbance: They create no Manner of Trouble, if they are done for the public Good. Nay, in case they are the Effects of personal Hatred, or violent Passion, yet, if his Government be for the general equitable and just, the Subjects little concern themselves at his turning-out Ministers.

THE Reader will have a plain Proof of the Absoluteness of the Emperor's Power, from a Passage which happened during the late War with the *Eluth Tartars*. This Prince having, with a small Force, defeated a mighty Army under the Command of the Emperor's Brother, who killed his Father-in-law, who commanded the Artillery: *Kang-hi*, less concerned at the Loss of the Battle, than of his Brother's Honour, sent for him immediately to Court, to be tried before a Council of the Blood, whom he assembled in his Palace. The Prince, who was on all other Accounts a Person of singular Merit, surrendered himself, with the same Humility, as the meanest Officer in the Army would have done; and without staying till Sentence was pronounced, condemned himself, acknowledging that he deserved Death. *You deserve it*, said the Emperor: *But you ought, in order to recover your lost Honour, to seek your Death in the Midst of the Enemy's Troops; not here, in the Midst of* Pe-king, *where it can only augment your Disgrace.* At last the Emperor was inclinable to pardon him: But the Princes, who thought themselves in some Measure disgraced by this Action, earnestly begged of the Emperor to use his utmost Power to punish him; and his Uncle, who assisted at the Council, treated him with so much Scorn and Contempt, as is scarce to be imagined [b].

Emperor's Authority.

Without any Noise.

HIS Power extends over the Dead, whom he either disgraces, or honours (as much as if they were alive) when he hath a Mind either to reward or punish themselves, or their Families. He makes some, after their Decease, Dukes, others Counts, and confers upon them several other Titles [c]. As being High-Priest [d], he may canonize them as Saints; or, as they speak, *may make them naked Spirits.* Sometimes he builds them Temples; and, if their Ministry hath been very beneficial, or their Virtues very eminent, he commands the People to honour them as Gods [e], and Goddesses. An Instance of this you have in the Emperor *Van-lye*, in whose Time the Jesuits first entered *China*. That Monarch having put to Death a *Ko-lau* (Tutor to the hereditary Prince) for carrying-on an Intrigue with his Mother; the Lady laying to Heart as well the Affront, as Death of her Gallan, and withal fearing the same Destiny herself, within a few Days fell sick, and died. The Emperor hereupon, in some Measure to repair the Reputation of his Mother, by more than ordinary Honours, solemnly declared her *Kyew-lyen-pu-sa*, that is to say, *a Goddess of nine Flowers*; and erected her Temples over the whole Empire, where she is adored under this Title, like the Courtizan *Flora* among the *Romans* [f].

Ennobles the Dead.

Deifies Persons.

ABOUT four hundred Years ago, a *Bonza* of the Sect of *Tau-tse*, who never shave their Heads, yet marry, so insinuated himself into the Affec-

[a] *Le Comte*'s Memoirs of *China*, p. 254, *& seqq.* *Du Halde*'s *China*, p. 70, and 242. [b] *Le Comte*, before, *p.* 252, *& seq.* [c] See before, *p.* 113. in the Case of *Verbiest*'s Ancestors. [d] See *p.* 202. *Comte*, as before, *p.* 257. *Magalhaens*'s Relation of *China*, p. 256. [f] The *Ko-lau*, whose Name *Chang-kyn-cheng*, wrote a Commentary on the Books of *Confusius*, which is reckoned the most excellent in kind. The Emperor having been advised to burn that Work, answered, with his wonted Prudence, That only punished his evil Deeds, and not his good Works.

tion

Government.

tion of the reigning Emperor, by Means of his Skill in Chemiſtry, and magic Arts [a], that he looked-on him as ſomewhat more than Man during his Life, and after his Death declared him God and Lord of Heaven, the Sun, Moon, and Stars [b].

Farther Power.

IN ſhort, the Emperor's Power extends almoſt to every Thing. He can change the Figure and Character of their Letters, aboliſh any already received, or form any new one. He may likewiſe change the Names of Provinces, Cities, and Families: He may forbid the uſing of any Expreſſion, or Mode of ſpeaking, and revive thoſe which have been looked upon as obſolete: So that his Authority prevails over Cuſtom itſelf, which, in Matters of this Nature, was ſuppoſed among the *Greeks* and *Romans* to bear the ſole Sway.

Checks upon

BUT abſolute as his Power is, it is reſtrained by the ſame Law that enforces it. The Rule which exacts from his Subjects the Obedience of Children, obliges him to behave to them like a tender Parent. The *Chineſe* judge of the Merit and Talents of the Prince, ſolely by the paternal Affection which he ſhews to his Subjects, and the Care he takes to make them ſenſible of it by procuring their Happineſs. It is the general Notion of them, that an Emperor ought to attend to the minuteſt Matters which concern his People; that he is not elevated to ſo high a Station to divert himſelf; but that he ſhould place his Diverſions in diſcharging the Duties of his Truſt, and prove by his Application, Vigilance, and Tenderneſs for his Subjects, according to their Way of expreſſing it, that he is *the Father and Mother of his People*. When his Conduct is not agreeable to this Idea, he falls into the utmoſt Contempt: "Why (ſay they) has *Tyen* placed "him on the Throne? Is it not that he may be "a Father, and a Mother to us?"

his Authority.

A *Chineſe* Emperor is continually ſtudying how to preſerve his Reputation. Whenever any Province is afflicted with Calamities, he ſhuts himſelf in his Palace, faſts, denies himſelf of all Pleaſures, and publiſhes Decrees to exempt it from the uſual Taxes, and procure it ſufficient Relief. In thoſe Decrees, he affects alſo to ſet forth how deeply he is touched with the Miſeries of his People, ſaying, "That he carries them "in his Heart; that he bewails their Misfortune "Night and Day; and that all his Thoughts "are employed to render them happy:" Making uſe of many ſuch Expreſſions, to convince his Subjects how tenderly he loves them. The Emperor *Tong-ching* went ſo far as to order, that whenever any Part of the Empire was threatned with a Calamity, he ſhould be informed of it inſtantly by a Courier; that, as he believed himſelf accountable for every Misfortune that befel the State, he might, by his Conduct, appeaſe the Anger of *Tyen*.

THE Laws are a farther Check on the ſovereign Authority, in that they allow the *Mandarins*, whenever the Emperor commits any Fault in his Adminiſtration, tending to overthrow good Order in the Government, to repreſent them to him in the moſt humble and reſpectful Manner, by Way of Petition: And ſhould he either diſregard ſuch Remonſtrances, or puniſh the *Mandarin*, who had the Courage and Zeal to make them, he would entirely loſe the Hearts of the People; while the *Mandarin* would have the higheſt Applauſes, and his Name become immortal. There have been ſeveral of theſe Martyrs for the Public in *China*, who, when the Prince deviated from a wiſe Adminiſtration, ſpoke their Minds, without fearing either Puniſhment or Death itſelf.

BESIDES, the Tranquillity of the Empire depends intirely upon the Prince's Care to ſee the Law put in Execution. For ſuch is the Genius of the *Chineſe*, that were not the Emperor and his Council ſteady and attentive to the Conduct of the Vice-Roys and the Placemen, who are at a Diſtance from the Court, they would become ſo many petty Tyrants in the Provinces. This would raiſe a Spirit in that numerous People, who would begin to aſſemble, and ſoon break-out into a general Revolt. For it is the Character of this Nation, that if the firſt Sparks of Rebellion be not immediately quenched, they, in a ſhort Time, produce the moſt dangerous Revolutions; whereof *China* furniſhes ſeveral Examples. This has taught the Emperors, that nothing but an indefatigable Application, and their treading in the Steps of their wiſe Anceſtors, can ſecure their Authority [c].

IT may ſeem incredible, that a Prince ſhould have Time to examine himſelf the Affairs of ſo vaſt an Empire; as well as ſuch Crouds of *Mandarins*, whereof, every Day, ſome are advanced or marked down as Candidates for Places. But all Things there are ſo well digeſted, and the Laws ſo wiſe, plain, and well underſtood, that leaving no Room for Intricacy or Diſpute, two Hours a-Day are ſufficient for thoſe Purpoſes which, in other Countries, under different Laws and Regulations, might find Employment for thirty Kings: However that be, the famous *Kang-hi* would ſee every Thing with his own Eyes [d], and truſt no-body in chuſing Magiſtrates for his People [e].

[a] See before, *p.* 205. b. [b] *Magalhaens*'s Relation of *China*, p. 257, *&* *ſeq.* [c] *Le Comte*'s Memoirs of *China*, p. 259, *&* *ſeqq.* *Du Halde*'s *China*, p. 242, *&* *ſeq.* [d] This may well ſeem incredible in a Monarch of ſo vaſt an Empire, when the petty Princes of *Europe* are ſo much taken-up with other Affairs, that they have not Leiſure to look into thoſe of State. [e] *Le Comte*, as before, *p.* 270. *Du Halde*, as before, *p.* 7[illegible] Accor[illegible]

ACCORDING to *Le Comte*, the Emperor hath a two ſovereign Councils; one called *the extraordinary Council*, compoſed of Princes of the Blood only; the other *the Council in ordinary*, which, beſides the Princes, has ſeveral Miniſters of State, named *Ko-lau*, admitted into it. Theſe are they who examine all the Affairs of State, and make their Report to his Majeſty; from whom they have their final Determination [a]. *Du Halde* ſays, the great Council is compoſed of all the Miniſters of State, the chief Preſidents and Aſſiſtants b of the ſix ſupreme Courts, and three other conſiderable Tribunals; and that the Privy-Council conſiſts of the three Orders of Officers belonging to the Tribunal called *Nwi-ywen* [b], of which hereafter.

ONE of the moſt conſiderable Marks of the Imperial Authority is, the Seals; which are fixed to all the public Acts and Deciſions of the Tribunals. The Emperor's Seal is about eight Inches ſquare, and of a very fine Jaſper, a Stone highly c eſteemed in *China*; nor is any Perſon whatever allowed to uſe it in a Seal: It is called *Yu-ſhe*, and taken out of the *In-yu-ſhan*, that is, *the Mountain of the Agate Seal* [c]; concerning which the *Chineſe* relate ſeveral Fables. He dates his Letters, Decrees, and all public Acts, with the Years of his Reign, and Day of the Moon; as for Inſtance, the ſixteenth Year of my Reign, and the ſixth of the fourth Moon.

THE honorary Seals given to the Princes are d of Gold; thoſe of the Vice-Roys and great *Mandarins*, or Magiſtrates of the firſt Rank, are of Silver; and thoſe of the inferior *Mandarins*, or Magiſtrates, are only of Braſs or Lead; being larger or ſmaller, according to their reſpective Dignities. When it is worn-out, they are to acquaint the Tribunal, which ſends them another, obliging them to return the old one. Since the *Tartars* have ſettled in *China*, the Characters inſcribed on theſe Seals are both *Chineſe* and *Tartarian*, as the Tribunals are compoſed of both Nations. When the Emperor ſends Viſitors into the Provinces, to examine the Conduct of the Governors, Magiſtrates, and private Perſons, he gives each of them the Seal of their Office [d].

2. Majeſty *and* State *of the* Emperor.

Extraordinary Reſpect paid the Emperor: Reaſon given for it. Lofty Titles. Marks of Reſpect. f *The Omiſſion criminal. Officers of the Palace. Emperor's public Dreſs, Livery, and Arms: State going abroad: Viſiting the Provinces: Progreſs into* Tartary: *Great Magnificence: His Proceſſion to the Temple of* Tyen *in great State. Ambaſſadors maintained. Caution to* European *Kings. The Imperial Crown. Emperor's Revenue. Tribute, its Amount: Order in levying, and tranſmitting it: How conſumed in the Empire. Imperial Treaſury.* *Emperor's State.*

THE Veneration given to the Emperor of *China* is ſuitable to the abſolute Authority with which he is veſted. He is to Appearance a Kind of Divinity; the Reſpect which is paid him amounting to a Sort of Adoration; whereof many Inſtances occur in the Travels [e]. His Words are like ſo many Oracles; and the leaſt of his Commands as implicitly obeyed as if they came down from Heaven. None are ſuffered to ſpeak to him but on their Knees, not even his eldeſt Brother; or to appear before him with Ceremony in any other Poſture, unleſs he gives Orders to the contrary. Only the Lords who accompany him are permitted to ſtand before him; and to bend one Knee when they ſpeak to him. And this Reſpect deſcends to all Officers who repreſent his Majeſty. *Extraordinary Reſpect*

THE *Mandarins*, the Grandees of the Court, and the Princes of the Blood, proſtrate themſelves not only in the Preſence of the Emperor, but often even before his Chair, his Throne, and every Thing that is for his Uſe; kneeling down ſometimes at the Sight of his Habit, or his Girdle. When the *Mandarins* of the ſix ſovereign Courts come every fifth Day, on the firſt Day of the Year, and on the Emperor's Birth-Day, to perform theſe Ceremonies, in one of the Courts of his Palace, he is ſcarce ever preſent; and is ſometimes at a good Diſtance from the Palace when they pay him their Homages. If he falls dangerouſly ſick, it cauſes a general Alarm, the *Mandarins* of all Orders aſſemble in a vaſt Court of the Palace; and without regarding the Inclemencies of the Air, or the Rigour of the Seaſon, paſs both Nights and Days on their Knees, to teſtify their Grief, and intreat Heaven to reſtore his Health. For if the Emperor ſuffers, all the Empire ſuffers in his Perſon; his Loſs being the only Misfortune which his Subjects ſeem to dread. *Paid the Emperor.*

THEY think they ought to give theſe public Marks of Veneration for their Sovereign, in order to maintain Subordination, and inſpire the People, by their Examples, with the Obedience due to his Authority. In Conſequence of this Maxim they give him the moſt lofty Titles, calling him *Tyen-tſe*, the *Son of Heaven*; Whang-ti, *Auguſt* and *ſovereign Emperor*; Shing-whang, *Reaſon given for it.*

[a] *Le Comte*'s Memoirs of *China*, p. 263. [b] *Du Halde*'s *China*, p. 248. [c] See Vol. III. *p.* 542.
[d] The ſame, *p.* 242, *&* *ſeq.* [e] The ſame, *p.* 427, 476, *&c.*

Government. *Holy Emperor*; Shau-ting, *Palace-Royal*; Van-ſwi, *Ten thouſand Years* [a]. But the Emperor never uſes theſe Expreſſions when he ſpeaks of himſelf: For, in private, he only ſays *Ngo* or *I*. And when in public, ſeated upon his Throne, he employs the Word *Chin*, which ſignifies the ſame, only with this Difference, that no Perſon beſides can make uſe of it: Wherein, ſays *Magalhaens*, he is more modeſt than many of our Princes, who are continually ſwelling-out the Catalogues of their affected Titles with new Additions. The Language of the Palace is all pompous: They never ſay, ſound the Trumpets, beat the Drums, *&c.* but *Ta-lwi, let the Heaven let looſe its Thunder*. To give you to underſtand that the King is dead, they make uſe of the Words *Ping-tyen, he is gone, a new Gueſt, into Heaven:* Or of the Word *Pung*, that is to ſay, *a great Mountain is fallen*. Inſtead of ſaying the Gates of the Palace, they ſay, *Kin-mwen, the Gates of Gold*; and ſo of other Things [b].

Lofty Titles.

Marks of Reſpect. No Subject, be his Rank or Quality ever ſo great, dares ride on Horſeback, or paſs in a Chair before the Gate of his Palace; but as ſoon as he approaches it, he muſt alight, and not mount again till he comes to the Place appointed for that Purpoſe. In the Middle of the Courts of the Palace there is a Path, paved with large Stones, for the Emperor to walk-on when he goes-out; and thoſe who paſs along it muſt run faſt; which is a Mark of Reſpect obſerved in paſſing before a Perſon of Quality: But they have a particular Way of Running, which is eſteemed as graceful among the *Chineſe*, as the making a handſome Bow in *Europe*. The firſt Miſſionaries were obliged to learn this Ceremony before they ſaluted the late Emperor *Kang-hi* in his *Kong*, that is, *the great Hall or Parlour of his own Apartment*. As ſoon as the Perſon is entered the Door of the Hall, he muſt run in a graceful Manner till he comes to the Bottom of the Chamber fronting the Emperor: There he muſt ſtand a little while with both Arms ſtretched downwards, and, after bending his Knees, bow to the Ground three Times; then riſe-up again, and repeat this laſt Ceremony the ſecond and third Time, till he is commanded to advance and kneel at the Emperor's Feet [c].

The Omiſſion criminal. To be the leaſt wanting in Point of Reſpect to the Emperor, is reckoned criminal in *China*. One of the chief Crimes laid to the Charge of *Adam* the Jeſuit, by *Yang-quang Syen*, was, that he had omitted to inſert the North Star in a Globe he had made; inſinuating, that his Reaſon for ſo doing was, becauſe he would not acknowledge a King in *China*; and, conſequently, as a Rebel, deſerved Death. For it muſt be obſerved, that the *Chineſe* call the North Star *Ti-ſing*, or *the King of the Stars*, becauſe immoveable; ſaying, that all the other Stars turn-about it, as the Subjects turn-about the Emperor to do him Service; and for that Reaſon they pretend, that his Majeſty is on Earth, what that Star is in Heaven. The Judges, it ſeems, were raviſhed with this ridiculous Accuſation, which they looked-on as his ſtrongeſt Argument; but were much diſappointed, when on producing the Globe it appeared to be but half finiſhed, the Southern-Hemiſphere only having been delineated [d].

THE Officers of the Emperor's Houſhold, and thoſe appointed for governing the Affairs of the Palace, are very numerous. Formerly all was in the Hands of Eunuchs, of whom there were no fewer than ten thouſand [e], infamous for their Pride, Avarice, and Wealth. But ſo ſoon as the *Tartars* came to be Maſters of the Empire, they turned-out nine thouſand, reſerving only one thouſand for the Service of the innermoſt Retirements of the Palace. Nevertheleſs, by their Tricks and Flatteries, they ſo gained the youthful Affection of *Shun-chi*, that they recovered almoſt all their former Authority. However, after his Deceaſe, the four *Tartar* Tutors, or Regents, again deprived them of all their Credit, and reduced them to three hundred, to ſerve the young Monarch, the Queens, his Mother, and Grandmother, in the moſt ſervile Offices [f]. However, the Emperor in private Life, diſcovers but little of that Pomp which he diſplays when he appears on any public Occaſion, either in his Palace (when he gives Audience, or receives Homage, of which enough has been already ſpoken) or out of it.

HE always appears in public in a long, yellow Robe, or Veſt, that reaches to his Feet: The Ground of it is Velvet, embroidered all-over with a great Number of little Dragons with five Claws on each Foot, all emboſſed Work. Two large Dragons, with their Bodies and Tails twirling one within another, take-up both the Sides and Forepart of the Breaſt: They are in a Poſture ready, as it were, to ſeize with their Teeth, and Claws, a very fair Pearl, that ſeems to drop from the Skies; in Alluſion to what the *Chineſe* ſay, that Dragons play with the Clouds, and with Pearls. His Bonnet, his Buſkins, his Girdle, and in a Word all his Robes, are very magnificent, diſplaying a great deal of Grandeur and Majeſty [g].

ON this Occaſion it muſt be obſerved, that Yellow is the Imperial Livery, every Thing that belongs

belongs to him being that Colour [a], and the Dragon with five Claws, called *Long*, his Coat-of-Arms, firſt aſſumed by *Fo-hi*; neither of which any Subject whoever dares wear, without his Leave: But any-body may adorn his Habit with a Dragon having four Claws, called *Mang* [b].

THE Emperor ſeldom ſtirs-out of his Palace, except it be to hunt, to take the Air, or divert himſelf in his Parks and Gardens; to ſacrifice in the Temple of *Tyen*, or to viſit the Provinces. On theſe Occaſions he is always attended by a great Number of Lords of his Court, and Guards all on Horſeback: Every Thing glitters in his Train, the Arms, the Harneſs of the Horſes, the Streamers, the Umbrellas, the Fans, and all the other Enſigns of the Imperial Dignity. If it be only to hunt, or take the Air, the whole Cavalcade conſiſts of about two thouſand Perſons. The Princes and the Lords go foremoſt, followed by the *Ko-lau*, or Prime-Miniſters, and the great *Mandarins*: They advance cloſe to the Houſes on both Sides, leaving the Middle of the Streets clear. After them march twenty-four Standards of yellow Silk, embroidered with golden Dragons: Theſe are followed by twenty-four Umbrellas of the ſame Colour, and as many Fans, which are very curious, and rich. The Life-Guards [c] are cloathed in Yellow, each wearing a Kind of Headpiece, and in their Hands a Sort of Javelin, or Half-pike gilt; on the Top of which is the Figure of the Sun, a Creſcent, or the Head of ſome Animal. Twelve Footmen dreſſed in the ſame Livery, carry on their Shoulders the Emperor's Chair, which is very magnificent. At divers Places on the Road, there are a great Number of theſe Footmen to relieve one another. A Band of Muſic, of Trumpets, and other Sorts of Inſtruments, accompanies the Emperor, playing all the While: A great Number of Pages and Footmen cloſe the Proceſſion.

THIS was their Pomp formerly: But now that the Emperors appear oftener abroad, they are attended with a ſmaller Retinue. When *Kang-hi* viſited the Southern Provinces, he went by Water, going on-board a new Bark built on Purpoſe, accompanied with his Children, the great Lords, and a Croud of truſty Officers: But then there was ſuch a Number of Troops on the Road, that he ſeemed to march in the Midſt of an Army. He made but ſhort Stages, ſtopping, from Time to Time, to examine Things himſelf, and to be informed exactly of whatever occurred: But in his Return to *Pe-king*, his Bark proceeded Day and Night [d]. *Emperor's State.*

WHEN he went into *Tartary*, to take the Diverſion of Hunting, he then actually marched at the Head of an Army, as if he was going to conquer an Empire. He carried along with him no fewer than forty thouſand Men, who endured a great deal of Hardſhip, whether the Weather be hot, or cold; becauſe they incamp in a very inconvenient Manner: Nay, and it ſometimes happens, that, in one of theſe toilſome Huntings, there die more Horſes than he would loſe in a pitched Battle; but he counts the Deſtruction of ten thouſand Horſes as nothing. *Progreſs into Tartary.*

THE Jeſuits accompanying him thither ſay, that his Magnificence never diſplays itſelf more than on this Occaſion: There are ſometimes thirty or forty petty *Tartar* Kings who come to addreſs him, or pay him Tribute: Some of them bear the Name of *Han* [e], or *Khân*; that is to ſay, Emperor: They are all, like the *Mandarins* of the firſt Order, his Penſioners: He gives them his Daughters in Marriage; and to make them the more ſure to his Intereſt, declares himſelf their Protector againſt all the Weſtern *Tartars*, who often annoy them, and dare even attack *China* itſelf. During the Time they are in the Emperor's Camp, the Court is wonderfully ſumptuous, and the Tents of the *Mandarins* rich and glorious to Exceſs [f]. *Great Magnificence.*

MAGALHAENS deſcribes the Pomp and Order of his March, when he goes to perform Sacrifice, or any public Duty, the Ceremonies of which are fixed. This Proceſſion began with twenty-four Drums, ranged in two Files, and twenty-four Trumpets (made of *U-tong-ſhu*, a Wood greatly eſteemed by the *Chineſe*) more than three Foot long, and about eight Inches in Diameter at the Mouth: They are in the Shape of Bells, adorned with Circles of Gold, and ſuit very well with the Drums. Next to theſe were twenty-four Men in the ſame Livery, armed with Staves ſeven or eight Feet long, varniſhed with Red, and adorned with gilded Foliages: Then an hundred Soldiers carrying Halberts, the Iron Part of which ends in a Creſcent. An hundred Mace-Bearers, whoſe Arms were japanned with red Varniſh, mixed with Flowers, and gilded at the End. Four hundred great Lanthorns finely adorned. Four hundred Flam- *His Proceſſion to*

[a] Even to the Paper he uſes, or is uſed in the Orders, and Books that come out in his Name, *Navarette*, p. 50. [b] *Le Comte*'s Memoirs of *China*, p. 140. [c] *Navarette*, p. 12, accuſes the Jeſuit *Romanus* of Falſehood, in writing that they conſiſt of ſeventy thouſand Men: Likewiſe *Mendoza*, for ſaying, that ten thouſand guard the Palace on the Outſide continually, beſides thoſe who wait in the Courts, at the Gates, *&c.* [d] *Magalhaens*'s Relation of *China*, p. 334. *Le Comte*'s Memoirs of *China*, p. 170. *Du Halde*'s *China*, p. 247. [e] In *Le Comte*, *Ham*, or *Cham*. [f] *Le Comte*, as before, *p.* 170, *& ſeq.* [g] This Proceſſion is related from *Magalhaens*, both by *Le Comte*, p. 171, and *Du Halde*, p. 247.

Government. beaux made of a Wood, which burns for a long Time, and yields a great Light. Two hundred Spears, ſome ſet-off with Locks of Silk of various Colours; others with the Tails of Panthers, *The Temple of Tyen,* Foxes, and other Animals. Twenty-four Banners, on which were painted the Signs of the Zodiac, which the *Chineſe* divide into twenty-four Parts. Fifty-ſix other Banners, exhibiting the fifty-ſix Conſtellations, to which the *Chineſe* reduce all the Stars. Two hundred Fans (ſupported with long gilded Sticks) painted with divers Figures of Dragons, Birds, and other Animals. Twenty-four Umbrellas, richly adorned; and a Bouſet carried by Officers of the Kitchen, and furniſhed with Gold Utenſils; ſuch as Baſons, Ewers, *&c.*

AFTER theſe had marched in good Order, the Emperor followed on Horſeback, pompouſly dreſſed, with a grave, majeſtic Air: On each Side of him was carried a rich Umbrella, large enough to ſhade him, and his Horſe. He was ſurrounded with ten white led Horſes (whoſe Saddles and Bridles were enriched with Gold, and precious Stones) an hundred Spearmen, and the Pages of his Bed-Chamber.

In great State. NEXT to theſe appeared, in the ſame Order, all the Princes of the Blood, the Regulos, the chief *Mandarins*, and the Lords of his Court, in their Habits of Ceremony. Five hundred young Gentlemen belonging to the Palace, richly clad. A thouſand Footmen in red Gowns embroidered with Flowers, and Stars of Gold and Silver. Then thirty-ſix Men carried an open Chair, followed by another that was cloſe, and much larger, ſupported by an hundred and twenty Chairmen. Laſtly, came four large Chariots, two drawn by Elephants, and the other two by Horſes, covered with embroidered Houſings; each Chair and Chariot had a Company of an hundred and fifty Men following it for its Guard. This Proceſſion was cloſed with two thouſand civil, and as many military Officers, in magnificent Habits of Ceremony [a].

Ambaſſadors maintained. EVERY Ambaſſador is maintained at the Emperor's Expence, who furniſhes him with all Manner of Proviſions, Horſes, Litters, and Barks. He is lodged in the Royal Court of the Palace, whither the Emperor ſends him, every two Days, a Feaſt, ready-dreſſed, out of his own Kitchen, as a Mark of his Favour and Good-will. *Magalhaens*, who was lodged for two Years in the Royal Inn at *Pe-king*, obſerved, that the Emperor ſtudies to receive and entertain all Strangers with Splendor and Magnificence; although, through the Avarice of his Officers, this Civility is not always performed with the ſame Decency and Regularity [b].

ON this Occaſion, however, it may be proper to obſerve, that the Princes of *Europe* ought to be cautious how they ſend Letters, or Preſents, either by the Miſſionaries, the Merchants, or any other Way in their own Name; for the Moment they do, their Kingdoms will be regiſtered among the Tributaries [c]. The chief of which are, thoſe of *Korea*, *Japan*, of the *Mohammedans*, in whoſe Dominions they put *Samaul-han*, or *Samarkand*; *Pan-ko-la*, or *Bengal*, which they place to the Eaſt of *In-tu*, or *Indoſtân*; laſtly, *Me-te-na*, or *Medina:* For according to one of the *Chineſe* Geographers, *Mo-han-mû-te*, or *Mohammed*, in the Reign of *Ming-hyon-te*, ſent an Ambaſſador to pay Tribute [d]. The *Ruſſians* had a great Struggle to get this Term changed in their Favour; and although it was changed, yet the Embaſſy was conſidered as a Tender of Homage. The ſame Cuſtom prevails in all the other Parts of the *Indies*. Not that the *Indians* really believe them to be ſuch, but they will have it ſo to flatter their own Vanity: And hence often they take Occaſion to deſpiſe the Kings of *Europe*. The *Chineſe* Geography is adapted to this fine Notion; for ſuppoſing the Earth to be a Square, they pretend *China* takes-up the greater Part of it, and place the reſt of Mankind in the Corners [e].

WE muſt not forget to mention the Imperial Crown, which the Emperor wears upon ſome Occaſions. *Navarette*, who ſaw it ſeveral Times in certain Temples, ſays it is beautiful and myſterious: Its Shape is round, and ſomewhat long. There hang at it twelve Strings of Pearls, four of them over the Eyes, ſignifying, that his Majeſty's Eyes muſt be ſhut, that he may not ſee thoſe who have Cauſes before him; and that he will neither favour the Rich, nor pity the Poor; nor be led by Affection for his Friend, or Hatred to his Enemy.

FOUR Strings of Pearls fall-over the Ears, to ſhew that the Judges Ears are to be ſhut againſt the Intreaties of the great, and Tears of the poorer Suitors; and that he muſt only give Ear to Reaſon, Law, and Juſtice.

THE laſt four Strings hang behind, to expreſs with how much Judgment, Foreſight, Premedi-

[a] *Magalhaens*'s Relation of *China*, p. 334. [b] The ſame, *p.* 101. *Du Halde*'s *China*, p. 245. [c] In this they think they do them a great Honour, as reckoning all other Nations Barbarians. [d] Orig. *Min-hiuen*; others, for *Hiuen*, write *Hiven* and *Huen*. This ſeems to be the ſame with *Hiuen-tſong*, ſixth Emperor of the Dynaſty of *Tang*, who began his Reign in the Year 712, after Chriſt; but *Mohammed* had been dead above eighty Years before. [e] *Du Halde*'s *China*, p. 46.

tation,

tation, and Stayedneſs, Princes ought to weigh their Reſolutions; and how they are to be verſed in the Affairs of the Government [a].

THE Revenue of the Emperor is exceeding great: But it is not eaſy to ſay exactly what it amounts to; becauſe the annual Tribute is paid partly in Money, and partly in Commodities; and is collected from all Kinds of Lands, even the Mountains; from Salts, Silks, Calico, Linen, and divers other Goods; from the Ports, Sea-Coaſts, Cuſtom-Houſes, and Barks; from the Foreſts, Royal Gardens, Confiſcations, *&c* [b].

THE Subſidies, which the Laws grant, are ſo conſiderable, that, were the *Chineſe* leſs induſtrious, or their Lands leſs fruitful, this Empire, like the reſt of the *Indian* Kingdoms, would be only a Society of poor and miſerable Wretches [c].

THE Tribute paid by every Perſon in this populous Empire, between the Years of twenty and ſixty, amounts to immenſe Sums. They ſay, that formerly fifty-eight Millions of Inhabitants paid this Tax [d]. The Emperor maintains ten thouſand Barks, for bringing to Court the Tribute in Commodities, he receiving annually from the Provinces forty Million one hundred and fifty-five thouſand four hundred and ninety Sacks of Rice, Wheat, and Millet; each Sack weighing an hundred and twenty Pounds: One Million three hundred and fifteen thouſand nine hundred and thirty-ſeven Loaves of Salt, weighing fifty Pound each: Two hundred and ten thouſand four hundred and ſeventy Sacks of Beans; and twenty-two Million five hundred and ninety-eight thouſand five hundred and ninety-ſeven Bundles of Straw for his Horſes: In wrought Silks, and Stuffs, one hundred and ninety-one thouſand five hundred and thirty Pound Weight, each Pound of twenty Ounces: Four hundred and nine thouſand eight hundred and ninety-ſix Pound of unwrought Silk: Three hundred and ninety-ſix thouſand four hundred and eighty Pieces of Calico: Five hundred and ſixty thouſand two hundred and eighty Pieces of Linen Cloth: Beſides vaſt Quantities of Velvet, Satin, Damaſk, and other Silks; Varniſh, Oxen, Sheep, Hogs; Geeſe, Ducks, wild Fowl, Fiſh, Pot-herbs, Fruits, Spices; and many Sorts of Wine, which are annually brought into the Imperial Palace: The whole Revenues of the Emperor amounting, in *Chineſe* Money, to near two hundred Millions of *Lyangs*, or Ounces of Silver, each the Value of ſix Shillings and Eight-pence *Engliſh* [e]. It is this prodigious Income which makes the Emperor ſo powerful, and enables him, by his Standing-Armies, to keep his People in Awe. *Emperor's State.*

As the Lands are ſurveyed, and the Number of Families, as well as what is due to the Emperor, is known, it is eaſy to compute what each City ought to pay yearly [f]. The Tax-Gatherers of the reſpective Cities never ſeize the Goods of thoſe who are ſlow in paying, or ſeek to avoid it by continual Delays; for that would ruin Families: And, therefore, from the Middle of the Spring, when they begin to plow, to the Time of Harveſt, the *Mandarins* are not ſuffered to moleſt the Peaſants. The Courſe they take to oblige them to pay, is, by the Baſtonado and Impriſonment; or elſe by billetting on them the old Men maintained in each Town on the Emperor's Charity, who remain in their Houſes till they have conſumed as much as their Arrears amount to. *Order in levying.*

THESE Officers are accountable for what they receive to the *Pu-ching-tſe*, or Treaſurer-General of the Province, who is next to the Vice-Roy; to whom, at certain Times, they are obliged to remit the Money they collect. They ſend it on Mules, each carrying two thouſand *Lyang*, in two wooden Veſſels like long Barrels, which are ſecured with Iron Cramps. The *Pû-ching-tſe* accounts to the *Hû-pû*, or ſupream Tribunal, which ſuperintends the Finances; and the *Hû-pû* accounts to the Emperor. Nothing is better ordered than the Manner of impoſing and collecting the Tributes, allowing for ſome little Frauds in the under Officers. *And tranſmitting it.*

GREAT Part of the Imperial Commodities are conſumed in the Provinces, in Penſions, and in maintaining the Poor, eſpecially old People, and Invalids, who are very numerous; in the Salary of the *Mandarins*, Payment of the Forces, public Buildings, maintaining Ambaſſadors on the Road, *&c.* and the Overplus is carried to *Peking*, to defray the Expences of the Palace, and the Metropolis; where the Emperor maintains one hundred and ſixty thouſand regular Troops, excluſive of their Pay, which they receive in Money; beſides near five thouſand *Mandarins*, among whom there is diſtributed every Day, a certain Quantity of Fleſh, Fiſh, Salt, Herbs, *&c.* And once a Month they have Rice, Beans, Wood, Coals, and Straw; all which are deli- *How conſumed*

[a] *Navarette*'s Deſcription of *China*, p. 20. [b] *Du Halde*'s *China*, p. 244. [c] *Le Comte*'s Memoirs of *China*, p. 254. [d] See, before, the Diviſion of the People. [e] Which makes ſixty-five Millions eight hundred and thirty-three thouſand, three hundred and thirty-three Pounds, ſix Shillings and Eight-pence. By *Le Comte*'s Reckoning, it amounts to no more than twenty-one Million ſix hundred thouſand, including twenty-two Million of *Lyangs* in Specie. [f] *Le Comte* obſerves, that they are not troubled in *China* with ſuch Swarms of Officers, and Commiſſioners, as in *Europe*.

vered

Government. vered them very plentifully [a]. The ſame Cuſtom is obſerved with Regard to thoſe who are called to Court, or ſent from thence into the Provinces: They are ſerved, and all their Charges defrayed on the Road, being furniſhed with Barks, *In the Empire.* Horſes, Carriages, and Inns, which are kept at the Emperor's Expence. The Troops, which the Emperor pays, amount in all to above ſeven hundred and ſeventy thouſand: He likewiſe keeps five hundred and ſixty-five thouſand Horſes to remount the Cavalry; as well as for the Uſe of Poſts, and Couriers, to carry his Orders, and thoſe of the Tribunals, into the Provinces.

ALTHOUGH what comes by Water from the Southern Provinces, is alone ſufficient to anſwer the Expence at *Pe-king*; yet they are ſo jealous leſt the Revenue ſhould, at any Time, fall ſhort of the Diſburſements, that in that City there are Magazines of Rice before-hand, ſufficient for three Years [b].

ial Treaſury. THE Imperial Treaſure, or Revenue, is kept in the Tribunal of *Hû-pû* (which ſignifies the Treaſury) hereafter deſcribed: Beſides which, there are two Palaces at Court, ſet-apart for the Jewels and Rarities [c]; which *Magalhaens* thinks is the largeſt and richeſt Treaſure of the Kind in the World; in Regard the *Chineſe* Emperors have for above four thouſand Years been always adding to, without taking any Thing from it. For although the Succeſſion has been often changed, yet none of the Emperors ever touched either this, or the other Treaſure above-mentioned, on account of the rigorous Puniſhments which the new Family would have inflicted on them, and all their Race, for ſuch a Sacrilege. However, as the Commentator on that Author obſerves, an Exception muſt be made to Accidents by Fire, or Plunder by an Enemy: For in the Year 1644, the Rebel *Li-kung*, not daring to wait in *Pe-king* for the *Tartars*, ſpent eight Days in removing all that was valuable in the Palace [d].

3. *The* Emperor's Wives *and* Children, Kindred, *and* Burial.

Emperors's Wives: His Marriages: His three Queens. The Empreſs. Pomp obſerved in proclaiming her. The Emperor's Sons, and Daughters: His Kindred Male, and Female. Idle Prince puniſhed. The Emperor's Funeral. Imperial Sepulchre. Funeral of the Empreſs. Cruel Cuſtom aboliſhed.

ACCORDING to *Le Comte*, the Number of the Emperor's Wives, or Concubines, is not eaſily known; it being very great, and never fixed. They never were ſeen by any one, but himſelf; and ſcarce durſt a Man enquire about them [e]. But *Magalhaens* ſays, he has three thouſand Concubines. They are called *Kong-nyu*, or *Ladies of the Palace:* But they for whom the Emperor has the greateſt Affection, are ſtiled *Ti*, or *almoſt Queens*. When he pleaſes, he beſtows upon them Jewels, which they wear in their Heads, or upon their Breaſts, and a Piece of yellow Satin, or Damaſk, which they hang before their Doors, and cauſes them to be reſpected above all the reſt. Theſe Ladies have alſo their particular Titles and Dignities, and are divided into ſeveral Claſſes, or Orders, diſtinguiſhed by their Habits and Dreſſes, and other Marks of their Degrees, like the *Mandarins*. Their Sons, as alſo thoſe of the half Queens, are looked upon as Natural Children [f].

WHEN the Emperor, or the Heir of the Crown are pleaſed to marry, the Tribunal of Ceremonies employ Matrons, of good Repute, to chuſe out twenty the moſt beautiful, and moſt accompliſhed Virgins, that are to be found, without Regard to their Family, or Parentage. This done, they are carried, in cloſe Sedans, to the Palace, where, for ſome Days, they are examined by the Queen-Mother; or, if there be no ſuch Perſon living, by the principal Lady of the Court; who orders them to run, on purpoſe to find-out whether they have any ill Smell, or Defect about them. After ſeveral Trials, ſhe makes Choice of one, whom ſhe ſends to the Emperor, or Prince, with a great deal of Ceremony, accompanied with Feaſtings, Diſtribution of Favours, and a general Pardon for all Criminals of the Empire, unleſs Rebels, and Robbers. After this ſhe is crowned with a ſplendid Pomp, and at the ſame Time ſhe has beſtowed upon her many Titles, and large Revenues. As for the other nineteen Virgins, his Majeſty marries them to the Sons of great Lords, if there be ſo many who want Wives: If not, he ſends the Remainder back to their Parents, with Dowries ſufficient to marry them advantageouſly.

THIS was the Cuſtom of the *Chineſe* Monarch

[a] This Cuſtom is not unlike what was practiſed formerly in the Court of the Kings of *France*; where Bread, Wine, Meat, Candles, and the like, were diſtributed. From which Diſtributions, called *Livraiſons*, or *Deliveries*, came the Term *Livery*, applied to the Domeſtics, who were of the ſame Livery, or Diſtribution, that belonging to the ſame Maſter. *Du Halde*, p. 245. [b] *Le Comte*'s Memoirs of *China*, p. 312. *Du Halde*, *China*, p. 244. [c] See before, *p.* 19. a. [d] *Magalhaens*'s Relation of *China*, p. 311, and 314. *Comte*, as before, *p.* 60. [f] *Magalhaens*, as before, *p.* 291.

But at preſent the *Tartar* Emperors make Choice of the Daughters of ſome one of the Kings of the Weſtern *Tartars*, for their Wives and Queens [a]. Of theſe laſt there are three. Theſe are in a far higher Degree of Honour than the reſt, having each their Lodgings, their Court, their Ladies of Honour, and other Female Attendants. Nothing is wanting that can contribute to their Diverſion: Their Furniture, Cloaths, Attendants, being all rich and magnificent [b]. While *Navarette* was at *Pe-king*, the Emperor ſent the Dowry and Preſent to the Daughter of one of the four Governors, whom he afterwards married. He ſent her an hundred Tables full of ſeveral Things, and Sorts of Meat, two thouſand Ducats in Pigs of Silver, one thouſand in Gold, one hundred Pieces of Silk of ſeveral Colours, with Silver and Gold Flowers, and one hundred of Cotton [c]. The Sons of theſe three Queens are all legitimate, with this Difference only, that the Sons of the firſt are preferred to ſucceed in the Empire [d]. This firſt Queen reſides in the Imperial Palace with the Emperor, and has the Title of Empreſs; the other two in ſeparate Palaces [e].

THE Form obſerved in declaring the Choice which the Emperor *Yong-ching* [f] made of one of his Wives for Empreſs, was as follows. Immediately two of the moſt conſiderable Doctors, who are Members of the great Council, were deputed to make the Compliment, and remit it to the Tribunal of Rites; who, as ſoon as they received it, prepared themſelves for the Ceremony. On the Day appointed in the Morning, there was carried to the firſt, or Eaſtern Gate [g] of the Palace, a Kind of ſquare Table, on the Corners whereof were erected four Pillars, which ſupported a Sort of Dome: This little portable Cabinet was ſet-off with yellow Silk, and other Ornaments. At the prefixed Hour, a neat little Book (wherein was written the Compliment that was compoſed for the Emperor, with the Names of the Princes, Grandees, and thoſe of the ſupream Courts, who came in a Body to perform this Ceremony) being placed on the Table, ſome *Mandarins*, clad ſuitably to their Office, took-up the Machine, and went forward. All the Princes of the Blood, with the other Princes and Noblemen, had gone before, each according to his Rank, and waited near one of the inner Gates of the Palace. The Prime-Miniſters, the Doctors of the firſt Rank, the Preſidents of the ſupream Courts, and the other great Officers, *Tartarian* and *Chineſe*, as well civil as military, all magnificently dreſſed in their Habits of Ceremony, followed the Table on Foot. Several muſical Inſtruments made a very agreeable Concert, the Drums and Trumpets reſounding from different Parts of the Palace. *Emperor's Family.*

THEY began the Proceſſion; and when they were near the Gate, called *U-mwen*, the Princes joined them, placing themſelves at their Head. In this Manner they walked together as far as the great Hall of Audience [h]; which having entered, they took the Compliment off the portable Table, and placed it on another, prepared in the Middle of the Hall. Then all being ranged in handſome Order, they made their uſual Reverences before the Imperial Throne, as if his Majeſty had been there himſelf. After this, the Muſic began to play again; and the Preſidents of the Tribunal of Rites acquainted the chief Eunuchs of the Preſence, that all the Grandees of the Empire beſought his Majeſty to come, and ſit-down on his precious Throne. Theſe Words being carried to the Emperor, he appeared, and aſcended the Throne; when immediately two Doctors of the firſt Rank, having advanced near the Table, made ſeveral Reverences on their Knees: Then riſing-up, one of them took the little Book, and read diſtinctly, with a loud Voice, the Compliment made by this auguſt Company to his Majeſty; which was not very long. As ſoon as the Doctors had finiſhed it, and retired to their Places, the Emperor, deſcending from his Throne, returned to his Apartment. *Pomp obſerved in.*

AFTER Noon the Princeſſes of the Blood, the other Princeſſes, and Ladies of the firſt Quality, with the Wives of all the great *Mandarins* abovementioned, went every one, according to their Rank and Dignity, towards the Palace of the Empreſs; no Lord, or *Mandarin*, daring to appear: They were conducted by a Lady of Diſtinction, who, on this Occaſion, performed the Part of a Miſtreſs of the Ceremonies, as the Preſidents of the Tribunals had done that of Maſters. As ſoon as all the Ladies were arrived near the Empreſs's Palace, her firſt Eunuch preſenting himſelf, the Miſtreſs of the Ceremonies addreſſed him in this Manner: "I humbly beſeech the Empreſs, in "Behalf of this Aſſembly, to condeſcend to "come-out of the Palace, and place herſelf on "the Throne." The Womens Compliment is not carried in a ſmall Book, like the Emperor's; but they preſent a Leaf of a particular Sort of Paper, whereon it is written, with Variety of *Proclaiming her.*

[h] Where he gives Audience to Ambaſſadors, and preaches, or delivers Inſtructions two or three Times a Year.

Orna-

Government. Ornaments about it. The Empreſs accordingly came-out; and being ſeated on her Throne, erected in one of the Halls of her Palace, after the Paper was preſented, the Ladies ſtanding-up made two Courteſies, like thoſe made by the Women of *Europe*, which is the Faſhion in *China*. This Reverence is called *Van-fo* [a], as much as to ſay, *All Happineſs attend ye.* Then they fell on their Knees, and knocked their Foreheads once againſt the Ground, as the Tribunal of Rites had preſcribed: This done, they roſe, and ſtood-up in the ſame Order with profound Silence, while the Empreſs deſcending from the Throne withdrew [b].

The Emperor's Sons, THE Emperor's Sons, before they are married, reſide in the Imperial Palace; but, when married, are uſually ſent to ſome of the principal Cities of the Provinces, where they have Palaces built to receive them. All theſe Palaces, of which the Author had ſeen three [c], though much leſs than that of *Pe-king*, were vaſtly large, beautiful, rich, and ſurprizingly magnificent. They contained, ſome ten, ſome twelve, ſome more Apartments, with ſeparate Palaces on each Side, and a double Incloſure of Walls. When the Emperor ſent his ſecond, or third Son, to one of theſe Palaces, he gave him the Title of *King*. Thus he gave the Title of *Cho-vang*, or King of *Cho*, to him whom he ſent to *Ching-tu-fû*, the Metropolis of *Se-chwen*; becauſe this Province was anciently called *Cho*. Each of theſe Kings (or Regulos) had a thouſand Eunuchs to attend him, to take Care of his Affairs, and receive his Revenues: But theſe Kings had nothing to do in the public Affairs of the Province. Nevertheleſs the *Mandarins* were obliged to repair, four Times a Year, to the young King's Palace, to pay their Homage to him in the ſame Manner as they do to the Emperor at *Pe-king*; only with this Difference, that they give the Emperor the Title of *Van-ſwi*, or *ten thouſand Years*; but to theſe Princes, no more than that of *Syen-ſwi*, or *a thouſand Years.*

And Daughters. WITH Regard to the Marriage of the Emperor's Daughters, during the Reign of the *Chineſe* Monarchs, the Tribunal of Ceremonies picked out certain young Gentlemen, handſome, and ingenious, of the Age of fourteen, or fifteen: From theſe his Majeſty choſe one for his Daughter, or Siſter, to whom he gave a vaſt Dowry in Land and Jewels. Theſe were called *Tu-ma*, or *the Emperor's Kindred by his Wives.* They could not be *Mandarins*; yet they became very powerful, and were great Oppreſſors of the People. Before they had any Children, they were obliged, every Morning and Evening, to fall upon their Knees before their Wives, and knock their Heads three Times againſt the Ground: But ſo ſoon as they became Fathers, they were exempted from performing that Ceremony. The preſent *Tartar* Emperor marries his Siſters, and his Daughters, to the Sons of great Lords, who are not of the Blood-Royal; or to thoſe of the *Khâns* of the Weſtern *Tartars* [d].

ALL the Emperor's Kindred of the Male Line, whether they be great Lords or poor, and though fifteen or ſixteen Generations diſtant in Blood, have nevertheleſs ſome Penſion, according to their Dignities and Proximity of Alliance. They have all the Privilege to paint their Houſes and their Furniture with Red. But the preceding Family having reigned for two hundred and ſeventy-ſeven Years, the Deſcendants from it multiplied to ſuch a Paſs, that the Revenues of the moſt remote Degrees being too ſmall to live-on, ſeveral of them were reduced to follow Trades for their Subſiſtance. When *Magalhaens* entered firſt into the Empire, he met with one of them, in the Capital of *Kyang-ſi*, who was a common Porter; and, to diſtinguiſh himſelf from the reſt of his Companions, carried the Inſtruments of his Profeſſion at his Back, very bright, and varniſhed over with Red. There were an infinite Number of them in the Reign of the preceding Family, diſperſed all over the Empire; who, abuſing the Privileges of their Birth, committed a thouſand Inſolences and Extortions upon the poor People: But they were all utterly extirpated by the *Tartars*. The Kindred of the preſent Emperor are all great Lords and live at Court: But if their Dominion long endures, their Numbers multiplying, they will become no leſs burthenſome than the former. *Navarette* ſays, that the Palaces of the petty Kings of the Royal Blood are covered with glazed yellow Tiles; and that the Emperor ſtiles theſe and his other Kindred *Kin-chi-pau-iſe*; that is, *Golden Branches, and precious Leaves* [e].

THE Emperor's Kindred, in the Female Line, are of two Sorts. The firſt, they who deſcend from his Daughters. Theſe are not looked-upon as Princes of the Blood, or the Emperor's Kindred; nor have they any Right of Succeſſion to the Crown, though they ſhould have ſeveral Heirs Male: Which Cuſtom is alſo obſerved among the People. The ſecond Sort, are the Father, Brothers, Uncles, and other Kindred of the Queen

[a] *Van*, or *Wan*, ten thouſand; and *Fo*, *Happineſs*, or *Good-Luck*. [b] *Du Halde*'s *China*, p. 292, &
[c] In *Vu-chang fû*, *Ching-tu fû*, and *Hang-chong fû*; the two firſt Capitals of the Provinces of *Hu-quang*, *Se-chwen*; the third a chief City of *Shen-ſi*. He mentions ſeveral other Places where there are ſuch Pa
[d] *Magalhaens*'s Relation of *China*, p. 307, & *ſeqq.* [e] The ſame, *p.* 238. [f] *Navarette*'s Deſcrip
of *China*, p. 22.

the Emperor's Son-in-law, their Fathers, Brothers, Uncles, and other Kindred. Out of these two Sorts his Majesty makes Choice of some of the most considerable to compose the Tribunal of *Whang-sin*, as before-mentioned. But this second Sort of Kindred was extirpated also by the *Tartars* [a].

THE Emperor has a watchful Eye over the Behaviour of the Princes of the Blood; and punishes them severely when he thinks their Conduct not suitable to their Dignity. One of them happening to be a mighty Lover of Sports, especially Cock-fighting, (a common Diversion in the East) the Emperor, who could not bear to see him spend his whole Time in such low Diversions, told him of it: But, finding this of no Effect, he resolved to make an Example of him; and did therefore declare, that he had forfeited his Title and Honour of Prince: He was, besides, deprived of his Retinue, his Salary and his Quality, until he should, by some great and extraordinary Action, make it appear to the whole Empire, that he was not unworthy of the Blood from whence he sprang [b].

WE come now to the last Affair, relating to the grand Monarch of *China*; which is, his Funeral. So soon as the Emperor is dead, they set him in a rich Chair, which is carried by sixteen Eunuchs into the Middle of the Royal Hall of the Palace of *Jin-chi Tsyen*, or *Palace of Mercy and Prudence* [c], where they lay the Body on a rich Bed; and soon after, with a World of Ceremonies, and Funeral Music, they put-it into a Coffin, which costs two or three thousand Crowns: It is made of *Kong-syo-mo*, or *Peacock Wood* [d]; so called, because the Lines and Veins of it form certain Figures that resemble the Eyes in a Peacock's Tail. The *Chineses* affirm, that this Wood preserves dead Bodies from corrupting; for the Coffin is usually left for several Months, and sometimes Years, in the same Place. The Funeral Pomp is performed in this Palace with so many Ceremonies, and such incredible Magnificence, that it would require a long Description [e]. After this, they carry the Body to be interred in the Imperial Wood; for so they call the Place where the Imperial Sepulchres are: The Grandeur of which, the Palaces, the Wealth and Ornaments that belong to it, the Walls that environ it, the *Mandarins* and other Servants that are employed in continual Attendance, and the Soldiers that guard it, would well deserve a particular Relation [f].

Emperor's Funeral.

ALL Men were obliged formerly to wear three Years Mourning when the Emperor died; but of late, this has been changed into a few Days. *Navarette* was in *China* at the Time of the Mourning for the Father of *Kang-hi*, which lasted four or five Days [g]. During these Days, the *Mandarins* of every City and Town met in some public Place, where they fasted, wept, and performed the Ceremonies usual when a dead Body is present [h].

Funeral of the Empress.

THE Account given us of the Funeral of that Emperor's Mother is more particular: All went in deep Mourning for fifty Days; during which Time the Tribunals were shut-up, and they never spoke of any Business to the Emperor. The *Mandarins* spent the whole Day at the Palace in Weeping, or at least the Appearance thereof: Several of them passed the Night there, sitting in the open Air, though very cold Weather: Even the Emperor's Sons slept in the Palace, without putting-off their Cloaths. All the *Mandarins* on Horseback, clad in White, and with few Attendants, went for three Days together to perform the usual Ceremonies before her Tablet; their Caps being stripped of their red Silk, and all other Ornaments. When her Corpse was carried to the Place where she was to lie in public State, the Emperor ordered, that it should pass through the Gates of the Palace; thereby to discountenance the superstitious Notion of the *Chinese*, who make new Doors to their Houses for carrying-out the Bodies of their Relations; and then close them up again, to prevent renewing their Grief too often by a Remembrance of the Deceased every Time they passed through them. Out of the City, they built a vast and stately Palace (all of new Mats, with Courts, Halls, and Apartments) for the Body to remain in, till it was carried to the Imperial Burying-place [i].

Cruel Custom abolished.

FOUR young Ladies, who had served her affectionately, had taken their Attire, according to the *Tartar* Usage, in order to go and sacrifice themselves before their Mistress's Corpse; but the Emperor prevented so barbarous a Practice. He likewise prohibited, for the future, another extravagant Custom among that People, of burning the Riches, and even sometimes Domestics of great Men, along with their Bodies, on the Funeral Pile [k]. We shall conclude this Section with observing, that the Successor never sees the Wives and Concubines of the deceased Emperors, or so much as enters their Palaces: Such is their Respect for their Predecessors [l].

[a] *Magalhaens*'s Relation of *China*, p. 239, & *seq.* [b] *Le Comte*'s Memoirs of *China*, p. 251. [c] In the Emperor's Palace. See before, *p.* 19. a. [d] It grows in the Province of *Se-chwen*. Government.

SECT. IV.

Officers *in the* Government, *for Civil Affairs.*

The Quân, *or* Mandarins: *Nine Orders of them. Titles of Honour: How diſtributed, in the Emperor's Privy Council. Officers, civil and military. Badges of their Orders. Of the Princes: Their different Habits: Their Places: Badges of their Offices: Other Marks of Diſtinction.*

The Quân, *or* Mandarins.

IT hath already been obſerved, that no Perſon can enjoy any Poſt whatever in the Government of *China*, without having merited it by his Learning and Abilities. As ſoon as they are employed in the Service of the Empire, they are qualified with the Title of *Quân*, which ſignifies *Præpoſitus*, or *a Perſon ſet before others*. The *Portugueze* have ſtiled them *Mandarins* or *Commanders*; which Term other *European* Nations have generally adopted; and to this they have the Title of *Lau-ya* or *Lord* annexed, to denote their Nobility.

Nine Orders of them.

THERE are nine Orders of the *Quân* or *Mandarins*; which are in ſo perfect a Subordination to each other, that nothing can be compared to the Reſpect and Submiſſion which the *Mandarins* of an inferior Order bear to thoſe who are of a ſuperior.

To obtain any of theſe, according to *Magalhaens*, a Perſon is firſt made a third Aſſiſtant to the *Chi-hyen*, (or Governor of a City of the third Rank;) and is called *Tyen-tſe*, being then of no Order. But, if he acquit himſelf well for three Years, then the Governor of the City gives him a Certificate to the Governor of the City whereon it depends; and the Governor of that City to the Governor of the Capital of the Province. This laſt Governor certifies to the two grand Tribunals of his City, and they to the Vice-Roy. The Vice-Roy writes to the grand Tribunal of the *Mandarins*, (at *Pe-king*) and they to the Counſellors of State, who inform the Emperor; and by him generally the Candidate is made a *Mandarin* of the eighth or ninth Order [a].

Titles of Honour,

EACH of theſe nine Orders is divided into two Degrees: Thus, ſuch a one is ſaid to be a *Mandarin* of the ſecond Degree of the firſt, ſecond, or third Order; or elſe, of the firſt Degree of the firſt, ſecond, or third Order. Theſe are no more than Titles which the Emperor gives them, without any reſpect to their Employments. For though uſually they are of Orders higher or lower, according to the Dignity of their Employments, yet that is no general Rule; becauſe ſometimes it happens, that to reward a Perſon in an inferior Office, the Emperor makes him a *Mandarin* of the firſt or ſecond Order. On the other Hand, to puniſh a Perſon whoſe Office belongs to the ſuperior *Mandarins*, he degrades him to a *Mandarin* of ſome inferior Order [b].

Offices.

THE Manner how the *Mandarins* of theſe nine Orders are employed in the Government of Affairs, appears, in ſome Meaſure, from the Diſtribution made of them in the Tribunal of the Emperor's Privy-Council, called *Nwi-ywen* [c], or *The Inner Court*, becauſe within the Imperial Palace at *Pe-king*. This Tribunal, or Court, is compoſed of three Claſſes of *Mandarins*: The firſt Claſs conſiſts of the *Ko-lau* [d], or Miniſters of State; who, with the chief Preſidents of the ſupreme Tribunals, and principal Officers of the Army, make the firſt Order of *Mandarins*. This is the higheſt Degree that the *Literati* can arrive at; unleſs, in Return for very important Services done the Nation, the Emperor ſhould think proper to confer more honourable Titles on them; ſuch as thoſe equalent to Earls, Dukes, &c. The Number of the *Ko-lau's* is not fixed; but depends on the Will of the Prince, who chuſes them at Pleaſure out of the Tribunals: However, they are ſeldom more than five or ſix [e]; and one of them is commonly more diſtinguiſhed than the reſt, and ſtiled *Shew-ſyang*: He is Preſident of the Council, and in greateſt Confidence with the Emperor.

THE Tribunal of theſe *Ko-lau's* is kept in the Palace, on the left Hand (which is accounted moſt honourable) of the Imperial Hall; where the Emperor gives his public Audience, and receives the Veneration and Homage of the *Mandarins*. As there are in the Palace ſeveral magnificent Halls pompouſly adorned, each of the *Ko-lau's* is aſſigned one; in which he examines whatever comes under his Cognizance, and has the Name of the Hall added, as a Title of Honour to his own: For Inſtance, ſuch a *Ko-lau*, *Supreme Hall of the Middle*. Their Buſineſs in this Tribunal is to inſpect almoſt all the Petitions of the ſupreme Tribunals; whether relating to War or Peace, civil or criminal Matters: After which Examination, they remit them to be preſented to the Emperor, unleſs they have any Objection thereto, wherewith they acquaint his Majeſty; who receives or rejects their Advice, as he thinks proper; reſerving ſometimes ſolely to himſelf the Cognizance of Affairs, and the Examination of the Memorials that are preſented to him.

THE *Mandarins* of the ſecond Claſs are, as it were, Aſſiſtants to the former; and out of their

[a] *Magalhaens*'s Relation of *China*, p. 245. [b] The ſame, *p.* 196, *& ſeq.* [c] Called before, *p.* 14. *d.* *Kyu-ywen*, perhaps by Miſtake. [d] Called in the *Tartar* Language *Aliagata* [e] *Navarette* ſays, *p.* 18, that they uſed to be ſeven, and that ſince the Acceſſion of the preſent Family the Number is doubled, by adding ſeven *Tartars*. They ſit at a round Table.

Num-

Number are appointed the Vice-Roys of Provinces, and the Presidents of other Tribunals. They bear the Title of *Ta-hyo-tse*, that is, *Literati* or *Magistrates* of approved Capacity; and are taken out of the second or third Order of *Mandarins*. Those of the third Class in this Tribunal, who are called *Chong-shu-ko*, that is, *The School of Mandarins*, are the Emperor's Secretaries; whose Office is to see all Matters, deliberated-upon in the Tribunal, reduced to Writing: These are taken out of the fourth, fifth, or sixth Order of *Mandarins*. In this Tribunal the principal Part of the prime Affairs are examined and determined; unless the Emperor assembles the great Council for that Purpose [a].

THESE *Quân*, or Placemen, are properly distinguished into Civil and Military. The first Sort are by some called *Literary Mandarins*, and divided into Civil and Criminal: But this Division tends to breed Confusion, since they are all in Effect of the literary Kind; as rising by Study, though of different Natures; passing their Examinations, and taking their Degrees. If there be any therefore to whom the Title of *Literary Quân* may be appropriated, it is those who preside over the *Literati* or Students in every City, where there is a Tribunal or Court for the Purpose.

THE Number of Civil *Mandarins*, dispersed through the Empire, amounts to thirteen thousand six hundred and forty-seven; and that of the Military, eighteen thousand five hundred and twenty; in all, thirty-two thousand one hundred and sixty-seven. Four Times a Year is printed an exact Catalogue of them; wherein their Names, Titles, Country, and the Times when they took their Degree, are mentioned [b]. According to *Navarette*, there are two thousand four hundred at Court; where every Province has its *Mandarin*, who is in the Nature of its Protector, and Solicitor-General [c].

THE nine Orders of *Mandarins*, both Civil and Military, are distinguished by the following Marks, according to the Relation of *Adam Schaal* the Jesuit [d]. Those of the first Order wear, at the Top of their Cap or Bonnet, which ends in a very flat Cone, a Carbuncle enchased with Gold, and a Pearl at the Bottom before. Upon their Girdles also glitter four Stones, highly esteemed in *China*, enchased with Gold, and cut into long Squares, three Fingers broad, and four in Length [e].

THE *Mandarins* of the second Order wear, at the Top of their Caps, a large Ruby; and another which is less at the Bottom. Their Girdles are adorned with Hemispheres of Gold, embellished with Flowers of the same Metal, and a Carbuncle in the Middle. They of the third Order have, at the Point of their Caps, a Carbuncle enchased with Gold, and a Saphire at the Bottom: Their Girdles are set with Hemispheres, adorned with Flowers only. The Badge of the fourth Order is a Saphire, at the Top of their Cap; and at the Bottom another, but less in Size, having, upon their Girdles, plain Hemispheres of Gold. The *Mandarins* of the fifth Order wear only a Saphire in their Caps; in other Things, like those of the fourth Order. They of the sixth, at the Top of their Bonnets, wear a Crystal neatly shaped; and at the Bottom a Saphire: Their Girdles being covered with Pieces of Rhinoceros's Horns set in Gold. They of the seventh Order, have nothing but an Ornament of Gold, without any Jewel at the Bottom, having their Girdles covered with thin Pieces of Rhinoceros's Horn. The *Mandarins* of the ninth Order wear a Bonnet of Satin purfled with Silver, and Pieces of Buffalo's Horns, inchased in Silver, upon their Girdles.

Officers Civil.

Their Orders.

THE great Lords, who are above all the nine Orders of the *Mandarins*, are distinguished from the first Order only by the Stones in their Girdles, which are round, with a Sapphire in the Middle. The Regulos, instead of a Carbuncle, wear, at the Top of their Bonnets, a Ruby, adorned with Pearls, and a Flower of Gold fastened at the lower-End of their Bonnets, that come-over their Foreheads. The Emperor himself wears a Bonnet of the same Form, and at the Point of it a Pearl as big as a Pigeon's Egg, with several other lesser Pearls dangling underneath: His Girdle also dazzles the Eye with the precious Stones, and Pearls, with which it is covered. The literary Graduates also have their distinctive Marks. The Licentiates, or Masters of Arts, wear, upon the Top of their Heads, a Dove of Gold, or gilt upon a Bodkin of the same Metal, with flat Pieces of Rhinoceros's Horns upon their Girdles. The Bachelors of Arts wear the same Doves, but of Silver only, and Plates of Buffalo's Horns upon their Girdles.

Of the Princes.

THE several Orders of *Mandarins* are distinguished likewise by their Habits. The Civil *Mandarins* of the three first Orders, and the

Their different Habits.

[a] *Magalhaens*'s Relation of *China*, p. 197, *& seq.* *Du Halde*'s *China*, p. 248. [b] *Magalhaens*, as before, *p.* 249. *Du Halde*, as before, *p.* 251. [c] *Navarette*'s Description of *China*, p. 19. [d] This Account is taken from the Notes added by the *French* Editor of *Magalhaens*. [e] This Stone, called by the Chinese, *Yu-tse*, is brought from the Kingdom of *Kashghar* by the *Mohammedan* Merchants, who come from thence to *China* every three Years under Pretence of an Embassy. It is somewhat greenish, and resembles a Jasper, only that it is harder, somewhat transparent, and inclining to white. So says *Magalhaens*: But we find a Mine of the same Stone in *China*.

Government. Military of the four firſt, are diſtinguiſhed from a the inferior Orders by their Garments, enriched with Figures of Dragons. They alſo wear a certain Sort of Surtouts, embroidered with Birds and Beaſts of different Kinds, according to their different Orders: But as they are not bound to wear theſe Surtouts conſtantly, eſpecially in Summer, by Reaſon of the exceſſive Heats, they are not ſuch ſure Marks of Diſtinction, as thoſe before-mentioned, which none can quit, or change, without a Breach of the Laws: The ſame Laws b have regulated the Places, which every one is to *Their Places.* take, when they meet in the Palace. The Civil *Mandarins* ſtand on the Left of the Emperor's Throne, which in *China* is the moſt honourable Place: The Military *Mandarins* upon the Right, his Majeſty facing the South [a].

Badges of their Offices. THE *Mandarins* wear likewiſe Badges, which diſtinguiſh their Employments, as well as their Orders. This Badge, we are told, conſiſts of a Piece of ſquare Stuff, worn upon their Breaſts, c richly worked, and carrying, in the Middle, the Devices peculiar to their reſpective Poſts. The Civil *Mandarins* have, ſome a Dragon with four Claws, others an Eagle, or a Sun; and ſo of the reſt. In like Manner, thoſe of the military Claſs bear Leopards, Tigers, Lions, &c. They likewiſe affect a Diſtinction in their Girdle. Before the *Chineſe* took the *Tartarian* Habit, they were divided into ſmall Squares, and faſtened before with great Claſps, made of the Horns of Buffa- d los and Rhinoceros's, of Ivory, Tortoiſe-Shell, Eagle-Wood, Silver, Gold, and Jewels; the Materials differing according to the different Employments of the Perſons. None but a *Kolau* might wear one of Jewels, which was given him by the Emperor, when he put him in Poſſeſſion of his Office; but at preſent a Silk Girdle is all that is worn. The *Mandarins* are extreamly jealous of the Badges of their Dignity, which diſtinguiſh them not only from the com- e mon People, but alſo from the ſimple *Literati*, and all thoſe of an inferior Rank among themſelves [b].

Other Marks of Diſtinction. BOTH Princes and *Mandarins* are diſtinguiſhed alſo by their Penſions, their Houſes, the Number of their Servants, the Shape and Bigneſs of their Sedans; ſo that when they appear in public, their Quality is preſently known. When the *Chineſe* governed the Empire, even private Men wore their Marks of Diſtinction; inſomuch f that the Degree and Rank of every Man of Letters might be known by the Faſhion, or Colour, of his Garb [c].

1. *Their* Titles, *and* Power; *with the Checks on their* Authority.

Provincial Governors. Inferior Governors. Of Diſtricts, and Cities. Great Subordination. Places diſtributed by Lot. Frauds in Drawing. All Employments ſold. Remarkable Inſtance. Checks on Governors. Accountable for all Commotions. None preferred in his native Country; and why. Triennial Examinations. Certificates given; which procure Rewards, or Puniſhments. Cenſors or Inſpectors, great Precaution in their Proceedings. Emperor's Progreſs through the Provinces. Inſtance of ſpeedy Juſtice on a great Lord. The Imperial Gazette, Articles contained in it: Its Uſe and Authority: Moſt effectual Remedy.

CHINA is governed under the Emperor, by p several Officers. There are, in each Pro- Go vince, five general Officers, *viz.* the *Fu-ywen*, who is the ſame with a Vice-Roy, or Governor, in *Europe*, and four Aſſiſtants; the *Pu-ching-tſe*, or Treaſurer-General; the *Ngan-cha-tſe*, or criminal Judge; the *Yen-tau*, who ſuperintends the Poſt-Offices, Salt-Offices, &c. and the *Lyang-tau*, who has Care of the Proviſions collected by Way of Tribute. In Quality of Counſellors to the Vice-Roy, theſe four Officers are obliged, d ſeveral Times every Month, to attend his Tribunal, on Matters of Importance, relating to the Province. Some Provinces being divided into two Parts, on account of their Largeneſs, have two Vice-Roys, like that of *Kyang-nan*. Superior ſtill to the Vice-Roy, there is another Officer, called the *Tſong-tû* [d], who has ſometimes two or three Provinces under his Juriſdiction: Such as the *Tſong-tû* of *Shen-ſi* and *Se-chwen*, *Quang-tong* and *Quang-ſi*. To theſe great Officers the e Emperor immediately iſſues-out his Orders, and they take Care to tranſmit them, off-hand, to all the Cities of their Diſtrict. However great the Authority of the *Tſong-tû* may be, it does not in the leaſt diminiſh that of the particular Vice-Roys; but every Thing is regulated in ſuch a Manner, that they never have any Conteſt about Juriſdiction [e]. Sometimes the *Tſong-tû* has the Care only of one Province; ſuch as *Hû-quang*, *Shen-ſi*, &c. But then, on Account of f its great Extent, it is divided into two Governments, and each Government has its proper Vice-Roy; who are both ſubordinate to him, although he is their Superior only in certain Matters: But he has alwas a Right of deciding Cauſes, in caſe of Appeals from the Tribunals of

[a] *Magalhaens*'s Relation of *China*, p. 298, *& ſeqq.* [b] *Du Halde*'s *China*, p. 252. [c] *Le Comte*'s Memoirs of *China*, p. 297. [d] There are ſubordinate to the *Tſong-tû*, two Generals, one for the *Tartar*, the other for the *Chineſe* Troops, with their inferior Officers, of which hereafter. either of the provincial Governors [a]. The Provinces of *Quang-tong*, and *Fo-kyen*, are governed by Regulos [b], who, in Quality, are superior to all those Officers above-mentioned; but not in Authority: However, they assume much, and bear heavy on the Subjects, there being no-body to curb them.

As every Province is divided into a certain Number of Jurisdictions, called *Fû*, and these subdivided into other Districts, named *Chew*, and *Hyen*: In every City having the Appellation of *Fû*, there is always found a *Mandarin*, named *Chi-fû* [c], and at least another who is a *Chy-hyen*: But in the great Cities of all, there are, besides the *Chi-fû*, two other inferior *Mandarins*, with the Title of *Chi-hyen*; because, when the Territory is large, it is divided into two Districts, each of which has immediate Recourse to its *Chi-hyen* [d].

To every District there also belongs a *Mandarin*, called *Tau-ti*; whose Business it is to inspect the Manners and Behaviour of the Officers within his Jurisdiction, and to hasten the Governors of Towns and Cities in paying-in the Emperor's Duties. There are some who look after, or survey, the Rivers and Sea-Coasts in their respective Quarters; the first called *Ho-tau*, the latter *Hay-tau*. All these *Mandarins* belong to the Tribunal of the *Ko-tau*, that is, Inspectors, Overseers, or Visitors [e]. With Regard to these two Kinds of Officers, *Navarette* observes, that where there are navigable Rivers, there are *Mandarins* to take Care of the Barks, both Imperial and Mercantile; and that in all the maritime capital Cities there is a great *Mandarin*, who has Charge over the Coast.

THE *Literati* are not subject to the common Magistrate, but have *Mandarins* of their own: In every City and Town there is one great one, like a School-Master, and two under him, who dwell in the [f] Universities [g].

THERE is an absolute mutual Dependence among the several Powers that govern the Empire. The most inconsiderable *Mandarin* has full Authority within the Extent of his District; but he depends on other *Mandarins*, who, though more powerful, yet are subject to the General Officers of every Province, as these latter are to the Tribunals of the Imperial City; and the Presidents of the supream Courts, who are dreaded by all other *Mandarins*, tremble themselves before the Emperor, in whom resides the sovereign Power.

Officers Civil.

Places distributed by Lot.

EMPLOYMENTS are divided among the *Mandarins* in the following Manner: Any Person is capable of enjoying public Offices, who has gained two of the three Degrees of Literature. Their Names are written in the Registers of the first supream Tribunal, called *Li-pû*; which distributes the vacant Offices, according to the Rank and Merit of the *Literati*; who, when duly qualified, repair to Court for that Purpose: But they do not usually raise even *Tsing-tse* [h], or Doctors, to be more than Governors of Cities of the second or third Rank. As soon as any of these Employments fall, suppose four, they immediately acquaint the Emperor with it; and then calling the four *Literati*, who are first upon the List, write the Names of the four Governments on four Tickets [i], which are put into a Box, placed so high, as just to be within Reach of the Candidates, who draw, by Turns, according to their Rank, each possessing the City which falls to his Lot.

Frauds in Drawing.

BESIDES the common Examinations, they pass through another, in order to discover what Sort of Government they are fit for: And it is said, when a Person has Friends, or Money to bestow, the *Chenese* do not want Ways to cause the best Governments to fall to those they design to favour [k]. *Magalhaens* affirms, that when a Man has agreed with the Tribunal, the Tickets are so ordered, that the Person draws the City which he desires. However (continues he) this Artifice failed a *Mandarin* in the Year 1669, who had given a round Sum to one of the chief Secretaries of that Court, on his Promise, that he should draw a City of great Trade, and not far distant: Instead of which, he drew a City in the Province of *Quey-chew*, the most remote, and the poorest in the whole Empire. Hereupon the unfortunate *Mandarin*, quite distracted at his Disappointment, without any Respect to the Tribunal, or the Presence of above three hundred *Mandarins*, rose-up all in a Rage (for they draw upon their Knees) bawling-out he was undone; and throwing-off his Robe, and his Cap, fell-upon the Secretary, threw him on the Ground, and with his Foot and Fist belaboured him heartily. *Knave and Impostor*, cried he, *Where is the Money that I gave thee? Where is the City thou didst promise me?* with many such Reproaches. Upon this the Tribunal broke-up, and both Parties were committed to the Prison of the criminal Tribunal, where they were in great Danger of being condemned to Death; which is

Pleasant Passage.

[a] *Du Halde*'s *China*, p. 4. [b] Those Titles are now abolished. [c] This is the Title of the Presidents of the supream Courts, or Tribunals. *Chi* signifies a Governor, and *Fû* a District, or City of the first Rank. [d] *Du Halde*, as before, *p.* 4. [e] *Magalhaens*'s Relation of *China*, p. 243. [f] Or Palaces, where the Students are examined. [g] *Navarette*'s Description of *China*, p. 14. [h] Or *Tsin-tse*. See before, *p.* 117 d. the

Government. the Puniſhment inflicted by the Law for ſuch a Sort of Traffic [a].

All Employments ſold. BUT ſo little is the Penalty regarded, that, according to *Magalhaens*, all Things are put to Sale there. He affirms, that the Government of every City, or Town, coſts the Perſon who is preferred to it, ſeveral thouſand Crowns; ſometimes twenty, ſometimes thirty, and ſo proportionably for all other Offices, great and ſmall. Before a Vice-Roy, or Governor of a Province, can have his Commiſſion ſealed, it will coſt him b twenty, thirty, forty, and ſometimes threeſcore, or ſeventy thouſand Crowns; which Money goes into the Pockets of the *Ko-lau* [b], or chief Miniſters of State, and the Officers of the ſix ſupream Tribunals at *Pe-king*, who privately ſell all Offices and Employments. On the other Hand, the Vice-Roys, and other great Placemen of the Provinces, to reimburſe their Expences, extort Preſents from the Preſidents of Territories, and Cities, who repay themſelves upon the Gover- c nors of Towns, and Boroughs; and they, or rather all together, lick themſelves whole again, and fill their Purſes at the Expence of the People: So that it is a common Proverb in *China*, that *the Emperor unwittingly lets looſe ſo many Hangmen, Murderers, hungry Dogs, and Wolves, to ruin and devour the poor People, when he creates new* Mandarins *to govern them.* In ſhort, there is not any Vice-Roy, Viſitor of a Province, or ſuch-like Officer, who at the End of three d Years that he is employed, does not return with ſix or ſeven hundred thouſand, and ſometimes a Million of Crowns [c].

Remarkable Inſtance. THIS Kind of Trade is driven as openly as if it was authorized by Law: So that Juſtice and Employments are ſet-up, as it were, to public Sale all over the Empire; but more eſpecially at Court: Hence there is no-body but the Emperor who can properly be ſaid to mind the public Good, all the reſt regarding nothing but their e private Intereſt. Of this the Author was a Witneſs himſelf, in the Caſe of a Convert. This Perſon's Father had been Governor of the Province of *Shen-ſi*; but having been ſlain in an Engagement with an Army of Robbers, the Emperor made the Son Governor of a City of the ſecond Rank. When the three Years of his Employment expired, he was advanced to a City of the firſt Rank; in which having continued three Years more, he repaired to Court, f according to the Cuſtom, in Hopes to be preferred to a yet more conſiderable Government. The Emperor having referred his Petition to the Tribunal of the *Mandarins*, they preſently ſent Letters to let him know, that if he would depoſit, in a third Hand, fourteen *Van* of Silver, which amounts to about an hundred thouſand Crowns, they would give him the Government of *Ping-yang fû*, in the Province of *Shen-ſi*, which is one of the moſt rich and populous Cities of the whole Empire. But the *Mandarin* refuſing to obtain it by Corruption, ſent them Word, that he would be content with what fell to his Lot [d].

To prevent the Extortions committed on the People, by Governors, either through Avarice, or in Conſequence of the Corruption introduced of ſelling Places, the Laws have provided ſeveral Remedies:

FIRST, It is difficult to prevent Commotions among the People, when they groan under Oppreſſion; and the leaſt Inſurrection which happens in a Province is imputed to the Vice-Roy, who is almoſt ſure to loſe his Employment, if it be not immediately ſuppreſſed. He is conſidered, in the Eye of the Law, as the Head of a great Family, whereof, if the Peace be diſturbed, it muſt be his Fault. It is his Buſineſs to hinder the ſubordinate Officers from oppreſſing the People, who, when the Yoke is eaſy, bear it chearfully.

SECONDLY, The Law preſcribes, that no Perſon ſhall be made a *Mandarin* of the People, either in the City he belongs to, or even in the Province where his Family dwells. And, commonly, he does not poſſeſs the ſame Office many Years, in the ſame Place, before he is advanced: Whence it happens, that he contracts no ſuch particular Intimacies with the People of the Country as may occaſion his being partial; and as almoſt all the other *Mandarins*, who govern in the ſame Province, are unknown to him, he hath ſeldom any Reaſon to favour them.

IF an Employment be given him in a Province joining to that where he came from, it muſt be in a City at leaſt fifty Leagues from it; the Reaſon is, becauſe a *Mandarin* ought to think of nothing but the public Good. Whereas, if he poſſeſſed a Place in his own Country, his Neighbours and Friends would not fail to ſolicit him; whereby he might either be biaſſed in his Decrees to do Injuſtice to others in their Favour; or be carried, by a Spirit of Revenge, to ruin or oppreſs thoſe from whom he, or ſome of his Family, had formerly received Injury.

THEY are ſo nice in this Reſpect, that they will not permit any Perſon to be a ſubordinate *Mandarin*, where his Brother, Uncle, or other near Relation, is the ſuperior. For Inſtance, ſuppoſe ſuch a one is *Mandarin* of a City of the third Rank, and the Emperor deſigns to ſend his eldeſt Brother to be Vice-Roy of the ſame Province; on this Occaſion, the younger is obliged

[a] *Magalhaens*'s Relation of *China*, p. 247. [b] While *Le Comte* was at *Pe-king*, three *Ko-lau* were caſhiered for taking Bribes, one of whom he ſaw as a common Centinel at the Palace-Gate. See before, *p.* 16. [c] The ſame, *p.* 135. [d] The ſame, *p.* 245.

to

give Notice of that Circumſtance to the Court, which removes him to a Government of the ſame degree in another Province. The Reaſon of this regulation is, becauſe either the elder Brother being the ſuperior Officer, might favour the younger, by conniving at his Faults; or the younger, preſuming on the Dignity and Protection of his Brother, be more partial and remiſs in the Execution of his Office. On the other hand, it would be very hard for one Brother to be obliged to draw-up an Accuſation againſt another. To avoid ſuch Inconveniencies, therefore, Relations are not permitted to poſſeſs Employments which have the leaſt Dependence upon each other.

THIRDLY, Every three Years there is a general Review of all the *Mandarins* of the Empire; who are examined with regard to their good or bad Qualifications for Government. Every ſuperior *Mandarin* examines the Conduct of the inferior, from the Time the laſt Informations were made, or ever ſince they have been in Office; and gives Notes to each of them, containing Praiſes or Reprimands. For Inſtance, the chief *Mandarin* of a City of the third Rank, who has under him three or four petty *Mandarins*, gives them Notes, and ſends them to a *Mandarin* of a City of the ſecond Rank, on whom he depends: This latter, who has likewiſe under him ſeveral *Mandarins* governing Cities of the third Rank, examines thoſe Notes; and either agrees to, or adds others, according to their Knowledge.

WHEN the *Mandarin* of the City of the ſecond Order has received the Notes from all the *Mandarins* of the Cities of the third Order, he gives them his Note; and then ſends the Catalogue of all the *Mandarins* in his Diſtrict to the *Mandarins* General of the Province, who reſide in the Capital. This Catalogue paſſes from them to the Vice-Roy; who, after he has examined it in private, and then with the four *Mandarins* General, his Aſſiſtants, ſends it to Court with his own Notes; that the chief Tribunal may have an exact Knowledge of all the *Mandarins* of the Empire, in order to reward or puniſh them according to their Deſerts. They reward a *Mandarin* by raiſing him ſome Degrees higher, or giving him a better Place: And they puniſh him by removing him a few Degrees lower, or turning him out of his Poſt.

FOR two Months, that this Examination laſts, the Vice-Roy ſees no-body, admits no Viſits, nor receives any Letters from thoſe who are in his Government; that he may appear to be a Man of Integrity, and to regard nothing but Merit. *Officers Civil.*

As to the Form of theſe Notes: Under the Name of the *Mandarins*, and Title of their Government, they write; *He is a Man greedy of Money; he is too ſevere in his Puniſhments; he treats the People harſhly:* Or elſe, *He is too much advanced in Years; he is no longer able to perform the Duties of his Office; this Man is proud, fantaſtical, capricious, of an uneven Temper; that Perſon is raſh, paſſionate, has no Command of himſelf; ſuch a one is weak in his Manner of Governing, does not know how to make himſelf obeyed:* Or elſe, *He is ſlow; he is not expeditious in diſpatching Buſineſs; he is not well acquainted with the Laws and Cuſtoms*, &c. Favourable Notes run in this Manner; *He is a Man of Integrity, who does not oppreſs the People, who is attentive to all the Duties of his Office:* Or elſe, *He is a Man of Experience; he is ſteady without Harſhneſs, and gains the Love of the People; he has the Art of Governing*, &c. *Which procure*

WHEN the Catalogue of Notes arrive at *Peking*, the ſupreme Tribunal, to which it is addreſſed, examine them; and having ſet-down ſuch Reward or Puniſhment as it appoints for each *Mandarin* of the Province, ſend them back to the Vice-Roy. They deprive thoſe of their Employments whoſe Certificates are defective as to the ſmalleſt Point of Government; and raiſe thoſe who are commended, to ſuperior Poſts; as, from a City of the third Rank to one City of the ſecond. They are contented with raiſing or turning down others a few Degrees; which the *Mandarins* concerned are obliged to ſignify at the Head of their Orders, in the following Manner; *The* Mandarins *of this City, raiſed three Degrees*, or elſe, *turned down three Degrees, do give Notice and ordain*[a], &c. By this Means the People are apprized of the Reward or Puniſhment which the *Mandarin* deſerved. When he has been raiſed ten Degrees[b], he has Room to hope being advanced to a ſuperior Government: On the contrary, if he has been depreſſed ten Degrees, he is in Danger of loſing his Employment. *Rewards, or Puniſhments.*

FOURTHLY, The Emperor, from Time to Time, ſends *Ko-tau*, Inſpectors or Viſitors, ſecretly into the Provinces; who, paſſing from City to City, ſlip into the Tribunals, while the *Mandarin* gives Audience: And alſo by their Inquiry among the Mechanics and common People, dextrouſly inform themſelves in what Manner he behaves in the Adminiſtration of his Office. If *Viſitors, or Inſpectors.*

[a] *Le Comte* ſays, the *Mandarins* are obliged, from Time to Time, with all Humility and Sincerity, to ſend Court an Account, in Writing, of the public Faults they have committed in their reſpective Employments; it is dangerous to conceal any, for ſhould they be accuſed thereof in the Inſpectors Advertiſement, it would them their Places. [b] There are but nine Degrees of the *Quân*.

Government. by these Means they discover any Irregularity in his Conduct, they presently unveil the Ensigns of their Dignity, and declare themselves the Emperor's Envoys. As the Inspector's Authority is absolute, he that Moment prosecutes and rigorously punishes the faulty *Mandarins:* But, if the Injustice be not very flagrant, he sends his Information to Court, that they may determine there what is to be done.

Great Precaution A FEW Years ago, the Emperor appointed Commissioners of this Kind to enquire into an Affair which concerned the Vice-Roy of *Quang-tong*, and the Comptroller-General of Salt, who had sent Accusations to *Pe-king* against each other. The People of the Province, who suffered by the Dearness of Salt, took the Vice-Roy's Part, and most of the *Mandarins*-General spoke in Favour of the other. The Emperor being very desirous of knowing who was in the Fault, sent the *Tsong-tû* of the Provinces of *Che-kyang* and *Fo-kyen*; and the *Tsong-tû* of *Kyang-nan* and *Kyang-si*, in Quality of his Commissioners, to *Kanton*. At their Arrival, they went directly to the Palace prepared for them, without receiving or making any Visit. They refused the Honours paid at their Reception; and to remove all Suspicion, that they might be gained by Presents, had even no Communication with the *Mandarins*, but when they cited them, one after another, to take their Informations. In short, they shut themselves up till such Time as having cited the Vice-Roy, and the Comptroller-General, they had begun the Process, by repeated Interrogatories put to those two great *Mandarins*, who appeared several Times like common Criminals before their Judges [a].

In their Proceedings. THE Vice-Roy, during the whole Time of the Trial, was obliged to leave his Palace, and wait at the Hall of Audience till Night: In which he was treated yet more favourably than the Comptroller-General; who was obliged all the Time to absent himself from his Tribunal, and to be continually at the Door of the Audience-Chamber. All the Shops in the City were shut; and the People, by their Deputies, sent in their Accusations against the Comptroller, which was received by the Commissioners, as well as those of the *Mandarins*. The Informations being ended, the Commissioners sent them to *Pe-king*, by a particular Express: After which they received Visits from all the *Mandarins*, except the Comptroller-General.

Emperor's Progress FIFTHLY, Though the Inspectors of Provinces are always chosen from among the Officers of considerable Posts, and known Integrity; yet, as they may sometimes abuse their Power, by taking Bribes to screen the Guilty, the Emperor, when they least think of it, makes a Progress into certain Provinces, that he may hear in Person the just Complaints of the People against their Governors. These Visits, wherein the Prince affects to render himself popular, make the Mandarins tremble, let their Conduct be ever so little liable to Blame. The Emperor *Kang-hi*, in one of his Journeys into the Southern Provinces, made in 1689, passed through the Cities of *Sû-chew fû*, *Yang-chew fû*, and *Nan-king*. He was on Horseback, followed by his Guards, and about three thousand Gentlemen; in which Manner he made his Entry into the last. The principal Citizens came to receive him with Standards, Silk Ensigns, Canopies, Umbrellas, and other Ornaments, without Number; while the rest, lining the Streets, with profound Silence, shewed the greatest Marks of Respect. At the Distance of every twenty Paces they had erected triumphal Arches covered with the finest Stuffs, and adorned with Festons, Ribbands, and Tufts of Silk, under which the Emperor passed.

HIS Majesty lay in his Bark the Night he arrived at *Yang-chew fû*, and next Day, made his Entry on Horseback into the City; whose Streets being covered with Carpets, he asked the Inhabitants, If that had been done by the *Mandarins* Order? And finding they did it of their own Accord, he expressed his Satisfaction. The Streets were so full of Men and Children, who thronged among the Horsemen, that the Emperor stopped every Moment, seeming to be highly delighted with it. The Inhabitants of *Sû-chew fû* having laid Carpets upon the Pavement of the Streets, the Emperor alighted at the Entrance of the City, and commanded the Horses to stop, that they might not spoil so many fine Pieces of Silk which belonged to the People: He went therefore on-foot to the Palace prepared for him, and honoured the City with his Presence for two Days.

LE COMTE relates an Action of the same Emperor in one of these Visitations, which rendered him formidable to the *Mandarins*, and amiable to the People. This great Prince being separated at some Distance from his Attendants, perceived an old Man who wept bitterly. On asking the Cause of his Tears, *My Lord*, replied the Man, who did not know him, *I had but one Child, in whom I placed all my Joy, as well as the Care of my Family, and a* Tartarian Mandarin *has taken him from me; so that I am at present deprived of all Succour: For how can I, who am a poor weak Man, oblige the Governor to do me Justice? This is not so difficult a Matter as you think it*, (replied the Emperor;) *get-up behind me, and guide me to the House of this Ravisher.* The good Man obeyed without Ceremony;

[a] *Le Comte*'s Memoirs of *China*, p. 266. *Du Halde*'s *China*, p. 257, *&c seq.*

n two Hours Time they arrived at the *Manda-* a
in's Palace, who did not expect such an extraor-
linary Visit.

MEAN Time the Guards, and a great Com-
pany of Lords, after rambling about, arrived at
he *Mandarin's*, and without knowing what was
he Matter, some surrounded the House, while
others entered with the Emperor; who having
convicted the *Mandarin* of the Violence he was
ccused of, condemned him to lose his Head on
he Spot. After this, turning towards the af-
licted Father, *To make you amends*, said he to
im with a serious Air, *I give you the Employ-*
ment of the guilty Person, who is put to Death.
Take Care to behave yourself in it with more Mo-
deration than he did; and let his Punishment be a
Warning to you, that in your Turn you be not
made an Example of [a].

LASTLY, Nothing can be more instructive,
s well as proper, to keep the *Mandarins* in Or-
der, than the Gazette, which is printed every c
Day at *Pe-king*, and dispersed into all the Pro-
vinces. The Articles inserted in it, relate solely
o the Government: You find there the Names
f the *Mandarins* who have been deprived of
heir Employments, and for what Reasons; one,
ecause he was negligent in gathering the Em-
eror's Tribute, or had embezzled it: Another,
or either being too indulgent, or severe in his
Punishments; this for his Oppressions, and that
or want of Talents to govern well. If any d
Mandarin has been advanced to a considerable
Place, or removed to a worse; or if he has been
eprived, for some Fault, of the annual Pension
e received of the Emperor, he is immediately
ut into the Gazette.

IT contains an Account of all criminal Mat-
ers, which are punished with Death: Likewise
he Names of the Officers put into the Places of
hose who are removed: All the Calamities that
appen in a Province, and the Relief given by e
he *Mandarins* of the respective Cities by the
Emperor's Order: An Extract of the Expences
isbursed for the Subsistence of the Soldiers, the
ecessities of the People, the public Works, and
e Benefactions of the Prince: The Remon-
rances made by the supream Tribunal to the
mperor, concerning his own Conduct, or his
ecisions: Therein is mentioned also the Day
hen the Emperor ploughed the Earth, in order
encourage Agriculture: The Time he has f
ed for assembling the Grandees of the Court,
d all the chief *Mandarins* of the Tribunals at
-*king*, to be instructed by him in their Duty.
here you meet with the Laws, and new Cus-
ms, that have been established; as also the

Praises, or Reprimands, given by the Emperor to a *Mandarin*: For Instance, *such a* Quân *has no good Reputation; if he does not mend, I will punish him.* *Officers Civil.*

IN short, the *Chinese* Gazette is so contrived, that it is of great Use to instruct the *Mandarins* how to govern the People: For which Reason they read it carefully; and as it gives an Account of all the public Transactions in this vast Empire, most of them write down Remarks upon b the Passages in it, that may help to direct their Conduct. Nothing is printed in the Gazette, but what has been presented the Emperor, or comes from him; those who have the Care of it not daring to add a Tittle, not even their own Reflections, upon Pain of corporal Punishments. In 1726, a Writer belonging to a Tribunal, and another employed in the Post-Office, were condemned to die, for having inserted certain Falsehoods in the Gazette: The Reason, upon which the Tribunal of criminal Affairs founded their Judgment, was, that what they had done shewed a Failure of Respect towards his Majesty, which is by the Laws declared capital. *Its Use and Authority.*

AFTER all, no Remedy is more likely to prove effectual in preventing the Corruption and Oppressions of the Governors, than that which the Emperor *Yong-ching* applied; for he augmented their Salaries, and declared he would receive no Presents himself; forbidding them to d receive more than their Due, under the Penalty of the Law, which ordains, that the *Quân*, who shall receive, or unjustly exact fourscore Ounces of Silver, shall be punished with Death: He likewise allowed the Visitors or Inspectors large Sums to defray their Expences, rigorously punishing both the Corruptor, and Corrupted. *Most effectual Remedy.*

TO conclude, the Laws debar the *Mandarins* of most of the common Pleasures of Life. They are but seldom permitted to treat their e Friends, and give them a Play: They would risk their Fortune, if they took the Liberty to game, or walk abroad, to make private Visits, or frequent public Assemblies; being debarred all Diversions, but what they can take in the most private Apartments of their own Palaces [b].

2. *The several* Duties *of* Governors, *with the Order in Cities.*

f Duty of Governors, to preach as Priests. Moral Subjects for their Texts. Accountable for the People. Governors of Cities, their Duty. Order in Cities. Passengers examined. No Night Revels. No bloody Quarrels. Common Women, how regulated.

[a] *Le Comte's* Memoirs of *China*, p. 267. *Du Halde's China*, p. 259.

[b] *Du Halde*, as before, *p.* 3, 4, and 257.

Government.

Duty of Governors

AS the *Mandarin* is appointed ſolely to ſupport and protect the People, he ought always to be ready to hear their Complaints, not only at the ſtated Hours of Audience, but at all other Hours of the Day. If the Affair be urgent, they go to his Palace, and beat loud upon a Kind of Kettle-Drum, which is ſometimes on one Side of the Hall of Juſtice, but commonly without-Doors, that the People may come at it both Night and Day. At this Signal, the *Mandarin*, though ever ſo much employed, is obliged b to grant the Audience demanded; but unleſs the Complainant has ſuffered ſome extraordinary Wrong, that requires ſpeedy Redreſs, he is ſure to receive the Baſtonado for his unſeaſonable Viſit.

To preach at Prieſts.

ONE of the *Mandarin*'s principal Functions, is to inſtruct his People, as he is in the Emperor's Stead; who, according to the *Chineſe*, is not only a Monarch to govern, and a Prieſt to ſacrifice, but alſo a Maſter to teach. Hence it c is, that from Time to Time, his Majeſty aſſembles all the Grandees of the Court, and chief *Mandarins* of the Tribunals, to give them Inſtructions, always taking his Text out of the canonical Books. In like Manner, on the firſt and fifteenth Day of every Month the *Quân* aſſemble, and give their People a long Diſcourſe, wherein every Governor acts the Part of a Father, who inſtructs his Family. There is a Law of the Empire for this Practice, and the Em- d peror himſelf has appointed the Subjects to be handled in their Sermons, which are comprehended in ſixteen Imperial Ordinances, as follows, *viz.*

Moral Subjects

1. THAT they very carefully practiſe the Duties preſcribed by filial Piety, and the Deference which the younger Brother ought to pay the elder; whereby they will learn how to ſet a Value on the eſſential Obligations which Nature lays on all Mankind.

2. THAT they always preſerve a reſpectful Remembrance for the Anceſtors of their Family; which will be conſtantly attended with Unity, Peace, and Concord.

3. THAT there may be Union in all the Villages: By this Means they will be Strangers to Quarrels and Law-Suits.

4. THAT they hold, in great Eſteem, the Profeſſion of Huſbandmen, and thoſe who cultivate Mulberry-Trees, wherewith the Silk- f Worms are nouriſhed: They will then never want Grain to feed-on, nor Garments to cover them.

5. THAT they accuſtom themſelves to a prudent Œconomy by Frugality, Temperance, and a Modeſty; which will be the Means of avoiding many idle Expences.

6. THAT great Care be taken to encourage public Schools; to the End young Students may be taught good Morals.

7. THAT every one apply himſelf to his proper Buſineſs, which will be an infallible Means to keep the Heart and Mind at Eaſe.

8. THAT they ſtifle Sects and Errors in their Birth, in order to preſerve the true and ſolid Doctrine in its Purity.

9. THAT they inculcate to the People the penal Laws eſtabliſhed by the ſupream Authority; for Fear will keep rude and untractable Minds in their Duty.

10. THAT they inſtruct Perſons thoroughly in the Laws of Civility, and decent Behaviour: Thus the good Cuſtoms, which Decorum has eſtabliſhed, will always be punctually practiſed.

11. THAT they apply all their Endeavours to give Children and younger Brothers a good Education, which will prevent their delivering themſelves up to Vice, and diſorderly Paſſions.

12. THAT they abſtain from all ſlanderous Accuſations; thus Innocence and Integrity will have nothing to fear.

13. THAT they take Care not to conceal the Guilty, whoſe Crimes oblige them to lead a wandering and vagabond Life: By this Means they will avoid being involved in their Misfortunes.

14. THAT they be punctual in paying the Contributions eſtabliſhed by the Prince; whereby they will prevent the Inquiries and Vexations of the Tax-Gatherers.

15. THAT they act in Concert with the Heads of the Wards in every City, which will prevent Theft, and the Eſcape of thoſe who are guilty.

16. THAT they repreſs the Sallies of Anger, e which will ſecure them againſt all Danger[a].

THESE are the Ordinances which ſerve the *Mandarins* for Texts to their Sermons. *Du Halde* has inſerted the Diſcourſe of one of them made on the third Head, which, for its Energy and Conciſeneſs, pathetic Reaſoning, and excellent moral Advice, is ſcarcely to be equalled. The *Mandarin*'s giving the People a Lecture once a Fortnight, is ſo eſſential a Part of his Office, that there are ſome Sorts of Crimes, for which if committed within his Diſtrict, he muſt be accountable. When a Theft, or a Murder happens in a City, he is obliged to diſcover the Thief or Murderer, or elſe he will loſe his Employment. If any ſhocking Crime be committed, for Inſtance, if a Son ſhould kill his Father, the

[a] *Du Halde*'s *China*, p. 254, & *ſeq.*

Coun

Court is no ſooner informed of it, than all the *Mandarins* of that Diſtrict are deprived of their Offices. *The Fault is theirs*, ſay they, *nor could this Misfortune have happened had they been careful to promote good Morals.* For the ſame Reaſon, where the Children have been guilty of enormous Offences, they put their Parents to Death along with them [a].

IT is the Duty of the Governor of every *Hyen*, or *Chew*, to adminiſter Juſtice; to receive the Tribute due from each Family to the Emperor; to viſit perſonally the Bodies of thoſe who have either been killed in ſome Scuffle, or through Deſpair have laid violent Hands on themſelves. Twice in a Month he is obliged to give Audience to all the Heads of the Wards in his Diſtrict, and to inform himſelf exactly of every Thing that paſſes. It is likewiſe his Buſineſs to give Paſſports to Barks, and other Veſſels, to hear Complaints and Accuſations, which muſt be almoſt continual, in a Country ſo populous. All Law-Suits come before his Tribunal, and he puniſhes the Perſon he judges to be in the Wrong, with a ſevere Baſtonado. In a Word, he condemns Criminals to Death: But his Sentence, or indeed that of any ſuperior *Mandarin*, cannot be executed till it be ratified by the Emperor. Cauſes of ſmall Importance are determined firſt by the three inferior *Mandarins* [b].

THAT which chiefly employs the inferior *Mandarins*, whether they be the *Chi-chew*, *Chi-hyen*, or *Whey-chew-pey* [c], is gathering the Taxes; and it requires their perſonal Attendance. Although the Lands in every Province are meaſured, and what every [d] *Arpent* is to pay be adjuſted, according to the Goodneſs of the Soil; yet whether through Poverty, or Avarice, the People are uſually unwilling to part with it, till the inferior Officers come and haraſs them for it, being ſometimes conſtrained to make uſe of Blows. When theſe Tax-Gatherers are reproached for their Severity to the Peaſants, they alledge, in Excuſe, that ſhould they not bring the Dues home with them, their Maſters would ſuſpect either that they had neglected their Duty, or had taken Bribes: Which bare Suſpicion, without farther Examination, would be ſufficient to procure them the Baſtonado. The *Mandarins*, on the other Hand, pretend to juſtify treating their Servants with ſuch Rigour, by alledging, that whenever they failed of collecting the Dues in the appointed Time, they have been obliged to pay the Emperor out of their own Pockets, for Fear of loſing their Employments: And, in Fact, ſeveral Provinces are greatly in Arrear to the Royal Treaſury, which probably will never be paid. But to remedy this Inconvenience, the late Emperor *Yong-ching* [e] ordered, that, for the future, the Proprietors of the Lands, and not the Occupiers, ſhould pay the Taxes [f]. *Order in Cities.*

THERE is ſcarce any Thing which contributes more to the Tranquillity which reigns in *China*, than the good Regulations obſerved in Cities, eſpecially *Pe-king*, which influences the reſt [g]. As an Account has been already given of their Form, Walls, Gates, their Diviſion into Wards, with the Order of their Streets, and the Watches appointed for their Security; we ſhall only mention here certain other Matters relating to the Police, which have not been touched-on before. Every Ward in each City has a Head, who keeps an Eye over a certain Number of Houſes, being reſponſable for whatever paſſes within his Precinct; ſo that ſhould any Tumult happen, and he neglected immediately to inform the *Mandarins* about it, he would be very ſeverely puniſhed. Maſters of Families are equally reſponſable for the Conduct of their Children and Servants. The very Neighbours themſelves are obliged to lend mutual Aſſiſtance when any Misfortune happens: For Inſtance, a Robbery in the Night; and, in ſuch Caſes, one Houſe anſwers for the next. *Order in Cities.*

THERE is always a good Guard at the Gates of every City, who examine all Paſſengers; and if they ſee any Thing ſuſpicious about a Man, if his Phyſiognomy, Air, or Accent, diſcover him to be a Stranger, he is immediately ſtopped, and Notice given to the *Mandarin* [h]. One of their principal Maxims is, not to ſuffer Foreigners to ſettle in the Empire; for beſides their hereditary Contempt of other Nations, they are perſuaded, that a Mixture of People would introduce a Diverſity of Manners and Cuſtoms, which would gradually produce perſonal Quarrels, Parties, and Rebellions. *Paſſengers examined.*

AS ſoon as Night falls, the Gates of the City, as alſo the Barricades at the End of every Street, are carefully ſhut, and at proper Diſtances there are Centries, to ſtop thoſe who are abroad. In ſome Places there are Horſemen continually patrolling upon the Ramparts: *The Night*, ſay they, *is for Repoſe, and the Day for Work.* This Law is ſo well obſerved, that no People of Credit will be ſeen at Night in the Streets; and if *No Night-Revels.*

[a] *Du Halde's China*, p. 257. [b] The ſame, *p.* 253. [c] Theſe laſt are military Officers. [d] A Meaſure of Land, containing an hundred Paces ſquare, of eighteen Feet each. [e] Who died in the Year 1736. [f] *Du Halde*, as before, *p.* 4. [g] See before, *p.* 8, and 100, *& ſeq.* [h] On this Occaſion *Le Comte* obſerves, that the Miſſioners, who had not the Emperor's Approbation, found it very difficult to make long Journeys.

Government. any one happens to be found, he is ſtopped, being looked-upon as a Scoundrel, or Robber, on the Lurch to do Miſchief by Favour of the Darkneſs: So that it is very dangerous to be abroad at unſeaſonable Hours, it being difficult, however innocent, to eſcape the Severity of the Magiſtrates.

No bloody Quarrels. IF there happens to be a Quarrel among the Populace, and from abuſive Language they come to Blows; they are extreamly careful not to ſhed Blood: For which Reaſon, if they chance to have any Stick, or Iron Weapon in their Hands, they lay it aſide, and fall a boxing. They commonly end their Quarrels by complaining to a *Mandarin*, who, after hearing what both Parties have to ſay, cauſes the culpable to be baſtonadoed in his Preſence.

Common Woman, how regulated. THERE are common Proſtitutes in *China*, as well as elſewhere: But as they generally cauſe Diſturbances, they are not permitted to live within the Walls of the City, or have private Houſes to themſelves; but ſeveral of them lodge together, and often under the Government of a Man, who is reſponſable for any Diſorder. After all, theſe looſe Women are but barely tolerated, being looked-upon as infamous; and ſome Governors of Cities will not permit them to live within their Diſtricts [a].

3. *Great Submiſſion of the* People, *and Tenderneſs of* Governors.

Submiſſion paid the Quân. *Their State in travelling. Royal Inns, and Couriers. Guards along the Rivers. Care for the People in Time of Drought. Images ſcurvily treated on ſuch Occaſions. Guardian Genii invoked. Great Reſpect paid to good Governors. Preſent of the party-coloured Coat. Bad ones ill-treated.*

Submiſſion paid the Quân. IT is very ſurprizing to ſee a Nation ſo vaſtly numerous, ſo naturally reſtleſs, ſo exceſſively ſelfiſh, and eager in its Purſuit of Riches, kept within the Bounds of its Duty by a ſmall Number of *Mandarins* at the Head of every Province. It is ſcarce credible with how much Eaſe a ſingle *Mandarin*, for Inſtance, a *Chi-fû*, governs Multitudes of People: He does no more than publiſh his Orders on a ſmall Piece of Paper, ſealed with his Seal, and fixed up at the Corners of Streets, and he is inſtantly obeyed. So true it is, that the bare Shadow of Imperial Authority (derived from the parental Scheme) can do every Thing with this Nation.

THEY never ſpeak to him but on their Knees, when he is diſtributing Juſtice in his Tribunal; and he never appears in public without a great Attendance, in a very majeſtic Manner: He is pompouſly dreſſed, his Countenance grave and ſevere, being carried by four Men in a gilded Chair, open, if in Summer, but covered with Silk in Winter, preceded by all the Officers of his Tribunal, whoſe Caps and Garb are of a very extraordinary Faſhion. On all Days of Ceremony (or when they go to viſit thoſe to whom they would ſhow Reſpect) the Seals, which they receive from the Emperor, are carried before their Chair in a Golden Box, by two Men, upon a Kind of a Litter; and being come to the Place appointed, they are laid on a Side-Table, covered with a Carpet [b].

THE ſame State accompanies the *Quân* in all his Marches, Proceſſions, or Journeys, whether by Land, or Water, of which ſome Account has been already [c] given. The Day before a *Mandarin* ſets-out on his Journey, a Courier is ſent forwards, who carries a Tablet, called *Pey*, wherein is written the Name and Employment of that Officer; on Sight of which, the Lodgings at the *Kong-quân*, or Royal Inn [d], are immediately prepared for him, according to his Dignity; and he is furniſhed with all Neceſſaries, ſuch as Proviſions, Porters, Horſes, and Chairs, or Barks, if he goes by Water. The Couriers, who publiſh the Approach of the *Mandarin*, always find Horſes ready; and that they may not be diſappointed, one or two *Li*, before their Arrival, they ſtrike very hard, ſeveral Times, upon a Baſon, to give Notice, that the Horſe may be immediately ſaddled, if it be not already done. The Furniture of a *Kong-quân* conſiſts only of a few Felts and Mats, two or three Chairs, a Table, and a wooden Bedſtead covered with a Mat, when there is never a *Kan* [e]. If he be a *Mandarin* of conſiderable Rank, and the *Kong-quân* not ſuitable to his Dignity, he is lodged in one of the beſt Houſes in the City, where an Apartment is borrowed for him.

IN theſe Royal Inns all Perſons are entertained, as the Miſſioners have often been, when travelling on the Emperor's Buſineſs, whoſe Couriers alſo bait here. On this Occaſion it may be obſerved, that thoſe who carry his Majeſty's Orders are commonly Perſons of ſome Note, and attended by ſeveral Horſemen: The Orders are incloſed in a great Roll, covered with a Piece of yellow Silk, and wrapped in a Scarf, which hangs at their Backs. Every Poſt-Houſe has a *Mandarin* to take Care of it, and the Emperor's Horſes; which, though not ſightly, will ride ſixty or ſeventy *Li* without changing; their Stages, which are called *Chan*, being unequal; the

[a] *Du Halde's China*, p. 264, *& ſeq.* [b] The ſame, *p.* 244, and 252. [c] See before, *p.* 97, *& ſeq.*
[d] Or Magiſtrates Inn, deſcribed before, *p.* 105. [e] Or Bed. See before, *p.* 104, 132. a.

ſhorteſt

ſhorteſt containing fifty *Li*, and rarely ſo few as forty. The ordinary Couriers carry their Wallet faſtened upon their Back: And when they ride it reſts upon a Cuſhion lying on the Horſe's Buttocks. Their Wallets are not heavy, for they hold nothing but the Diſpatches of the Emperor, or the Sovereign Courts, or Advice from the Officers of the Provinces; ſo that they are able to carry privately the Letters of other Perſons, in which conſiſt their Perquiſites [a].

WHEN a *Mandarin* paſſes by Water, the Soldiers of each *Tang*, or Guard, uſually ſtand in a Rank along the River-Side, out of Reſpect; one of them bearing an Enſign diſplayed, and the reſt with their Arms in their Hands. If the Bark carries an Envoy, principal *Mandarin*, or great Court Lord, they put at the Head and Stern four Lanthorns, with theſe Words, in great Characters of Gold, *King-chay-ta-jin*, that is, *the great Man, Envoy from the Court:* Theſe are accompanied with Flags and Streamers of Silk, of ſeveral Colours, waving in the Wind. Every Morning and Evening, when they heave and caſt Anchor, the Guard ſalute the *Mandarin* with a Diſcharge of their Fire-Arms, followed by the Sound of Trumpets. Towards Night-Fall they light the Lanthorns at the Head and Stern, as well as thirteen others of a ſmaller Size, hung in the Form of a Chaplet, by the Side of a Maſt, *viz.* ten in a perpendicular Line, and three above them croſſwiſe.

WHEN the Lanthorns are lighted, the Captain of the Place appears, with his Company, oppoſite to the Barks, and with a loud Voice calls over the Names of the Men whom he hath brought to watch, and ſtand Centry all Night: Then the Maſter of the Bark pronounces a long Harangue to the Soldiers, reminding them of all the Accidents that are to be feared, as Fire, Thieves, *&c.* and that if any of them ſhould happen, they muſt be accountable for it. The Soldiers, at the End of every Article, give a great Shout; after which they withdraw to form a Guard, leaving one of their Company to ſtand Centry, who walks to and fro on the Quay, continually ſtriking two Pieces of Bambû againſt each other, to ſignify his Vigilance. Theſe Centries are relieved every Hour [b].

HOWEVER formidable the Authority of theſe *Mandarins* may be, they could not maintain themſelves in their Offices, if they did not gain the Reputation of being the Fathers of the People [c], and of having nothing in View but the People's Happineſs. A Magiſtrate of this Character has made it his Buſineſs to ſend for Perſons ſkilled in breeding Silk-Worms, and making Silk, that he might teach thoſe Arts in his Diſtrict; and thus by inriching his City, he has acquired the greateſt Applauſe. Others, in the Time of a Storm, not contented to forbid Perſons to croſs the River, have come themſelves to the Bank, and ſtaid there all Day, to prevent, by their Preſence, any from being ſo raſh as to expoſe himſelf to the Danger of periſhing. A *Mandarin*, who did not ſhew the like Affection, or was too ſevere to the People under him, could not avoid being noted-down in the Informations ſent by the Vice-Roys every three Years to the Court, and this would be ſufficient to deprive him of his Office. If a Priſoner dies in his Confinement, a great Number of Atteſtations muſt be produced, to prove, that the *Mandarin* was not ſuborned to compaſs his Death: That he viſited him, ſent him a Phyſician, and furniſhed him with proper Remedies, *&c.* for an Account muſt be tranſmitted to the Emperor of all thoſe who die in Priſon, and of the Manner of their Death; and according to the Advice which he receives, he often orders an extraordinary Proceſs.

Tenderneſs of Magiſtrates.

In Time of Drought.

WHEN they are apprehenſive of a bad Harveſt, occaſioned either by Drought, too much Rain, or any other Accident, ſuch as the ſwarming of Graſshoppers, which ſometimes over-run certain Provinces; then the *Mandarin*, either through Affection, Intereſt, or Diſſimulation, omits nothing that may render him popular. Though the greater Part of them deteſt the Idols of *Fo* and the *Tau*, yet they fail not to make ſolemn Viſits to their Temples, to implore Rain, or fair Weather. When Calamities of this Nature happen, the *Mandarin* cauſes his Orders for a general Faſt to be fixed-up in all public Places, forbidding Butchers, and Cooks, to ſell Meat under heavy Penalties: Yet they do it privately, by Means of a little Money given to the People of the Tribunal appointed to ſee the Orders obſerved.

Images ſcurvily treated.

THE *Mandarin* goes to the Temple on-foot, negligently dreſſed, ſometimes even with Straw Shoes on, accompanied with inferior *Mandarins*, and followed by the principal Perſons of the City. Being arrived, he lights-up two or three ſmall Perfume-Sticks on the Altar; after which they all ſit, and to paſs away the Time, drink Tea, ſmoak, and chat an Hour or two together, and then retire. By this the Reader may perceive, that they treat the Idol with very little Ceremony; and if they are obliged to pray too long before the Favour is granted, they ſometimes bring him to Reaſon with a good Cudgel; but this is rare.

AT *Kyang-chew*, in the Province of *Shen-ſi*,

[a] *Magalhaens*'s Relation of *China*, p. 39. *Du Halde*'s *China*, p. 265, *& ſeqq.* [b] *Du Halde*, as before, *p.* 287.
[c] They call the Governors of Cities *Fu-mu*, that is, *the Father and Mother of the People.* Magalhaens, *p.* 237.

an

Government. an Image was beaten to Pieces by Order of the Officers, for obſtinately refuſing to ſend Rain in *On ſuch Occaſions.* Time of a great Drought. And when Rain fell, they made another of Earth, or Plaiſter, and led it in Triumph into the City, where they offered Sacrifices to it, and reſtored it to its Saintſhip again. Another Idol not vouchſafing to anſwer the reiterated Commands of the Vice-Roy of a Province, that Lord ſent an inferior *Mandarin* to tell him, that if there was not Rain by ſuch a Day, he would drive him out of the City, and level his Temple with the Ground. As none fell on the Day limited, that Magiſtrate ordered the Temple to be ſhut-up, and the Gates ſealed; which was immediately done: But Rain falling a few Days after, the Vice-Roy's Anger was appeaſed, and the Image permitted to be worſhipped as before.

Guardian Genii invoked. IN theſe Kinds of public Calamities, the *Mandarin*, as Paſtor and Governor of the People, addreſſes himſelf chiefly to the Guardian Genius of the City, according to ancient Cuſtom, imploring his Aſſiſtance [a]. In this Harangue, he tells the Spirit, it is through him properly, that they receive their Happineſs, and are preſerved from the Misfortunes they are threatened with: That in public Calamities they ought to implore his Aid: But, at the ſame Time, he gives the Guardian Angel to underſtand, that if he is prayed to in vain, their Hearts can have no Share in the Honours paid him; and though he ſhall continue to be what he is, yet he will be little known. After informing him, that their Faſting, Praying, and Repentance, had not been ſufficient to move *Tyen*, he adds, *As for you, O Spirit! the inviſible Governor of this City, you have Acceſs to him: You can requeſt Favours of him for us Mortals, and beſeech him to put an End to our Afflictions. Such a Grace obtained by your Interceſſion, will anſwer the utmoſt Deſires of the People, and cauſe you to be more and more adored in the City* [b].

Great Reſpect paid WHEN the Governor of a City, who has acquitted himſelf, in his Office, to the public Satisfaction, withdraws into another Province, the People pay him ſuch Honours, as would engage the moſt ſtupid to the Love of Virtue and Juſtice. For two or three Leagues together, at certain Diſtances, they fix Tables; on ſome of which (ſet round with long Pieces of Silk, that hang-down to the Ground) they burn Perfumes, and place Candleſticks, Wax-Lights, Meats, Pulſe, and Fruits; furniſhing others with Wine and Tea. As ſoon as the *Mandarin* appears, they fall on their Knees, and bow their Heads to the Ground: Some weep, or at leaſt pretend to do ſo; others beſeech him to alight, to receive the laſt Teſtimony of their Gratitude. They then preſent him with the Wine, and other Proviſions; and thus he is continually ſtopped as he advances. But the moſt pleaſant Part of all, is to ſee People drawing-off his Boots [c], every now-and-then, to give him new ones [d]. All the Boots that have touched the *Mandarin*, are held in Veneration by his Friends, who preſerve them as precious Reliques. The firſt that are drawn-off are, by Way of Gratitude, put in a Sort of a Cage, over the Gate of the City through which he paſſed [e].

IN the ſame Manner, when the Inhabitants of any City would honour their Governor on his Birth-Day, the principal Perſons meet, and go in a Body, to ſalute him at his Palace. Beſides the common Preſents, they often take with them a long japanned Box, adorned with Flowers of Gold, and divided into eight or twelve ſmall Cells, which are filled with ſeveral Sorts of Sweetmeats. When they are come to the Hall, where the Ceremony is to be performed, they all ſtand in a Rank, and make a profound Reverence: Then they fall on their Knees, and bow their Heads to the Ground, unleſs the *Quân* prevents them, as he commonly does. Oftentimes the moſt conſiderable among them takes a Cup of Wine, and lifting it up on high, with both Hands, offers it to the *Mandarin*, who ſays aloud, by Way of Wiſh, *Fo-tſyû, This is the Wine that brings Good-Luck:* Shew-tſyû, *This is the Wine that brings long Life.* Immediately after another advances, and holding-up the Sweetmeats, preſents them very reſpectfully, ſaying, *This is the Sugar of long Life.* Then others repeat the ſame Ceremonies three Times, ſtill uttering the ſame Wiſhes.

BUT when the *Mandarin* has diſtinguiſhed himſelf in an extraordinary Manner by his Equity, Zeal, and Goodneſs to the People, they have a particular Way of letting him know how highly they eſteem his happy Government. The *Literati* cauſe a Garment to be made, conſiſting of ſmall Squares of Satin, of various Colours, as red, blue, green, black, yellow, *&c.* and on his Birth-Day carry it with great Ceremony, accompanied with Muſic. Being arrived in the outward Hall, which ſerves for a Tribunal, they beſeech him to come-out of the inner Hall into the public one, and then preſent his Garment, requeſting him to put it on. The *Mandarin* ſeems to make a Difficulty of it, ſaying, that *he is unworthy of ſuch an Honour:* But at length giving Way to the Intreaties of the *Literati*, and People, he ſuffers them to ſtrip-off his upper

[a] *Du Halde* gives the Form of an Addreſs. [b] *Du Halde*'s *China*, p. 253, *& ſeq.* [c] *Le Comte* ſays, his Cap alſo, and his Great Coat, giving him others in their Room. [d] It ſometimes happens, that he has had thirty different Pair of Boots on. [e] *Le Comte*'s Memoirs of *China*, p. 275. *Du Halde*, as before, *p.* 294.

Garment, and cloath him with that which they brought with them. They intend, by the various Colours, to repreſent all Nations, who wear different Habits, and to ſignify that all People conſider him as their Father, and that he is worthy to be their Governor; for which Reaſon theſe Garments are called *Wan-jin-i*, that is, *the Habits of all Nations*. It is true, the *Mandarin* never wears it, except at this Time; but it is careſully kept in the Family, as a Mark of Honour and Diſtinction. They never fail to acquaint the Vice-Roy with it, and the News is often carried to the ſupream Courts. *Contancin*, the Jeſuit, happened once to be preſent at this Ceremony, on going to pay his Compliments to a Governor on his Birth-Day [a].

a

b

SUCH is the Gratitude and Love the *Chineſe* bear to a good Magiſtrate. On the contrary, when a *Mandarin* has not behaved well in his Employment, they treat him, at his Departure, with no leſs Scorn and Contempt. A Governor of a maritime Province, having been deprived of his Office for defrauding the People of Three-fourths of the Rice ſent by the Emperor for their Relief in a Time of Scarcity, he was followed by a prodigious Croud of People, who reproached him for his Avarice. Some invited him, by Way of Deriſion, *to ſtay in the Government till he had eaten all the Rice the Emperor had intruſted him with*. Some dragged him out of his Chair, and broke it; others tore his Garment and ſilken Umbrella in Pieces: In ſhort, all followed him to the Bark, loading him with Injuries and Curſes [b].

c

d

SECT. V.

Of the ſeveral Tribunals, *or* Courts, *wherein all* Affairs *are tranſacted.*

ALL Affairs whatever relating to the Government, both Civil and Military, are tranſacted in Tribunals, or Courts, eſtabliſhed for that Purpoſe; each of which has its Share of Buſineſs allotted it, for the more exact Performance, and quick Diſpatch. Theſe, like the Magiſtrates who preſide in them, are ſubordinate to one another. Every Governor has his particular Court. The Tribunals of Cities depend on the provincial Courts, and thoſe of the Provinces on the ſupream, or general Tribunals of the Empire fixed at *Pe-king*, before which all Matters of Conſequence muſt be brought, and there finally determined.

e

f

Supream Tribunals.

1. *The* ſupream, *or general* Tribunals *of the* Empire.

Six ſupream Tribunals. Court of the Quân. *Court of Exchequer. Court of Rites: Its Tribunals. Court of War. The Criminal Court. Court of public Works. Their Site and Form, Halls and Chambers. Officers of the Tribunals: Their Juriſdiction. Method of proceeding in the Tribunals. Dexterous at deceiving. Checks on their Power. Public Inſpectors: Their Authority: Remarkable Inſtance of their Intrepidity: Prevail at laſt.*

Six ſupream Tribunals.

BESIDES the great Tribunal called *Nwi-yuen*, already ſpoken of [c], there are within the Palace eleven ſovereign Tribunals more, whoſe Power and Authority extend over all the Provinces of the Empire. Six of them are for civil Affairs, and called *Lew-pû* [d]; the other five for military Matters, and named *U-fû*, of which hereafter.

Court of the Quân.

THE firſt of the ſix Tribunals for civil Affairs is called *Li-pû*, or the Tribunal of the Magiſtrates: Its Buſineſs is to furniſh all the Provinces with Officers; to watch-over their Conduct; to examine their good and bad Qualities, and give an Account thereof to the Emperor, that he may raiſe, or degrade them according to their Deſerts. Theſe are, properly ſpeaking, the Inquiſitors of the State.

THIS Court has four Tribunals under it: The firſt, called *Ven-ſven-ſû*, chuſes thoſe who deſerve to poſſeſs the great Offices of the Empire. The ſecond, named *Kau-kong-ſû*, examines the Conduct of the *Mandarins*. The third, *Nyen-ſong-ſû*, is to ſeal all judicial Acts; to aſſign to the *Mandarins* of different Dignities, and Offices, their reſpective Seals; and to examine if the Seals of the Diſpatches, that are ſent to Court, be true, or counterfeit. The fourth, *Ki-hyong-ſû*, is to examine the Merit of the Grandees of the Empire, that is, the Princes of the Blood, the Regulos, thoſe who have Titles like our Dukes, Marquiſſes, Counts, and the like. Theſe are called *Hyong-chin*, or ancient Vaſſals, having performed great Services for the reigning Family in the *Tartar* War.

Court of Exchequer.

THE ſecond ſupream Court, called *Hû-pû*, that is, High-Treaſurer of the Emperor, hath the Superintendance of the Finances, with the Care of the private Eſtates, Treaſures, Expences, and Revenues of that Monarch. It makes-out Orders for Salaries and Penſions, appoints the Delivery of Rice, Silks, and Money, which are diſtributed to the great Lords, and all the *Mandarins* of the Empire. It keeps an exact

[a] *Du Halde's China*, p. 294. [b] The ſame, *p.* 279. [c] See before, *p.* 250. [d] *Magalhaens* writes *Lo-fû*.

Regiſter

Government. Regiſter of all Families; of all the Duties that ought to be paid; of the Cuſtom-Houſes, and public Magazines. To go-through this prodigious Throng of Buſineſs, it has fourteen ſubordinate Tribunals for the Affairs of the other fourteen Provinces of the Empire, whoſe Names they bear: For that of *Pe-che-li*, being the Seat of the Emperor, is not reckoned among the Provinces, but enjoys, in many Caſes, the Prerogatives of the Court and Houſhold of that Monarch: As did, till latterly, the Province of *Kyang-nan*, by Reaſon *Nan-king* had been the Imperial Reſidence, and as it had ſix ſuperior Tribunals like *Pe-king*, they reckoned then but thirteen Provinces; but the *Tartars*, by reducing it into a common Province, have made fourteen.

Court of Rites. THE third ſupream Court is called *Li-pû*, or the Tribunal of Rites. Though the Name ſeems to be the ſame with that of the firſt Court, yet *Li* being pronounced differently, ſignifies [a], in that Place, *Mandarins*, in this, Rites. It belongs to this Court, to ſee that Rites and Ceremonies be duly obſerved, and to look after the Improvement of Arts and Sciences: It has alſo the Care of the Imperial Muſic: It examines thoſe who are Candidates for Degrees, and permits them to come to be examined: It is conſulted concerning Titles of Honours, and other Marks of Diſtinction, wherewith the Emperor would gratify thoſe who deſerve them: Beſides, it has the Charge of the Temples, and Sacrifices offered by the Emperor; alſo of the Feaſts given by his Majeſty to Subjects, or Strangers. It receives, entertains, and diſmiſſes Ambaſſadors: It has the Direction of liberal Arts, and of the three Laws, or Religions, profeſſed in the Empire. In ſhort, it is a Kind of Eccleſiaſtical Tribunal, before whom the Miſſioners have been obliged to appear in Times of Perſecution.

Its Tribunals. THIS Court is aſſiſted by four ſubordinate Tribunals. The Buſineſs of the firſt, called *I-chi-ſû*, or the Tribunal of important Affairs, is to ſettle and make-out the Titles and Patents of the Regulos, Dukes, *Tſong-tu*'s, Vice-Roys, and other great Offices of the Empire. The ſecond, *Su-ſi-ſû*, has the Charge of the Sacrifices which the Emperor offers; of the Temples, of the Mathematics, and of the Religions approved, or tolerated. The third, *Chu-ke-ſû*, is to receive thoſe who are ſent to the Court. The fourth, *Sing-ſen-ſhû*, has the Direction of the Emperor's Table, and the Feaſts which he gives either to the Grandees, or Ambaſſadors.

THE fourth ſupream Court is called *Ping-pû*, or the Tribunal of Arms. The Soldiery of the whole Empire is under its Care, and the Officers of War, as well general, as particular, have their Dependence on it. It examines them in their Exerciſe, keeps the Fortreſſes in Repair, ſupplies the Arſenals and Magazines with Weapons offenſive and defenſive, Ammunition and Proviſions: It cauſes all Sorts of Arms to be made, and, in ſhort, has the Management of every Thing in general, which concerns the Defence and Safety of the Empire.

IT has four inferior Tribunals to aſſiſt it. The firſt, *Vu-ſivn-ſû*, diſpoſes of all military Employments, and ſees that the Troops are well-diſciplined. The ſecond, *Che-ſang-ſû*, diſtributes the Officers and Soldiers into their reſpective Quarters, for maintaining the public Tranquillity, and take Care to clear the Cities and Highways of Thieves and Robbers. The third, *Che-kya-ſû*, has the Superintendance of the Horſes of the Empire, the Poſts, Stages, Imperial Inns, and Barks, appointed to carry Victuals, and other Proviſions, for the Soldiers. The fourth, *Vu-ka-ſû*, orders the making of all Sorts of Arms, and ſtowing the Arſenals [b].

NAVARETTE obſerves, that this Court-Martial, as he calls it, has ſome further Juriſdiction; for that the Miſſioners were turned-over to it in order to their Baniſhment, and appeared before it. They aſſigned them Barks, a Guard, and Officers to attend them [c].

THEY have given the Name of *Hing-pû* to the fifth ſupream Court, which is like the *Tournelle*, or criminal Chamber belonging to the Parliaments of *France*, where thoſe guilty of any Crime are examined. Under it are fourteen ſubordinate Tribunals, each for one of the Provinces, as before remarked.

THE ſixth and laſt ſupream Court, called *Kong-pû*, or *the Tribunal of public Works*, is employed in keeping in Repair the Palaces, as well of the Emperor, as of the Tribunals, the Princes of the Blood, the Vice-Roys, the Imperial Sepulchres, Temples, &c. It ſuperintends the Towers, triumphal Arches, Bridges, Cauſeways, Dikes, Rivers, Canals, Lakes, and all the Works neceſſary to render them navigable; the Streets, Highways, Barks, and all Veſſels requiſite for Navigation.

THIS Court has likewiſe four ſubordinate Tribunals. The firſt, called *Vin-ſhen-ſû*, prepares the Plans and Deſigns for the public Works

[a] *Magalhaens* obſerves, that ſuch equivocal Terms are not to be found among the *Tartars*; for the Tribunal of *Mandarins* is in their Language *Hafan Shurgan* (or *Churgan*) and the Tribunal of Ceremonies *Tore Shurgan*. *Hafan*, ſignifies a *Mandarin*; *Tore*, a Rite or Ceremony; and *Shurgan*, a Tribunal. [b] *Magalhaens* Relation of *China*, p. 205, & *ſeqq*. *Du Halde*'s *China*, p. 249. [c] *Navarette*'s Deſcription of *China*, p. 19.

The ſecond, *Yu-heng-tſe*, has the Direction of a all the Work-Shops of the Imperial Joiners, Maſons, Carpenters, *&c.* in the ſeveral Cities of the Empire. The third, *Tong-ſhwi-tſe*, is employed in repairing the Canals, Bridges, Cauſeways, Roads, *&c.* and making the Rivers navigable. The fourth, *Tſe-tyen-tſe*, takes Care of the Royal-Houſes, Gardens, and Orchards; cauſes the latter to be improved, and receives the Profit ariſing from them [a].

THESE ſix Tribunals ſtand near the Em- b peror's Palace, on the Eaſt-Side. Each takes-up a large ſquare Incloſure, a Muſket-Shot and half in Length on every Side, and conſiſts of three Diviſions, or Ranges of Courts and Apartments. The firſt Preſident poſſeſſes the Middle Diviſion, which begins at the Street, where there is a great Gate with three Doors: From thence you paſs-on through other Gates and Courts, beautified with Portico's and Galleries, ſupported by Pillars, till you come to a ſpacious c Hall, where the Tribunal is held. Beyond this Hall, paſſing through another Court, you come to a leſſer Hall, where the firſt Preſident withdraws, with his Aſſiſtants, when he is to examine any private Buſineſs, or Affairs of extraordinary Moment. On both Sides, and beyond this Hall, there are ſeveral Chambers, and other Halls. The Chambers are for the Uſe of the Preſident, his Aſſiſtants, and the reſt of the *Mandarins* to take their Repoſe, and eat the d Victuals ſent them by the Emperor, that they might not loſe Time by going home to dine. The Halls are for the Protonotaries and Clerks, and other inferior Officers. The two other Diviſions of Apartments and Courts belong to the inferior Tribunals dependent on it [b].

NAVARETTE ſays, the Shape and Structure of all the ſupream Tribunals is the ſame, only ſome are bigger than others. Every Tribunal has three Doors, on which are painted horrible e Giants, to terrify the Multitude. None but *Mandarins*, or Perſons of great Note, paſs through the middle Door, which is very large, the other two being for Suitors, and other People to enter. Before it is a great Court, with three Cauſeways anſwering to the Doors: That in the Middle is raiſed above a Yard higher than the others, with a Stone-Arch, and another Gate in the Middle of it. On the Sides are a vaſt Number of Rooms under Piazzas, for f Clerks, Sollicitors, and other Officers. A Temple is never wanting. Oppoſite to the Doors are very ſpacious Halls, and within them others, where Tribunals are held. Each of the ſupream Tribunals hath four great Rooms, in which ſeveral *Mandarins* of inferior Quality to thoſe in the Court ſit, and tranſact Affairs of leſs Moment [c]. *Supream Tribunals.*

EVERY Tribunal is compoſed of two Preſi- *Officers of* dents, with four Aſſiſtants, and twenty-four Counſellors, one half *Tartars*, the other *Chineſe*. This was a Maſter-Piece of Policy in the Conqueror, who thus by doubling the Number of Officers, brought the *Tartars* into the Adminiſtration, without diſcontenting the *Chineſe*; who would have had Cauſe to complain, if they had been excluded from the public Employments [d].

MAGALHAENS ſays, that the chief Preſidents of theſe ſix Tribunals are of the ſecond Degree of the firſt [e] Order of *Mandarins*, and called *Shang-ſhu* [f], which Name is annexed to that of their reſpective Tribunals, as *Li-pû-ſhang-ſhu*, that is, chief Preſident of the Tribunal of Ceremonies. Each Preſident has two Aſſiſtants: The firſt, called *Tſo-ſhi-lang*, or *Preſident of the Left-Hand:* The other, *Yew-ſhi-lang*, or *Preſident of the Right-Hand.* They are all of the firſt Degree of the ſecond Order. Theſe Preſidents, and their Aſſiſtants, have ſeveral other Titles: One is called *Ta-tang*, that is, *the great, or firſt Hall:* Another, *the Hall on the Left-Hand:* A third, *the Hall on the Right-Hand.*

THE forty-four inferior Tribunals have like- *The Tribu-* wiſe their Palaces and Halls, ſituate within the *nals.* Incloſure of thoſe to which they belong; with each two Preſidents, and twenty-four Counſellors, beſides a great Number of Clerks, Regiſters, Tipſtaffs, Meſſengers, Provoſts, Bailiffs, Beadles, Cooks, and other under Officers [g].

As in ſo great a Multitude of Officers, it would be difficult to find-out the proper Perſon with whom one has Buſineſs, there is a Book ſold, which may be called *The preſent State of China*, containing the Names, Surnames, and Employments of all the Officers, and diſtinguiſhing whether they are *Chineſe*, or *Tartars*, Bachelors, or Doctors, *&c.* It takes particular Notice alſo of the Changes made with reſpect to the Officers of the Army; and to ſpecify theſe Changes without reprinting the Book, they make uſe of moveable Characters [h].

THE Juriſdiction of theſe ſovereign Tribunals *Their Juriſ-* extends abſolutely over all the Provinces, and al- *diction.* moſt all thoſe who belong to the Emperor's Court. In Effect they have no Superior, except the Emperor, or the great Council: When that Prince thinks

[a] *Magalhaens*'s Relation of *China*, p. 213. *Du Halde*'s *China*, p. 250. [b] *Magalhaens*, as before, *p.* 202. *Navarette*'s Deſcription of *China*, p. 19. [d] *Du Halde*, as before, *p.* 249, *& ſeq.* [e] In the *Engliſh* tranſlation it is the ſecond Order. [f] That is, chief Preſident; and in the *Tartarian*, *Aliagamba.* [g] *Magalhaens*, as before, *p.* 201, *& ſeq.* [h] *Du Halde*, as before, *p.* 69.

Government.

fit to aſſemble it on ſome important Affair, already determined by one of the Courts, they preſent their Petitions on the Days appointed, and often confer with the Emperor himſelf, who either approves of, or rejects them, by ſigning them with his own Hand. But if he retains them, they wait ſome Time for his Orders, which are communicated to them by one of the *Ko-lau*. The Petitions preſented by the Preſidents of the ſupream Courts, ought to have the Subject which it relates to, ſpecified in the Title, and to end with the Opinion of the Court, to which the Affair belongs [a].

Method of proceeding

THE Manner of proceeding in theſe ſix Tribunals is this. When a Man has any Buſineſs, after ſetting it down in a Paper of a preſcribed Form and Size, he goes to the Palace of the Tribunal, and beats upon a Drum, which he finds at the ſecond Gate. Then falling on his Knees, and raiſing his Petition with both Hands as high as his Head, an Officer appointed for the Purpoſe, takes it from him: He carries it to the *Mandarins* of the great Hall, who give it to the chief Preſidents; or, in their Abſence, to their Aſſiſtants. If theſe reject it, they ſend the Petitioner his Paper again, and often order him to be ſoundly whipped for troubling the Court with an impertinent Suit. If the Petition be admitted, the firſt Preſident ſends it to the inferior Tribunal, to whom that Sort of Buſineſs belongs, to examine the Caſe. After this Court has examined the Matter, and given their Judgment, they ſend it back to the chief Preſidents, who ſometimes add to, or moderate their Sentence: At other Times confirming it without any Alteration. If it be an Affair of great Moment, they order the ſame Tribunal to draw-up the Caſe in Writing; which having read along with their Aſſiſtants, they ſend it to the Comptroller [b], and he to the ſupream Tribunal, or Council of State lodged in the Emperor's Palace.

In the Tribunals.

This Tribunal examines the Cauſe, and informs his Majeſty, who commonly orders the Tribunal to re-examine it: After which they ſend-back the Caſe to the Comptroller, and the Comptroller remits it to the chief Preſidents: Theſe cauſing it once more to be examined, ſend it back by the ſame Canals, as before, to the Emperor, who then gives his definitive Sentence. That Sentence returns the ſame Way to the firſt Preſident, who gives Notice of it to both Parties; and ſo the Suit is ended. If it be a Buſineſs which the provincial Tribunal ſends to the Court, the Caſe is ſealed-up, and directed to the Emperor's Comptroller: The Comptroller opens and reads it, and then ſends it to the chief Preſident, who proceeds as before is recited [c].

THE ſix ſupream Juriſdictions never meddle with Affairs of State, but when remitted to them by the Emperor, with Orders to deliberate thereon: For then ſtanding in need of each other, they are obliged to agree together, to the End that the Money, Troops, Officers, and Equipages, may be ready at the Time appointed; excepting in ſuch Caſes, each Court confines itſelf wholly to the Affairs belonging to it, and certainly has enough to do, in an Empire of ſuch vaſt Extent as *China* [d].

No State would be more happy, did all the *Mandarins* conform themſelves ſtrictly to the Laws of their Country: But among ſo great a Number, a few will always be found, who ſacrifice every Thing to their private Intereſts. There are no Tricks, or Artifices, which ſome of the inferior Officers do not make uſe of to deceive the ſuperior *Mandarins*; while ſome of theſe latter endeavour to impoſe upon the ſupream Tribunals of the Court, and even to deceive the Emperor himſelf. They are ſo dextrous at cloaking their Deſign, under the moſt humble and flattering Expreſſions; and in the Memorials which they preſent, affect ſuch an Air of Diſintereſtedneſs, that it requires a good deal of Penetration in a Prince to ſee through the Diſguiſe, and diſcover the Truth [e]. The late Emperor *Kang-hi* had this Quality in great Perfection; yet in Spite of all his Vigilance and Penetration, there were many Diſorders of this Kind during his Reign: But *Yong-ching*, his fourth Son, who ſucceeded him, effectually remedied theſe Evils, by allowing the Perſons he deputes, for that Purpoſe, large Sums to defray their Expences [f], as has been already obſerved.

As there might be Room to fear, that Bodies of Men, inveſted with ſo much Power, would by Degrees weaken the Imperial Authority, the Laws have provided againſt this Inconvenience two Ways: Firſt, none of theſe Tribunals is veſted with an abſolute Power of judging in Matters that are brought before them, but requires the Aſſiſtance of another, and often of all the reſt, to put its Decrees into Execution. For Inſtance, the Army is ſubject to the fourth ſupream Tribunal, but the Payment of it belongs to the ſecond, while the Barks, Waggons, Tents, Arms, *&c.* are under the Management of the ſixth: So that no military Operation can be carried-on, without the Concurrence of theſe

differen

different Tribunals; and this is the Case with Regard to all Affairs of Importance that concern the State.

SECONDLY, Nothing can be better contrived to curb the Power of the Magistrates belonging to the supream Tribunals, than the Precaution taken to appoint a Visitor, called *Ko-tau*, or *Ko-li*, that is, Inspector, or Censor, whose Business it is to assist at all their Assemblies, and to revise all their Acts, which are communicated to him. He can decide nothing himself, but is only b to take Notice of every Thing that passes in each, and give Information secretly to the Emperor of the Faults of the *Mandarins*, not only in the Administration of public Affairs, but in their private Conduct [a]. There is, in each of the Palaces of the supream Tribunals, a Hall and Apartment for a *Ko-li*, who has no Share in the Business, but only acts as a Comptroller in his Capacity of Inspector [b].

OF these *Ko-li*, even the Princes of the Blood c stand in Awe, as appears from the Instance of one who pulled-down his House for Fear of being accused by them [c]. Their Authority extends even to admonish the Emperor himself in case he sets an ill Example, or indulges himself too much in Plays, or Sports, permits Excess in Apparel, neglects to regulate his Palace, or his Duty in any Respect; and though they sometimes suffer even to Death, they seldom desist till they have gained their Point [d]. Of this Intrepidity, or d Greatness of Mind, *Le Comte* gives a very remarkable Instance.

ONE of the Emperors having banished his Mother into a distant Province, for carrying-on a private Intimacy with a great Court-Lord, forbad the Princes and *Mandarins*, who he judged would be disgusted at it, to admonish him thereof, on Pain of Death. They forbore for some Time, in Hopes he would correct his Conduct; but finding that he did not, they resolved to ap- e pear in Behalf of his Mother, looking on the Thing as a high Breach of filial Duty. The first who had the Courage to present a Request to the Emperor in this Matter, was put to Death on the Spot. His Death put not a Stop to the *Mandarins* Proceedings; for a Day or two after another made his Appearance, and to shew that he was willing to sacrifice his Life for the Public, he ordered his Hearse to stand at the Palace-Gate. The Emperor provoked, instead of being softened by this generous Action, to terrify all others from following his Example, ordered him to be tortured to Death. But this had not that Effect on the *Chinese*, who resolved to fall, one after another, rather than depart from their Design. *Inferior Tribunals.*

A THIRD, who devoted himself, like the se- *Of their Intrepidity.*
cond, protested to the Emperor, that he was not able any longer to see him still guilty of his Crime. *What shall we lose by our Death?* says he, *nothing but the Sight of a Prince, upon whom we cannot look without Amazement and Horror. Since you will not hear us, we will go and seek-out yours, and the Empress your Mother's Ancestors: They will hear our Complaints, and, perhaps, in the Dark and Silence of the Night you will hear ours, and their Ghosts reproach you with your Injustice.* The Emperor more enraged than ever, inflicted, on this last, the severest Torments he could devise. Many others, encouraged by these Examples, exposed themselves to Torment, and did in Effect die the Martyrs of filial Duty. At last this heroic Constancy wearied-out the Emperor's Cruelty; and whether he was afraid of more dangerous Consequences, or was himself convinced of his own Fault, he repented, as he *Prevail at last.* was the Father of his People, that he had so unworthily put to Death his Children; and, as a Son of the Empress, he was troubled that he had so long misused his Mother. He recalled her, therefore, restored her to her former Dignity, and, after that, the more he honoured her, the more was he himself honoured of his Subjects [e].

2. *Several other* Tribunals *at* Pe-king.

Tribunal of Han-lin. *Doctors of the first Order. Of the Princes Male-Line. Of the Female-Line. Of the Royal College. Mixed Tribunal. Of Comptrollers-General: Their Business. Subordinate Tribunals. Of the grand Provosts: Their Duty. Tribunal of Inspectors: Their Authority: That of Envoys. Of Reason and Justice. Court of Conscience.* Tong-ching-sû. *Court of Rites. Of Imperial Inns. Court of Mathematics: That of Physic. The Groom-Porter. Court of the Seal: Of the Royal-Guards: Of State-Prisoners: Of the Customs: Of the Household.*

THE Tribunal, which most deserves our No- *Tribunal of* Han-lin.
tice next, after the six supream Courts, is that called *Han-lin-ywen*, which signifies *a Gar-* f *den*, or *Wood, flourishing in Learning and Knowledge* [f]. It is composed out of the new Doctors, *Doctors of the first Order.* (or *Tsin-tse*) who every three Years take their Degree at *Pe-king*, and is a Kind of Academy,

Government. whose Members are Men of the greatest Genius and Learning in the Empire.

THESE Doctors direct the Education of the Heir to the Crown, and are to teach him, besides the Sciences, the great Art of governing well. It is their Business to write the History of the Empire in general, and to record all the considerable Events, worthy to be transmitted to Posterity. Their Profession is to study continually, and to compose useful Books. They are properly the *Literati* of the Emperor, who discourses with them about Matters relating to the Sciences, and often chuses the *Ko-lau*'s, and Presidents of the supream Tribunals, out of their Body. These *Han-lin* Doctors are divided into five Classes, and compose as many Tribunals. They belonging to the first, are of the third Order of *Mandarins*: They of the second of the fourth Order; and they who belong to the other three, are of the fifth Order [a]. This Tribunal seems to have been instituted chiefly to encourage, by doing Honour to, Men of Learning.

Of the Princes Male-Line. THERE are two Tribunals for inspecting the Affairs relating to the Descendants of the Imperial Family. The first, called *Tsong-jin fû*, concerns those of the Princes in the Male-Line. The Presidents and Assistants of this Court are Princes, or Regulos; but the inferior Officers are chosen from among the common *Mandarins*, who draw-up the Acts of their Proceedings, and all other Writings. In the Registers of this Tribunal, all the Children of the Imperial Family, as soon as born, are inrolled; the Titles and Dignities they are honoured with inscribed [b]. By this Court they are paid their Pensions: Here likewise they are tried, and punished when culpable [c].

Of the Female-Line. THE second, called *Whang-sin*, is composed of the Emperor's Kindred in the Female Line; of which there are two Sorts, from whom [d] his Majesty chuses the most considerable. Their Business is of the same Nature with the other Tribunal: They differ only in this, that they are *Mandarins* of the first and second Orders; whereas those of the former Court are of none: But they esteem much more honourable the Titles of *Whang-sin*, and *Fu-ma* [e], or the King's Kindred, than that of *Mandarin*, though of the first Order [f].

Of the Royal College. THE Tribunal called *Ghe-tsu-kyen*, is, as it were, the Royal School or College of the whole Empire. Their Business is, first, to present the Wine when the Emperor performs the Sacrifices. Secondly, to take Care of all the Licentiates, and other *Literati*, on whom his Majesty confers Titles and Dignities, which, in some Measure, put them on a Level with the Bachelors [g].

THE *Ju-hyo* is a mixed Tribunal, which takes Care of the under Graduates, civil and military. Four Presidents belong to it, two superintending each. The Bachelors of Art frequently exercise themselves in making Discourses on the Means of preserving the State, and governing the People. The Themes of the military Class are warlike Discipline, how to attack and defend fortified Places, to draw-up Forces in Order of Battle, and the like. The *Mandarins* of this Tribunal, who are dispersed through all the Provinces and Cities, are considered by them rather as Professors, than Magistrates. The President of this College is of the fourth Order of *Mandarins*; and his Assistants, who are Regents in the College, of the fifth Order [h].

THE *Mandarins*, who compose the Tribunal called *Tu-cha-ywen*, are Comptrollers of the Palace, and all the Empire. The Presidents [i] are equal in Dignity to those of the six superior Tribunals, being *Mandarins* of the second Degree: The two first Assistants are of the third: The other two of the fourth: All the rest of the *Mandarins*, which are very numerous, are of the seventh Order. They punish slight Faults in their own Court, and inform the Emperor of great Offences. Their Business is to see, that the Laws and Customs be strictly observed every where: In short, that both the *Mandarins* and People perform their respective Duties. In order to this they from Time to Time send-out Inspectors. Every three Years they cause a general Visitation to be made, sending fourteen Inspectors abroad, one for every Province. Every Year there is another called *Chong-chay*, or *the middle Supervisor*. They likewise send Visitors to nine Quarters of the Frontiers, on that Side next the great Wall: And others to the Salt-Pits, which yield the Emperor a great Revenue. The general Visitors enrich themselves by the Spoils of the *Mandarins*, and People: But the *Mandarins* commit much greater Robberies upon the Farmers, who distribute the Salt into the Provinces, and are the richest Men in *China*, being commonly worth four or five hundred thousand

[c] *Magalhaens*, as before, p. 239. *Du Halde*, as before, *p.* 250. [d] See before, *p.* 248. [e] Elsewhere *Tu-ma*. [f] *Magalhaens*, as before, *p.* 239. [g] The same, *p.* 219. [h] The same, *p.* 226. [i] Note, that *Magalhaens* all along makes but one President, and two Assistants, in the Tribunals; relating Things as they stood before the Change made by the *Tartars*, to which we have accommodated our Account, for Fear of giving the Reader a wrong Notion of the present State of Matters.

Crowns a Man. The third Viſitation, called *Syau-chay*, or *the petty Viſit*, is made every three Months, by ſending Inſpectors, often in Diſguiſe, to particular Provinces, or Cities, to pry into the Conduct of ſome Placeman, infamous for his Tyranny and Extortion. Beſides theſe Viſitations, every three Years an Inſpector, called *Hyo-ywen* [a], is ſent into each Province; and to every City another, called *Ti-hyo* [b], to examine the Bachelors of Art, and defend the People from the Violences they commit, confiding in their Privileges. Theſe have Power to apprehend, and condemn all ſuch Offenders to the Whip: Likewiſe when they prove incorrigible, to degrade and puniſh them with an extraordinary Severity. Laſtly, this Tribunal ſends, when requiſite, a Viſitor, called *Syun-ho*, to ſurvey the Royal Canal, and take Care of the Barks: By which this Inſpector reaps more Honour, and Profit, than all the reſt.

THE Judges of this Tribunal are lodged in a vaſt Palace, where they have under them five-and-twenty Tribunals, divided into five Claſſes, to each of which belong five Tribunals, with their Preſidents, Aſſiſtants, and inferior Officers. The five of the firſt Claſs are called *U-chin-chay-ywen*, or *Viſitors of the five Quarters of* Peking [c]. The four firſt inſpect each the Walls on one Side, with the adjoining Quarter of the City; and the fifth, the Walls in the Middle. The Authority of theſe *Mandarins* is very great, having Power to try and puniſh the Domeſtics of the *Mandarins*, and great Lords: But if the Offender deſerve Death, Confiſcation of Eſtate, or Baniſhment, they ſend him to the criminal Tribunal.

THOSE of the ſecond Claſs are called *U-chin-ſsing-ma-tſe*, or *Grand Provoſts of the five Quarters*. Thoſe of the third Claſs, *Tang-quen*, or *inferior Provoſts of the five Quarters*. It is the Buſineſs of the two latter to apprehend and impriſon Malefactors of all Kinds, Gameſters, Vagabonds, and the like: To keep Watch in the Day-time, go the Rounds in the Night, and ſet Centinels to give Notice when any Fire happens. The Captains of the Watch are alſo ſubject to theſe two Claſſes: For to every ten Houſes there belongs a Captain, called *Pay*; and every ten *Pay* have another Captain, called *I-tong-kya*, who is obliged to inform the Tribunal of what paſſes in his Diſtrict, with reſpect to any Irregularity, Strangers coming to Town, and the like. He is obliged, likewiſe, to exhort the ſeveral Families, by ſinging, at the Beginning of every Night, a Song, conſiſting of five Verſes: The Senſe of which is, *Obey your Parents, reverence old Men, and your Superiors; live together in Unity; inſtruct your Children; and do no Acts of Injuſtice.*

Inferior Tribunals. *Their Duty.*

IN petty Towns, where there are no *Mandarins*, the Care of this Duty is committed to four or five of the *Lau-jin*, or old Men, who have a Captain, called *Hyang-yo*, or *Ti-fang*. This Perſon alſo ſings the ſame Song every Night; and the firſt and fifteenth of every Month aſſembles the Inhabitants, and explains the Meaning of thoſe Inſtructions, by Similes and Examples [d], in a Lecture, or Sermon, as hath been already mentioned.

Inſtruct the People.

THE Officers ſent by this Tribunal belong to an inferior one of the ſame Kind, called *Ko-lau*, or *Ko-li*, that is, Inſpectors, or Cenſors. Theſe are divided into ſix Claſſes, like the ſix ſupream Tribunals, from whence they take their Name and Diſtinction: The firſt being called *Li-ko*, or *Inſpectors of the* Mandarin *Tribunal*: The ſecond *Hu-ko*, or *Inſpectors of the Treaſury Tribunal*; and ſo of the reſt. Each Claſs being compoſed intirely of *Mandarins* of the ſeventh Order, not one of them has any Superiority over another [e].

Tribunal of Inſpectors.

THEIR Authority, as Cenſors, is very great, extending over not only the ſix ſupream Tribunals, but the Grandees. They have ventured to accuſe Princes, great Lords, and *Tartar* Vice-Roys, though under the Protection of the Court: Nay, they commonly, either through Obſtinacy, or Vanity, chuſe to fall into Diſgrace with their Sovereign, and even ſuffer Death, rather than deſiſt from their Purſuits, when they believe them to be conſiſtent with Equity and ſound Policy. It was by the Information of one of theſe Cenſors, that the four *Ko-lau's* above-mentioned [f], and as many great Officers, were diſgraced, for receiving Bribes, to put People into Poſts. Nothing eſcapes their Vigilance; nor do they ſpare even the Emperor himſelf, when blameable; Hiſtory furniſhing many aſtoniſhing Inſtances of their Courage and Firmneſs, beſides that juſt now mentioned: And that they may neither be corrupted by Hopes, nor intimidated by Threats, they are kept conſtantly in-

Their Authority.

[a] See before, *p.* 116. b. [b] The ſame, doubtleſs, with the *Ti-hyo-tau*, mentioned *p.* 117. b. In the *English* Tranſlation, it is *Ti-trio:* But this muſt be a Miſtake, becauſe the *Chineſe* want the Letter *r*. [c] This muſt be meant of the *Tartar* City only, where the Palace ſtands: For the ſame Author informs us, that each of the two Cities, into which *Pe-king* is divided, contains five Quarters. [d] *Magalhaens*'s Relation of *China*, 221. This Author gives us a Specimen here, in a few Lines, of one of their Lectures. [e] *Magalhaens*, before, *p.* 227. [f] *P.* 16. b, only three *Ko-lau* are ſpoken of.

the

Government. the Employment, unleſs advanced [a] to a more considerable Poſt [b].

THEIR Method is, to inform the Emperor by private Memorials. His Majeſty likewiſe makes uſe of the *Mandarins* of this Tribunal, to execute ſeveral Orders of Importance, that require Secrecy; and every Year deputes three. The firſt, called *Syong-tſing*, viſits all the Merchants of the Court, and in the City of *Pe-king*, to diſcover ſophiſticated, or prohibited Goods: The ſecond, *Syong-kang*, viſits the Emperor's Lime-Burners. The third, called *Syong-ſhi-ning-ing*, is preſent at all the general Muſters.

That of Envoys. THE Tribunal, called *Hing-jin-tſe*, conſiſts of Doctors, all of the ſeventh Order of *Mandarins*, like thoſe of the preceding. Theſe are employed either as Meſſengers, Envoys, or Ambaſſadors, to diſtant Parts of the Empire, or to Foreign States. As when the Emperor confers Titles of Honour on the Mother, or Wife of a *Mandarin* ſlain in the Wars, who has done his Sovereign and Country eminent Service; or is pleaſed to confirm the Election of the King of *Korea*, or any other neighbouring Sovereign. Theſe Embaſſies are very honourable, and ſometimes no leſs gainful.

Of Reaſon and Juſtice. THE Tribunal of *Tay-li-tſe*, or *ſupream Reaſon and Juſtice*, is ſo called, becauſe they are entruſted to examine all doubtful Cauſes, and to confirm, or annihilate the Sentences of other Tribunals, eſpecially in Reference to Crimes that concern the Eſtates, Honour, and Life of the Subject. The Preſidents of this Tribunal are of the third Order; their lateral Judges, or Aſſiſtants, of the fourth; and the other *Mandarins* of the fifth and ſixth. When the Reaſons upon which the Tribunal of Crimes condemns any Perſon to Death, appears doubtful to the Emperor, he refers the Matter to the Tribunal of *San-fa-tſe*, which is, as it were, his Council of Conſcience. Hereupon the *Tay-li-tſe*, the *Tu-cha-ywen* [c], or ſuperior Court of Viſitors, and the Tribunal of Crimes, being aſſembled, re-examine the Proceſs in Preſence of the Parties concerned, and often revoke the Sentence. Generally the Emperor confirms the Deciſion of thoſe three Tribunals, whom it is not in the Power of the Proſecutor either to corrupt, or impoſe on.

Court of Conſcience.

Tong-ching-ſu. THE Tribunal *Tong-ching-tſe*, takes Care to publiſh the Emperor's Orders and Commands at Court, to inform themſelves of the Calamities, Oppreſſions, and Neceſſities the People labour under, and privately acquaint his Majeſty therewith. They are likewiſe to communicate to him, or ſuppreſs, as they think proper, the Memorials of the military *Mandarins*, and Letters that come from the fourteen Provinces, the ſuperannuated *Mandarins* (who are obliged to no Duty) from the People, Soldiers, and Foreigners: But the *Mandarins* of the Province of *Peking* preſent their Memorials immediately to the Emperor himſelf. The Preſidents of this Tribunal are of the third Order; their two firſt Aſſiſtants of the fourth; the two others of the fifth; and the reſt of the *Mandarins*, who are many, of the ſixth and ſeventh.

THE Tribunal of *Tay-chang-tſe* is, as it were, an Aſſociate to the *Li-pû*, or *ſupream Tribunal of Rites*. The Preſidents are of the third Order, their Aſſiſtants of the fourth, and the reſt of the fifth and ſixth. They ſuperintend the Emperor's Muſic and Sacrifices, together with the Temples where they are performed. The married *Bonzas* [d] are under their Juriſdiction. They give Orders for the Reception and Lodging of Strangers who come to Court, appointing two of their Number for that Purpoſe. Laſtly, they take Cognizance of the public Whores, the Places where they dwell, and thoſe who direct them in their infamous Trade. The *Chineſes* call theſe Miſcreants *Vang-pa*, that is to ſay, Men who have quite forgotten eight Virtues, *viz.* Obedience to their Parents, Affection for their Brethren, and other Kindred, Fidelity towards their Prince, Sincerity, Honeſty, Juſtice, Modeſty, and Chaſtity, together with all commendable Cuſtoms. This, which is the Signification of thoſe two Words, or Characters, ſhews both the Force of their Language, and the Eſteem they have for Virtue.

THE Tribunal *Quân-lo-tſe* [e], or of the *Royal Inns*, provides the Wine, Animals, and all other Requiſites for the Imperial Sacrifices. They likewiſe give Order for Banquets and Entertainment of thoſe who are treated at the Emperor's Expence. This Tribunal is an Aſſociate likewiſe to that of Rites. The Preſidents are of the third Order; two of their Aſſiſtants of the fourth; the other two of the fifth; and the reſt of the numerous *Mandarins* of the ſeventh Order.

THE *Mandarins* of the Tribunal *Tay-pe-tſe*, are of the ſame Orders with thoſe of the former. Their Buſineſs is to take Care of the Horſes, belonging both to the Emperor, and the Army. Having by their Agents bought-up the Numbers wanted, they ſend them to the Tribunal of War, to which this is an Aſſiſtant, who diſtribute them among the Officers, and Frontier Places. During the Government of the *Chineſes*, thoſe Horſes were furniſhed by the Provinces; but now the Weſtern *Tartars* bring them to the

[a] *Le Comte* was told, their Employ was perpetual, for the ſame Reaſons.

ſu for *tſe*, for which the *French* Miſſioners blame the *Portugueze*.

Court. The Emperor buys, every Year, ſeventy thouſand, beſides what are purchaſed by the great Lords, the civil and military *Mandarins*, the Soldiers, and the People, which amount to double, or treble the Number.

THE *Kin-tyen-kyen*, or *Tribunal of the Mathematics*. The Preſidents are of the fifth Order; their Aſſiſtants of the ſixth; and the reſt of the *Mandarins* of the ſeventh and eighth [a]. This Tribunal is ſubordinate to that of the Rites: It is alſo divided into two Chambers, whereof the b principal and moſt numerous, called *Li-ko*, is ſolely employed about calculating the Motions of the Stars, obſerving the Heavens, compoſing the Kalendar, and other aſtronomical Affairs. The ſecond, named *Lu-ko*, beſides other Buſineſs more peculiar to it, is employed to determine the proper Days for Marriages, Burials, and other civil Matters: But in this they have little Trouble more than to copy an ancient *Chineſe* Book, wherein almoſt all theſe Things are already ſet- c tled, according to the Year of the ſexagenary Cycle [b].

THE *Ta-i-ywen*, or *Tribunal of Medicine*, is compoſed of the Phyſicians belonging to the Emperor, Queens, and Princes. They alſo take Care of all others, whom his Majeſty out of his eſpecial Care, Grace, and Favour, orders them to viſit, and prepare the Medicines themſelves. The *Mandarins* of this are of the ſame Order as are thoſe of the preceding Tribunal, and de- d pend likewiſe on the Tribunal of Rites.

THE Tribunal of *Hong-lu-tſe* ſupplies the Office of Groom-Porter, and Maſter of the Ceremonies, when the Emperor gives Audience, or enters the Imperial Hall, to receive the Homages of the Grandees and *Mandarins*. This Tribunal is an Aſſiſtant to that of Rites. The Preſidents are of the fourth Order; the Aſſiſtants of the fifth and ſixth; and the reſt of the *Mandarins* of the ſeventh and eighth. e

THE Tribunal, called *Shang-len-ywen*, takes Care of the Gardens, Orchards, and Parks: Likewiſe of the breeding of Cattle, Sheep, Hogs, wild Ducks, Fowl, and other Animals made uſe of in the Royal Sacrifices, Feaſts, and Inns. It is ſubject to the Tribunal of Rites, and the *Mandarins* are of the ſame Order with thoſe of the Tribunals of the Mathematics and Phyſic.

THE Tribunal of *Shang-pau-tſe* [c] lodges in the Palace, and takes Care of the Emperor's Seal. f They are obliged to give the Emperor Notice both when it is delivered to, or returned by any Tribunal that has Occaſion to make uſe of it. They prepare the Seals of all the Tribunals of the Court and Empire: They appoint alſo the Letters and Marks that are to be graved upon them, when his Majeſty honours any Perſon with ſome new Title, or Employment; or when, for ſome Reaſon of State, he is pleaſed to change the Seals. When the grand Tribunal of *Mandarins* wants to confer Commands, and give Diſpatches to the *Mandarins* either of the Court, or Provinces, they ſend for them to this Tribunal, having firſt obtained the Emperor's Leave. The Preſidents of this Court have but two Aſſiſtants, both Doctors, and of the fifth Order. The reſt are of the Number of thoſe who have been made *Mandarins* out of Favour, and are only of the ſeventh, or eighth Order. *Inferior Tribunals.*

THE *Kin-i-ghey*, or *Tribunal of Royal-Guards*, conſiſts of ſeveral hundred military *Mandarins*, divided into four Claſſes. They of the firſt Claſs are of the ſecond Order of *Mandarins*; thoſe of the ſecond, of the third; they of the third, are of the fourth; and thoſe of the fourth Claſs, are of the fifth Order. Their Buſineſs is to guard the Emperor's Perſon, when he goes-out of his Palace, or gives Audience to the Grandees and *Mandarins*. They likewiſe apprehend and arreſt Perſons conſiderable for their Birth, or Dignity. They are generally the Brothers, or other Kindred of the Queens; the Sons, or Nephews of great *Mandarins*, or of ſuch as have performed eminent Services. They are never advanced to other Tribunals, like the reſt of the *Mandarins*. However, they are preferred in their own, and frequently to the Dignity of *Shang-pau* [d], or *Ko-lau*, who are Counſellors of State. Though military *Mandarins*, they are exempt from the Juriſdiction of the *Ping-pú*, or ſupream Tribunal of Arms, as being only ſubject to the Emperor; and as they are always near his Perſon, are greatly feared and reſpected. *Of the Royal Guards.*

TO this Tribunal belong two inferior Tribunals, that abide in particular Places. The firſt is called *Nan-chin*, or *the Watch-Tower of the South*. Their Office is to attend thoſe who are ſent to apprehend any Grandees. Thoſe of the ſecond, called *Pe-chin*, or *Watch-Tower of the North*, receive and guard the Priſoners while in Cuſtody, till releaſed by the Emperor's Order, or delivered over to the Tribunal of Crimes. The Preſidents of theſe two Tribunals are of the fifth Order; and the inferior *Mandarins*, which are very numerous, of the ſeventh. *Of State-Priſoners.*

THE two Tribunals, called *Swi-ke-tſe*, ſubject to the *Hu-pu*, or Treaſury, are properly Directors of the Audits of the Tolls, paid for Slaves, *Of the Cuſtoms.*

[a] *Magelhaens*'s Relation of *China*, p. 228, *& ſeqq.* [b] *Du Halde*'s *China*, p. 69. [c] *Shang-pau* ſignifies a precious Stone, alluding to the Seal which is made of one like Agate. See before, *p.* 241. [d] The Title of the Preſidents of the ſix ſupream Tribunals.

Government. Horſes, Camels, and all other Things brought to *Pe-king*, and ſold there. The Preſidents are of the ſeventh Order, and the inferior *Mandarins* of the eighth and ninth.

Of the Houſehold. THE *Tu-pû* is, as it were, the Tribunal of the ordinary Judge of the King's Houſehold. The Preſidents are of the ſecond Order; his Aſſiſtants of the third; and the reſt of the *Mandarins* of the ſeventh and eighth. Their Buſineſs is twofold: Firſt, to arreſt and proſecute Robbers, and other Malefactors: If adjudged worthy of Death, they deliver them over to the Tribunal of Crimes, but puniſh Offences that are not capital. Secondly, to arreſt and puniſh fugitive Slaves. To this Tribunal there belongs a great Number of Bailiffs, and Thief-takers, who manage their Buſineſs with more than ordinary Induſtry and Cunning [a].

BESIDES the Tribunals at *Pe-king*, already deſcribed, there are thoſe peculiar to the City itſelf, which will be treated of in the next Article.

3. *The* Tribunals *of* Provinces *and* Cities.

Tribunals, provincial. Preſidents and Officers. Tribunals civil and criminal. Other provincial Tribunals. Tribunals of Cities. Of the three Ranks: Their Officers. Inferior Tribunals. Other Tribunals: Their Juriſdictions. Inferior Officers. Tribunal for Learning. Check of Viſitors: Inform the Emperor by Petition: Their Intrepidity. Pleaſant Story

Tribunals, provincial. TO each of the fifteen Provinces (including *Pe-che-li*) there belongs a ſupream Tribunal, which ſuperintends all the reſt. The Preſidents bear the Titles of *Tu-tang*, *Kyun-mwen*, *Tu-ywen*, *Syun-fû*, with ſeveral others, importing no more than Governor of a Province, or Vice-Roy. Theſe Preſidents are of the firſt, ſecond, or third Order, according to the Emperor's Pleaſure. They are intruſted with the whole Government, as well in Times of Peace, as War; and with the Command of the People and Soldiers, as well in civil, as criminal Matters. They communicate to the Emperor, and the ſix ſupream Tribunals, all Affairs of Importance. On the other Side, all that Monarch's Orders, and Diſpatches, as well as thoſe of the ſuperior Tribunals, are directed to this; and all the *Mandarins* of the Province are bound to repair to it, when any Affair of Moment is under Conſideration.

Preſidents and Officers. THE Vice-Roy, the Viſitor called *Ngan-tay*, or *Ngan-ywen*, and the *Tſong-ping*, or General, are the ſupream Preſidents of the provincial Tribunals, having under them ſeveral inferior *Mandarins*, to aſſiſt in the Diſpatch of Buſineſs: And though theſe three great Officers have their Palaces in the capital City of the Province, yet they are not always reſident there, but keep their Circuits, from Place to Place, as Buſineſs requires. The Palace belonging to this Tribunal, like thoſe at the Court, contains two other Tribunals, which are not inferior, but Aſſiſtants to the firſt. That on the Left-hand, called *Tſan-ching*, is the moſt conſiderable: Its Preſidents are both of the ſecond Degree of the third Order. The other, on the Right-hand, is called *Tſan-i*. The Preſidents are both equal, and of the ſecond Degree of the fourth Order. The Buſineſs of the inferior *Mandarins* (of theſe three Tribunals) called *Shew-lyen-quan*, is to decide all civil Matters, as well as to pay and receive all the Revenues of the Province [c].

IN all the capital Cities of Provinces, two Tribunals are eſtabliſhed, one for civil, the other for criminal Affairs. The firſt, called *Pu-ching-tſe*, has a Preſident, who is like the Treaſurer-General of a Province in *Europe*; and two Aſſiſtants, who are all *Mandarins* of the ſecond Order. The criminal Tribunal, named *Ngan-cha-tſe*, has a Preſident of the third Order, and inſtead of Aſſiſtants, two Claſſes of *Mandarins*; the firſt called *To-tſe*, of the firſt Order; the ſecond *Syen-tſe*, of the fifth: Both Claſſes have the common Name of *Tau-li*.

THESE *Mandarins* are Viſitors of the different Diſtricts, into which every Province is divided, and have their reſpective Tribunals: Their Buſineſs is to give an Account of what paſſes to the Emperor, eſpecially when there is no Viſitor in the Province ſent expreſly from the Court. Some of them, called *I-chwen-tau*, have the Care of the Poſts, as alſo of the Imperial Inns and Barks within their Diſtricts: Others, named *Ping-pi-tau*, have the Inſpection of the Army: The *Tun-tyen-tau* viſit the Sea-Coaſts [d]. They have all a Power to puniſh Criminals, and are as the Subſtitutes of the ſix ſupream Tribunals of the Court.

BESIDES the Tribunals common to all the Provinces, there are others peculiar to certain Places, or which have particular Functions. Such are for Inſtance, 1. The *Mandarins* of the Salt, whoſe Buſineſs is to diſtribute it through the Provinces, and to hinder private Traders from ſelling it in Prejudice to the Revenue: The Preſident of this Tribunal is called *Yen-fa-tau*. 2. The

[a] *Magalhaens*'s Relation of *China*, p. 232, & *ſeqq.* [b] See before, *p.* 252. [c] *Magalhaens*, as before, *p.* 241, & *ſeq.* [d] *Magalhaens* ſays, their Buſineſs is to drain the Lands, and level the Highways, which ſeems the more juſt Account.

Mandarins

Mandarin General, of the Tribute of Rice, a named *Lyang-tau*. 3. Another *Mandarin* General, called *Hyo-tau*, who presides at the Examination of the Students of the Province, and those who appear to take the Degrees of Literature; besides several others too tedious to mention, who have particular Offices [a].

EVERY District, as well as Province, has its own Tribunal, or Court, for preserving Order, and distributing Justice: These reside in their respective chief Cities, whether of the first, second, or third Rank, called *Fu*, *Chew* and *Hyen*. Their Presidents are the Governors of these Cities, or Districts, and called from thence *Chi-fû*, *Chi-chew*, and *Chi-hyen*.

THERE are, in *China*, an hundred and seventy-three Tribunals, or Jurisdictions, of the first Sort, or *Fû*, immediately subject to the General Officers and Governors of each Province; fourteen hundred and eight inferior Tribunals, or subordinate Jurisdictions, depending immediately on the *Chi-fû*, whereof eleven hundred and seventy-three are *Hyen*, and two hundred and thirty-five *Chew*; these latter however differ somewhat from each other. The greater Part have no Authority over the *Hyen*; but some have a Jurisdiction over one, two, and sometimes four *Hyen*, almost equal to that of the *Chi-fû*, but depending immediately on the Vice-Roy [b].

THE *Chi-fû* of all Cities of the first Rank in the Provinces (except *Pe-king*) is a *Mandarin* of the fourth Order, and has three Assistants, called *Tong-chi*, *Tong-pwen*, and *Chwi-quan*, who are of the sixth and seventh Orders: They are called second, third, and fourth Lords, of the second, third, or fourth Chair, or of the second, third, or fourth City, in regard the President is called the first Lord, the first Chair, and the first City. There are four other inferior *Mandarins*, called *King-lye-chu-tse*, *Chau-mo*, and *Kin-kyau*, who are only of the seventh, eighth, or ninth Order. All the Cities of the Empire are provided with such *Mandarins* as these: But if it be a Place of great Trade, or the District large, their Number is doubled.

THE *Chi-chew*, or President of Tribunals in Cities of the second Rank, of the second Degree of the fifth Order, has two Assistants, the first called *Chew-long*, the second *Chew-pwon*, who are of the second Degree of the sixth and seventh Order. He has under him also a third *Mandarin*, called *Li-mo*, of the second Degree of the ninth Order. The People call this Governor *Tay-ya*, that is, *the great*, or *first Lord*; the other three the second, third, or fourth Lord. *Provincial Tribunals.*

THE *Chi-hyen*, or President of Tribunals in third-Rate Cities, is of the first Degree of the seventh Order. He has also two Assistants, the first called *Hyen-ching*, of the eighth Order; the second *Chu-pu*, and of the ninth. He has also a third under him, who is called *Tyen-tse*, who is of no Order; but if he acquit himself well of his Employments for three Years, he is advanced, on Recommendation from the Governors [c], as hath been before remarked [d].

WHEN Cities for Largeness of District are said to be double, each Part has its peculiar Tribunal; besides that of the *Chi-fû*, which is much more numerous, more powerful, and often differently named. For Instance, *Pe-king*, besides the chief Tribunal, called *Fu-in*, being divided into two Cities under distinct Governors, has two Tribunals more, one called *Tay-hing-hyen*, the other *Ven-ping-hyen*. These depend on the first. The two Governors being superior to all the other Governors of the *Fû*, or chief Cities in the Empire, are of the third Order of *Mandarins*, and their Assistants of the fourth. The first superintends the Students, and *Literati*, who are not yet *Mandarins*: The Office of the second is to instruct the People, and defend them from the Rich, to punish the Vicious, and reward the Virtuous: Lastly, to prepare the Place, and all Things necessary, for the public Sacrifices. The Business of the Tribunals of other Cities is the same with this, except in the last Article: The Business of the two superior Courts, as well as of the Tribunals of all other Cities, is the same with that of the first. Their Presidents are of the sixth Order, as being in Cities where the Court resides; but in those of the Provinces they are of the seventh Order, and their Assistants of the seventh, eighth, and ninth [e]. *Inferior Tribunals.*

THERE are some Cities with Courts, named *Wey*, whose *Mandarins*, or Governors, have the Title of *Wey-shew-pey*, and are military Officers: Their Jurisdiction seldom extends without the Walls of the Town. There are others appointed in the Villages; and all that commonly falls under their Cognizance relates to certain Persons, who are obliged, by their Station and Birth, to attend the Service of the Public. These Tribunals, distinguished also by their Names, are sometimes, like those of the *Chi-fû*, and *Chi-hyen*, included within the same Districts: So that if one relies on the Lists of the *Mandarins*, or Histories of the Provinces, without enquiring *Other Tribunals.*

[a] *Magalhaens*'s Relation of *China*, p. 242, & *seq.* *Du Halde*'s *China*, p. 251. [b] *Du Halde*, as before, p. 5. [c] *Magalhaens*, as before, *p.* 244, & *seq.* [d] See before, *p.* 250. d. [e] *Magalhaens*, as before, p. 256.

Government. farther, he may reckon three Cities, where there are but one [a]. For Inſtance, the Town which, in the Hiſtory of the Province of *Quey-chew*, is called *Li-ping-fû*, is in Reality the ſame, which in the Province of *Hû-quang*, is called *U-kay-wey*: For being ſituated on the Borders of two Provinces, it is the Seat of a *Chi-fû*, ſubject to the Province of *Quey-chew*, and of a *Wey-ſhew-pey*, who depends on the Province of *Hû-quang*, as a military Officer [b].

Their Juriſdictions. THE Governors of Cities, who are inferior *Mandarins*, do not commonly determine Matters of Importance themſelves, but are obliged to make their Report to the ſuperior *Mandarins*, that is, to the *Pû-ching-tſe*, and *Fu-ywen*, who have none above them, except the Tribunals of *Pe-king*. The *Tſong-tû* himſelf is ſubject to the ſame Tribunals [c]. As the Officers of the Army depend likewiſe, in ſome Reſpects, upon the Vice-Roy, and are obliged, under ſevere Penalties, to give him Notice of the leaſt Commotion among the People within their Diſtricts; it happens, that almoſt all Affairs of the Government, whether civil, criminal, or military, are brought at length before his Tribunal: And what adds to his Authority is, that all the Deciſions of the ſupream Courts of *Pe-king*, are grounded commonly on the Informations that come from him; and that they almoſt always ratify the Sentence which he paſſes againſt the *Mandarins*, whom he hath a Right to diſplace, and, even previous thereto, of taking-away their Seal [d].

Inferior Officers. EVERY *Mandarin* has the Officers of his Tribunal lodged in his Palace [e]. Theſe Officers are a Kind of Notaries, Clerks, *&c.* There are ſix Sorts of them, each employed in Buſineſs of the ſame Kind with one of the ſix ſupream Courts at *Pe-king*; ſo that a private *Mandarin* does all that in little, in his Tribunal, which ſome Time or other he will be called to do in one of the ſupream Courts, with reſpect to the whole Empire. They are maintained at the public Expence, and their Places are for Life; ſo that Buſineſs goes-on without Interruption, though the *Mandarins* are often changed, either by being caſhiered, or removed into other Provinces [f].

Tribunal for Learning. LASTLY, In all the Towns and Cities of the Empire, there is a Tribunal, compoſed of a Preſident, and at leaſt two or three Aſſiſtants, called *Kyau-quân*, or *Judges of the* Literati. Their Buſineſs is to take Care of Learning, and learned Men: Eſpecially to inſpect the Bachelors of Art, who are very numerous, and frequently very poor; yet truſting to their Privileges, become inſolent. They uſe many knaviſh Arts, and even Violence, to get Money from the Rich, as well as Poor; and often throw-off the Reſpect due to the Preſidents and Governors. This Court was therefore erected to puniſh them, either by Whipping, or other Penalties; and to degrade them, if incorrigible. For this Reaſon, the Bachelors ſtand in great Awe of thoſe *Mandarins*. This Court has Power alſo to aſſemble, from Time to Time, all the Graduates of the City, and old *Mandarins* excuſed from Service by reaſon of their Age; and to examine them, by giving them Themes, as hath been already ſet forth [g]: So that theſe Officers are rather Profeſſors, than Magiſtrates [h].

Court of Cenſors. THESE inferior Tribunals of Provinces and Cities have alſo their Checks on them, as well as the ſupream Courts of the Empire, particularly in the Viſitors, or Cenſors, called *Ko-li*, *Ko-tau*, and *Ko-tau-yu-ſe*. As ſoon as the fourteen Viſitors, ſent by the Tribunal of *Tu-cha-ywen*, enter their reſpective Provinces, they are ſuperior to the Vice-Roys, and all other *Mandarins*; who ſtand ſo much in Dread of them, that it is become a common Proverb, *The Rat has ſeen the Cat*. Nor is it without Reaſon, that they fear theſe Cenſors, ſince it is in their Power to take-away their Employments, and ruin them. The Viſitation being finiſhed, they return to Court, generally loaden with four or five hundred thouſand Crowns; for the *Mandarins* who are guilty will bleed freely, to ſtave-off an Accuſation to the Emperor. Others give ſomething to prevent a falſe Information. They divide their Spoils, with the firſt Preſidents, and their Aſſiſtants; after which they give both them, and the Emperor, an Account of their Viſitation. They rarely impeach any, but ſuch whoſe Injuſtice and Oppreſſions are ſo public, that it is impoſſible to conceal them; or, who through Virtue, or Poverty, fail to gratify their Avarice [i].

As theſe provincial Cenſors are very vigilant, and have their Spies, they can be ignorant of nothing that paſſes. If any *Mandarin* neglects his Duty, in a Matter of Importance, and the Vice-Roy does not give immediate Notice thereof, the Cenſors are obliged to inform the ſupream Courts, and the Emperor, by a public Accuſation. If they be the firſt by whom his Majeſty is apprized of the Diſorder, it redounds much to their Honour: On the other Hand, if they fail of ſo doing, they are liable to be removed from their

[a] On this Occaſion the Author very rightly obſerves, that to write with Certainty the Geography of a large Country, it is not enough to travel over it barely for Information, but one muſt be furniſhed with the proper Helps. Employments. Positive Proof is not required; if their Report has the Air of Truth, it is sufficient Ground for an Information.

THEIR Method of giving Information to the Emperor, is by Petitions, which are dispersed through the Empire. When his Majesty, according to Custom, refers them to the Tribunals to deliberate upon, the *Mandarins* seldom raise any Objections, for Fear of being accused themselves. It is true, this gives them a great Power; yet nothing, perhaps, contributes more to preserve Peace, good Order, and the ancient Customs. If they be ill treated, either by the Intrigues of the Grandees, whom they have accused, or by the Emperors, who sometimes are offended at the Advice their Office obliges them to give, the whole Nation look on them as Fathers of their Country, and Martyrs for the public Welfare; while the Emperor is sure to draw on himself very odious Names, which the Historians would take Care to transmit to Posterity.

In short, these Censors seldom or never change their Resolution. If the Court, or the great Tribunal seeks to elude the Justice of their Complaints, they return to the Charge, and make it appear that they have not answered conformable to the Laws: Some of them having persevered two whole Years in accusing a Vice-Roy supported by the Grandees, and without being discouraged by Delays, or frighted by the most terrifying Menaces, have at length compelled the Court to degrade him, and avoid disgusting the People. But if in this Sort of Combat between the Prince and State, in the Name of which the Censor acts, the Prince happens to yield, he immediately receives the Praises of the Public in their Addresses, and is loaded with Elogies by the whole Empire; the sovereign Courts of *Pe-king* return him their Thanks, and what he has done for Justice, is looked-on as a singular Favour [a].

NAVARETTE observes, that when the Emperor gives these Visitors his Seal, which they carry fastened on their right Arm, they are as terrible as so many Thunderbolts [b]. On Occasion of this Seal, we meet with the following pleasant Story. A Visitor having lost his Seal, by the Artifice, as he suspected, of the Governor of the City, who was his Enemy, disappeared of a sudden, pretending to be dangerously ill. A *Mandarin*, his Friend, suspecting something amiss, went to his Palace, and having, with much Difficulty, gotten Admittance to his Chamber, at last learned from him the Cause of his Distress. His Friend thereupon advised him, after removing his best Effects out of that Apartment, to set it on Fire, and then deliver publickly into the Governor's Hands, the little Coffer where the Seals were kept, desiring him to keep it till he had Occasion for it: *And if he, my Lord*, added the *Mandarin*, *maliciously caused the Seals to be stolen, he will re-place them in the Coffer; or you may accuse him with having lost them.* The Matter, it seems, succeeded, as the *Mandarin* had foreseen; and the Visitor recovered his Seal again [c]. *Law Proceedings.*

4. *Manner of proceeding in* civil, *and* criminal Affairs.

Causes soon dispatched. Appeals, in what Cases. Judges civil, and military. No Lawyers Fees. Criminal Proceedings: Great Precaution. Punishments adequated. Form of Condemnation. Proceedings in capital Matters strictly examined. Mighty Tenderness for the Life of Persons. Dead Warrant. Execution-Day.

EACH Magistrate, great or small, has his Tribunal, or *Ya-men*; and so soon as he is fully apprized of the Cause by the Parties, after some few Proceedings, drawn-up by proper Persons, he pronounces Sentence just as he thinks fit. Sometimes he orders him who has lost his Cause to be bastonadoed, for having commenced it with no good Design, or defended it against all Appearance of Equity [d]. *Causes soon dispatched.*

CAUSES of small Importance are generally heard in the inferior Tribunals. However, the Plaintiff may bring his Action in any higher Court, without applying first to the lower. For Instance, an Inhabitant of a City of the first Rank, instead of having Recourse to his own Governor, may apply himself to the Governor of the capital City of the Province, or even to the Vice-Roy; and when once an Affair comes before a superior Judge, the inferior ones cannot take Cognizance of it, unless remitted to them by the superior Magistrates, as it often is.

WHEN the Cause is of great Consequence, there lies an Appeal from the Vice-Roy to one of the supream Courts at *Pe-king*, according to the Nature of the Business. There it is first examined in one of the under Offices, from whence a Report being made to the President of the supream Office, he gives Sentence, after advising with his Assistants, and communicating his Opinion to the *Ko-lau*, who then carry it to the Emperor. Sometimes the Emperor desires better Information, sometimes gives Sentence on the Spot. In this Case the supream Court makes a Brief of the Sentence, in his Majesty's Name, and sends it to the Vice-Roys, for them to put it *Appeals, in what Cases.*

[a] *Du Halde's China*, p. 3, 70, and 250. [b] *Navarette's* Description of *China*, p. 18. [c] *Du Halde*, as before, *p.* 243. [d] The same, *p.* 3.

Government. in Execution. A Sentence pronounced in this Manner is irrevocable; they call it *the holy Commandment, which is without Defect, or Partiality* [a].

WHATEVER Deference the *Mandarins* pay to the leaſt Intimations, as well as Orders of the Emperor, they do not fail, on proper Occaſions, to diſcover a great deal of Reſolution. When his Majeſty interrogates the Tribunals, by Way of Information, and they anſwer according to the Laws, they are not liable to either Blame, b or Reproach: Whereas, if they anſwer contrary thereto, the Cenſors of the Empire have a Right to accuſe, and the Emperor to puniſh them.

Judges civil and military. As all the Courts in the Province depend on the Vice-Roy, and the four other General Officers, who are his Aſſiſtants, according to the Nature of the Buſineſs: So if the Affair relates to the Revenue, and civil Matters, it is brought before the *Pu-ching-tſe*, or Treaſurer-General: If a criminal Cauſe, it is referred to the *Ngan-cha-tſe*, or Lieutenant-Criminal: If it concerns c the Poſts, or Salt-Branch, *&c.* Recourſe is had to the *Yen-tau.* Laſtly, if the Buſineſs relates to the Proviſions, which are collected by Way of Tribute, they apply to the *Lyang-tau.* But beſides the Affairs peculiar to their reſpective Tribunals, theſe may be applied-to in Caſes of a different Nature: Becauſe all the inferior Courts of the Provinces depend on them, and their Preſidents are by their Stations Counſellors to the d Vice-Roy; in which Quality they are obliged, ſeveral Times every Month, to attend his Tribunal on Matters of Importance relating to the Province [b].

No Lawyers Fees. ONE Thing more ought to be added for the Honour of the *Chineſe* Legiſlators, and to ſhew how truly they had the Intereſt of the People at Heart, that no Fees are paid for the Adminiſtration of Juſtice. The Judge, whoſe Office coſt him nothing, and who has his Salary ſtated, can e require nothing of the Parties at Law; which impowers every poor Man to ſue for his Rights, and frees him from being oppreſſed by the Opulence of his Adverſary [c].

Criminal Proceedings. WITH Regard to criminal Proceedings, there is no need of having a Warrant to carry Offenders before the Magiſtrate, or that the Magiſtrate ſhould ſit in a Court of Juſtice to hear their Accuſation and Defence. Such Formalities are not inſiſted on in *China.* Where-ever the Magiſtrate f ſees a Fault, there he has Power to puniſh it on the Spot, be it in the Street, on the Highway, or in a private Houſe, it is all one: He may take-up a Gameſter, a Cheat, or debauched Perſon, and without any Ceremony order ſome of his Attendants to give him twenty or thirty Stripes. Notwithſtanding this Puniſhment, he may be accuſed a ſecond Time by the Perſon damaged in a ſuperior Court, where he is tried, and uſually receives a farther Puniſhment [d].

IN all criminal Proſecutions the Emperor names a Commiſſioner, unleſs the Criminal, by his Office, or Quality, be privileged to object to him. If the Emperor diſlikes the firſt Sentence, he may commiſſion new Judges to reexamine it until the Sentence be agreeable to his Mind; for otherwiſe it would be in the Power of Money, or Artifice, to ſave a Man, whoſe Life would be noxious to the State [e]. Before the criminal Matters come to a definitive Sentence, they commonly paſs through five or ſix Tribunals ſubordinate to one another; which have all a Right to review the whole Proceedings, and to receive exact Information concerning the Life and Manners of the Accuſers and Witneſſes, as well as of the Crimes of the Perſons accuſed. This Dilatorineſs proves favourable to the Innocent, who by that Means are ſeldom oppreſſed, although they lie a long While in Priſon [f].

WHEN Thieves are apprehended, if armed, they by the Law ſuffer Death; but if they are found in no Condition to wound, or kill anybody, they inflict ſome other corporal Puniſhment, according to the Quality of the Goods ſtolen: If they have taken nothing, the Judges are ſatisfied by puniſhing them with thirty or forty Blows of the Battoon. They ſay, theſe Felons rob by Favour of a Drug, whoſe Fume caſts the People of the Houſe into a deep Sleep [g]; and the *Chineſe* are ſo perſuaded of the Truth of this, that Travellers cauſe a Baſon of cold Water to be brought into their Chamber in the Inn, as an infallible Remedy to fruſtrate the Power, or Charm of the Drug [h].

THE Baſtonado, Wooden-Ruff, and Impriſoning, are all the Puniſhments which the *Chineſe* Laws permit the *Mandarins* of the Provinces to inflict on Criminals: They may, indeed, condemn to Baniſhment; yet their Sentence muſt be examined by the ſupream Courts, before it can be put in Execution: But they muſt never go ſo far as to take-away Life, except the Nature of the Crime require ſpeedy Juſtice, as in Caſes of Sedition, or Revolt; then the Emperor gives Authority to the *Tſong-tû*, and even to the Vice-Roy, to puniſh the Offenders with immediate Death [i].

WHEN the Criminal is to be condemned, the

[a] *Le Comte*'s Memoirs of *China*, p. 269. [b] *Du Halde*'s *China*, p. 2, 70, *& ſeqq.* [c] *Le Comte*, as before, p. 287, *& ſeq.* [d] The ſame, *p.* 269. [e] The ſame, *p.* 284. [f] *Du Halde*, as before, *p.* 310. [g] See before, *p.* 74. d. [h] *Le Comte*, as before, *p.* 242, *& ſeq.* [i] *Du Halde*, as before, *p.* 3, *& ſeq.*

Mandarin

Mandarin orders him to be brought into the Tribunal, where commonly there is prepared a ſhort Repaſt; at leaſt before Sentence is given, they never fail to offer him Wine, which is called *Tſi-ſeng* [a]. After the Sentence is read, the Criminal ſometimes breaks-out into abuſive Language, and Invectives, againſt thoſe who condemned him: When this happens, the *Mandarin* hears all with Patience, and Compaſſion; but afterwards they put a Gag in his Mouth, and lead him to Execution. Some of thoſe, who go on-foot, ſing all the Way, and drink chearfully of the Wine preſented them by their Acquaintance; who wait their coming, in order to give them this laſt Proof of their Friendſhip.

THE Judgments paſſed-on all Perſons for Crimes worthy of Death, are to be examined, agreed to, and ſubſcribed by the Emperor. The *Mandarins* ſend to Court an Account of the Trials, with their own Deciſion, mentioning the particular Law on which their Sentence is grounded: For Inſtance, *ſuch a one is guilty of a Crime, and the Law declares, that thoſe who are guilty of it, ſhall be ſtrangled; for which Reaſon I have condemned him to be ſtrangled.* Hereupon the ſupream Tribunal of criminal Affairs examines the Fact, the Circumſtances, and the Sentence. If the Fact is not clearly ſtated, or the Tribunal has need of freſh Informations, it preſents a Memorial to the Emperor, containing the Caſe and the Judgment of the inferior *Mandarin*, with this Addition: *To form a right Judgment, it is neceſſary, that we ſhould be informed of ſuch a Circumſtance; therefore we are of Opinion, that the Matter ſhould be ſent back to ſuch a* Mandarin, *that he may give us ſuch Light therein as we could wiſh to have.* The Emperor's Clemency always inclines him to do what is deſired, that the Sentence, which concerns a Thing of ſuch extraordinary Conſequence, as the Life of a Man, may not be pronounced raſhly, and without the moſt convincing Proof. When the ſuperior Tribunal has received the Informations required, it preſents a ſecond Time its Deliberation to the Emperor, who either confirms the ſame, or elſe diminiſhes the Rigour of the Puniſhment: Nay, ſometimes he remits the Memorial, writing theſe Words with his own Hand: *Let the Tribunal deliberate farther upon this Affair, and make their Report to me.*

IN *China* every Thing is canvaſſed with the ſtricteſt Care, when they are about condemning a Man to Death. The Emperor *Yong-ching* gave Orders, in 1725, that thenceforward none ſhould be put to Death till after his Trial was preſented to him three Times. Agreeable to this Order, the criminal Tribunal obſerve the following Method: Some Time before the appointed Day, they cauſe to be tranſcribed in a Book, all the Informations, that, during the Courſe of the Year, have been ſent them from the inferior Judges; to which they join the Sentence given by each, and that of the Tribunal of the Court. This Tribunal afterwards aſſemble to read, and review, correct, add, or retrench whatever they think fit. When every Thing is ſettled, two fair Copies are made-out, one of which is preſented to the Emperor for his private Examination; the other is kept to be read in the Preſence of all the principal Officers of the ſupream Courts, that it may be amended as they ſhall adviſe.

Kinds of Puniſhments.

THUS in *China* the moſt vile and deſpicable Wretch enjoys a Privilege, which in *Europe* is granted to none but Perſons of the greateſt Diſtinction, namely, the Right of being judged and condemned by all the Houſes of Parliament, aſſembled in a Body [b]. The ſecond Copy having been examined, and corrected, they preſent it to the Emperor: Then it is written over-again ninety-eight Times in the *Tartarian* Language, and ninety-ſeven in the *Chineſe*. All which Tranſcripts being put into his Majeſty's Hands, he gives them to be examined by his moſt ſkilful Officers of both Nations who are at *Pe-king*.

The Life of Perſons.

WHEN the Crime is very enormous, the Emperor, in ſigning the Dead-Warrant, adds, *As ſoon as this Order ſhall be received, let him be executed without Delay.* As for capital Crimes, which have nothing uncommon in them, his Majeſty writes this Sentence underneath, *Let the Criminal be kept in Priſon till Autumn, and then be executed.* For there is a fixed Day in Autumn, whereon all capital Offenders are put to Death [c].

Dead Warrant.

Execution Day.

5. Puniſhments *inflicted on* Criminals.

Government. *ment. Depriving of Burial. Cutting in Pieces. Kinds of Torture; ordinary: Extraordinary Torture. Horrid Punishment.*

Justice slow, but sure. THOUGH Justice, in *China*, seems slow, by reason the Proceedings are lengthened-out (not for Sake of enriching the Lawyers, but) that Men may not be unjustly deprived of such considerable Benefits as Life and Honour; yet no Offences whatever escape Punishment, that of each being fixed, and proportioned to the Enormity of the Crime. The *Pan-tse*, or Bastonado, is commonly applied for slight Faults, and the Number of Blows according to the Quality thereof. It is the usual Chastisement inflicted on the Soldiers, placed as Centinels in the Night-Time in Streets and public Places of great Cities, when found asleep. If the Number of Blows does not exceed twenty, it is accounted a Fatherly Correction, and is not disgraceful; for the Emperor himself causes it to be given to Persons of great Distinction, and afterwards sees and carries-it to them as usual. A little Matter will incur this Fatherly Chastisement, as having filched any Trifle, used abusive Language, or given a few Blows with the Fist; for if these Things reach the *Mandarin*'s Ears, he immediately sets the *Pan-tse* at Work. After the Correction is over, they are to kneel at the Feet of the Judge, bow their Bodies three Times to the Earth, and thank him for the Care he takes of their Education.

The Pan-tse, or Bastonade.

How applied. THE *Pan-tse* is a thick Piece of split Bambû, (a hard, large, and heavy Sort of Cane) several Feet long: The lower-End is as broad as one's Hand, the upper smooth and small, that it may be more easily managed. When the *Mandarin* sits in Judgment, he is surrounded by Officers, holding these Instruments in their Hands; who upon a Sign given, by the Magistrate throwing on the Ground small Sticks, about six Inches long, and two broad (which he takes-out of a Case lying before him on a Table) seize the Offender, and laying him along with his Face towards the Ground, pull his Breeches over his Heels: Then for every Stick a different Officer gives him five Blows with the *Pan-tse*, on the bare Skin, that so they may fall the heavier. However, it is observable, that four Blows are reckoned as five, which they call the Grace of the Emperor, who as a compassionate Father constantly lessens the Punishment something. There is a Way of mitigating it also, by bribing the Officers, who have the Art of making the Blows fall so light, as to be scarcely felt [a]. For this Punishment is so violent, that one Stroke a is enough to fell a Person who is of a tender Constitution, and oftentimes People die of it: For Money likewise, Men may be hired everywhere, to bear the Punishment in the Offender's Stead, as hath been already observed [b]. *Le Comte* affirms, that by such a Trick as this, *Yang-quang-syen*, the famous Prosecutor of the Missioners, escaped the Sentence of Death, and let it fall on another, whom he had hired to bear the Punishment he expected to be condemb ned-to, which he made the poor Wretch believe would be no more than a good Drubbing at worst. But this Story is palpably forged by the Author, to be revenged on that Enemy of his Religion. This appears from many Reasons; but it is enough to observe, that *Yang-quang-syen* was pardoned by the Emperor [c]: Nor can a *Mandarin* order a Person to be executed, till his Trial be sent to Court, and the Sentence confirmed there [d].

c A *Mandarin* has Power to give the Bastonado not only in his Tribunal, but also wherever he is, even out of his own District: For which Reason, when he goes abroad, he has always Officers of Justice in his Train, who carry the *Pan-tse*. If one of the People happens to be on Horseback when he passes-by, and does not alight, or crosses the Street in his Presence, it is sufficient to incur five or six Blows by his Order; which are applied so nimbly, that often the honest Man d has gotten his Due, before those about him know any Thing of the Matter [e]. The *Pan-tse* is a Punishment for sturdy Beggars, Strollers, Night-walkers, or idle People, who cannot give a good Account of themselves.

CHINA swarms with strolling Beggars, Musicians, and Fortune-tellers. These Vagrants travel in Companies, sometimes all Blind-folks; and are as great Impostors as the Gypsies of *Europe*. They practise many Austerities to extort Alms, as scourging their Bodies, laying e burning Coals on their Heads, striking their Foreheads against a Stone, or one another, till huge Lumps arise, or they fall-down quite stunned. They will continue inflicting these Severities on themselves till they die, unless the Spectators give them something to desist. Many of them are Cripples, having wry Necks or Mouths, broken Backs, long hooked Noses, Eyes blind or squinting, and lame Arms or Legs. f Besides those who are born with such Deformities, many are lamed whilst Infants by their Parents, who put them to incredible Torture [f].

SOME Women, purposely blinded by their Parents, go-about with Gittars to get their Bread

Other

N.° 139

G. Child Sculp.t

Plate XXXVIII. Vol. IV. p. 279

Others playing on Inſtruments, calculate Nativi- a ities, and pretend to underſtand Phyſiognomy [a]. You ſhall ſee likewiſe the Mountebanks riding through the Towns and Villages on the Backs of Tigers, and other wild Beaſts, made tame; which walk ſlowly along, whiſking their Tails, and carrying Branches of Trees in their Mouths. The Rider hath commonly over his other Cloaths a wide Coat with prodigious large Sleeves, and a Belt worn like a Scarf over his right Shoulder, and under his left Arm. In his left Hand he carries a Sword, which he flouriſhes by Intervals, extolling his Balſoms, Plaiſters, and other Medicines, as infallible Remedies for all Wounds and Diſtempers whatever. He is generally accompanied with deformed People, following him on Crutches, or with Rattles: Moſt of them go naked; others wear wide Coats, full of Patches of divers Colours; and ſome appear with Wings fixed to their Temples [b].

To return to the *Pan-tſe:* The *Mandarins* c themſelves are liable to the Battoon for Offences committed: But it cannot be inflicted on any, however inconſiderable, unleſs he be firſt deprived of his Office: Yet this is no great Matter in his Favour, ſince the Vice-Roy has Power to caſhier him on certain Occaſions, without waiting for the Anſwers of the ſupreme Courts; being only obliged to give them his Reaſons, which uſually they approve, and often even order the Offender to be proſecuted. It is true, he has Liberty to d repair to *Pe-king* to juſtify his Conduct, by preſenting his Petition to one of the ſovereign Courts, or even carrying his Complaint before the Emperor: And this reſtrains the Vice-Roy from acting precipitately, and abuſing his Authority [c]. In a Word, Maſters give this Kind of Correction to their Scholars, Fathers to their Children, and Noblemen to their Domeſtics; with this Difference, that the Battoon is neither ſo long nor ſo large as that of the Magiſtrate.

ANOTHER Puniſhment, leſs painful, but more infamous, is the wooden Collar, which the *Portugueze* call *Cangue*. It is compoſed of two Pieces of Wood cloſed together, with a Hole in the Middle, to fit the Neck of the Offender [d]; who, when this Machine is on, can neither ſee his Feet, nor put his Hand to his Mouth; ſo that he muſt be fed by ſome other Perſon. Night and Day he carries this diſagreeable Load; which is heavier or lighter, according to the Nature of the f Fault. The Weight of the common Sort of *Cangues* is fifty or ſixty Pounds; but ſome weigh two hundred; and are ſo grievous to Criminals, that, ſometimes, through Shame, Confuſion, Pain, want of Nouriſhment, and Sleep, they die under them. Some are three Feet ſquare, and five or ſix Inches thick. *Kinds of Puniſhments.*

THE Criminals, however, find different Ways to mitigate this Puniſhment: Some walk in Company with their Relations and Friends, who ſupport the four Corners of the *Cangue*, that it may not preſs their Shoulders: Some reſt it on a Table, or on a Bench: Others have a Chair made b with four Pillars of an equal Height, to bear-up the Machine: Some lie on their Bellies, and make uſe of the Hole, their Head is in, as a Window; through which they impudently gaze at all who paſs along the Street. *An uneaſy Burden.*

WHEN they have fixed this portable Pillory about the Neck of the Criminal, in the *Mandarin*'s Preſence, they paſte on each Side, over the Place where the Boards join, two long Slips of Paper, four Inches broad, on which they clap a Seal, to prevent the *Cangue* from being opened. Then they write in large Characters how long *A ſhameful Puniſhment* this Puniſhment is to laſt, and the Crime for which it was inflicted. For Inſtance: *This is a Thief; this is a diſorderly and ſeditious Perſon; this is a Diſturber of the Peace of Families; this is a Gameſter* [e], &c. *He ſhall wear the* Cangue *for three Months in ſuch a Place.*

THE Place, where they are expoſed, is gene- d rally at the Gate of a Temple, of the City, or of the *Mandarin*'s Tribunal; at the Corners of Streets, or in a public Square [f]. When the Time of Puniſhment is expired, the Officers of the Tribunal bring-back the Offender to the *Mandarin*, who, after exhorting him to amend his Courſes, frees him from the *Cangue*; and, to take his Leave of him for that Time, orders him twenty Strokes of the *Pan-tſe:* For commonly, in *China*, all Puniſhments, except pecuniary ones, e begin and end with the Baſtonado.

THIS Puniſhment is more common for Men *Inflicted on Women.* than Women: Nevertheleſs, *Contancin* the Miſſioner met, near a Tribunal, with a *Bonzeſs*, or Kind of Nun, carrying the *Cangue*. Though all Perſons whatever are forbidden to enter their Convents, and they are obliged to live a Life of Chaſtity while they continue there, yet thoſe Rules are often broken through. This Female being accuſed of having had a Child, the *Man-* f *darin* cited her before his Tribunal; and, after a ſevere Reprimand, told her, that ſince ſhe could not live continently, it was fit ſhe ſhould

[a] *Navarette*'s Deſcription of *China*, p. 55. [b] Montanus in Ogil. Chin. p. 306. [c] *Du Halde*'s *China*, 3. [d] Like the Boards of a Pillory, in which the Offender's Neck is faſtened. [e] The *Chineſe* are exceſ-Gameſters, often ſtaking their whole Fortune at one Bet, and playing away their Wives, Children, and emſelves, who become the Winner's Slaves. [f] This ſeems to be the ſame Puniſhment called *Karkan*, by Comte, who makes it a Sort of Baſtonado.

Government. quit the Nunnery, and marry. However, to punish her, he condemned her to carry the *Cangue*; and to the Note containing her Crime, it was added, that in case any Person would marry her, the *Mandarin* would set her at Liberty, and give her an Ounce and an half of Silver (which is equal to ten Shillings *English*) to defray the Expences. Of this Sum one Third was to hire a Chair, and to pay the Musicians; the rest was for bearing the Expence of the Wedding-Feast: Nor was it long before she met with a Husband. There are still other Punishments for slight Faults. The same Missioner entering into a second Court of the Tribunal, found young People upon their Knees: Some bore on their Heads a Stone weighing seven or eight Pound; others held a Book in their Hands, and read very diligently. Among these was a young married Man, who loved Gaming to Excess, and had lost Part of the Money given him by his Father to set-up with. Exhortations, Reprimands, and Menaces, proving ineffectual, his Parents carried him before the Tribunal. The *Mandarin* having heard the Father's Complaint, caused the young Man to draw-near; and, after giving him a severe Reprimand, as well as very good Advice, with regard to Submission, was going to order him the Bastonado: When his Mother entered of a sudden, and throwing herself at the *Mandarin*'s Feet, with Tears, besought him to pardon her Son. The *Mandarin* being moved to Pity, ordered a Book to be brought, composed by the Emperor for the Instruction of the Empire; and opening it, chose the Article which related to filial Obedience. *You promised me*, said he to the young Man, *to renounce Play, and to listen to your Father's Directions; I therefore pardon you this Time; but go kneel down in the Gallery on the Side of the Hall of Audience, and learn by Heart this Article of filial Obedience: You shall not leave the Tribunal till you repeat it, and promise to observe it the Remainder of your Life.* This Order was punctually executed, the young Man remained three Days in the Gallery, learned the Article, and was dismissed.

Punishments for slight Faults.

A Gamester punished.

Banishment. Galleys. THERE are certain Enormities for which Offenders are marked on both Cheeks with a *Chinese* Character, signifying those Crimes; for others are condemned to Banishment, or to draw the Royal Barks, which Servitude scarce ever lasts longer than three Years. As for Banishment, it is often perpetual, especially if *Tartary* is the Place of Exile; but before their Departure, they are sure to be drubbed with a Number of Blows proportionable to their Crimes [a].

Branding on the Cheeks. PICK-POCKETS are branded on the left-Arm with a red-hot Iron, for the first Offence; for the second, upon the right-Arm; and for the third, they deliver them over to the Tribunal of Crimes. Fugitive Slaves they first cause to be punished with an hundred Lashes of a Whip, and then to be restored to their Masters. Of late Years they were marked on the left-Cheek, with two *Tartar*, and two *Chinese* Characters: But a *Chinese Mandarin*, having represented to the Emperor, that the Punishment was too rigorous for a Crime, which proceeded rather from the Desire of Liberty, so natural to Mankind, than any wicked Inclination; and that it was unbecoming the City of his Majesty's Residence to have the Streets so full of those deformed Objects, this Counsel being approved by the Emperor, he ordered, for the future, that the Letters should be branded upon the left-Arm [b].

ON this Occasion it may be observed, that often a great *Tartarian Mandarin*, or *Chinese Tartarised* [c] (that is, listed under the *Tartar* Banner) who has a Parcel of Slaves for his Servants, is himself a Slave to some Court-Lord, to whom, from Time to Time, he makes a Present of considerable Sums. A poor *Chinese*, when he gives himself to a *Tartarian* Prince, if he has Merit, may hope to be a great *Mandarin* very soon; but this is not so common under the present Dynasty, as formerly: If he be deprived of his Office, he returns to his Master, to serve in certain honourable Functions.

WHEN rich Folks marry their Daughters, they bestow on them several Families of Slaves, in Proportion to their Wealth. It often happens, that they give them their Liberty; and some have half their Freedom, on Condition that they pay yearly a certain Sum. If any of them grow rich by their Industry, their Master does not strip them of their Goods, but is contented with large Presents, without consenting however to their Redemption. These Slaves are of an approved Fidelity, and inviolably attached to their Master; who, on his Side, uses them as his own Children, and often trusts them with the most important Affairs. As to his Authority over his Slaves, it is confined to Matters relating to his Service; for should it be legally proved that a Master had abused his Power, by taking criminal Liberties with the Wife of his Slave, he would be ruined beyond Remedy [d].

THE three capital Punishments, are Strangling, Beheading, and cutting in Pieces. The first is the most common and mildest Punishment, being inflicted for the smaller Sort of Capital Offences; as when a Man kills his Adversary in a Duel. In some Places they strangle

[a] *Du Halde*'s *China*, p. 311, *& seq.* Sect. 1. chap. 2.

[c] See be
[d] *Du Halde*, as before, *p.* 278.

with a Kind of Bow: In others, they make uſe of a Cord ſeven or eight Feet long, with a running Knot, in which the Neck being put, two Servants belonging to the Tribunal draw it hard at each End, and looſe it of a ſudden a Moment after: Then drawing the ſecond Time, they are ſure of doing the Criminal's Buſineſs. Perſons above the common Rank are always carried to the Place of Execution in Chairs, or covered Carts [a]. Perſons of Quality are ſtrangled, unleſs the Crime be very notorious; in which Caſe they are puniſhed like mean People, and ſometimes their Heads are cut-off, and hanged on a Tree in the Highways [b]. For contrary to the Cuſtom of *Europe*, Hanging is an honourable Death, and Beheading the moſt ignominious: For this Reaſon, when the Emperor would ſhew an extraordinary Favour to a great Lord, or *Mandarin*, condemned to die, he ſends him a ſilken Cord, inſtead of a Halter (with Orders to be his own Executioner.)

BEHEADING is inflicted for Crimes of a more enormous Nature; ſuch as Aſſaſſination. This Death is looked-upon as the more ſhameful, becauſe the Head, which is the principal Part of a Man, is ſeparated from the Body; and that in dying they do not preſerve the Body as intire, as they received it from their Parents. The Party condemned to ſuffer this Puniſhment is not expoſed on a Scaffold on the Day of Execution; but being made to kneel in ſome public Place, with his Hands tied backwards, a Perſon holds him ſo faſt, that he cannot move; while the Executioner coming behind, takes-off his Head at one Stroke, and at the ſame Time lays him on his Back with ſuch Dexterity, that not a Drop of Blood falls-on his Cloaths, which, on that Occaſion, are often better than ordinary: His Relations and Friends, who are aſhamed to own him in thoſe unhappy Circumſtances, commonly ſend him new Cloaths, and cauſe Proviſions and Drink to be furniſhed him by the Way.

THE Executioner is commonly a Soldier; nor is the Office ſcandalous, but the contrary, if they perform it well. At *Pe-king*, he accompanies the Criminal, girt with a Saſh of yellow Silk, which is the Imperial Colour; and his Cutlaſs is wrapped in Silk of the ſame Kind, to ſhew that he is veſted with the Emperor's Authority, and command the greater Reſpect from the People [c].

THE *Chineſe* are of Opinion, that ſuch as are beheaded, muſt have been diſobedient to their Parents, who gave them ſound and perfect Bodies; and that the Separation of the Members is a Puniſhment conſequent to that Crime. They are ſo firmly perſuaded of this, that they will buy the Bodies of their Parents, or Relations, from the Executioner, at a great Price [d], according to their Ability, and ſew-on the Head again with a World of Lamentation, to ſatisfy, in ſome Meaſure, for their Diſobedience. They refer the Origin of this Notion to *Tſeng-tſu* (a Diſciple of *Confuſius*) who at his Death exhorted his Children, and Diſciples, to obey their Parents, ſaying, it was owing to his Obedience, that he had preſerved his Body as perfect and intire, as they had beſtowed it on him. *Kinds of Puniſhments.*

THEY who are condemned to be beheaded, are alſo ſentenced to be deprived of common Burial; which is ſtill a more terrible Infamy in *China*. For this Reaſon the Executioner is obliged, after he has ſtripped the Body, to throw it into the next Ditch: So that in ſelling it, he runs the Hazard of being ſeverely puniſhed, unleſs he bribes the *Mandarin*, or Informer, pretty high; and this makes the Purchaſe of a Body ſo dear. By an ancient Law, when any Criminal, either for his good Qualities, or any other Reaſon, deſerves to be pitied, let him be condemned at what Time of the Year he will, he is to be reprieved till the End of the Autumn following: Becauſe, upon the Birth or Marriage of a Prince, or any other Cauſe of public Rejoicing; after an Earthquake, or on any extraordinary Alteration of the Seaſons, or Elements, it is uſual to releaſe all Sorts of Priſoners, except ſome few who are excepted; and by that Means thoſe that are reprieved are ſet at Liberty, or at leaſt live in fair Hopes for ſome Months [e]. *Depriving of Burial.*

THE third Kind of Puniſhment, called cutting in ten thouſand Pieces, wherewith Rebels and Traitors are uſually puniſhed, ſavours of Cruelty. The Executioner faſtens the Criminal to a Poſt, and tearing the Skin off his Head, pulls it over his Eyes, that he may not ſee his Sufferings: He mangles him afterwards in all Parts of his Body, which he cuts in many Pieces; and when he is tired with this Exerciſe, abandons him to the Mercy of his Enemies, and the Populace. Though this has been often practiſed under the Reigns of ſome Emperors, who are looked-on as barbarous; yet, according to the Laws, this Puniſhment conſiſts in cutting the Body of the Criminal [f] into ſeveral Pieces, opening his Belly, and throwing the Carcaſe into the River, or a Ditch, as is done by great Malefactors. *Juſtice*, ſay the *Chineſes*, *is neceſſary*; *but not Cruelty*. *Cutting in Pieces.*

THE Rack is uſed in *China*, as well as other Countries, to extort Confeſſion; and is either ordinary, *Kinds of Torture, ordinary.*

[a] *Du Halde*'s *China*, p. 4, and 312. [b] *Le Comte*'s Memoirs of *China*, p. 293. [c] *Du Halde*, as before, p. 4, and 312. [d] Paying often ſix hundred, or a thouſand Crowns. [e] *Magalhaens*'s Relation of *China*, p. 211, *&* *ſeqq.* [f] We preſume, when dead.

Government. ordinary, or extraordinary. The ordinary Torture is extreamly acute and painful. It is inflicted both on the Feet and Hands: For the former they make-uſe of an Inſtrument compoſed of three croſs Pieces of Wood, of which that in the Middle being fixed, the other two move, and turn-about: In this Machine they put the Feet of the Criminal, and ſqueeze them ſo violently, that they make the Ankle-Bone quite flat [a]. They inflict it on the Hands, by placing little Pieces of Wood between the Fingers of the Criminal, and tying them very hard with Cords, leave him for ſome Time in this Torment. The *Chineſe* have Remedies to diminiſh, and even ſtupify the Senſe of Pain during the Torture: Others, to heal the Priſoner, who indeed recovers by their Aſſiſtance, ſometimes in a few Days, the former Uſe of his Limbs [b]. The extraordinary Torture, which is inflicted to diſcover the Accomplices, eſpecially in High-Treaſon, and other great Crimes, when the Fact has been proved, conſiſts in making ſlight Gaſhes on the Offender's Body, and ſtripping-off the Skin in narrow Slips, like Fillets.

Extraordinary Torture.

THESE are all the Kinds of corporal Puniſhment, appointed by the *Chineſe* Laws for Malefactors; though ſome Monarchs have inflicted others of a more inhuman Nature: Such as the Emperor *Chew*, who at the Inſtigation of *Takya*, his favourite Concubine, invented a new Kind of Puniſhment, called *Pau-lo:* It was a Column of Braſs twenty Cubits high, and eight in Diameter, hollow in the Middle, like *Phalaris*'s Bull, with Openings in three Places for putting in Fewel. To this they faſtened Criminals, and making them embrace it with their Arms and Legs, lighted a great Fire within, and thus roaſted them till they were reduced to Aſhes, in the Preſence of that Monſter of a Woman [c].

Horrid Puniſhment.

6. *The* Priſons *of* China.

Goals large and convenient. Priſoners cloſely confined, and ſtrictly guarded; yet carefully attended. The Womens Priſon. Door of the Dead. State of the Goaler. Lodgings at Night. Exerciſe by Day. Great Regularity. Poor maintained. The Dungeon.

Goals large, and convenient.

THE Priſons here, beſides being neither ſo dreadful, nor loathſome as thoſe of *Europe*, are much more convenient, and ſpacious. They are built almoſt in the ſame Manner throughout the Empire; and ſituated at a ſmall Diſtance from the Tribunals. Having paſſed through the firſt Door towards the Street, you meet with a long Paſſage, which brings you to a ſecond Goaler's Apartment. After that, you enter a large ſquare Court, on the Sides whereof are Priſoners Rooms, erected on large Pillars of Wood, which form a Kind of a Gallery.

AT the four Corners are private Priſons, wherein the more notorious Rogues are ſecured, who are never let-out in the Day-time to converſe in the Court; and yet Money will purchaſe this Liberty for a few Hours: But at Night they take Care to load them with heavy Chains, which are faſtened to their Hands, Feet, and Middle; ſqueezing their Sides ſo hard, that they can ſcarcely ſtir. However, this Severity may be mitigated for a little Silver. As for thoſe, whoſe Faults are not very heinous, they have the Liberty of the Courts of the Priſon in the Day-time, to walk-about for the Air; but in the Evening they are all called, one after another, and ſhut-up in a large dark Hall, or elſe in the little Rooms, which they may hire for lodging more conveniently. A Centinel watches all the Night, to keep the Priſoners in profound Silence, and if the leaſt Noiſe is heard, or the Lamp happens to be put-out, immediate Notice is given to the Goalers, that they may remedy the Diſorder.

OTHERS are obliged to walk the Rounds continually, ſo that it would be in vain for any Priſoner to attempt an Eſcape; becauſe he would be immediately diſcovered, and ſeverely puniſhed by the *Mandarin*, who viſits the Priſons often, and ought always to be able to give an Account of them: For if any fall-ſick, he muſt anſwer for them; being obliged not only to find them in Phyſicians, and Remedies, at the Emperor's Expence, but alſo to take all poſſible Care for their Recovery. When any die, they are to inform the Emperor, who often orders the ſuperior *Mandarin* to examine, if the inferior have done their Duty. At theſe Times of viſiting, thoſe who are guilty of any capital Crime appear with a melancholy Air, the Face pale and ghaſtly, the Head hung-down, and the Feet trembling, whereby they endeavour to excite Compaſſion: But it is to no Purpoſe, for the Deſign of their Impriſonment is not only to ſecure, but alſo to afflict them, and become Part of their Puniſhment.

IN large Priſons, ſuch as that of the ſupreme Court at *Pe-king*, Tradeſmen and Mechanics, as Tailors, Butchers, Sellers of Rice and Herbs, *&c.* are allowed to enter, for the Service and

[a] *Magalhaens* ſuffered this Torture. See before, *p.* 2. c. It is ſurpriſing the *Chineſes* could introduce a Puniſhment, which, in its own Nature, is both unjuſt and abſurd. [b] If this be ſo, methinks the *Chineſe* Surgeons muſt far excel the *European*; and their Method of curing Wounds and Contuſions be well worth enquiring after. [c] *Du Halde*'s *China*, p. 4, 313, *&* *ſeq.* *Le Comte*'s Memoirs of *China*, p. 293.

Conve

Convenience of those who are detained in them: a There are even Cooks to dress their Victuals, and every Thing is done in Order, through the Care of the Officers.

THE Womens Prison is separated from that of the Men, and there is no speaking to them but through a Grate, or at the Turning-Box, by which their Necessaries are conveyed; but very rarely any Man goes near them.

IN some Places, when a Prisoner dies, his Body is not carried-out through the common b Door of the Prison, but through a Passage made in the Wall of the first Court, which serves only for the Dead. When Prisoners above the common Rank find themselves in Danger of Death, they desire, as a Favour, that they may go-out before they expire: Because they look upon it as an infamous Thing for their Corpse to be carried through that Passage; insomuch that the greatest Curse a *Chinese* can bestow on the Person to whom he wishes ill, is to say, *May you be dragged through the Prison-Hole* [a]. c

NAVARETTE, who in the Time of Persecution, was, with other Missioners, confined at *Hang-chew fû*, the Capital of *Che-kyang*, gives the following Account of the Prison, and his Treatment there. As soon as they were brought into the first Court, they spied the Head-Goaler, who sat in great State on his Tribunal-Seat: He presently asked for the Mittimus of the criminal Judge, and then examined them concerning d their Design in coming to *China*, and the like. Having answered him with a great deal of Freedom, they were let through another little Door, that was locked, and had a Porter at it, into a Lane, which brought them to an elegant Temple. In all the Goals, Dungeons, and Courts of Justice throughout the Empire, they have Temples, very neat, and richly adorned; where the Prisoners, and such as are at Law, make their Vows, offer Candles, Oil, Silver, Perfumes, e and other Things: Some beg to be delivered out of Goal, others for good Success in their Suits; but in vain they pray to Images of Wood and Earth, which can neither see, nor hear.

AT Night they were turned through another lesser Door, into a Court, and conveyed into a great Hall, quite dark, without any Window, and so full of People, that there was hardly Room for them all to stand: This was called the little Prison, to distinguish it from the Dungeon, f which was at a good Distance. Here they continued forty Days, having always Light at Night, and then, for more Conveniency, hired a Room. There was an Overseer, to keep in Order the Prisoners, who were all extreamly submissive to him; so that there was no Roaring, Noise, or Quarrelling, but all as hush as if it had been a regular Monastery. *Prisons.*

IN the Day-time they went to the Temple, *Exercise by Day.* and to a great Court that was before it, where they breathed the fresh Air. There were two Lanes full of Rooms, which were let to People of some Note, who were in for small Faults: There they live quietly, and with Conveniency, till their Business is over. There are also some Houses in which married People dwell, who keep Watch in the Night: They walk-about those Lanes and Courts, continually beating Drums, and blowing little Horns; so that it is impossible any Man should make his Escape, though the Place itself were not so secure.

THE Womens Prison is apart, and has a *Great Regularity.* strong Door, in which there is a little Gate, through which they gave them Necessaries. The Author took particular Notice, that no Man ever went to hold Discourse there: The Modesty of the Men, and Reservedness of the Women *Chineses* in this Particular, not being to be parallelled in all the World besides. All Kinds of Necessaries are daily brought thither to be sold; so that every Day a formal Market is kept there. Thus the Whole resembles a well-governed Corporation. Every Evening the Head-Goaler, with his Clerk, viewed the Prisoners, calling them over by their Names, and then locking them up.

TO those who were poor, there was given, *Poor maintained.* every Day, a Portion of Rice: Half of it they eat, and with the other Half bought Wood, Salt, Herbs, *&c.* Without this Benevolence, many would be exposed to miserable Want: For there is no Way to beg, they being lodged much higher than the Ground, and quite out of the Way for People to come at them. During the Time that the Missioners were there, more came in than went out: Some had their Thighs all gauled with Lashes, others their Ancles disjointed by the Rack, which is a common Punishment, and inflicted with great Severity in *China*.

ONE Day they went into the Dungeon, which *The Dungeon.* is dismal enough: Without it was a large Court, and in the Middle a Temple, like that of the little Prison. All those who were there had Fetters on, and their Colour was unwholesome, because the Place is very damp; but in the Day-time they suffered them to come-out into the Sun, where they aired, and loused themselves. What the Missioners admired most, was to see how devoutly they implored their Idols to deliver them from their Sufferings; as well as with how much Courtesy and Respect they treated *them*, and one another. If two Natives of *China*, *Japan*, or *Tong-king*, were brought into our

[a] *Du Halde's China*, p. 310, *& seq.*

Government. Priſons, ſays *Navarette*, how would the other Goal-Birds uſe them? What Tricks would they play them? How would they force them to pay Garniſh? Nothing of this Sort, continues he, is practiſed among the *Chineſes*; but they treated us with as much Reſpect, as if we had been ſome Perſons of Note among them. On the Inſide, towards the Dungeon, there was a Gap made through the Wall into a ſmall Orchard, through which they thruſt-out the Corpſe of thoſe who died in the Goal [a].

SECT. VI.

Of the Military Government *and* Forces *of the* Empire.

1. Military Officers, *and* Tribunals.

Military Officers, and Tribunals. Chief Preſident. Supream Tribunal of Yong-ching ſû, *or* Zhong-ching ſû. *A great Honour.* Chineſe *Fortification. Kinds of Fortreſſes. Places of Refuge. Its natural Strength. Emperor's Forces.* Chineſe *bad Soldiers:* Tartars *not much better: Their Diſcipline. No Preſſing. Army how employed. Troops along the Wall.* Tartar *Officers, and Guards, divided into Banners. Arms and Artillery.* European *Cannon admired: The Jeſuits caſt ſome: More caſt: Are a Year in making.* Verbieſt *honoured by the Emperor: Bleſſes the Cannon.*

HAVING given an Account of the Civil Officers, and their Authority, we come next to ſpeak of the Military *Quân*, and their Tribunals. Theſe take their three Degrees regularly, like thoſe for Civil Affairs, are divided into nine Claſſes, and like them have their ſeveral Tribunals [b].

Military Officers. The Rank and Buſineſs of the principal military *Mandarin*, is much the ſame with that of a General in *Europe* [c]. He has under him, in ſome Places, four *Mandarins*; and, in others, only two, whoſe Employment is not unlike that of our Lieutenant-Generals: Theſe have likewiſe four ſubordinate *Mandarins*, anſwering to Colonels. The Colonels, again, have under them others, who may be conſidered as Captains, and have likewiſe their ſubaltern Officers, reſembling our Lieutenants and Enſigns. Each of theſe *Mandarins* has a Train ſuitable to his Dignity; and when he appears in public, is always attended by a Company of Officers belonging to his Tribunal. All of them together command a great Number of Troops, partly Horſe, and partly Foot.

THERE are at *Pe-king* five Tribunals of military *Mandarins*, called *U-fû*, that is, the five Claſſes, or Troops of *Mandarins* of War. The firſt is called *Hew-fû*, or the Rear-Guard. The ſecond *Tſo-fû*, or the Left-Wing. The third *Yew-fû*, or Right-Wing. The fourth *Chong-fû*, or the Van-Guard of the main Body. The fifth *Tſyen-fû*, or the Van-Guard.

THESE five Claſſes have at their Head a Chief, or Preſident, and two Aſſiſtants, which are of the firſt Order of *Mandarins*. They commonly chuſe for the Poſts, great Lords of the Empire; and theſe are they who command the Officers, and all the Soldiers. Theſe five depend on a ſupream Tribunal of War, called *Yong-ching-ſû*, whoſe Preſident is one of the greateſt Lords of the Empire, and has Authority over the five Tribunals, and all the Officers and Soldiers of the Court: But to prevent the Abuſe of ſo extenſive a Power, which renders him Maſter of ſo many Troops, they give him a literary [d] *Mandarin* for his Aſſiſtant, with the Title of Superintendant of the Army, and two Inſpectors, named by the Emperor, who have their Share in all Affairs. Moreover, when the Execution of any military Project is in Agitation, they depend abſolutely on the fourth of the ſix ſupream Courts, called *Ping-pû*, already ſpoken of, which has the whole Militia of the Empire under its Juriſdiction.

THOUGH there are great Lords, who, holding in the Empire the Rank of Princes, Dukes, and Earls, are above all the Orders of *Mandarins* [e], by their Dignity, Merit, and Services; yet there is not one of them but thinks himſelf honoured by the Title he derives from his Employment, and the Quality of Chief of the firſt Tribunals of military *Mandarins*. None can be more ambitious to command, than the *Chineſe*; they placing all their Glory and Happineſs in having Authority in the State [f].

[a] *Navarette*'s Deſcription of *China*, p. 15, *& ſeq.* [b] See before, *p.* 250, *& ſeq.* [c] With the *Chineſe*, the *Ho-tong-ta* is General of the Troops, the *Tſi-tû* of the Militia. The *Tartars* call their General *Tſong-kiun*; and their Lieutenant-General, *Meyrain-chain*. Under theſe Commanders, according to *Gemelli*, p. 2[illegible] there are *Tſong-pings*, or Colonels; *Fu-tyans*, or Majors; *Se-kupe's*, or Captains; and *Pa-tſun's*, or Enſigns. But *Du Halde* makes the *Tſong-ping* chief General of the Militia. [d] Rather, perhaps, Civil *Mandarin*, one for Civil Affairs, the Literary being often confounded with the Civil Officers. [e] Theſe are, by *Magalhaens*, called *Vu-ping*, as if no Degrees were high enough for them, or equal to their Merit, and therefore of Places. But thoſe *Mandarins*, who are not of any of the nine Orders, are called *Vi-jo-lyew*, or *Men ſettled*, becauſe they aſpire to Places of Truſt and Profit. [f] *Magalhaens*'s Relation of *China*, p. 215, 2[illegible] *Du Halde*'s *China*, p. 260, *& ſeq.*

THIS is all that ſeems neceſſary to be ſaid with Relation to the military *Mandarins*, and their Tribunals; the Nature of their Proceedings being much the ſame with that of the civil Tribunals already deſcribed: It remains therefore to give ſome Account of the Forces, and Strength of the Empire.

BOTH Art and Nature have combined to render *China* very ſtrong. All the Cities and chief Towns are fortified more, or leſs. Among them, likewiſe, there are ſome termed Cities of War, b to diſtinguiſh them from the reſt, which are called Cities of Trade. However, the Cities of War have no Advantage of other fortified Cities, but in their Situation, which renders them difficult of Acceſs. The whole Art of Fortification, among the *Chineſe*, conſiſts in an excellent Rampart, Brick-Walls, Towers, and a large Ditch full of Water: And to ſay the Truth, this is ſufficient Security againſt all Efforts of Enemies, who are as ignorant of the offenſive, as the de- c fenſive Part of War.

THE Forts, fortified Places, and Citadels, are very numerous, and diſtinguiſhed into ſeven different Orders, named *Quang*, *Ghey* or *Wey*, *So*, *Chin*, *Pau*, *Pû*, and *Chay*. There are about ſix hundred of the firſt Order, five hundred and upwards of the ſecond, three hundred and eleven of the third, three hundred of the fourth, one hundred and fifty of the fifth, and three hundred of the laſt: Which make, in all, above two thou- d ſand fortified Places, without reckoning the Towers, Caſtles, and Redoubts of the famous Wall, which have every one its particular Name and Gariſon.

AMONG the *Chay* are reckoned thoſe Places of Refuge found in the Middle of Fields, whither the Huſbandmen and Peaſants retire with their Flocks and Moveables, in caſe of Commotions, or the ſudden Irruption of Robbers, where they are ſecure from all Inſults. There are others e ſituated on the Tops of Rocks and craggy Mountains, inacceſſible, but by Ladders, or Steps cut into the Rock. Theſe Places are not encompaſſed with Walls, their Strength conſiſting ſolely in their impregnable Situation, or in deep and broad Ditches capable of ſtopping the Rebels in their March. They reckon, beſides theſe, more than three thouſand Towers, or Caſtles, called *Tay*; wherein are conſtantly kept Centinels, and other Soldiers on Duty, who, f when they diſcover any Diſturbance, make a Signal: In the Day, by a Flag on the Top of the Tower; and in the Night, by a lighted Torch, to alarm the neighbouring Gariſons; for there is not a Province, City, nor walled-Town in the Empire, but what has Soldiers for its Defence.

Officers Military.

NATURE has taken Care to fortify *China* in all other Places, where it might be liable to Attacks. The Sea, which waſhes ſix Provinces on the Eaſt and South, is ſo ſhallow near the Shore, that no large Veſſel can approach it without being broken to Pieces; and Storms are ſo frequent, that no Fleet can ride there in Safety. On the Weſt there are inacceſſible Mountains, which are no leſs a Defence on that Side, than the Sea on the other two, and the great Wall on the North [a].

Its natural Strength.

THE Number of Soldiers maintained by the Emperor along the great Wall, in the Cities, and fortified Places, amounted formerly to ſeven hundred and ſeventy thouſand; which Number has been increaſed, but not diminiſhed; for they never reduce their Forces. They are to ſerve for Guards to the grand *Mandarins*, Governors, Officers, and Magiſtrates: They even attend them on their Journeys, and in the Night keep Watch about their Barks, or Inns, being relieved at every Place the *Mandarin* halts at. The Emperor likewiſe keeps five hundred and ſixty-five thouſand Horſes to remount the Cavalry, and for the Uſe of Poſts and Couriers to carry his Orders, and thoſe of the Tribunals, into the Provinces [b]. Theſe Troops being well-cloathed, and well-armed, make a very fine Appearance in their March, or on a Review: But they are not comparable to the Soldiers of *Europe*, either for Courage, or Diſcipline, being eaſily put into Diſorder, and routed.

Emperor's Forces.

THE *Chineſes* are not only naturally effeminate, and the *Tartars* almoſt degenerated to *Chineſe*, but the profound Peace they have enjoyed, gives them no Opportunity to become warlike; while the Eſteem they have for Learning preferable to every Thing elſe, the Dependance which the Soldiers have on the *Literati*, and the Education that is given to Youth, who ſee nothing but Books, and hear nothing talked-of but Morality and Politicks, are ſo many Obſtructions to their being Warriors [c].

Chineſe bad Soldiers.

THE *Tartars*, indeed, aſſail with Heat and Briſkneſs, and puſh-home, if they can make their Enemies give Ground in the Beginning: But they are unable either to continue an Attack, or bear-up long againſt one, eſpecially if made in Order, and with Vigour. The Emperor *Kanghi*, who ſaid nothing but what was proper, as he did nothing but what was great, gave this ſhort Character of them: *They are good Soldiers, when oppoſed to bad ones; but bad, when oppoſed to good ones* [d].

Tartars not much better.

[a] *Du Halde*'s *China*, p. 262. [b] The ſame, *p.* 245. [c] *Le Comte*'s Memoirs of *China*, p. 290. *Du Halde*, as before, *p.* 261. [d] *Le Comte*, as before.

As

Government. Their Discipline. As to what concerns Discipline, the Soldiers are regularly exercised by their Officers. This Exercise consists either in a Kind of tumultuous and disorderly March, which they perform when they attend the *Mandarins*; or else in forming Squadrons, filing-off in Order, encountering each other, or in rallying at the Sound of Horns and Trumpets: In a Word, they draw the Bow, and handle the Sabre, with a great deal of Skill. They also from Time to Time review their Troops, examining carefully their Horses, Muskets, Sabres, Arrows, Cuirasses, and Helmets. If there be the least Rust on their Arms, they are punished on the Spot, for their Negligence, with thirty or forty Blows of a Batoon, if they are *Chinese*; or so many Lashes of a Whip, if *Tartars*; unless when employed on such Occasions, or some particular Duty, they are at Liberty to follow what Business they please [a].

No Pressing. IN *China* there is no Necessity either for Pressing, or giving Advance-Money, to induce Men to inlist in the Army, as is practised in *Europe:* For there the Profession of a Soldier is commonly looked-upon as a good Settlement; which makes People fond to procure it [b], by Means of their Friends, or Presents to the *Mandarins*; the Service being generally in the Country where they dwell.

THE three Northern-Provinces furnish Abundance of Soldiers, who every three Months receive their Pay, being five Sous of fine Silver [c], and a Measure of Rice a Day, which is sufficient to maintain one Man. Some have double Pay, and Horsemen have five Sous more, with two Measures of small Beans to feed their Horses, which also are provided by the Emperor.

Army, how employed. THESE Troops are scarce ever employed, especially since *Tartary* has submitted, for any Thing else, but to prevent Revolts, or to quash Commotions on their first Appearance in a City, or Province [d]. Their chief Business is to purge the Highways of Robbers, whom they follow and observe so carefully, that they seldom escape. On these Occasions, Orders are sent to the City; and if there be a Necessity for it, the Forces of several Cities, neareſt to the Place infested by Robbers, are employed. In War-time, several Battalions are detached from every Province, to form an Army.

Troops along the Wall. BEFORE the Union of the *Tartars* and *Chinese*, a prodigious Number of Troops [e] were ranged along the great Wall, in order to guard it, and cover the Empire against the Attempts of such formidable Enemies: But at present only the most important Places are garisoned.

THE Gate of Arms, in Cities, is only for the Use of Soldiers, who seldom are in their military Accoutrements, but when on Duty; as in Time of War, when they keep Guard, when they pass in Review, or when they attend the *Mandarins*. At other Times they apply themselves to Traffic, or follow their own private Professions [f].

TWENTY-FOUR *Tartar* Officers have at Court the Dignity of Captain-Generals, and there are likewise many Colonels. Besides these Officers, who were established by the *Tartars*, there are also Officers of the *Ping-pû*, or Tribunal of War, who superintend the *Chinese* Troops throughout the Empire; and have always Couriers ready to carry necessary Orders into the Provinces, which is performed with great Secrecy [g].

ALL the *Tartar* Families live in, or about *Peking*, and are not permitted to remove from thence without the Emperor's special Order. Hence it is, that the *Tartar* Troops, which compose the Emperor's Life-Guard, are always in a Manner near his Person. Here are also found some *Chinese* Troops, who formerly listed themselves under the *Tartar* Banners, and were for that Reason called the *Tartarized Chinese*: They are very well paid, and always ready to fly on the first Order, to suppress Commotions, with surprizing Secrecy and Expedition.

THESE Troops are divided into eight Bodies, each of which has a Banner, distinguished either by the Colour, *viz.* yellow, white, red, and blue: Green is the Colour belonging to the Troops that are entirely *Chinese*, which are thence called *Lu-ki*, or the Soldiers of the green Banner.

EVERY *Tartar* Banner has its General, named, in the *Manchew* Language, *Kusanta*; who has under him certain great Officers, called *Meyreynchain*, who are like our Lieutenant-Generals, and have under them several other Officers subordinate to each other.

AS each Body, at present, is composed of *Manchew Tartars*, *Mongul Tartars*, and *Tartarized Chinese*, the General has under him two General Officers of each Nation, and these Officers have likewise Subalterns of the same Nation. Each Body consists of ten thousand effective Men, divided into an hundred *Nuru's*, or

[a] *Le Comte*'s Memoirs of *China*, p. 313. *Du Halde*'s *China*, p. 261. [b] Hence it is, that, as *Trigautius* observes, half the People of the three Northern-Provinces are inrolled in the Service of the Emperor. [c] About Two-pence Farthing *English*. [d] *Du Halde*, as before, *p.* 261. [e] *Le Comte* says, a Million: *Navarette* confirms the same on his own Knowledge, *p.* 24. [f] *Magalhaens*'s Relation of *China*, p. 44, and *Le Comte*, as before, *p.* 290. And *Du Halde*, as before, *p.* 261, and 264. [g] *Du Halde*, as before, *p.* 261.

Companies of an hundred Soldiers each [a]: So that if we reckon the Emperor's Houſhold, and thoſe of the Princes, who have their Servants, with the Pay of the Officers and Soldiers, the common Opinion may be readily allowed to be true, *viz.* that there are always an hundred thouſand Horſe [b] at *Pe-king* [c]: Yet for the Reaſons before-mentioned, they are ſo enervated, that the Weſtern *Tartars* do not value their Numbers a Ruſh, and frequently ſay in Deriſion of them, that the Neighing of a *Tartary* Horſe is enough to rout all the *Chineſe* Cavalry.

BESIDES theſe ſtanding Forces, there are fifteen or twenty thouſand Men in each Province, under the Command of private Officers: They have alſo Troops to keep their Iſlands, eſpecially *Hay-nan*, and *Formoſa*.

THE Soldiers are all armed, according to the Cuſtom of the Country, with Simeters and Darts. They have but a very ſmall Infantry; among whom, there are no Pikemen, and very few Muſqueteers [d].

ARTILLERY is but a modern Invention among the *Chineſe* [e]; and though that of Gun-Powder is very ancient, they have ſeldom made-uſe of it, but for Fireworks, wherein they excel. There are, however, three or four Bombards, ſhort and thick, at the Gates of *Nan-king*, old enough to prove, that they have had ſome Knowledge of Cannon, though they ſeemed to be ignorant of their Uſe; for they ſerve for nothing but to be ſhewn as Curioſities. They had alſo a few Patteraroes on-board their Veſſels, but had not Skill enough to ſhoot with them.

IN the Year 1621, the City of *Ma-kau* having preſented the Emperor with three Cannon, and Men to manage them [f]; which being tried before the *Mandarins*, they were greatly ſurpriſed at the Novelty. Theſe Guns ſo terrified the *Tartars*, who came in Swarms towards the great Wall, by the Havock they made among them, that they fled, and durſt never approach it, till 1636; when having made a new Irruption into the Empire, the military *Mandarins*, in order to ſtop their Inroads, talked of fortifying the Towns, and furniſhing them with Artillery. On this Occaſion, remembering that they had often heard Dr. *Paul Syu* [g] ſay, that the Miſſionaries underſtood the Art of founding Cannon, they immediately beſought the Emperor to command *Adam Schaal*, then Preſident of the Tribunal of Mathematics, to caſt ſome.

HAVING obtained what they deſired, they made the Jeſuit *Mandarin* a Viſit, and in Diſcourſe aſked him, as it were by Chance, if he underſtood the Method of caſting Cannon: *Schaal* replying, that he underſtood the Principles, they immediately preſented him the Emperor's Order. The Miſſionary thus overreached, would fain have excuſed himſelf, by alledging, that the Practice was quite different from the Theory: But obey he muſt, and inſtruct the Workmen, aſſiſted however by the Eunuchs of the Court. Afterwards being perſuaded by the Mathematical Works and Inſtruments made by *Verbieſt* at *Pe-king*, that he muſt be equally ſkilled in founding Artillery, they obtained another Order from the Emperor, to that Jeſuit; who finding by the Regiſter of the Church at *Pe-king*, that a great Number of Miſſionaries had been brought into the Empire by the ſame Means, under the laſt Family of the *Chineſe* Monarchs; and believing that ſuch a Piece of Service done for the Emperor, would induce him to favour the *Romiſh* Religion, he caſt one hundred and thirty Pieces of Cannon with wonderful Succeſs.

Officers Military.

SOME Time after, the Council of the chief *Mandarins* of War, having preſented a Memorial to the Emperor, whereby they required three hundred and twenty Pieces of Cannon, of different Bores, after the *European* Faſhion, for the Defence of the fortified Places, his Majeſty ordered, that *Nan-whay-jin* (for ſo the *Chineſe* called *Verbieſt*) ſhould overſee the Work, and that it ſhould be performed agreeable to the Patterns, which were to be painted, and preſented him in a Memorial. Accordingly the eleventh of *February* 1681, that Miſſioner preſented the Patterns, which were approved of; and an Order was ſent to the *Kong-pû*, or Tribunal of public Works [h], to furniſh all Things neceſſary for the Purpoſe, without Delay.

More caſt.

IT took-up above a Year to make theſe Cannon, in which Time the Jeſuit met with many Obſtructions from the Eunuchs of the Palace, who impatient to ſee a Stranger ſo much in Favour with the Emperor, uſed their utmoſt Endeavours to defeat the Undertaking: They complained every Moment of the Slowneſs of the Workmen, while they cauſed the Metal to be ſtolen-away by the under Officers of the Court. As ſoon as one of the largeſt Guns was caſt, before it could be poliſhed on the Inſide, they forced an Iron-Bullet into the Mouth of it, thinking thereby to render it uſeleſs: But *Verbieſt* having

Are a Year in making.

[a] As *Jenghiz Khan* is remarked to have eſtabliſhed the ſame Sort of Order among his Troops, it would be worth Enquiry, whether he took it from, or communicated it to the Eaſtern *Tartars*. [b] *Le Comte* ſays, one hundred and ſixty thouſand. [c] *Du Halde*'s *China*, p. 69, & *ſeq.* [d] *Le Comte*'s Memoirs of *China*, p. 290, and 312. It appears from *Marco Polo*, that the *Tartars* employed Cannon at the Siege of *Pe-king*, in the thirteenth Century. [e] See before, *p.* 230. d. [f] A converted *Mandarin*. See before, *p.* 230. c. [g] Deſcribed before, *p.* 264.

ving

Natural History.

ving charged it through the Touch-Hole, it was fired-out with ſuch a terrible Noiſe, that the Emperor hearing it in the Palace, would needs ſee it repeated. When all the Cannon were finiſhed, they were taken to the Foot of the Mountains, half a Day's Journey Weſt from *Peking*; and his Majeſty, attended by the principal Officers of his Army, beſides his whole Court, went to ſee them tried.

Verbieſt honoured

OBSERVING that the Balls hit the Places they were levelled at by the Jeſuit with his Inſtruments, he was ſo greatly pleaſed, that he made a ſolemn Feaſt for the *Tartarian* Governor, and principal Officers of the Army, in the Middle of the Fields, under Tents; drinking out of his Golden-Cup, to the Health of his Father-in-law, of his Officers, and even of thoſe who had ſo exactly directed the Cannon. At length ſending for *Verbieſt*, who by his Orders was lodged near his own Tent, he ſaid to him, *The Cannon you cauſed to be made for me the laſt Year were very ſerviceable againſt the Rebels, in the Province of* Shen-ſi, Hû-quang, *and* Kyang-ſi, *and I am well ſatisfied with your Services:* Then taking-off his Veſt, furred with Martin-Skins of great Value, and alſo his Gown that was under it, he gave them to him, as a Teſtimony of his Friendſhip.

By the Emperor.

THEY continued ſeveral Days to make Proof of the Guns, in which Time they diſcharged twenty-three thouſand Bullets, to the great Satisfaction of the *Mandarins*, whoſe Officers aſſiſted at the ſame Time. *Verbieſt* compoſed a Treatiſe alſo on the founding of Cannon, and their Uſe, which he preſented to the Emperor; with forty-four Tables of Figures neceſſary for underſtanding the Art, and of the Inſtruments proper to level the Cannon for ſhooting at any Mark.

A FEW Months afterwards, the Tribunal for enquiring into the Deſerts of Perſons who had done Service to the State, preſented a Memorial to the Emperor, wherein they beſought him to have Regard to the Service that *Nan-whay-jin* had done, by caſting ſo many Pieces of Artillery. His Majeſty granted their Petition, and beſtowed on him a Title of Honour, like that conferred on the Vice-Roys, when they have deſerved well in their Government.

To prevent the Superſtition of the *Chineſe* [a], (ſays our Author) who ſacrifice to the Spirit of the Air, Mountains and Rivers, according to the various natural Events, and the different Works they begin, or finiſh, *Verbieſt* fixed a Day to bleſs the Cannon in a ſolemn Manner. For this Purpoſe he erected an Altar in the Foundery, on which he placed a Crucifix, and then in his Surplice and Stole worſhipped God, by nine Proſtrations: And as it is the Cuſtom in *China* to give Names to ſuch Kinds of Works; ſo he gave, to every Piece of Cannon, the Names of a he, or ſhe Saint, of the *Romiſh* Church, tracing the Characters that were to be engraven on the Breech of the Gun [b].

CHAP. VII.

The NATURAL HISTORY.

SECT. I.

The Climate, Air, *and* Soil *of* China.

Air wholeſome. The Plague ſeldom. Mountainous Part. Charming Country: Lovely Plains: Uncultivated Lands: Barren Deſerts in ſeveral Parts: Soil generally fertile. Produce of Grain. Two Crops of Rice. Corn-Mills.

Air wholeſome.

CHINA being a Country of ſuch vaſt Extent, muſt be differently affected in different Parts of it, with Regard to the Air, Weather, Seaſons, and other Properties which depend on the Influence of the celeſtial Bodies. Thus the Northern-Provinces are very cold in Winter, while the Southern are always temperate. In Summer theſe latter are exceſſively hot, and the Northern, for the general, tolerably cool, eſpecially when the Wind blows from the North. The Days and Nights likewiſe are much longer and ſhorter in the Northern, than in the Southern Provinces; where, on the other Hand, Vegetables of all Kinds are more forward, and come to greater Perfection. In a Word, the Air of *China* is very healthful, is ſeldom incommoded with Stagnations, or infected with peſtilen-

[a] That is, to prevent one Superſtition by another. [b] *Du Halde's China*, p. 262, *& ſeq.*

Vapou

Vapours: So that the Plague has ſcarce ever found an Entrance there. To this great Benefit, doubtleſs, the North-Winds blowing frequently from *Tartary*, do not a little contribute; at leaſt it is manifeſt, they do not produce that Calamity there: Although it is imagined by ſome (but indeed on very chimerical Grounds) that they are the Cauſe of it in *Europe*.

THERE is no leſs a Difference with reſpect to the Surface of the Land, and Fertility of the Soil in different Parts, than there is in the Air. Beſides the Provinces of *Yun-nan*, *Quey-chew*, *Se-chwen*, and *Fo-kyen*, which are too mountainous to be cultivated ſufficiently, that of *Che-kyang*, whoſe Eaſtern-Part is very fruitful, has hideous Mountains in the Weſtern. The Land of *Quang-tong*, and *Quang-ſi*, ſo fine and fertile along the Sea-Coaſt, becomes frightful, and almoſt barren in divers Places, the farther it lies from thence. In the Province of *Kyang-nan*, the large Diſtrict of *Whey-chew-fû* is entirely over-run with very high, and almoſt uninhabitable Mountains: They abound ſtill more in the Provinces of *Shen-ſi*, and *Shan-ſi*, all whoſe Plains, put together, do not amount to a quarter Part of the Whole.

HAVING entered the Province of *Kyang-ſi*, from that of *Quang-tong*, you begin to diſcover the moſt beautiful Country in all *China*: One Part of it lies upon the great River, adorned with the fine Cities of *Ngan-king-fû*, *Kyang-ning-fû*, or *Nan-king*, and *Chin-kyang-fû*: Another Part runs along the great Canal, *Yu-lyang-ho*, beſet with the moſt rich and populous Cities of the Province of *Kyang-nan*; as *Whay-ngan-fû*, *Yang-chew-fû*, *Chang-chew-fû*, *Su-chew-fû*; and a third Part borders on the Sea-Coaſts of the Province of *Che-kyang*, where are the Lands of *Hang-chew-fû*, the Metropolis, *Hû-chew-fû*, and *Kya-hing-hû*; which alone furniſh more Silk than all the other Provinces of *China*.

IT muſt be confeſſed, that nothing appears more charming than theſe Plains, which are ſo level, that they ſeem to be laid-out by Rule [a]: They are covered with Cities, and large Villages, and cut into an infinite Number of Canals, which have Communication with each other, and are navigated by Barks, without the leaſt Danger. Their Water is clear, and excellent to drink. Theſe Plains are cultivated with an Induſtry, which no People, but the *Chineſe*, are capable of [b]: They are withal ſo fertile, that in ſeveral Places they yield Rice twice a Year; and frequently Wheat, and ſmaller Grain, between the two Crops. *Soil and Grain.*

BUT one muſt not judge of *China* in general by this Country. The Knowledge of a Part is not ſufficient to give a diſtinct Notion of the Whole. But for the Opportunity which the Miſſionaries had of travelling-over the Empire, when they made the Map of it, we ſhould ſtill have been ignorant, that in moſt of the great Governments, there are Countries, which for more than twenty Leagues together, are very thinly peopled, almoſt intirely uncultivated, and often ſo wild, that they are uninhabitable. *Uncultivated Lands.*

AS thoſe Countries are remote from the great Roads uſually taken by Travellers, they might eaſily have eſcaped the Knowledge of former Miſſioners [c], and Authors of printed Relations. The Reaſon why the Provinces of *Shen-ſi*, and *Se-chwen*, are much commended by ſome of them, is becauſe they had ſeen the Diſtrict of *Si-ngan-fû*, which is divided into thirty-ſeven Cities, moſt of them rich and populous. To a like Cauſe are to be attributed the Praiſes they beſtow on the Lands of *Ching-tû-fû*, which are cut by artificial Canals, like thoſe of the Provinces of *Kyang-nan*, and *Che-kyang*; not imagining that the Parts which they had no Opportunity of ſeeing differed ſo much, as in Effect they do, from thoſe they had travelled through. *Barren Deſarts*

The Provinces of *Ho-nan*, and *Hû-quang*, are generally commended by thoſe Writers: Yet great Part of the Weſtern-Side of the former is deſart, and uncultivated; and there are larger Deſarts ſtill in *Hû-quang*: However, it muſt be confeſſed, that the fertile Lands, contained in thoſe two Provinces, produce Rice, and other Grain, ſufficient to furniſh the neighbouring Provinces, and eſpecially that of the Court: For though *Pe-che-li* is one vaſt continued Plain, the Soil is always ſo dry, and deſtitute of Rivulets, that for all it abounds in Wheat, ſmall Grain, and Pulſe, it produces very little Rice, without which the *Chineſe* could hardly make a Shift to live. Hence it is, that this Province, and eſpecially *Pe-king*, which is the Reſort of the whole Empire, could ſcarcely ſubſiſt without Supplies of Proviſions from the other Provinces. *In ſeveral Parts.*

IT is true, that, generally ſpeaking, the Land in all the Provinces, and even in *Quey-chew*, is fertile enough, and ſometimes brings a double Crop: But it is entirely owing to the indefatigable Labour of the Huſbandmen, that thoſe Countries, where the Grounds are low and boggy, are *Soil generally fertile.*

[a] *Le Comte* ſays, they are ſo even, that one would think the Natives had been employed, ever ſince the Foundation of their Monarchy, in nothing elſe but levelling them. [b] For their Manner of cultivating both Plains and Hills, ſee before, *p.* 122. Alſo *Le Comte*'s Memoirs of *China*, p. 91, *& ſeqq.* [c] *Le Comte* muſt be included among the reſt.

Natural History.

capable of bearing Corn. Add to this, that several Provinces being full of Mountains, which afford but a small Quantity of Land fit for Tillage, it happens sometimes, that the whole Produce of the Empire is scarce sufficient for the Sustenance of the prodigious Number of Inhabitants [a].

Produce of Grain.

THE Provinces which lie to the North and West, as *Pe-che-li*, *Shan-si*, *Shen-si*, and *Sechwen*, produce Wheat, Barley, several Kinds of Millet, Tobacco, Pease that are always green, also black and yellow Pease, which serve instead of Oats to feed their Horses: But in the Southern Parts these Sorts of Grain are in no Esteem. The same Provinces likewise produce Rice, and that in several Places where the Earth is dry, but then not so plentifully: Besides it is harder, and requires more boiling than the Rice of the Southern Provinces, especially *Hu-quang*, *Kyang-nan*, and *Che-kyang*, which produce great Quantities, because the Lands lie low, and have Plenty of Water.

Two Crops of Rice.

RICE is sown twice a Year in some Provinces, and is much better than that which grows in *Europe* [b]. *Navarette* says, they gather it in *June*, and *December*: That the Southern Provinces have more Plenty of this Grain, and the Northern of Corn, although the former abound with it. The Plenty of these several Sorts of Grain and Pulse is exceeding great. In 1664, *Navarette* bought very clean and good Wheat, brought to his Door, for Eighteen-pence [c] the Bushel; and Rice, every Grain as big as a Pine-Apple Kernel, for half a Crown. In *Shan-tong*, the same Year, Wheat was sold for Six-pence the Bushel [d]. To grind their Corn, they make use of a very simple Kind of Mill, consisting of a round Stone-Table, placed horizontally like a Mill-Stone, whereon they roll circularly a Stone-Cylinder, which by its Weight bruises the Corn [e].

Corn-Mills.

ACCORDING to *Magalhaens*, the *Chinese* reckon, in respect of Provision, or Eatables, six principal Sorts of Grain, Rice, Wheat, Oats, Millet, Pease, and Beans: Six Sorts of Flesh of tame Animals, Horses, Cows, Pork, Dogs, Mules, and Goats: And an hundred Sorts of Fruits, as Pears, Apples, Peaches, Grapes, Oranges, Walnuts, Chesnuts, Pomegranates, Citrons, and several other Kinds: All which are to be found in *Europe*, excepting three [f].

SECT. II.

1. FRUIT-TREES.

Fruits of Europe. *Kind of Olives. The Oil-Tree. China-Oranges. Lemons and Citrons.* Yew-tse, *or* Pamplimus. *Melons, and other Fruit. The* Li-chi. *The* Tse-tse: *A Kind of Fig. The* Long-yen. *The* Mwey-shu. *The* Ja-ca. *The* Shi-ku. Mirabines, Karambolas. *The* U-tong-shu. *Cassia-Tree. Pepper-Tree. Betel-Tree. Cinnamon. The Camphire, how gathered: Preserves dead Bodies. The Pea-Tree.*

THE *Chinese* have almost all the Fruits to be met-with in *Europe*, besides many other Sorts not to be found there at all; however they have not so great Variety of each Kind: Thus they have but three or four Sorts of Apples, seven or eight of Pears, as many of Peaches, and no good Cherries at all, although they grow every-where. Neither are any of these Fruits, except the Muscadine-Grapes and Pomegranates, to be compared to ours; because the *Chinese* are not so skilful as the *Europeans* in cultivating the Trees, and improving the Flavour of the Fruit: Yet their Peaches are as good, nay one Kind of them is better: But in some Places, unless eaten sparingly, they bring-on a Dysentery, which is very dangerous in *China*. Their Apricots would not be bad, did they but give them Time to ripen [g]. Although their Grapes are excellent, yet they make no Wine, not knowing the Way. What they generally use is made of Rice, and very pleasant, being red, white, and pale. Their Quince-Wine is very delicious. The *Chinese* drink all their Wine very hot [h].

NAVARETTE says, there are no Olives in *China* [i]; but *Du Halde* describes them under the Name of *Tsin-lan*, or *Quang-lan*. That Author observes, that in Figure and Colour they very nearly resemble our large Olives: It is one of the ten Kinds spoken of in the Books, which treat of Olives, and what they say of its Nature, Colour, and Soil where it grows, suits them very well. In all Probability, if they were prepared in the same Manner as in *Europe*, they would have the same Taste. The Tree is large, and the Leaves resemble those of the Olive.

[a] *Du Halde*'s *China*, p. 7, & *seqq*. *Navarette*'s Description of *China*, p. 53, confirms this last Remark. [b] *Le Comte*'s Memoirs of *China*, p. 95. *Du Halde*, as before, *p.* 272, and 314. [c] In the Original, three Rials; a Rial being equivalent to Sixpence *English*. [d] *Navarette*, as before, *p.* 32, and 53. [e] *Du Halde*, as before, *p.* 303. [f] *Magalhaens*'s Relation of *China*, p. 142. [g] *Le Comte*, as before, *p.* 95. *Du Halde*, as before, *p.* 4, and 317. [h] *Navarette*, as before, *p.* 32. [i] He says, he never saw any Heart-Cherries there

Whe

When they have a Mind to gather the Olives before they are thoroughly ripe, which is their Time of eating them, inſtead of beating them down with long Poles, which ſhatters the Branches, and hurts the Tree, they make a Hole in the Body of it; then putting-in ſome Salt, ſtop it up, and in a few Days after the Fruit drops of itſelf [a].

LE COMTE ſays, their Olives are different from the *European*, and that they preſs no Oil out of them; becauſe, perhaps, they are not fit for that Purpoſe, or that the *Chineſe* have not yet thought of it [b]. However, *Navarette* takes Notice, that they have Oil of ſeveral Sorts for three Halfpence a Pound [c]. He adds, that the Oil made of a ſmall Seed, called *Aſonjoli*, is much uſed for making Puff-paſte Fritters, and in other Victuals [d]. There is likewiſe a Tree that bears a Fruit, yielding an Oil, called *Cha-yew*, which, when freſh, is perhaps the beſt in all *China*: It very nearly reſembles the Shrub of the *Vu-i-cha*, (or Bohea-Tea) in the Shape of its Leaves, Colour of the Wood, and ſome other Qualities; but differs from it, as to Size, Thickneſs, Figure, Flowers, and Fruit; which laſt becomes the more oleaginous, when kept after it is gathered. Theſe Trees are of a moderate Height, and grow without Culture on the Sloping of Hills, and even in ſtony Valleys: They bear green Berries of an irregular Form, filled with a Sort of Kernels, which are not ſo hard as the Stones of other Fruits [e].

OF Oranges, known by the Name of China-Oranges, they have ſeveral excellent Kinds, although the *Portugueze* brought-over but one [f] Sort to *Europe*; where all were propagated from a ſingle Tree, which is ſtill preſerved at *Liſbon* in the Garden of the Count *de St. Lawrence*. There is a Sort of them in great Eſteem with the *Chineſes*: Theſe are ſmall, and the Rind is thin, ſmooth, and very ſoft. There is another Sort that comes from the Province of *Fo-kyen*, that has an admirable Taſte: They are larger, and the Rind is of a beautiful Red [g]. The *Europeans* commonly ſay, that a Diſh of theſe Oranges would become the moſt ſumptuous Tables in *Europe*. They have larger at *Kanton*, which are yellow, agreeable to the Taſte, and very wholeſome: They give them even to ſick Perſons, roaſting them firſt in hot Embers, then cutting them in two, and filling them with Sugar [h], the Juice being reckoned a great Pectoral. Others have a ſharp Taſte, and are uſed by the *Europeans* in Sauces [i]. *Navarette* obſerves, they make one Species of them into dry, flat Cakes (like the *Chiqueys*) which are excellent good, cordial, and nouriſhing: They are valued at *Manilla*, and carried to *Mexico* as a great Dainty [k]. *Fruit-Trees.*

LEMONS and Citrons are very common in ſome Southern Provinces, and extraordinary large; but theſe are ſcarce ever eaten, being only made uſe of for Ornaments in Houſes, where they put ſeven or eight in a China-Diſh, to pleaſe the Sight and Smell: However, they are exceeding good, when candied. Another Sort of Lemon, not much larger than a Walnut, is likewiſe in great Eſteem: It is round, green, and ſharp, being reckoned excellent good for Ragous. The Tree that bears them is ſometimes put in Boxes, and ſerves to adorn the outward Courts, or Halls of Houſes [l]. *Lemons and Citrons.*

THE Fruits, called in the *Indies*, *Pamplimûs*, and in *China*, *Yew-tſe*, have nothing in the Taſte to recommend them, more than the *Tſin-lan*, or Olives. They are ordinarily bigger than our Citrons: The Fruit is ſometimes reddiſh, ſometimes white, and of a Taſte between ſweet and ſour. The Tree is more prickly than the Citron-Tree [m]. *Yew-tſe, or Pamplimus.*

BESIDES Melons of the *European* Kind, there are two other Sorts in *China*; one of which is very ſmall, and yellow within, has a ſweet Taſte, and may be eaten, Rind and all, like Apples. The other Kind, which is called a Water-Melon, is very large, and long: The Inſide is white, and ſometimes red, containing a ſweet cooling Juice, that quenches Thirſt, and never does any Harm, even in the hotteſt Weather: Yet theſe are not ſo delicious as thoſe which come from a Place in *Tartary*, called *Ha-mi* [n], at a great Diſtance from *Pe-king*. *Melons, and other Fruit.*

BESIDES the above-mentioned Fruits, which *Europeans* are acquainted with, there are others, known to them only by the Relation of Travellers, and ſeem to have been imported into *China* from the neighbouring Iſlands; ſuch as the *Fan-*

[a] *Du Halde*'s *China*, p. 8. [b] *Le Comte*'s Memoirs of *China*, p. 95. [c] But he believes both theſe, and Almond-Trees, would thrive here, *p.* 37. [d] *Navarette*'s Deſcription of *China*, p. 32. [e] *Du Halde*, as before, *p.* 12. [f] *Navarette* ſays, two Sorts are common in *Portugal*. [g] This ſeems to be the ſame, which *Le Comte* ſays is moſt valued, and ſent as a Rarity to the *Indies*: That it is no bigger than a Billiard-Ball; that the Rind is of a reddiſh Yellow, fine, clear, and very ſmooth; yet that the bigger Sort (ſuch as brought into *Europe*) ſeemed to him the beſt. [h] *Le Comte*, p. 98, ſays, this Sort differs nothing from the *Portugal* Oranges, only that they are more firm, not eaſily parted from the Rind, nor divided into Segments. [i] *Le Comte*, as before, *p.* 97, *& ſeq.* *Du Halde*, as before, *p.* 317. [k] *Navarette*, as before, *p.* 37. [l] *Le Comte*, as before, *p.* 98. *Du Halde*, as before, *p.* 317. Natural History.

po-lo-mye, or *Ananas*, *Chew-ku*, or *Goyavas*, *Pa-tsyau*, or *Bananas*, &c. which are found in many other Countries, and seem to have been brought from the neighbouring Islands. We shall therefore pass them over here, to speak of those, which are not to be met with any-where else [a].

The Li-chi.

WHAT they call *Li-chi* [b] (if it be of a good Sort, for there are several) is about the Size of a Date: The Stone is equally long, and hard: It is covered with a soft Pulp, full of Moisture, and of an excellent Flavour, which it partly loses when dried, becoming black and wrinkled, like Prunes: The Rind, or Skin, outwardly resembles Shagreen; but it is smooth within, and of a Figure nearly oval [c].

THE *Li-chi* of *Shan-si* and *Shen-si*, are bigger and firmer, so as to be cut like Apples; but of a different Colour. These they either gather early, to ripen them on Straw, or dip in scalding Water, to take-off an ill sour Taste, which they have at first gathering. This might be made excellent by grafting [d].

THIS, according to *Navarette*, is reckoned by the *Chinese* the Queen of Fruits. Though surprizingly plenty, yet they are not valued the less. The Fruit is a little bigger than a large Walnut, the Shell green and thin; within it is as white as Snow, with a Stone as black as Jet. The Taste and Flavour is delicious to Admiration, not to be exceeded by any other Fruit except the *Ate* [e] (or *Ya-ta.*) They usually put them into cold Water before they eat them: They say they are of a hot Nature. When they have eaten as many as they can, they drink a little Water, and have a Stomach to eat more. The Tree is large and handsome. The Author found them also at *Batan*, near *Manilla*. *Le Comte* knew not any Fruit in *Europe* to compare with it for a delicious Taste: Yet he says, it is unwholesome to eat a Quantity, and of so hot a Nature, as to cause a Man's whole Body to break-out into Pimples. The *Chinese* keep them to eat all the Year round, being used especially in Tea, to which it gives a sharp Taste, more agreeable than that of Sugar.

The Tse-tse.

THE Fruit *Tse-tse* [g], grows almost in all Parts of *China*, and is of several Kinds. Those in the Southern Provinces taste much like Sugar, and melt in one's Mouth. The Rind is smooth, transparent, and of a shining Red, especially when ripe. Some are in Shape like an Egg, but usually bigger: The Seeds are black, and flat; the Meat is very watery, and almost liquid, which they suck-out at one of the Ends. When they are dried, like our Figs, they become mealy, but in Time there grows a Sort of sugared Crust upon them, from which they receive a most delicious Flavour.

THE *Portugueze* of *Ma-kau* call this Fruit a Fig, not from its Shape, but because, when dried, it becomes mealy and sweet [h], like a Fig: The Trees which bear them, when grafted, look very pretty. There is great Plenty of them, especially in the Province of *Ho-nan*. They are as tall, and spreading, as our middling Walnut-Trees; the Leaves large, and of a beautiful Green, which changes in the Autumn to an agreeable Red: The Fruit also is about the Bigness of an Apple [i], and, as it ripens, grows of a bright Yellow.

THEY are of different Kinds, the Fruit of some having a more thin, transparent, and ruddy Rind; while that of others, to give them a finer Flavour, must be put upon Straw to ripen; yet they are all very agreeable to the Sight, and good to eat: It does not come to Maturity on the Tree till the Beginning of Autumn. They commonly dry them, as they do Figs in *Europe*, and sell them all over the Empire. They have an excellent Taste, like that of our best dried Figs: Such also is the smaller Sort, that grows in *Shan-si*. The Trees that bear them need no cultivating: They grow no-where but in *China*, and in no Province so plenty, as in that of *Shantong* [k]. The *Su-ping* of *Boim* must be a Species.

THERE is another Sort of Fruit in the Southern Provinces, which turns to great Account in *China*, called *Long-yen* [l], that is, *the Dragon's Eye:* Its Shape is round, the Rind smooth and yellowish, the Pulp white, very juicy, and often sourish. Though not so pleasant as the *Li-chi*, it is said to be more wholesome, and never to do one Hurt: The Tree, which bears this Fruit, is as large as the Walnut-Tree [m]. *Navarette* says, they are called *Dragon's Eyes*, because the Stone within them are just like the Eyes of a Dragon, as the *Chinese* paint them. He adds, that this Fruit being more fragrant and sweet than the *Li-chi*, would be better than it, provided it were equal in Quantity: That it is sold dry throughout the Empire, and boiled makes a pleasant and nourishing Broth [n].

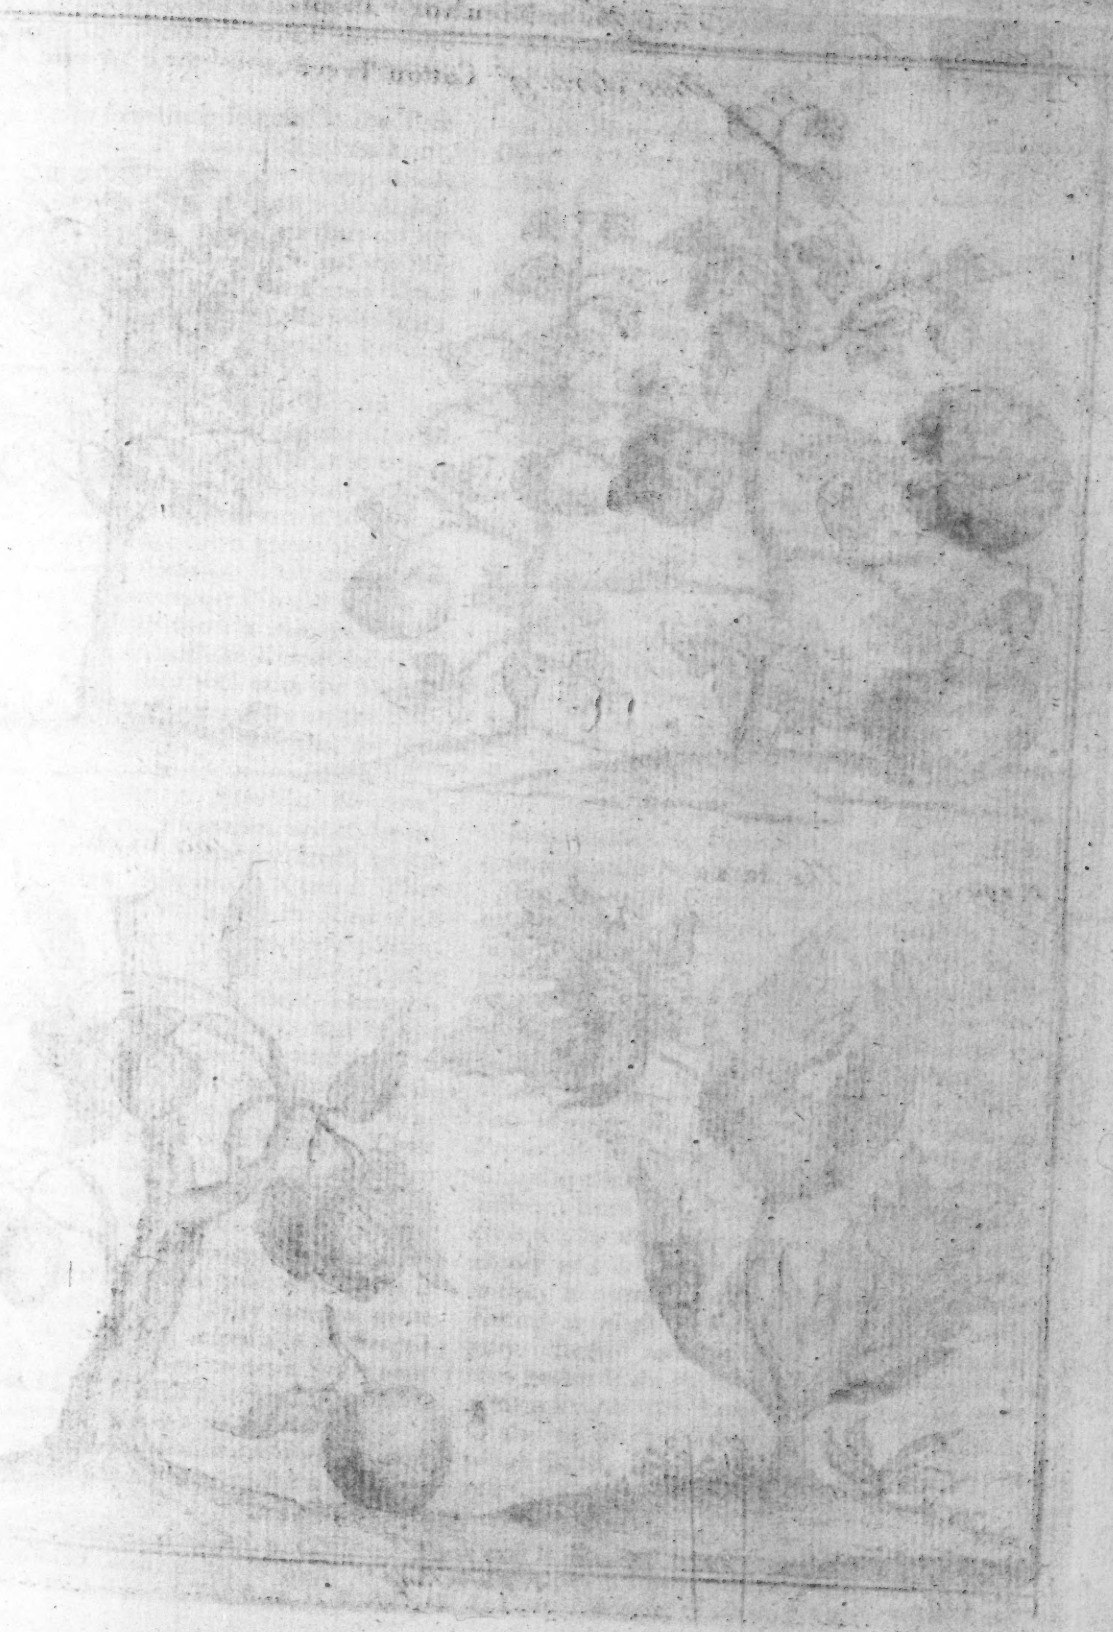
[a] *Du Halde*'s *China*, p. 317. [b] And the *Portugueze*, *Lechia*. [c] *Le Comte*'s Memoirs of *China*, p. And *Du Halde*, as before, *p.* 8. [d] *Le Comte*, as before, *p.* 96, & *seq.* *Du Halde*, as before, *p.* 104. excellent Fruit, like a little Pine-Apple, but the Rind is green, the Pulp white as Snow, and very delicious. is divided into little Cells, with each a black Kernel. [f] *Navarette*'s Description of *China*, p. 36, & [g] *Le Comte* writes, *Se-zse*; and *Magalhaens*, *Sû-sû*. [h] *Magalhaens*, p. 142, says, it is so delicious, that may well be called a Lump of Sugar. [i] The same Author says, of a Quince, but somewhat flatter, seemingly more crushed. [k] *Du Halde*, as before, *p.* 8, and 104. [l] *Navarette* writes, *Lung-jen*. *Comte*, as before, *p.* 96. *Du Halde*, as before, *p.* 8. [m] *Navarette*, as before, *p.* 37.

TH

The Sa-puing.

Trees from Boim.

The Chew-li or Guyave.



P. 299.

Two Sorts of Cotton Trees.

P. 293. The Ia ka

The Li chi P. 291.

THE *Li-chi*, and *Long-yen*, according to *Magalhaens*, are not eaten till they are rotten; nor is the Want of them supplied in *Europe* by Quinces, Medlars, and Services (which one meets with alſo in *Shan-ſi*) there being no Compariſon in the Taſte [a].

THERE is alſo ſomething ſingular in the Tree they call *Mwey-ſhu*: It bears a little ſour Fruit, which Women and Children eat: Being dried, and put into Brine, they ſell it for a Medicine, and give to ſick People, becauſe it ſharpens the Appetite. The Tree is very large, and the Author admired to ſee, that it bloſſomed about *Chriſtmas*, when it freezes hard, and the Snow falls. He firſt obſerved it in 1663, the Flowers being very white. b

THAT which the *Portugueze* call *Jaca* (or *Jaka*) the *Spaniards*, *Nangcas* (and the *Chineſes* *Po-lo-mye*) is, in *Navarette*'s Opinion, the largeſt Fruit in the World, ſome weighing half an hundred Weight. *Kircher* appropriates it to *China*; but he was miſinformed; for it grows alſo in *India*, the Iſlands, and *Manilla*. They cut it with an Ax: Within it are many Nuts as yellow as Gold, and in each of them a Kernel. This roaſted is very ſavoury, and the Kernel delicious. The *Indians* dreſs it very well with the Milk of the Cocoa-Nuts. This Fruit grows on the Body of the Tree, and not on the Boughs, for they could never bear it. c

THE *Shi-ku*, called at *Manilla*, *Chiqueys*, and by the *Portugueze*, *Figocaque*, are of ſeveral ſorts; but all delicate. Some are ſmall, in the ſhape of an Acorn, but much bigger: They have no Kernel. The Shell is like the Rind of an Onion, the Fleſh is ſweet and pleaſant, yellow, and very ſoft when ripe; ſo that making a little Hole at the Top, they ſuck it out. There are others bigger than Burgamy-Pears, and of the Colour of a fine red Poppy, very beautiful to the Eye. Before they grow ſoft, they ſhrink conſiderably; but when they have lain a Day in Water, they come-out as fair as a Pippin. Theſe two Sorts are ripe about *September*, and very plenty. There are others exceeding good, and large, greeniſh, and flat, which ripen in *December*. Theſe have Kernels enough, but they are ſmall. They dry them in the Sun: Every one is as broad as a Man's Hand: They keep a great while, and are delicious, eſpecially if ſteeped one Night in Wine. There comes a Sugar over them, which is ſold by itſelf; and being put into Water in Summer, makes a pleaſant Drink [b]. d

THE Fruit called at *Manilla*, *Milinbines*, and *Carambolas*, is found in the Southern Parts of *China*: Some are ſweet, others ſour. When ripe, they ſmell exactly like Quinces. An excellent Conſerve is made of both Sorts. There is nothing finer to quench a ſick Perſon's Thirſt. It is very green at firſt, and, when full ripe, of a Quince-Colour. e *Fruit-Trees.*

THE Plane-Tree, and its Fruit, is found in *China*: Though neither in *Mexico*, nor the *Philippine* Iſles. It differs much from thoſe commonly called *Plantans* [c].

THE *U-tong-ſhu*, is very large, and reſembles the Sycamore: Its Leaves are long, broad, and joined to a Stalk of a Foot in Length. This Tree is ſo buſhy, and crouded with Tufts, that the Rays of the Sun cannot penetrate. The Manner of bearing its Fruit is very extraordinary: Towards the End of *Auguſt*, there grow, at the Extremities of the Branches, inſtead of Flowers, ſmall Tufts of Leaves, which are more white, and ſoft, than the reſt, and not ſo broad. On the Edge of every Leaf are generated three or four ſmall Grains, of the Bigneſs of a Pea; containing a white Subſtance, of a Taſte not unlike the Kernel of a Hazle-Nut before it is ripe. Nothing can be better to adorn a Garden, than this Tree [d]. f *The U-tong-ſhu.*

IN the Province of *Yun-nan*, towards the Kingdom of *Ava*, there are Caſſia-Trees, *Caſſia Fiſtula*: They are pretty tall, and called by the *Chineſe*, *Chang-ko-tſe-ſhu*, or, *the Tree with long Fruit*; becauſe it bears long Pods (longer than thoſe ſeen in *Europe*.) Theſe are ſo many hollow Tubes, divided, by Partitions, into Cells, which contain a pithy Subſtance [e]. g *Caſſia-Trees.*

THE Soil of *China* yields no Sort of Spice, except a Kind of Pepper, called *Wha-tſyau*: It is the Huſk of a Grain as big as a Pea; the Kernel of which is too hot and biting to be made uſe of. The Colour is grey, mixed with a few Streaks of red. The Plant, which produces it, in ſome Places grows like a thick Buſh; in others, reſembles a pretty tall Tree: It is neither ſo pungent, nor agreeable to the Taſte, as Pepper, and is ſeldom uſed for ſeaſoning Victuals, except by the meaner People. This Pepper is very different from that of the *Eaſt-Indies*, which the *Chineſes*, by their Commerce, procure in as much Plenty as if it grew at home [f]. When the Grain is ripe, it opens of itſelf, and diſcovers a little Kernel as black as Jet, caſting a ſtrong Smell very offenſive to the Head; for which Reaſon they gather them by Intervals, not being able to remain long on the Tree. Having expoſed theſe Grains to the Sun, they caſt-away the Kernel, which is too hot and ſtrong, and only uſe the reſt [g]. h *Pepper-Tree.*

BESIDES

Natural History.

Betel-Tree.

Cinnamon.

BESIDES the Trees producing Betel, much a uſed in the Southern Provinces, we meet with the *Quey-pe*, a Kind of Cinnamon in *Quang-ſi*, and the Diſtrict of *Tſin-chew-fu*, chiefly on the Mountain *Pe-ſhe*. It is not ſo much eſteemed, even in *China*, as that which comes from other Places: Its Colour inclines rather to grey than red, which is the Colour of the beſt Cinnamon of *Seylan*: It is alſo more thick, and rough; nor is it ſo odoriferous. However, it has the ſame Virtue of ſtrengthening the Stomach, and exhilarating the Spirits; and Experience ſhews, it has all the Qualities of Cinnamon, though not in ſo great Perfection. One meets, now-and-then, with ſome more biting than that which is brought from the *Indies*; and this they ſay becomes grey alſo, when it is long a drying [a]. *Navarette* affirms, that there are many of theſe Trees in *Quang-tong*, and that the Cinnamon is ſo good, that they do not ſtand in need of *Seylan*-Cinnamon. He adds, that *China* produces no c Cloves, nor Nutmegs, as *Mendoza* has written.

The Camphire,

THE Camphire-Tree, called by the *Chineſes*, *Chang-ſhu*, is vaſtly large, and beautiful. The Camphire [b] gathered from it is ſomewhat coarſe, the fineſt being that of the Iſland of *Borneo*. The Wood, of which they make Houſhold-Goods, ſmells very ſtrong; ſo that the Saw-Duſt ſtrewed about the Beds, drives-away the Bugs; and five Leagues round, where theſe Trees grow, there is not one Bug to be ſeen.

How gathered,

A Prieſt, who had been ſome conſiderable Time in *Borneo*, where the fineſt is produced, informed *Navarette* in what Manner they gather the Camphire. Before the Sun riſes, a Liquor oozes through the Trunk of the Tree, and the Branches, which moves-about juſt like Quick-ſilver; then ſhaking the Boughs ſtrongly, it falls-down on Cloths and Sheets ſpread underneath to receive it: There it conſolidates; and having gathered it, they put it into Canes, where they e keep it. As ſoon as the Sun appears, all that is left ſinks into the Tree again. The People of *Borneo*, who keep their Dead ſeveral Days in the Houſe before they bury them, to prevent the Corpſe putrifying with the great Heat of the Country, make uſe of Camphire after this Manner. They ſeat the Body on a low Chair, open below, and from Time to Time blow Camphire into the Mouth with a Cane, which paſſing downwards, in a ſhort Time works-out at the f other End; and thus the Carcaſſes are kept many Days without the leaſt Corruption [c].

Preſerves dead Bodies.

HERE it may be proper to take Notice of the Tree which yields Peaſe; for their Figure, Colour, Pod, and Taſte, though ſomewhat rank, ſhew that they are of the Kind of ordinary Peaſe. The Tree is common enough in ſeveral Provinces: It is very tall, as well as ſpreading; and for Thickneſs ſcarce yields to any other [d].

2. *Four very remarkable* Trees.

b *The Varniſh-Tree: Shape and Size: How propagated. Varniſh procured by Inciſion: Its bad Effects: Precautions uſed by the Workmen: Quantity gathered: Diſeaſe cauſed by it: Excellent Qualities. The Oil-Varniſh of ſingular Uſe. The Tallow-Tree: Its Fruit: The Tallow, and Kernel. Candles, how made of it. Tallow, how ſeparated, when gathered. Farther Account. The Wax-Tree. Wax, how produced. The* Kû-ſhu *Tree: Size for gilding. Odd Situation. The Tree deſcribed.*

AMONG the Trees that deſerve the Attention of the Public, and are moſt likely to excite the Envy of *Europeans*, there are four which claim the Preference: The Varniſh-Tree, the *Tong-ſhu*, or Oil-Tree, the Tallow-Tree, and white Wax-Tree.

THE Varniſh-Tree, called *Tſi-ſhu*, is neither tall, buſhy, nor ſpreading: Its Bark is whitiſh, d its Leaf nearly reſembles that of the wild Cherry-Tree; and the reddiſh Gum, called *Tſi*, which it diſtils Drop by Drop, the Tears of the Turpentine-Tree [e]. It yields a much greater Quantity of Liquor, if an Inciſion be made in it; but then it periſhes ſo much the ſooner [f].

THESE Trees are found in the Provinces of *Kyang-ſi*, and *Se-chwen*; but thoſe of the Diſtrict of *Kan-chew*, one of the moſt Southern Cities of *Kyang-ſi*, yield that which is moſt eſteemed.

THE Varniſh ought not to be drawn till the Trees are of ſeven or eight Year's Growth; for that which is procured before, is not ſo fit for Uſe. The Trunk of the youngeſt Tree, from whence they begin to draw it, is a *Chineſe* Foot in Circumference. It is ſaid, that the Varniſh of ſuch Trees is better than that which diſtils from thoſe older, but that they yield much leſs: Yet the Merchants make no Scruple to mix both together. Theſe Trees, whoſe Leaf and Bark are very like thoſe of the Aſh, are ſcarce ever more than fifteen Feet high; and when they are of that Growth, the Trunk is about two Feet

[a] *Du Halde*'s *China*, p. 14. [b] The Camphire is ſuppoſed to be gathered from the Roots of the Cinnamon-Tree. [c] *Navarette*'s Deſcription of *China*, p. 34. [d] *Du Halde*, as before, *p.* 9. [e] *Le Comte* ſays, that in the Towns whereto it is tranſported, it reſembles melted Pitch, or Tar, excepting that it has a Smell, when uſed. d an half in Compaſs. It is affirmed, that a
ey bear neither Flowers, nor Fruit, and that
ey multiply in the Manner following:

IN the Spring, when the Tree begins to ſprout, ey chuſe the moſt promiſing Sprig that proceeds om the Trunk, not from the Branches; and hen it is about a Foot long, they coat it with ellow Clay. This Coat begins about two Inches ove the Place where it riſes, and reaches four five Inches lower: It is at leaſt three Inches ick, is laid-on very cloſe, and covered with a b Mat carefully tied about it, to ſecure it from ain, and the Injuries of Air: It is left, in this anner, from the vernal to the autumnal Equi-ox, and then they open the Earth a very little Way, to examine the Condition of the Roots, hich the Sprig uſually ſhoots-forth, and are di-ided into ſeveral Strings. If theſe Strings are a yellowiſh, or reddiſh Colour, they judge at it is Time to ſeparate the Sprig from the Tree; and then cutting it dexterouſly, without c oing it the leaſt Damage, afterwards plant it: ut if the Strings are ſtill white, it is a Sign they e too tender; and ſo they cloſe-up the Coat gain, and defer cutting the Shoot till the next pring. But whether it is planted in the Spring, r Autumn, a good deal of Aſhes muſt be put nto the Hole, prepared for that Purpoſe; other-iſe the Piſmires, as they affirm, would devour he tender Roots, or at leaſt get all the Sap, and o cauſe them to wither.

THE Varniſh is to be procured from theſe Trees only in the Summer-Seaſon: For in the Winter they yield none; and that which diſtils n the Spring, or Autumn, is always mixed with Water: Beſides, they yield it only in the Night-me. In order to draw-out the Varniſh, they ake ſeveral horizontal Inciſions in the Bark ound the Trunk, which are either deeper, or allower, according to its Thickneſs. The firſt ow of Inciſions is but ſeven Inches from the e round, the ſecond is at the ſame Diſtance ove the firſt, and thus at the End of every ſe-n Inches there is a Row of Inciſions, not only the Top of the Trunk, but even along ſuch the Branches as are of a ſufficient Thickneſs bear it.

THEY uſe a little Knife, with a ſemicircular lade, to make theſe Inciſions; which muſt not done directly downward, but ſlanting, nor eper than the Bark is thick. While the Ope-f tor makes them with one Hand, he thruſts the dge of a Shell, which he has in the other, as r-in as he can, that is about half a *Chineſe* Inch; d this is ſufficient to ſupport the Shell. Theſe ells are very common in *China*, and much rger than our biggeſt Oyſter-Shells. The In-ciſions being made in the Evening, next Morn-ing they gather what is run into the Shells: The Evening following they fix them again in the ſame Inciſions, and continue ſo doing till the End of the Summer. The Proprietors of the Trees do not uſually draw-off the Varniſh them-ſelves, but let them, for the Seaſon, at the Rate of Two-pence halfpenny a Foot to Merchants, who hire Labourers to attend, giving them an Ounce of Silver a Month, if they find their own Victuals, which is moſt common; if not, then they have but Three halfpence a Day. One of theſe Labourers is ſufficient to take Care of fifty Feet of Tree [a]. *Varniſh-Tree.*

IT is commonly reported, that this Liquor, drawn cold, has certain venomous Qualities; and that there is no Way of preventing its miſchiev-ous Effects in pouring it from one Veſſel to ano-ther, or ſtirring it; but by avoiding to ſuck-in the Effluvia with the Breath. The ſame Care is to be obſerved in boiling it [b]. As it is neceſ-ſary to uſe ſome Precautions, to ſecure the La-bourers from its bad Effects, the Merchants are obliged to have a large Veſſel of Oil, wherein has been boiled a certain Quantity of the fleſhy Filaments, which are found intermixed with the Fat of Hogs, and remain after the Fat has been melted. The Proportion is one Ounce to a Pound of Oil. When the Workmen go to place the Shells in the Trees, they carry with them a d little of this Oil, wherewith they rub the Face and Hands; and in the Morning, when they have gathered the Varniſh, and return to the Merchants, they rub themſelves more carefully with it. After Dinner they waſh their Bodies with hot Water, prepared by the Merchant, wherein has been boiled a certain Quantity of the outward rough Shell of Cheſnuts, the Bark of the Fir-Tree, Saltpetre in Cryſtal, and a Sort of Blits, an Herb eaten in *China*, and the *Indies*; all which are ſuppoſed to be of a cold Nature. They waſh themſelves in a little Tin-Baſon, ha-ving ſome Objection to Copper. *Its bad Ef-fects.* *Precautions uſed.*

DURING the Time they are at work at the Trees, their Heads are covered with a Linen-Bag, tied about their Necks, wherein are only two Holes for the Eyes: Before them they wear a Sort of Apron, made of Doe-Skin, which is hung-about their Necks with Strings, and tied round their Middles: They have alſo Buſkins of the ſame, and long Gloves on their Arms. When they gather this Varniſh, they have a Veſſel made of Neats-Leather, faſtened to their Girdle; Then with one Hand they take-out the Shells, and ſcrape them with a ſmall Iron-Inſtru-ment, which they hold in the other, till they have gotten-out all the Varniſh: At the Bottom *By the Work-men.*

[a] *Du Halde's China*, p. 336, *& ſeq.* [b] The ſame, *p.* 9.

of

Natural History.

of the Tree is a Baſket, wherein they leave the Shells till the Evening. To facilitate coming at the Varniſh, the Proprietors take-care to plant the Trees not far-aſunder; and when the Time of gathering it is come, they lay a great Number of Poles from one to another, which faſtened with Cords, ſerve inſtead of Ladders to get-up by.

Quantity gathered,

THE Merchant has always ready at his Houſe, a great Earthen-Veſſel, placed under a ſquare, wooden Frame, like that of a Table, ſupported by four Feet. On the Frame is a thin Cloth, (whoſe four Corners are faſtened to Rings) laid very ſlack, whereon they pour the Varniſh; and when the Fluid-Part has run-through, they wring-out the reſt, all but a little that remains behind, which is ſold to the Druggiſts, as being ſometimes uſed in Phyſic. They are well-enough ſatisfied with their Bargain, when a thouſand Trees, in one Night, yields twenty Pound of Varniſh. After the Gathering is over, the Merchant puts the Varniſh in wooden Buckets, well-caulked on the Outſide, faſtening-on the Covers with ſtrong Nails. A Pound of Varniſh, while it is freſh, is valued at about Eighteen-pence [a]; and the Merchant gains double, or more, according to the Diſtance of the Place to which it is carried.

Diſeaſe cauſed by it.

THE Labourers pay very dear for gathering the Varniſh, if they do not take the above-mentioned Precautions. The Diſeaſe begins with a Kind of Ring-Worm, which in the Space of a Day covers the whole Body, Face and all; for it ſpreads in a few Hours, and grows very red. Soon after the Perſon's Face becomes bloated, and his Body, which ſwells to an extraordinary Degree, ſeems quite covered with a Leproſy. When a Man is attacked with this Diſtemper, they give him, immediately, to prevent thoſe Accidents, a conſiderable Quantity of the aforeſaid medicinal Water for waſhing with, which purges him violently: They afterwards make for him a ſtrong Fumigation with the ſame Water, wrapping him up very cloſe. By this Means the Swelling is removed, but the Skin is not ſo ſoon healed; for it cracks in ſeveral Places, from whence proceeds a great deal of Water. To remedy this, they take ſome of the Blits above-mentioned, dry, and burn them: Then upon the Part moſt affected put the Aſhes, which imbibing the ſharp Humour, the chopped Skin dries and falls-off, a new Skin ſucceeding in Place of it [b].

Excellent Qualities.

THE *Chineſe* Varniſh, beſides the Beauty it gives to the ſmalleſt Piece of Work it is applied to, has likewiſe the Property of preſerving the Wood, and hindering the leaſt Moiſture from entering it [c]. It takes all Colours alike, and, when well-made, loſes nothing of its Luſtre and Clearneſs, by Change of Air, or otherwiſe. But to do it well requires Time and Care; for one or two Layings-on is not ſufficient: Nor muſt a new Lay of Varniſh be applied, till the former, which ought to be very ſmooth and thin, be dried, yet not ſo as to be hard. Care muſt be taken to ſee, whether ſuch Lay be ſtiffer, or of a deeper Colour: One muſt try to bring the Varniſh, by Degrees, to a certain Temper, which only can render the Work firm, ſmooth, and clear. This Art is to be attained only by Experience. As the varniſhed, or japanned Works, muſt ſometimes be ſet in moiſt Places, ſometimes ſteeped in Water, and, in ſhort, turned and placed in various Poſitions, they are ſeldom very large, like the Pillars fixed on Stone-Baſes, wherewith the great Imperial Hall, the Emperor's Apartment, and other *Chineſe* Buildings, are ſupported; which Pillars are not done over with true Varniſh, but another Liquor, called *Tong-yew*, proceeding from

THE ſecond Tree, called *Tong-ſou*, whence a Liquor is drawn not much differing from Varniſh. So great is the Reſemblance as to Figure, Colour of Bark, the Size and Faſhion of the Leaves, the Shape and Make of the Nuts, to the Walnut-Tree, that at a ſmall Diſtance you would take it for one. The Nuts are full of a thickiſh Oil, mixed with an oily Pulp, which they preſs. To make it fit for Uſe, they boil it with Litharge, and may mix it with any Colour at Pleaſure. It is often laid, without any Mixture, on Wood, which it preſerves againſt Rain; alſo on the Squares which form the Floors of Chambers: This makes them ſhine, and, if waſhed from Time to Time, they retain their Luſtre. The Pavements of the Apartments, belonging to the Emperor and the Grandees, are done in this Manner.

WHEN they would adorn a Hall, a Chamber, or Cloſet, in a finiſhed Manner, they firſt cover the Pillars and Wainſcot with a Paſte of Flax, Lime, or ſuch-like Materials: When this is dried to a certain Degree, they with Brushes lay-on the Oil (mixed with the Colour they pitch-on, and boiled as uſual) according to their Deſign. Sometimes they gild the Moldings, Carvings, and every Thing that is in Relievo. But, ſetting-aſide the Gilding, theſe Works ſcarcely yield in Beauty and Luſtre to those wherein they employ the Varniſh, called *Tſi*. As this Oil is cheap, and the Varniſh proves dear, the Merchants uſually mix a great Quantity of the *Tong-yew* with the *Tong-tſi*; under-

[a] Forty Sous in the *French*. [b] *Du Halde*'s *China*, p. 337. [c] The ſame; and *Le Comte*'s Memoirs of *China*, p. 148. The Manner of applying the Varniſh has been already deſcribed, *p.* 138.

Pretend-

Pretence, that a little of it is neceſſary to bring it to a Temper, and make it ſpread more eaſily. It is with this *Tong-yew*, that they make Cloth to keep-out Rain, like Oil-Cloth; but the Cloaths made of it can be worn only in the Northern-Parts. In ſhort, the *Tong-ſhu* is one of the moſt uſeful Trees to be found in *China*, and would be of vaſt Service, if brought into *Europe* [a].

THE Tallow-Tree, called by the *Chineſes*, *U-kyew-mû* [b], is one of the moſt ſingular Trees in Nature, and to be found no-where but in *China*, being very common in *Che-kyang*, and *Kyang-ſi*. *Martini* has given a pretty exact Account of it in his Deſcription of the City of *Kin-wha*, in the firſt of thoſe Provinces. This Tree, which he compares to our Pear-Trees, and is ſometimes as tall as the larger Sort, has alſo a great Reſemblance of the Aſpin, and Birch-Tree, with reſpect to the Leaves, and long Stalks; but the Trunk and Branches are moſtly ſhaped like our Cherry-Trees. The Bark is of a whitiſh Grey, ſomewhat ſoft [c] to the Touch: The little Branches are long, flexible, and furniſhed with Leaves only from the Middle to the End; where they grow in a Sort of Tuft, but more ſmall than elſewhere, and often turning at the Edges, ſo as to appear hollow like a Boat. Theſe Leaves are of a dark Green, ſleek on the upper-Part, and whitiſh underneath; very thin, dry, moderately large, and in Form of a Lozenge; only the Angles on the Side are rounded-off, and the End lengthened into a Point. They are joined to the Branches by long Stalks, dry, and ſmall: The Ribs of the Leaf, as well as its Fibres, are round, dry, and ſlender. In the latter Seaſon, that is towards *November* and *December*, they become red before they fall-off; as happens to the Leaves of the Vine, and Pear-Tree.

THE Fruit grows in Bunches, at the Extremity of the Branches, on a very ſhort, woody Stalk: It is incloſed in a hard, woody, brown Capſula, or Huſk, called *Yen-kyû*, a little rough, and of a triangular Figure; the Angles being rounded-off, much in the ſame Manner as thoſe of the ſmall Fruit, or red Berries of the Privet, or Prime-Print, vulgarly called *Prieſt-Cap*. Theſe Huſks, or Caſes, commonly incloſe three ſmall Nuts, or Berries, each about the Size of a Pea [d], with a pretty hard Shell, and round, excepting on the Sides, where they touch, which is a little flat. Every Nut is incloſed with a thin Covering of white Tallow, pretty hard. The Stalk divides itſelf, as it were, into three ſmall Strings, which paſs through the Middle of the Fruit, between the three Kernels, in ſuch Manner, that the Ends of the Strings enter the upper-Ends of the Kernels, whereat they ſeem to hang. When the Huſk, which is compoſed of ſix ſmall, hollow, oval Leaves, begins to open [e], and fall-off, as it does by Degrees, the Fruit diſcovering itſelf, makes a very agreeable Sight, eſpecially in Winter; for then theſe Trees appear covered-over with ſmall, white Bunches, which at a Diſtance look like ſo many Noſegays. *Tallow Tree.* *And Kernel.*

BEFORE the Fruit is quite ripe, it appears round. Some are defective as to Shape, and contain but one or two Nuts, or Berries. The Nut has within its Shell a Kind of ſmall Kernel, about the Bigneſs of a large Hempſeed, which is covered with a brown Skin, and affords a great deal of Oil for their Lamps.

OF this Tallow they make Candles, which are like the Segment of a Cone, and lighted at the broad End: The Wick is a little Stick, or hollow Reed, round which they wrap Cotton-Thread, or elſe the Pith of a Ruſh of the ſame Bigneſs: This Ruſh ſerves alſo for the Wick of Lamps. One End of the Reed, or ſmall Stick, ſerves for fixing-on the Candleſtick, which is made with a Point to enter into the Hollow. This Sort of Candle, beſides being thick and heavy, readily melts, when touched with the Hand. The Light it gives is pretty clear, but a little yellowiſh; and as the Wick is ſolid, and changes, while burning, into a hard Coal, it is not eaſily ſnuffed, they uſing Sciſſars made for the Purpoſe. *Candles, how made.*

IN order to ſeparate the Tallow from the Fruit, they pound the Shell and Nut both together, and boil it in Water; ſkimming-off the Fat, or Oil, as it riſes to the Top, which condenſes like Tallow when it is cold. To ten Pound of this Greaſe, they ſometimes put three of Linſeed-Oil, and a little Wax, to give it a Body; whereof they make exceeding white Candles, though they alſo make red-ones, by mixing Vermilion with the Compoſition [f]. *Du Halde* mentions elſewhere, that they dip the Candles into the Wax produced by the Wax-Tree; and that this forms a Sort of Cruſt about the Tallow, which hinders it from running [g]. *Tallow, how ſeparated.*

NAVARETTE affirms, that this Tree always grows on the Banks of Brooks, as do the Willows in *Caſtile*: That it bears a Fruit about the Bigneſs of a Hazle-Nut, of a dark-green Colour:

[a] *Du Halde*'s *China*, p. 9. [b] *Magalhaens* and *Navarette* call it *Quey-ſhu*. [c] *Le Comte* ſays it is ſmooth. [d] P. 9, he ſays, the Size of a Hazle-Nut. [e] The ſame Author ſays, it opens in the Middle, like a Cheſnut. [f] *Du Halde*, as before, *p.* 319. [g] The ſame, *p.* 9.

Natural History. That it bloſſoms about the Middle of *December*, and looks as white as Snow: That the Huſk coming to drop, a white Subſtance, like Tallow, appears, which is gathered about the End of *December*, or Beginning of *January*: That the Candles made of it yield no ill Smell, and laſt much longer in Summer, than Winter [a]: That they coſt Three halfpence a Pound [b]; but the Tallow bought-off the Tree is not half ſo dear. They adorn them with Paint, Silver, and Gold, like the Paſchal-Candles of the *Romaniſts*: From the Dregs that remain, after making the Candles, they preſs an Oil, which ſerves for Lamps [c].

When gathered.

Farther Account. *LE COMTE* ſays, the Branches of the Tallow-Tree are crooked, the Leaves ſhaped like a Heart, of a lively briſk Red [d], its Bark ſmooth, the Trunk ſhort, and the Head round, and very thick. The Rind incloſing the Fruit is divided into three Segments, which open when it is ripe, and diſcover three Kernels of the Bigneſs of a ſmall Nut. This Mixture of White and Red, makes, at a Diſtance, the fineſt Proſpect in the World: The Fields, where theſe Trees are planted, which is uſually in a direct Line, and checquerwiſe, ſhewing afar-off like a vaſt Parterre of Flower-Pots. For want of the Art of purifying the Tallow, the *Chineſe* make the Candles very awkwardly; ſo that their Smell is much ſtronger, their Smoak thicker, and their Light dimmer, than ours; which the Author attributes chiefly to the Stick uſed for a Wick [e].

The Wax-Tree. THE fourth extraordinary Tree, called *Pe-laſhu*, or *the white Wax-Tree*, is not quite ſo tall as the Tallow-Tree: It differs from it alſo in the Colour of the Bark, which is white; and in the Figure of the Leaves, which are longer than broad. A Kind of little Worms faſten on theſe Leaves, wherewith being covered, in a ſhort Time they form Combs of Wax, much ſmaller than the Honey-Combs. This Wax is very hard and ſhining, and is conſiderably dearer than Bees-Wax. When theſe Worms are accuſtomed to the Trees of any Diſtrict, they never quit them, but on particular Occaſions; and when once they remove from a Place, they never return; ſo that others muſt be procured in their Stead, from the Merchants who deal in them [f].

Wax, how produced. ACCORDING to *Magalhaens*, the Animal which produces the Wax, is no bigger than a Flea, but exceeding active and vigorous, piercing with extraordinary Swiftneſs, not only the Skins of Men and Beaſts, but the Branches and Bodies of Trees, where they lay their Eggs: Theſe being picked-out, and kept, in Spring turn to Worms. The beſt are thoſe of *Shan-tong*, which the Inhabitants ſell in *Hû-quang*; from whence comes the beſt Wax. At the Beginning of Spring, they lay theſe Worms at the Roots of the Trees: Up theſe they run, taking Poſſeſſion of the Branches, and piercing to the very Pith, which by a peculiar Property they prepare, and turn to Wax as white as Snow. Afterwards they thruſt it up the Holes they have made, to the Surface; where being congealed by the Air, it hangs like Icicles, till gathered by the Proprietors of the Trees, and made into Cakes for Sale. The Wax-Trees in *Hû-quang* are as large as Cheſnut-Trees: Thoſe of *Shan-tong* but ſmall [g].

To theſe four extraordinary Trees, let us add another, called *Kû-ſhu*: This reſembles the Fig-Tree in its Leaves and Branches, which conſiſt of a light pithy Wood, and are covered like it with Bark. The Root commonly ſends forth ſeveral Stalks, or little Trunks, like a Buſh, and ſometimes only one. The Trunk of ſome is ſtrait, round, and nine or ten Inches thick. The Leaf is deeply indented, eſpecially in two Places, whereby it becomes, as it were, divided into three Leaves, curiouſly hollowed on each Side. In Colour on both Sides, as well as the Conterture of the Fibres, it reſembles the Leaf of the Fig-Tree, only it is larger, thicker, and rougher on the upper-Side; but the under-Side is very ſoft and downy. Some of them are not hollowed at all, and have the Figure of a longiſh Heart.

THIS Tree yields a Milk, made-uſe of by the *Chineſe* in gilding. They draw it off in Shells put into horizontal, or perpendicular Inciſions, made in the Trunk. In uſing it, they draw, with a Pencil, what Figures they pleaſe upon Wood, or any other Matter, and then apply Leaf-Gold, which ſticks ſo firmly, that it never comes-off [h].

THERE is another remarkable Tree, which partaking ſomewhat both of the Juniper and Cypreſs, is called *Tſe-tſong*, that is, Juniper, and *Ywen-pe*, or Cypreſs. The Trunk, which is about a Foot and half in Circumference, ſends-forth Branches almoſt from the very Ground: Theſe again emit a great many others, which ſtretching-out at ſome Diſtance from the Trunk, form a thick green Buſh. The Tree is crouded with Leaves, ſome like Cypreſs, the reſt like Ju-

[a] This is contrary to what is found with our Candles. [b] *Magalhaens*, who deſcribes this Tree almoſt in the ſame Words, differs in this Circumſtance, ſaying, they coſt not above Fourteen-pence the Pound, if there be not ſome Miſtake in the *Engliſh* Tranſlation. [c] *Navarette*'s Deſcription of *China*, p. 33. [d] He ſays them, doubtleſs, in the latter Seaſon, when they are of that Colour. [e] *Le Comte*'s Memoirs of *China*, P. 99. [f] *Du Halde*'s *China*, p. 9. [g] *Magalhaens*'s Relation of *China*, p. 140, & *ſeq.* [h] *Du Halde*, as before, *p.* 320.

niper; the latter being long, narrow, and ſharp, a with this Peculiarity, that they are diſpoſed along the Boughs, or Twigs, in Rows, four, five, or ſix in Number: So that looking-on the Boughs from the End, they appear like Stars of four, five, or ſix Rays; the Leaves of the firſt Row covering thoſe of the under Rows ſo exactly, that through the Spaces between, one may ſee diſtinctly to the Bottom of the Bough. Theſe Boughs are found principally at the lower-Part of the Branches; for towards the Top you ſee no- b thing but Cypreſs-Branches, which are the more large and numerous of the two Sorts: Nature hath ſtill formed a greater Variety, for ſome are half one, and half the other. In ſhort, ſometimes one beholds a few Cypreſs-Leaves grafted at the End of a Juniper-Bough; at other Times, ſome ſmall Juniper-Bough ſhooting from the Bottom of a Cypreſs-Branch.

THE Bark of this Tree is ſomewhat rugged, and of a greyiſh brown Colour, inclining a little c to the Red in ſome Places: The Wood of a reddiſh White, like that of the Juniper, with a Spice of Turpentine in it: The Leaves, beſides the Smell of Cypreſs, have an aromatick Scent; but their Taſte is tartiſh, and very bitter. The Tree bears ſmall, round, green Berries, little larger than thoſe of Juniper: The Pulp is of an Olive-green, and has a ſtrong Smell. The Fruit is joined to the Branches by long Stalks of the ſame Nature as the Leaves: It contains two red- d diſh Seeds, in the Shape of Hearts, and as hard as Grape-Stones. The Trunk of ſome of theſe Trees is tall and ſlender, having Branches nowhere but at the Top, which ends in a Point almoſt like the Cypreſs. There are others of the Dwarf-Kind, growing no higher than ſeven or eight Feet; but as their Trunk and Branches are crooked, and wrinkled, there is Reaſon to believe the *Chineſe* ſtunt their Growth by cutting them. When the Tree is young all the Leaves e are long, like thoſe of Juniper; but, when old, they reſemble the Cypreſs [a].

3. *Of the* Cotton, *and* Tea-Shrubs.

The Cotton-Shrub. Manner of growing: How cleanſed. The Tea-Shrub. Song-lo *Tea, its Qualities.* Vû-i, *or Bohea, more preferable.* Mau-cha, *or Imperial-Tea: Other Sorts, their different Effects. Counterfeit Teas, in common* f *Uſe.* Pe-eul *Tea.* Vû-i, *or Bohea, when gathered: The Shrub deſcribed: Bears three Sorts of Fruit. Qualities of Tea. All the Sorts from the ſame Tree.* Chineſe *Grafting.*

ONE of the moſt uſeful Shrubs in all *China*, is that producing the Cotton. The Huſbandmen, the ſame Day that they get-in their Harveſt, ſow it in the ſame Field, only breaking the Surface of the Ground with a Rake. After the Earth has been moiſtened with Rain, or Dew, there grows-up, by Degrees, a ſmall Shrub, about two Feet high: The Flowers appear in *Auguſt*, being generally yellow, but ſometimes red, and are ſucceeded by ſmall Buttons, growing in the Shape of a Pod of the Bigneſs of a Nut. *The Tea-Shrub.* *The Cotton-Shrub.*

THE fortieth Day after the Appearance of the Flower, the Pod opens of itſelf, and cleaving in three Places, diſcovers three or four little Bags of Cotton, extreamly white, and of the ſame Figure as the Cod of a Silk-Worm. They are faſtened to the Bottom of the open Pod, and contain Seed for the following Year. It is then Time to get-in the Crop; but in fair Weather the Fruit is left expoſed to the Sun two or three Days more, that ſo being ſwelled by the Heat, the Profit may be greater. *Manner of growing.*

As all the Fibres of the Cotton are ſtrongly faſtened to the Seeds which they incloſe, they make-uſe of a Sort of Wheel to ſeparate them. This Engine conſiſts of two very ſmooth Rowlers, one of Wood, and the other of Iron, about a Foot long, and an Inch thick. They are placed ſo cloſe together, that there is no Vacancy between; and while one Hand gives Motion to the firſt Rowler, and the Foot to the ſecond, the other Hand plies the Cotton, which looſening by the Motion, paſſes on one Side of the Engine, the Seed remaining on the other. Afterwards they card, ſpin, and weave it [b]. *How cleanſed.*

THE Tea-Shrub is juſtly preferable in *China* to all others, becauſe it is of the greateſt Uſe and Benefit there. The Name of *Tha*, or Tea, comes from the corrupt Pronunciation at *Tſwon-chew*, and *Chang-chew-fû*, in the Province of *Fo-kyen:* In all other Parts of the Empire they uſe the Word *Cha*; as do the *Portugueze.* There are many Kinds of it, which have different Names in different Provinces: However, it may be diſtinguiſhed, by its Qualities, into four Sorts, *viz. Song-lo-cha*, *Vû-i-cha*, *Pû-eul-cha*, and *Longan-cha.* *The Tea-Shrub.*

THE *Song-lo*, Green-Tea, is ſo called from a Mountain in the Province of *Kyang-nan*, and Diſtrict of *Whey-chew-fû:* It is neither high, nor of great Extent, but covered-over with theſe Shrubs, which are cultivated on its Sides, in the ſame Manner as at the Foot of the neighbouring Mountains. It is planted much in the ſame Manner as Vines, and they hinder its Growth Song-lo *Tea,*

[a] *Du Halde's China*, p. 321.

[b] The ſame, *p.* 319, *&c ſeq.*

Natural History. in that Province; otherwise it would run-up to six or seven Feet, as it does in other Provinces to ten or twelve: It must also be planted anew every four or five Years, or else the Leaves will become thick, hard, and rough. The Flower is white, and shaped like a five-Leaf Rose. In Autumn, when it decays, there appears a Berry *Its Qualities.* in the Form of a well-filled Nut, somewhat moist, and not ill-tasted. The *Song-lo-cha*, preserved several Years, is an excellent Remedy against many Distempers [a]. The Leaves are somewhat long, the Infusion clear and green, when it is fresh, the Taste pleasant: It smells, as they say in *France*, a little of Violets; but this Taste is not natural, and the *Chinese* often assured the Author, that, to be good, it ought to have no Taste at all. This is what they commoly present at Visits, but it is exceeding corrosive; perhaps the Sugar they mix with it here corrects its Acrimony: But in *China*, where it is drank pure, too great a Use of it would be apt to spoil the Stomach [b].

Vû-i, or Bohea, THE *Vû-i-cha*, or Bohea-Tea, as we call it, grows in the Province of *Fo-kyen*, and takes its Name also from the Mountain *Vû-i-shan*, situated in the District of *Kyen-ning-fû*, and two Leagues distant from the little City of *Tsong-gan-hyen*: This is the most famous Mountain in that Province: It is covered with a great Number of Temples, Houses, and Hermitages of the *Bonzas*, belonging to the Sect of *Tau-kya*, which draw thither a great Concourse of People.

THE better to compass their Design of making this Mountain pass for the Abode of the immortal Beings, they have conveyed Barks, Chariots, and the like, into the Clefts of the steepest Rocks all along the Sides of a Rivulet; and the common People believing it impossible that they could have been raised to such inaccessible Places, but by a Power more than human, look upon the Whole as a Prodigy. The Soil which produces this Plant is light, whitish, and sandy.

More preferable. THE *Vû-i-cha*, and *Song-lo-cha* Shrubs, are of the same Height and Size, and cultivated in the same Manner: The only Difference between them is, that the Leaves of the latter are more long and pointed, give the Water a greenish Tincture, and Experience shews it to be somewhat raking. On the contrary, the Leaves of the *Vû-i-cha* are short, more round, somewhat blackish, and colour the Water yellow, without the least Harshness, or any Quality offensive to the weakest Stomach: Hence the *Vû-i-cha* is most generally used throughout the Empire. It is difficult to meet with any that is good in the Northern Provinces, where usually only the large-leafed Sort is sold; for the more yellow, tender, and fine the Leaves of both Sorts are, the more they are esteemed: Of these they make three Sorts, in Places where the Tea is gathered.

THE first is the Leaf gathered from the Shrubs newly planted; or, as the *Chinese* express it, are the first Points of the Leaves: This they call *Mau-cha*, and is scarce ever used but in Presents, or to send to the Emperor. The second is of the Leaves more full-grown: This is what they sell by the Name of good *Vû-i-cha*. The remaining Leaves, which are allowed to grow to their full Bigness, make the third Sort, which is very cheap.

THERE is yet another Sort made of the Flower itself; but they who would have it must bespeak it, and pay an excessive Price. The Missionary-Geographers, having gotten a little of it by Means of the *Mandarins*, found no sensible Change in the Water, either as to Colour, or Taste, which is probably the Reason why this Tea is not used by the Emperor, or even in the Palace. The *Mau-cha* is the Imperial-Tea, and sold in the Places near the Mountains *Song-lo*, and *Vû-i*, for about two Shillings *English* [c] a Pound.

UNDER these two Sorts of Tea, or *Cha*, we may comprehend all the rest, distinguished by different Names; as *Lû-ngan-cha*, *Hay-cha*, &c. The first has its Name from the City of *Lû-ngan-chew*, although the best Tea of this Kind is cultivated no-where but on the Sides of the little Hills belonging to the small City of *Ho-shan-hyen*, from whence they are distant about seven Leagues. The Missionaries having examined it on the Spot, found no Difference between it and the *Song-lo-cha*, either in the Figure of the Leaves, or the Manner of Cultivation. It tinges the Water of a different Colour, and, when fresh, appears not quite so rough or corrosive to the Taste: This may be attributed to the Difference of Soil, since in *Europe* Wines of the same Kind of Grape are found more or less rough in different Parts of the same Province.

THE *Chinese*, however, perceive the Effects of them to be very different. The *Song-lo* is hot and raking, but the *Lû-ngan* Tea is otherwise, and reckoned very wholesome. The *Hay-cha* comes from *Kan-chew-fû*, in the Province of *Kyang-si*, and differs, in no Respect, from the *Lû-ngan-cha*; so that it may be called a Species of the *Song-lo-cha*. It is the same with the other Sorts of Tea; for Instance, that which the Mongols in *Tartary* use, called by them *Koyl-cha*, or *Karcha*, consists only of Leaves, either

[a] *Du Halde's China*, p. 10. *Le Comte's* Memoirs of *China*, p. 222. [b] *Le Comte*, as before, p. 223.

[c] Forty or fifty Sols.

the *Song-lo*, or *Vû-i-cha*, which grow to their a
ll Size, and are mixed without any Sorting;
cauſe the *Chineſe* think any Thing good enough
r the *Tartars*, who cannot diſtinguiſh the coarſe
ea from the fine, and commonly dilute it with
ilk: Of this they make both an agreeable and
nouriſhing Liquor, which they take at all
ours.

THE *Chineſe* Traders often impoſe the Leaves
other Plants for Teas. Thus in the Pro-
ince of *Shan-tong*, that which is ſold by the b
ame of *Meng-ing-cha*, as admirable Tea, is no
ore than a Kind of Moſs which grows on the
ocky Parts of a Mountain belonging to a City
Meng-ing-hyen. It has a very bitter Taſte,
d this Quality of the true Tea, that when
rank hot after Meals, it promotes Digeſtion.

THE ſame Sort of Tea is found in ſome Parts
the Provinces ſtill more to the North:
hough it be not made of Leaves, yet the Mer-
hants call it *Cha-ye*, or *Leaves of Tea*. In thoſe c
ountries where the Tea does not uſually grow,
e common People, who have not the niceſt
alates, make-uſe of any Thing that reſembles
e Tea, either in Taſte, or Effects, and regale
emſelves upon this coarſe Stuff, which they
equently gather from Trees, that, having been
ng tranſplanted, degenerate, on Account of the
nproper Soil; and to make it much cheaper,
ey lay-in their Store when the Leaves are
rown old, and become tough and large; which d
enders the Taſte rough and inſipid, although it
roduces the ſame Effects in thoſe who take it,
the *Song-lo*, or *Vû-i-cha*.

THE third Sort is named *Pû-eul-cha*, from the
illage *Pû-eul*, which is ſituate in the Province
Yun-nan, and on the Borders of *Pegu*, *Ava*,
e *Laos*, and *Tong-king*. It is gathered in the
eighbouring Mountains, by the Natives, who
ill not ſuffer the Merchants to approach nearer
han the Foot of them, where they receive the e
Quantity for which they bargained. According
theſe Merchants, the Trees which produce
is Tea, are tall and buſhy, planted without
rder, and propagated without Culture: The
eaves are longer and thicker than thoſe of the
ng-lo-cha, and *Vû-i-cha*, and are rolled-up into
Kind of Ball, which they ſell at a good Price.
his Sort of Tea is common in the Provinces of
un-nan and *Quey-chew*; but the Taſte is diſa-
eeable, though ſmooth. The Balls, when cut f
Pieces, they throw, like other Tea, into boil-
g Water, to which it gives a reddiſh Tincture.
THE *Chineſe* Phyſicians affirm this Drink to
wholeſome, as by its Effects it ſeems to be.
he Miſſionaries, and thoſe who accompanied
em in their Surveys, found it very good in

The Tea-Shrub.

ſlight Diſorders on the Road. Its peculiar Vir-
tues are, to cure the Colic, ſtop the Flux, and
create an Appetite; but then it ought to be
drank at leaſt as ſtrong again as Tea is com-
monly made [a].

THE Leaves of the ſecond Kind, called *Thee* *Vû-i, or*
Vû-i, are little, and inclining to black: They *Bohea*,
tinge the Water with a yellow Colour. The
Taſte is delicious, and even the weakeſt Sto-
mach always agrees with it. In Winter it is to
be uſed temperately, but in Summer one cannot
drink too much. It is eſpecially good in Sweat-
ing, after Travelling, Running, or any other vio-
lent Exerciſe. They give of it alſo to ſick People;
and thoſe who have any Care of their Health,
drink no other. When *Le Comte* was at *Siam*,
he heard them often talk of the Flower of *Thee*,
of Imperial *Thee*, and of ſeveral other Sorts of
Thee, the Price of which was yet more extraor-
dinary, than the Properties they aſcribe to it:
But in *China* he heard no ſuch Thing.

THEY uſually begin to gather the Tea in *When ga-*
March and *April*, according as the Seaſon is for- *thered.*
ward: They afterwards hold them in the Steam
of boiling Water, to ſoften them again: So ſoon
as penetrated by the Moiſture, they draw them
over Copper-Plates kept on the Fire, which dries
them by Degrees, till they grow brown, and
roll-up of themſelves in the Manner we ſee
them.

IT commonly grows in Valleys, and at the
Foot of Mountains; the choiceſt ſprings in
ſtony Soils; that which is planted in light
Grounds holds the ſecond Rank. The leaſt va-
luable of all, is found in yellow Earth; but, in
what Place ſoever it is cultivated, Care muſt be
taken to expoſe it to the South: It gains more
Strength by that Means, and bears three Years
after being ſown. Its Root reſembles that of a
Peach, and its Flowers white wild-Roſes.

THE Trees grow of all Sizes, from two Feet *The Shrub*
to an hundred, and ſome are to be met-with that *deſcribed.*
two Men can ſcarce graſp in their Arms. Thus
far *Le Comte* gives from the *Chineſe* Herbal. The
following Remarks are thoſe which he made du-
ring one Quarter of an Hour that he had to exa-
mine the Tree. He firſt ſaw it on the Side of a
little Hill, entering the Province of *Fo-kyen*: It
was not above five or ſix Feet high. Several
Stalks, each an Inch thick, which joined toge-
ther, and divided at the Top into many ſmall
Branches, compoſed a Kind of Cluſter, much
like Myrtle. The Trunk, though ſeemingly
dry, bore very green Branches and Leaves:
Theſe Leaves were an Inch, or an Inch and half
long, pretty ſtrait-pointed, and indented round
the Edges. The oldeſt, which ſeemed ſomewhat

[a] *Du Halde's China*, p. 10, & *ſeq.*

Natural History.

white, were hard, brittle, and bitter. The new ones, on the contrary, ſoft, pliable, reddiſh, ſmooth, tranſparent, and pretty ſweet to the Taſte, eſpecially after they had been a little chewed.

Bears three Sorts

IT being in *September*, he found three Sorts of Fruit. In the new Branches there were little ſlimy Peaſe, green without, and full of yellow Grains within. In others, the Fruit was as big as Beans, but of different Figures, ſome round, containing a Pea; others long, that contained two; ſome of a triangular had three, very like thoſe of the Tallow-Tree Fruit. The firſt Skin incloſing theſe Grains is green, very thick, and ſomewhat even: The ſecond white, and thinner, under which a third very fine Pellicle covers a Kind of Gland, or ſmall Nut perfectly round, that ſticks to the Bark by a little Fibre, from whence it derives its Nouriſhment. When this Fruit is young, it is ſomewhat bitter; but, a Day or two after it has been gathered, it withers, grows long and yellow, and wrinkles like an old Hazle-Nut; at length it becomes unctuous, and very bitter. The Author found alſo a third Sort of hard, old Fruits, the firſt Skin of which, between open and ſhut, ſhewed within a hard, brittle Huſk, exactly reſembling that of a Cheſnut. On breaking it, he ſcarce found any Sign of Fruit, it was grown ſo dry and flat. In ſome this Fruit was reduced to Powder; others contained a little Nut quite dried-up, and covered with its firſt Pellicle.

Of Fruit.

AMONGST theſe Fruits, a great Number of them have no Germ, or Bud: Theſe they call Females; ſuch as have any may be ſown, and produce Trees; but the *Chineſe* do commonly make-uſe of Grafts to plant. The Author taſted the Bark of the Trunk and Branches: He likewiſe chewed ſome of the Wood and Fibres, which far from being bitter, left a Reliſh ſweet like that of Liquorice; yet one does not taſte it till ſome Time after.

Qualities of Tea.

As to the Virtues of Tea, Opinions differ much; ſome aſcribing good, others bad Qualities to it. Many imagine, that it preſerves the *Chineſes* from the Gout, Sciatica, and Stone, becauſe not ſubject to thoſe Diſeaſes. The *Tartars*, who feed on raw Fleſh, ſuffer continual Indigeſtions ſo ſoon as they give-over drinking of it: In others, drinking it after Meals produces the ſame Effects. The Uſe of Tea cures ſome of the Vertigo: Others, after drinking it, ſleep better; which argues that it is not proper to ſuppreſs Fumes. Many in *France* find it good for the Gravel, Crudities, and Head-achs; ſome pretend to have been cured by it of the Sciatica and Gout, in a very ſhort Space [a]. Others, on the contrary, have received no Manner of Benefit from it. Hence it is judged, that its good Qualities, whatever they are, may be found in moſt other Sorts of Leaves. A Pound of it coſts no more than Three-pence in *China* [b].

CUNNINGHAM affirms, that the three Sorts of Tea, commonly carried to *England*, proceed all from the ſame Plant, and that nothing but the Seaſon of the Year, and the Soil, makes the Difference. The Bohea, or *Vo-i* [c], is the very firſt Bud, gathered in the Beginning of *March*, and dried in the Shade. The Bing-Tea is the ſecond Growth, in *April*; and *Sing-lo* the laſt, in *May* and *June*, both dried a little in Tatches, or Pans, over the Fire. He adds, that the Tea-Shrub being an Ever-Green, is in Flower from *October* to *January*, and the Seed ripe till *September* and *October* following; ſo that one may gather both Flowers and Seed at the ſame Time; but for one freſh and full Seed, there are an hundred good for nought. Theſe, continues he, make-up the two Sorts of Fruit in *Le Comte's* Deſcription of Tea. As for his other Sort, which he calls ſlimy Peaſe, they were nothing but the young Buds of the Flowers not yet open. Its Seed-Veſſels are really tricapſular, each Capſula containing one Nut, or Seed; and although two or one Capſula only comes to Perfection, yet the Veſtiges of the reſt may be diſcerned. It grows in a dry, gravelly Soil, on the Sides of Hills, in ſeveral Places of the Iſland of *Chuſhan*, without any Cultivation.

THE ſame Author obſerves, that *Le Comte* is miſtaken in ſaying [d], that the *Chineſe* are Strangers to the Art of Engrafting, for he ſaw the Tallow, and other Trees, engrafted in the ſame Iſland. They do not ſlit the Stock, but cut a ſmall Slice off the Out-ſide, to which they apply the Graft, cut ſloping, to fit the Place; then bringing-up the Bark of the Slice over the Graft, they tie all together, and cover it with Straw and Mud, as is done with us [e].

4. *Of the* Trees *bearing* Flowers.

Flowering Trees. *The* Mo-lyen. *The* La-mwa. *The* Cha-Wha. *Several Species.* *Odoriferous Shrubs.* *The* Jaſmin *and* Sampagu. *The* Quey-wha. *An excellent Flower.* *The* Lan-wha. *Common Flowers.* Peonies. Provence

[a] This muſt be owing to its attenuating Quality, for it is a great Thinner of the Blood and Juices. [b] *Comte's* Memoirs of *China*, p. 221, *& ſeqq.* [c] The Author ſpells it *Voiii.* [d] *P.* 96, of his Memoirs. But *p.* 225, he owns they do graft, as may be ſeen a little above. [e] Philoſ. Tranſ. Abridg. vol. 5. part 2. p. 180.

Roſes. The Lyen-wha: *Kind of Water-Lily. The* Pe-tſi. *Vegetable Colours.*

THE Flowering-Trees and Shrubs are very numerous throughout *China*, which, in this reſpect, has the Advantage of *Europe*, as the latter has of it in regard to Flowers which ſpring from Seeds and Roots. Large Trees are to be ſeen there, covered with Flowers; ſome having a perfect Reſemblance of Tulips; others are like Roſes; which, intermixt with the green Leaves, make a very beautiful Appearance.

AMONG the Trees of this Kind, there is one called *Mo-lyen*, as thick as the Small of one's Leg: Its Branches are ſlender, full of Pith, and covered with a red Rind, ſpeckled with white Spots like a Filbert-Tree. The Leaves are not many, but very large, and broadeſt towards the Top. They are thin, and pretty dry: Their Ribs and principal Fibres covered with a fine whitiſh Down. They are joined to the Tree by Stalks, which ſpread towards the Bottom almoſt round the Branch; which may be ſaid to proceed from it, as out of a little Tube, making an Elbow in this Place.

FROM amidſt the Stalks riſe little Buds of an oval Figure, covered with Down; which opening in *December*, become large Flowers, like the Mountain-Lily, compoſed of ſeven or eight Leaves full of long Fibres, of an oval Figure, and pointed at the Extremities. Some of theſe Trees bear yellow Flowers, ſome red, others white.

ANOTHER Tree, called *La-mwe*, has ſome Reſemblance of our Bay-Tree, as to the Size and Figure, as well as Shape of its Branches. The Leaves grow oppoſite each other, by Pairs, on ſhort Stalks. The greateſt are almoſt as large as thoſe of the common Laurel, but neither ſo thick nor dry; becoming leſs and leſs in Proportion to their Diſtance from the End of the Branch. In the Depth of Winter, there proceed from between theſe Leaves ſmall yellow Flowers, of an agreeable Smell, not unlike that of the Roſe.

THE Tree called *Cha-wha* would alſo be a great Ornament for Gardens. There are four Kinds of it, which bear Flowers, and reſemble the *Spaniſh* Laurel, in the Shape of its Top, the Wood, and the Leaves: Theſe latter do not fall off during the Winter. They are ranged alternately on each Side of the Branches, large as thoſe of the *Spaniſh* Kind; but of an oval Figure, pointed at the Ends, and indented on the Edges like a Saw. They are alſo more thick and firm; being of a dark Green on the upper-Side, like the Leaf of an Orange-Tree, and yellow underneath, with pretty thick Stalks. Its Wood is of a whitiſh Grey, and very ſleek: The Trunk, commonly, as thick as one's Leg. *Flowering-Trees.*

AT the Place where the Stalks join the Tree, there proceed Buds of the Bigneſs, Figure, and Colour of a Hazle-Nut. They are covered with fine white Hair, and have a Ground like that of Satin. Theſe, in *December*, become Flowers, double, and of a reddiſh Colour, like ſmall Roſes. They are ſupported by a Calix, and grow from the Branch without any Stalks.

THE Trees of the ſecond Kind are very high: The Leaf is rounded at the End; and the Flowers large and red, intermixed with the green Leaves, make a very agreeable Shew. The Flowers of the two other Kinds are ſmaller and whitiſh. The Middle is full of ſlender Filaments, with each a yellow flat Top, like thoſe in common Roſes, and a ſmall round Piſtil in the Center; at the Bottom whereof is a little green Ball, which, as it grows, forms the Film, incloſing the Seed [a]. *Several Species.*

THERE are Trees in ſome Parts, that are almoſt all the Year long laden with Flowers of a florid Carnation. The Leaves are ſmall, like thoſe of the Elm; the Trunk irregular, the Branches crooked, and Bark ſmooth. If Alleys were made of them, mixed with Orange-Trees, it would be the moſt pleaſant Thing in the World: But the *Chineſe* do not much care for walking [b].

AMONG the Shrubs, *Du Halde*, (or his Correſpondent) was not acquainted with above three or four Sorts; whoſe Flowers were odoriferous: Thoſe called *Mo-li-wha*, are the moſt agreeable. The Shrub which bears them is eaſily propagated in the Southern Parts of *China*, where it grows to a pretty good Height: But, in the Northern Provinces, it never exceeds five or ſix Feet; although they take Care, in Winter, to keep them in Green-Houſes made on purpoſe. The Flower has a great Reſemblance of the double Jaſamin, both in Figure and Colour; but the Scent is ſtronger, though no leſs pleaſant. Its Leaf is entirely different, more nearly approaching that of the young Citron-Tree [c]. *Odoriferous Shrubs.*

JASMINS are very common. They plant them in the Nature of Vines, and look after them carefully; ſelling them in Noſegays. But this Flower is excelled by the *Sampagu*, which is famous in other Countries as well as *China*. They have them in Pots, and carry them from one Province to another to ſell. There are wonderful Properties in the Root; and thoſe very oppoſite: The Author was told, in *Manilla*, that *The* Jaſmin, *and* Sampagu.

[a] *Du Halde's China*, p. 12, and 320, & *ſeq.* [b] *Le Comte's* Memoirs of *China*, p. 158. [c] *Du Halde*, before, p. 12.

the

Natural History.

the Part which grows to the East is a mortal Poison, and that which grows to the West the Antidote [a].

The Quey-wha,

THE Tree that produces the Flowers called *Quey-wha*, very common in the Southern Provinces, and sometimes as tall as an Oak, is rarely seen in any of the Northern. These Flowers are small, differing in Colour, and have a very agreeable Odour. The Leaves resemble those of our Bay-Tree; which Resemblance is more easily discerned in the very high Trees, to be met with chiefly in *Che-kyang*, *Kyang-si*, *Yun-nan*, and *Quang-si*, than in the Shrubs of the same Kind. These little Flowers are ordinarily yellow, and hang on the Trees in such Clusters, that, when they fall, they quite cover the Ground. Their Scent is so agreeable, that the Air is perfumed at a great Distance. Some Trees bear four Times in the Year; new Flowers succeeding as soon as the old fall: So that they are frequently to be had, even in Winter.

An excellent Flower.

NOT unlike this, if not the same, is that which *Navarette* describes to be a little yellow Flower, so sweet and fragrant, that he knew nothing in *Europe* to compare it to: Though very small, it may be perceived three Quarters of a Mile. He observes, that the Tree it grows-on, called *La-moli-shwi*, bears no other Fruit but it; that it blossoms in *January*; and the Flower continues some Months upon the Stalk; lastly, that the *Literati* and Scholars much esteem it; usually wearing it on the Lock of Hair that hangs behind. On this Occasion the Author observes, that the Women are so fond of wearing Flowers on their Heads, (either natural or artificial, of Gold and Silver) that they sow Mallows in their Gardens for the Purpose. This Friar saw one of threescore and ten, all bedecked with them, passing in Haste to a Neighbour's, at which, he owns, the Missioners could not forbear laughing, according to the *European* Custom; though the *Chinese* Example ought to have taught them better Manners.

The Lan-wha.

THERE is yet a Flower called *Lan-wha*, or *Lan-wey-wha*, whose Smell is still more fragrant than either of the former; but it is not so beautiful. The Colour is commonly inclining to that of Wax. It is produced by a Sort of Plant, difficult to rear in any but the maritime Provinces. The most leafy, and charming Flowers, but entirely insipid, grow like Roses, on Trees and Shrubs, which are thought to be of the Peach and Pomegranate Kind: They are of a very bright Colour, but yield no Fruit. There is another Shrub which has still less Conformity with any of that Species among us, named, at *Pe-king*, *Wen-quang-shu*: For it has different Names in, at least, three different Provinces. Its Flower is white; the Leaves growing in Form of a double and sometimes a triple Rose. The Calix, or Cup, becomes afterwards a Fruit resembling a Peach, but quite tasteless. The Cells are filled with Kernels, or rather Seeds, covered with a cartilaginous and blackish Film [b].

As for the Flowers produced from Plants and Roots, *Le Comte* tells us, they do not deserve looking after. He adds, that they have none curious; and though many may be met-with like those in *Europe*, yet they cultivate them so ill, that one has much ado to know them [c]. It should seem, that this Author had not seen any Peonies, since *Du Halde* assures us, they are found in several Parts of *China*, much finer than the *European*; and, that besides the Variety of their Colour, they, in some Places, diffuse a most charming Fragrance. He adds, indeed, that they are the greatest Ornament of their Flower-Parterres; where one meets with no other Sort to compare with our Pink, Tulip, Ranunculus, Anemony, and the like [d]. Yet *Navarette*, who values himself on having seen a great Variety of Flowers, assures us, that there is in *China* a Sort of Rose-Tree, in all Respects, like the Provence-Rose, which every Month puts-out new Flowers. That which the *Chinese* call *Mew-tan*, or *Queen of Flowers*, is certainly, says our Author, the most beautiful in the World, and ought only to be handled by Kings and Princes. Its Smell is very delightful, and it is thick of reddish Leaves; which will divert even Melancholy itself. He also observes, that one meets with abundance of Sun-Flowers, very fragrant Lilies, much celebrated by their Philosopher, and other Flowers common in *Europe*: That there are vast Multitudes of what are called *Cocks-comb*; which is very beautiful, and a great Ornament to Gardens [e]; but allows, their Pinks have little or no Scent.

IN artificial Fish-Ponds, and often in the Marshes, there grows a Flower called *Lyen-wha*, in much Esteem with the *Chinese*. By the Leaves, the Fruit, and Stalk, it appears to be the *Nenuphar*, *Nymphea*, or Water-Lily [f]; which is but little valued in *Europe*. But, by the great Care they bestow on it, the Flower becomes double. The Leaves, it is said, amount to an hundred, and the Colours are more lively, and in greater Variety, than with us. Where the Flower

[a] *Navarette*'s Description of *China*, p. 35. [b] *Du Halde*'s *China*, p. 12. [c] *Le Comte*'s Memoirs *China*, p. 158. [d] *Du Halde*, as before, *p.* 12. [e] *Navarette*, as before, *p.* 35. [f] Yet *p.* 77, this Author says, it differs much from the Water-Lily, as well in the Fruit, as the Blossom and Root. It is also called the Water-Rose.

sing

fingle, the Cup, as in ours, has ordinarily no more than five Leaves; whereof the Paſtil grows in Form of a Cone, and is divided, lengthways, into ſeveral Cells, which contain a very white Sort of Fruit larger than our Beans [a].

THE *Lyen-wha* is found almoſt every-where in the Province of *Kyang-ſi*. Nothing can be more agreeable than to ſee whole Lakes all covered with its Flowers, which are cultivated every Year. The great Lords keep them in little Ponds, ſometimes in great Vaſes filled with Mud and Water, which ſerve to adorn their Gardens, or Courts. b

THIS Flower, which ſhoots-up above the Top of the Water, the Height of a Yard, or Yard and an half, pretty nearly reſembles a Tulip: It conſiſts of a little Ball, ſupported by a ſmall Filament, much like that which is found in the Lilly: Its Colour is either Violet, or white, or partly red, and partly white: The Smell is very agreeable: Its Fruit is of the Size of a Hazle-Nut, the Kernel whereof is white, and well-taſted. The Phyſicians preſcribe it to nouriſh and ſtrengthen People weakened by long Sickneſs: It is alſo very cooling in Summer. The Leaves are long, and float on the Water; they are faſtened to the Root by long Strings, which the Gardeners make-uſe of to wrap their Ware in. The Root is knotty, like that of Reeds: Its Pith and Subſtance is very white. This Plant is eſteemed all-over the Empire, d every Part of it being of uſe; they even make Meal of it, which ſerves for ſeveral Occaſions [b].

LE COMTE mentions a Flower, a Kind of *Nenufar*, called *Pe-tſi:* It grows under-Water, its Root being faſtened to a white Matter, covered with a red Skin, that divides itſelf into ſeveral Heads, which, when freſh, taſte like a Hazle-Nut. The *Chineſe* aſſured him, that it ſoftens Copper, if put into the Mouth with a Bit of it: But on Trial at *Hang-chew-fû*, where e the *Pe-tſi* is much eaten; and at *Kya-hing-fû*, the Miſſioners found it to be a mere Fiction; and no Wonder, ſince the Juice of it is very mild, and ſeems to have no corroſive Qualities [c]. *Du Halde*, who aſcribes the Braſs-ſoftening Fiction to the *Lyen-wha*, ſuppoſes the *Pe-tſi* to be a Species of it [d].

THE *Chineſes* ſcarce employ any Thing elſe, but the Juiçes of Flowers, and Herbs, for painting Flowers and Figures on Satin, and Satin-Taffaties, whereof the *Chineſe* make their Cloaths, Trimmings, and Furniture. Theſe Colours, which penetrate the Subſtance of the Silk, never fade; and as they have not a Body, they never peel-off. They ſeem to be woven-in very finely with the Ground of the Silk, though they are only painted in a very delicate Manner [e]. *Timber-Trees.*

5. Timber, *and other uſeful* Trees.

Foreſt-Trees, Oaks, Pines. The Nan-mû. Tſe-tau, *or Roſe-Wood. The* Lung-ju-tſu. Tye-li-mû, *or Iron-Tree. The* Bambû, *Rattan, and Sugar-Canes.*

THE Plains are ſo much taken-up with Rice, that there is ſcarce a Tree to be ſeen in them: But the Mountains, eſpecially thoſe of *Shen-ſi*, *Ho-nan*, *Quang-tong*, and *Fokyen*, are covered with Foreſts, containing large, ſtrait Trees of all Kinds, very proper to be uſed in public Edifices, and eſpecially for building Ships; ſuch as Pines, Aſh's, Elms, Oaks, Palms, c and Cedars, beſides ſeveral others little known in *Europe* [f]. *Foreſt-Trees, Oaks, Pines.*

THE Conſumption of Pine, or Fir, in Ships, Boats, and Buildings, is ſo immenſe, that it ſeems wonderful all the Woods are not deſtroyed. No ſmall Quantity is ſpent in Firing [g]. In the Northern Provinces the ſame Tree is employed in building; and in the Southern Part, beyond the River, they ordinarily make-uſe of the *Sha-mû*.

BUT that of greateſt Eſteem among them is called *Nan-mû*. The Pillars of the Apartments, and ancient Halls of the Imperial Palace, are all made of it, as well as the Windows, Doors, and Beams. The *Chineſes* look-upon it as a Wood that never decays. *When a Perſon has a Mind*, ſay they, *to build a Houſe, that may laſt for ever, he muſt uſe the* Nan-mû. Hence, perhaps, it is, that Travellers ſpeak of it as a Cedar: But the Leaves, at leaſt ſuch as the Miſſionaries have ſeen, are not at all like thoſe of the Cedars of *Libanus*, as deſcribed by Authors who have ſeen them. This Tree is one of the talleſt Sort, and very ſtrait. Its Branches ſhoot directly upwards: They begin only at a certain Height, and terminate a-Top in Form of a Noſegay. *The* Nan-mû.

THE *Nan-mû*, however, comes far-ſhort in Beauty of the Wood named *Tſe-tan*, which at Court is called *Roſe-Wood*. It is of a reddiſh Black [h], ſtreaked, and full of very fine Veins, f which one would think were painted: It is beſides fit for the fineſt Sort of Joinery-Work. The Furniture made of this Wood, is much eſteemed all-over the Empire, and in the North- *Tſe-tan, or Roſe-Wood.*

[a] *Du Halde*'s *China*, p. 12. [b] The ſame, *p.* 79, *& ſeq.* [c] *Le Comte*'s Memoirs of *China*, p. 101. [d] *Du Halde*, as before, *p.* 13. [e] The ſame, *p.* 14. [f] The ſame, *p.* 317. [g] *Navarette*'s Deſcription of *China*, p. 34. [h] Perhaps this is the Ebony, which *Navarette* ſays grows in the Northern Parts, but not plentifully.

Natural History.

ern Provinces, ſelling it at a greater Price than that which is varniſhed [a].

The Lung-ju-tſu.

THE Tree, called *Long-ju-tſu*, has a Trunk, which is as large as our biggeſt Plum-Tree, and they cut it into Boards for common Uſes. It divides, betimes, into two or three thick Branches, and theſe again into ſmaller. The Bark is of a reddiſh grey Colour, and ſpotted like the Filbert-Tree; but the Extremity of the Branches is knotty, crooked, rough, and full of Pith, like the Walnut-Tree. The Fruit is ſomewhat oval, and, when green, nearly reſembles Cherries, both in Colour and Shape, as well as the Stalk; which laſt is green and ſtringy, extreamly long, and divided into ſeveral Branches, each whereof has one of theſe Berries hanging at the End. The Skin of the Fruit, in ſome Places, is full of little red Spots, is pretty tough, and incloſes a greeniſh Subſtance, which, when ripe, becomes like Pap: They uſe it in Winter to rub the Hands with, and prevent Chilblains. c

THIS Fruit has a very hard Stone, like a Cherry-Stone, but a little oblong, and indented with five, ſix, and ſometimes ſeven Furrows. This Stone receives its Nouriſhment through a pretty large, round Hole, that grows ſtraighter, as it approaches the incloſed Kernel, which is ſmall, and covered with a blackiſh Skin, not ſo hard as that of the Kernel of an Apple [b].

Tye-li-mû, or Iron-Tree.

WITH Regard to Strength and Firmneſs, there is, perhaps, no Wood comparable to that called *Tye-li-mû*, which the *Portugueze* render *Pao de ferro*, that is, *Iron-Wood*. This Tree is as tall as our large Oak, but differs from it in the Thickneſs of the Trunk, the Shape of the Leaves, the Colour of the Wood, which is darker, and ſtill more in the Weight. The Anchors of their Ships of War are made of this Wood, and the Emperor's Officers, who accompanied the Miſſioners in their Paſſage to the Iſland of *Tay-wan*, or *Formoſa*, pretended they were preferable to the Iron-Anchors belonging to the *Chineſe* Merchantmen; but in this they muſt be miſtaken: For the Flukes can never be ſufficiently pointed, nor ſtrong enough for taking ſure Hold; and by making the Shanks twice as long as thoſe of Iron-Anchors, they muſt be proportionably weak, be they ever ſo large. d

The Bambû.

To the uſeful Trees may be added the Cane, which the *Chineſe* call *Chu-tſe*, and *Europeans*, *Bambû*, whereof there are many different Kinds. It grows as high as moſt Trees, and, though it is hollow throughout, except in the knotty Parts, or Joints, yet it is exceeding hard, is capable of ſuſtaining great Weights, and, in ſome Places, large Houſes of Wood. It may be divided into ſmall Splinters, or Strings, of which they make Mats, Boxes, and other curious Works. They likewiſe make Paper of it [c], Pipes to convey Water, and ſeveral other Things [d], particularly Houſhold-Furniture; ſuch as Tables, Chairs, Beds, Preſſes, Boxes, Cheſts, and whatever elſe they pleaſe. The Miſſioners found thoſe Moveables at *Kanton*, ready-made in the Shops. A Bed coſt Nine-pence, a Table Six-pence, the Chairs Four-pence halfpenny apiece, and ſo of the reſt. Theſe Canes are moſt common in the Southern Provinces; they are very fit for making Poles, or any Sort of Scaffolding [e]. e

CHINA produces alſo the Rattan, and Sugar-Canes. The firſt is very ſmall, but ſtrong, creeping along the Ground to the Length of eight hundred, or a thouſand Feet [f]: And the Southern Provinces abound with the latter [g]. f

6. Roots, Herbs, *and* Plants.

Herbs, Roots. Pe-tſay, *a Lettuce. Onions. Rhubarb.* Fu-ling, *or China-Root, its Virtues.* Ten-ſe *Root.* Ti-whang *Root.* Hu-chu-u. *The* San-tſi, *its Virtues.* Tyen-wha *Blue.*

THE meaner Sort of People in *China*, living, for the moſt Part, on Herbs, Roots, and Pulſe, together with Rice, which is their ordinary Food, are very careful to cultivate their Kitchen-Gardens: Whenever the Seaſon for one Thing is over, another, immediately, is planted, or ſown; and by this Means they never ſuffer the leaſt Spot of Earth to lie idle. They have great Variety of theſe Vegetables, many of which are found in *Europe*. The Seeds of Cabbage, Sorrel, Rue, and ſome other Plants, which are brought from the *Indies*, either die, or degenerate, in two or three Years. They have true Cabbages indeed, but they do not come to a Head: They have had Parſly for many Ages [h], ſince it is found in their Books under the Name of *Shin-tſay*; but it has neither the Beauty, nor Sweetneſs of the *European*.

AMONG the Pot-Herbs, which we have not, ſcarce any deſerves a Place in our beſt Kitchen-Gardens, except one, called *Pe-tſay*, which is exceeding good: Some miſtake it for the *Roman* Lettuce; but though its firſt Leaves have a Reſemblance, it differs from it in the Flower, Seed, Taſte, and Height. They are beſt in the Northern Provinces, where they are made tender by the

[a] *Du Halde*'s *China*, p. 10. [b] The ſame, *p.* 320. [c] They make Paper alſo of the Bark of the *Chû-kû*, or *Ku-chû* Tree, deſcribed before, *p.* 159. [d] *Du Halde*, as before, *p.* 10. [e] *Navarette*'s Deſcription of *China*, p. 34. [f] *Du Halde*, as before, *p.* 266. [g] *Navarette*, as before, *p.* 32. [h] *Navarette*, p. 32, ſays, they have neither Parſly, nor Burrage.

first Hoar-Frosts; the Plenty of them is almost incredible. In *October* and *November*, the nine Gates of *Pe-king* are stopped-up by Carts loaded with them, which are passing continually from Morning to Sun-set. The *Chinese* preserve them with Salt, or pickle them to boil with their Rice, which by itself is insipid.

In some of the Southern Provinces they cultivate Mallows, whose Leaves they boil, and dress with Fat, or Oil, as we do Lettuce, or Spinage, with Butter, this Plant being very wholesome, and laxative [a].

LE COMTE saw a Kind of Onions, which do not seed like ours; but towards the latter End of the Season their Leaves bear some small Filaments, in the Midst of which is a white Onion like that in the Ground. This, in Time, produces Leaves, and those another Head, and so on, which grow less and shorter, as they are farther from the Earth, in such exact Proportions, that one would think them artificially done [b].

NAVARETTE says, the Cucumbers and Melons are not like ours, and that there are several Sorts of Pompions and Kalabasses: That there is much wild Marjoram, but no Rosemary: That there is planted Abundance of Tobacco, which is smoaked throughout the Empire. He bought it dry for a Penny a Pound: But the *Japan* Tobacco is most esteemed [c].

WITH Regard to medicinal Plants, those which are most esteemed, or appeared most extraordinary to the Missionaries, when they travelled over the Provinces, are the following:

RHUBARB. This Plant grows in great Plenty both in *Se-chwen*, and the Mountains of *Shen-si*, named *Swe-shan*, or *the Mountains of Snow*, which extend from *Lyang-chew*, as far as *Sú-chew* and *Si-ning-chew*. The Missionaries, while they were making the Map thereof, in *October* and *November*, frequently met whole Troops of Camels, loaded with Net-Bags full of Rhubarb. The Flowers resemble Bells scolloped at the Edges; the Leaves are long, and somewhat rough; the Inside of the Root, when fresh, is whitish; but, as it dries, assumes the Colour it has when it comes to us.

THE Plant which their Physicians most use, is called *Fu-ling*, and by *European* Authors *Radix Xina* [d], or *China Root*. It grows chiefly in *Se-chwen*: Its Leaves, which creep along the Ground, are long, and narrow: On the contrary, the Root grows to a great Thickness; and if we may believe the *Chinese*, sometimes to the Size of a Child's Head. The right Sort is called *Pe-fú-ling*, or *white Fú-ling*, containing, in a Kind of Shell, a white pithy Substance, somewhat clammy. It differs from another Sort, much used also, because it is cheaper, and grows spontaneously in several Parts of *China*, where it is considered as a Species of wild *Fú-ling*. Some of the Missionaries affirm, that the *Pe-fú-ling* of *Shen-si* is a perfect Truffle: Its Colour is nearly green, but, when dry, it grows somewhat yellowish. It is not easy to determine in what Distemper it is most proper to apply this Plant, because the *Chinese* Physicians use it indifferently in all their Prescriptions [e]. It is an excellent Sudorific, and very proper to purge the Blood [f]. *Roots, Plants.* *Its Virtues.*

NAVARETTE observes, that there are two Sorts of the *China* Root; one perfect, which is fine and white: It grows in the Northern Provinces. The other a very imperfect Sort, they call it *the Root of the Earth*: It grows in *Fo-kyen*, *Quang-tong*, and other Southern Provinces: It is of a ruddy Colour: There is Abundance of it about the Fields, which any-body may gather. Both Sorts grow under-Ground, and have nothing above but some little Sprigs, with very small Leaves, by which it is found-out. The Author believes the first Sort, which bears four Times the Price of the latter, is never brought into *Europe*. He says, it is very dear in *India*, and that he had seen a Quantity sold at *Malakka* for eighteen Pieces of Eight, which in *China* did not cost two. The *Portuguezes* at *Ma-kau*, of late Years, fell into the Way of preserving this Root. The *Dutch* and *English* bring some of this Preserve, which is very delicious, into *Europe* [g].

THE Root of the Plant named *Ten-se*, is not so commonly used, as the *Fu-ling*, but bears a greater Price. It is scarce, even in the Province of *Se-chwen*, where it grows between the thirtieth and twenty-ninth Degrees of Latitude; is of a hot Quality, and accounted an excellent Remedy for Disorders caused by cold Humours, and for all Sorts of Obstructions. Its Figure is singular, being very round on one Side, and almost flat on the other: Its flat Side is fastened to the Ground by Strings, especially by one pretty thick, which is in the Midst of the rest, and enters deeper into the Substance of the Root: From the Convex-Surface shoot divers Stems, which separating at the Bottom, each makes a little Nosegay; by these Marks it is easily distinguished. They commonly throw-away the Branches, and only keep the Root, which they boil, or at least make them pass the *Balneum Mariæ* before they are sold. *Ten-se Root.*

[a] *Du Halde*'s *China*, p. 13. [b] *Le Comte*'s Memoirs of *China*, p. 100, & *seq.* [c] *Navarette*'s Description of *China*, p. 32. [d] The *Portugueze* call it *Pao China*. [e] *Du Halde*, as before, *p.* 13. [f] *Le Comte*, as before, *p.* 228. [g] *Navarette*, as before, *p.* 55.

Natural History.

Ti-whang *Root.*

TI-WHANG is another Root of a very beautiful Plant, which grows chiefly in the North-Parts of *Ho-nan*, in the Diſtrict of *Whay-king-fu*. At firſt Sight one would take it for a Kind of Liquorice, having a leguminous Flower, and crooked Pod; but after examining the Leaves, the Seed, and the Taſte, it is hard to determine under what Species to range it. The *Chineſe* find it good for ſtrengthening the Stomach, and reſtoring the Loſs of Vigour [a].

Hu-chu-u.

MR. *CUNNINGHAM* ſaw a very ſingular Root, called *Hu-chu-u*, in *Chew-ſhan*, to which they aſcribed the Properties of prolonging Life, and turning grey Hairs into black, by drinking its Infuſion for ſome Time; ſo that it ſold from ten *Lyang*, or *Taël*, to one or two thouſand a ſingle Root; for the larger it is, the more efficacious; but the Author did not care to make ſo coſtly an Experiment [b]. This ſeems to be the *Jin-ſeng*, brought from Eaſtern *Tartary*; or elſe the *San-tſi*, which differs little from it, except in the Figure.

The San-tſi,

THIS *San-tſi* is, of all Plants, next to the *Jin-ſeng*, moſt valued by the *Chineſe* Phyſicians, who attribute almoſt the ſame Virtues to both; even preferring the *San-tſi* in Female Diſorders, and in all Caſes where there is Loſs of Blood. It grows in the Province of *Quang-ſi*, and is to be found no-where but on the Tops of almoſt inacceſſible Mountains. This is the Sort always uſed in Medicine, and the *Mandarins*, in thoſe Parts, make Preſents of it to their Superiors. A Kind of Goat, of a greyiſh Colour, is very fond of this Plant: Whence the *Chineſe* ſay, the Blood of that Animal receives a medicinal Quality. It is certain, that its Blood [c] has ſurprizing Effects in Caſe of Hurts, and Contuſions, as the Miſſioners frequently experienced, whoſe Servants having, by Falls from vicious Horſes, been deprived almoſt of Speech and Motion, were, by applying this Remedy, in a Condition next Day to continue their Journey.

Its Virtues.

THE *Chineſe* look-on this Plant as a Specific againſt the Small-Pox: Inſtances of its Succeſs are frequent: The black and infectious Puſtules become of a clear Red, as ſoon as the Patient has taken the Potion. Hence it is preſcribed in ſeveral Diſeaſes ſuppoſed to proceed from bad Qualities in the Blood: But this Plant is both ſcarce and dear; and, after all, one is not ſure of having it pure and unmixed.

Tyen-wha *Blue.*

OF the numerous Simples and Drugs made-uſe of by the *Chineſe* Mechanics, we ſhall only mention the Plant named *Tyen*, and *Tyen-wha*, which is much uſed in all the Provinces. When it is ſteeped in Water, and prepared in large Tubs, or little Ponds, it yields a Blue fit for Dying. Thoſe of *Fo-kyen* give a more beautiful Teint, and are moſt eſteemed in that Sort of Painting which they call *Tan-mey* [d].

SECT. III.

FOSSILS.

1. Mines *and* Metals.

China rich in Mines: Thoſe of Silver: Gold Mines: Iron and Tin: White Copper: Red Copper.

MANY Mountains in *China* are famous for their Mines, containing all Sorts of Metals; for their medicinal Fountains, Simples, and Minerals. There you meet with Mines of Gold, Silver, Iron, Copper, Tin, white Copper, Quickſilver, Lapis Armenus, Cinnabar, Vitriol, Allum, Jaſper, Rubies, Rock-Cryſtal, Load-ſtones, Porphyry, and Quarries of different Kinds of Marble [e].

THE *Chineſe* ſay, their Mountains are full of Gold and Silver; but that the Working of them hitherto has been hindered, from ſome political Views, perhaps, leſt too great Plenty ſhould make the People turbulent, or neglect Agriculture. The Emperor *Kang-hi* once gave Permiſſion to ſome, who had the Care of his Domain, to open the Silver Mines, but cauſed them to give-over the Work in two or three Years; to prevent, it is thought, the Rabble from aſſembling together. Thoſe who work the Silver-Mines in the Province of *Yun-nan*, which have always been open, were formerly conſiderable Gainers.

WITHOUT Doubt, *China* affords Mines of Gold alſo. What they have there is partly dug out of Mines; but moſt of it is found among the Sands [f], which the Rivers and Torrents roll from the Mountains in the Weſtern Parts of *Schwen* and *Yun-nan*. This laſt Province is the richer of the two. A great deal is brought-in by the People called *Lo-lo* [g], who poſſeſs the neighbouring Parts of the Kingdoms of *Ava*, *Pegu*, and *Laos*: But it is not very beautiful, poſſibly becauſe not purified; and their Silver is ſtill blacker, with the Alloy; but when refined by the *Chineſe* Workmen, it becomes as fine as any other Silver.

[a] *Du Halde*'s *China*, p. 13. [b] Philoſ. Tranſ. Abridg. vol. 5. part 4. p. 182. [c] They make-uſe of the Blood of a Goat that has been hunted down. [d] *Du Halde*, as before, *p.* 13, *& ſeq.* [e] *Le Comte*'s Memoirs of *China*, p. 93. *Du Halde*, as before, *p.* 317. [f] So alſo ſays *Navarette*, p. 32; and *Le Comte*, p. 93. [g] The *Lo-lo*, probably, dig a great deal of Gold from their Mountains, ſince they uſe to put a great Quantity of Gold-Leaves in the Coffins of illuſtrious Perſons, or thoſe who deſerved their Eſteem. An Account of theſe People has been already given, *p.* 65.

THE *Chineſe* Gold, which is moſt beautiful a and dear, is found in the Diſtricts of *Li-kyang-fû*, and *Yang-chang-fû*: But as it is not coined, it is not employed in Trade as a Merchandize; yet the Demand for it in the Empire is not very conſiderable, becauſe Gold is ſcarce ever uſed, except by the Gilders, and in ſome trifling Ornaments; for none but the *Europeans* have any Golden-Plate.

MINES of Iron, Tin, and other Metals for ordinary Uſe, muſt needs alſo be very numerous b there, ſeeing they bear a low Price throughout the Empire. The Miſſionary Geographers were Witneſſes of the Richneſs of a Tuttenague Mine in the Province of *Hu-quang*, from whence, in a few Days, were drawn ſome Hundreds of Quintals.

THE Mines of common Copper, which are in the Provinces of *Yun-nan*, and *Quey-chew*, have ſupplied the Empire with all the ſmall Money that has been coined there for ſeveral Years c paſt: But the moſt extraordinary Copper is that called *Tſe-tong*, or *white Copper*, which is to be found, perhaps, no-where but in *China*, and that only in *Yun-nan*: It is white when dug-out of the Mine, and ſtill more white within, than without. It appears, by numerous Experiments made at *Pe-king*, that its Colour is owing to no Mixture, for all Mixtures diminiſh its Beauty: When rightly managed, it looks exactly like Silver: To ſoften it, they mix a little Tuttenague, d or ſome ſuch Metal with it; but thoſe who would have it keep its fine Colour, in Place thereof add a fifth Part of Silver.

As for the Copper named *Tſe-la-tong*, or *the Copper which comes of itſelf*, it proves to be nothing but red Copper waſhed-down from the high Mountains of *Yun-nan*, and found in the Channels of the Torrents, when dry [a].

MAGALHAENS obſerves, that an infinite Quantity of it is conſumed in making their Can- e ons, Images, Statues, Money, Cups, and Diſhes, ſome of which either on Account of their Antiquity, or the Workman, though otherwiſe very ordinary, are valued at ſeveral Hundreds of Crowns, ſometimes above a thouſand. The great Plenty of theſe Metals appears alſo from the Numbers of great Guns, to be admired for their Goodneſs, Size, and Workmanſhip, which are caſt at *Ma-kau*; from whence ſeveral Places in the *Indies*, and even *Portugal* itſelf, is ſup- f plied with them [b].

2. Stones *and* Minerals.

Lapis Armenus: Jaſper: Rubies: Rock-Cryſtal. Marble Quarries. Load-ſtone, Leath for cutting it. The Hyong-whang. *Coal-Mines. Pit-Coal. Salt, how dug-up, and prepared.* *Stones, Minerals.*

THE Lapis Armenus, or Azure, is found in ſeveral Parts of *Yun-nan*, and *Se-chwen*, *Lapis Armenus.* differing in nothing from what is imported into *Europe*. It is alſo produced in the Diſtrict of *Tay-tong-fû*, belonging to *Shan-ſi*, which furniſhes the moſt beautiful *Yu-ſhe*, a Kind of white *Jaſper.* b Jaſper, in all *China*. The white reſembles that of Agat: It is tranſparent, and ſometimes ſpotted, when poliſhed.

THE Rubies ſold at *Yun-nan-fû*, are of the *Rubies.* right Sort, but very ſmall. The Miſſioners know not in what Part of the Province they are found. One meets with ſome other Kinds of precious Stones at the ſame City: But they are brought from other Countries, chiefly by the Merchants of *Ava*, on which Kingdom the Diſtrict of that Capital borders. c

THE faireſt Rock-Cryſtal is found in the *Rock Cryſtal.* Mountains of *Chang-chew-fû*, and *Chang-pû-hyen*, in the Province of *Fo-kyen*; in which Cities they make of it curious Seals, Buttons, and Figures of Animals.

THERE are in the ſame Province, as well as *Marble Quarries.* ſeveral others, Quarries of Marble, not inferior to the *European*, was it as well wrought. However, one meets at the Merchants with Variety d of little Pieces, well-enough poliſhed, and of a pretty good Colour; ſuch as the little Tables named *Tyen-tſan*, which are very pretty, and ſpotted with divers Colours, repreſenting very naturally Mountains, Rivers, and Trees: Theſe are made of ſelect Pieces of a Marble commonly dug in the Quarries of *Tay-li-fû*, and are ſometimes ſeen to adorn the Tables at Entertainments.

FOR all this Store of Marble in *China*, yet e one meets with neither Palace, Temple, nor any other Structure there, entirely built with it. Though the *Chineſe* Houſes are ſupported by Pillars, it does not appear, that they have yet made any of Marble, or once thought of employing the coloured Kind inſtead of Wood. Buildings even of the fine Freeſtone are rare in this Country, Stone being never uſed but in Bridges, and triumphal Arches [c].

THE Load-ſtone is found almoſt in every Pro- *Load-ſtone.* f vince: It comes alſo to *China* from *Japan*; but the grand Uſe they make of it is in Phyſic: It is bought by Weight, and the beſt are not ſold for above Eight-pence or Ten-pence an Ounce. *Le Comte* brought-over one with him an Inch and

[a] *Du Halde's China*, p. 15, *& ſeq.* [b] *Magalhaens's* Relation of *China*, p. 135, *& ſeq.* [c] *Du Halde*, before, *p.* 16.

Natural History.

half in Diameter, which, though but indifferently guarded, took-up eleven Pound Weight, and would raiſe fourteen or fifteen when rightly fixed. They are very dextrous in cutting them. The Author's was reduced to Form at *Nan-king*, in leſs than two Hours. The Engine for that Purpoſe is a plain one; and, if the *French* Workmen would uſe it, he ſays, they would abridge their Labour.

Leath for cutting it.

IT is compoſed of two Jaumbs, three or four Feet high, arch-wiſe, with two Strings like a Setting-Iron: Is divided by a Board, which goes acroſs, and cloſed by a Mortice in the Lee-board [a]. On the Head of the Jaumbs is placed a little Roller, or Cylinder, an Inch and half in Diameter, which turns by Means of a String wound-about the Middle, whoſe two Ends are tied to a Step, on which the Workman ſets his Foot.

AT one End of the Cylinder is faſtened with Maſtic, a thin, flat Piece of Iron, eight Inches Diameter, very round, and ſharp at the Edge, which moves ſwifter, or ſlower, according as the Step is ſet high, or low. Mean Time the Workman applies the Load-ſtone in one Hand, and in the other ſome very fine wet Sand, which cools the Iron, and ſerves to cut the Stone: But becauſe the Iron, in paſſing through the Sand, ſcatters it about with Violence, there is placed juſt under it a little ſemicircular Board, which receiving it, hinders it from flying into the Eyes of the Workman [b].

The Hyong-whang.

THE *Hyong-whang* is found in *Yun-nan*, and ſeveral other Provinces; even Northern ones, as *Shen-ſi*. It is not a Mineral, but a ſoft, yellowiſh Stone [c], ſometimes ſpotted with black, eaſily formed into Veſſels of all Kinds, which they tinge with Vermilion. It is affirmed to be an Antidote againſt Poiſon, and the *Chineſe* Geographers recommend it as a grand Specific againſt malignant Fevers; but it is not uſed in the Cure of them in Places where it abounds.

Pit-Coal.

No Kingdom, perhaps, in the World beſides, has ſo many, and ſo rich Coal-Mines [d]. The Mountains, eſpecially thoſe in the Provinces of *Shen-ſi*, *Shan-ſi*, and *Pe-che-li*, afford innumerable: Without ſome ſuch Convenience, there would be no living in ſo cold a Country, where Wood for Firing is very ſcarce [e]. *Magalhaens* obſerves, that the Pit-Coal, called *Mwi*, burned at *Pe-king*, is brought from certain Mountains two Leagues diſtant, which ſeem inexhauſtible; having ſupplied both the City, and greater Part of the Province, for above four thouſand Years paſt, though the very pooreſt People have Stoves heated with it [f]. It is black, and found between the Rocks in very deep Veins. Some, eſpecially the common People, pound it, and wetting the Duſt, make it into Lumps. This Coal is very difficult to light, but caſts a great Heat, and is very laſting. It ſometimes yields a very bad Smell, and will ſuffocate thoſe who ſleep near it, unleſs they keep cloſe-by them a Veſſel full of Water, which draws the Smoke in ſuch a Manner, that at length it ſmells as diſagreeably itſelf. It is univerſally uſed by all Sorts of People, and even in Wind-Furnaces for ſmelting Copper. But thoſe who work in Iron find, that it makes the Metal hard.

PROVIDENCE has wonderfully ſupplied the Weſtern Parts of *China*, bordering on *Tartary*, ſo remote from the Sea, with Salt: For beſide the Salt-Pits found in certain Provinces, there is, in other Parts, a Sort of grey Earth ſcattered up-and-down ſeveral Diſtricts in Spots, containing between three and four Acres each, which yield a prodigious Quantity of it. The Manner of getting this Salt out of the Earth is remarkable. They make the Surface of the Land as ſmooth as Glaſs, with a little Sloping, that the Water may not lie on it; and when the Sun has dried it, ſo that it appears white from the Particles of Salt which are mixed with it, they take it up and raiſe it in little Heaps, beating it very well that the Rain may ſoak into it. Afterward ſpreading it on large Tables, that are a little inclining, and have Ledges four or five Fingers high, they pour-on freſh Water; which diſſolving all the Particles of Salt, carries them along with it into a large Earthen Veſſel, whereinto it runs, Drop by Drop, through a little Tube. The Earth thus drained, being dried again, they reduce to Powder, and lay in the ſame Spot from whence it was taken; where, in ſeven or eight Days, it becomes impregnated, as before, with abundance of ſaline Particles, which are again ſeparated from it in the Manner as above.

WHILE the Men are at this Work in the Fields, their Wives and Children are employed in Huts built on the Place, in boiling the Salt Water, in very large, deep, Iron-Baſons, over an Earthen-Stove, with Holes made in it; in ſuch Manner, that the Fire is communicated to all the Baſons alike, the Smoak being carried off by a long Funnel, in Form of a Chimney, at the End of a Stove. When the Water has boiled for ſome Time, it grows thick, and changes by Degrees into a very white Salt, which they ſtir inceſſantly with a large Iron-Spatula, till it is quite dry. In Places where Wood is wanting for this Purpoſe, the Defect is ſupplied with Reed

[a] Or left Jaumb, we preſume. The Tranſlation here is very obſcure. [b] *Le Comte*'s Memoirs of *China*, 230. [c] See before, *p.* 53. [d] *Navarette*, p. 34, ſays, Pit-Coal is found in the Northern Provinces. [e] *Du Halde*'s *China*, p. 16. [f] *Magalhaens*'s Relation of *China*, p. 10. [g] *Du Halde*, as before, *p.* 317, &

SEC

SECT. IV.

Birds *and* Fowl, Inſects *and* Reptiles.

1. Birds *and* Fowl.

European *Birds.* *Catching wild Ducks.* *Bird-fighting.* Chineſe *Falcon.* Kin-ki, *or Golden Hen.* *The* Fong-whang. *The* Ki-lin. *The* Tung-wha-fong. La-ki, *a ſurprizing Bird.*

ALTHOUGH Peacocks and Turkeys are common in the *Indian* Countries, yet there are none in *China* but what come from abroad. Cranes are numerous; this Bird ſuiting with any Climate, cold or hot: They are eaſily tamed, and taught to dance: Their Fleſh is reckoned very good eating.

THERE is abundance of fine Pheaſants, whoſe Feathers are worth more than is given for the Bird, the uſual Price being a Penny a Pound. Their Nightingales are bigger than the *European*, and ſing to Admiration; as do likewiſe their Blackbirds. Geeſe and Ducks are infinite. *Kanton* alone conſumes yearly twenty thouſand, beſides other Fowl, Fiſh, and Butchers Meat [a].

THESE, and other Water-Fowl, ſwarm on the Rivers and Lakes, eſpecially wild Ducks: The Manner of taking them deſerves mention. They put their Heads into the Shells of large Gourds, with Holes made to ſee and breathe through; then going naked into the Water, walk or ſwim ſo low, that nothing appears but the Gourds. The Ducks being accuſtomed to ſee Gourds floating on the Surface, and to play about them, approach them without Fear; when the Duck-Hunter taking them by the Feet, pulls them under-Water, to prevent their making a Noiſe, wrings their Necks, and faſtens them to his Girdle [b], purſuing his Exerciſe till he has gotten a great Number [c].

NAVARETTE obſerves, that this is no very diverting Exerciſe, for they who do not underſtand it, would think that the Ducks, when pulled under-Water, are only diving for Food, as they do every Moment. He adds, that theſe Fowls are frequently boiled, and their Broth reckoned very nouriſhing: That they are very good roaſted, and in Souſe; but incomparably better ſalted, and dried; for that they exceed Eggs, and make an excellent Proviſion in either Sea, or Land-Journeys. It is difficult to diſtinguiſh the Wild from the Tame by the Taſte. *Birds, Fowl.*

THERE are certain little Birds in *China* in great Eſteem: They are like Linnets, and bred in Cages, not to ſing, but to fight together. Such as have been tried are of great Value. The *Chineſes* are likewiſe very fond of Cock-Fighting: But this Diverſion [d] is more common in ſeveral Iſlands (particularly the *Philippine*) and Kingdoms of the *Eaſt-Indies*, where much Money is won and loſt at it, as in ſome Parts of *Europe* [e]. *Bird-fighting.*

WITH Regard to Birds of Prey, that called *Hay-tſing* is the moſt remarkable, both for its Beauty and Rareneſs, being found only in the Diſtrict of *Hong-chang-fû*, in *Shen-ſi*, and ſome Parts of *Tartary*. It is not inferior to our fineſt Falcons [f], but exceeds them in Bigneſs and Strength: It may be called the King of the Birds of Prey in *Tartary*, or *China*; for it is the moſt beautiful, ſprightly, and courageous of all. As ſoon as any of them is catched, it muſt be carried to the Emperor, and afterwards committed to the Care of the Royal Falconers. Chineſe *Falcon.*

IN the Southern Provinces, as *Quang-tong*, and eſpecially *Quang-ſi*, there are Parrots of all Sorts, in every Reſpect like thoſe brought from *America*: They have the ſame Plumage and Docility for talking; but are not comparable to the Birds called *Kin-ki*, or Golden Hens, doubtleſs from their Beauty. Theſe laſt are found in the Provinces of *Se-chwen*, *Yun-nan*, and *Shen-ſi*. There is no Bird in *Europe* that reſembles them; the lively Red and Yellow, with a Plume on the Head, the Shadowing of the Tail, and the Variety of Colours in the Wings, together with a well-ſhaped Body, ſeem to give it the Preference to all other Birds: Its Fleſh is more delicate than that of a Pheaſant; ſo that, of all Birds in the Eaſt, this, perhaps, beſt deſerves to be brought into *Europe* [g]. This, probably, is that very beautiful Bird which *Navarette* ſays is met with in the Province of *Shen-ſi*. He adds, that *Trigauſius* uſed to ſay, the Tail-Feathers, which are extraordinary gaudy, are a Fathom in Length [h]. Kin-ki, *or Golden-Hen.*

THE *Chineſe*, not content with ſuch Maſter-Pieces of Nature, have had Recourſe to Invention for Birds. Of theſe the moſt remarkable are, the *Fong-whang*, and the *Ki-lin*. They relate a thouſand Stories about them [i]. The firſt muſt be the ſame Bird which *Navarette* fancies is our Eagle, and ſays, the *Chineſe* call *the Bird of the* *The* Fong-whang.

[a] *Navarette*'s Deſcription of *China*, p. 40, and 42. [b] The ſame Author ſays, they put the Fowl into a Bag, and walk out ſlowly again, that they may not diſturb the reſt. [c] *Du Halde*'s *China*, p. 314. [d] Methinks, a very execrable, becauſe a cruel one. [e] *Navarette*, as before, *p.* 40, *& ſeq.* [f] This, probably, the Bird called in *Tartary*, the *Shongar*, mentioned in the Hiſtory of *Jenghiz Khân*. [g] *Du Halde*, as before, *p.* 15. [h] *Navarette*, as before, *p.* 40. [i] *Du Halde*, as before, *p.* 333.

Sun,

Natural History.

Sun, (as he thinks) from what is commonly reported, that it looks full at the Sun. He adds, that when it appears, they say it denotes Good-luck; and that, according to their learned Men, one was seen at the Birth of their Philosopher *Confusius*. Their Books, continues that Author, tell us, the Body of it is like a Crane, the Neck like a Snake, the Tail like a Dragon's: That it never rests on any Tree, or eats Fruit: That there is a Male and Female (whence he concludes it cannot be the Phœnix [a], as some Missioners imagined;) and that they sing charmingly: Lastly, that the *Chinese* take it for granted there is such a Bird, though no Man living in *China* ever saw one [b]. *Du Halde* (from his Correspondents) assures us, that the *Fong-whang*, whose Figure is often painted, and set-off with a vast Number of Ornaments, never appears in any of the Cities, or Mountains, to which they have given its Name: Nor is it better known at *Fong-tsyang-fû* in *Shen-si*, where they say it is, than at *Fong-whang-ching* in *Tartary* [c].

The Ki-lin. THE *Ki-lin*, according to the *Chinese*, is composed like the *Fong-whang*, of different Parts of Creatures: It has the Height and Chest of an Ox; the Body is covered with broad, hard Scales; it has a Horn in the Middle of the Forehead, with Eyes and Whiskers like those of the *Chinese* Dragon. This Animal is the Symbol of the military *Mandarins* of the first Order [d].

The Tung-wha-fong. THE *Chinese* Geographers mention a little Bird, called *Tung-wha-fong*, which in Beauty even surpasses the *Fong-whang*. They say, that the Variety of its Colours is surprizing, and its Bill of a shining Red, inclining to Vermilion; and that its Life is of no longer Duration than the Flower *Ing-wha*: But at *Ching-tû-fû*, the Capital of *Se-chwen*, where according to them it breeds, the Inhabitants know nothing at all of this Bird [e].

La-ki, a surprizing Bird. *MAGALHAENS* tells us of a Bird no less remarkable than any of the fabulous ones, if what he says of it be true. It is called the *La-ki*, or *Bird with a Bill of Wax*, the Bill being of that Colour. He saw one in the Emperor's Palace: It was as big as a Black-bird, but the Feathers of an Ash-Colour. This Bird learns whatever is taught her, with that Docility, that she does Things incredible: For all alone she will act a Comedy. She will put-on a Vizor, handle a Sword, a Lance, or Ensign made for her. She plays at Chess, and performs several Actions and Motions with such a lively Grace, as charms the Spectators [f]. It is strange, that *Du Halde*, who has copied many Things from *Magalhaens*, should omit this extraordinary Bird, if he thought his Brother Jesuit, who seems to speak as an Eye-Witness, deserved to be credited.

2. Insects *and* Reptiles.

Jew-ting, *a Lizard. Curious Butterflies. Locusts. Bugs.*

CHINA abounds with Insects and Reptiles, but not so much as the *Philippine* Islands, *India*, and other Places. There is among the latter, a Lizard of a singular Kind, called *Jew-ting*, *Pye-long*, or *Shew-kong*. They have given it the Name of the *Wall-Dragon* [g], because it runs-up Walls, and it is stiled the *Guard of the Palace* [h], or *Court-Ladies*, on the following Occasion. The Emperors used to cause the Wrists of their Concubines to be anointed with an Unguent made of the Flesh of this Animal, mixed with other Ingredients; the Mark of which (it seems) continues so long as they forbear having to do with a Man; but the Moment they admit of amorous Embraces, it disappears, and thus their Incontinence comes to be discovered. *Navarette*, who believed this to be Fact, was of Opinion, that it would contribute vastly to the Security and Happiness of both Sexes, if all married Men had such an Ointment for their Wives; and Wives another for their Husbands.

AN Account has already been given of the admirable Reptile the Silk-Worm [k], which is a Fountain of Wealth to *China*. Bees are in plenty, but they use the Wax in Medicine, not to burn. The Price no-where exceeds Twelve-pence a Pound [l].

THIS Empire would furnish our Virtuosi with a great Variety of Butterflies. Those of the Mountain *Lo-few-shan*, situated in the District of *Whey-chew-fû*, and Province of *Quang-tong*, are so much esteemed, that the largest and most uncommon Sorts are sent to Court, where they become a Part of certain Ornaments in the Palace: Their Colours are surprizingly diversified and lively: They are much bigger than the *European*, and their Wings a great deal larger. In the Day-time they appear without Motion on the Trees, and are easily taken: In the Evening they begin to flutter-about, like our Bats, some of them seem to be as large, when their Wings are extended. There are also beautiful Butterflies found in the Mountains of *Si-ning* in the Province of *Pe-che-li*, which are like

[a] *Du Halde* says, *p.* 15, that the *Fong-whang* should be the Phœnix, if there ever was such a Bird. [b] *Navarette*'s Description of *China*, p. 39, *& seq.* [c] *Du Halde*'s *China*, p. 15. [d] The same, *p.* 333. [e] *Navarette*, as before, *p.* 15. [f] *Magalhaens*'s Relation of *China*, p. 320. [g] *Pye-long*. [h] *Shew-kong*. [i] *Navarette*, as before, *p.* 39. [k] See before, *p.* 140. [l] *Navarette*, as before, *p.* 33.

in Requeſt; but ſmall, and not to be compared to the former [a].

SOME Provinces of *China*, eſpecially *Shantong* [b], are often infeſted by Locuſts, which in a ſhort Time deſtroy the Hopes of the moſt plentiful Harveſt. This dreadful Plague is thus deſcribed by a *Chineſe* Author: "There appeared "(ſays he) a prodigious Multitude, which co- "vers all the Sky, being ſo thick together, that "their Wings ſeem to touch, and their Num- "ber ſo great, that in looking-up you would b "think you ſaw very high Mountains all green "over your Head; and the Noiſe they make in "flying, is like the Sound of a Drum." The ſame Author obſerves, that theſe Swarms do not appear but when the Inundations are followed by a very dry Year. Hence he pretends, that the Spawn of the Fiſh being left upon the Land, and afterwards hatched by the Heat of the Sun, produce this prodigious Number of Inſects. At ſuch unlucky Junctures, the wretched Huſbandmen c ſweat all Day, underneath the burning Sky, to drive-away theſe Inſects, with Clouts, which they ſpread-over their Crop: But ſometimes this Evil does not extend above one League, the Harveſt being very good in the reſt of the Province [c].

BUGGS ſwarm in ſome Parts of *China*: But what ſeems very odd, the Natives take a particular Delight in killing theſe loathſome Vermin with their Fingers, and then clapping them to d their Noſe [d].

SECT. V.

Game. No Lions. Large Tigers, commit great Ravages. The Horſe-Tiger. Bears, Man-Bear. Small Stags. Kind of Dromedary. Odoriferous Roe-Buck, or Muſk-Animal: Its Food Serpents. Odd Accident. Muſk-Animal. Another Species. Chineſe *Unicorn.* Lang *and* Pwey. *The* Jang. e *The Man-Ape.*

CHINA abounds with Game. In ſeveral Parts of *Pe-king*, during Winter, are to be ſeen great Heaps of Animals, and Fowls of various Kinds, hardened by the Froſt, and free from Corruption. There are a prodigious Number of Bucks, Does, wild Boars, Goats, Elks, Hares, Rabbits, Squirrels, Cats, Field-Rats, beſides Woodcocks, Quails, Geeſe, Ducks, Partridges, Pheaſants, already mentioned, and ſeveral other Creatures not to be met-with in *Europe*, which are all ſold exceeding cheap [e]. *China* likewiſe produces a great Number of Fallow-Beaſts of all Sorts, except Lions [f], ſuch as wild Boars, Tigers, Buffaloes, Bears, Camels [g], Rhinoceroſes, *&c* [h]. Not to mention Oxen, Cows, Sheep, and the like domeſtic Creatures. *Wild Beaſts.* *No Lions.*

NAVARETTE obſerves, that the *Chineſe* ſay there are no Lions in their Country, and that many believe there is no ſuch Beaſt: Yet he obſerves, that if there be Leopards, as they affirm there are (beſides Ounces) it is ſcarce poſſible but there muſt be Lions; but he adds, perhaps thoſe they ſpeak of are not Leopards.

THE Tigers are very numerous in *China*, large, and fierce: It is incredible what Numbers of People they kill, and devour every Year. A Chriſtian *Chineſe* affirmed to *Navarette*, that they ranged in Troops of a hundred or two together, at one Place on the Road, from *Kanton* to *Haynan*; ſo that Travellers durſt not ſet-out, unleſs they were one hundred and fifty ſtrong; and that ſome Years they had deſtroyed ſixty thouſand Perſons. But the Author well obſerves, that if ſuch Ravages continued, *China* would at length be diſpeopled. He ſaw ſeveral, one bigger than a great Calf. A Friar of his own Order told him, that he had ſeen a Tiger leap a Wall as high as a Man; and catching-up a Hog, which weighed about an hundred Pounds, threw it over his Neck, leaped the Wall again with his Prey, and ran ſwiftly away to the Wood. As in Winter they come into the unwalled Villages, near the Mountains, all Men are at home betimes, and ſecure their Doors. *Navarette*, who was ſome Days in a Place where they did ſo, obſerved, that they would come to the Door before it was dark, howling ſo dreadfully, that they e were not without Fear in their Rooms: Yet the *Chineſes* do not take much Pains to catch them, although they value the Skins [i]. *Large Tigers.* *Commit great Ravages.*

BUT what ſome *Chineſe* Books mention of the *Horſe-Tiger*, ought to be looked-on as mere Fiction. They pretend it differs from a Horſe only in being covered with Scales, in having Claws which reſemble a Tiger's, and in its bloody Diſpoſition; which in the Spring makes him leave the Water to ſeize Men and Beaſts: *The Horſe-Tiger.*

[a] *Du Halde's China*, p. 15. [b] See before, *p.* 49, and 53. e. [c] *Du Halde*, as before, *p.* 274. [d] *Navarette's* Deſcription of *China*, p. 34. [e] *Magalhaens's* Relation of *China*, p. 143. *Du Halde*, as before, *p.* 314, *& ſeq.* [f] Lions are ſo much unknown to the *Chineſe*, that the Pictures which they draw of that Animal have no Reſemblance of it. Hence *Magalhaens* obſerves, *p.* 9, that *Marco Polo*, in affirming Lions are common in ſome Parts of *China*, muſt have miſtaken them for Tigers; and this appears to be the Caſe, from his Deſcription of the Lion in his ſecond Book, and fourteenth Chapter. [g] *Navarette* obſerves, *p.* 37, that very good Elephants are bred in *Yun-nan*. [h] *Du Halde*, as before, *p.* 324. [i] *Navarette*, as before, *p.* 37, *& ſeq.*

Natural History.

Yet the Miſſioners, who travelled along the River *Han*, that waters the Territory of *Syang-yang-fû*, in the Province of *Hu-quang*, where they ſay theſe Animals breed, and croſſed the frightful Mountains of *Yun-yang-fû*, could neither ſee, nor hear of any ſuch Creature, notwithſtanding all their Enquiry, and the Diligence of the Natives to ſhew them every Thing worth obſerving [a].

Bears, Man-Bear.

BEARS there are in abundance. In the Province of *Shan-tong*, there is one Species of them, which the *Chineſes* call *Hyung-jin* [b], or *Men-Bears*: They walk upon two Legs, their Face is like a Man's, their Beard like a Goat's. They climb the Trees nimbly to eat the Fruit; they do no hurt, unleſs provoked; but in that Caſe they come-down furiouſly, fall-upon the People, and ſtrike two or three Times with their Tongue, carrying-away with it all the Fleſh it touches. This, ſays our Author, is very odd: Yet Friar *Antony de Santa Maria*, who ſaw theſe Animals, and *John Balat*, a Jeſuit, who likewiſe had lived ſeveral Years in that Province, often affirmed it [c]. With Regard to this Man-Bear, *Du Halde* only obſerves, that what the *Chineſe* report of the *Jin-hyung*, found in the Deſarts of the Province of *Shen-ſi*, ought only to be underſtood of the extraordinary Bigneſs of thoſe Bears compared with Men; juſt, ſays he, as the Animal called *Ma-lû*, or the *Horſe-Stag*, is only a Species of Stags, which are near as high as the little Horſes, named *Chwen-ma*, of the Provinces of *Se-chwen* and *Yun-nan*.

Small Stags.

THIS laſt Province alſo breeds a Kind of Stags, to be found no-where elſe; for their Size never exceeds that of ordinary Dogs [d]: The Princes and great Men keep them in their Gardens as Curioſities [e]. *China* abounds in Mules and Aſſes. It likewiſe affords many good and able Horſes: Vaſt Numbers are continually brought thither from the Countries to the Weſt, but they geld all. They have abundance of Pads, ſome very ſmall, and finely ſhaped. Their Saddles differ ſomewhat from the *Spaniſh* [f].

Kind of Dromedary.

BUT the moſt remarkable Quadrupedes to be met-with in *China*, are two. The firſt of theſe is a Kind of Camel, or Dromedary, no taller than an ordinary Horſe, having two Bunches on his Back, covered with long Hair, which make a Sort of Saddle. The Bunch before ſeems to be formed by the Back-bone, and the upper-Part of the Shoulder-Bones, being bent backwards, not unlike the Bunch which the *Indian* Cows have on their Shoulders; the other Bunch joins to the Buttocks. Its Neck is ſhorter than the common Camels, and much thicker, covered with thick Hair, as long as that of Goats: Some of them are of a yelloviſh Dun-colour; others again a little upon the red, and blackiſh in ſome Places. The Legs are not ſo long and ſlender, in Proportion, as thoſe of other Camels; ſo that it ſeems more fit to carry Burdens.

Odoriferous Roe-Buck.

THE other Animal is a Kind of Roe-Buck, called by the *Chineſe*, *Hyang-chang-tſe*, that is, the *odoriferous Roe-Buck* [g]. This Creature is found not only in the Southern Provinces, but even in the Chain of Mountains within four or five Leagues to the Weſt of *Pe-king*. It is a Sort of Deer [h] without Horns, with Hair of a blackiſh Colour: Its Muſk-Bag is compoſed of a very thin Skin, covered with Hair exceeding fine: The Fleſh is good to eat, and ſerved-up at the beſt Tables. When one of the Jeſuits was ſerving his Miſſion in the Mountains above-mentioned, they brought him a Male and a Female, while they were yet warm and bleeding. He bought the Male for a Crown, Muſk and all, (for ſome buy only the Fleſh.) Hereupon they immediately cut-off the Bag, leſt the Muſk ſhould evaporate, and tied the Top of it cloſe with a Packthread. Thoſe who would keep it out of Curioſity, dry it.

THE Muſk is generated in the inward Part of the Bag, and ſticks all round it like a Kind of Salt. There are two Sorts; but that which is in Grains, and called *Tew-pan-hyang*, is the moſt precious: The other, named *Mi-hyang*, is the leaſt eſteemed, becauſe it is too ſmall and fine. The Female produces no Muſk, or at leaſt the Matter which ſhe yields, having the Appearance of Muſk, has no Scent.

THE uſual Food of this Animal, as he was told, is the Fleſh of Serpents; which, though of an enormous Size, are eaſily killed by it: Becauſe when they are at a certain Diſtance from the Roe-Buck, they are ſuddenly overcome with the Scent of the Muſk, and grow ſo feeble, that they are not able to ſtir. This is certain, that when the Peaſants go to cut Wood, or make Charcoal in the Mountains, they have no ſurer Way to preſerve themſelves from theſe Serpents, whoſe Bite is exceeding dangerous, than to carry-about them a few Grains of Muſk. Being thus armed, they ſleep quietly after their Dinner.

THAT which happened on his Return to *P*

[a] *Du Halde*'s *China*, p. 14. [b] The ſame Author writes *Jin-hyung*. [c] *Navarette*'s Deſcription of *China*, p. 38. [d] Such Stags are found in ſome Parts of *Guinea*. See Vol. III. *p.* 715. [e] *Du Halde*, as before, *p.* 14. [f] *Navarette*, as before, *p.* 39. [g] *Hyang* ſignifies properly a ſweet Smell; but it alſo ſignifies odoriferous, when joined to a Subſtantive, for then it becomes an Adjective. [h] It is called, in this Place, the *odoriferous Deer*.

king, was in ſome Meaſure a Confirmation, that a the Fleſh of Serpents is the principal Food of the Muſk-Animal. Part of the Roe-Buck being dreſſed for Supper, one of thoſe who was at Table happened to have ſuch an Averſion to Serpents, that the bare mentioning of them, in his Preſence, would make him extreamly ſick. As he knew nothing of what was reported of this Animal, and the Serpent, the Jeſuit was very careful to ſay nothing at all about it, but obſerved his Countenance very attentively. He took ſome of the Roe-Buck, as others did, with a Deſign to eat it; but he had no ſooner put a Bit in his Mouth, than he found an extraordinary Loathing at his Stomach, and would not touch any more, while the reſt eat of it very heartily [a].

NAVARETTE informs us, that theſe Muſk-Animals abound in the Provinces of *Shen-ſi*, and *Shan-ſi*, where they are called *She*. According to the *Chineſe* Authors, it is like a ſmall Deer in the Body, and the Hair reſembles that of a Tiger, or Ounce: That when hard-preſſed by the Hunters, it climbs the Rocks, where it bites-off the Muſk-Bag which hangs at its Navel, thinking thus to ſave its Life by quitting the Treaſure; but it ſoon dies. This Account, he tells us, agrees with the common Opinion.

THE ſame Author ſays, there is another Creature in the ſame Province, which differs from the former only in that it has no Bag [b]. He adds, that this Beaſt is ſold to eat, and that the Miſſioners, in their Way by Water from *Peking* to *Kanton*, bought one. The Fleſh, when roaſted, had ſo ſtrong a Scent, that it perfumed the whole Veſſel, and in eating taſted like the higheſt Preparation of Muſk: Yet he ſays the Smell did not give them a Diſguſt to the Meat; though if it had been ſtronger, there would have been no eating of it.

THE *Chineſes* talk, and write much concerning the Unicorn, which they account an Omen of Proſperity. They paint him very beautifully, and their Authors affirm, that he has the Belly of a Deer, the Feet of a Horſe, and Tail like a Cow's: That he is of five ſeveral Colours, the Belly yellow; has only one Horn with Fleſh about it, is two Fathom high, a merciful Beaſt, and the Emblem of Felicity: But all this, ſays *Navarette*, ſavours too much of the Fable of the Phœnix.

THE ſame Author ſpeaks of two other ſtrange Creatures, one called *Lang*, whoſe Fore-feet are very long, and the Hinder ſhort. The other *Pwey*, or *Poy*, with long Hind-feet, and ſhort Fore-feet. As neither Kind can walk by itſelf, the two join [c], making, as it were, one Beaſt, which moves-about by Means of the long Feet. The *Chineſes* call miſerable poor Wretches, who cannot live by their own Induſtry, *Lang-poy*, to ſignify, that they want ſome Aſſiſtance to get their Bread. *Fiſh.*

THERE is yet a third extraordinary Beaſt, called *Jang*, found in the Mountains of the Province of *Nan-king*: It is ſhaped like a Goat, has Ears and Noſe, but no Mouth, and lives upon the Air [d]. It muſt be obſerved, that *Navarette* does not relate theſe Things as an Eye-Witneſs, but from the Books and Diſcourſe of the *Chineſe*, though he ſeems to believe all as Fact. *Du Halde* tells us, that the Miſſioners were not able to procure an exact Knowledge of the rare Animals, which the *Chineſe* pretend are to be met-with in the Mountains of this Empire. He adds, that what they relate of ſome has ſuch an Air of Fable, as not to deſerve mention. As to the *Sin-ſin*, continues he, by the Account which is given of it all-over *Se-chwen*, it ſeems to be a Kind of Ape: They ſay it is as large as a middle-ſized Man, and has a greater Reſemblance of the human Species, than other Apes, both in its Actions, and in the Facility with which it walks on its Hind-feet [e]. *The Jang.* *The Man-Ape.*

SECT. VI.

Salt, *and* Freſh-Water Fiſh.

Plenty of Fiſh. Fiſh-Spawn, Traffic. River-Porpoiſe. The Armour-Fiſh. The Meal-Fiſh. Sort of Bream, and Cod. Salt-Fiſh. The Yellow Fiſh. The Golden Fiſh: Their Nouriſhment: Full of Sport: Their Shape and Beauty: How kept, and managed: Propereſt Food: Very prolific: Farther Remarks concerning them. The Hay-ſeng, *a hideous Fiſh. Petrified Crabs.*

CHINA is ſtored with Fiſh. The Rivers, Lakes, Pools, and even Canals, are full of all Sorts ſupplied from thence: Nay, they abound in the very Ditches, made in the Middle of the Fields, to preſerve the Water, for ſupplying the Rice. Theſe Ditches are ſtocked alſo with the Spawn of Fiſh, which yields a great Profit. In the great River *Yang-tſe-kyang*, not far from the City *Kyew-king-fû*, in the Province of *Kyang-ſi*, *Plenty of Fiſh.*

[a] *Du Halde*'s *China*, p. 15, and 324, *& ſeq.* [b] This ſeems to be only the Female of the ſame Species. But the Author does not ſay in what Manner, nor can it well be conceived how they ſhould join for the Purpoſe, unleſs one threw his Fore-Legs, and the other his Hind-Legs, over the Back of his Companion; which manifeſtly impracticable. [d] *Navarette*'s Deſcription of *China*, p. 38, *& ſeq.* [e] *Du Halde*, as before, p. 14.

Natural History.

a prodigious Number of Barks meet every Year to buy Fiſh-Spawn. About *May* the People of the Country dam-up the River for nine or ten Leagues together, in ſeveral Places, with Mats and Hurdles (leaving only Room enough for Barks to paſs) in order to ſtop the Spawn, which they know how to diſtinguiſh at firſt Sight, though the Water is ſcarce altered: With this Water mixed with the Spawn, they fill ſeveral Veſſels to ſell to the Merchants, who tranſport it in their Barks into divers Provinces, taking Care to have it ſtirred-up from Time to Time. This Water is ſold by Meaſure to ſuch as have Fiſh-Ponds, and Pools belonging to their Houſes: In a few Days the young Fry begin to appear in little Shoals, which being ſmall, and almoſt imperceptible, are fed with Lentils (that grow in the Marſhes) or Yelks of Eggs, much in the ſame Manner as domeſtic Animals are nouriſhed in *Europe:* They preſerve the large Fiſh by Means of Ice; and filling great Boats with them, carry them as far as *Pe-king*. The Profit often amounts to an hundred Times the Expence; for the common People live much on Fiſh. The Canals are ſupplied with Fiſh from the Rivers and Lakes: Several others come from the Sea, advancing a great Way up the Rivers; ſometimes thoſe of the largeſt Size are caught in Places above an hundred and fifty Leagues from the Coaſt [a].

Fiſh-Spawn Traffic.

River Porpoiſe.

IN the *Yang-tſe-kyang*, above ſixty Leagues from the Sea, are ſeen Porpoiſes, called *Kyang-chû*, or the *River Hog* [b]. They are leſſer than thoſe of the Ocean, but ſcud along in Shoals with the ſame Leaps and Evolutions as in the open Sea [c]. In ſhort, there is ſcarce any Sort of Fiſh in *Europe*, but what is to be met-with in *China*, as Lampreys, Carps, Soals, Salmons, Trouts, Sturgeons, *&c.* beſides a great many others of an excellent Taſte, quite unknown there: But the Miſſioners were ſo employed in ſettling the Geography of Places, when they ſurveyed the Provinces, that they had not Time to enquire into the various Species of them. They only took Notice of a few more remarkable than the reſt:

The Armour Fiſh.

One is called *Cho-kya-yu*, that is, *the Armour-Fiſh*; becauſe its Back, Belly, and Sides, are covered with ſharp Scales, placed in ſtrait Rows, one over another, much like Tiles on the Roof of a Houſe. It weighs about forty Pound, is an admirable Fiſh, exceeding white, and taſtes not unlike Veal.

The Meal-Fiſh.

IN calm Weather, they catch another delicate Sort, which they name the *Meal-Fiſh*, becauſe of its extraordinary Whiteneſs; and the black Pupils of its Eyes are incloſed with two Circles, reſembling very bright Silver. There are ſuch prodigious Shoals of them in the Sea, near the Province of *Kyang-nan*, that they commonly take four hundred Weight of them at one Draught of the Net.

ONE of the beſt Sorts of Fiſh *China* affords, reſembles a Sea-Bream: It is caught in the fourth and fifth Moon, and commonly ſold for a little more than a Farthing a Pound, whereof it weighs five or ſix; and for about twice as much, twenty Leagues up the Country, where it is carried. When this Fiſhing-time is over, there comes from the Coaſts of *Che-kyang* large Barks, loaded with another Kind of freſh Fiſh, reſembling *Newfoundland* Cod: It is incredible what a Conſumption there is of them, in the proper Seaſon, along the Coaſts from *Fo-kyen* to *Shantong*, beſides the prodigious Quantity that is ſalted in the Country where they are caught. The Plenty of this Fiſhery appears in that they are ſold at a very low Price, notwithſtanding the Merchants are at great Expence to procure them; for they muſt firſt buy a Licence of the *Mandarin* to trade, then hire a Bark, buy the Fiſh as ſoon as it is caught, and lay them in the Hold on Beds of Salt; by which Means the Fiſh is tranſported into the moſt diſtant Provinces, even in the hotteſt Seaſon.

THERE is likewiſe brought a ſurprizing Quantity of other Salt-Fiſh from the Sea-Coaſt, from the ſixth to the ninth Moon. In the Province of *Kyang-nan*, one meets with very large Fiſh, which coming out of the Sea, or *Yellow River*, throw themſelves into vaſt Plains covered with Water: But Matters being ſo ingeniouſly contrived, that the Water runs-off as ſoon as the Fiſh are entered, they are left on dry Land, and taken without Difficulty, ſalted, and ſold to the Merchants, who load their Barks with them at a very cheap Rate.

IN the River *Yang-tſe-kyang*, over-againſt the City *Kyew-kyang-fû*, where it is above half a League broad, they catch all Sorts of excellent Fiſh; and, among others, one called *Whang-yu*, or *the Yellow-Fiſh*. It is of an extraordinary Size (ſome of them weighing upwards of eight hundred Pound) as well as an exquiſite Taſte, and perfectly firm: They are caught only at certain Seaſons, when they come out of the *Tong-ting-hû*, called alſo the Lake of *Jau-chew*, into this River [d].

THERE is in the ſame River, near *Nan-king*, a famous Fiſhery for Shads, called *She-yu*, in the Months of *April* and *May*; and at another Place, a good Way from thence, there is ſuch Plenty of this Sort of Fiſh, that they often car-

[a] *Du Halde's China*, p. 19, and 315. [b] See before, *p.* 139. a. [c] *Du Halde*, as before, *p.* 35
[d] The ſame, *p.* 315.

them to *Tſong-ming*, a neighbouring Iſland, where they are ſold exceeding cheap.

BUT the moſt remarkable Fiſh, is the *Kin-yu*, or *Golden-Fiſh*: Theſe are kept, either in little Ponds, made for that Purpoſe, wherewith the Houſes of Pleaſure, belonging to the Princes and great Lords, are embelliſhed; or elſe in Baſins, which are more deep than wide: They chuſe the leaſt that can be found, becauſe eſteemed moſt beautiful, and a greater Number may be kept of them.

THE prettieſt of them are of a curious Red, ſpeckled, as it were, with Gold-Duſt, eſpecially towards the Tail, which is forked with two or three Points: Some are of a Silver Colour, others white, and ſome ſpotted with Red [a]. Both Sorts are extraordinary lively and active, delighting to play on the Surface of the Water; but then they are ſo tender, that the leaſt Impreſſion of Air, and even any violent Shaking of the Veſſel, will kill great Numbers of them.

THOSE bred in Ponds are of various Sizes: Some are bigger than the largeſt Pilchards [b]. They teach them to riſe-up to the Top of the Water at the Noiſe of a Clapper, which the Perſon uſes who feeds them. According to all Accounts, the beſt Way to preſerve them, is to give them nothing in Winter: It is certain they do not feed them for three or four Months at *Pe-king*, while the very cold Weather laſts: What they live-on in the mean Time, under the Ice, it is not eaſy to determine, unleſs they find little Worms in the Roots of Herbs, which grow at the Bottom of the Ponds; or the Roots themſelves, being ſoftened by the Water, become proper Food for them. Frequently to prevent their being frozen, they are taken into the Houſes, and kept the whole Winter in a Chamber, often ſhut-up in a China-Veſſel, without being fed at all. Towards Spring they are put into the Baſins again. The greateſt Lords delight in feeding them with their own Hands, and ſpend ſome Time to obſerve their nimble Motions, ſporting in the Water.

THIS Fiſh, at leaſt the prettieſt of them, are caught in a Lake, in the Province of *Che-kyang*, near the City of *Chang-wha-hyen*, in the Diſtrict of *Han-chew-fu*, and at the Foot of a Mountain called *Tſyen-king*: But as this Lake is ſmall [c], it is not likely that all the Golden-Fiſh come from thence, which are ſeen in the Provinces of China, particularly thoſe of *Quang-tong*, and *Fo-kyen*, where this Species may be eaſily propagated [d].

Fiſh.

ACCORDING to *Le Comte*, theſe Fiſh are commonly the Length of one's Finger, proportionably thick, and finely ſhaped. The Male is of a beautiful Red, from the Head more than half-way down the Body, and the remaining Part, together with the Tail, is gilded; being accompanied with ſuch a bright and dazzling Luſtre, that our beſt Gildings fall vaſtly ſhort of it. The Female is white, the Tail, and ſome Part of the Body, having a perfect Reſemblance of Silver. Their Tails are not ſmooth and flat, like thoſe of other Fiſh, but form a Sort of Tuft, thick and long, which adds a particular Beauty to them. *Their Shape, and Beauty.*

THEY are kept in a very large and deep Baſin, at the Bottom of which there is commonly put an Earthen-Pan, turned upſide-down, with Holes in it, for them to retire from the Sun in hot Weather, for they are exceeding tender.

THE Water is changed three or four Times a Week, but in ſuch a Manner, that the freſh runs-in, while the ſtale runs-out, that the Baſin may never be dry: They likewiſe ſtrew on the Surface certain Herbs, which keep the Water always green and cool. When they are obliged to remove the Fiſh from one Veſſel to another, to avoid handling them (for thoſe which are touched die ſoon after, or decay) they take them up by Degrees with a ſmall Net, the Mouth of which is faſtened round a Hoop, and the Threads woven ſo cloſe together, that they have Time to put them into freſh Water before the old runs-out. The Author obſerved at Sea, that every Time the Guns were fired, or Pitch and Tar melted, ſome of them expired. Beſides they live upon almoſt nothing: However, from Time to Time their Feeders throw-in ſmall Bits of Paſte; but the beſt Thing for them are Wafers, which ſoaked, make a Kind of Pap they are extreamly fond of. *How kept, and managed.* *Propereſt Food.*

IN hot Countries they multiply exceedingly, provided the Spawn, that ſwims upon the Surface of the Water, be duly taken-away; for otherwiſe they would devour it. Being placed in a particular Veſſel expoſed to the Sun, it is kept there till the Heat animates the young Fry. They are at firſt quite black, which Colour ſome always retain; but the reſt change, by Degrees, to red or white, Gold or Silver. The Gold and Silver begin to appear at the End of the Tail, and extend more or leſs towards the Middle of their Bodies, according to their reſpective Natures [e]. *Very prolific.*

THE following Informations were obtained by

[a] They loſe their Luſtre when dead, as we have obſerved by ſome brought over to *England*. [b] They ſcarce exceed a Finger's Length, and one of the better Sort ſells for three or four Crowns. [c] Not above two hundred Acres in Compaſs. [d] *Du Halde's China*, p. 215. [e] *Le Comte's* Memoirs of *China*, p. 113. *Du Halde*, as before, *p.* 315, *& ſeq.*

the

Natural History.

the Miſſioners from the *Chineſe*, who deal in a theſe ſmall Fiſh, and get their Livelihood by breeding and ſelling them.

Farther Remarks

1. ALTHOUGH they are commonly no longer than one's Finger, ſome grow to the Length and Thickneſs of the largeſt Herrings.

2. IT is not the red or white Colour that diſtinguiſhes the Male from the Female; but the latter are known by ſeveral ſmall white Spots about their Gills, and little Fins that are near them; and the Males, by having theſe Places b bright and ſhining.

3. THOUGH the Tail is commonly in the Shape of a Tuft, yet often it is like that of other Fiſh.

4. BESIDES ſmall Balls of Paſte, they give them the Yelks of Eggs boiled hard, or elſe lean Pork dried in the Sun, and reduced to very fine Powder. They ſometimes put Snails into the Baſin where they are kept; their Slime, which ſticks to the Sides of the Veſſel, being excellent c Food for theſe little Animals, who ſtruggle for it. They are alſo very fond of little reddiſh Worms, found in the Water of ſome Reſervoirs.

5. THEY ſeldom multiply after they are ſhut-up in theſe Veſſels, becauſe they are too much confined. In order to breed, they muſt be put in Reſervoirs, where the Water runs, and is deep in ſome Places.

Concerning them.

6. THE Water drawn-out of the Well, to d fill the Veſſel where they are kept, ought to be left to ſettle five or ſix Hours, otherwiſe it would be too crude, and unwholeſome.

7. WHEN you perceive the Fiſh ſpawning, which happens about the Beginning of *May*, you ſhould ſcatter Graſs upon the Surface of the Water, that the Spawn may cling to it; and when you perceive the Spawning is over, or that the Males ceaſe to follow the Females, the Fiſh muſt be removed into another Veſſel, that the Spawn e may be expoſed in the Sun for three or four Days; and at the End of forty or fifty Days the Water muſt be changed, becauſe the ſmall Fry begin then to appear diſtinctly [a].

BUT this Kind of Fiſh is not more beautiful than thoſe, called *Hay-ſeng*, are hideous and ugly. They are, however, the common Diet of the *Chineſes*, and make a Diſh in almoſt every Meal. They are ſeen floating on the Coaſts of *Shan-tong* and *Fo-kyen*. The Miſſionaries took them at firſt for ſo many inanimate Lumps: One which the *Chineſe* Mariners catched, by their Orders, ſwam in the Baſin wherein it was caught, and even lived there a pretty while. The Natives having always told them, that this Animal had four Eyes, and ſix Feet, and that in Figure it reſembled a Man's Liver, they examined it very carefully, but could diſcover only two Places, which ſeemed to be Eyes, by the Signs of Fear it ſhewed when they moved their Hands before thoſe Parts: Indeed, was every Thing that ſerves it to move with, to be looked on as Feet, one might reckon as many as there are little Pimples, reſembling Buttons, all-over its Body. It has neither Prickles, nor Bones, and dies the Moment it is ſqueezed. A little Salt will preſerve it, in which it is conveyed to all Parts of the Empire: It is accounted a great Dainty by the *Chineſes*, but did not appear ſo to the Miſſioners [b].

LE COMTE tells us, that in the Iſle of *Hay-nan*, there is a certain Lake or Fountain, whoſe Water petrifies Fiſh, and that he brought-over Craw-Fiſh which were ſo far changed into Stone, that the Claws and Body of them were very hard, ſolid, and little differing from Stone [c]. The Miſſioners who ſurveyed the Empire, on the Authority of the Natives, deny there is any ſuch petrifying Lake in that Iſland [d]: But ſeem to acknowledge, that there is a Kind of Sea-Crab (found between the Coaſts of *Kau-chew*, in the Province of *Quang-tong*, and the Iſle of *Hay-* e *nan*) which are ſubject to Petrefaction without loſing their natural Shape. They add, that they are very proper in burning and acute Fevers [e].

The Geography. extends from thirty-four to forty-three Degrees of Latitude; and its greateſt Breadth, from Eaſt to Weſt, is ſix Degrees.

Map of Korea, A *Tartarian* Lord, whom the Emperor had ſent thither, attended by a *Mandarin* of the Mathematical Tribunal, brought from thence the Map of the Country, which hangs in the Royal-Palace. He went as far as the Capital, and meaſured, by a Line, the Way to it from *Fong-whang-ching*. Eaſt of this City, which ſtands at the Eaſt-End of the Paliſado of *Quan-tong*, b is the preſent Weſtern Border of *Korea*: For after the *Manchews* had ſubdued the *Koreans*, which was before they attacked *China*, it was agreed, that a certain Space ſhould be left uninhabited, as a Boundary betwixt them, which is marked in the Map by pricked Lines. The Miſſioners found the Latitude of this City forty Degrees thirty Minutes and twenty Seconds: And its Longitude, from the Meridian of *Peking*, appeared by their Geometrical Meaſures, c to be ſeven Degrees forty-two Minutes Eaſt.

How far correct. As the Author, and his Aſſiſtants, had no Opportunity of viewing either the Sea-Coaſt, or inward Parts of the Kingdom, they do not vouch the Map for compleat, but only give it as the beſt that has been yet publiſhed. The whole Northern Limits, where *Korea* is broadeſt, and ſo far as they travelled on the Weſt, having been meaſured geometrically, and their Latitudes fixed, they made-uſe of theſe Helps for re- d ducing the other Parts to their proper Longitude. Moreover, by the *Tartar* Lord's Meaſurement of the Road from *Fong-whang-ching*, and the Latitude of the Capital of the Kingdom, they were enabled to proportion the Diſtances of other Places in the Map. This Latitude was found by the *Chineſe* Mathematicians to be thirty-ſeven Degrees thirty-eight Minutes and twenty Seconds, which is diſtant from the Northern-Boundary five Degrees and a half: So that a few e Obſervations on the South and Eaſt-Sides would ſerve to adjuſt the Situation of *Korea* tolerably well.

Chief Rivers, THE moſt conſiderable Rivers of this Peninſula, are the *Ya-lû*, and *Tû-men*, called by the *Chineſe*, *Ya-lû-kyang*, and *Tû-men-kyang*; but in the Map by the *Manchew* Names, *Ya-lû-ûla*, and *Tû-men-ûla*; *ûla* and *kyang* ſignifying each, in its particular Language, a River. They both riſe-out of the ſame Mountain, one of the higheſt f in the World, named by the *Chineſe*, *Chang-pe-ſhan*, by the *Manchews*, *Shan-alin*, that is, the *ever-white Mountain*. The one runs Weſt, and the other Eaſt: They are both deep, ſomewhat rapid, and of exceeding good Water. The Courſe of the other Rivers, which we have not ſeen, are marked according to the *Korean* Meaſures.

THIS Country was formerly inhabited by various Nations, the principal whereof were the *Me*, the *Kau-kyu-li*, and the *Han*; the laſt of which were ſubdivided into the *Ma-han*, the *Pyen-han*, and the *Chin-han*; all which were at laſt united into one Kingdom, called *Chau-tſyen*, or *Kau-li*.

KOREA is divided into eight Provinces, which contain forty *Kyun*, or grand Cities [a]; thirty-three *Fû*, or Cities of the firſt Rank; fifty-eight *Chew*, of the ſecond Rank; and ſeventy *Hyen* of the third Rank. The firſt Province is in the Center of the Kingdom, and named *King-hi*, or *the Province of the Court*. 2. The Eaſtern, *Kyang-ywen*, or *the Source of the River*, was anciently the Country of the *Mé*. 3. The Weſtern, called *Whang-hay*, or *the Yellow-Sea*, includes Part of the old *Chau-tſyen*, and Country of the ancient *Ma-han*. 4. The Northern, *Ping-ngan*, *the Pacific*, was formerly Part of the Kingdom of *Chau-tſyen*. 5. *Tſven-lo*, the Southern, was the Reſidence of the *Pyen-han*. 6. The South-Weſtern, *Chu-ſin*, that is, *the Faithful and Pure*, is the ancient *Ma-han*. 7. The North-Eaſtern, *Kyen-king*, or *the Happy*, was the ancient Dominion of the *Kau-kyu-li*; and the South-Eaſtern, *Kin-ſhan*, was formerly the Country of the *Chin-han*.

THE Capital is named, in the Map, *King-ki-tau*, according to the *Koreans*: But the *Chineſe* call it *Kong-ki-tau*, becauſe they think the Word *King* of too much Dignity to be applied to any Court but their own; nor do they think it lawful to ſtile other Sovereigns *Tyen-tſe*, or *Van-ſuy*, which Epithets they appropriate to their own Monarchs.

THE Houſes, in this Kingdom, have but one Story: They are ill-built, in the Country of Earth, and in the Towns commonly of Brick. Their Cities are generally built and walled in the *Chineſe* Manner: But the great Wall raiſed by the *Koreans*, as a Defence againſt the *Tartars*, is much inferior to that of *China*, and for nine Years paſt has been almoſt entirely ruinous; for they firſt felt the victorious Arms of the *Manchews* [c].

THE *Koreans* are generally well-ſhaped, and of a mild and tractable Diſpoſition: They are Lovers of Learning, and fond of Muſic and Dancing. The Northern Provinces produce the ſtouteſt Men, and the beſt Soldiers.

THE *Koreans* were ſo well-regulated by the Laws of *Ki-tſe* [d], that Theft and Adultery were

[a] This ſhould ſeem to be a Miſtake for Diſtricts. [b] *P.* 382, he ſays, they are thatched, and that they have no Beds. [c] *Du Halde's China*, vol. 2. p. 376, *& ſeq.* [d] Mentioned hereafter in the Hiſtory.

Regis. 1720.

Crimes unknown to them, they never ſhut their Street-Doors in the Night; and although the Revolutions of Government have made them deviate a little from their primitive Innocence, yet they may ſtill be juſtly looked-on as a Pattern to other Nations: But they abound with looſe Women, and the young Men and Maids have frequent Meetings [a].

Habit. THEY dreſs as the *Chineſe* did, under the *Tayming* Family, in a Gown with long and wide Sleeves, a high ſquare Cap, a Girdle, and Boots of Leather, Linen, or Satin [b]. They generally wear Fur-Caps, and brocade Cloaths. The Women put Edging, or Lace, both upon their upper and under Petticoats. The Quality uſually dreſs in purple-coloured Silk; and the *Literati* are diſtinguiſhed by two Feathers in their Caps. On public Occaſions, their Cloaths are richly adorned with Gold and Silver. Their Arms are Croſs-Bows, and long Sabres, without Ornaments. They never take Phyſic. They marry without making nuptial Preſents, or uſing any Ceremony. The Princes and Princeſſes of the Blood are always matched together, and the Grandees follow the ſame Rule in their Families. They keep their Dead three Years unburied, and wear Mourning for their Parents three Years, but for Brothers only three Months. When the Bodies are interred, they place, by the Side of the Grave, the Cloaths, Chariots, and Horſes of the Deceaſed, and in general every Thing they were fond of while alive, which are carried-off by thoſe who accompany the Funeral [c].

THEIR Language is different from the *Chineſe*, but their Characters are the ſame, and both Nations uſe Interpreters. They have a very great Eſteem for the Doctrine of *Confuſius*, but little Reſpect for the *Bonzas*, none of their Pagods being allowed in the Towns [d]. Yet a few Pages after, the Author ſays they obſerve the Religion of *Fo*. He adds, that they are naturally ſuperſtitious, and abhor to deprive any Creature of Life; are moderate in eating and drinking, and uſe Plates and Diſhes.

THE Learned apply themſelves chiefly to Muſic. Every three Years they have an Examination of Doctors, Bachelors, and Maſters of Arts; and thoſe who are appointed Ambaſſadors are examined by the Tribunal of Miniſters. The King poſſeſſes no Lands as his own Property, and every one has ſo much allotted him in Proportion to the Number of his Family.

HE ſends an Ambaſſador yearly to receive the *Chineſe* Almanack. Upon his Demiſe the Emperor commiſſions two Grandees to confer upon his Son the Title of *Quey-vang*, or King: And when this latter is apprehenſive of Contention after his Death, he nominates an Heir to the Crown, whom he deſires the Emperor to confirm. The Prince receives the Inveſtiture upon his Knees, and makes Preſents to the Commiſſioners, which are ſettled, beſides about eight thouſand *Lyangs* [e] in Money. After this an Ambaſſador is ſent from *Korea* with the Tribute, who knocks his Forehead againſt the Ground before the Emperor: Nor does the Royal Conſort aſſume the Title of Queen before the Emperor has granted it [f]. The *Mandarins* very much affect an Air of Gravity, and their Salaries are paid in Rice.

Puniſhments mild.

THEIR Puniſhments are gentle. Crimes capital, in other Countries, are puniſhed by Baniſhment into the neighbouring Iſlands; but thoſe who are guilty of abuſive Language to their Parents, are beheaded. Petty Criminals are baſtonadoed on the Back, and then diſcharged. When a Perſon is to be puniſhed, a Sack is thrown-over his Head, reaching to his Feet, with Deſign to conceal his Shame, and have him the better in their Power [g].

Soil and Commodities.

THE Frontiers of *Korea*, ſo far as *Regis* ſaw, were very well cultivated, after the Manner of the Southern Provinces of *China*; and the *Tartarian* Envoy informed him, that the Country abounded with all the Neceſſaries of Life [h]. Although the Surface be mountainous, it is fertile, eſpecially the Provinces of *Ching-tſing*, *Kingſhang*, and *Tſven-lo*. The chief Commodities of this Kingdom are Cotton-Paper, which is ſtrong and laſting, and of a higher Price than any in *China*; the famous Plant *Jin-ſeng*, Gold, Silver, Iron; the Gum of a Tree reſembling a Palm-Tree, with which whatever is varniſhed ſeems to be gilt; Hens with Tails three Feet long, little Horſes three Feet high, mineral Salt, with Sable and Caſtor Skins. Of the Grain Paniz they make Wine [i].

Korea once contiguous

IN the Abridgment of Chorography, intitled *Quang-yu-ki*, it is remarked, that the City of *Chau-tſyen*, where *Ki-pe*, hereafter mentioned, reſided, is in the Territory of *Yong-ping-fu*, a City of the firſt Rank in the Province of *Peche-li* in *China*. Suppoſing this true, *Regis* thinks it reaſonable to conclude, that the ancient *Chautſyen* [k], and *Korea*, were contiguous, and not ſeparated by a Gulf till many Ages after: For it is

[a] *Du Halde*'s *China*, vol. 2. p. 381, *& ſeq.* [b] The ſame, *p.* 377. [c] The ſame, *p.* 381, *& ſeq.* [d] The ſame, *p.* 377. [e] Or Ounces of Silver, ſix Shillings and Eight-pence each. [f] *Du Halde*, as before, *p.* 381. [g] The ſame, *p.* 382. [h] The ſame, *p.* 376. [i] The ſame, *p.* 382. [k] *King-ki-tau*, the Capital, is by ſome Travellers and Geographers named *Chau-tſyen*.

The Geography. not to be imagined, that a Prince would fix his Reſidence out of his own Dominions, eſpecially if divided from them by a wide Sea. This Conjecture will appear the more probable, if it be conſidered, that when the Emperor *Yu*, about three thouſand Years ago undertook to drain the Waters, which had overflowed the flat Country[a]: He cut a Paſſage through a Mountain in the Southern Borders of *Shan-ſi* and *Shen-ſi*, to make Way for the *Whang-ho*, which ſeparates thoſe Provinces, and there forms a Cataract not inferior to thoſe of the *Nile*.

To Pe-che-li. THENCE he conducted it through *Ho-nan*, and following its Channel along *Pe-che-li*, drained the Lake *Ta-lu*, into which the *Whang-ho* formerly emptied itſelf. This Lake overflowed all that Country, which now includes the Diſtricts of *Shun-te-fu*, *Chau-chew*, and *Shing-chew*, in the ſame Province. At laſt to break the Rapidity of this River, he divided it into nine Channels, which ſome imagine were again united before it diſembogued itſelf into the Sea, at the Foot of the Mountain *Kye-ſhe-ſhan*, which then made a Promontory: But whether the united Streams, or only the main Channel made its Exit there, it is certain, ſays the Author, that ſince the Time of *Yu*, the *Whang-ho* has ſtrayed far from its ancient Courſe; for inſtead of diſcharging itſelf into the Sea, as it did formerly in Latitude forty Degrees, it now falls into the River *Whay-ho*, a little above *Whay-ngan-fû*, in *Kyang-nan*, about *Reaſons to ſupport* Latitude thirty-four Degrees. It is likewiſe obſervable, that the Mountain *Kye-ſhe-ſhan*, which was formerly united to the Territory of *Yong-ping-fû*, is now five hundred *Li*[b] diſtant in the Sea from this City: So that the Sea gaining on the Land by Degrees, hath at laſt overflowed all this Tract of Ground.

IT is true, that the *Chineſe* Hiſtory makes no mention of this extraordinary Change of the Courſe of the *Whang-ho*, nor of this Overflowing of the Sea. But, ſays the Author, when Alterations on the Earth's Surface are brought-about inſenſibly, and without alarming Nature, they eaſily eſcape the Obſervation of Hiſtory, the Difference that happens during the Life of any *This Conjecture.* one Man being not at all perceptible. To confirm this Conjecture by a parallel Inſtance. When *Shin-tſun-chong* was ſent Ambaſſador into the Country North of the *Whang-ho*, in travelling by the Mountains of *Tay-hang-ſhan*, he obſerved, that the Shelfs of the Rocks were filled with Shells and Beds of Gravel; whence he ſuppoſed that the Sea had formerly waſhed the Foot of theſe Mountains, though they are now a thouſand *Li*[b] from it. *Chu-ven-hong*, indeed, rather believes, that the *Whang-ho* anciently ran this Way. But although it would be eaſy to refute his Opinion, yet if it only appears doubtful, whether this great Extent of Country was formerly covered by the Sea, it is ſufficient to ſhew, that nothing can be inferred from the Silence of the *Chineſe* Hiſtory in Caſes of this Nature[d].

SECT. II.

The Hiſtory *and* Revolutions *of* Korea.

Korea *ſubject to* China. *Race of* Ki-tſe. *Another Dynaſty. The* Kau-kyu-li: *They invade* China. *Invaded in their Turn: Attack* Lyau-tong: *Their King aſſaſſinated: His Death revenged by the Emperor: Defeats the* Koreans: *Takes their King. The* Koreans *tributary: Defeat the* Ki-tan: *Diſoblige the Emperor: Pay him Homage. A new Revolution. The* Koreans *invaded by the* Japanneſe. *The* Chineſe *come to their Aſſiſtance.* Ping-yang *deſcribed: Taken by Aſſault. The* Chineſes *worſted.* Japanneſe *quit* Korea. *An amorous Ambaſſador.* Chineſe *King of* Japan. *The War renewed.* Chineſe *Treachery:* Japanneſe *Bravery. King of* Korea's *Petition to* Kang-hi.

THE *Koreans* were ſubject to the *Chineſe* from the Time of *Yau*[e], who began his Reign two thouſand three hundred and fifty-ſeven Years before Chriſt, till the Tyranny of *Ta-kang*, of the *Hya* Dynaſty (who came to the Crown an hundred and ſixty-nine Years after) forced them to revolt. *Kye*, who aſcended the Throne one thouſand eight hundred and eighteen Years before the Chriſtian Æra, made them pay Tribute: But they ſoon rebelled againſt his oppreſſive Sway, and even ſeized Part of *China*. *Ching-tang*, who about fifty-two Years thence dethroned *Kye*, and founded the *Shang* Dynaſty, again reduced them. In the Reign of *Chung-ting*, which began one thouſand five hundred and ſixty-two Years before Chriſt, they attacked *China*, and continued ſometimes ſubmiſſive, and ſometimes rebellious, till 1324, when by the Weakneſs of the Emperor *Vû-ting*, they conquered the Provinces of *Kyang-nan*, and *Shan-tong*; whereof they kept Poſſeſſion till *Tſin-ſhi-whang*, who aſcended the Throne two hundred and forty-ſix Years before Chriſt, ſubdued them.

BUT as theſe Times are very obſcure, th

[a] See before, *p.* 119. [b] Or fifty Leagues. [c] Or an hundred Leagues. [d] *Du Halde's China*, P. 282. [e] This Hiſtory, taken from the *Chineſe* Annals, is not a connected Relation of the Affairs and Kings of *Korea*, but only ſo far as they concern the Empire of *China*: Yet, being the only Piece of the Kind extant we judged it too important to be omitted.

Chineſe Hiſtory, confirmed by the Calculations of Eclipſes therein recounted [a], begins the Eſtabliſhment of this Monarchy with *Ki-tſe*. This Prince was impriſoned by his Nephew *Chew*, Emperor of *China*, for his Freedom in adviſing him; but releaſed by *Vû-vang*, Founder of the *Chew* Dynaſty, one thouſand one hundred and twenty-two Years before Chriſt, who deſtroyed that Tyrant. However, *Ki-tſe* not chuſing to live under a Prince, by whom his own Family had been driven from the Throne, retired into *Chau-tſyen*, where, by the Aſſiſtance of the Emperor, he was made King. This Prince introduced among his People the Politeneſs of the *Chineſe*, and ſoon, by his Wiſdom, eſtabliſhed his Dominion, which his Family enjoyed till the Emperor *Tſin-ſhi-whang*, before-mentioned, made *Chau-tſyen* dependent on *Lyau-tong*; but ſtill leaving the Poſſeſſion to the Deſcendants of *Ki-tſe*, who for forty Years governed under the Title of *Hew*, or Marquis, till *Chun* re-aſſumed that of *Vang*, or King.

In the Year 206, before Chriſt, *Kau-tſû*, likewiſe named *Lyew-pang*, Founder of the *Han* Dynaſty, conquered the ſeveral Kingdoms *China* was then divided into, and eſtabliſhed himſelf ſole Monarch. *Wey-man*, or *Nyan*, a *Chineſe* of the Province of *Pe-chè-li*, taking Advantage of theſe Commotions, ſet himſelf at the Head of ſome diſbanded Soldiers, ſeveral Times defeated *Chun*, and ſecured himſelf in the independent Poſſeſſion of his Kingdom, putting an End to the Race of *Ki-tſe*. *Wey-man*, after repeated Refuſals from the *Chineſe* Emperors, at laſt obtained a Confirmation of his uſurped Crown from *Whey-ti* and *Lyu-hew*, his Mother, who governed in his Name. He afterwards brought the *Me*, the *Kau-kyu-li*, the *Wo-tſyu*, and all *Korea* under his Subjection. About one hundred and ten Years before the Chriſtian Æra, *Yew-kyu*, Grandſon of *Wey-man*, having put *She-ho*, the *Chineſe* Ambaſſador, to Death, the Emperor *Vû-ti*, called likewiſe *Hyau-û-whang-ti*, ſent his Generals againſt him, though without Succeſs. But ſoon after *Yew-kyu* being aſſaſſinated, his People voluntarily ſubmitted to the Emperor; who reduced *Chau-tſyen* into a Province, which he called *Tſan-hay*, and divided *Korea* into four more, namely, *Chin-fan*, *Lin-tong*, *Lo-lang*, and *Hiun-tû*. But the Emperor *Chau-ti*, who began his Reign eighty-ſix Years before Chriſt, afterwards reduced *Korea* into two.

The *Kau-kyu-li* were deſcended from the *Fû-yu*, a People of Eaſtern *Tartary*: But they, reſembling other idolatrous Nations, give fabulous Accounts of their Heros, of which the following is one. A Daughter of the God *Ho-hang-ho*, being cloſely confined by the King of *Kau-kyu-li*, one Day as ſhe was expoſed to the Rays of the Sun, conceived; and afterwards brought-forth an Egg, as large as a Buſhel, wherein was found a Male Child, who, when he grew-up, was named *Chu-mong*, or the *Good Archer*; and the King made him Overſeer of his Studs. As *Chu-mong* ſtarved the good Horſes, and fattened the bad, the King choſe the latter, and left him the former. One Day as they were hunting, his Majeſty permitted him to ſhoot what Game fell in his Way; and he ſlew a great Number of Fallow-Deer, which made the King think of cutting him off. *Chu-mong*, perceiving his Intention, fled, and being hotly purſued, came to the River *Pû-ſhwi*, which not being able to croſs, *Ah!* ſaid he, *Shall I, who am the Offspring of the Sun, and Grandſon to the God* Ho-hang-ho, *be by this River prevented in my Eſcape?* He had no ſooner concluded his Ejaculation, than the Fiſh, binding themſelves together, made a Bridge, over which he paſſed. On the other Side he met three Perſons, one dreſſed in hempen Cloth, the ſecond in a quilted Garment, and the third covered with Sea-Weeds. They accompanied him to the City *Kyi-ſhing-ku*, where he took the Name of *Kau*, ſignifying, that he came from *Kyau-kyu-li*.

Regis. 1720.

They invade China.

QUANG-VU-TI, Reſtorer of the *Han* Dynaſty, who aſcended the Throne twenty-five Years before Chriſt, again made the Kingdom of *Chau-tſyen* dependent on *Lyau-tong*, which was governed by *Chay-ſong*, famous for his Juſtice and Probity. Mean-time the King of *Kau-kyu-li* conquered the *Me*, *Japan*, the *Han*, and the *Fû-yu*, continuing the uſual Tribute to the *Chineſe* Emperors. But *Kong*, King of *Kau-kyu-li*, firſt carried the War into *China*, took the City *Hiun-tû*, and killed *Chay-ſong*, Governor of *Lyau-tong*, in Battle. However, *Kong* was defeated, in his Turn, by *Wey-tay-kyew*, the King of *Fû-yu*'s Son; and was ſucceeded by his Son *Swi-ching*, who reſtored *Hiun-tû* to the Emperor, and paid the uſual Tribute. Yet in the weak Reigns of *Whang-ti* and *Ling-ti*, he invaded that Country again: But under *Kyen-ti*, who began his Reign in the Year 196 after Chriſt, *Ken-lin*, Governor of the Province, expelled him. Part of *Swi-ching*'s Dominions were conquered by *Kong-Sun-tû*, which his Poſterity enjoyed till *Kong-ſun-ywen*, whoſe Kingdom was deſtroyed by the Dynaſty of the *Wey*.

Invaded in their Turn.

YI-MO retreated to the Foot of the Mountain *Wa-tû-han*, and was ſucceeded by *Wey-kong*, a brave and wiſe Prince, who joined the *Wey* Dynaſty in the War againſt the Succeſſors of *Kong-ſun-tû*. In the Reign of *Ming-ti* [b], he

[a] See before, *p.* 164. [b] It began in the Year of Chriſt 322.

The History.

ravaged *Ngan-ping*, and *Lyau-ſu*, in the Province of *Lyau-tong*: But *Mŭ-kyew-kyen*, the Governor, having defeated him, ſent *Vang-ki* in Purſuit, who followed him above a thouſand *Li*, till he came to the Country of the *Sŭ-ſhin*, or Eaſtern *Tartars* [a], where he erected a Stone-Monument in Memory of his Expedition.

CHAU, Great Great Grandſon of *Kong*, being created King of *Chau-tſyen* by the Emperor *Yong-kya* [b], was driven from *Wa-tu* by *Mu-yong-whang*, who demoliſhed it. *Mu-yong-pau* ſubdued *Ngan*, King of *Kau-kyu-li*, whom he made Governor of *Ping-chew*. The Kings of *Korea*, during the *Tſin*, *Song*, *Tſi*, latter *Wey*, and latter *Chew* Dynaſties, were always created by the Emperors.

Attack Lyau-tong.

IN the Year 611, and ſeventh of the Reign of *Yang-ti*, of the *Swi* Dynaſty, *Ywen*, King of *Korea*, at the Head of the *Mo-ko*, invaded *Lyau-tong*, and advanced as far as *Lyw-ſi*. The Emperor ſummoned him to appear before him, and, upon his Refuſal, went in Perſon againſt him: But the *Koreans* taking Shelter in their Cities, which they vigorouſly defended, and Proviſions falling ſhort, the Emperor was obliged to return. He thrice invaded *Korea*, with no better Succeſs. *Kyen-vû* ſucceeding his Father *Ywen*, was honoured with the Title of *Shang-chu-que*, or *chief Pillar of the State*, by the Founder of the *Tang* Dynaſty, who aſcended the Throne in 620. *Korea* was at that Time divided into five *Pu*, or Governments, that of the Court poſſeſſed the Middle; the others had Reſpect to the four Quarters of the World.

Their King aſſaſſinated.

KAY-SVEN [c], of the Family of the *Tſven*, (or *Tſivn*) ſucceeding his Father in the Eaſtern Government, aſſaſſinated *Kyen-vu*; and uſing the Body with the utmoſt Indignity, ſet *Tang*, a younger Brother of the Deceaſed, upon the Throne; but, under the Title of *Mo-li-chi*, retained the Power in his own Hands. This Traitor, who was of a ſavage Diſpoſition, pretended to be the Son of a River-God, thinking to ſecure the Veneration of the People by the Splendor of his Birth. Mean-time the *Koreans* attacked the People of *Sin-lo*; and they begged Aſſiſtance of the Emperor *Tay-tſong*, who began his Reign in 627. This Monarch having been informed of the barbarous Murder of *Kyen-vu*, ſet-out at the Head of a mighty Army, to puniſh the Criminal, and gave Orders for the King of *Ki-tan-hi*, *Pe-tſi*, and *Sin-lo*, to join him. He took two Towns, and then ſet-down before *Lyau-tong*. He was generous to his Soldiers, and tender of the Sick. One Day he helped ſome of them up with a Load of Earth, which they were carrying to fill the Trenches; which noble Act of Humility made the Officers proud to imitate his Example.

AT laſt having ordered Fire to be ſet to ſome combuſtible Matter, the Wind carried the Flames into the City; which occaſioned a general Conflagration, wherein above ten thouſand Men periſhed. He then reduced it to a City of the ſecond Order, and called it *Lyau-chew*. The Imperial Army beſieged *Ngan-ſhi*; to the Relief of which *Kyau-yen-ſhew*, and *Kau-whey-chin*, came, at the Head of an hundred and fifty thouſand *Mo-ko*. The Emperor having obſerved a ſhooting-Star fall in the *Mo-ko* Camp, believed it a happy Omen, and next Morning attacked their Trenches, and routed them. The two Generals ſubmitted to the Emperor's Mercy, who gave them Poſts; but ordered three thouſand of the *Mo-ko* of *Ping-yang* [d] to be buried alive. He named the Mountain, at the Foot of which he was incamped, *Hyu-king-chong*, and cauſed a Monument, with an Inſcription, to be erected there.

AFTER this the *Sin-lo* obtained the Aſſiſtance of *Kau-tſong* (who began his Reign in 650) againſt the *Koreans* and *Mo-ko*, who had declared War againſt them, and taken thirty-ſix of their Towns. Mean-time *Kay-ſven* dying, was ſucceeded as *Mo-li-chi* by his Son *Nan-ſeng*; who diſagreeing with his younger Brothers *Tſven-nan-kyen*, and *Tſven-nan-chan*, came in Perſon to implore his Majeſty's Aſſiſtance. *Tſing-tu*, younger Brother of *Kay-ſven*, likewiſe waited on the Emperor, and gave-up to him Part of his Dominions. *Kau-tſong*, in 667, ſent an Army under *Li-tſing*, againſt the *Koreans*; who having be-

[a] While *Vang-ki* was in this Country, the Natives told him, that their Fiſhermen were often driven by Storms to an Iſland, where the Language was different, and the Inhabitants on the ſeventh Month, annually drowned a Virgin in the Sea. They alſo informed him of another Kingdom, peopled only by Women, who conceived of themſelves, and carried the Fœtus in their Stomach: They had no Breaſts, but ſuckled the Child for an hundred Days by a Tuft of Hair behind the Neck, which yielded a Liquor like Milk; and the Infant grew more in that Time, than another did in four Years. They added, that the Sea-Coaſt was inhabited by Men with two Faces, who underſtood no Language, and ſtarved themſelves when taken: That they once ſeized a Man cloathed in the *Chineſe* Manner, whoſe Sleeves were thirty Feet long; and that this Country was near the Eaſtern Boundary of *Wo-tſyu*. Such are the romantic Imaginations of theſe People.

[b] Another Hiſtory relates, that *Kau-lyen*, King of *Kau-li*, in the Reign of the ſame *Kong-kya*, conquered *Korea*, and took *Pe-jam*, where he fixed his Court: That he made himſelf Maſter of that Part of *Lyau-tong* on the Eaſt of the River *Lyau*, and frequently invaded *Lyau-ſi*, or *Weſtern Lyau*; but *Lyau-tong* was recovered by *Fang-tay-tſong*. this Account *Kau-chau* is the ſame Perſon with *Kau-lyen*.

[c] In the Original, *Kay-ſu-ven*.

[d] As in Map; *Ping-jang*, or *Pin-jang*, as in this Hiſtory.

Regis. 1720.

sieged *Ping-yang*, *Tsang*, the titular King of *Korea*, with about an hundred Attendants, surrendered himself. But *Nan-kyen* defended the City with wonderful Bravery, till betrayed by one of his Generals, who, when *Li-tsing* set Fire to a Gate by Agreement, delivered it into his Hands. *Nan-kyen* was made Prisoner, and *Korea* divided into five Governments, consisting of one hundred and seventy principal Cities, and six hundred and ninety thousand Families [a].

ABOUT the Year 687, in the Reign of the Empress *Vu-hew*, *Pau-ywen*, Grandson of *Tsang*, last King of *Korea*, was created King of the second Rank of *Chau-tsyen*, to which *Korea* had changed its Name from *Kau-li*. About the Year 927, *Vang-kyen*, who governed *Korea*, assumed the Dignity of King (and founded a Dynasty.) He subdued the Kingdoms of *Pe-tsi*, and *Sin-lo*, and removed the regal Seat from *Pin-jam*, which he called *Si-king*, or the Western Court, eastwards to the Foot of the Mountain *Song-yo*.

FOR three Reigns under the *U-tay*, the Kings of the House of *Vang* paid their Tribute regularly to the Emperors. *Vang-chau*, King of *Chau-tsyen*, paid Homage to *Tay-tson*, Founder of the *Tsong* Dynasty, who came to the Empire in 960. *Chi*, the third King from *Vang-chau*, was forced to pay Homage to the *Ki-tan Tartars*, who conquered the Northern Parts of *China*, and were called *Lyau*. These People took from *Vang-sun*, second Successor to *Chi*, six of his Towns; who thereupon removed his Court at a greater Distance from them: But having entered into a League with the *Nyu-ché* [b] *Tartars*, who destroyed the *Lyau*, and fixed themselves in the Northern Parts of *China*, he expelled the *Ki-tan* from his Dominions, and again paid Tribute to the *Chinese* Emperor; who received his Ambassadors with particular Marks of Favour, because of his Bravery against the *Ki-tan*.

THE *Nyu-ché* had been formerly subject to the *Koreans*, who were, in their Turn, subdued by the *Nyu-ché*. Their Princes assumed the Title of Emperor, and gave the Name of *Kin* [c] to their Family; which, however, is not reckoned among the Dynasties, because they never were Masters of all *China*, the Emperors of the House of *Song* still keeping Possession of the Southern Provinces. The Emperor *Kau-tsong*, who mounted the Throne in 1127, sent an Ambassador to the *Koreans*, to prevent their joining the *Kin*; who to hinder their Friendship with the *Chinese*, sent *Vang-chû* into *Korea*, and created him King.

CHE, King of *Korea*, sent *Ching* his Son, and presumptive Heir, to pay Homage to the Emperor *Li-tsong*; but the old King dying, *Ching* returned to take Possession of his Throne, which was confirmed to him by the Emperor. This Prince had paid Tribute thirty-six Times, when *Shi-tsu*, as the *Chinese*, or *Hûbilay* [d], as the *Tartars* call him, Son of *Jeng-hiz-khân*, Founder of the *Ywen* Family (in 1280) resolved to undertake the Conquest of *Japan*, and march his Army through *Korea*, in order to facilitate his Entrance. With this Design he sent an Ambassador to *Japan*, whom he ordered to pass through *Korea*, and take his Guides from thence: But the *Koreans* not allowing this, the Emperor resented it, and seizing on *Si-king*, or *Pin-jam*, called it *Tong-nin-fû*. *Shin*, who changed his Name to *Kyu*, succeeding his Father *Ching*, married a Daughter of the Emperor, and received the Seal of the Emperor's Son-in-law, with the Title of King of *Korea*; and his third Successor was called *Song*. From *Vang-kyen* to *Vang-Song*, are reckoned twenty-eight Kings of *Korea* of the *Vang* Family, during the Space of more than four hundred Years.

Disoblige the Emperor.

CHWEN, King of *Korea*, having by his Ambassadors paid Homage to the Emperor *Hong-vû*, Founder of the *Ming* Dynasty in 1368, was, by that Monarch, created King of *Kau-li*, presented with a Silver Seal, and vested with the ancient Privileges of sacrificing to the Gods of the Rivers and Mountains of *Korea*. In the seventeenth Year of *Hong-vû*, the Ambassadors of *Korea* having engaged in the Conspiracy of *Hû-vi-yong*, against that Monarch, refused to do the usual Homage: But the Affair being discovered, the Emperor ordered the *Koreans* to be declared Enemies. Soon after the Ambassadors of *Korea* arriving at *Lyau-tong*, the Governor sent Advice

Pay him Homage.

[a] *Du Halde's China*, p. 377, *& seq.* [b] The Author observes in a Note, that the *Nyu-ché*, under the *Han*, were called *Yew*; in the Time of *Vu-sang*, they bore the Name of *Su-shin*; under they *Wey*, that of *Uki*; under the *Swi*, that of *Mo-ko*; and under the latter *Tang*, that of *Nyu-ching*; which *Song* altered to *Che*, because a *Tartarian* Emperor of the *Lyau* Dynasty was named *Ching*. However, it is probable, that these different Names did properly belong not to all the Nations inhabiting that vast Tract of Land, lying between the Rivers *When-tong-kyang*, and *He-long-kyang* (or *Amur*) *Korea*, and the Eastern Sea; but only to that People, who at different Times obtained the Superiority. Thus they may now be called *Manchews*, though the Name, strictly taken, belongs to a Nation the least considerable of any in that Country; and thus the *Mo-ko*, who there erected a mighty Kingdom, called themselves *Po-hay*. But it is not surprizing to find the same Nations called by different Appellations in *China*, as Towns, Countries, and Kingdoms, change their Names at the Pleasure of their Princes. [c] Hence their Subjects are called *Kin Tartars*, in the *Chinese* History. *Kin* signifies Gold, and the *Monguls*, or Western *Tartars*, called their King *Altun-khân*, or the *Golden King*. [d] The *Koblay*, *Kublay*, or *Koplay* of *Marco Polo*, and others.

thereof.

The History. thereof to his Majeſty, who accepted of the Satisfaction they offered. In his twenty-ſecond Year, he ſent into *Korea* to buy Horſes, and, at the ſame Time, commanded *Lyau-yang*, and *Shin-ching*, two Towns which had been ſeized in the Province of *Lyau-tong*, to be reſtored to him. Soon after *Kyu* was dethroned, and *Vang-chang* advanced to the Sovereignty by *Li-jin-jin*, Prime-Miniſter of *Korea*; whoſe Son *Li-ching-quey*, in like Manner deprived *Vang-chang* of his Crown, and put it on the Head of *Vang-yau*, whom he ſoon removed, and placed himſelf in his Stead. Thus ended the Houſe of *Vang*.

A new Revolution. THE Uſurper changed his Name to *Tan*, and ſent a ſolemn Embaſſy to *China*, deſiring that he might be confirmed King of *Chau-tſyen*, with the uſual Formalities: But the Terms of the Petition being diſreſpectful, the Emperor refuſed the Preſents, and ordered that *Ching-tſe*, who had drawn it up, ſhould be ſent him. *Tan* obeyed, and *Ching-tſe* was baniſhed to *Yun-nan*. The Emperor *Yong-lo*, who began his Reign in 1403, confirmed the Kingdom to *Fang-ywen*, to whom his Father *Tan* had reſigned. This Prince being informed, that the Emperor had aſſigned ſome new Lands to the Gariſon of *Lyau-tong*, ſent, as his Tribute, ten thouſand Oxen for ſtocking them. *Fang-ywen* was ſucceeded by his Son *Tau*, who ſent his Tribute in Ger-falcons, or Sea-Eagles. But the Emperor refuſed them, ſaying, *Jewels and rare Animals are not what I like*. *Vang-ki-whan*, King of *Korea*, prevailed with the Emperor, *Kya-tſing*, to eraſe out of the Book of the ancient Uſages of the *Ming*, the Article relating, that *Ching-quey* had dethroned his lawful Sovereign, and uſurped his Crown; *becauſe*, ſaid the *Korean* King, *he did it at the Solicitation of the People and Grandees of the Kingdom.*

The Koreans invaded IN 1592, the twentieth Year of the Emperor *Van-lye*, *Ping-ſyew-kyi*, chief of the *Japanneſe*, invaded *Korea*. This Conqueror was originally a Slave to an Inhabitant of *Sa-mo*, and afterwards a Retailer of Fiſh. It happened as *Sin-chang*, a *Quan-pe*, or *Japanneſe* Governor, went a hunting, he obſerved *Kyi* aſleep under a Tree, and intended to kill him: But *Kyi* waking, ſpoke ſo handſomely in his own Behalf, that his Enemy relented, made him Intendant of his Studs, and named him, in *Japanneſe*, *the Man from under the Tree*. *Kyi* ſoon grew in Favour with his Maſter, who gave him a Land-Eſtate, and made him his Confident. *Sin-chang* being aſſaſſinated by *O ki-chi*, his Counſellor, *Kyi* put himſelf at the Head of the Troops, revenged his Maſter's Death by killing his Murderer, and ſucceeded to the Dignity of *Quan-pe*. He ſoon grew powerful, and by Fraud, as well as Force, made himſelf Maſter of ſixty ſmall Provinces.

THE Mountain *Kin-ſhan*, in *Korea*, and the Iſland [a] *Twi-ma-tau*, in *Japan*, are within Sight of one another, and the two Nations intermarried, and traded together. *Kyi* having formed a Deſign upon *Korea*, ſent *Hing-chang*, and *Tſing-ching*, two of his Generals, with a numerous Fleet to attack it. They landed at *Feu-ſhan*, a Village; paſſed by *Lin-tſin* undiſcovered, and dividing their Forces, took the City *Fan-te*, with ſeveral others. The *Koreans* being quite ſoftened by a long Peace, fled, upon the Approach of the Enemy. The King *Li-ſen*, wholly devoted to his Pleaſures, leaving the Government in the Hands of his ſecond Son, retired to *Ping-yang*, and afterwards to *I-chew* in *Lyau-tong*, beſeeching the Emperor to receive him as his Subject, and to reduce his Kingdom to a Province. The *Japanneſe* had already demoliſhed the Sepulchres, and plundered the Treaſury, taken the Mother, Children, and Officers of the King, and ſubdued the greater Part of the Kingdom. They inveſted *Ping-yang*, and were preparing to paſs the *Ya-lû-kyang*, in order to enter *Lyau-tong*: Upon which the *Korean* King withdrew from *I-chew* to *Ngay-chew*, and diſpatched Couriers to haſten the Succours from the Emperor. At laſt two *Chineſe* Detachments, each of about three thouſand Men, advanced towards *Ping-yang*, but were cut to Pieces, and the Commander of the firſt killed.

SONG-ING-CHANG being ſent as [b] *King-lyo*, or Superintendant-General, the *Chineſe* Forces began to rendezvous. The *Japanneſe* Generals, in order to gain Time, told the *Chineſe* they never intended to attack them, but only to make the River *Ta-tong-kyang* the Boundary of their Conqueſts, and return to *Japan*. However, they fortified the Capital of *Korea*, and poſted ſufficient Guards in all Places of Importance. During theſe Tranſactions, *Kyi* [c] conquered the King of *Shan-ching*, and aſſumed the Title of *Tay-ko*.

IN the twelfth Month *Li-yu-ſong*, the *Chineſe* General, marched through *Lyau-tong*, at the Head of ſixty thouſand Men: The Paſſage over the Mountain *Fong-whang-ſhan* [d] was ſo very difficult, that all his Horſes are ſaid to have ſweated Blood. *Shin-vi-king* was ſent before to overreach *Hing-chang*, the *Japanneſe* General, at *Ping-yang*, and perſuade him that *Li-yu-ſong* came with no other Intention, but to create his Maſter a King, for which he was inveſted with full

[a] Another Author ſays, they are about two or three Days Sail diſtant, with a fair Wind. In the Map called *Twi la-tau*. [b] The *King-lyo* has Power over Life and Death, as well as a general Inſpection into all Affairs whatever. [c] Or, *Ping-ſyew-kyi*. [d] Near the City *Fong-whang-ching*, on the Weſtern Border of *Korea*.

Powers from the Emperor. This Stratagem had the desired Effect, and *Hing-chang* sent twenty Officers to meet the *Chineſe* General, who gave Orders to a Party to apprehend them; but they ſo bravely defended themſelves, that only three were taken. This *Shin-vi-king*, having imputed to a Miſunderſtanding amongſt the Interpreters, the *Japanneſe* General ſent two truſty Perſons along with him, to compliment *Li-yu-ſong*, who treated and diſmiſſed them courteouſly.

PING-YANG is defended by a River on the South-Eaſt, and by ſteep Mountains on the Weſt: But the Place of greateſt Importance was an Eminence on the North, guarded by the *Japanneſe*. The *Chineſe* arriving before this City on the ſixth of the firſt Month, of the twenty-firſt Year of *Van-lye*, *Li-yu-ſong* drew up his Troops in order of Battle, and began to march them into it; while the *Japanneſe*, in their richeſt Accoutrements, lined the Way, and their General, from a Tower, viewed the Proceſſion. But the *Chineſe* Officers behaving with a Haughtineſs no Way conſiſtent with Friendſhip, the *Japanneſe* ſuſpected the Deceit, and put themſelves on their Guard. Hereupon *Li-yu-ſong* made a Feint to attack the Eminence on the North-Side; ordering the Detachment to retire after the firſt Charge, with a Deſign to draw the Enemy from that advantageous Poſt. In the Night the *Japanneſe* attacked the *Chineſe* Camp, but were repulſed with Loſs.

ON the eighth at Day-break, the general Aſſault was given, and the main Attack was on the South-Eaſt Side of the City. At firſt the *Chineſe* gave Ground, but *Li-yu-ſong*, by killing ſome who fled, brought the reſt back to the Charge. That General had his Horſe ſlain under him, and *Ye-chong* was ſhot quite through the Breaſt, but, to the laſt, continued to encourage his Men. *Li-yu-ſong* taking a freſh Horſe, preſſed where the Battle was hotteſt: Then ordering the Walls to be ſcaled, made himſelf Maſter of them, and the *Japanneſe* retired to the Fortreſs; thence many of them, with their General, made their Eſcape by Midnight, and paſſed the River *Ta-tong-kyang*. Two hundred and eighty-five were killed in the Action, and a great Number drowned in croſſing the River. A Detachment of three thouſand *Chineſe* formed an Ambuſcade for the Fugitives, of whom they ſlew three hundred and ſixty-two, and made ſome Priſoners. The nineteenth the *Chineſe* took the City of *Fu-kay* by Storm, killing one hundred and ſixty-five *Japanneſe*, who by theſe Defeats were now deprived of four Provinces of Korea.

CHING-KING, a *Japanneſe* General, who was Maſter of *Hyen-king*, retired to the Capital, within ſeventy *Li* [a] of which, the *Chineſe* had marched on the twenty-ſeventh, and were informed, that the Enemy had abandoned it. Their General believing the Report, put himſelf at the Head of the Light-Horſe, and advanced to the Paſs of *Pik-ti-quan*, within thirty *Li* of that City: As he was riding at full Speed to the Bridge *Ta-ſhe-kyau*, his Horſe fell, and he pitching on his Head, was almoſt killed. Immediately they were ſurrounded by an Ambuſcade of the Enemy, and a deſperate Engagement enſued. A *Japanneſe* Commander, who had on a Cuiraſs of Gold, preſſed hard upon the *Chineſe* Generaliſſimo; but being at length ſhot-through with an Arrow, and *Yang-ywen* coming up to his Relief, the Enemy was put to Flight: However, all the *Chineſe* who had paſſed the Bridge were cut in Pieces, and the Flower of their Army was loſt in this Action, which laſted from Ten of the Clock till Noon.

THE Ground was become exceeding ſlippery, by reaſon of a Thaw, accompanied with great Rains; ſo that the *Chineſe* Cavalry could not charge: Whereas the *Japanneſe* Camp was on an advantageous Ground, with a River in Front, and a Mountain in the Rear: They had likewiſe raiſed, within the Town, high Machines, filled with deſtructive Weapons: For theſe Reaſons the *Chineſe* Army retreated to *Chay-king*. In the third Month, the Spies brought Account, that there were two hundred thouſand *Japanneſe* about the Capital, and that they were plentifully ſupplied with Corn: But the *Chineſe* having fortunately burnt Part of it, which made the Enemy apprehenſive of a Scarcity, they agreed to a Peace, and yielded up the Capital. *Li-yu-ſong* entered that City the eighteenth of the fourth Month, finding forty thouſand Buſhels of Rice, and Forage in Proportion. The *Japanneſe* ſent an Ambaſſador into *China* to make their Submiſſion; yet in the mean Time attacked *Hyen-ngan* and *Tſin-chew*, and ravaged the Province of *Tſven-lo*. In the ſeventh Month they delivered up the Children, and principal Officers of the King of *Korea*; and the Emperor, in the twenty-ſecond Year of his Reign, agreed, at the Intreaty of that Prince, to accept of the Tribute offered by the *Japanneſe*, and to create *Ping-ſyew-kyi* King of *Japan*, on the following Conditions. 1. That the *Japanneſe* ſhould deliver up all their Conqueſts in *Korea*. 2. That *Tay-ko* [b] ſhould ſend no Ambaſſador into *China*: And, 3. Swear never to invade *Korea*.

Li-TSONG-CHING, Marquis of *Lin-whay*, was ſent Ambaſſador to *Japan*, with proper Powers to create *Tay-ko* King. That Lord

being

The History.

being much given to the Sex, *I-chi*, Governor of *Twi-ma*, who had married the *Japanneſe* General's Daughter, and knew the Ambaſſador's Foible, ſent him, as ſoon as he arrived there, three handſome young Women, by Turns, into his Tent. This Entertainment he was not diſpleaſed with, but being afterwards informed, that the Governor's Wife was extreamly beautiful, he had the Impudence to demand her of her Huſband, who thereupon could not conceal his Reſentment. About this Time, *Long*, a *Japanneſe* Gentleman, diſputed the Way with the Marquis, who attempted to kill him: But *Long* being aſſiſted by his Domeſtics, the Ambaſſador thought fit to ſave himſelf, by Flight; leaving every Thing, even his very Credentials behind him. He wandered about all Night, and in Deſpair hanged himſelf upon a Tree; but his Death was timely prevented by thoſe who followed him. He then fled to *King-chew*, where, by the Emperor's Orders, he was tried for his Miſconduct, and *Yang-ſang-heng* ſent in his Room [a].

Chineſe King of Japan.

PING-SYEW-KYI [b] having faſted and bathed for three Days, went to meet the Emperor's Patent; before which he proſtrated himſelf fifteen Times, and was created King of *Japan* with the uſual Formalities. The King of *Korea* being adviſed, by his Favourite *Li-chin*, to ſhew his Contempt of the new King, ſent his Compliments only by a Deputy-Governor of a City of the ſecond Rank, with a few ordinary Pieces of Silk as a Preſent. *Ping-ſyew-kyi* was highly offended, and ſaid to the Ambaſſador, *Has your Maſter already forgotten, that I conquered his Kingdom, and only, out of Regard to the Emperor, reſtored it to him? What does he imagine I am, when he ſends me ſuch a Preſent by one of your Rank? Whom does he affront, me, or the Emperor? But ſince I am treated in this Manner, my Forces ſhall not leave* Korea, *till the Emperor chaſtiſes the King your Maſter.* The next Day he ſent with his Tribute, which was very rich, two Remonſtrances, one acknowledging his Obligations to the Emperor, and the other demanding Juſtice of the King of *Korea*.

The War renewed.

IN the twenty-fifth Year of *Van-lye*, the War was renewed, and the *Japanneſe* under the Command of *Tſing-ching*, and *Hang-ching*, invaded *Korea* with a Fleet of two hundred Sail. They took *Nan-ywen-fû*, the Governor of which fled bare-footed, upon their firſt Approach, and ſoon made themſelves Maſters of *Tſven-chew*: Likewiſe of *Nyau-ling*, and *Chong-chew* on the Eaſt, *Nan-ywen*, and *Tſven-chew* on the Weſt; Cities commanding the narrow Paſſes leading to the Capital, which was by this Means in a Manner blocked-up. *Tſing-ching* fixed his Quarters at *Tun-tſing*, ſix hundred *Li* [c] from the Capital, and *Hang-ching* at *King-ſhang*, four hundred *Li* from thence. The *Chineſe*, headed by *Haw-quey*, laid Siege to the latter; but upon a Report, that the Enemy had received Succours, he fled: Hereupon his Army diſperſing, twenty thouſand of them were killed; for which Cowardice *Haw-quey* was put to Death.

IN the ninth Month of the twenty-ſixth Year of *Van-lye*, *Lew-ting* marched againſt *Hing-chang*, but propoſed to him a Conference, wherein Affairs might be amicably adjuſted. The *Japanneſe* General agreed to the Propoſal, and next Day went to the Place appointed, attended only by fifty Horſe. *Lew-ting*, who had laid an Ambuſcade, and cauſed one of his Officers to perſonate him, went as one of his Retinue, dreſſed like a common Soldier. *Hing-chang* was received by the pretended General with extraordinary Honours: But as he ſat at Table, looking ſteadfaſtly on *Lew-ting* in his Diſguiſe, *Surely*, ſaid he, *this Soldier has been unfortunate.* *Lew-ting* ſurprized at this Speech, goes-out of the Tent, and gives the Signal to the Ambuſcade by firing a great Gun. *Hing-chang* ſuſpecting the Treachery, in an Inſtant mounted, with his Attendants, who forming themſelves into a Triangle, pierced through the *Chineſe* Troops, making a dreadful Slaughter, and eſcaped. Next Day *Hing-chang* ſent to thank the *Chineſe* General for his Entertainment, who endeavoured to excuſe the Firing of the Gun as an Accident. *Hing-chang* appeared to be ſatisfied with the Apology, and ſent him a Woman's Head-dreſs as a Preſent. *Lew-ting* immediately made an Attack, but was every-where worſted. At laſt, upon the Death of *Tay-ko*, in the Year 1598, the twenty-ſixth of *Van-lye*, the *Japanneſe* returned to their own Country, and put an End to the War which had laſted ſeven Years.

LI-TUN, the preſent King of *Korea* [d], is of the *Li* Family. In 1694, he preſented the following Petition to the Emperor *Kang-hi*.

"THIS Petition is preſented by the King "*Chaw-tſyen*, with a Deſign to ſettle his Family, and ſhew the Deſires of his People."

"I, YOUR Subject, am a Man amongſt the "Unfortunate: I was long without an Heir, "till at laſt, to my great Joy, I had a Son by "Concubine, whom I thereupon exalted; but "from this falſe Step all my Unhappineſs ſprung. "I obliged Queen *Min-ſhi* to retire, and made "*Chang-ſhi* Queen in her Stead, of which I then "informed your Majeſty. But now I reflect

[a] *Du Halde's China*, p. 379, *& ſeq.* [b] Here and afterwards written *Pin-lyew-kyi*. [c] Sixty Leagues. [d] That is, about the Year 1720, when *Regis* wrote this Relation.

" that *Min-ſhi* was created Queen by your Ma- a
" jeſty, that ſhe has governed my Family, aſ-
" ſiſted me in Sacrifices, waited upon the Queen
" my Great Grandmother, and the Queen my
" Mother, and mourned with me three Years:
" I ought, therefore, to have treated her ho-
" nourably; but I yielded to my Imprudence,
" for which I am at preſent extreamly concern-
" ed. Now, to comply with the Deſires of my
" People, I intend to reſtore *Min-ſhi* to her
" former Dignity, and again to reduce *Chang-* b
" *ſhi* to the Condition of a Concubine. By
" theſe Means my Family will be put in Order,
" and a Reformation of Manners begun in my
" Kingdom."

" I YOUR Subject, though by my Ignorance
" and Stupidity I have diſgraced the Title of
" my Anceſtors, yet have ſerved your Majeſty
" theſe twenty Years, and all that I am I owe
" to your Goodneſs, which, like Heaven, ſhields
" and defends me. There is no Affair, whether
" public, or private, that I conceal from you,
" which makes me preſume to ſolicit your Ma-
" jeſty, two or three Times, about this Affair.
" I am indeed aſhamed to tranſgreſs the Bounds
" of my Duty; but as the Matter concerns my
" Family, and is agreeable to the Wiſhes of my
" People, I thought I might, without Breach
" of Reſpect, lay it before your Majeſty."

1653. Hamel.

THE Tribunal of Ceremonies, to whom this Petition was referred, were of Opinion, that it ought to be complied with; and accordingly Ambaſſadors were ſent to create the Queen, with the uſual Formalities. But the Petition which the King ſent next Year to the Emperor, being wanting ſomewhat in Point of Reſpect, the ſame Tribunal condemned him to pay a Fine of ten thouſand *Chineſe* Ounces of Silver, and for three Years allowed him no Return for the annual Tribute [a].

CHAP. II.

TRAVELS *of ſome* Dutchmen *in* KOREA, *with an Account of the Country, and their Shipwreck on the Iſland of* Quelpaert.

By Henry Hamel.

Tranſlated from the French.

INTRODUCTION.

THE following ſhort Relation was firſt printed by the Author in *Holland*, where the eight Men, who returned from *Korea*, were then living: Theſe having been examined by ſeveral Perſons of Reputation, all confirmed what the Secretary of the Ship, as he calls himſelf, had written. This ſeems to render the Narrative ſufficiently authentic, in the Opinion of the *Engliſh* Tranſlator [b]; who obſerves, that according to the *French* Editor, in his Preface, there is nothing aſſerted in the Deſcription of *Korea*, d which does not agree with what *Palafoix*, and others who wrote of the *Tartar* Invaſion, had ſaid before. However true this may prove, with regard to the Cuſtoms of the People (which, as well as the Form of Government, ſeems to be nearly the ſame with the *Chineſe*) there ſeems to c lie an Objection againſt the Geography of the *Dutch* Author, *viz.* that it does not correſpond with the Map of *Korea*, as to the Names of any of the Cities [c] in the Road, which the *Dutchmen* took from the Sea-Coaſt to the Capital of that Kingdom, or even that of the Capital itſelf: Eſpecially ſince that Map was taken from one hung-up in the King's Palace, and gives the indigenous Names to Places, unleſs the Names be written by the Miſſioners, according to the *Chineſe*, inſtead of the *Korean* Language: For though both Nations uſe the ſame Characters, their Languages are different. As the Author reſided thirteen Years in *Korea*, the Tranſlator thinks he might have publiſhed a more ample and ſatisfactory Account of it. Be that as it will, we may be content, provided it is but genuine,

[a] *Du Halde's China*, p. 381. [b] This Tranſlation is inſerted in the fourth Volume of one of our great *Engliſh* Collections, under the Title of *An Account of the Shipwreck of a* Dutch *Veſſel on the Coaſt of* Quelpaert, *together with the Deſcription of the Kingdom of* Korea. [c] The Names given by *Hamel* to the Provinces, differ alſo from thoſe in the Relation of *Regis*.

Voyage to Quelpaert.

since that which the Missioners have sent-over is much more scanty. At the End of the Journal [a], we meet with the Names both of those who returned from *Korea*, and those who were left behind, making in all but sixteen out of thirty-six, who were saved from the Wreck thirteen Years before.

Those who returned from *Korea*, were

Henry Hamel, of *Gorcum*, Secretary to the Ship, and Author of this Account.
Godfrey Denis, of *Rotterdam*.
John Piters, of *Uries* in *Friezland*.
Gerard Jans, of *Rotterdam*.
Matthew Yhocken, of *Enchuysen*.
Cornelius Theodorick, of *Amsterdam*.
Benet Clerc, of *Rotterdam*.
Denis Godfrey, of *Rotterdam*.

The Names of those who remained in *Korea*,

John Lampe, of *Amsterdam*.
Henry Cornelius, of *Ureelandt*.
John Nicholas, of *Dort*.
Jacob Jans, of *Norway*.
Anthony Ulders, of *Embden*.
Nicholas Arents, of *Ost-Voren*.
Alexander Bosquet, a *Scotchman*.
John, of *Utrecht*.

SECT. I.

Their Shipwreck *on* Quelpaert, *and* Travels *in* Korea.

1. *Their* Voyage *to* Quelpaert, *and* Shipwreck *there*.

Departure from Holland. *Great Storms. Their Distress. The Ship wrecked: How treated by the Natives. The Wreck secured for their Use: Sent-up to the Governor: Are closely confined, but kindly used: They meet with a* Dutchman, *sent as Interpreter. Very good Governor. A very bad one. Some attempt to escape: Taken, and punished.* Quelpaert *described.*

Their Departure from Holland.

THEY left the *Texel* in the *Sparrow-Hawk*, on the tenth of *January* 1653, in the Evening; and after many Storms, and much foul Weather, came to an Anchor the first of *June*, in the Road of *Batavia*. As soon as they had refreshed themselves, they set-sail the fourteenth of the same Month, by Command of the Governor-General, for *Tayowan* [b], where they arrived the sixteenth of *July*. They carried with them Mynheer *Cornelius Lessen*, who went to take Possession of the Government of that City, and *Formosa*, in Place of Mynheer *Nicholas Verburge* [c], who had resided there three Years. The thirtieth they, by Order of the Council, departed for *Japan*: But next Day, towards the Evening, as they were getting out of the Channel of *Formosa*, there arose a Storm, which increased all Night.

THE first of *August*, in the Morning early, they perceived themselves close-upon a small Island, where, with much Difficulty, they at length came to an Anchor; for in most Parts of that Sea there is no Bottom. The Fog clearing-up, they found themselves so near the Coast of *China*, that they could easily discern armed Men scattered along the Shore, expecting to make their Advantage of the Ship's Wreck [d]: But though the Storm increased, they there continued all that Day, and the Night following, in Sight of them. The third Day they perceived the Storm had driven them twenty Leagues from their Course, so that they were again in Sight of *Formosa*. They plied betwixt that Island and the Continent, the Weather somewhat cold. What troubled them most, was, that the uncertain Winds and Calms kept them in that Channel till the eleventh of the same Month, when a South-East Wind grew-up into a Storm, with a heavy Rain, and forced them to run North-East, and North-East by East. The three following Days the Weather continued still more tempestuous, and the Wind shifted so often, that they were continually hoisting and lowering their Sails.

BY this Time the frequent Beating of the Sea had much weakened their Vessel, and the continual Rain obstructed their making any Observation; for which Reason they were forced to furl all their Sails, strike the Yards, and commit themselves to the Mercy of the Waves. On the fifteenth the Ship took-in so much Water, that there was no mastering it. That Night their Boat, and the greater Part of their Gallery, were carried away, by the continual breaking-in of the Waves, which shook their Bolt-sprit, and endangered their Prow: Nor was it possible to repair the Damage sustained, the Gusts of Wind were so violent, and came so close one upon another. At length a Wave breaking over their Stern, had like to have washed-away all the Seamen who were upon the Deck, and filled the Ship so full of Water, that the Master cried out, to cut-down the Mast by the Board immediately, and go to their Prayers, saying, if one or two such Waves should return, they were inevitably lost.

THIS was their Condition, when the second

[d] Rather to guard the Coast against Smugglers, or *Koxinga*'s Men.

Watch

Watch being juſt run-out, he who looked a-head, cried, *Land, Land*, adding, *that they were not above a Muſket-Shot from Shore*, which they could not deſcry ſooner for the Rain and Darkneſs of the Night. They could not come to an Anchor, becauſe they found no Bottom; and while they were endeavouring at it, in vain, three ſucceſſive Waves ſprung ſuch a Leak in the Veſſel, that they who were in the Hold were drowned before they could get-out. Some of thoſe on the Deck leaped over-board, and the reſt were carried-away by the Sea. Fifteen of them got aſhore, for the moſt Part naked, and much hurt. They thought, at firſt, none had eſcaped except themſelves; but in climbing the Rocks, they heard the Voices of ſome Men complaining, whom next Day, by calling and ſeeking about the Strand, they met-with, ſcattered here and there: So that they made-up thirty-ſix, no more remaining out of ſixty-four, and moſt of them dangerouſly hurt.

IN ſearching the Wreck, they found a Man wedged betwixt two Planks, which had ſo preſſed his Body, that he lived but three Hours: But of all who periſhed, they could find only their Captain, *Egbertz*, of *Amſterdam*, ſtretched-out on the Sand, ten or twelve Fathom from the Water, with his Arm under his Head, whom they buried: Nor had the Sea caſt any of their Proviſions aſhore, except one Sack of Meal, a Caſk with ſome ſalt Meat, a little Bacon, and a Hogſhead of Claret. Their greateſt Trouble was, to contrive how to make a Fire, concluding they were on ſome Deſert-Iſland. Towards Evening the Wind and Rain ſomewhat abating, they gathered enough of the Timber, and Sails of the Wreck, to make ſome Shelter againſt the Weather.

THE ſeventeenth as they were lamenting their deplorable Condition, ſometimes complaining that they ſaw no-body, and ſometimes flattering themſelves with the Hopes of being near *Japan*, they ſpied a Man about a Cannon-Shot diſtant, to whom they called, and made Signs; but as ſoon as he ſaw them he fled. Afternoon they ſpied three more, one carried a Muſket, and his Companions Bows. Being come within Gun-Shot, they halted, and perceiving the *Dutchmen* made towards them, ran-away, though they endeavoured to inform them, by Signs, that they deſired nothing but Fire. At laſt one of the Company reſolving to attack them, they delivered up their Arms without Oppoſition, and thus kindled their Fuel. Theſe Men were clad after the *Chineſe* Faſhion, excepting only their Hats, which were of Horſe-Hair; and the *Dutch* were much afraid leſt they ſhould be wild *Chineſe*, or Pirates. Towards Evening there came an hundred armed Men, clad like the former, who after counting, kept them incloſed all Night. 1653. Hamel.

NEXT Day at Noon, there coming-down about two thouſand Men, Horſe and Foot, who drew-up in order of Battle before their Hut, or Tent, their Secretary, the chief Pilot, and his Mate, with a Boy, went-out to meet them. When they were brought to the Commander, he ordered a great Iron Chain to be put about the Neck of each of them, with a little Bell, in which Condition they were obliged to proſtrate themſelves before him. Thoſe in the Hut were treated in the ſame Manner, all the Iſlanders, at the ſame Time, raiſing a great Shout. When they had lain ſome Time flat on their Faces, Signs were made for them to kneel, and ſome Queſtions were put to them, which they did not underſtand; nor could they, on the other Hand, make the Natives ſenſible, that they intended to have gone to *Japan*; for they call that Country *Jeenare*, or *Jirpon*. The Commander perceiving he could make nothing of all they ſaid, cauſed a Cup of Arak [a] to be given each of them, and ſent them back to their Tent, ordering their Conductors to let him ſee their Proviſions; which having viewed, an Hour after they brought them Rice boiled in Water; but believing they were almoſt ſtarved, gave them not much, for Fear it ſhould do them Hurt. *By the Natives.*

AFTER Dinner, they came with Ropes in their Hands, which greatly ſurprized the *Dutch*, imagining they intended to ſtrangle them: But their Fear vaniſhed, on ſeeing them run towards the Wreck, to draw aſhore what might be of uſe to them. At Night they gave them more Rice to eat; and their Maſter having made an Obſervation, found they were in the Iſland of *Quelpaert*, which is in thirty-three Degrees thirty-two Minutes of Latitude [b]. *The Wreck ſecured*

THESE People were employed all the nineteenth in getting aſhore the ſad Remains of the Wreck, drying the Cloaths, and burning the Wood, to get the Iron, being very fond of that Metal. Beginning now to grow ſomewhat familiar, they went to the Commander of the Forces, and Admiral of the Iſland, who was alſo come-down, and preſented each with a Proſpective-Glaſs, and a Pot of Red-Wine, beſides the Captain's Silver Cup, found among the Rocks. They liked the Liquor ſo well, that they drank till they were very merry; but returned the Silver Cup, with many Tokens of Friendſhip.

THE twentieth they made an End of burning all the Wood of the Ship, and ſaving the Iron: During which Time, the Fire they made coming to two Pieces of Cannon loaded with Ball, they *For their Uſe.*

[a] We call it Rack.

[b] *Hamel*, as before, *p.* 575, *& ſeq.*

Voyage to Quelpaert.

gave ſo great a Report, that they all fled, and durſt not go-near the Veſſel, till the *Dutch* had aſſured them, by Signs, that they need not fear the like Accident any more. This Day they brought them Rice twice, to eat. Next Morning the Commander gave them to underſtand, by Signs, that they muſt bring before him whatever they had ſaved in their Tent, in order to be ſealed; which was done in their Preſence. Meanwhile certain Perſons being brought to him, who had converted to their own Uſe, ſome Iron, Hides, and other Things ſaved out of the Wreck, were immediately puniſhed before them, to let them ſee, that their Deſign was not to wrong them of any of their Goods. Each of the Thieves had thirty or forty Strokes on the Soles of his Feet, with a Cudgel ſix Foot long, and as thick as a Man's Arm. This Puniſhment was ſo ſevere, that ſome of their Toes dropped-off.

Sent up

ABOUT Noon they were given to underſtand, that they muſt depart. Thoſe who were well had Horſes provided for them, and the Sick were carried in Hammocks. They ſet-forward, attended by a numerous Guard of Horſe and Foot; and travelling four Leagues, came at Night to a little Town called *Tadiane*; where, after a ſlender Repaſt, they were carried into a Warehouſe much like a Stable. The twenty-ſecond, at Break of Day, they departed, in the ſame Order as before, and travelled to a little Fort, near which there were two Galliots. Here they halted to dine, and at Night came to the Town of *Moggan*, or *Mokſo* [a], where the Governor of the Iſland reſides. They were all conducted to the Square before the Town-Houſe, where about three thouſand Men ſtood under-Arms; ſome of whom coming forwards, gave them Water to drink in Diſhes; but being armed after a terrible Manner, the *Dutchmen* imagined their Deſign was to kill them. Their very Habit increaſed their Fear, for it had ſomewhat frightful, which is not ſeen in *China*, or *Japan*.

Of the Governor.

THEIR Secretary, accompanied with ſome others, was carried to the Governor. When they had lain a-while proſtrate, a Sign was made to the reſt to do the ſame, near a Sort of Balcony before the Houſe, where he ſat like a King. After this, he cauſed them to be aſked, by Signs, whence they came, and whither they were bound. They anſwered, that they were *Hollanders*, and bound for *Nangaſaki* in *Japan*. Thereupon he ſignified, by bowing his Head a little, that he underſtood ſomething of what they ſaid. Then he ordered them to paſs in Review by four and four at a Time; and having put the ſame Queſtion to each of them, ordered them to be carried to the ſame Houſe, where the King's Uncle, who had attempted to uſurp the Throne, had been confined, and died.

As ſoon as they were all in, the Houſe was beſet with armed Men. They had a daily Allowance of twelve Ounces of Rice a Man, and the ſame Quantity of Wheaten Meal, but very little beſides, and ſo ill-dreſſed, that they could not eat it. Thus their common Meals were for the moſt Part only Rice, Meal, and Salt, with Water to drink. The Governor, who was ſeventy Years of Age, was a very underſtanding Man, and in good Eſteem at Court. When he diſmiſſed them, he made Signs, that he would write to the King to know his Pleaſure concerning them, but that it would be a conſiderable Time before he could receive an Anſwer, becauſe the Diſtance was fourſcore Leagues, all but ten, by Land; they therefore begged him to order, that they might have Fleſh ſometimes, and other Kinds of Victuals. They alſo obtained Leave for ſix of them to go abroad every Day, by Turns, to take the Air, and waſh their Linen. He did them the Honour often to ſend for, and make them write ſomething before him, both in his own, and the *Dutch* Language. By this Means they began to underſtand ſome Words. As he was pleaſed ſometimes to diſcourſe with, and divert them with little Amuſements, they began to conceive Hopes of getting-over one Day to *Japan*. He took ſuch Care of their Sick, that, ſays the Author, we may affirm we were better treated by that Idolater, than we ſhould have been among Chriſtians.

THE twenty-ninth of *October*, the Secretary, Maſter, and Surgeon's Mate, were carried before the Governor, where they found a Man ſitting who had a great red Beard. The Governor aſked them who they took that Man to be? And having told him they ſuppoſed he was a *Dutchman*, he fell a laughing, and ſaid they were miſtaken, for he was a *Koreſian*. After ſome farther Diſcourſe, the Man, who till then had been ſilent, aſked them in *Dutch*, who they were, and of what Country? They returned an Anſwer, adding an Account of their Misfortune. Then taking the Boldneſs to aſk him the ſame Queſtions, in their Turn, he ſaid, his Name was *John Wettevree*, that he was born at *Riip* [b] in *Holland*, from whence he came as a Volunteer in 1626, a-board the Ship *Hollandia*: That next Year going to *Japan* in the *Ouderkeres* Frigate, the Wind drove them on the Coaſt of *Korea*: That wanting Water, and being one of thoſe who were commanded aſhore to get Proviſions, he and two more, named *Theodorick Gerard*, and *John Pieters*, had been taken by the Inhabitants and killed ſeventeen or eighteen Years before

[a] In the Original, *Mocxo*.

[b] *Riip* is a great Village in *North-Holland*.

the Wars, when the *Tartars* invaded *Korea*: a That he was fifty-eight Years of Age, and that his Abode was in the capital City of *Korea*, whence the King had ſent him, to know who they were, and what had brought them into his Dominions. He added, that he had often aſked Leave of the King to go-over to *Japan*, without ever obtaining any other Anſwer, than that he muſt never expect it, unleſs he had Wings, and could flie thither: That the Cuſtom of the Country was, to detain all Strangers, but that b they wanted for nothing, being provided with Diet and Cloaths as long as they lived.

THIS was no pleaſing News to the *Dutchmen*: But the Joy of finding ſo good an Interpreter diſpelled their Melancholy. Yet he had ſo forgotten his Mother-Tongue, that they had much to do at firſt to underſtand him; but he recovered it again in a Month's Time. The Governor having cauſed all their Depoſitions to be taken in Form, ſent them to Court, and bade c them be of good Cheer, for that they ſhould have an Anſwer in a ſhort Time. Mean-while he daily beſtowed new Favours on them, giving Leave to *Wettevree*, and the Officers who came with him, to ſee them at any Time, and acquaint him with their Wants.

THE Beginning of *December* a new Governor came, their Benefactor's three Years being expired. It would be hard to expreſs the Kindneſs he ſhewed them at his Departure, inſomuch that d ſeeing them ill-provided againſt Winter, he cauſed two Pair of Shoes, a Coat well-lined, and a Pair of Stockings of Skins to be made for each of them. He likewiſe treated them nobly, declaring that he was ſorry it had not been in his power to ſend them over to *Japan*, or carry them with him to the Continent. He added, that they ought not to be troubled at his going-away, becauſe, being at Court, he would uſe all his Endeavours to obtain their Liberty, or have e them carried thither. He reſtored them the Books they had ſaved, with ſome other Parcels of Goods, giving them, at the ſame Time, a little of precious Oil. He likewiſe got the new Governor to mend their Allowance, which he had reduced to Rice, Salt, and Water.

BUT after that Lord's Departure, which was in *January* 1654, they were much worſe uſed than before, for Barley was given them inſtead of Rice, and Barley-Meal in Place of Wheat; f the firſt of which they were forced to ſell, to procure other Food. This hard Uſage tempted them to think of making their Eſcape in the approaching Spring, and the rather, as the King's Order did not come for carrying them up to Court. After long conſulting how they might eſcape on a Boat in a dark Night, at length ſix of them reſolved to execute this Deſign about the End of *April*: But one of the Gang having gotten a-top of the Wall, in order to ſee where the Bark lay, was diſcovered by ſome Dogs, whoſe Barking alarmed the Guards. 1653. Hamel.

THE Beginning of *May*, the Maſter going abroad with five others, as he was walking, obſerved, at a little Hamlet near the City, a Bark well-fitted up, without any-body to guard it. He preſently ſent one of his Company to get a little Boat, and ſome ſhort Planks. Then making each Man drink a Draught of Water, he went aboard, without taking-care for any more. Whilſt they were labouring to draw the Bark over a little Shoal that was near it, ſome of the Inhabitants diſcovered their Deſign; and one of them running-out with a Muſket, went-into the Water to oblige them to return: Yet that did not hinder them from proceeding, except one, who not being able to get-up to the reſt, was forced to go-back to Land. The other five c attempting to hoiſt the Sail, both Maſt and Sail fell into the Water. They ſoon got Things to Rights again, with much Labour; but as they endeavoured a ſecond Time to hoiſt Sail, the End of the Maſt broke-off ſhort, and could not poſſibly be mended. Theſe Delays giving the Natives Time to get into another Bark, they ſoon overtook the Fugitives; who, notwithſtanding their Weapons, nimbly boarded them, hoping to make themſelves Maſters of the Veſſel: d But finding it full of Water, and unfit for Service, they all ſubmitted. *Some attempt to eſcape.*

BEING carried before the Governor, he cauſed them to be laid flat on the Ground, and their Hands chained to a great Log: Then the reſt being brought alſo bound and manacled, the Priſoners were aſked, whether they were privy to their Flight? This all the ſix poſitively denying, *Wettevree* was ſet to examine what their Deſign was: And they anſwering, it was no other, but e to go to *Japan*, *How durſt you*, ſaid the Governor, *attempt that Paſſage without Bread and Water?* They replied, *they had choſen rather to expoſe themſelves, once for all, to the Danger of Death, than to die every Moment.* Hereupon the unfortunate Wretches had each twenty-five Strokes given him on the bare Buttocks, with a Cudgel a Fathom long, four Fingers broad, and an Inch thick, being flat on the Side that ſtrikes, and round on the other. Theſe Strokes were ſo f unmercifully laid-on, that the Sufferers were forced to keep their Beds a Month; and though the reſt were unbound, yet they were confined, and ſtrictly guarded Day and Night. *Taken, and puniſhed.*

QUELPAERT, which the Natives call *Sehe-ſure*, lies twelve or thirteen Leagues South of the Coaſt of *Korea*, and is fourteen or fifteen Leagues in Compaſs. On the North-Side of it is a Bay, where ſeveral Barks lie, and from whence they *Quelpaert deſcribed.*

Travels in Korea.

sail for the Continent: Which is of very dangerous Access to those unacquainted with it, on Account of the hidden Rocks, and that there is but one Road where Ships can anchor and tide under Shelter; for in all other Places they are often driven over to the Coast of *Japan*. The Island is quite surrounded with Rocks, but abounds in Horses and Cattle; yet these paying great Duties to the King, the Natives are very poor, and despised by the Inhabitants of the Continent. In this Island, there is a Mountain of a vast Height, covered with Woods; besides several small Hills, which are naked, interspersed with Vales abounding in Rice [a].

2. *Their* Journey *to the Capital of* Korea, *and other* Adventures.

Sent for to Court: The Road thither: Arrive at the Capital: Entered in the Guards: Caressed by many. A strong Castle. Severe Cold. Attempt of two unlucky to the rest. Shipwreck on Quelpaert. *The* Dutch *in Danger. Banished from Court: Are hardly used by the Governors: Get Leave to beg.*

Sent for to Court.

THE latter End of *May*, Orders came to carry them up to Court. Six or seven Days after, they put them into four Boats, with Fetters on their Feet, and one Hand made fast to a Block, to prevent their leaping into the Water, which otherwise they might easily have done, all the Soldiers being Sea-sick. After two Days struggling with contrary Winds, they were put-back, and their Irons being taken-off, returned to their former Prison at *Quelpaert*. Four or five Days after, being shipped again betimes in the Morning, towards Evening they got close-up to the Continent; and having lain all Night in the Road, landed next Morning, where their Chains were taken-off, but their Guards doubled. Presently Horses were brought, to carry them to the City *Hey-nam*, where they all met again, having been separated at Sea, and landed in several Places.

The Road thither.

THE Morning following they came to the Town of *Jeham*; where their Gunner, who had never enjoyed Health since the Shipwreck, died, and was buried, by the Governor's Order. Next Night they came to the City *Nadioo*; the Day following to *Sansiang*; thence to *Tongap*, after crossing a high Mountain, on the Top whereof is the spacious Fort called *Ilpam-Sansiang*. Thence they travelled to the City *Teyn*, and next Day having baited at the little Town of *Kuniga*, at Night came to the great Town of *Khin-tyu*, where formerly the King kept his Court, and at present the Governor of the Province of *Thillado* resides. It is a City of great Trade, and very famous in that Country, though a Day's Journey from the Sea. Going thence, they lay at *Jesan*, the last Town of the same Province; then at the little Town of *Gunun*, next at *Jensan*, and lastly at *Konsio*, the Residence of the Governor of the Province of *Tiongsiando*. Next Day they crossed a great River, and entered upon the Province of *Sengado*, in which *Sior*, the Capital of *Korea*, is seated.

AFTER lying many Days in several Places, they crossed a River as wide as the *Maese* at *Dordrecht* [b], and a League from thence arrived at the City of *Sior* [c]. They computed the Distance seventy-five Leagues, from their Landing to this City, all the Way Northward, only a little inclining to the West. Here for two or three Days they were lodged all in one House, and then removed into little Huts, three or four together, to remain with the *Chinese*, who were settled there. Being carried in a Body before the King, he examined them, by Means of *Wettevree*. After which they humbly beseeched his Majesty to send them over to *Japan*, that with the Assistance of the *Dutch* there, they might one Day return to their own Country. The King told them it was not the Custom of *Korea* to suffer Strangers to depart the Kingdom; but promised, at the same Time, to provide them with all Necessaries. Then he ordered them to do such Things before him as they were most expert at, as Singing, Dancing, and Leaping. After which causing Meat to be set before them, he gave to each two Pieces of Cloth, to cloath them after the *Korean* Fashion.

NEXT Day they were all carried to the General of the Forces, who ordered *Wettevree* to tell them, that the King had admitted them among his Life-Guard, and, as such, would allow them seventy *Kattis* of Rice a Month. Hereupon each had a Paper given him, in which was set-down his Name, his Age, and his Country; what Profession he followed before, and what he now was, all in their Character, sealed with the King's Great Seal, and the General's; which is nothing but the Print of an hot Iron. Together with this Commission, they delivered to each a Musket, Powder, and Ball, with Orders to give a Volley before the General every first and fourth Day of the Month; to be always ready to march into the

[a] *Hamel*, as before, *p.* 577, *& seqq.* [b] Or *Dort*. [c] It appears from the Map, that there is no *r* in the *Korean* Language; at least that there is no Name of a City with that Letter in it, provided the Names be written by the Missioners, in the *Korean* Language: Yet in this Journal we meet with two or three Names more wherein the *r* occurs. On Account of this Difference of Names, and for want of an Observation of the Latitude, there is no finding this Capital, or any of the other Cities, in the Map.

Field with him, whether the King went, or a upon any other Account. In Spring and Autumn that General reviews his Troops three Times a Month; the Soldiers likewiſe exerciſe as often in private. A *Chineſe* and *Wettevree* were appointed to command them, the former as Serjeant; the other was to have an Eye over them, and teach the Cuſtoms of the *Koreans*.

MOST of the great Men, out of Curioſity, invited them to dine at their Houſes, to ſee them exerciſe, ſhoot, and dance, after the *Dutch* Man- b ner. But, above all, their Wives and Children were eager to view them, becauſe the common People of *Quelpaert* had ſpread a Report that they were of a monſtrous Race, and, when they drank, were obliged to tuck-up their Noſes behind their Ears. Hence the People of Faſhion at *Sior* were amazed to ſee them better ſhaped than their Countrymen; above all, they admired the Fairneſs of their Complexion. They ſo thronged to ſee them, that, at firſt, they could c ſcarce walk the Streets, or be quiet at Home. At length the General put a Stop to this, forbidding all Perſons whomſoever to go-near them without his Leave; the rather, becauſe the very Slaves of great men took the Liberty to fetch them out of their Chambers, to make Sport with.

IN *Auguſt*, a *Tartar* Envoy arriving to demand the uſual Tribute, the King was forced to ſend them to a great Fort, ſix or ſeven Leagues from *Sior*, to be kept there till the Ambaſſador departed, d which was the Beginning of next Month. This Fort ſtands on a Mountain called *Numma Sanſang*, which is three Hours Work to aſcend. It is ſo ſtrong, that the King himſelf retires thither in Time of War; and moſt of the great Men of the Kingdom live there. It is always furniſhed with three Years Proviſion for a great Number of People [a].

ABOUT the End of *November* the Cold was ſo vehement, that the River was frozen, and three e hundred Horſes loaded paſſed-over it. The General concerned to ſee the Cold they endured, informed the King, who ordered ſome Hides, for the moſt Part rotten, which they had ſaved from the Shipwreck, to be diſtributed among them, that they might ſell them, and buy ſome Cloathings. Two or three, with the Money they got for theſe Hides, purchaſed a little Hut for nine or ten Crowns; chuſing rather to endure Cold than to be continually tormented by their Landlords f ſending them to the Mountains, two or three Leagues diſtant, to fetch Wood. The reſt having cloathed themſelves the beſt they could, were forced to paſs the Remainder of the Winter as they had often done before.

THE *Tartar* Ambaſſador returning in *March*, 1655, they were forbidden, as before, under ſevere Penalties, to ſtir-out of Doors. But the Day he ſet forward, *Henry Jans*, their Maſter, and *Henry John Bos*, a Gunner, under Pretence of going for Wood, reſolved to meet him on the Way. As ſoon as he appeared at the Head of his Troops, they laid-hold of his Horſe's Reins with one Hand, and with the other turned aſide their *Korean* Habit, to let him ſee they were clad after the *Dutch* Manner underneath. This, at firſt, cauſed a great Confuſion among the Multitude, and the Ambaſſador aſked them earneſtly, who they were; but they could never make him underſtand them: However, he ordered them to follow him. At Night he cauſed Enquiry to be made for ſome-body to explain what they ſaid to him; and hearing of *Wettevree*, ſent for him in Haſte. That Interpreter having advertiſed the King, a Council was held, where it was reſolved to make the Ambaſſador a Preſent, in order to ſtifle the Matter from coming to the *Khân*'s [b] Ear. 1655. Hamel. *Attempt of two.*

THE two unhappy *Dutchmen* were brought back to *Sior*, and put in Priſon, where, in a ſhort Time, they died; but whether of a violent or natural Death, was unknown to their Countrymen, who were never allowed to ſee them afterwards. As ſoon as this Affair was noiſed abroad, they were carried before the Council of War to be examined; and though they declared themſelves no way privy to their Companions Deſign, yet each of them was ſentenced to receive fifty Baſtonados for not giving Notice of their going-out. But the King remitted this Puniſhment; ſaying, they were to be conſidered as poor Wretches caſt into his Country by Storms, rather than as Out-laws who came with an Intent to plunder. Hereupon they were ſent home again; but with an Injunction not to ſtir abroad without his Majeſty's Orders. *Unlucky to the reſt.*

IN *June* the General ſent their Interpreter to acquaint them, that a Veſſel being run a-ground on the Iſland of *Quelpaert*, and *Wettevree* too old to perform the Journey, three of them, who beſt underſtood the *Koreſian* Language, ſhould prepare to ſet-out to bring an Account of the Wreck. In Purſuance of this Order, the Aſſiſtant, the Pilot's Mate, and a Gunner, were choſen, and ſet-forwards two Days after. *Shipwreck on Quelpaert.*

THE *Tartar* Ambaſſador coming again in *Auguſt*, they were commanded, under Pain of ſevere Puniſhment, not to ſtir out of their Quarters till three Days after he was gone. The Day before he came, they received Letters from their Companions, giving an Account, that they were

[a] *Hamel*, p. 579, & *ſeq.* [b] Meaning the Emperor of *China*, who was a *Tartar*. In the Original, inſtead of *Khân*, or *Hân*, it is written *Cham*, or *Kham*, according to the old erroneous Way.

Travels in Korea.

closely confined on the Southermost Borders of a the Kingdom, to the End, that if the great *Khân* had been informed of the two unhappy Fellows who were dead, and should demand the rest, he might be told, they were all three cast-away going to the Island *Quelpaert*.

The Dutch in Danger.

THE Ambassador came again towards the End of the Year; so that although the great *Khân* had sent twice into *Korea*, since that unfortunate Attempt of two of their Companions, without making any Mention of it, yet most of the great b Men used all their Endeavours with the King to destroy them. The Council sat three Days upon this Affair; but the King, his Brother, the General, and some others, were not for taking such Measures. The General proposed, that each of them should fight two *Koresians* with the same Weapons; alledging, that the King would thus get-rid of them, without putting it in the Power of any to say, that he had murdered poor Strangers. This Intelligence was secretly con- c veyed to them by some charitable Persons. And soon after, the King's Brother passing by their Quarters, as he was going to the Council, of which he was President, they fell prostrate at his Feet, and implored his Favour; which so moved him to Compassion, that he solicited strongly in their Behalf; insomuch, that they owed their Lives solely to the King and him. This giving Offence to many Persons, to prevent the Designs of such who might attempt to destroy them, d and keep them from being seen by the *Tartars*, it was thought-fit to banish them into the Province of *Thillado*, with an Allowance from the King of fifty Pounds of Rice a Month.

Banished from Court,

ACCORDINGLY, in *March*, 1657, they departed on Horseback from *Sior*, in Charge of a Serjeant, accompanied by their Acquaintance as far as the River, a League from the City, where they took their Leave of *Wettevree*. They passed through the same Towns they had seen in e their Way to the Court; and coming to lie at *Jeam*, set-out next Morning, and, about Noon, arrived at a great Town called *Diusiong*, or *Thillapening*, commanded by a large Citadel. The *Penigse*, who is Chief in the Absence of the Governor, resides there, and has the Title of Colonel of the Province. Being delivered to him with the King's Letters, the Serjeant was dispatched to fetch their three Companions who had been sent away the Year before, and were twelve Leagues off, where the Vice-Admiral commanded. They were lodged together in a Public-House, making in all thirty-three Persons.

Are hardly used

IN *April* they brought them some Hides that had been left-behind at *Quelpaert*, which was but eighteen Leagues distant. The only Business they were charged with, was to pull-up the Grass that grew in the Square before the Castle twice a Month, and to keep it clean. The Governor, who was very good to them, as well as all the Citizens, being obliged to go to Court to answer some Accusations, was in Danger of his Life: But being well-beloved by the People, and favoured by the Grandees, on account of his Family, he came-off with Honour. The Governor who succeeded him was more rigid, obliging them to fetch their Wood, which used to be brought them, from a Mountain three Leagues off: But an Apoplexy delivered them from him in *September* following.

YET they fared no better under the next, who came in *November*: For when they asked him for Cloaths (which were then worn-out with carrying Wood) or any Thing else, he answered that the King had given him no Orders as to that Point; that he was only obliged to furnish their Allowance of Rice, and that for other Wants it was their Business to provide for themselves. They therefore presented him with a Petition for Leave to beg, each in his Turn, representing that they could not get their Living any longer by carrying Wood, because they were naked and that their Labour would yield nothing but a little Salt [a] and Rice. He granted their Request, and, in a short Time, they were provided against the Cold.

AT the Beginning of the Year 1658, a new Governor coming, afflicted them with new Crosses. He forbid them to go-abroad, profering, they would work for him, to give each three Pieces of Cotton Cloth. But this they respectfully declined, knowing they should wear-out more Cloaths in his Service than what he would furnish them with. At the same Time, some of them falling-ill of a Fever, (the very Thought of which Disease terrifies the Natives) he consented, that they should beg in Companies; provided they were not absent above a Fortnight or three Weeks, and that they neither went towards the Court, nor *Japan*. The other half, who remained at home, he ordered, should look to the Sick, and take-care to pull-up the Grass in the Square [b].

3. *Their hard Usage, and the* Escape *of them to* Japan.

King of Korea *dies. A great Famine. The Dutch parted: Get Leave to beg. A new Governor. Three Comets. Ease of the Dutch disturbed by severe Governors. Some build a Bark, and escape: Get-out to Sea: Descry*

pan. *The Iſland* Gotto. *Are carried aſhore.* a *Sail to* Nangaſaki. *Received by the Factors.* *Return to* Holland.

IN *April* the King died, and his Son ſucceeded him, with the Conſent of the great *Khân*. They went-on in their Trade of Begging, particularly among the religious Men, who were very charitable, being never weary of hearing their Adventures, and the Cuſtoms of other Countries.

THE Governor, who arrived in 1660, was ſo b kind to them, that he often declared, if it was in his Power, he would ſend them into their own Country, or at leaſt to ſome Place where the *Hollanders* frequented. This Year there happened ſuch a Drought, that all Sorts of Proviſions were very ſcarce. The next was yet more miſerable, abundance of People being famiſhed to Death, and the Roads full of Robbers; but the King vigorouſly purſued them. Acorns, Pine-Apples, and other wild Fruit, were all the c Support of the People. The Famine was ſo great, that Villages were plundered, and ſome of the King's Stores broken open: Yet thoſe Diſorders being committed by the Slaves of great Men, none were puniſhed for them. This Calamity laſted all the Year 1662, and the following felt ſome Share of it. The Place where the *Dutch* were, being no longer able to furniſh them with Proviſion, the Governor, about the End of *February* 1663, by Order from Court, diſtributed d them into three Towns: Twelve he ſent to *Sayſiano*, five to *Siunſchien*, and as many to *Namman*, ſixteen Leagues beyond; their Number, at this Time, being reduced to twenty-two. This Separation, which at firſt afflicted them, proved the Means of the Eſcape of the Author, and his Companions.

THEY ſet forwards on Foot, carrying the Sick, and what Baggage they had, on the Horſes e allowed them, and lay all in the ſame Towns the firſt and ſecond Night. The third Day they came to *Siunſchien* [a], where the five aſſigned to that Place were left. Next Day they lay in a Country-Houſe, and ſetting-out early in the Morning, came about Nine to *Sayſiano*, where their Conductors delivered them to the Governor, or Admiral of the Province of *Thellado*, who reſides there. This ſeemed to be a very worthy Lord: But five Days after he was ſucceeded by another, who proved their Scourge. The greateſt Favour he granted them, was Leave to go cut Wood fit to make Arrows for his Men, who had nothing to do but to learn to ſhoot, the great Men ſtriving who ſhall keep the ableſt Archers.

WINTER drawing-on, they petitioned the Governor for Permiſſion to ſeek for Cloathing; and he gave them Leave to be abſent, half at a Time, for three Days. This Liberty proved very beneficial to them, becauſe the great Men, who had Compaſſion on them, favoured their Sallies; ſo that they were ſometimes allowed to be a Month abroad. Whatever they got, was ſhared in common. This continued till the Governor was called to Court, where the King declared him General of his Army, which is the ſecond Employment in the Kingdom. His Succeſſor eaſed them of all their Burdens, and ordered, that they ſhould be as well treated as their Countrymen, who were in the other Towns. Thus they were only obliged to paſs Muſter twice a Month, to keep Houſe in their Turns, and to aſk Leave when they wanted to go-abroad; or at leaſt give the Secretary Notice, that they might know where to find them. 1663. Hamel. *Get Leave to beg.*

THIS Governor, beſides other Favours, often *A kind Go-* treated them, and pitying their Misfortune, *vernor.* would aſk, *why, being ſo near the Sea, they did not attempt to paſs-over to* Japan? They ſaid, *they durſt not venture to do a Thing ſo contrary to the King's Will*; adding, *that they knew not the Way, nor had any Veſſel.* He replied, *there were Barks enough along the Coaſt.* The *Dutchmen* alledged, that they did not belong to them, and that if they miſſed their Aim, they ſhould be puniſhed as Thieves and Deſerters. The Governor laughed at their Scruples, not imagining they talked after that Manner only to prevent Suſpicion; and that all their Thoughts, Day and Night, were employed in contriving how to ſeize a Bark. The late Governor had not enjoyed his new Honour above ſix Months, when being accuſed to the King of having put to Death ſeveral Perſons, as well Nobles as Commoners, on very ſlight Occaſions, he was condemned to receive fourſcore and ten Strokes of a Cudgel on his Shin-Bones, and to be baniſhed for ever.

TOWARDS the End of the Year a Comet ap- *Three Co-* peared, and after that two at once: The firſt *mets.* was ſeen in the South-Eaſt, for about two Months: The other in the South-Weſt, but their Tails were oppoſite to each other. The f Court was ſo much alarmed at it, that the King cauſed the Guards to be doubled in all his Ports, and a-board his Ships: He alſo cauſed his Fortreſſes to be furniſhed with Proviſion, and warlike Stores: He made all his Forces, both Horſe and Foot, exerciſe every Day, expecting an Invaſion from ſome of his Neighbours; inſomuch

[a] Pronounced *Syunſkyen*.

Travels in Korea.

that he forbad making any Fire at Night in thoſe Houſes which might be ſeen from Sea. The Commonalty ſpent all they had, keeping only as much as would ſerve to ſubſiſt them with Rice; becauſe they had ſeen the ſame Signs when the *Tartars* over-ran their Country. They remembered likewiſe, that ſome ſuch Thing had appeared before the *Japanneſe* declared War againſt them. Where-ever they met the *Hollanders*, they never failed to aſk, what they thought of Comets in their Country. Their Anſwer was, that they preſaged ſome ſignal Judgment, generally the Plague, War, or Famine, and ſometimes all three; which, ſays the Author, they believed, having had Experience of it themſelves.

Eaſe of the Dutch

As they lived much at Eaſe all the Year 1664, and the next, their whole Endeavours were employed to make themſelves Maſters of a Bark, but without Succeſs. Sometimes they rowed along the Shore in a little Boat, which ſerved them to get their Living; and ſometimes round the ſmall Iſlands, to ſee if any Thing would fall-out, which might forward their Eſcape. Their Countrymen, who were in the two other Towns, came every now-and-then to ſee them; and they repaid their Viſits, according as it pleaſed their Governors. They were patient under the greateſt Severities, thinking it a great Mercy that they enjoyed their Health, and a Subſiſtance during that long Captivity. In the Year 1666, they loſt their Benefactor, who was promoted to the prime Dignities at Court, in Reward for his good Actions. It is incredible how much Good he did to all Sorts of People, indifferently, during his two Years Adminiſtration, which gained him the Love of all, as well as the Eſteem of his Prince, and the Nobility. He repaired public Structures, cleared the Coaſts, and increaſed the Marine Forces.

Diſturbed by

THEY were without a Governor for three Days after his Departure, ſo many being allowed the Succeſſor for chuſing a happy Minute [a], by Means of ſome Diviner, to enter upon his Employment. This Man, to other Severities, would oblige them continually to mould Clay. This they refuſed, alledging, *that they ought to be allowed what Time they had to ſpare from their own Affairs, to get ſomething to cloath themſelves, and ſupply their other Wants; that the King had not ſent them to work, or if they muſt be ſo uſed, it was better for them to quit his Allowance, and deſire to be ſent to* Japan, *or ſome other Place, where their Countrymen reſorted* [b].

Severe Governors.

To this he made no Anſwer, but ordered them to be gone, threatning to find a Way to make them comply. But he was luckily prevented; for a few Days after, being on-board a very fine Ship, ſome Fire accidentally fell into the Powder (which is kept in a Room before the Maſt) and blew-up the Prow, killing five Men. The Governor believing he could conceal that Accident, gave no Account of it to the Intendant of the Province; but he was miſtaken, for the Fire being ſeen by one of the Spies, whom the King keeps on the Coaſts, as well as in the Heart of the Country, to be informed of all that paſſes, he gave Notice thereof to the Intendant, who ſent an Account of it up to Court, whither the Governor was immediately ſummoned, and, by Sentence of the Judges, received fourſcore and ten Strokes on his Shin-Bones, and was baniſhed for ever.

THUS in *July* they had another Governor, who behaving like the laſt, required of them daily an hundred Fathom of Mat; and when they repreſented it as a Thing not to be done, he told them, he would find ſome other Employment for them; which he had done, but that he fell ſick, although, beſides their own Affairs, they were obliged to pull-up the Graſs in the Square of *Penighe*, and then to fetch home Wood fit for Arrows. Theſe Conſiderations made them reſolve to take Advantage of their Tyrant's Indiſpoſition, and to get a Bark at any Rate. For this Purpoſe they employed a *Koreſian*, whom they had often relieved in his Diſtreſs, to buy them one, under Pretence that they wanted to go beg Cotton in the neighbouring Iſlands, promiſing him a good Share when they returned. Accordingly he bought a Bark of a Fiſherman. The Seller perceiving it was for them, would have gone from his Bargain, at the Inſtigation of ſome who told him, it was to make their Eſcape, and that in Caſe they did, he would be put to Death: But being blinded with an Offer of double the Value, he conſented.

As ſoon as the two *Koreſians* were gone, they furniſhed the Veſſel with Sails, Anchor, Rigging, Oars, and other Requiſites, in order to ſet-out the firſt Quarter of the Moon, that being the fitteſt Seaſon. They kept two of their Countrymen, who came to viſit them, and ſent to *Nanman* for *John Peter* of *Uries*, an able Sailor, to ſteer their Veſſel. Although their Neighbours had conceived ſome Jealouſy of them, yet on the fourth of *September*, as the Moon was ſetting (the Time fixed for their Departure) they crept along the City-Wall, unperceived by any body; carrying-off their Proviſion, which conſiſted of Rice, Pots of Water, and a Frying Pan.

HAVING filled a Caſk with freſh Water, in a little Iſland, which was within Cannon-Shot

[a] The *Chineſe* have the ſame Superſtition.

[b] *Hamel*, p. 582, *& ſeqq.*

they, without any Noiſe, paſſed before the Veſ- a
ſels belonging to the City, and juſt oppoſite to
the King's Frigates, keeping as far-off in the
Channel as they could. The fifth in the Morn-
ing, being almoſt out at Sea, a Fiſherman hailed
them, but they would not anſwer, fearing it
might be ſome advanced Guard to the Men of
War that lay thereabouts. At Sun-riſe the Wind
falling, they plied their Oars. About Noon the
Weather began to freſhen, ſo that directing their
Courſe by Gueſs, South-Eaſt, at Night they b
cleared the Point of *Korea*, and were no longer
apprehenſive of being purſued.

THE ſixth Day in the Morning, they found
themſelves very near the firſt Iſland of *Japan*;
and the Wind ſtill favouring them, came, with-
out knowing it, before the Iſland of *Firando*,
where yet they durſt not put-in, becauſe unac-
quainted with the Road. Beſides, the *Koreſians*
had often told them, that there were no Iſles to
coaſt in the Way to *Nangaſaki*; therefore hold- c
ing on their Courſe with a cold Breeze, the
ſeventh they ran-along abundance of Iſlands,
which ſeemed to be numberleſs. At Night they
thought to have anchored at a ſmall Iſland, but
the Sky appearing ſtormy, and perceiving abun-
dance of Fires on every Side, they reſolved to
continue under-ſail.

THE eighth in the Morning, they found
themſelves in the ſame Place from whence they
ſet-forward the Night before, which they attri- d
buted to the Force of ſome Current. Hereupon
they ſtood-out to Sea, but were ſoon obliged, by
contrary boiſterous Weather, to ſeek the Land
again. After croſſing a Bay, they came to an
Anchor about Noon, without knowing the
Country. Whilſt they were dreſſing ſome Vic-
tuals, the Natives paſſed backwards and for-
wards cloſe by them, without ſaying any Thing.
About Evening the Wind being ſomewhat fallen,
a Bark with ſix Men in it, each having two e
Knives at his Girdle, rowed cloſe by them, and
landed a Man oppoſite to the Place where they
were. This made them weigh, and depart as
faſt as they could, making Uſe of their Oars, as
well as Sails, to get-out of the Bay: But the
Bark purſuing, ſoon overtook them. By making
Uſe of their long Bambûs, they might eaſily
have prevented their coming aboard; but obſer-
ving ſeveral other Barks full of *Japanneſe* ſet-
out from Shore, they gave themſelves no farther f
Trouble.

THE Bark hailed them, and aſking, by Signs,
whither they would go, the *Dutch* let fly the Co-
lours with the Arms of *Orange*, which they had
provided for that Purpoſe, crying, *Holland*, *Nan-*
gaſaki. Hereupon they made Signs for them to 1668.
ſtrike their Sail, which done, they carried two *Hamel.*
Men into their Bark, and aſked them ſeveral
Queſtions, without being underſtood. Their
Arrival had ſo alarmed all the Coaſt, that not a
Man was to be ſeen, but who was armed with
two Swords. At Night a great Bark brought
aboard them the third Man for Dignity in the
Iſland; who perceiving they were *Hollanders*,
gave them to underſtand, by Signs, that there
were ſix *Dutch* Ships at *Nangaſaki*, and that
they were in the Iſland of *Gotto*, ſubject to the
Emperor. They continued here three Days
well-guarded, aboard their Bark. Mean-time
Water, Wood, and Fleſh, was brought them,
with a Mat to cover them from Rain, which
fell in great Abundance.

THE twelfth, being furniſhed with Proviſions, *Sail to Nan-*
to go to *Nangaſaki*, they ſet-forward, accompa- *gaſaki.*
nied by the Officer above-mentioned. He car-
ried ſome Letters from the Emperor, and ſome
Goods, being attended by two large Barks, and
two little ones. Next Day, towards Evening,
they ſaw the Bay of that City, and at Midnight
anchored before it, where they found five *Dutch*
Ships. Several Inhabitants of *Gotto*, as well as
chief Men, did them many Kindneſſes, without
taking any Thing in Return. On the fourteenth
they were all carried aſhore, where the Compa-
ny's Interpreters received them. Then their An-
ſwers to ſeveral Queſtions being taken-down in
Writing, they were carried to the Governor's
Houſe, and about Noon brought before him.
When they had ſatisfied his Curioſity, he much
commended their Reſolution in encountering ſo
many Dangers to recover their Liberty.

AFTER this, he ordered the Interpreters to *Received by*
conduct them to their Commandant, Mynheer *the Factors.*
William Volguers, who received them very kind-
ly; as did his Deputy, Mynheer *Nicholas Le Roy*,
and in general all their Countrymen. The Go-
vernor of *Nangaſaki*, who would have kept them
a Year, cauſed them to be brought before him
on the twenty-fifth of *October*; and after exami-
ning them over again, reſtored them to the
Company's Director, who lodged them in his
own Houſe. A few Days after, they ſailed for
Batavia, where they arrived on the twentieth of
November. At landing they delivered their Jour-
nal to the General, who gave them a very fa-
vourable Reception, and promiſed to put them
aboard the Ships that were to ſail from thence
on the twenty-eight of *December*; which Veſſels *Return to*
arrived at *Amſterdam* on the twentieth of *July*, *Holland.*
1668 [a].

Travels in Korea.

SECT. II.

A Deſcription of the Kingdom of Korea.

1. Its Situation and Extent, with the Manners of the Inhabitants.

Situation. Bounds. An open Sea. The Coaſts. Intenſe Cold. Soil and Produce. Animals. Provinces. Inhabitants, their Character: Very puſillanimous. Diſeaſes, Phyſicians. Great Smokers. Their Houſes ſmall, and low. Recreations. Travelling.

Situation. THE Kingdom known to the *Europeans* by the Name of *Korea*, is, by the Natives, called *Tiozenkouk*, and ſometimes *Kaoli*. It reaches from thirty-four to forty-four Degrees of North Latitude, being about one hundred and fifty Leagues [a] in Length from North to South, and ſeventy-five in Breadth from Eaſt to Weſt. Hence the Natives repreſent it in Form of a long Square, like a playing Card: Nevertheleſs it has ſeveral Points of Land which run far-out into the Sea.

Bounds. ON the Weſt, this Kingdom is divided from *China* by the Bay of *Nan-king*, but is joined to it on the North by a long and high Mountain, which is all that hinders *Korea* from being an Iſland. On the North-Eaſt it is bounded by the vaſt Ocean, where every Year a great Number of Whales are taken; ſome by the *French* and *Dutch*: Abundance of Herrings alſo are caught there in *December*, *January*, *February*, and *March*. Thoſe taken in the two firſt Months are as large as what they have in *Holland*: Thoſe they catch afterwards are ſmaller, and like the *Dutch* frying Herrings. Hence the Author, and his Companions, inferred, that there is a Paſſage above *Korea*, *Japan*, and *Tartary* [b], which anſwers to the Streights of *Weigats*: For this Reaſon, they often aſked the *Koreſian* Seamen, who uſe the North-Eaſt Sea, what Lands were beyond them? And they all told them, they believed there was nothing that Way but a boundleſs Ocean.

An open Sea.

THOSE who go from *Korea* to *China*, embark in the uttermoſt Part of the Bay: For the Difficulty of paſſing the Mountain makes the Way by Land very troubleſome in Summer, becauſe of the wild Beaſts; and in Winter, on Account of the excеſſive Cold: Yet in this Seaſon the Bay may be croſſed-over on the North-Side, being generally frozen hard enough to bear.

The Coaſts. THE Coaſts being incloſed with Rocks, and Sands, makes it difficult of Acceſs, and dangerous for Strangers to approach it. Towards the South-Eaſt it is very near *Japan*, there being but twenty-five, or twenty-ſix Leagues Diſtance betwixt the Town of *Pouſan* [c] in *Korea*, and that of *Oſakko* in *Japan*. Betwixt them is the Iſland *Suiſſima*, which the *Koreſians* call *Taymuta* [d]. It formerly belonged to them, but they exchanged it for that of *Quelpaert*, in a Treaty of Peace concluded with the *Japanneſe*.

THE Cold is ſo intenſe in *Korea*, that in the Year 1662, the *Dutch* being in the Monaſteries on the Mountains, there fell ſuch a prodigious Quantity of Snow, that they made Paſſages under it to go from Houſe to Houſe: To walk upon it, they wear ſmall Boards, like Battledores, under their Feet, which hinder their ſinking. By Reaſon of this exceſſive Cold, thoſe who live on the Northern Coaſt feed only upon Barley, and that none of the beſt, for no Rice or Cotton can grow there. The better Sort of People have their Meal brought from the South.

THE reſt of the Country is fruitful, and produces all the Neceſſaries of Life, eſpecially Rice, and other Sorts of Grain. They have Hemp, Cotton, and Silk-Worms; but they know not how to work the Silk. There is alſo Silver, Lead, Tigers Skins, and the *Niſi* Root. They have Store of Cattle, and make uſe of Oxen to till the Land. The *Dutch* met with Bears, Deer, wild Boars, Swine, Dogs, Cats, and ſeveral other Creatures; but never ſaw any Elephants there. The Rivers are often peſtered with Alligators, or Crocodiles, of ſeveral Sizes: Some are eighteen or twenty Ells [e] long: The Eye is ſmall, but very ſharp; the Teeth placed like thoſe of a Comb. When they eat, they only move the upper-Jaw. Their Back-Bone has ſixty Joints. The Natives often told them that three Children were once found in a Crocodile's Belly. *Korea* breeds abundance of Serpents, and venomous Creatures. As for Fowl, they have Plenty of Swans, Geeſe, Ducks, Herrons, Storks, Eagles, Falcons, Kites, Pigeons, Woodcocks, Magpies, Daws, Larks, Lapwings, Pheaſants, Hens, beſides other Sorts not known in *Europe*.

KOREA is divided into eight Provinces, containing three hundred and ſixty Cities and Towns, without reckoning the Forts and Caſtles, which are all on the Mountains [f].

THE *Koreſians* are much addicted to Stealing, and ſo apt to cheat and lie, that there is no truſting of them. They think Over-reaching a good Action, and, therefore, Fraud is not infamous.

[a] Reckoning only fifteen to a Degree. [b] And the late Diſcoveries ſhew, that their Conjecture was well grounded. [c] Doubtleſs, the *Few-ſhan* of *Regis*. See *p.* 326. a. [d] Or *Twi-ma-tau*, as *Regis* writes it, in the ſame Place. [e] *Dutch* Ells, we preſume. [f] *Hamel*, p. 587, & *ſeq.*

among them; yet the Law will redreſs a Man, who has been cheated in a Bargain. They are withal ſilly and credulous. The *Dutch* might have made them believe any Thing they would, becauſe they are great Lovers of Strangers, but chiefly the religious Men. They are an effeminate People, and diſcover very little Courage; at leaſt the *Hollanders* were informed ſo by ſeveral credible Perſons, who beheld the Havock the Emperor of *Japan* made among them, when he ſlew their King; and how they behaved, when the *Tartars* coming-over the Ice, ſeized the Kingdom. *Wettevree*, who was an Eye-Witneſs to the Whole, aſſured them, that more *Koreſians* died in the Woods, whither they fled, than were killed by the Enemy.

THEY are not aſhamed of Cowardice, and lament the Misfortune of thoſe who are obliged to fight. They have often been repulſed in attempting to plunder *European* Veſſels, caſt-on their Coaſt. They abhor Blood, and fly when they meet with any. They are much afraid of ſick Folks, and particularly thoſe who have contagious Diſtempers: Such they preſently remove, putting them into little Straw-Hovels in the Middle of the Fields, where they ſee none but thoſe who are to look after them: Theſe give Notice to Paſſengers to keep-off; and when the ſick Man has no Friends to take-care of him, others will rather let him die, than come near him. When any Town, or Village, is infected with the Plague, the Avenues to it are ſhut-up with a Hedge of Briars, and ſome are laid on the Tops of diſtempered Houſes, that People may know them. Many medicinal Plants grow in the Country, but the People are not acquainted with them, and almoſt all the Phyſicians are employed by the Grandees; ſo that the Poor, who cannot be at that Charge, make-uſe of blind Men, and Conjurors, whom formerly they followed everywhere over Rivers and Rocks, and into the Idol Temples: But this Cuſtom was aboliſhed, by the King's Order, in the Year 1662.

BEFORE the *Tartars* ſubdued *Korea*, it was all of Luxury and Debauchery, the Natives giving themſelves wholly-up to Eating, Drinking, and Leudneſs: But now the *Tartars* and *Japanneſe* tyrannize over them, they have enough to do to live when a Year proves bad, becauſe of the heavy Tribute they pay to the former. Within theſe fifty or ſixty Years, the *Japanneſe* taught them to plant Tobacco, which, till then, was unknown to them, and telling them the Seed came from *Nampankouk* [a], they often call it *Nampankoy*. They take ſo much at preſent, that there are very few of either Sex but

a what ſmoke; and the very Children practiſe it at four or five Years of Age. When firſt brought them, they bought it for its Weight in Silver; and for that Reaſon they look-upon *Nampankouk* as one of the beſt Countries in the World [b]. 1668. Hamel.

THE poorer Sort have no Cloaths but what are made of Hemp, and pitiful Skins: But, to make amends, the Root *Niſi* [c] grows there, in which they drive a great Trade to *China* and *Japan* [d].

Their Houſes.

b THE Houſes of the *Koreſians* of Quality are ſtately, but thoſe of the common Sort very mean; nor are they allowed to build as they pleaſe. No Man can cover his Houſe with Tiles, unleſs he has Leave ſo to do; for which Reaſon moſt of them are thatched with Straw, or Reeds. They are parted from one another by a Wall, or elſe a Row of Stakes, or Paliſados. They are built by fixing wooden Poſts, or Pillars, in the Ground at certain Diſtances, and filling the Spaces between with Stone up to the firſt Story: c The reſt of the Structure is of Wood, plaſtered without, and covered on the Inſide with white Paper glued-on. The Floors are vaulted, and in Winter they make a Fire underneath; ſo that they are always as warm as a Stove: The Floor [e] is covered with Oil-Paper.

Small and low.

THEIR Houſes are ſmall, conſiſting of one Story, and a Garret over it, where they lay-up their Proviſions. They have ſeldom more Furniture than what may be abſolutely neceſſary. d The Nobility have always an Apartment forwards, where they receive their Friends, lodge their Acquaintance, and divert themſelves; there being generally, before their Houſes, a large Square, or Baſs-Court, with a Fountain, or Fiſh-Pond, and a Garden with covered Walks. Tradeſmen, and the chief Citizens, have generally a Warehouſe adjoining to their Manſion-Houſe, where they keep their Goods, and treat their Friends with Tobacco and Arak. The e Womens Apartment is in the moſt retired Part of the Houſe, where none muſt approach them: Yet ſome Wives are allowed the Liberty of ſeeing People, and going to Feaſts; but they ſit by themſelves, and facing their Huſbands.

Recreations.

THERE are, in the Country, abundance of Taverns, and Pleaſure-Houſes, to which the *Koreſians* reſort, to ſee common-Women dance, ſing, and play-upon muſical Inſtruments. In Summer, they take this Recreation in cool f Groves, under cloſe, ſhady Trees. They have no Inns to entertain Paſſengers, but he who travels goes and ſits-down, at Night, near the Pales of the firſt Houſe he comes at. Preſently thoſe within bring him boiled Rice, and dreſs Meat enough for his Supper. He may ſtop thus at as

Travelling.

many

Travels in Korea. many Houſes as he will: Yet, on the great Road to *Sior*, there are Inns, where thoſe who travel on public Affairs have Lodging, and Diet, at the public Charge [a].

2. *Their* Cuſtoms, *and* Learning.

Their Marriages. Condition of Wives. Duty of Children. Mourning for Parents. Their Funerals. Inheritance. Education of Children. Examinations for Places. Language, and Writing. Their Geography. Printing, Arithmetic. Account of Time.

Their Marriages. KINDRED are not allowed to marry within the fourth Degree. They make no Courtſhip, becauſe they are married at eight or ten Years of Age; and the young Maids (unleſs they be only Daughters) from that Time, live in their Father-in-law's Houſe, till they have learnt to get their Living, or to govern their Family. The Day a Man marries, he mounts on Horſeback, attended by his Friends; and having rode about the Town, ſtops at the Bride's Door, where he is received by her Relations, who then carry her to his Houſe, where the Marriage is conſummated, without any other Ceremony.

Condition of Wives. A MAN may keep as many Women abroad as he can maintain, and repair to them, at any Time, without Scandal; yet none lives with him but his Wife. Noblemen, indeed, have two or three Women beſides in the Houſe; but they have nothing to do with the Management of the Family. To ſay the Truth, they make no great Account of their Wives, whom they uſe little better than Slaves. Although a Woman has borne her Huſband a great many Children, it is in his Power to put her away whenever he pleaſes, on the ſlighteſt Pretence, and to take another: But the Woman has not the ſame Privilege, unleſs ſhe can get it by Law. What is ſtill harder, he can compel her to take, and maintain their Children. However, this unreaſonable Cuſtom helps to render the Country very populous.

Duty of Children. PARENTS are very indulgent to their Children, and, in Return, are much reſpected by them. They depend upon one-another's good Behaviour, and if one of them withdraws after an ill Action, the other does the like. It is not ſo with the Slaves, who have but little Regard for their Children, becauſe they know they will be taken from them as ſoon as they are able to work, or do any Buſineſs [b]. If a Freeman lies with a Woman-Slave, the Children born of them are Slaves; and ſuch whoſe Father and Mother are both Slaves, belong to the Mother's Maſter [b].

WHEN a Freeman dies, his Children mourn three Years, during which Time, they live as auſterely as religious Men: They are not capable of any Employment, and thoſe who are in Poſt muſt quit them. It is not lawful for them even to lie with their Wives; and, if they ſhould have any Children born during the Mourning, they would not be accounted legitimate. It is not permitted them to be in a Paſſion, or to fight, much leſs to be drunk. The Mourning they wear, is a long hempen Robe, without any Thing under it, but a Sort of Sackcloth, made of twiſted Thread, almoſt as thick as the Twine of a Cable. On their Hats, which are of green Reeds woven-together inſtead of an Hatband, they wear a hempen Cord. They never go without a great Cane, or Cudgel in their Hand, which ſerves to diſtinguiſh who they are in Mourning for, the Cane denoting the Father, and a Stick the Mother. During all the Time, they never waſh, and, conſequently, look like Mulattos.

As ſoon as any-one dies, his Kindred run about the Streets ſhrieking and tearing their Hair. They take ſpecial Care to bury him honourably, in ſome Part of a Mountain choſen by a Fortune-teller. They incloſe every Corpſe in two Coffins, two or three Fingers thick, put one within the other, to keep-out the Water, painting and adorning them according to their Ability. They generally bury their Dead in Spring and Autumn. Such as die in Summer they place in a thatched Hut, raiſed on four Stakes, till Rice-Harveſt is over. When they intend to bury them, they bring them back to the Houſe, and put their Cloaths, with ſome Jewels, into the Coffin: Then after making merry all Night, they ſet-out at Break of Day with the Body. The Bearers ſing, and keep Time as they go, whilſt the Kindred and Friends of the Party make the Air ring with their Cries. Three Days after, theſe latter return to the Grave, where they make ſome Offerings, and then eating all together, are very merry. The meaner Sort only make a Grave five or ſix Foot deep; but the great Men have Sepulchres of Stone, on which are placed the Statues, with their Names, Qualifications, and Employments, cut underneath. Every Full Moon they cut-down the Graſs that grows on the Grave, and offer new Rice there; that being their greateſt Feſtival next to the new Year.

WHEN the Children have fully performed their Duty to their Parents, the eldeſt Son takes Poſſeſſion of the Houſe, with all the Lands depen-

[a] *Hamel*, p. 592.

[b] The ſame, *p.* 588.

ing on it. The reſt is divided among the other Sons; but the *Dutch* never heard, that the Daughters had any Share, becauſe the Women carry nothing to their Huſbands, but their Cloaths. When a Father is fourſcore Years of Age, he declares himſelf incapable of managing his Eſtate, and reſigns it up to his Children: Then the eldeſt taking Poſſeſſion, builds a Houſe, at the common Expence, for his Father and Mother, where he lodges, and maintains them, treating them with the greateſt Reſpect.

THE Nobility, and Freemen in general, take great Care of the Education of their Children, putting them very young to learn to read and write. They uſe no Manner of Rigour in their Method of teaching, but manage all by fair Means. They give their Scholars an high Idea of Learning, and of the Worth of their Anceſtors, telling them how honourable thoſe are, who, by this Means, have raiſed themſelves to great Fortunes, which breeds Emulation, and makes them ſtudious. It is ſurprizing how much they improve, by ſuch Exhortations, in expounding the Writings they give them to read, wherein all their Learning conſiſts. Beſides this private Study, there is, in every Town, a Houſe, where the Nobility, according to ancient Cuſtom, of which they are very tenacious, aſſemble the Youth, to make them read the Hiſtory of their Country, and the Trials of great Men, who have been put to Death for their Crimes.

THERE are Aſſemblies, likewiſe, kept yearly, in two or three Towns of each Province, where the Scholars appear to get Employments, either by the Pen, or the Sword. The Governors of Towns ſend able Deputies thither, to examine them, and chuſe the beſt qualified; and, according to the Report made to them, they write to the King, who beſtows Employments on thoſe eemed worthy. The old Officers, who till hen have only had civil, or military Commiſ- ions, at this Time uſe all their Endeavours to e employed in both Profeſſions, to increaſe their evenue. The aſpiring to theſe Honours, is ften the Ruin of the Candidates, becauſe of the reſents they make, and Treats they give, to ain Reputation, and obtain Votes. Some alſo e by the Way, and moſt of them are ſatisfied ith getting the Title of the Employment they n at, thinking it Honour enough to have been ſigned for one.

THEIR Way of Writing, and their Arithetic, are very hard to learn. They have many ords to expreſs the ſame Thing. They ſomees talk faſt, and ſometimes ſlow, eſpecially eir learned Men, and great Lords. They uſe ree Sorts of Writing; the firſt like that of *China* and *Japan*, which they uſe for printing their Books, and all public Affairs. The ſecond is like the common Writing among *Europeans*: The great Men and Governors uſe it, to anſwer Petitions, and make Notes on Letters of Advice, or the like: The Commonalty cannot read this Writing. The third is more unpoliſhed, and ſerves Women, and the common Sort. It is eaſier to write in this Character, than the other two, Names, and Things never before heard of, being noted-down with very curious Pencils. They have abundance of old Books, both printed, and manuſcript, ſo choicely kept, that none but the King's Brother is truſted with them. Copies of them, with Cuts, are kept in ſeveral Towns, that in Caſe of Fire they may not be all deſtroyed. 1668. Hamel.

As to their Knowledge of the World, their Authors affirm, that there are fourſcore and four thouſand ſeveral Countries; but few of them give Credit to what they write, ſaying, that then every little Iſland, and Shoal, muſt paſs for a Country; and that it would not be poſſible for the Sun to give Light to ſo many in one Day. When the *Dutch* named ſome Kingdoms to them, they laughed, affirming, that they only talked of Towns, or Villages; for their Knowledge of the Coaſts reaches no farther than *Siam*, which is the Limit of their foreign Traffic. In Effect, they believe there are but twelve Kingdoms, or Countries, in the whole World, which once were all ſubject, and paid Tribute to *China*; but that they have ſhook-off the Yoke ſince the Conqueſt of the *Tartars*, who, they ſay, are not able to ſubdue them. They call the *Tartar* [a], *Tiekſe*, and *Orankay*; and *Holland*, *Nampankouk*; which is the Name the *Japaneſe* give to *Portugal*, and, therefore, not knowing the *Dutch*, they give them the ſame. *Their Geography.*

THEIR Almanacks are made in *China*, they themſelves wanting Skill to make them. They print with Boards, or wooden Cuts, and lay one Cut to each Side of the Paper, and ſo ſtrike-off a Leaf. They caſt Accounts with little long Sticks, as the *Dutch* do with Counters. They know not how to keep Books of Accounts, but when they buy any Thing, ſet-down the Price under it, and write on it what they made of it, and ſo find what Profit, or Loſs. *Printing, and Arithmetic.*

THEY reckon by Moons, and every third Year add one Moon. They have Conjurors, Diviners, or Soothſayers, who aſſure them whether the Dead are at Reſt, or not; and if the Place where they are buried is proper for them: In which Point they are ſo ſuperſtitious, that they often remove them two or three Times [b]. *Account of Time.*

[a] That is, the Emperor of *China*. [b] *Hamel*, p. 592, & *ſeq.*

3. *The*

Travels in Korea.

3. *The* Trade *and* Religion *of* Korea.

Trade of Korea. *The Religion there. Monaſteries and Temples. The Superiors. Married Prieſts. Nunneries.*

Trade of Korea.

THE Inhabitants of *Korea* have ſcarce any Trade, but with the *Japanneſe*, and the People of the Iſland of *Suſima* [a], who have a Store-Houſe in the South-Part of the Town of *Pouſan*. They ſupply *Korea* with Pepper, ſweet Wood, Alum, Buffalo's Horns, Goats, and Buck-Skins, beſides other Commodities, which the *Chineſe* and *Dutch* ſell in *Japan*. In Exchange, they take the Product and Manufactures of the Country. The *Koreſians* have alſo ſome Commerce in the Northern-Parts of *China*, in Linen, or Cotton Cloth; but it is very chargeable, becauſe they travel only by Land, and on Horſeback. None but the rich Merchants of *Sior* trade to *Pe-king*, and they are always three Months, at leaſt, on the Road.

THERE is but one Sort of Weight and Meaſure throughout the Kingdom, but the Traders abuſe it very much, notwithſtanding all Precautions, and Orders of the Governors. They know no Money but their *Kaſis*, and thoſe paſs only on the Frontiers of *China*. They paſs Silver by Weight, in little Ingots, like thoſe brought from *Japan* [b].

The Religion there.

As for Religion, the *Koreſians* have ſcarce any. The common People make odd Grimaces before the Idols, but pay them little Reſpect; and the great ones honour them much leſs, becauſe they think themſelves to be ſomething more than an Idol: For when any of their Kindred, or Friends dies, they all appear to honour the dead Man at the Offering, which the Prieſt makes before the Image; and frequently travel thirty or forty Leagues to be preſent at this Ceremony, in order to expreſs their grateful Remembrance, or Eſteem, for ſome good Commander, or learned, religious Man. On Feſtivals, the People repairing to the Temple, every one lights a Bit of ſweet Wood; then putting it into a Veſſel for that Purpoſe, they offer it to the Idol, and placing it before him, make a low Bow, and depart. This is their Worſhip. For their Belief, they are of Opinion, that Good-doers ſhall be rewarded, and Evil-doers puniſhed. They know nothing of Preaching, or Myſteries, and, therefore, they have no Diſputes about Religion, all believing and practiſing the ſame Thing throughout the Kingdom. The Clergy offer Perfumes before their Idols twice a Day; and, on Feſtivals, all the Religious of a Houſe make a Noiſe with Drums, Baſons, and Kettles.

THE Monaſteries and Temples, which are very numerous, are built by the Contributions of the People, for the moſt Part on Mountains. Some of them contain five or ſix hundred Religious, whereof there are four thouſand within the Liberties of ſome Towns. They are divided into Companies of ten, twenty, and ſometimes thirty: The eldeſt governs, and, if any-one neglects his Duty, may cauſe the others to puniſh him with twenty or thirty Strokes on the Buttocks; but if the Offence be heinous, they deliver him up to the Governor of the Town they belong to. As every Man is at Liberty to become a Religious, *Korea* ſwarms with them, and the rather, becauſe they may quit the Profeſſion when they pleaſe: However, generally ſpeaking, theſe Monaſtics are not much more reſpected than the Slaves, becauſe of the great Taxes they are obliged to pay, and the Work they are forced to do.

THEIR Superiors are in great Eſteem, eſpecially when learned, for they are equal with the Grandees, and called *the King's religious Men*, wearing (the Badge of) their Order over their Cloaths. They have the Power of judging as ſub-altern Officers, and make their Viſits on Horſe-back, ſhave their Heads and Beards, muſt eat no thing that had Life, and are forbidden converſing with Women. Whoever breaks theſe Rules, receives ſeventy or eighty Strokes on the Buttocks, and is baniſhed the Monaſtery. When they firſt receive the Tonſure, they impreſs a Mark on the Arm, which never wears off. They work for their Living, or follow ſome Trade: Some go a begging, but all have a ſmall Allowance from the Governor. They bring-up Children in their Houſes, whom they teach to read and write. If theſe Children conſent to be ſhaved, they retain them in their Service, and receive what they earn. When their Maſter dies, they become free, and Heirs to all their Goods, mourning for them, as if they had been their Fathers.

THERE is another Sort of religious Men, who, like the former, abſtain from Fleſh, and ſerve Idols; but they are not ſhorn, and may marry [c]. They believe, by Tradition, that Mankind, originally, had only one Language; but that the Deſign of building a Tower to go up to Heaven, cauſed the Confuſion of Tongues. The Nobles much frequent the Monaſteries, to divert themſelves, either with common Women, whom they find there, or others they carry with them

[a] Or *Tsui-ma-tau*, before called *Suiſſima*, in this Place ſpelled *Ceuxima*. [b] *Hamel*, p. 594. [c] They are like the *Tau-tſe* among the *Chineſe* who are married, as the former correſpond with the *Ho-ſhang*, who are not married. See before, *p.* 203, *&* *ſeqq.*

because they are generally deliciously seated for a Prospect, and accommodated with fine Gardens, so that they might better be called Pleasure-Houses than Temples; but this is to be understood of the common Monasteries, where the religious Men love to drink hard.

THERE were two Convents of religious Women in the City of *Sior*; one contained none but Maidens of Quality, the other those of the inferior Sort. They were all shorn, and observed the same Rules and Duties as the Men. b They were maintained by the King and great Men: But three or four Years before the *Dutch* left *Korea*, his Majesty gave them Leave to marry [a].

4. *Of the* King *and* Government *of* Korea.

The King tributary; yet absolute: His chief Officers: State in going abroad. Petitions, how presented. Military Officers, and Soldiers. c Shipping. The Revenue. Punishments for Rebels, and Traitors: Killing a Husband: Murder and Theft: For Adultery: Not paying Debts: Beating on the Shins, and Feet, Buttocks, and Calfs of the Legs.

KOREA is tributary to the Eastern *Tartars*, who conquered it before they subdued *China*, from whence an Ambassador comes three Times a Year, to receive the Tribute, which the Peo- d ple pay in the Root *Nisi*. Upon his Arrival, the King goes out of Town, with all his Court, to receive him, and waits on him to his Lodging. He is treated every-where with such Respect, that he seems to be honoured more than the King himself. He is preceded by Musicians, Dancers, and Vaulters, who strive to divert him. During the Time he remains at Court, all the Streets, from his Lodging to the Palace, are lined with Soldiers, who stand within ten or twelve Foot e one of the other. There are two or three Men, who have no other Employment but to pick-up Notes thrown-out of the Ambassador's Window, in order to be carried to the King, who desires to know what he is doing at all Times. That Prince studies all Manner of Ways to please this Officer, that he may make a favourable Report of him to the great *Khân* of *China* [b].

BUT although the King of *Korea* pays an Acf knowledgment to the Emperor of *China*, yet his Power is absolute over his own Subjects. None of them, not the greatest Lords, have any Property in the Lands; their Revenues arising out of those Estates they hold of his Majesty, during Pleasure, and from the great Number of their Slaves, for the *Dutch* knew some who had two or three hundred. 1668. Hamel.

THE chief Officers, by Sea and Land, who make-up the King's Council, meet every Day at Court. They must wait till their Advice is asked, before they give it; and till they are appointed to manage any Business, must not meddle with it. These People have the first Places about the King, which they enjoy till fourscore Years of Age, provided they behave well. The same is practised in other inferior Employments at Court, which no Man quits, unless it be to rise. The Governors of Places, and subaltern Officers, are removed every three Years: But very few of them serve-out their Time, being cashiered for Misdemeanors on the Accusation of the Spies [c], which the King keeps in all Places [d]. *His chief Officers.*

WHEN his Majesty goes abroad, he is attended by all the Nobility of the Court, wearing their respective Badges; consisting of a Piece of Embroidery before and behind, on a Garment of black Silk, with a very broad Scarf, a great Body of Soldiers following in good Order. He is preceded by Men, both on Foot and Horseback, some carrying Colours and Banners, others playing on warlike Instruments. They are followed by the Life-Guards, composed of the principal Citizens. The King is in the Middle, carried under a very rich Gold-Canopy, and the Whole proceeds with such Silence, that not the least Noise is heard. When he passes by the great Men, or Soldiers, they must turn their Backs to him, without offering to look, or so much as cough, on such Occasions. Therefore most Soldiers put little Sticks in their Mouths, that they may not be accused of making a Noise. Just before him goes a Secretary of State, or some other great Officer, with a little Box: Into this he puts all the Petitions, and Memorials, which private Persons either present on the End of a Cane, or hang along the Walls, or Pales; so that they cannot see who prefers them. These, which are brought him by Men appointed to gather them, are laid before the King, on his Return to the Palace; and whatever he orders relating thereto, is forthwith put in Execution. All the Doors and Windows of the Houses in the Streets, through which his Majesty passes, are shut, and no-body dares presume to open them ever so little, much-less look over the Wall, or Pales [e]. *State in going abroad.* *Petitions, how presented.*

THE King keeps abundance of Soldiers in his capital City, whose sole Business is to guard his Person, and attend him when he goes abroad. The Provinces are likewise obliged, once in *Military Officers.*

[a] *Hamel*, p. 590, & *seq.* [b] The same, *p.* 594, & *seq.* [c] See before, *p.* 338. a. [d] *Hamel*, p. 588, & *seq.* [e] The same, *p.* 595.

Travels in Korea.

ſeven Years, to ſend all their Freemen, by Turns, to guard him for two Months. Each Province has its General, with four or five Colonels under him, and each as many Captains depending on them; each of whom is Governor of ſome Town, or ſtrong Hold; inſomuch that there is not a Village, but where, at leaſt, a Corporal commands, who has under him Tithing-Men, or Officers over ten Men. Theſe Corporals are obliged, once a Year, to deliver to their Captains a Liſt of what People are under their Juriſdiction.

And Forces.

THEIR Cavalry wear Cuiraſſes, Head-Pieces, Bows and Arrows, Swords and Whips, with ſmall Iron Points. The Foot likewiſe wear a Corſelet, a Head-Piece, a Sword, and Muſket, or Half-Pike. The Officers carry nothing but Bows and Arrows. The Soldiers are obliged to provide fifty Charges of Powder and Ball, at their own Coſt. Every Town, in its Turn, furniſhes alſo a Number of religious Men, to guard and maintain, at their own Expence, the Forts and Caſtles, which are ſituate in narrow Paſſes, or on the Sides of Mountains. Theſe are reckoned the beſt Soldiers, and obey Officers choſen out of their own Corps, who obſerve the ſame Diſcipline as the other Troops. Thus the King knows, to a Man, how many are fit to ſerve him. Thoſe turned of ſixty, are diſcharged from Duty, and their Children ſupply their Places. The Number of Freemen, who neither are, nor have been in the King's Service, together with the Slaves, makes above half the People in the Country.

Shipping.

KOREA[a] being almoſt encompaſſed by the Sea, every Town is obliged to fit-out, and maintain a Ship. Their Ships have generally two Maſts, and thirty, or thirty-two Oars; to each of which there are five or ſix Men: So that each of this Sort of Galleys has about three hundred Men, for Rowing and Fight. They carry ſome ſmall Pieces of Cannon, and abundance of artificial Fireworks. Every Province has its Admiral, who views theſe Veſſels once a Year, and gives an Account, of what he finds, to the High-Admiral, who ſometimes is preſent at theſe Reviews. If any of the Admirals, or Officers under them, commits a Fault, he is puniſhed with Baniſhment, or Death; as in the Year 1666, their Governor, who had the Command of ſeventeen Veſſels, was puniſhed for the Offence already mentioned [b].

The Revenue.

THE King's Revenue, for Maintenance of his Houſe and Forces, ariſes out of the Duties paid for all Things the Country produces, or that are brought by Sea: To this Purpoſe, in all Towns and Villages there are Store-Houſes to keep the Tithe, which the Farmers, who are generally of the common Sort, take upon the Spot in Harveſt-Time, before any Thing is carried away. Thoſe who have Employments receive their Salaries out of the Revenues of the Places where they reſide, what is raiſed in the Country being aſſigned to pay the Sea, and Land-Forces. Beſides this Tithe, thoſe Men, who are not liſted in the Army, are to work three Days in a Year, at whatever Buſineſs the Country ſhall put them upon. Every Soldier, whether Horſe, or Foot, has yearly three Pieces of Cloth, worth eighteen Shillings, given to cloath him; which is Part of the Pay of the Troops that are in the Capital. This is what is raiſed on the People, who know no other Duties, or Taxes.

JUSTICE is ſeverely executed among the *Koreſians*. He who rebels againſt the King, is deſtroyed, with all his Race: His Houſes are thrown-down, and no Man dares ever rebuild them; all his Goods forfeited, and ſometimes given to ſome private Perſons. Nothing can ſave the Man from Puniſhment, who makes any Objection to his Decree: This the *Dutch* were often Witneſſes of. Among the reſt, the Author remembers, that the King having deſired his Brother's Wife, who was excellent at her Needle, to embroider him a Veſt; that Princeſs bearing him a mortal Hatred, ſtitched-in, betwixt the Lining and the Outſide, ſome Charms and Characters, of ſuch a Nature, that his Majeſty could enjoy no Pleaſure, nor take any Reſt, whilſt he had it on.

AT length ſuſpecting the Matter, he had the Veſt ripped, and found-out the Cauſe. Hereupon the King condemned her to be ſhut-up in a Room, the Floor whereof was of Braſs, and ordered a great Fire to be lighted underneath, the Heat whereof tormented her till ſhe died. The News of this Sentence ſoon ſpreading through the Provinces, a near Kinſman of the unhappy Lady, who was Governor of a Town, and in good Eſteem at Court, ventured to write to the King; repreſenting, that a Woman, who had been ſo highly honoured as to marry his Majeſty's Brother, ought not to die ſo cruel a Death, and that more Favour ſhould be ſhewn to the Sex. The King incenſed at this Courtier's Boldneſs, ſent for him immediately, and, after cauſing twenty Strokes to be given him on his Shin-Bones, ordered his Head to be cut-off.

THIS Crime, and thoſe following, are only perſonal, and do not involve the whole Family. If a Woman kills her Huſband, ſhe is buried alive up to the Shoulders, in a Highway, and an Ax laid by her, with which all Paſſengers, who are not Noblemen, are obliged to give her

[a] In ſpeaking of *Korea*, the *Chineſe* to *Kau-li*, add *que*; and the *Manchews* to *Solgon* (rather than *Sodbo*, as ſpelled *p.* 319.) annex *Kuron*, or *Koron*, which Words ſignify *Kingdom*, in the reſpective Languages. *Du Halde's China*, vol. 2. p. 246. [b] See before, *p.* 338. b.

Stroke on the Head till ſhe is dead. The Judges of the Town, where this happens, are ſuſpended for a-while: It is deprived of a Governor, and made ſubordinate to another Place; or, at beſt, only a private Gentleman is left to command in it. The ſame Penalty is inflicted on ſuch Towns as mutiny againſt their Governor, or ſend falſe Complaints againſt them to Court.

IT is lawful for a Man to kill his Wife for Adultery, or any other heinous Fault, on proving the Fact. If the Woman ſo killed was a Slave, the Penalty is, to pay three Times her Value to the Owner. Slaves, who kill their Maſters, are cruelly tormented to Death: But they reckon it no Crime for a Maſter to kill his Slave, though upon a ſlight Account. Thus they puniſh Murder. After they have long trampled on the Criminal, they pour Vinegar, (in which they waſhed the putrified Carcaſs) through a Funnel down his Throat, and when he is full, beat him on the Belly with Cudgels till he burſts. Thieves are trampled to Death: And though this be a dreadful Puniſhment, yet the *Koreſians* are much addicted to ſtealing.

IF a ſingle Man is found a-bed with a married Woman, he is ſtripped naked to a little Pair of Drawers; then daubing his Face with Lime, they run an Arrow through each Ear, and faſten a little Drum on his Back, which they beat at all the croſs Streets, to expoſe him: This Puniſhment ends in forty or fifty Strokes of a Cudgel on the Man's bare Buttocks; but the Woman receives them with Drawers on. The Men are naturally very amorous, and ſo jealous, that they ſeldom allow their beſt Friends to ſee their Wives. If a married Man be taken lying with another Man's Wife, he is to ſuffer Death: This happens chiefly among Perſons of Rank; and the Criminal's Father, if living, or elſe his neareſt Relation, muſt be the Executioner. The Offender is to chuſe his Death; but generally the Men deſire to be run-through the Back, and the Women to have their Throat cut.

THEY, who by a Time appointed, do not pay what they owe to the King, or private Perſons, are beaten twice or thrice a Month on the Shin-Bones, which is done till they can find Means to diſcharge the Debt: If they die before they have ſatisfied the Creditor, their neareſt Relations muſt pay it for them, or ſuffer the ſame Puniſhment; ſo that nobody ever loſes what is due to him. The ſlighteſt Puniſhment in this Country is, to be baſtonadoed on the Buttocks, or Calfs of the Legs; and they look upon it as no Diſgrace, becauſe it is very common, being often liable to it for only ſpeaking one Word amiſs. Inferior Governors, and ſubordinate Judges, cannot condemn any Man to Death, without acquainting the Governor of the Province; nor can any try Priſoners of State, without the King be firſt informed. 1668. Hamel.

Beating on the Shins.

THE Manner how they baſtonado on the Shin-Bones is this: They tie the Criminal's Feet together, on a little Bench four Fingers broad, and laying ſuch another under his Hams, which are faſt bound to it, they ſtrike on the Shins with a Sort of Lath of Oak, or Alder, as long as a Man's Arm, ſomewhat round on one Side, and flat on the other, two Inches broad, and about the Thickneſs of a Crown-Piece. They muſt not give above thirty Strokes at one Time, and then two or three Hours after they repeat them, till the whole Number be compleat, according to the Sentence.

Feet, Buttocks, and

WHEN the Offender is to be drubbed on the Soles of the Feet, he is made to ſit-down on the Ground, then having bound his Feet together by the great Toes, they reſt them on a Piece of Wood they have betwixt their Legs, and beat them with a Cudgel as thick as a Man's Arm, and three or four Foot long, giving as many Strokes as the Judge has ordered. The Baſtonado on the Buttocks is thus: The Men being ſtripped, they make them lie on the Ground with their Faces down, and bind them to the Bench. The Women have a Pair of wet Drawers left on, and in this Poſture they beat them with a larger and longer Lath than thoſe before-mentioned. An hundred Strokes are equivalent to Death, and many of them die, ſome even before they have received fifty.

Calfs of the Legs.

WHEN they are adjudged to be beaten on the Calfs of the Legs, it is done with Rods, or Wands, as thick as a Man's Thumb. This Puniſhment is common to Women and Apprentices. Whilſt theſe Severities are inflicting, the Criminals cry ſo lamentably, that the Spectators ſeem to ſuffer no leſs than the Offenders [a].

[a] *Hamel*, p. 588, & *ſeqq.*

CHAP. III.

A DESCRIPTION of TARTARY, subject to CHINA.

INTRODUCTION.

Tartary *in general: Vaſt Extent.* Chineſe Tartary. *Inhabitants of* Tartary. *Travellers into the* Mongols *Country: Thoſe into Eaſtern* Tartary: *Jeſuits Map thereof. Names of Places.* Du Halde's *Account, whence.*

Tartary *in general.*

TARTARY in general, commonly called *Great Tartary*, or rather *Tatary*, is a Country of vaſt Extent, bounded on the Eaſt by the *Tartarian*, or Eaſtern Ocean; and on the Weſt by the *Caſpian* Sea, the Rivers *Jaïk* and *Tobol*, which ſeparate it from *Ruſſia*; on the North it has *Siberia*, which belongs to *Ruſſia*; and on the South the Kingdom of *Karaſm*, the two *Bukharia's*, *China*, and *Korea*: So that it takes-up all the Middle-Part of *Aſia*, from Weſt to Eaſt; being ſituated between the ſeventy-fifth and hundred and ſixty-firſt Degrees of Longitude, and between the thirty-ſeventh and fifty-fifth Degrees of Latitude. Hence it contains eighty-ſix Degrees of Longitude, or is in Length, from Weſt to Eaſt, three thouſand and ſix hundred Miles; and eighteen Degrees of Latitude, or is in Breadth, from South to North, nine hundred and ſixty Miles, where broadeſt; though where narroweſt, not above three hundred and thirty.

Vaſt Extent.

THIS Region, though ſo vaſtly extenſive, is not near ſo large as it was while the *Tartar* Empire exiſted under *Jenghiz Khân*, and his Succeſſors, who reduced the Whole, with all the Southern *Aſia*, under their Dominion: But after it came to be broken to Pieces, by the Diviſions among the Chiefs, or Heads, of Tribes, *Great Tartary* was curtailed, on every Side, by the bordering Powers, particularly the *Ruſſians*; who on the Weſt have ſubdued almoſt all that Part, containing the Empire of *Kapchâk*, or *Kipjâk*, which extended Weſtwards to the *Don*, and made near one Fourth of the Whole: And on the North have much enlarged the Bounds of *Siberia*, by incroaching on the Lands of the *Eluths*, or *Kalmûks*, and the *Kalkas* (particularly towards the Springs of the River *Irtiſh*) whom they have reduced to narrower Limits, from North to South, than formerly were poſſeſſed by them.

Chineſe Tartary.

OF this great Country, more than one Half belongs to the Empire of *China*, extending Eaſtward from the famous Mountains of *Altay* (out a of which the great River *Irtiſh* riſes) in about one hundred and ten Degrees of Longitude. This Part is by ſome of the Miſſioners, who made the Map of it, called *Eaſtern Tartary*: But, according to moſt other Authors, the Name is given only to that Part which comprizes the Countries of the *Manchews*. Thus *Verbieſt* intitles his firſt Progreſs, *A Journey into the Eaſtern* Tartary; and his ſecond, *A Journey into the Weſtern*; although this laſt did not extend be- b yond the Country of the *Mongols*, which lies, within this Diviſion, to the Weſt of the *Manchews*.

AND here it may be proper to obſerve, that the Whole of *Great Tartary* is poſſeſſed by two Sorts of People, branched-out into ſeveral Nations, or Tribes, and differing in their Language, Manners, and Cuſtoms. Firſt, theſe known at preſent by the Name of *Manchews*, commonly called *Eaſtern Tartars*, and their c Country, *Eaſtern Tartary*. Secondly, the *Mongols*, or *Moguls*, commonly called *Weſtern Tartars*, and their Country, extending to the *Caſpian* Sea, *Weſtern Tartary*. Each of theſe People are divided into ſeveral Nations, and Tribes, eſpecially the *Monguls*, who are infinitely the more numerous: For many Ages, they were known to us by the Name of *Turks*, and diſtinguiſhed, by the Oriental Authors, into Weſtern and Eaſtern *Turks*: Till in the thirteenth Cen- d tury, led-forth by *Jenghiz Khân*, they made themſelves famous, under the Appellation of *Moguls* and *Tartars*, which were the Names of the two principal Hords.

THE Country of the *Monguls* having been the Seat of their Empire for ſeveral Ages, became greatly frequented, for a Time, by foreign Merchants and Travellers. Beſides *Marco Polo*, the *Venetian*, who went thither for Sake of Trade, ſeveral Prieſts were ſent out of *Europe*, by the e Pope, on a religious Account, to the Succeſſors of *Jenghiz Khân*; ſuch as *Rubruquis*, *Carpin*, and others. The Journals of theſe Friars, which were publiſhed, give us a tolerable Account of the Country, and Inhabitants, at the Juncture they wrote: But that great Empire, in Time, falling to Ruin, and the Country being, for the moſt Part, one continued Deſart, without Towns, or Habitations, it hath, of late Ages, been viſited

by no *Europeans*, and the *Ruſſians* have ſeldom paſſed through it, in their Way to *China*. All the Notices we have of it come from the Jeſuits *Verbieſt*, *Thomas*, and *Gerbillon*; the laſt of whom croſſed it ſeveral Times: And from the Miſſioners *Regis*, *Jartoux*, *Fridelli*, and *Bonjour*, who made the Map in the Years 1709, 1710, and 1711. To theſe we muſt add the Notes of a curious Gentleman, to the Hiſtory of *Jenghiz Khân* (written [a] by *Abulghâzi Khân*, King of *Karazm*) and tranſlated by him from the *German* into *French*. Theſe Remarks were collected by the Editor, whoſe Name was *Bentink* [b], from the Report of ſeveral Perſons, particularly *Swedes*, who had been in *Tartary*, or had their Memoirs from the Natives. He had inſerted them occaſionally, as Notes at the Bottom of their reſpective Pages: But the *Engliſh* Tranſlator has thrown them together in a geographical Form, mixed with Remarks of his own, at the End of the Hiſtory, to which it makes a ſecond Volume.

THE early Travellers above-mentioned, not having penetrated into Eaſtern *Tartary*, which in their Time made no Figure in the World, give no Manner of Account of it, or the Inhabitants. The Jeſuit *Verbieſt* was the firſt *European* we know of, who entered into this Part of the Continent, when he accompanied the Emperor *Kang-hi*, in his Progreſs, in 1688. Since then the *Ruſſians*, in their Way from *Ni-po-chew*, or *Nerchins-koy*, to *China*, paſſing through the Skirts of it, have furniſhed us with ſome farther Knowledge thereof. But the greateſt Light is to be expected from the Miſſionary Geographers abovementioned, who travelled through the Whole, and have tranſmitted Memoirs of their Remarks, as well as Maps, communicated by *Du Halde*, in his Deſcription of *China* and *Tartary*.

WITH Regard to the Map of this Part of *Tartary*, we are told by them, that it is not only new, even in the Parts neareſt to *China*, but the firſt that ever appeared either there, or in *Europe*: For, it ſeems, the *Chineſe* Geographers have given no Deſcription of theſe vaſt Territories (which they comprehend under the Names of *Nyu-che* and *Ni-ul-Han*) although inhabited by a Nation, who ruled in *China* itſelf about the thirteenth Century, under the Name of *Kin-chau*; but are, in a Manner, unknown at *Pe-king*, even to the Grandees, and the *Literati*. Such is their Contempt of Foreigners [c].

HOWEVER, it may be neceſſary farther to inform the Reader, that the Country of the *Kalkas*, and other Lands, lying to the Weſt of the Head of the River *Tula*, and North of the River *Onon*, were not meaſured by the Jeſuits [d]; the Lake *Paykal*, or *Baykal*, River *Irtiſh*, and the neighbouring Parts, were laid-down from the Reports of the *Mongols* [e]; neither was the reſt ſurveyed any Thing ſo compleatly as *China*: For in Eaſtern *Tartary* they ſeem to have made but two Tours, and in Weſtern *Tartary* only one; if we may judge by the Order in which Places are inſerted in the Tables of Latitude and Longitude, which we have annexed: Nor are the Obſervations of the Latitude near ſo numerous as thoſe made in *China*. As for the Longitudes, they are only computed as reſulting from the geometrical Meaſures, they having made no Obſervations that Way in *Tartary*; whence it happens, that neither the Eaſtern Coaſt, nor Weſtern Bounds at *Mount Altay*, are ſufficiently fixed.

Names of Places.

WITH reſpect to Names, the Miſſioners thought neceſſary to inſert thoſe uſed in each Country. To the *Manchew* Places, they give the *Manchew* Names; and to the *Mongul*, the *Mongul* Names. When they firſt began the Map, the Emperor commanded the *Tartarian* Names to be written in the *Tartarian*, and the *Chineſe* Names in the *Chineſe* Characters; becauſe it is impoſſible to write the *Tartarian* Names in the *Chineſe* [f]. But as the *Tartars* have two Languages in common, the *Manchew*, and *Mongul*; therefore they have inſerted only three Sorts of Names in their Map in *European* Characters: The *Chineſe* Names, for the Towns they formerly poſſeſſed beyond the great Wall, in the Province of *Lyau-tong*, or *Quan-tong*, which, for the moſt Part, have undergone no Alteration: The *Manchew* Names, for all the ancient Places of the *Manchew* Country, which, like other Provinces of *China*, are ſubject to Governors ſent thither by the Emperor: Thirdly, the *Mongul* Names, to diſtinguiſh the ſeveral Diſtricts of the *Mongul* Princes; which, notwithſtanding their vaſt Extent, have neither Cities, Fortreſſes, nor Bridges, and are in a Manner deſtitute of every Convenience of ſocial Life [g].

Du Halde's Account, whence.

DU HALDE intitles his Account of theſe Countries, *Geographical Obſervations on* Tartary: *Extracted from the Memoirs of the Miſſioners who made the Map*. But as he has not diſtinguiſhed the Remarks which belong to each Author, and it would be cumberſome to ſet-down all their Names at the Head of the Page, we ſhall only mention that of *Regis*, who ſeems to have been the chief Perſon concerned in the Survey.

[a] In the *Turkiſh* Language. [b] He publiſhed a ſhort Account in *French* alſo of *Little Bukharia*. [c] *Du Halde's China*, vol. 2. p. 236. [d] See the ſame, *p.* 249. [e] Theſe we have, in ſome Meaſure, rectified from the Maps of *Strahlenberg* and *Kyrillow*, as well as other Helps. [f] Or the *European* Names. See before, *p.* 195. [g] *Du Halde*, as before, *p.* 236.

SECT.

Manchews Country.

SECT. I.

The Territories of the Manchew Tartars, *commonly called* Eaſtern Tartary.

THIS Country is divided into three great Governments, *Shin-yang*, or *Mugden*, *Kirin Ula*, and *Tſitſikar*; whoſe Bounds and Extent appear from the Map.

1. *The* Government *of* Shin-yang.

Bounds and Extent. Shin-yang *the Capital.* *Imperial Sepulchres.* Inden *City.* Fong-whang-ching. San-cha *River Point.* *Soil and Produce.*

Bounds and Extent.

THE Government of *Shin-yang*, called by the *Manchews*, *Mugden*, contains all the ancient *Lyau-tong* [a], and is bounded on the South by the great Wall of *China*: On the Eaſt, North, and Weſt, it is incloſed only by a wooden Paliſado, ſeven or eight Foot high, and more fit to mark its Bounds, and keep-out petty Robbers, than to oppoſe an Army. The Gates are no better, and guarded only by a few Soldiers. The *Chineſe* Geographers having given the Name of Wall to this Paliſado, has occaſioned the Province of *Lyau-tong* to be erroneouſly placed in ſome Maps [b], within the great Wall. As the Subjects of *Lyau-tong* were neither permitted to go-out of their own Country, nor into *China*, without Leave of the *Mandarins*, this Government was accounted very profitable: It contained likewiſe ſeveral fortified Places, but at preſent they are almoſt in Ruins, being become uſeleſs under the *Manchew* Emperors.

Shin-yang *the Capital.*

THE Capital of the Country is *Shin-yang*, or *Mugden*: A City, which the *Manchews* look-upon as the Metropolis of their particular Nation; and, therefore, ſince their Poſſeſſion of *China*, have not only adorned it with ſeveral public Edifices, and ſtored it with Magazines, but have ſettled here the ſame Sovereign Tribunals with thoſe at *Pe-king*, excepting that called *Li-pû*. Theſe Tribunals conſiſt of none but Natives, and all their Acts are written in the *Manchew* Language and Character. They are not only Sovereign in *Lyau-tong*, but likewiſe in all the Parts of *Tartary*, immediately ſubject to the Emperor. *Mugden* is likewiſe the Reſidence of a *Tartarian* General, who has here his Lieutenants-General, with a conſiderable Body of Soldiers of the ſame Nation. This has drawn a great Reſort of *Chineſe* from the other Provinces, a who carry-on almoſt all the Trade of *Tartary*.

NOT far from the Gates of this City are two magnificent Burying-Places of the firſt Princes of the reigning Family, who took the Title of Emperor from their beginning to reign in *Lyau-tong*. They are built according to the *Chineſe* Architecture; but, what is ſingular, are incloſed by a thick Wall with Battlements, and are ſomewhat lower than that of the City. Several *Manchew Mandarins*, of all Ranks, are appointed to b take-care of them, and, at ſet-Times, to perform the ſame Ceremonies of Reſpect, as if the Princes were ſtill living.

THE Emperor *Kang-hi*'s Great Great Grandfather lies interred in an ordinary Burying-Place at *Inden*, which is more like a Village than a City, though the *Manchews* began here to eſtabliſh the Seat of their Empire over *China*. The other Cities of this Province are of little Note, being thinly peopled, ill-built, and without any c Defence, except a Mud-Wall; though ſome of them, as *I-chew*, and *King-chew*, are very well ſituated for Trade, and have Plenty of Cotton.

THE City of *Fong-whang-ching* is the beſt, and moſt populous, and has a very conſiderable Trade, being, as it were, the Key to the Kingdom of *Korea*, and its Commerce. This has drawn hither a great Number of *Chineſe* Merchants, who have handſome Houſes in the Suburbs. The principal Merchandize is Paper, d made of Cotton, very ſtrong and durable; but neither white, nor tranſparent: It is uſed at *Peking* for Saſhes in Palaces, and Houſes of Faſhion. The City is governed by a *Manchew*, with the Title of *Hotongta*; who has under him ſeveral other *Mandarins*, Civil and Military, of his Nation. It derives its Name from *Fong-whang-ſhan*, the moſt noted Mountain in the Country, where the famous Bird, *Fong-whang*, is ſuppoſed to breed [c].

THE *Chineſe* exaggerate much in ſpeaking of e the Rarities of this Country; but the Miſſioners found nothing remarkable either in the Mountains, or Rivers: For Inſtance, the Point of *San-cha-ho*, ſo much taken Notice of by *Chineſe* Authors, is no more than a Concourſe of three ordinary Rivers, which unite in this Place, and under that common Name diſcharge themſelves into the Sea; but is far from being a Novelty.

THE Lands of this Province are in general f very good, producing Plenty of Wheat, Millet, Roots, and Cotton: They alſo feed Numbers of Sheep and Oxen, which are rarely ſeen in any of the Provinces of *China*. They have but little Rice, yet Plenty of Apples, Pears, Nuts, Fil-

[a] Called alſo *Quan-tong*. This Government is about two hundred and ſeventy Miles long, and one hundred and twenty-five broad.

[b] As in thoſe of the Jeſuit *Martini*, and after him *Sanſon*, *De Fer*, and all other Geographers, till *De l'Iſle*.

[c] See before.

erds, and Chesnuts, even in their Forests. The a
Eastern Part, which borders on the ancient Coun-
ry of the *Manchews*, and the Kingdom of *Ko-*
ea, is full of Desarts and Bogs: Wherefore it is
o Wonder, that one of the Emperors, of the
Family of *Tang*, was obliged to raise a Cause-
way for twenty great *French* Leagues, in order
o march his Army into *Korea*, and compel the
King to render him Homage: For when it rains
n these Parts, as it frequently does, the Water
inks so deep into the Ground, that the Sides of b
he Hills, by which People endeavour to pass,
re almost as marshy as the Plains. In some
Parts of this Country, are still to be seen the
Ruins of Towns and Villages, destroyed in the
Wars between the *Chinese* and *Koreans* [a].

2. *The* Government *of* Kirin-ula.

Its Bounds. Kirin-ula *City.* Pedne, *or* Petuna. Ninguta, *or* Ningunta. *Soil and Produce. Grain. The Air very cold. Flowers: The* Jin-seng, *by whom gathered; and in what Manner: Where it grows: The Root.* Hon-chun *Village. Prospect of* Korea: *Map of it, how far accurate: Wall of* Korea. *The* Yu-pi Tartars: *Their Dress: Way of Living: Use Dog-Sleds: Their Manners: Fish, and Fishing: Their Language. The* Ke-cheng Tartars. *Great Island on the Coast. Land of* Yesso. *Country beyond the River.* Han-hala Tartars. *Ruins of Cities, built by the* Kin. *River* Songari. *Mountain* Chang-pe.

THE second great Government is *Kirin-ula-hotun*, bounded Westward by the Pa-
lado of *Lyau-tong*; on the East by the Eastern
Ocean, Southward by the Kingdom of *Korea*,
nd on the North by the great River *Saghalian-*
la (whose Mouth is a little on this Side the
fty-third Degree:) So that it extends in Lati-
ude no less than twelve Degrees, and almost e
wenty in Longitude (being seven hundred and
fty Miles long, and six hundred broad.)

THIS Country is but thinly peopled, and has
nly three Cities, very ill-built, and encompassed
ith Mud-Walls. The chief of them is situated
n the River *Songari*, there called *Kirin-ula*,
ence it takes its Name; for *Kirin-ula-hotun*
nifies the City of the River *Kirin*. Here re-
des the *Manchew* General, who has all the Pri-
leges of a Vice-Roy, and commands the (civil) f
Mandarins, as well as the Troops.

THE next City, called *Pedne*, or *Petuna*,
nds on the same River, forty-five Leagues
orth-West from *Kirin-ula-hotun*: It is much
erior to the former, being inhabited mostly by
rtarian Soldiers, under a Lieutenant-General,
d by Exiles.

THE third City, which the reigning Family 1720.
considers as its ancient Patrimony, is situated on Regis.
the *Hûrka-pira*, which runs North into the
Songari-ula: It is commonly called *Ninguta*, Ninguta, or Ningunta.
though its proper Name be *Ningunta*; for these
two *Tartarian* Words, signifying seven Chiefs,
are expressive of the Rise of their Kingdom,
which was first established by the seven Brothers
of the present Emperor *Kang-hi*'s Great Grand-
father's Father. That Prince having found Means
to settle them, with all their Families, in this
Place, soon made himself obeyed, through Fear,
or Love, by the rest of his Nation; which was
at that Time dispersed in the Desarts that extend
to the Eastern Ocean, and divided into little
Hamlets, each of one Family. The City, at
present, is the Residence of a *Manchew* Lieute-
nant-General, who has Jurisdiction over all the
Territories both of the old and new *Manchews*,
called also *Han-hala Ta-tse*, and all the Villages
c of the *Yu-pi Ta-tse*, with some other Nations of
less Note, along the Sea-Coasts towards the
Mouth of the *Saghalian-ula*.

As the precious Plant, *Jin-seng*, grows only *Soil and Produce.*
in these vast Countries, and as the *Yu-pi Tartars*
are obliged to pay a Tribute of Sables, the
Trade to *Ninguta* is considerable, and draws a
great Number of *Chinese* from the most distant
Provinces; whose Houses, with those of the Sol-
diers, make the Suburbs at least four Times
d larger than the City. The Emperor has taken
Care likewise to re-people the Country, by send-
ing hither such *Tartars* and *Chinese* Criminals as
are banished: So that the Missioners found Vil-
lages at a good Distance from *Ninguta*. They
make a Shift to live, and have, in particular,
abundance of Millet, and a Sort of Grain un-
known in *Europe*, called by the *Chinese* of the
Country, *May-se-mi*, as being of a middle Kind,
between Wheat and Rice. It is wholesome, and
e much used in these cold Countries: It would,
perhaps, thrive in some Parts of *Europe*, where
no other Grain will grow.

OATS, so scarce every-where else, are here in *Grain.*
Plenty, and given to their Horses; which seemed
strange to the *Tartarians* bred at *Pe-king*, where
they feed their Horses with a Kind of black
Beans, common to all the Northern Provinces.
They have but little Wheat, or Rice; whether
it be the Fault of the Soil, or that those new In-
f habitants find their Account more in the Quanti-
ty, than Quality of their Grain. It is hard to
assign Reasons, why so many Countries, which
lie only in the forty-third, forty-fourth, and
forty-fifth Degrees of Latitude, should differ so
much from those of *Europe*, in regard of the
Seasons, and Productions of Nature, as not to
equal even the most Northern Provinces. How-

[a] *Du Halde*'s *China*, vol. 2. p. 236, & *seq.*

Manchows Country.

ever, it may be presumed, that the Quality of a Country among the Crouds of *Mandarins* and Soldiers continually passing and re-passing, between *Pe-king*, *Kirin-ula*, and *Ninguta*, or by Connivance of the Governors: But in 1709 the Emperor chusing that his *Manchews* should reap this Advantage, rather than the *Chinese*, ordered ten thousand of his Soldiers, encamped without the great Wall, to go and gather all the *Jin-seng* they could find; on Condition that each should give him two Ounces of the best, and take an equal Weight of fine Silver for the Remainder: By which Means the Emperor got in that Year, twenty thousand *Chinese* Pounds of it, for less than a fourth Part of the Price it bears at *Pe-king*.

any Soil depends rather on its abounding more, or less, in nitrous Particles, than on its Situation.

The Air very cold.

THE Cold begins much sooner in these Parts, than at *Paris*, whose Latitude is near fifty Degrees. The Missioners felt it very sharp at the Beginning of *September*; and the eighth of that Month being at *Tondon*, the first Village of the *Ke-ching Tat-tse*, or *Tartars*, were obliged to put-on Cloaths lined with Lamb-Skins: They were afraid too, that the *Saghalian-ula*, though so large and deep, would be frozen-over, and that the Ice would stop their Passage in Boats: That River was indeed frozen every Morning a considerable Distance from its Banks, and the Inhabitants assured them, that in a few Days it would be dangerous Sailing. This Cold is kept-up by the great Forests in this Country, which are very thick, and large, the nearer you advance to the Eastern Ocean: They were nine Days in passing through one, and had several Trees cut-down by the *Manchew* Soldiers, to make Room for their Observations of the Sun's Altitude.

Flowers.

HAVING passed these Woods, they came, from Time to Time, into fine green Valleys, watered with excellent Rivulets; whose Banks are enamelled with Variety of Flowers, but such as are very common in *Europe*, except the yellow Lilies, which are of a most lovely Colour: The *Manchews*, who accompanied them, were mighty fond of them. These Lilies, in Shape and Height, perfectly resemble our white Lilies, but are of a much weaker Scent; as well as the Roses found in these Valleys. The finest yellow Lilies grow seven or eight Leagues beyond the Palisado of *Lyau-tong*: They meet with great Quantities between the forty-first and forty-second Degree, in a most uncultivated Plain, bounded on one Side by a small River, and on the other by a Chain of little Hills.

The Jin-seng,

BUT the Plant which is most esteemed, and draws a great Number of Herbalists into these Desarts, is the *Jin-seng*, called by the *Manchews*, *Orhota*, that is, *the Chief*, or *Queen of Plants*. It is highly valued for its Virtues, in curing several Diseases, and all Decays of Strength proceeding from excessive Labour of Body, or Mind: Wherefore, it has ever been the principal Riches of Eastern *Tartary*; for what is found in the North of *Korea*, is all consumed in that Kingdom. The Value of this Root heretofore, may be judged-of by the present Price it bears at *Peking*, where an Ounce sells for seven Times its Weight in Silver.

By whom gathered,

THE *Chinese* used to get into the *Jin-seng*

As soon as these Herbalists begin their Search they are obliged to quit their Horses and Baggage, carrying with them neither Tent, Bed nor Provision, except a Bag of Millet dried in the Oven; and at Night lodge upon the Ground under a Tree, or in some wretched Hut run-up in Haste with Boughs. The Officers, who encamp at a Distance, where there is Plenty of Forage, receive an Account, from Time to Time, of their Progress, by those they send to them with Pieces of Beef, or Venison. The greatest Danger is from wild Beasts, especially Tigers; and if any-one returns not on the Signal for moving their Quarters, they conclude him devoured by them.

THIS Plant grows only on the Declivity of woody Mountains, on the Banks of deep Rivers or about steep Rocks: If a Forest takes Fire, it appears no more there in three or four Years, which proves, that the *Jin-seng* cannot endure Heat: But then, as it is not found beyond the forty-seventh Degree of Latitude, where the Cold is still more sensible, it may be inferred that it can as little bear too cold a Soil. It is easily distinguished from all other Plants about it, and frequently by a Cluster of very round red Fruit, or a Stalk that shoots above the Branches: Such was that the Missioners saw in the Village *Hon-chun*, on the Borders of *Kor*. This Plant, which was about a Foot and a half in Height, had but one Knob; whence shot five Branches, parting equally one from another, as if they did not spring from the same Plant. Each Branch had five Leaves, and, they say, there is always that Number, unless diminished by Accident.

THE Root is the only Part used in Physic, and has this Peculiar, that it shews the Number of its Years by the Remains of the Branches it sent-forth: Its Age enhances its Value; for the largest and firmest are the best. This Plant, together with three others, was brought the

[a] The Figure of it was taken by *Jartoux*, as it appears in our Print.

one of the Inhabitants of *Hon-chun*, who went a in Queſt of them five or ſix Leagues.

HON-CHUN, in forty-two Degrees fifty-five Minutes Latitude, two Leagues from *Korea*, is the principal Village of the *Quelka Tartars*, who are at preſent confounded with the *Manchews*, both in Language and Habitation; and is the fartheſt Extent of their Country, which is, in other Reſpects, agreeable enough, and, what is very uncommon among *Tartars*, well-cultivated, whether it be owing to Neceſſity, on Account of b their Diſtance from the *Manchews* (the neareſt of whom are forty Leagues off, and the Road very bad) or the Example of the *Koreans*, whoſe very Hills are cut into Stories, and cultivated to the Top.

It was a new Sight to the Miſſioners, after they had croſſed ſo many Foreſts, and coaſted ſo many frightful Mountains, to find themſelves on the Banks of the River *Tûmen-ûla*, with nothing but Woods and wild Beaſts on one Side, while c the other preſented to their View all that Art and Labour could produce, in the beſt-cultivated Kingdoms. They there ſaw walled Cities, and determined the Situation of four of them, which bounded *Korea* on the North: But as the *Koreans* underſtood neither their *Tartars*, nor *Chineſe*, though they wear the Habit of the latter, the Jeſuits could not learn the Names till they came to *Hon-chun*, where live the Interpreters, whom the *Tartars* employ in their Commerce d with thoſe People. The Names of theſe Towns are ſet in the Map, juſt as they are in the Emperor's, which has them in *Chineſe*.

The *Tûmen-ûla*, which divides the *Koreans* from the *Tartars*, falls into the Ocean ten Leagues from *Hon-chun*: As this was an important Point, the Miſſioners drew a Baſe of forty-three *Chineſe Li*, to a high Hill near the Sea, whence they had a Proſpect of two of the Cities fixed by their former Obſervations, and could e alſo diſtinguiſh the Mouth of that River: So that their Map may be depended on for the exact Limits of *Korea* on the Side of *Tartary*: But as the Emperor did not approve of their entering that Kingdom, the Eaſtern and Inland Parts are laid-down from Obſervations made by Imperial Envoys ſent the Year following, with a *Mandarin* of the Mathematic Tribunal, who took the Latitude of the Capital, called *Chau-ſyen*, or *King-ki-tau*; as alſo from the Maps of the *Koreans*, which were communicated to the Miſſioners. Although for this Reaſon they cannot warrant the exact Poſition of the Eaſtern Cities, nor ſeveral of the Southern; yet they do not ſcruple to affirm, that their Map of it is incomparably more correct, than any publiſhed before; which were only made from uncertain Reports, or Tranſlations of ſome *Chineſe* Geographers, who never ſaw ſo much as the Frontiers of the Kingdom [a]. The Name *Tûmen-ûla*, is a *Manchew* Appellation, and anſwers to the *Chineſe Van-li-kyang*, that is, the River of ten thouſand *Li* [b], which are equal to one thouſand *French* Leagues: But the Map ſhews this to be falſe. 1720. Regis.

Wall of Korea. The *Koreans* had built a ſtrong Wall on the Bank oppoſite to the *Tartars*, almoſt like that of *China*; but the Part towards *Hon-chun* was quite ruined when the *Manchews* ravaged *Korea*, which they made their firſt Conqueſt: In Parts more remote, it continues almoſt entire. Beyond the *Tûmen-ûla*, the Miſſioners, in their Progreſs into the ancient Country of the *Manchews*, came to a River, called *Suifond-pira*, the moſt conſiderable in it, and very famous among theſe *Tartars*, though it ſcarce deſerves Notice. Here they ſaw the Ruins of a City, called *Furdanhotun*, ſituated in an open Plain fit for Tillage: It had only a ſlight Mud-Wall, defended by a ſhallow Ditch.

The Yu-pi Tartars. The River *Uſuri* is incomparably the fineſt, both for Clearneſs, and Length of Courſe. It falls into the *Saghalian*, and belongs to the *Yu-pi Tartars*, who live in Villages by its Banks: It receives a great many large and ſmall Rivers, inſerted in the Map: It muſt be extraordinary full of Fiſh, ſince they ſerve the Inhabitants both for Food and Raiment: Theſe *Tartars* know how to dreſs the Skins, and dye them of three or four Colours, to ſhape, and ſew them in ſuch a delicate Manner, that at firſt you would imagine they made-uſe of Silk, till on ripping a Stitch or two, you perceive an exceeding fine Thong cut-out of a very thin Hide.

Their Dreſs. They dreſs like the *Manchews*, in the *Chineſe* Habit: The only remarkable Difference is, that the Bottom of their long Robes is commonly bound with a green, or red Border, on a white, or grey Ground: The Women alſo hang ſmall Pieces of Braſs Coin, or little Bells, at the Bottom of their Mantles, which give Notice of their Approach: Their Hair, which parts into ſeveral Treſſes, falls-upon their Shoulders, and is loaded with Bits of Looking-Glaſs, Rings, and other Baubles, which they prize as Jewels [c].

Way of Living. The Manner of Life of theſe *Yu-pi*, is no f leſs extraordinary. All the Summer they ſpend in Fiſhing: One Part of what they catch is laid-up, to make Oil for their Lamps; another ſerves for their daily Food; and the reſt, which they dry in the Sun, without ſalting (for they have no Salt) is laid-up for their Winter's Proviſion,

[a] *Kue*, in the *Chineſe*; and *Kuron* (or *Koron*) in *Manchew*, ſignify Kingdom. [b] Or *Chineſe* Furlongs, of which ten make a *French* League. [c] *Du Halde*, as before, *p.* 245, *& ſeq.*

Manchews Country. whereof both Men and Beaſts eat when the Rivers are frozen. The Miſſioners obſerved however, a great deal of Strength and Vigour in moſt of theſe poor People; yet the Animals uſed for Food, are very ſcarce in this Country, and their Fleſh of ſuch an intolerable Taſte, that the very Servants, as eager as they are for Fleſh, (having lived long on Fiſh) could not endure it. The Dogs in this Country draw their Sleds, when the Rivers are frozen, and are highly valued.

Uſe Dog-Sleds. IN their Return, they met the Lady of *Uſúri* coming from *Pe-king*; where her Huſband, who had been chief General of this Nation, and enjoyed the Honours and Prerogative of a Body-Guard, was lately dead. She told them, that ſhe had an hundred Dogs for her Sleds: One, beaten to the Road, goes before, which thoſe in Harneſs follow, without ſtraying, to the End of the Stage, and are relieved by others from the ſpare Pack. She aſſured them, that ſhe had often run an hundred *Chineſe Li* (or ten *French* Leagues) without reſting. Inſtead of bringing them Tea, which is the Cuſtom among the *Chineſe*, and other *Tartars*, her Attendants ſerved-up little Bits of Sturgeon, upon a neat Ratan Salver.

Their Manners. THIS Lady, who underſtood *Chineſe*, had a quite different Air and Manner from theſe *Yu-pi Tartars*, who, in general, are of a peaceable Diſpoſition, but heavy, unpoliſhed, and without any Tincture of Learning, or the leaſt public religious Worſhip, the *Chineſe* Idols themſelves, not having, as yet, found their Way among them: Very likely, ſays the good Jeſuit, becauſe the *Bonzas* cannot take-up with ſuch a poor, wretched Country, where they ſow neither Rice, nor Wheat, but only a little Tobacco, in a few Plats of Ground near each Village, on the Banks of the River: All the reſt of their Land is covered with a thick, and almoſt impenetrable Wood; whence they are annoyed with a Cloud of Gnats, and ſuch-like Inſects; which they are obliged to drive-away with Smoke.

Fiſh, and Fiſhing. THERE are, in *Europe*, almoſt all the Kinds of Fiſh taken in theſe Rivers; but not that Quantity of Sturgeon, which is the principal Fiſhery of this Nation. If you will believe them, the Sturgeon is the King of Fiſh, and has no Equal. They eat certain Parts of it raw, pretending, by that Means, to partake of all the Virtues they attribute to it. Next to the Sturgeon, they highly prize a Fiſh, which is unknown to us, but one of the moſt delicious that can be eaten: It is about the Length, and almoſt of the Shape, of a ſmall Tunny, but of a finer Colour: The Fleſh is entirely red, which diſtinguiſhes it from other Fiſh: It is ſo very ſcarce, that the Miſſioners could never meet with it above once or twice. The Natives commonly ſpear the large Fiſh, and take the leſſer with Nets: Their Barks are ſmall, and their Boats made only of the Barks of Trees, ſo well ſewed, as to keep-out Water.

THE Language of the *Yu-pi* ſeems to be a Mixture of that of the *Manchews*, their Neighbours, on the Weſt and South, and the *Ke-cheng Tartars*, bordering on the North and Eaſt; for to the Chiefs of the Villages, both Languages were intelligible. Theſe Chiefs cannot be called *Mandarins*, as having neither their Power, Enſigns, nor Train: Neither did the Miſſioners ever hear any *Tartars*, or *Chineſe*, give this Country the Name of a Kingdom, with which ſome *European* Geographers have honoured it.

THE ſame muſt be ſaid of the Country of the *Ke-cheng Tartars*, notwithſtanding it extends along the *Saghalian-úla*, from *Tondon* before-mentioned, to the Ocean: For in all this Space, of near one hundred and fifty Leagues, you meet with nothing but ordinary Villages, which are almoſt all ſeated on the Banks of that great River. Their Language differs from that of the *Manchews*, who call it *Fiatta*: This *Fiatta* Tongue is alſo apparently that of the *Tartars*, who inhabit from the Mouth of the *Saghalian-úla*, to the fifty-fifth Degree of Latitude, which, in this Part, is the Northern Boundary of the Emperor's Dominions in *Eaſt Tartary*. They do not ſhave their Heads, according to the preſent Cuſtom of the Empire, but wear their Hair tied with a Sort of Ribbon, or in a Bag behind. They ſeemed more ingenious than the *Yu-pi Tartars*, anſwered diſtinctly to the Queſtions aſked them by the Jeſuits, concerning the Geography of their Country, and took great Notice of their Operations.

FROM theſe *Tartars* the Miſſioners learned, that oppoſite to the Mouth of the *Saghalian-úla*, there was a great Iſland inhabited by People like themſelves. The Emperor, after this, ſending ſome *Manchews* thither, they paſſed-over in Barks belonging to the *Ke-cheng Tartars*, who dwell by the Sea-Side, and trade with the Inhabitants of the Weſtern Parts of the Iſland; and had they taken Surveys of the Southern Parts of it, as they did in their Progreſs on the Eaſt-Side, and, on their Return, by the North, to the Place whence they ſet-out, the Miſſioners ſhould have procured a compleat Knowledge of this Iſland: But being obliged to return too ſoon, for Want of Proviſions, they did not bring them the Names of any Villages, but thoſe through which they paſſed, nor a Plan of the Southern Coaſt. The Draught of that Part, therefore, is only grounded on the Reports of the Inhabitants; and, on this Circumſtance, that no Land appeared

peared along that Coaſt beyond the fifty-firſt Degree of Latitude; which could not be, were the Iſland longer.

THE Inhabitants of the Continent give it various Names, according to its different Villages; but their general Name is, *Saghalian Anga hata*, or, *The Iſland of the Mouth of the black River*: That of *Hu-yê*, fancied by ſome at *Pe-king*, is entirely unknown, both to the *Tartars*, and the Natives. The *Manchew* Surveyors told the Miſſioners, that theſe Iſlanders bred neither Horſes, b nor any other Beaſts of Burden; but that in ſeveral Parts they had ſeen a Sort of tame Stags, which drew their Sleds, and, by the Deſcription, were like thoſe uſed in *Norway*.

THEY heard nothing of the Land of [a] *Jeſſo*, which muſt be five or ſix Degrees more to the South, according to the *French* Maps, and the *Portugueze* Map of *Japan*, from whence that Iſland cannot be far diſtant, being ſituate, probably, not beyond the forty-fifth Degree of Latitude [b]. This ſeems to be the Country called *Ye-tſe*, by the *Chineſe* Geographers, who make it Part of *Eaſtern Tartary*, and a Land of vaſt Extent [c], inhabited by a warlike Nation, formidable to the *Japanneſe*; having hairy Bodies, Whiſkers hanging-down to their Breaſts, and their Swords tied by the Points behind their Heads. But all this is void of Truth, for neither the *Yu-pi*, nor *Ke-cheng Tartars*, whoſe Lands are contiguous, and who, in the Time of d their hunting Sables, range all the Countries Eaſt and Weſt, as far as the fifty-fifth Degree, know any Thing of theſe terrible People: Therefore, it is much ſafer to rely on the Accounts from *Japan*, concerning this Iſland of *Jeſſo*, which cannot be far from thence, as being the Place to which ſeveral *Japanneſe* Chriſtians fled, conducted by the Jeſuit *Jerom des Anges*, who, in 1623, was put to Death at *Yendo*, with fifty of his Followers.

BEYOND the *Saghalian-ula*, there is nothing but a few Villages, inhabited by the *Ke-cheng Tartars*; the reſt of the Country being a wild Deſart, frequented only by Sable-Hunters: It is croſſed by a famous Chain of Mountains, called *Hinkan-alin*. Here are alſo ſome pretty good Rivers. The *Túhûrû-pira*, which falls into the Eaſtern Ocean, ſprings from another Chain of a Mountains, in the fifty-fifth Degree of Latitude, which marks the Point whence the Rivers flow contrary Ways: Thus the *Udi-pira* runs towards the Northern Sea, and belongs to the *Ruſſians*; while the *Silimſi-pira* paſſes Southward into the Country of the *Ke-cheng Tartars*. 1720. Regis.

THOSE called *Han-hala*, or the three *Hala* Families, are true *Manchews*, who united together after the Conqueſt of the reſt of their Nation, from which they lay at a great Diſtance, being mixed with the *Yu-pi Tartars*. The Emperor *Kang-hi* gave them Lands near *Ningûta*, along the *Hûrha-pira*, and the *Songari-ûla*, on the Banks of which almoſt all their Villages are ſeated. Their Wives, Children, and Servants, go cloathed in general, like the *Yu-pi*; but have Horſes and Oxen, as well as good Harveſts, which the others want. Han-hala Tartars.

IN theſe Parts alſo, are ſeen the Ruins of ſeveral Cities. *Feneghê-hotun* ſtood on the *Hûrha-* c *pira*, five or ſix Leagues from *Ningûta*; but now is only a little Hamlet. *Odoli-hotun* was ſtrongly ſituated, being acceſſible only through the Waters, by a narrow Cauſeway. Here are alſo found great Stone Stair-Caſes, with ſome other Remains of a Palace, the like not to be met with any-where elſe; not even at *Ningûta*: So that it is very probable, all the Monuments of Antiquity in *Eaſtern Tartary*, were not the Work of the preſent *Manchews*, but of thoſe of the d twelfth Century, who under the Name of *Kinchau* [d], were Maſters of the North of *China*; and having built, in ſeveral Parts of their Country, Towns and Palaces, were afterwards cut-off by the *Mongols*, in Confederacy with the *Chineſe*, in ſuch a Manner, that thoſe who eſcaped the Slaughter, were obliged to fly into the Weſtern Parts of their ancient Country, now inhabited by the *Solon Tartars*, who ſay they were originally *Manchews*. Ruins of Cities. Built by the Kin.

e HENCE it may likewiſe be concluded, that *Pûtay-ûla-hotun* [e] was built by them; though nothing now remains, except an ordinary Pyramid, and the Ruins of the Walls, without which are the Houſes inhabited by the *Manchews*: It is about eight or nine Leagues from *Kirin-ûla-hotun*, on the *Songari*, there called *Pûtay-ula*, whence it takes its Name: This is the leaſt of the four Cities in the Government of *Kirin-ûla*,

[a] This is written variouſly, *Jeſſo*, *Jeſo*, *Jetſo*, *Jedſo*, *Yedſo*, and *Yetſo*. [b] The Land of *Yeſo*, as repreſented in our Maps, according to the Diſcoveries of the *Dutch*, extends beyond the fiftieth Degree of Latitude, and, conſequently, the North Part of it muſt lie in nearly the ſame Parallel with the South-Coaſt of the Iſland mentioned in the Text, and, perhaps, three or four Degrees more to the Eaſt, as it is exhibited in Mr. *Kyrilow*'s Map of the *Ruſſian* Dominions, publiſhed at *Peterſburg* in 1734; which ſeems to be the beſt extant for thoſe Parts. This Country, there called *Jedſo*, is repreſented as an Iſland; but Mr. *D'Anville* has made two Iſlands of it; and *Strahlenberg* makes *Jedſo* a Part of *Kamchatka*, contrary to the Fact. [c] Placing it about *Hon-chun*, above-mentioned, on the Northermoſt Borders of *Korea*. [d] Theſe were the *Kin Tartars*, often mentioned before. [e] The ſame which *Verbieſt*, in his Journal inſerted hereafter, calls ſimply *Ula*, repreſenting it as once the Seat of the *Tartar* Empire.

Manchews Country.

but by far the moſt agreeable, as being in a more fertile, and better-cultivated Plain.

River Songari.

THERE is nothing more celebrated in the *Manchew* Hiſtory, than the *Songari-ûla*, and the Mountain whence it ſprings, called by the *Tartars*, *Shanyen-alin*; and by the *Chineſe*, *Chang-pe-ſhan*, that is, *the ever-white Mountain*, from whence they derive their Origin, which they mix with a great many fabulous and wonderful Circumſtances. The Truth is, that the *Manchews* had then no River, in all their Territories, comparable to the *Songari-ûla*, which abounds with Fiſh, is large, deep, and navigable in every Part, without Danger; being but moderately rapid, even at its Confluence with the *Saghalian-ûla*.

Mountain Chang-pe.

As for the Mountain, it is the higheſt in all *Eaſtern Tartary*, and may be ſeen at a vaſt Diſtance, one Half woody, the other ſandy: It is this which makes it appear always white, and not the Snow, as the *Chineſe* imagine; for it ſcarce ever has any. On the Top are five Rocks, like ſo many broken Pyramids, exceeding high, which are continually wet with Fogs, and Vapours, peculiar to this Country. Between them is a very deep Lake, whence, with a fine Stream, the *Songari* takes its Riſe. But it does not give Birth, as the *Manchews* pretend, to the three great Rivers, *Tûmen-ûla*, (already deſcribed) *Ya-lû-ûla*, and *Si-hû-ûla*; which having encompaſſed the Borders of *Korea*, unite, and fall into the Sea of that Kingdom [a].

3. *The* Government *of* Tſitſikar.

Tſitſikar *City*. *The* Taguri. Merghen *City*. Saghalian-ûla *City*. Aykom *City Ruins: Its Riſe, and Fall. Pearl-Fiſhing*. Solon Tartars. *Sable-Hunters*. *River* Ergona, *or* Argon. Nipchu, *or* Nerchinſkoy. Manchews *Country*: *Extent, and Cities*. Solon, *or* Dawra *Province*. Albazin, *or* Yak-ſa. *The* Fiatta, *or* Yu-pi. *Vaſt Deſart Country*. *The* Orochon Tartars. Manchews, *their Religion, Perſons, Language*.

Tſitſikar *City*.

THE third Government is that of *Tſitſikar* [b], a new City, built by the Emperor *Kanghi*, to ſecure his Frontiers againſt the *Ruſſians*: It is ſituated near the *Nonni-ûla*, a conſiderable River, that falls into the *Songari*, and incloſed with a ſtrong Paliſado, not very high, but lined with a pretty good Rampart. The Gariſon conſiſts chiefly of *Tartars*, but the Inhabitants are moſtly *Chineſe*, drawn thither by Traffic, or baniſhed for Crimes. The Houſes of both are without the wooden Wall, which incloſes little beſides the Courts of Juſtice, and Palace of the *Tartar* General: They are built of Earth, ranged into pretty wide Streets, and incloſed with a Mud-Wall. It is inhabited by *Manchews*, *Solons*, and chiefly by the ancient Inhabitants of the Country of *Tſitſikar*, called *Taguri* [c]. This Nation, which is not very numerous, ſubmitted to the *Manchews*, under the Father of the Emperor *Kanghi*, imploring his Protection againſt the *Ruſſians*; who, paſſing in armed Barks out of the *Saghalian-ûla* into the *Songari-ûla*, ſecured all the Rivers communicating with them, and became terrible to the *Tartarian* Nations on their Banks. The *Tagûri*, who are large and robuſt, were always uſed to ſow Grain, and to build Houſes, though ſurrounded with *Tartars*, who never did either.

THE Governor of *Tſitſikar*, has Juriſdiction over the new Cities, *Merghen* [d] *hotun*, and *Saghalian-ûla-hotun*. *Merghen* is above forty Leagues from *Tſitſikar*, much thinner of People, and incloſed with a ſingle Wall. The Lands, belonging to the two laſt Cities, are but indifferent, being a ſandy Soil: But thoſe of *Saghalian-ûla-hotun*, that is, *the City of the Black River*, yield good Crops of Wheat, being a Plain, extending along the fine River *Saghalian*, and containing ſeveral Villages.

THE City *Saghalian-ûla* itſelf, which ſtands on the South Side, is built like *Tſitſikar*, is equally populous, and richer in Commodities. To this City belong the *Manchew* Villages on that River, which are but few, and ſeveral large Foreſts, where is excellent Hunting for Sables. Theſe the *Ruſſians* would have made themſelves Maſters of, had not their City *Yakſa*, which was built a few Days Journey higher-up the River, been demoliſhed by the Treaty in 1689. The *Tartar* Hunters ſtill keep a very good Guard on the Frontiers, and armed Barks on the *Saghalian-ûla*.

ABOUT thirteen *Chineſe Li* [e] higher, on the North Side, are the Ruins of an ancient City, called *Aykom*, built by the firſt Emperors of the preceding Family, *Tay-ming*: For, by a ſurprizing Turn of Fortune, the Weſtern *Tartars*, or *Monguls*, were not only expelled by the *Chineſe*, whoſe Maſters they had been for many Years; but alſo attacked with ſuch Vigour in their own Country, that after retiring a long Way, they were obliged, in their Turn, to draw Lines, of which the Miſſioners ſaw ſome Ruins. Soon after, finding themſelves no longer able to withſtand their enraged Enemies, they paſſed the *Saghalian-ûla*, and, to keep them beyond the River, was *Aykom* built under *Yong-lo*

[a] *Du Halde*, p. 247, *&c ſeq.* [b] By *Ides*, *Xixigar*; by *Brand*, *Suttega*; and in the Jeſuits Table of Latitude and Longitude, *Chiſkar*. This Government is ſeven hundred and forty Miles long, and ſix hundred broad.
[c] Called by *Iſbrand Ides*, *Targazi*. [d] Or *Merghin*. [e] Ten *Li*, or Furlongs, make a League.

J. Basire sculp.

N°145.

Vol. 4. Plate L. p. 356.

N.145. J. Basire fculp Vol. 4, Plate XLIX p. 356.

It appears to have ſubſiſted no long Time, ſince a twenty Years after the *Tartars* rallied, and entering their ancient Country, deſtroyed it. Then to revenge themſelves on the *Chineſe*, ravaged their Northern Provinces; and though they were afterwards overwhelmed, by the vaſt Army of the Emperor *Swen-ti*, yet they ſtill keep Poſſeſſion of their old Territories, the *Chineſe* Generals not knowing how, or being unwilling, to improve the Victory by driving them beyond the *Saghalian-ûla*, and re-building *Aykom*. This b Name is known to the *Chineſe*, as well as *Tartars*; and ſeveral at *Pe-king* give it to *Saghalian-ûla-hotun*, above-mentioned, a new City, built in a different Place.

INTO the River *Saghalian* [a] run the *Son-pira*, *Korſin-pira*, and ſeveral others conſiderable for Pearl-Fiſhing; which is done without much Art, the Fiſhermen only jumping into theſe little Rivers, and taking the firſt Oyſters they can find. They ſay there are no Pearls in the *Saghalian* c itſelf, becauſe, it is likely (as their *Mandarins* informed the Miſſioners) they durſt not plunge into ſo deep a Water. They fiſh for them likewiſe in ſeveral other little Rivers, that fall into the *Nonni-ûla*, and *Songari*, as the *Arom*, and *Nemer*, in the Road from *Tſitſikar* to *Merghen*; but affirmed they never found any in thoſe Weſt of *Saghalian-ûla-hotun*, towards the *Ruſſian* Territories. The Pearls are much cried-up by the *Tartars*, but would probably be little valued by d *Europeans*, on Account of their Defects in Shape and Colour. The Emperor has ſeveral Chaplets with one hundred, or more, on each, very large, and exactly like: But then they are choſen out of Thouſands, all belonging to him. The Sable-Skins of this Country are alſo highly valued by the *Tartars*, becauſe they wear well, and are laſting.

THE *Solon Tartars*, who hunt the Sables, are originally *Eaſtern Tartars*, deſcended, as themſelves ſay, from thoſe who eſcaped the general Deſtruction of their Nation in 1204, beforementioned. They are more robuſt, ſkilful, and brave, than the other Inhabitants of theſe Parts; and their Women ride on Horſeback, draw the Plow, hunt Stags, and other Game. A great Number of theſe *Tartars* now reſide at *Nierghi*, a pretty large Town, not far from *Tſitſikar*, and *Merghen*. The Miſſioners ſaw them ſet-out from thence, *October* the firſt, to hunt f Sables, clad in ſhort ſtrait Jackets of Wolf-Skins, with a Cap of the ſame, and their Bows at their Backs. They took with them ſome Horſes loaded with Millet, and their long Cloaks of Fox or Tiger Skins, againſt the Cold, eſpecially of the Night. Their Dogs are made for the Game, clamber well, and are acquainted with the Wiles of the Sables. Neither the Severity of the Winter, which freezes the largeſt Rivers, nor the Tigers, which often worry them, can hinder their returning to this painful and dangerous Exerciſe, becauſe all their Riches conſiſt in it. The fineſt Skins are reſerved for the Emperor, who pays a fixed Price for a Number: The reſt bear a great Rate, even in the Country itſelf, being pretty ſcarce, and are immediately bought-up by the *Mandarins* in thoſe Quarters, and the Merchants of *Tſitſikar*. 1699. Gerbillon. *Sable-Hunters.*

THE Bounds of this Government to the Weſt, and on the Side of *Ruſſian Tartary*, are two Rivers of a moderate Largeneſs; one called *Ergona* [b], riſes to the South, a little below the fiftieth Degree of Latitude, and joins the *Saghalian-ûla*, in four Degrees of Eaſt Longitude from *Pe-king*. The other River, named *Aighe Kerbechi*, deſcends with a ſhorter Courſe from the North, and falls into the *Saghalian*, a little North-Weſt of the Mouth of the *Ergona*. *River* Ergona, *or* Argon.

FROM hence they reckon it fifty Leagues to *Nipchû* [c], the firſt City of the *Ruſſians*, almoſt under the Meridian of *Pe-king*: It ſtands on the North Side of the *Saghalian-ûla*, and takes its Name from the River *Nipchû*, which there falls into the former: It is built, by Report, much like *Tſitſikar*. The Gariſon moſtly conſiſts of *Siberians* and *Tartars*, commanded by *Ruſſian* Officers. Its Latitude was found in 1689, by the Jeſuits *Thomas* and *Gerbillon*, to be fifty-one Degrees forty-five Minutes; which agrees very well with the Obſervations made by the ſurveying Miſſioners at *Saghalian-ûla-hotun*, and thirty-one Leagues higher-up the River, where the *Tar-* e *tars*, called *Ulûſſû-mûdan*, are ſeated. The *Ruſſian* Dominions beyond *Nipchû*, and that Part of the *Saghalian-ûla* towards its Source, were laid-down in their Map ſolely from Reports of the bordering *Mongul*, and other *Tartars* [d]. Nipchu, *or* Nerchinſkoy.

To this Account of *Eaſtern Tartary*, and its Inhabitants, by *Regis*, let us add what the Jeſuit *Gerbillon* hath written of them.

THE Country of the *Manchews*, ſays this Author, lies North of *Lyau-tong*, the moſt Eaſtern Province of *China*; extending from forty-one to fifty-three Degrees of North Latitude, and from about one hundred and four of Longitude [e], to Manchews *Country.*

[a] This River has ſeveral Names in different Parts, as *Onon* towards the Source; afterwards *Shilka*: By the *Chineſes*, *He-long-kyang*, or *Black Dragon River*; and by the *Ruſſians*, *Amûr*. [b] Or *Argun*, as written by others. [c] Or *Ni-po-chew*, called by the *Ruſſians*, *Nerchinſkoy*, from the River *Nerchin*, on which it is ſituate. [d] Du Halde's *China*, p. 248, & *ſeq*. [e] It ſhould be rather one hundred and fourteen, reckoning from *Paris*, or one hundred and thirty-four, from *Ferro*.

the

Eaſtern Tartary.

the Eaſtern Ocean, which bounds it that Way. The great River, called by the *Manchews*, *Sagh-haliau-ûla*, by the *Chineſe*, *He-long-kyang*, and by the *Ruſſians*, *Yamûr*, or *Amûr*, confines it on the North. On the South it borders on *Lyau-tong*, and *Korea*; and Weſtward, on the Country of the *Monguls*.

Extent, and Cities.

IT is of great Extent from Eaſt to Weſt, but thinly peopled, eſpecially ſince the Emperor drew Part of its Inhabitants to *Pe-king*; though it has ſome Cities, and walled Towns, beſides Villages, and Hamlets, whoſe People are employed in Agriculture. The principal Cities, are *Ula*, *Aykon*, and *Ningûta*, gariſoned Places, with Governors, and other civil and military Officers: Hither alſo Criminals are baniſhed, to re-people the Country. The Air is very ſharp, and the Land mountainous and woody, much like *Kanada* in *America*. The Natives live in Huts, on the Banks of Rivers, and ſubſiſt by Hunting and Fiſhing, eſpecially the more Eaſtern Inhabitants, who are ſomewhat rude and barbarous.

Solon, or Dawra Province.

THE Country is divided into Provinces; the moſt Weſtern is *Solon*, by the *Ruſſians* called *Dawra*, which is rather the Name of a Nation, than a Country. It begins at the Confluence of the *Ergona*, and *Saghalian-ûla*, along which latter it extends above one hundred and fifty Leagues towards *Ningûta*. The Governor told *Gerbillon*, there were not above ten thouſand Families in the Province. They are great Hunters, dextrous Archers, and pay their Tribute in Sable Skins; each Family two, three, or more a Year, according to the Number of able Perſons.

IN the whole Country, there is but one Town, called *Merghen*, or *Merghin*, built and gariſoned by the Emperor; every-where elſe, are nothing but Huts. The *Ruſſians*, indeed, had a Fortreſs here, which they called *Albazin*, and the *Tartars*, *Yakſa*, from a little River on which it ſtood, where it runs into the *Saghalian-ûla*. This Fortreſs occaſioned the War between the Emperor, and the *Ruſſians*, the Gariſon diſturbing the *Chineſe* Sable-Hunters; but at length the Fort was demoliſhed, and the Country yielded to the Emperor by the Treaty of *Nipchû*.

Albazin, or Yak-ſa.

FROM *Yakſa*, to the Mouth of the *Saghalian-ûla*, in the Eaſtern Sea, are full four hundred Leagues, as the Vice-Roy, who made the Voyage in a Bark, by the Emperor's Order, aſſured the Author. They reckon one hundred and fifty Leagues from *Yakſa* to *Ningûta*; beyond which lives a Nation, who uſe only Dogs to draw their Carriages, and are called by the *Manchews*, their Neighbours, by no other Name than *Dog-Drivers* [a]. This People, though extended along the River about two hundred Leagues, are not numerous, having only here and there ſmall Hamlets, ſituate at the Fall of ſome little River into the *Saghalian*.

FROM hence along the River to the Sea, lies a Nation called *Fiattû*, or *Fiatta* [b], of a quite different Language from the former, as they both differ from the *Manchews*. The People, as deſcribed, are Savages, much like the *Iroquois* in *America*. They live on Fiſh, and cloath themſelves with their Skins, whence by the *Chineſes* they are called *Yu-pi*, that is, *Fiſh Skin*. They underſtand not Agriculture, living in Huts, without King, or Sovereign, though every Community chuſe a Chief, whom they obey, muck-like the Savages of *Kanada*. They have Canoas made of the Bark of Trees, or the Trunks hollowed. Thoſe near the Sea are frequently viſited by Boats from the Iſlands, that lie pretty thick at the Entrance of the River; which is not there above three Leagues broad, but very deep every-where, and navigable, when not frozen, for Veſſels of good Burden up to *Nipchû*, about five hundred Leagues diſtant.

GERBILLON learned from the Vice-Roy, that all the Region, Eaſt of the River, called by the *Tartars*, *Songari*, and the *Ruſſians*, *Singala*, is nothing but a vaſt Deſart full of Mountains and Foreſts [c]. The Inhabitants along the *Songari* are *Manchews*, called by the *Ruſſians*, *Dûchari* [d]. In Winter they go a Sable-hunting in theſe great Foreſts, and return to ſpend the Summer at home about *Ningûta*.

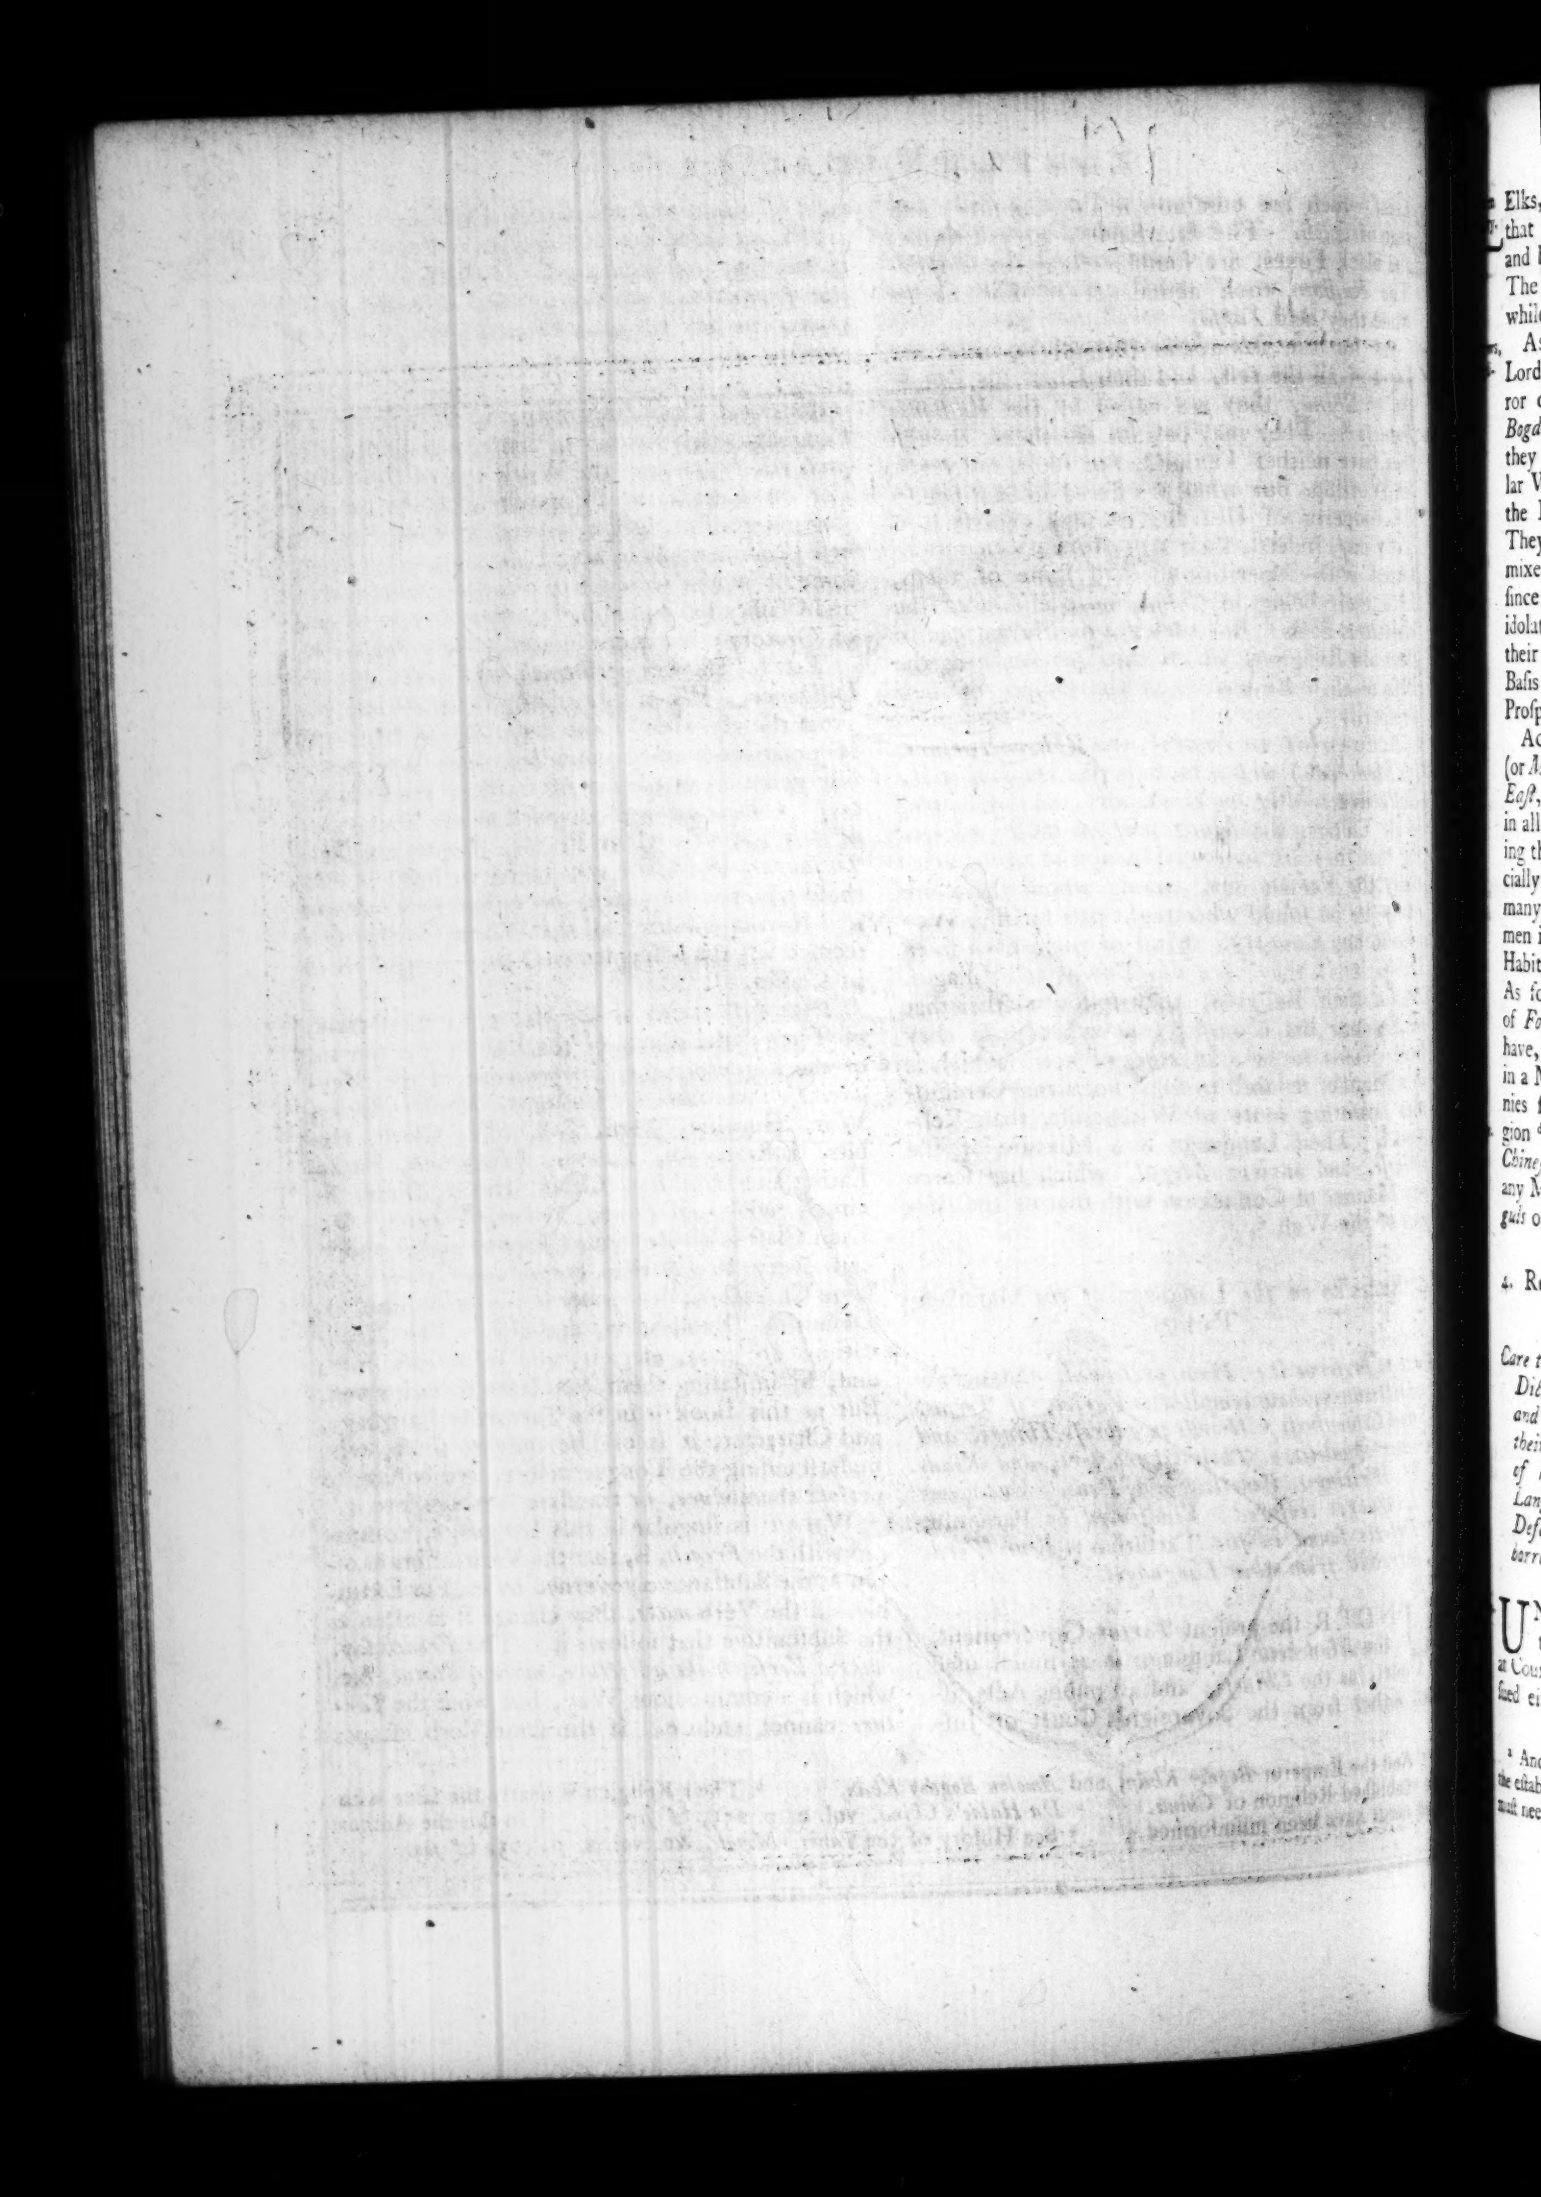
NORTH of the *Saghalian-ûla*, about one hundred Leagues below *Yakſa*, runs a River, called *Chikiri*, by the *Manchews*, and *Zia*, by the *Ruſſians*, about half a League over near its Fall into the *Saghalian-ûla*. The Aſcent to its Source, they ſay, is two Months Journey; but you may return in fifteen Days. It riſes in a Chain of Mountains, which ſerves for a Boundary to the two Empires, and deſcends Southward with a very rapid Current.

THE *Manchews* call the People about this River *Orochon*, from a Creature called *Oren*, a ſmall Sort of Deer, which they break to draw their Sleds, or carry their Baggage. The Author had ſeen ſome in the Emperor's Park; alſo

[a] Theſe, by their Situation, muſt be the *Ke-cheng Tartars*. [b] *Fiatta* is ſaid before, *p.* 354. c. to be the Language of the *Ke-cheng Tartars*. Perhaps it is the indigenous Name of one of theſe two Nations, and thence called the *Fiatta* Tongue. [c] The Miſſionaries, who were on the Spot, and made the Map, ſay both the *Yu-pi*, and *Ke-cheng Tartars*, inhabit to the Eaſt of the *Songari*, the latter dwelling along the *Saghalian-ûla*, as far as its Mouth. [d] *Avril.* p. 146. ſays, this Province of *Bogdoi*, is called by the *Ruſſians*, *Dinchari*; and, by the *Monguls*, *Diurſki*.

Elks,

Eastern Tartars, from Nieuhof.
N. Parr Sculp



Elks, which are common in this Country, and that of *Solon*. The fine Sables, grey Ermine, and black Foxes, are found among the *Chikiri*. The *Ruſſians* took abundance of fine Skins, while they held *Yakſa*.

As for the *Manchews* themſelves, who are Lords of all the reſt, and their Chief the Emperor of *China*, they are called by the *Ruſſians*, *Bogdoys* [a]. They may paſs for Heathens, though they have neither Temples, nor Idols, nor regular Worſhip, but what is offered in Sacrifice to the Emperor of Heaven, as they expreſs it [b]. They pay, indeed, their Anceſtors a Veneration, mixed with Superſtition; and ſome of them, ſince their being in *China*, have embraced the idolatrous Sects: But they are moſtly wedded to their old Religion, which they reverence as the Baſis of their Empire, and the Source of their Proſperity [c].

ACCORDING to *Bentink*, the *Eaſtern Tartars*, (or *Manchews*) whom he calls the *Mungals of the Eaſt*, live moſtly by Huſbandry, and reſemble, in all Things, the *Mungals of the Weſt*; excepting that they are more civilized, and fairer, eſpecially the Female Sex, among whom there are many to be found who might paſs for fine Women in any Country. Moſt of them have fixed Habitations; they have alſo Towns and Villages. As for their Religion, they follow neither that of *Fo*, nor the *Chineſe*; but what little they have, ſeems to be a Mixture of both, which is in a Manner reduced to ſome nocturnal Ceremonies ſavouring more of Witchcraft, than Religion [d]. Their Language is a Mixture of the *Chineſe*, and ancient *Mogul*, which has ſcarce any Manner of Connexion with that of the *Moguls* of the Weſt [e].

4. Remarks *on the* Language *of the* Manchew Tartars.

Care to preſerve it: How preſerved. Manchew *Dictionary, how compiled: Variety of Terms, and Copiouſneſs: Words to expreſs Things, and their Qualities: Their Characters, and Kinds of Writing: Pencils, and Pens.* European *Languages cenſured: Vindicated by* Parennin. *Defects found in the* Tartarian: *Few Words borrowed from other Languages.*

UNDER the preſent *Tartar* Government, the *Manchew* Language is as much uſed at Court, as the *Chineſe*; and all public Acts, iſſued either from the Sovereign's Court of Juſtice, or from the Emperor's ſupream Council, are drawn-up in both Languages: Yet it began to decline, and would probably be loſt, did not the *Tartars* uſe all Precautions to preſerve it. Under the firſt Emperor *Shun-chi*, they began to tranſlate the *Chineſe* Claſſics, and compile Dictionaries in Alphabetical Order; but the Explications and Characters being in *Chineſe*, which Language could neither in Senſe, nor Sound, expreſs the *Tartarian*, the Work was of little Uſe. For this Reaſon, the Emperor *Kang-hi*, at the Beginning of his Reign, erected an Office of the beſt Grammarians in both Languages at *Pe-king*, ſome of whom were ſet to tranſlate the Hiſtories and Claſſics left unfiniſhed; others to turn Pieces of Oratory; but more in compiling a *Theſaurus*.

1720. Parennin. *How preſerved.*

THIS Taſk was performed with extraordinary Diligence. When a Doubt aroſe, they interrogated the old Men of the eight *Tartar* Banners: If unſatisfied, they conſulted thoſe who were juſt come from the utmoſt Parts of their Country. A Reward was propoſed to the Diſcoverer of any old Word, or Phraſe, proper for their *Theſaurus*, and Care was taken to inſtil it into thoſe who had forgotten, or rather never learnt it. Having collected all the Words, ſo that few ſeemed left for a Supplement, they ranged them in Claſſes. Manchew *Dictionary*.

THE firſt treats of the Heavens; the ſecond, of Time; the third, of the Earth; the fourth, of the Emperor, the Government of the *Mandarins*, Ceremonies, Cuſtoms, Muſic, Books, War, Hunting, Man, Soil, Silk, Cloth, Habits, Inſtruments, Labour, Workmen, Barks, Eating and Drinking, Grain, Herbs, Birds, Animals wild and tame, Fiſhes, Worms, &c. Each Claſs is divided into Chapters and Articles; and every Word thus ranged and written in large Characters, has under it, in ſmall ones, its Definition, Explication, and Uſe. The Explications are neat, elegant, and in an eaſy Stile; and, by imitating them, you learn to write well. But as this Book is in the *Tartarian* Language, and Character, it is of Uſe only to thoſe, who underſtanding the Tongue before, are willing to perfect themſelves, or tranſlate Authors into it. *How compiled.*

WHAT is ſingular in this Language, compared with the *French*, is, that the Verb differs as often as the Subſtantive governed by it. For Example, in the Verb *make*, they change it as often as the Subſtantive that follows it. The *French* ſay, *make a Verſe*, *make a Picture*, *make a Statue*, &c. which is a commodious Way, but what the *Tartars* cannot endure. If the ſame Verb eſcapes *Variety of Terms*,

[a] And the Emperor *Bogdoy Khân*, and *Amolon Bogdoy Khân*. [b] Their Religion is nearly the ſame with the eſtabliſhed Religion of *China*. [c] *Du Halde's China*, vol. 2. p. 255, & *ſeq*. [d] In this the Author muſt needs have been miſinformed. [e] See Hiſtory of the *Turks*, *Mogols*, &c. vol. 2. p. 503, & *ſeq*.

Eaſtern Tartary.

them in familiar Diſcourſe, it is pardonable; but in an Author, or even in their ordinary Writings, inexcuſable. The Repetition of the ſame Word, within two Lines, is equally inſupportable, as making a Monotony, which is grating to their Ears. They fall a laughing, when they hear the Miſſioners read Books, at the frequent Returns of *que*, *qu'ils*, *qu'eux* [a]; who, what, him, them, &c. The cloſe Repetition of thoſe Pronouns quite diſguſts them, and it is in vain to tell them it is the Genius of the *French* Language. Indeed the *Tartars* can very well be without theſe Helps, for the bare ranging of their Words anſwers the ſame End, without Obſcurity, or Ambiguity; nor have they any inſipid Puns, or Quibblings on Words.

And Copiouſneſs.

ANOTHER Singularity in their Language is, the Copiouſneſs of it, which enables them to expreſs clearly, in a few ſhort Words, what without their Help would require a great many. For Inſtance, though a Dog, of all domeſtic Animals, affords the feweſt Terms in their Language; yet, beſides the common Appellations of great and little Dog, Maſtiff, Greyhound, Spaniel, &c. they have Words to expreſs their Age, Hair, and good or bad Qualities. Would they ſignify, that a Dog has the Hair of his Ears

Words to expreſs Things,

and Tail very long and thick, the Word *Tayha* is enough. Has he a long thick Muzzle, his Tail the ſame, large Ears, and hanging Lips, the ſingle Word *Yolo* expreſſes all that. If this Dog couples with an ordinary Bitch, the Whelp is named *Peſeri*. Any Dog, or Bitch, that has two flaxen, or yellow Locks, above the Eyebrows, is called *Túrbe*: If ſpotted like a Leopard, *Kûri*: If ſpeckled about the Muzzle, and the reſt of one Colour, he is called *Palta*: If his Neck be all white, he is *Chakû*: If he has ſome Hairs on the Top of his Head that fall back, *Kalia* denotes him: If the Ball of his Eye be half white, half blue, he is ſignified by *Chikeri*: If he be low, ſhort-legged, ſquat, and long-necked, he is *Kapari*. The common Name of a Dog is *Indagon*; of a Bitch, *Niegken*: Whelps, under ſeven Months, are called *Niacha*: Afterwards, till eleven, *Nûkere*: At ſixteen Months, they take the common Name *Indagon*. It is the ſame, as to their good or bad Qualities: One Word expreſſes two or three of them.

And their Qualities.

To ſpeak of other Animals would be endleſs: For Example, that beloved Creature the Horſe, the *Tartars*, on Account of his Serviceableneſs, have multiplied Names in his Favour, to twenty Times more than the Dog. They have not only proper Names for his different Colours, Age, and Qualities, but alſo for his different Motions: As if he be reſtleſs, when tied: If he breaks looſe, and runs at large: If he ſtarts at the Fall of his Rider, or the ſudden Encounter of a wild Beaſt: If he be mounted, for all his Paces, and the different Jogs he gives his Rider [b]. Whether ſuch a Copiouſneſs be an Ornament, or a Clog [c] to a Language, is not eaſy to determine: But whence could they get that aſtoniſhing Multitude of Names, and Terms, to expreſs their Meaning? Not from their Neighbours. On the Weſt are the *Mongol Tartars*: But in the two Languages there are hardly eight Words alike, and even thoſe uncertain, as to their Origin. Eaſtward, as far as the Sea, lie ſome ſmall Nations of Savages; but they underſtand nothing of their Language, nor of thoſe Northward. On the South they have the *Koreans*; whoſe Language and Letters, being *Chineſe*, have no Reſemblance to the *Tartarian*.

THEY have only one Sort of Character [d], but four Ways of Writing. Firſt, when they write with Care, in Characters like thoſe engraven on Stone, or Wood, twenty, or twenty-five Lines, is a Day's Work, eſpecially when the Emperor is to ſee them. If the Stroke of the Pencil, from a heavy Hand, be too wide, or full; if not clean, through Defect in the Paper; if the Words are crouded, or uneven; in theſe, and the like Caſes, they muſt begin anew. No References, nor marginal Additions, are allowed: That would be Want of Deference for their Prince; wherefore, the Inſpectors of the Work reject every Sheet where they ſpy but one of thoſe Faults. The ſecond Form is very pretty, and little different from the firſt, though much eaſier. It is not neceſſary to draw the Finals of every Word with double Strokes, nor re-touch what is done, though a Stroke be too ſlender, or too thick.

THE third Way differs more from the ſecond, than that from the firſt: It is their Running-Hand, quick in Motion, and ſoon fills both Sides of the Page. As the Pencil holds Ink better than our Pens, leſs Time is loſt in dipping; and, when you dictate to the Writer, you ſee his Pencil run moſt nimbly on the Paper, an

[a] Who would not be provoked at their *ce que ce que ſoit?* [b] In this it reſembles the *Arabic*, which expreſſes the ſame Animal, or Thing, under different Ideas, by different Words: Thus they have a thouſand Words for a Horſe, Camel, &c. five hundred for Milk, a Sword, &c. [c] It muſt be a Clog, but then it is ſurely a great Ornament, as it renders the Language more conciſe, and expreſſive, as well as affords infinite Variety in the Sounds. [d] The *Tartar*, or *Manchew* Characters, are originally the *Oigur*, or *Vigur* Letters, which, with ſome Variation, are uſed by the *Mongols*, People of *Tibet*, and *Bengal*, as well as the *Manchews*

without a Moment's ſtopping. This Character is moſt uſed in Records, Proceedings at Law, and other ordinary Affairs. Theſe three Ways differ in Fineneſs, but are equally legible. The fourth is the coarſeſt of all, though the ſhorteſt, and moſt convenient for an Author, or one who takes Minutes, or makes Extracts: For you muſt know, that in the *Tartar* Writing, there is always a Maſter-Stroke that falls perpendicularly from the Top of the Word to the Bottom. To the Left of this Stroke, they add, as it were, the b Teeth of a Saw, which make the four Vowels, *a*, *e*, *i*, *o*, diſtinguiſhed from one-another by Points on the Right of the Perpendicular. A Point oppoſite to the Tooth, is the Vowel *e*; if omitted, the Vowel *a*. A Point on the Left of a Word, near the Tooth, ſtands for *n*, and you muſt read *ne*: If there be an oppoſite Point on the Right, read *na*. Again, if at the Right of a Word, inſtead of a Point, you ſee an *o*, it denotes that the Vowel is aſpirate, and ſhould be c read, *ha*, *he*, as in *Spaniſh*.

THEY commonly write with a Pencil, though ſome uſe a Kind of Pen, made of Bambû, and cut almoſt like thoſe of *Europe*; wetting the Paper firſt with Alum-Water, to prevent the Ink from ſinking. The *Tartar* Characters are of ſuch a Nature, that they are as legible the wrong End upwards, as the other Way [a].

THERE is not a *Tartar* but prefers his Native Tongue to all others, and thinks it the moſt ele- d gant and copious in the World. The Emperor's eldeſt Son, who was about thirty-five Years old, imagined there was no rendering the Senſe of his Native Tongue, much leſs the Majeſty of its Stile, into any of the barbarous Languages; ſo he called the *European*. He was pleaſed with the handſome Binding of their Books, and elegant Engraving of the Figures; but the Letters quite diſguſted him. He ſaid, they were ſmall, few, and ill-diſtinguiſhed, and made a Sort of Chain e with the Links a little twiſted; or rather they reſembled the Track of a Fly, on a varniſhed Table, covered with Duſt. He could not think it poſſible, that ſuch Characters were able to expreſs ſo many Thoughts, and Actions; ſo many Things, dead and alive, like the *Tartarian* and *Chineſe*, which were clear, and diſtinct, graceful, and numerous. In ſhort, he alledged, that his Language was ſtrong, majeſtic, and agreeable to the Ear; but, when the Miſſioners talked together, he heard nothing but a continual Chattering, much like the Jargon of *Fo-kyen*. 1720. Parennin.

THAT the *European* Languages were capable of expreſſing the Senſe of any Thing delivered in the *Tartarian*, *Parennin* convinced the Prince, by writing-down readily, in *Latin*, a Letter to *Suarez* the Jeſuit (called *Su-lin* by the *Chineſe*) which he dictated in his own Tongue. As to the *Roman* Characters, he affirmed, that they were to be preferred to the *Tartarian*; becauſe, though fewer, they very well expreſſed many *Chineſe*, *Tartarian*, and other Words, which his Nation knew not how to write in their Characters. For Inſtance, he propoſed the Words *prendre*, *platine*, *griffon*, *friand*, which the c Prince could not write, becauſe the *Tartar* Language will not admit of joining two Conſonants, but muſt have a Vowel betwixt them, making *perendre*, *pelatine*, *geriffon*, *feriand*. The Author farther obſerved, that he could begin no Word with the Letters *B* and *D*, but was forced to ſubſtitute *P* and *T*; for inſtead of *Beſtia*, *Deus*, he wrote *Peſtia*, *Teus*. Hence, as there was an Infinity of *European* Sounds, which he could not expreſs in his Characters, though he might d pronounce them, *Parennin* concluded, that the *French* Alphabet had the Advantage of the *Tartarian* [b]. *Vindicated by Parennin.*

HE farther objected, that the Vowel *e* was always open, and never pronounced mute, but at the End of ſome Word after *n*; nor were there any Marks to diſtinguiſh it. He granted the *Chineſe* had the ſame Defect, and, that as the *Tartarian* has the Letter *r*, it had the Advantage ſo far in expreſſing foreign Names; but inſiſted, e that the Language itſelf was not proper for a ſhort and conciſe Stile: That many Words were too long, therefore unfit for Poeſy. He added, that there were but few Tranſitions in the *Tartarian*, and thoſe very nice and difficult to hit: That the greateſt Wits could not avoid this *Defect found*

[a] *Du Halde's China*, p. 265, *& ſeq.* [b] I do not take the *French* Author's Concluſion to be right: For the *French* want the *ch*, *kh*, *w*, *j*, which the *Manchews* have; and although they ſubſtitute Letters to expreſs them, as *tch* for *ch*, *ou* for *w*; *dj*, *dgi* for *j*; yet, I believe, they can pronounce none of them: Whereas the Prince could pronounce the Sounds *e*, *s*, *b*, and *d*, if he could not write them. But could he not make Characters to expreſs them, as well as the *French* have done; and, indeed, as the *Manchews* have done themſelves? ſince the *Oigur*, or *Vigur* Letters, which they uſe, were originally but fourteen. (See the Hiſtory of the *Turks*, *Moguls*, &c. Tranſlat. Pref. p. 22.) Whereas we find here, that the *Manchews* have more Characters than the *French*: Poſſibly they may have as many as the Inhabitants of *Tibet*, who uſe the ſame Characters, with ſome Variation, and have thirty Conſonants, and four Vowels. (*Vid. Act. Erudit.* tom. 46, *September* 1722. p. 415, *& ſeqq.*) The *Manchew*, or *Tartar* Language, therefore, ſeems to be preferable, in this Reſpect, to the *French*, whoſe Alphabet is one of the worſt in *Europe* to expreſs the Oriental Sounds. See before, *p.* 196. Alſo the General Hiſtory of the *Turks*, as above, *p.* 27.

Eaſtern Tartary.

Rock, but ſometimes would ſit in Suſpence how to paſs from one Phraſe to another; and, after cloſe thinking, were forced to obliterate what they had written; for which they give no other Reaſon than, That ſounds ill, That is hard, That cannot be ſaid, There muſt be another Connexion.

In the Tartarian.

THE Prince could not deny this Inconvenience in his Language, but ſaid, it did not affect Converſation, where Speech was fluent enough. *Parennin*, in Reply to this, deſired his Highneſs to obſerve, how they, who were not ſuch Maſters in the Tongue as himſelf, drawled-out the Finals, and added the inſignificant Word *Yala*; valuing themſelves much, if they repeated it but twice, or thrice, at a Converſation: That they who newly came from the Heart of the *Manchew* Country uſed it as frequently as the reſt; which, he ſaid, was a Proof that the *Tartar* Tranſitions are but ſcanty; and that becauſe they dare not riſque the Word *Yala* in Works of Elegance, eſpecially ſince the Emperor had damned it by Diſuſe, Authors were ſadly puzzled how to paſs cleverly from one Subject to another.

Few Words borrowed

THE Prince ſmiling, replied, it was no equal Match between them, in regard he had never been in *Europe*; but that had he made a Voyage thither, he ſhould have returned ſtored with the Defects of the *French* Language, ſufficient to have confounded him. *Parennin* alledged, that could not be, ſince there was an Academy eſtabliſhed purpoſely to reform and compleat his Language. But as the Jeſuit, on being put the Queſtion, could not deny that this Language had borrowed many Terms from other Nations, eſpecially in Arts and Sciences, the Prince cried out, he had gotten the Advantage: *We, for our Parts,* ſaid he, *have borrowed but very few Words from the* Mongols, *and fewer from the* Chineſe, *which few we have naturalized by* Terminations. *You, forſooth, are enriched with the Spoils of your Neighbours: It becomes you, indeed, after all this, to cavil at the* Tartar *Language for Trifles.* However, the Anſwer of *Suarez* having ſatisfied him, he began to have a better Opinion of the *European* Languages, placing them next below his own. He had a Mind, indeed, to give the *Chineſe* the ſecond Place; but the Jeſuit ſtrongly proteſted againſt it, alledging the Multitude of Equivocals in that Tongue [a].

From other Languages.

SECT. II.

A Journey *into* Eaſtern Tartary *in* 1682.

By Ferdinand Verbieſt, *Jeſuit.*

THIS Journey was performed in the Retinue of *Kang-hi*, late Emperor of *China*. *Verbieſt*, who has been often mentioned before, was then Preſident of the Tribunal of Mathematics at *Pe-king*. Some Time after, he ſent an Account to *Europe*, in two Letters, of this Voyage, and another, which he performed the Year following, into *Weſtern Tartary*. Theſe have been tranſlated (from the *Latin*, we preſume) into ſeveral Languages, firſt into *French*, and from thence into *Engliſh*. It was printed at *London* in 1687, and added to *Soto*'s Relation of *Florida*, in Octavo. *Du Halde* inſerted it in his Deſcription of *China*, and *Tartary*. The Work is ſhort, but curious; and the only Piece of Travels extant performed expreſly into the Heart of *Eaſtern Tartary*; for *Iſbrand Ides*, and thoſe who took the ſame Road from *Ruſſia* to *China*, only paſſed through the Weſtern Skirts of it.

The Emperor's Train. Verbieſt, *how employed. Nature of the Country. Towns all in Ruins. Enter* Lyau-tong. *The* Tartar *Manner of Hunting.* Shin-yang *City. A fine Road. The Order of the Emperor's March: Arrives at* Kirin: *Salutes the Place: Goes to* Ula: *News of* Ninkrita. *Fatiguing Journey: The Road ſpoiled. Particular Favours beſtowed on* Verbieſt. *The Emperor's Amuſement: Return to* Pe-king. *Places and Diſtances, correſpondent to the Map.*

THE Emperor ſet-out, on his Progreſs into *Eaſtern Tartary*, the twenty-third of *March*, 1682, after ſuppreſſing a Rebellion by the Death of three Kings. One of theſe was ſtrangled in the Province he had conquered; and another conveyed to *Pe-king*, with his chief Partiſans, was there cut to Pieces, in open Court, by the *Mandarins*, in Revenge for the barbarous Murder of their Relations: The third, who was the Ringleader, had killed himſelf, to avoid Puniſhment; and ſo ended a ſeven Years War. That Monarch took with him his eldeſt Son, of ten Years, and was attended by the three firſt Queens, the chief Regulos, all the Court Grandees, and the moſt conſiderable *Mandarins* of all Orders, beſides ſo numerous an Equipage, that he had, in his Retinue, more than ſeventy thouſand Perſons.

HE was pleaſed that *Verbieſt* ſhould accompany him

[a] *Du Halde's China*, p. 267, *&c. ſeq.*

him, and always be near his Perſon, to take Obſervations, in his Preſence, of the Diſpoſition of the Heavens, the Altitude of the Pole, the Heights of Mountains, and Diſtances of Places. He was alſo deſirous of being inſtructed concerning Meteors, and many other Matters in Phyſics and Mathematics. For this End, he ordered the neceſſary Inſtruments to be carried on Horſes, and recommended him to the Prince his Uncle, who was alſo his Father-in-law, and the ſecond Perſon in the State, being called by a Name ſignifying *Aſſociate in the Empire*. He had Orders to furniſh *Verbieſt* with all Neceſſaries, which he performed, cauſing him to lodge in his own Tent, and eat at his Table. The Emperor appointed him ten Horſes, out of his own Stables, for Change: One of them had been ridden by himſelf, which is a high Diſtinction.

THEIR Journey lay to the North-Eaſt. From *Pe-king*, to *Lyau-tong*, which is about three hundred Miles, the Road is pretty level: The four hundred Miles you travel in that Province is much more uneven, on account of Hills. The next four hundred Miles, beyond *Lyau-tong*, are very difficult, over very ſteep Mountains, deep Valleys, and ſometime deſart Plains, where you travel two or three Days without meeting with any Thing. The Hills, in this Country, are covered on the Eaſt-Side with huge Oaks, and Foreſts, uncut for Ages paſt.

THE whole Country, beyond *Lyau-tong*, is like a Wilderneſs: You ſee nothing all-around but Hills, Vales, and Dens of Bears, Tigers, and other Savage-Beaſts; ſcarce a Houſe, but ſome pitiful Huts by the Sides of Rivers and Torrents. All the Cities and Towns he ſaw in *Lyau-tong*, which are pretty numerous, lay in Ruins, everywhere appearing nothing but Heaps of Stones, Bricks, and Rubbiſh. A few Houſes had been lately built within the Incloſures of theſe Cities, ſome of Earth, others of Remains of the old Buildings; but few of Brick, moſt thatched, and in no Order. There remains not the leaſt Mark of a Multitude of Towns, and Villages, that ſtood before the Wars: For the petty *Tartar* King, who began them with very ſmall Forces, recruited his Army with the Inhabitants of theſe Places; which afterwards he deſtroyed, to deprive his Soldiers of the Hopes of returning to their native Country.

IN three Months they advanced about a thouſand Miles to the North-Eaſt, and ſpent as much in their Return. They firſt arrived at *Shan-hay*[a], a Fort ſituate between the *South-Sea*, and the Northern Mountains: Here begins the famous Wall of *China*, that ſeparates *Pe-che-li* from *Lyau-tong*. As ſoon as they entered this laſt Province, the Emperor, and his Nobles, quitted the main Road, and took that of the Hills; which extend, without Interruption, North-Eaſtward, where he ſpent ſome Days in Hunting. 1682. Verbieſt.

The Tartar Manner of Hunting.

THEIR Sport was thus managed: The Emperor chuſing-out three thouſand Men of his Guards, armed with Bows and Darts, diſperſed them on every Side, ſo as to ſurround the Mountains, which made a Circle of at leaſt three Miles Diameter. Then coming to approach, Step by Step, without breaking their Order (for which End the Emperor had mixed Captains, and even Lords of his Court, among them) they reduced this great Circle to one of about three hundred Paces Diameter: So that all the Beaſts incloſed in the firſt, were taken in this latter, as in a Net; for all diſmounting, drew themſelves ſo cloſe together, as to leave no Gap through which they might eſcape. In this ſmall Compaſs, they kept-up ſo briſk a Chace, that the poor Creatures, ſpent with running, lay-down at the Hunters Feet, and ſuffered themſelves to be taken-up without Reſiſtance. *Verbieſt* ſaw two or three hundred Horſes, thus taken, in leſs than a Day, beſides a vaſt Number of Wolves and Foxes. Another Time, at the ſame Sport in *Tartary*, beyond *Lyau-tong*, among the reſt, he ſaw above a thouſand Stags, thus incloſed; and finding no Way to ſave themſelves, come, and throw themſelves into the Hunters Arms. They killed alſo Bears, wild Boars, and above ſixty Tigers, or other fierce Beaſts. Our Jeſuit was the only *Mandarin* without Arms, and pretty near the Emperor's Perſon. Though he was uſed to a little Fatigue from their firſt ſetting-out, yet he was ſo tired every Evening when he got to his Tent, that he could not ſtand: He ſhould, therefore, ſometimes have forborn to follow his Majeſty, but for Fear, if known, he might take it ill.

Shin-yang City.

AFTER marching about four hundred Miles, hunting all the Way, they arrived at *Shin-yang*, Capital of *Lyau-tong*, which is a pretty handſome and compleat City, and ſhews the Remains of an old Palace. The Author found its Latitude, by ſeveral Obſervations, to be forty-one Degrees fifty-ſix Minutes[b]; that is, two Minutes more than the Latitude of *Pe-king*; though hitherto both *Chineſe*, and *Europeans*, placed it but in forty-one Degrees. He found, by ſeveral Experiments, that the Needle had no Variation here. At *Ula*, in Latitude forty-three Degrees

[a] In the firſt *French* and *Engliſh* Editions, it is written *Kam-hay*. [b] The Jeſuits place it in forty-one Degrees fifty Minutes and thirty Seconds, the Difference being ſix Minutes.

Eastern Tartary.

and about fifty Minutes [a], which City was almoſt a the End of their Progreſs, the Variation is forty Minutes Weſt.

A fine Road. FROM *Pe-king* to this Place, near eleven hundred Miles, a new Road was made, commodious for the Emperor to ride on Horſeback, and the Queens in their gilt Chariots. It is about ten Foot broad, and as ſtrait and even as they could poſſibly make it. On the Sides run a Sort of little Cauſeways, a Foot high, exactly even, and parallel. The Road itſelf, eſpecially in fine Weather, is as clean as a Threſhing-Floor, Men being appointed for that Purpoſe. Another ſuch Road is made to return by. They have done their beſt to level Mountains; they have built Bridges over Torrents, and lined the Sides with Mats, painted with Animals; which have the ſame Effect as the Tapeſtry, with which the Streets are hung in Time of Proceſſions.

The Order of THE Emperor ſeldom travelled along this Road, hunting almoſt continually; and, whenever he came-up with the Queens, rode by the Side of it, leſt the great Number of Horſes, in his Train, ſhould ſpoil it. He commonly marched at the Head of this Kind of Army: Next, at ſome Diſtance, followed the Queens, with their Attendants, and Equipage: Then the Regulos, Grandees of the Court, and *Mandarins*, according to their Dignities: A vaſt Number of Servants, and other People on Horſeback, brought-up the Rear.

As there was no City on the Road capable of lodging, or ſubſiſting, ſuch a Multitude, and great Part of the Way lay through a Country but thinly inhabited, they were obliged to carry with them all Sorts of Neceſſaries, and Proviſions, for three Months; wherefore a prodigious Number of Waggons, Camels, Horſes, and Mules, with the Baggage, were firſt ſent-away by By-Roads. Beſides, his Majeſty, and almoſt all the Nobility, had great Numbers of Led-Horſes, for Change on Occaſion; to ſay nothing of the Droves of Oxen, Sheep, *&c.* So that though the Road for this vaſt Multitude of Men, Horſes, and Herds, lay pretty far-off the Highway, yet they raiſed ſuch a horrible Duſt, that thoſe in the Emperor's Train could hardly diſtinguiſh fifteen or twenty Paces before them.

The Emperor's March. THEIR March was ſo well-regulated, that they encamped, every Evening, on the Bank of ſome River, or Torrent: For which End the Quarter-Maſters ſetting-forward early every Morning, followed by the neceſſary Baggage, marked-out Places for the Tents of the Emperor, Queens, Grandees, and *Mandarins*, according to their Quality. Some *Koreans* having preſented the Emperor with a Sea-Calf, he aſked *Verbieſt*, whether *European* Authors mentioned that Fiſh. On being told, there was a Book in the Jeſuits Library at *Pe-king*, which treated of its Nature, and had a Cut of it, he longed to ſee it, and immediately diſpatched a Courier, who brought it in a few Days. His Majeſty was much pleaſed to find the Deſcription agree with what he ſaw, and ordered the Fiſh to be kept as a Rarity.

WHILE they ſtaid at *Shin-yang*, which was four Days, the Emperor, with the Queens, went to viſit the Tombs of his Anceſtors, not far-off; from whence he ſent-back the Ladies to that City, in order to continue his Journey for *Eaſtern Tartary*. After a Hunting-March of ſome Days, they reached *Kirin*, four hundred Miles from *Shin-yang*. This City ſtands upon the great River *Songari*, which riſes in the *Shan-pê* [b], or *White Mountain*, four hundred Miles diſtant Southward. This Mountain, ſo famous in the Eaſt, for having been the ancient Habitation of the *Manchew Tartars*, is ſaid to be always covered with Snow, whence it takes its Name.

As ſoon as the Emperor came in Sight of the Place, he alighted from his Horſe; and kneeling on the Bank of the River, bowed thrice to the Ground, by Way of Salutation: He then mounted a Throne glittering with Gold, on which he made his Entrance into the City; all the People running in Crouds to meet him, and weeping for Joy to ſee him. Theſe Marks of Affection were highly acceptable to their Prince, who, in Token of his Favour, condeſcended to ſhew himſelf to every-body, forbidding his Guards to hinder his People from approaching him, as they do at *Pe-king*. They have a particular Sort of Bark in this City: The Inhabitants keep a great Number of them in Readineſs, to repulſe the *Ruſſians*, who often come-upon the River to diſpute their Pearl-Fiſhery [c].

THE Emperor reſted here two Days, and then went-down the River with ſome of his Nobles, attended by above an hundred Boats, as far

[a] In *Verbieſt*'s Letters, printed at *Paris* 1695, the Latitude is forty-four Degrees twenty Minutes: But the Latitude in the Text is very near that of *Kirin-ula hotun*, and that of *Ula* aſſigned by *Du Halde*; who, it is likely, took theſe two Places for the ſame: Whereas, *Ula* appears, in this Journal, to be thirty-two Miles North of *Kirin-ula*, and is, doubtleſs, the ſame with *Putay-ula-hotun*, on the *Songari*, in about forty-four Degrees ſix Minutes. [b] Before, *p.* 356, written *Chang-pê-ſhan*, which, doubtleſs, is the true Name, there ſaid to be taken from the Whiteneſs of its Sand. [c] *Du Halde*'s *China*, vol. 2. p. 268, *& ſeq.*

as *Ula* [a], twenty-three Miles distant, the finest City in all the Country, and formerly the Seat of the *Tartar* Empire. One chief End of this small Voyage, was to take the Diversion of catching Fish, pretty-like our Plaice, of which the River is full a little below *Ula*. But the Rains coming on-a-sudden, so swelled the Stream, that all the Nets were broken, and carried-away by the Flood: So that after waiting five or six Days, he was forced to return to *Kirin*, without that Sport. In the Way, the Bark in which *Verbiest* went with the Emperor's Father-in-law, was so damaged, by the Beating of the Waves, that they were forced to land, and get into a Cart drawn by an Ox.

The Author learned, from the Inhabitants of *Ula*, that *Ninkrita* [b], a Place pretty famous in those Parts, is distant from thence seven hundred *Chinese* [c] Furlongs, of three hundred and sixty geometrical Paces each. He was likewise informed, by the General of the Militia at *Kirin*, that setting-out from *Ninkrita* on the great River *He-long* [d], into which the *Songaro*, and other more considerable Rivers fall, and sailing-down the Stream, which runs to the North-East, he arrived, in forty Days, at the Eastern Sea, which, in the Writer's Opinion, is the *Streights of Anian*.

Two Days after, the Rains beginning to abate, they left *Kirin*, in order to return the same Way they came. The Fatigues of this Journey were inexpressible, the Roads being spoiled, and almost rendered impracticable by the Waters. They marched, without resting, over Mountains and Valleys; passing most dangerous Rivers, and Torrents, where the Bridges were broken with the Current, or covered with the Flood. In some Places, they met with deep Pools, and Sloughs, which they had the greatest Difficulty to get-out-of. The Beasts that carried the Baggage, could not move-forward, but remained sticking in the Mud, or died for Faintness on the Road. Men fared no better, and all went to wreck for want of Provisions, and necessary Refreshments, for so long a Journey. Many were forced to alight, and pull-along their Horses, who were quite spent; or stop in the Middle of the Plains, to give them Breath.

Though the Quarter-Masters, and Harbingers, wanted no Pioneers, nor Wood for Fascines, to mend the bad Places; yet after the Van-Guard of Horses, and Waggons, which set-out very early, was once passed, it was impossible to follow them. The Emperor himself, his Son, and all the great Lords of the Court, more than once were glad to cross the Bogs and Marshes on-Foot, fearing to run a greater Risk on Horseback. When they came to Bridges, or such Sort of Passes, the whole Body halted: Then as soon as the Emperor, and some of the great Men were over, the Multitude crouded after; and each striving to get foremost, many were thrown-down in the Water. Others fetching a Compass still more dangerous, got-into Sloughs, and Quag-mires, where they stuck: In short, they underwent such Hardships in all the Roads of *Eastern Tartary*, that the old Officers, who had followed the Court above thirty Years, said they never suffered so much before in any Journey. 1682. Verbiest. The Road spoiled,

On these Occasions, the Emperor testified a particular Regard for *Verbiest*. The first Day they set-out on their Return, they were stopped, in the Evening, by a large and rapid Torrent. The Emperor having found, by Chance, a small Boat, which could not carry above four, first passed with his Son; some of the chief Regulos followed. All the other Princes, Lords, and *Mandarins*, with the rest of the Army, waited, with Impatience, for the Boat's Return, because Night came-on, and the Tents had crossed long before: But the Emperor coming-back in just such another, called-out aloud for *Verbiest* to his Father-in-law, saying, *Let him come in, and pass-over with us:* So that only they two crossed with his Majesty, the rest tarrying on the Bank all Night, in the open Air. Particular Favours

The like happened the next Day, almost in the same Manner: The Emperor coming, about Noon, to the Side of such another Torrent, gave Orders to spend the Day, till Evening, in passing-over the Tents, Bales, and Baggage; and then was pleased, that of all his Court, the Author only should cross with him, leaving the great Lords to pass the Night on the other Side: Nay, his Father-in-law asking, whether he might accompany the Missioner, because he lodged in his Bestowed on Verbiest.

[a] This must be *Putay-ula*, placed in the Map a little to the West of the North, but cannot be *Ulugh-yurt*, the Seat of *Jenghiz Khân*, as the *English* Translator of *Abulgluzi Khân*'s History, before-mentioned, thinks, Vol. 2. p. 513. For it was not far from *Kara-koram*, or *Kara-kuran*, as *De la Croix* observes in his History of that grand Monarch, *p.* 397. Then the small Similitude between *Ula* and *Ulugh* (on which that Conjecture seems to have been grounded) is of little Use, since the Words have very different Meanings; *Ula*, in the *Manzur* Language, signifying a River, and *Ulugh*, great, in the *Mongul* Tongue. [b] Perhaps the same as *Ninguta*, or *Ningunta*, before-mentioned, *p.* 351. [c] That is, seventy Leagues, reckoning ten Furlongs to a League, as hath been often mentioned before. [d] In the Original, *He-lum*, according to the *Portugueze* Orthography; that is, the *He-long-kyang*, or *Saghalian-ula:* But it must be observed, that *Ninkrita*, if *Ninguta*, lies on the *Hurha*, which falls into the *Songaro*, at a great Distance to the South of the *He-long*.

Eaſtern Tartary.

Tent, was anſwered, that he might tarry, *for himſelf would take-care, that he ſhould be furniſhed with Neceſſaries.*

The Emperor's Amuſement.

WHEN they were gotten over, the Emperor ſeated himſelf on the Bank, and placed the Jeſuit by his Side, with the two Sons of Weſtern Regulos, and the chief *Ko-lau* of *Tartary*, whom he diſtinguiſhed on all Occaſions. It being a fine Night, and a clear Sky, he was pleaſed that *Verbieſt* ſhould name the Conſtellations, which then appeared, in the *Chineſe* and *European* Languages, b himſelf naming firſt thoſe which he knew. Then opening a little Map, which the Author had preſented him ſome Years before, he ſought the Hour of Night by the Star on the Meridian; delighting to let every-one ſee his Skill in the Sciences. To theſe, and other Tokens of his Goodwill, his Majeſty added, that of ſending him Meat from his own Table.

Return to Pe-king.

THE Author arrived at *Pe-king* the ninth of *June*, very late, in perfect Health; though many c remained ſick on the Road, or came home hurt, and lame [a].

Places and Diſtances

HERE follow the *Tartarian* Names and Diſtances of the ſeveral Places through which they paſſed in *Eaſtern Tartary*, from the Capital of *Lyau-tong*, to *Kirin*. The firſt Day, departing from *Shin-yang*, they came to *Syau-liſto*, as the *Chineſe* call the Place, ninety-five *Li*, or *Chineſe* Furlongs [b]. The ſecond Day, to *Chakay-angha*, (a Brook) eighty-five *Li*. The third, to another d Brook of the ſame Name, ſeventy *Li*. The fourth, to *Kiaguchen*, fifty *Li*. The fifth, to *Feyteri*, eighty *Li*. The ſixth, to the Torrent *Seyperi*, ſixty *Li*. The ſeventh, to the Brook of *Tſiang*, ſixty *Li*. The eighth, to *Kûrû* [c], fifty *Li*. The ninth, to the Town of *Sapê*, forty *Li*. The tenth, to *Quaranni-pira*, forty *Li*. The eleventh, to *Elten-eme-ambayaga*, ſeventy *Li*. The twelfth, to *Ipatan*, fifty-eight *Li*. The thirteenth, to *Swayen-ni-pira*, ſixty *Li*. e The fourteenth, to *Ilmen*, ſeventy *Li*. The fifteenth, to *Sewten*, ſeventy *Li*. The ſixteenth, to the City of *Kirin*, ſeventy *Li*. The whole Road contains one thouſand and twenty-eight *Chineſe* Furlongs, which make three hundred and ſixty-nine geometrical Miles; and might be inſerted in *Martini*'s Map of *Lyau-tong*, only correcting the Latitudes, according to the Obſervations inſerted in the Journal.

Correſpondent to the Map.

THIS Road cannot be traced in the firſt Sheet f of the Map of *Tartary*, given by *Du Halde*, till you come to the River *Kûrû*, which lies Halfway. But from thence you meet with all the Places mentioned in the Itinerary, except the Town of *Sapé*, and *Quaranni*, or *Karanni-pira*, which, perhaps, is the ſame with the *Ajighe-yaha* River. The other Places are named in the Map, as *Altan-eme-amba-yaha*, *Iptan*, *Sayan*, *Ilmen*, *Sewde* (for *Sewten*) *Kirin-ula-hotun* [d].

A TABLE [e] of Places in *Lyau-tong*, or *Quantong*, and *Eaſtern Tartary*, whoſe Latitudes have been determined by Obſervation, and Longitudes geometrically, by the Miſſioners.

SECT. III.

The Countries *belonging to the* Mongols, *properly ſo called.*

1. *The ſeveral* Diſtricts, *or* Territories, *of the* Mongols.

Bounds and Extent. Theatre of Wars. Diviſion into Countries. Firſt Diviſion, Karchin. *Tin-Mines, Timber. Its Extent.* Korchin *and* Nayman, Ohan, Tumet. *Second Diviſion:* Onhiot, *and* Parin. Kechikten, Uchumuchin, Sharot, Arukorchin, Abahanar. *Third Diviſion:* Whachit, Sonhiot, Abahay, Twinchûz. *Fourth Diviſion:* Khukhu-hotun, Kalka-targar, Maomingan, Ortûs *Country.*

THE Country of the *Mongols*, *Monguls*, or *Mongals*, called by the *European* Geographers, *Mongalia*, is bounded on the East by *Eaſtern Tartary*, on the South by the Wall of *China*; on the Weſt by the *Kobi*, or great Deſart [a], and Country of the *Kalkas*, from whence it is divided by the *Karû*, or Limits fixed by the Emperor; and on the North by the *Kalkas*, and Part of *Eaſtern Tartary*. This is a very large Region, of no leſs Extent than that of *Eaſtern Tartary*, being ſituated between the one hundred and twenty-fourth and one hundred forty-ſecond Degrees of Eaſtern Longitude, and between the thirty-eighth and forty-ſeventh Degrees of Latitude: So that it is in Length, from the Borders of *Eaſtern Tartary* in the Eaſt, to the Parts over-againſt *Ning-hya*, belonging to *China* in the Weſt, above three hundred Leagues; and about two hundred in Breadth, from North to South; though not every-where ſo broad, as may appear from the Map [b].

THE Part of *Tartary*, within this Diviſion, has been the Scene of the greateſt Actions performed both by the Eaſtern and Weſtern *Tartars*. Here the great Empire of *Jenghîz Khân*, and his Succeſſors, had its Riſe, and Seat: Here the Empires of *Kitay*, and *Karakitay*, were founded; and here the preſent Empire of the *Eaſtern Tartars*, or *Manchews*, had its Beginning. Here, for ſeveral Ages, bloody Wars ſubſiſted, and many Battles were fought, which decided the Fate of thoſe Monarchies. Here all the Riches of the Southern *Aſia*, at ſeveral Times, were heaped and diſſipated. Laſtly, in theſe Deſarts, at a Time, Arts and Sciences were cultivated, and many populous Cities flouriſhed; the Ruins of which are ſcarcely viſible at preſent.

ALTHOUGH the ſeveral Branches of the *Mongols* lead a roving Life, yet they have their reſpective Limits fixed by Cuſtom, beyond which they muſt not paſs to ſettle; that being accounted an Act of Hoſtility. The Countries of the *Mongul* Princes, who are divided into forty-nine *Ki*, or Standards, may be conſidered as they reſpect the four Gates in the great Wall of *China*, viz. *Hi-fong-few*, *Kû-pe-kew*, *Chang-kya-kew*, and *Sha-hû-kew*; *Kew* ſignifying, in *Chineſe*, *the Streights of Mountains*. Regis, Gerbillon. *Diviſion into Countries.*

PASSING North from the Gate *Hi-fong-kew*, in *Pe-che-li*, you ſoon find yourſelf in the Countries of *Karchin*, *Ohan*, *Naman*, and *Korchin*: Eaſtward of this laſt lies the Country of *Tumet*. *First Diviſion.* Karchin.

1. *Karchin* is divided into two Diſtricts, called at *Pe-king*, Banners, or Standards, under two Princes. The moſt remarkable Place here in the Map, is *Chahan-ſubarhan-hotun*: *Hotun*, with the *Manchews*, ſignifies a City; and *Subarhan*, a Pyramid of ſeveral Stories, which is ſtill to be ſeen. The Country reaches to the Gate *Hi-fong-kew* [c].

THE Country of *Karchin* is by far the beſt belonging to the *Mongols*: For as the preſent Princes are originally *Chineſe*, they have drawn thither many of their Countrymen, who have built ſeveral Towns, and improved the Lands about them, ſo as to produce enough for themſelves, and traffic with their Neighbours.

HERE are likewiſe Mines, ſome of an excellent Tin, with large Foreſts of fine Timber, which is ſent even to *Pe-king*, for their Buildings. By this Traffic, the Father of the Great Grandfather of the preſent Family got immenſe Riches, with which having done ſignal Service to the old Prince of *Karchin*, he obtained his Daughter in Marriage, and afterwards all his Poſſeſſions. Next, to ſecure them to himſelf, he joined with the *Manchews*, then attempting the Conqueſt of *China*; for which the new Imperial Family now reigning rewarded him with the Dignity of *Tſing-vang*, or *Prime Regulo*; which is the higheſt Title of Honour that an Emperor of *China* beſtows on any Prince. *Tin-Mines, Timber.*

KARCHIN, from North to South, is not above forty-two great *French* Leagues; but much larger from Eaſt to Weſt. In this Part are the Emperor's fine Houſes of Pleaſure, near which he frequently hunts, and uſually ſpends his Summer: For the Heats are much more tolerable in all theſe Parts, than at *Pe-king*; though the Diſtance between that City and *Je-ho*, the faireſt of theſe Retreats, is not above forty Leagues, if you paſs through the great Wall by the Gate *Kû-pe-kew*, which is not near half Way [d]. *Its Extent.*

[a] Called, by the *Chineſe*, *Sha-mo*. [b] *Du Halde*, vol. 2. p. 249, and 261. [c] The ſame, *p.* 249, and [d] The ſame, *p.* 250.

Mongols Country.

Korchin, and Nayman.

2. *KORCHIN* is divided into ten Standards, including the Countries of *Túrbedâ* and *Chaley* [a]. The principal Reſidence of the *Korchin Tartars* is along the River *Queyler*. Their Country extends to the *Sira-mûren* [b], and conſiſts of nothing but barren Plains. Inſtead of Wood, they burn Horſe, or Cow-Dung, dried; and for Want of Springs, dig Wells. The principal Point of *Túrbeda*, is *Haytahan-pira* [c]. The *Chaley Tartars* dwell by the *Nonni-ûla* [d]: So that *Korchin*, from North to South, contains almoſt four Degrees, extending ſix Leagues to the North of the *Haytahan*: But it is not more than three Degrees and twenty-five Minutes from Eaſt to Weſt. 3. *Nayman* (called, in ſome Maps, the Kingdom of *Nayman*, and *Nagman*) contains but one Banner, and begins from the South-Side of the *Sira-mûren*, Latitude (taken on the Spot) forty-three Degrees thirty-ſeven Minutes; Longitude five Degrees Eaſt. The principal North-Point is *Topirtala* [e].

Ohan.

4. *OHÂN* is chiefly inhabited along the *Narkoni-pira*, where ſome Rivulets fall into it, as the *Shaka-kol*, or *Chahan-kol*, which gives Name to the Village *Shaka-kol-kajan* [f]. The Ruins of a City called *Orpan*, or *Kurban-ſubarhan-hotun*, on the little River *Nûchûkû*, or *Nuchaka*, are on this Side the Latitude of forty-one Degrees fifteen Minutes. The *Nûchûkû* falls into the River *Talin-ho*. *Nayman* and *Ohan* are far leſs, yet much better than *Korchin*. They are interſperſed with little ſhrubby Hills, which furniſh Wood for Fuel, and abound with Game; eſpecially an incredible Number of Quails, ſo that they flew, without Fear, even between the Legs of Paſſengers Horſes. Theſe three Countries, and that of *Túrmeda*, or *Túrbêda*, on the Eaſt of them, are of a dry, ſandy, nitrous Soil, and extreamly cold.

Tûmet.

5. *TUMET* is divided between two Banneret Princes, and is moſtly inhabited beyond the River *Subarhan*, where are to be ſeen the Ruins of the City *Modun-hotun*. This Country extends on the South to the great Wall, Eaſtward to the Paliſado, incloſing *Lyau-tong*; Northward to *Halha*, or *Hara-pay-chang*.

Second Diviſion.

GOING through the Gate *Kû-pe-kew* [g], you enter upon the Territories, formerly Part of *Korchin*, and *Onhiot*, now converted to a Foreſt, where the Emperor hunts: Here he has alſo ſeveral fine Summer-Houſes. Farther North are the Countries of *Onhiot*, *Kechikten*, *Parin*, *Sharot*, *Uchû-mûchin*, *Arûkorchin*, and *Ababanar*.

Onhiot, and Parin.

1. *Onhiot* is divided into two Standards of *Tartarian* Princes on the River *Inkin*. 2. *Parin*, divided into two Standards, has its principal Habitation on the *Hara-mûren*, which falls into the *Sira-mûren* [h]. The Territories of *Onhiot* [i], and *Parin*, lie beyond the Emperor's Hunting-Seats, Northward. Their Princes have been many Years allied to the Imperial Family. There are ſeveral of them in both Countries. *Parin* is the largeſt; but, in other Reſpects, pretty like *Onhiot*, the Soil of which is but indifferent. Here are but a few Buildings erected near the Palace of the Princeſs, the Emperor's Daughter, for the Reception of her Retinue, where the Miſſioners were very well entertained. Her Huſband had the Title of *Tſing-vang*, or Prime Regulo, and one of the Princes of *Onhiot*, that of *Kuovang*, or Regulo of the ſecond Rank. His Mother had built him a ſmall Palace near the little River *Sirgha*, or *Siba*; though he uſually encamped on its Banks [k].

3. *KECHIKTEN*, or *Keſikten*, is alſo divided into two Standards, and has its principal Habitation on a little River that runs from the South-Weſt into the *Sira-mûren*. 4. *Uchûmûchin*, or *Utſimûſin*, has two Standards along the *Hulahar* or *Hulgur-pira*. Its Prince has the Title of *Tſing-vang*, or prime Regulo, and commands a Banner of twenty-two *Nurû*, or Companies. 5. *Sharot*, divided into two Standards, is moſtly inhabited towards the Confluence of the *Lóhan-pira*, and *Sira muren*. 6. *Arukorchin* has but one Banner, which is on the River *Arukondulen*. 7. *Ababanar* has two Standards, and is beſt inhabited about the Lake *Taalnor* [l].

WHEN you have paſſed the Gate *Chang-kya-kew*, Weſt of *Ku-pe-kew*, you enter on a Country conquered by the Emperor, who has it in Property. Theſe Lands, as well as thoſe from the *Ku-pe-kew*, to the *Hi-ſong-kew*, along the great Wall, are occupied by Farmers belonging to the Emperor, the Princes, and ſeveral *Tartar* Lords. Here are alſo *Mongol Tartars*, of different Countries, who were either made Priſoners or ſubmitted voluntarily. They are ranged under three Standards, and commanded by Officers of the Emperor's Appointment; wherefore they are not reckoned among the forty-nine *Ki*, or Banners of the *Mongols*.

FARTHER to the North of the *Chang-kya-kew*, are the Countries of the *Mongol* Princes *Hoachit*, *Sonhiot*, *Ababay*, and *Twinchuz*. 1. *Hoachit*, or *Whachit*, is divided into two Standards near the River *Chikir*, or *Chirin-pira*. 2. *Sonhiot* has two Standards: The principal Habita-

[a] Or *Chalair*, as in *De la Croix*'s Hiſtory of *Jenghîz Khân*. [b] *Mûren* is the *Mongul* Name for the Rivers. [c] *Pira* ſignifies a River, but of the leſſer Kind. [d] *Ula* is the *Manchew* Word for great [e] *Du Halde*'s *China*, p. 249. [f] *Kajan*, or *Kayan*, in *Manchew*, ſignifies a Village. [g] Called by the *ſians*, *Kapki*. [h] *Du Halde*, as before, *p.* 249, 264. [i] Some *Tartars* pronounce *Onihol*. [k] *Du* as before, *p.* 250. [l] *Nor*, a Lake in the *Mongol* Language.

is near a Lake. 3. *Abahay* has two Standards, a which encamp about ſome Lake, or Meer, of which the Southernmoſt is *Sûretû-hûchin*. 4. *Twinchûz* contains but one Banner, near the Mountain *Organ-alin* [a].

THROUGH the Gate *Sha-hû-kew*, you enter upon the Emperor's Lands. The City *Hûhû-hotun*, or *Khûkhû-hotun*, is moſt remarkable. Here inhabit the *Kû-ſay-chin*, or Chiefs of two *Tartar* Banners, called alſo *Tumet*. Theſe *Tartars* are partly deſcended from thoſe made Priſoners by b the *Manchews*, when they invaded the Territories of the *Mongols* from *Lyau-tong*; partly a Mixture of different Nations of *Tartars*. Their Chiefs are appointed by the Emperor. Beyond the Territory of *Huhû-hotun*, lie the Countries of the *Mongol* Princes of *Kalka-targar*, *Maomingan*, *Urat*, and *Ortos*, or *Ortûs*. 1. *Kalka-targar* is watered by the little River *Aypahamûren*: It contains but one Banner. 2. *Maomingan* has but one Banner. 3. *Urat* is divided c into three Standards, and is moſtly inhabited along the River *Kondolen* [b] (or *Quendolen.*) 4. The *Mongols*, called *Ortos*, or *Ortûs*, are bounded on the South by the great Wall, which is there, and alſo throughout *Shen-ſi*, only of Earth, and fifteen Foot high. On the three other Sides, they are hemmed-in by the *Whang-ho*, or *Yellow River*; which leaving *China* near the fine City of *Ning-hya*, makes a great Sweep, and enters it again towards *Pau-te-chew*: Its Windings to- d wards the North, are marked from Obſervations taken in following its Courſe, as far as *Kuramds*; which Countries are without Inhabitants, or any Thing remarkable. They had beyond the great Wall, upon the *Whang-ho*, a City named *Toto*, which ſeems, by the Ruins, to have been pretty large; though theſe People have neither Skill, nor Pleaſure, in Building. They are governed by ſeveral petty Princes, under ſix Banners, and love to diſtinguiſh themſelves by the e Largeneſs and Number of their Tents, as well as Multitude of their Flocks [c].

2. Manners, Cuſtoms, *and* Language *of the* Mongols.

Origin, and Name. Of great Extent, to what owing. Language, and Characters; Shape, and Features: Their Manners, Humour, and Genius: Their Dreſs, Arms, Cattle, Way of living, Diet, Wives, and Funerals: Their Tents: Their Traffic.

THE Inhabitants of theſe Quarters, are variouſly named by Authors, *Mongols*, *Monguls*, *Mungals*, and *Moguls*. According to the Hiſtory of *Abu'lghâzi Khân*, they took their Name from *Mogul*, or *Mungl Khân*, a very ancient Monarch of their Nation, of whom Mention will be made hereafter [d]. Gerbillon, Regis.

THE *Chineſe* ſometimes call the *Mongols*, or *Mongls* (which ſeems to be their true Name) *Sita-tſe*, or *Weſtern Tartary*; and, in Deriſion, *Tſau-ta-tſe* [e], that is, *ſtinking Tartars*, becauſe of their ill Scent.

THE *Monguls*, for Number and Extent, far *Of great Extent,* exceed the *Manchews*; for under that Name are to be comprehended the *Kalkas*, and *Elûths*, who inhabit Weſtward as far as the *Caſpian Sea*: Not that they are all properly *Monguls*, which was but one Tribe, amongſt many others; but *Jenghiz Khân*, who was of that Tribe, having ſubdued all the reſt, they thenceforward paſſed under the general Name of *Mongols*, as before they were known in the Weſtern Parts of *Aſia* by the Name of *Tartars*, who were the moſt powerful Hord, till ſubdued by the above-mentioned Conqueror; and, indeed, on the ſame Account they afterwards ſhared with the *Mongols*, in the Honour of giving a Name to the Inhabitants of this vaſt Region, as well as ingroſſed that of the Country wholly to themſelves, it being called *Tartary* to this Day in all the Southern *Aſia*, as well as *Europe*, although there is no ſuch particular Tribe, as that of the *Tartars*, now to be found.

IT is alſo to be conſidered, that the *Khâns* of *To what owing.* the three Diviſions of the Inhabitants above-mentioned, are *Mongols* by Deſcent, which goes a great Way in keeping-up the general Name among their reſpective Hords. Thus we meet with the Denominations *Kalka Mongols*, and *Eluth Mongols*, as well as *Kalka Tartars*, and *Eluth Tartars*, as the *Chineſes* generally call them. With regard to the Name *Tartars*, it may be proper to obſerve here, that the true Orthography is *Tatars*, as they are called in the Oriental Countries, and thoſe of *Europe* to the Eaſt of *Germany*. The *Chineſe*, who want the *r* in their Language, ſay *Ta-ta*, and *Ta-tſe*.

THESE People, though going under different *Language, and Characters,* Appellations, have all but one Language, Religion, and Manner of living, which is a Proof, that they are deſcended from the ſame original Stock. Their Language is ſimply called the *Mongol* Tongue: They have ſeveral Dialects indeed, but underſtand one another very well [f]. We are informed by *Regis*, that the Characters upon the ancient *Mongol* Monuments, are the ſame with thoſe in preſent Uſe, but different from the *Manchew*, which are no older than the

[a] *Alin*, a Mountain, in the *Manchew* Language. [b] *Du Halde's China*, p. 264. [c] The ſame, *p.* 253, and 263. [d] Hiſtory of the *Turks*, *Mogols*, and *Tartars*, p. 7, and 9. [e] By the *Sudatſes*, or rather *Su-ta-*, of *Nieuhof*, vol. 3. p. 426. d. are doubtleſs to be underſtood the *Tſau-ta-tſe*, or *Mongols*. [f] *Du Halde*, before, *p.* 256, *& ſeq.*

Mongols Country.

Family now reigning. They have not the leaſt Likeneſs to the *Chineſe* Letters, and are no more difficult than the *Roman*. They are written on Tables with an Iron Pencil; for which Reaſon a Book is a great Rarity among the *Mongols*. The Emperor, to pleaſe them, had ſome of their Authors tranſlated, and printed at *Pe-king*: But the chief Book among them is the Kalendar, publiſhed by the Mathematical Tribunal, and graved in *Mongol* Characters [a].

Shape, and Features.

ACCORDING to *Bentink*, the *Mungals* (or *Mongols*) in general, are of a middle Size, but ſtrongly ſet; their Faces very large, and flat; their Complexion ſun-burnt; their Noſes flat, but their Eyes black, and full: Their Hair is black, and ſtrong as Horſe-Hair: They commonly cut it pretty cloſe to the Head, preſerving only a Tuft at the Top, which they let grow the natural Length: They have very little Beard [b].

Their Manners,

GERBILLON ſays, they are quite rude, and unpoliſhed in their Manners; yet honeſt, and good-natured: Naſty and ſlovenly in their Tents and Cloaths, living amidſt the Dung of their Beaſts, which ſerves them for Fuel; for they have no Wood. They excel in Horſemanſhip, and Hunting; and are dexterous Archers on Foot, or on Horſeback. In general they lead a wretched Life. Averſe to Labour, they prefer Grazing to Agriculture [c].

Humour,

REGIS obſerves, that the utmoſt Ambition of the *Mongols*, is to preſerve the Rank of their Families. They value Things only for their Uſe, having no Regard to their Rarity, or Beauty. They are naturally of an eaſy, chearful Temper, always diſpoſed to Laughter, and never diſturbed with Melancholy: And, indeed, they find little Occaſion for Care, having generally neither Neighbours to manage, Enemies to fear, nor Lords to pleaſe; no difficult Affairs, no Buſineſs of Conſtraint, diverting themſelves only with Hunting, Fiſhing, and other bodily Exerciſe, in which they are very expert.

And Genius.

HOWEVER, theſe People are capable not only of the Sciences, but the greateſt Affairs: Witneſs their ſubduing *China* in 1264, which they governed, even in the Opinion of the *Chineſe*, with great Judgment, and Addreſs: And there are ſtill ſeen in *China*, Marble Monuments, with Inſcriptions both in the *Chineſe*, and *Mongol* Languages. In this they have been imitated by the *Manchews*, now Maſters of this Empire, who have cauſed the public Acts, and Inſcriptions, to be written in both Languages [d].

Their Dreſs,

AS to their Dreſs, according to *Bentink*, they wear very large Shirts, and Calico Drawers. Their Habits reach as low as their Ancles, and are commonly made of Calico, or ſome other ſlight Stuff, which they line with Sheep-Skin. Sometimes they wear intire Garments of Sheep-Skins: They faſten theſe Garments about the Loins with great Leather-Straps. Their Boots are very large, and uſually made of *Ruſſian* Leather: Their Bonnets ſmall, and round, with a Border of Fur four Fingers broad. The Dreſs of the Women is very near the ſame, excepting that their Garments are longer, their Boots generally red, and their Bonnets flat, with ſome little Ornaments [e].

ACCORDING to *Regis*, their uſual Cloathing is Sheep and Lamb-Skin, the Wool next the Body. Though they know how to dreſs, and tolerably whiten theſe Skins; as alſo thoſe of Stags, Deer, wild Goats, *&c.* (which, in ſome Sort, ſerve the Rich for under-Garments in the Spring) yet, for all their Care, you ſmell them as ſoon as they come near you; whence they got the Name of *ſtinking Tartars*, as before-mentioned. Their very Tents have a rammiſh Smell, hardly tolerable: So that a Stranger, who happens among them, had beſt erect his Tent ſome Paces diſtant from them [f].

THE Arms of the *Mongols* conſiſt in the Pike, the Bow and Arrows, and the Sabre, which they wear after the *Chineſe* Manner. They always go to War on Horſeback, like their Neighbours the *Kalmûks* (or *Eluths*;) but it is well if they be ſuch good Soldiers.

THEIR Cattle conſiſts in Horſes, Camels, Cows, and Sheep, that are generally very good in their Kind: But they are not to be compared with the Cattle of the *Kalmûks*, neither for Appearance, nor Goodneſs, except their Sheep, which almoſt ſurpaſs them; and what is peculiar, have Tails about two Foot long, and near as much in Compaſs, weighing commonly between ten and eleven Pounds: It is almoſt one entire Piece of very rank Fat, the Bone not being larger than that in other Sheep. They breed no Beaſts but what eat Graſs, and, above all Things, abhor Swine [g].

THE *Mongols*, ſays *Gerbillon*, live all the ſame Way, wandering from Place to Place with their Herds, and pitching where they find moſt Forrage: In Summer, near ſome River, or Lake; in Winter, on the South-Side of ſome Hills, while the Snow ſupplies them with Water. Their Diet is very ſimple: In Summer, they feed on Milk-Meats, uſing, indifferently, that of Cows, Mares, Ewes, Goats, and Camels. Their Drink is Water boiled with the worſt Sort of *Chine* Tea, in which they put Cream, Butter, or Milk

[a] *Du Halde*'s *China*, p. 253. [b] Hiſtory of the *Turks*, *Mogols*, &c. vol. 2. p. 502. [c] *Du Halde*, as before, *p.* 256. [d] The ſame, *p.* 253. [e] Hiſtory of the *Turks*, &c. *p.* 505. [f] *Du Halde*, as before, *p.* 254. [g] Hiſtory of the *Turks*, &c. as before, *p.* 505.

at Pleaſure. They alſo make a ſpirituous Liquor from ſour Milk, eſpecially Mares, which is diſtilled after Fermentation. The Rich lay Mutton to ferment with their ſour Milk. This Liquor is ſtrong, and nouriſhing, and they delight to get drunk with it. They alſo ſmoak a great deal of Tobacco. Though Polygamy be not forbidden, they have uſually but one Wife. They burn their Dead, and interr their Aſhes on ſome Eminence, where raiſing a Heap of Stones, they place thereon little Banners [a].

THE *Mungals*, ſays *Bentink*, dwell under Tents, or little moving Houſes, and live altogether on the Produce of their Cattle [b]. *Regis* obſerves, that their Tents are round, and much more commodious than the common *Manchew* Tents, which have only a ſingle, or double Wrapper, much like thoſe of the *French* Soldiers, being covered with a thick grey or white Felt, upheld within by Poles, with one End tied round a Hoop: They thus form the Superficies of a broken Cone, with a round Hole at the Top, to let-out the Smoak that aſcends from the Hearth, placed in the Middle of the Tent. While the Fire laſts, they are warm enough; but ſoon grow cold again; and in Winter would, without Care, freeze in their Beds. To avoid, or at leaſt leſſen, this, and other Inconveniences, the *Mongols* have their Tent-Door very narrow, and ſo low, that they cannot enter without ſtooping. They have alſo the Art to join theſe looſe Pieces ſo nicely, as to keep-out the piercing Blaſts of the North-Wind [c].

WITH regard to Commerce, the petty Merchants of *China* reſort to the *Mongols* in great Numbers, bringing them Rice, Bohea-Tea, which they call *Kara-chay*; Tobacco, Cotton-Cloth, and other ordinary Stuffs; ſeveral Sorts of Houſhold Utenſils, and, in ſhort, whatever they ſtand in need of. In Exchange, they give them Cattle; for they know not the Uſe of Money [d].

3. *The* Religion *of the* Mongols.

They worſhip Fo: *Their* Lamas: *Their Bigotry.* Foiſm, *when introduced.* *The* Khûtuk-tû. *Their Government.*
